κακοὶ μάρτυρες ἀνθρώποισιν ὀφθαλμοὶ καὶ ὅσα βαρβάρους ψυχὰς ἐχόντων (frag. 4 [B.], 107 [D.]).

This, however, is still vague philosophically. Parmenides is more precise, and in his affirmation that reason³ is the criterion he is more exclusive: we are to 'judge by argument' (*κρίναι λόγῳ* [frag. 1. 36]). Anaxagoras returns to a kind of balance, distinguishing the two modes of knowing as 'by rational consideration' (*λόγῳ*) and 'by experience' (*ἐργῳ*). This at least seems a fair interpretation of a fragment translated less determinately by Burnet:

'So that we cannot know the number of the things that are

¹ E.g., some misapprehensions would have been avoided if the 'common sense' of the Scottish school had been described as 'common reason.' Historically it takes its origin from *κοινή αἴσθησις*, but its meaning approximates rather to *κοινὸς λόγος* (see art. SCOTTISH PHILOSOPHY).

² See Burnet, *Early Greek Philosophy*², p. 147, n. 2.

³ The meaning of *λόγος* in Heraclitus is still disputed; but, when it most approximates to reason, it seems to mean a rational law of things and of the mind rather than a test applied by the mind to its knowledge of things (see art. LOGOS).

separated off, either in word or deed' (*ὥστε τῶν ἀποκρινομένων μὴ εἶδεναι τὸ πλῆθος μήτε λόγῳ μήτε ἔργῳ* [frag. 7; Burnet, p. 300]).

Democritus, not much later, declares outright that true knowledge is not by the senses but by reason. This is the interpretation of Sextus Empiricus; and it is supported by the strong terms in which Democritus rejects the claim of the senses to judge. As Sextus sums up his positions:

διὸ φησὶν εἶναι γνώσεις, τὴν μὲν διὰ τῶν αἰσθήσεων τὴν δὲ διὰ τῆς διανοίας, ὣν τὴν μὲν διὰ τῆς διανοίας γνησίην καλεῖ, . . . τὴν δὲ διὰ τῶν αἰσθήσεων σκοτινὴν ὀνομάζει. . . οὐκοῦν καὶ κατὰ τοῦτον ὁ λόγος ἐστὶ κριτήριον, ὃν γνησίην γνώμην καλεῖ (adv. Math. vii. 138 f.).

These positions of the pre-Socratics may not be ultimately compatible with the outlook implied in their tracing of reason as well as other modes of mind to dependence on certain material mixtures in the bodily organs; but complete clearness could not be attained so early; and it is interesting to find that the most decided materialist, Democritus, lays most stress on reason as against the experiences of sense-perception. Perhaps, however, Democritus ought rather to be counted as belonging to the next phase, when attacks on the possibility of knowledge had to be expressly met. In his appeal distinctively to reason he was at one with his constructive contemporaries, however he might differ in his ontology.

(b) *Plato and Aristotle*.—When, in the Sophistic period, the subjective criticism that examined the mind's own process was turned against the efforts of the early thinkers to arrive at truth in a direct objective way, Socrates, as a preliminary to reconstruction, set himself to examine the nature of the concept. Though by Aristotle induction from particulars (*ἐπαγωγή*), as well as the search for general definitions, is ascribed to Socrates, it was as a dialectical rather than as an experiential thinker that he became most influential. His central effort, as distinguished from incidental positions that interested eccentric thinkers like Antisthenes and Aristippus, was carried forward by Plato and then by Aristotle. For Plato reason, or coherent thinking, decidedly had the predominance, as a test, over experience of particulars. 'Dialectic' was conceived as a more general method than that of deductive mathematics, which implies it, but adds untested hypotheses of its own. The appeal to reason, in Plato's ideal system of knowledge, thus became part of a whole in which, while experience had a place, dialectic, with deductive mathematics at the next step below, was the model of ultimately valid thought. At a higher stage than that of discursive reason (*διάνοια*) there was pure intellect, intuitive thought (*νοῦς, νόησις*), by which true reality is to be grasped; at a lower stage was opinion (*δόξα*), not properly scientific because not dialectical or mathematical, which deals by more or less conjectural methods with the phenomena presented to sense-perception.¹ On the dialectical side, what had been partially formulated by Plato was definitively formulated by Aristotle, who stated the axioms since known as the 'laws of thought,' and made them the basis of his codified formal logic. Aristotle, on another side of his mind, was much more of a naturalistic inquirer into detail than Plato; but, in his general view of the test or tests of truth, he remains faithful to the principles of his master.

(c) *Epicureans and Stoics*.—The next period of Greek thought, occupied as it was with the effort to formulate a rule of life for the individual in a cosmopolitan world for which the bond of the city-State had become a waning tradition, brought on the search for a more tangible reality than that

of the metaphysics in which the Platonic and Aristotelian dialectic found its consummation. To arrive at some external reality in the most expeditious way was the theoretical problem. Then, without useless lingering over this, the philosophic learner could go on to the essential thing, which was practice. The great positive schools of this period, the Epicureans and the Stoics (*q.v.*), while differing much in detail, solved this problem fundamentally in the same way. Going back to the earlier thinkers, they developed more consistently the naturalistic side of their doctrines. The rudiments could be found in them of theories which, in the explanation of mind, proceeded from the physiological organs and made the senses psychologically fundamental. From these rudiments the new schools, with the long dialectical development of the intervening period behind them, worked out in considerable detail what we may call an experiential theory of knowledge. Not rational argument as such was the criterion, but a certain mode of experience. Epicurus, while taking for his ultimate account of reality the atomism of Democritus (with changes that were scientifically for the worse), completely inverted the position of Democritus with regard to the senses. For Epicurus sense-perception is the criterion; things are exactly as they appear. This is formally stated by Sextus Empiricus, who was our authority for the precisely opposite affirmation of Democritus. Epicurus, he says, affirms that sense-perception is trustworthy in its hold of reality throughout:

τὴν αἴσθησιν . . . διὰ παντός τε ἀληθεύειν καὶ οὕτω τὸ ὁ λαμβάνειν ὡς εἶχε φύσεως αὐτὸ ἐκεῖνο (adv. Math. viii. 9).

The more elaborate doctrine of the Stoics equally adopted for its criterion sense-perception, though not indiscriminately, but only when it was perception of a certain kind. The difference was in effect that Zeno and his successors laid stress on an active element in the grasp of external reality; mere reciprocity did not seem to them sufficient. Reality is seized, they said, by the *φαντασία καταληπτική*—a kind of presentation that is known to give a true account by the sense of possession that goes with it and the absence of any opposing presentation. As Sextus puts it,

κριτήριον εἶναι τῆς ἀληθείας τὴν καταληπτικὴν φαντασίαν . . . μὴδὲν ἔχουσαν ἐνστήμη (vii. 258).

The part of *λόγος* in the Stoic system, like that of *νοῦς* for Anaxagoras, is ontological. In one of its meanings *λόγος* is the law that runs through the world; but reason as the procedure of the mind in dealing with the general is not for the Stoic theory of knowledge the ultimate test of truth. The ultimate test for the Stoics, as for the Epicureans, is experience.

(d) *Sceptics*.—The opposition that this doctrine had to meet came from the sceptics, especially those of the New Academy. That the most reasoned scepticism should have proceeded from the Academy (*q.v.*) reveals its essential nature. For a time the attempt to build a positive system from the points of view developed in Plato's *Dialogues* was abandoned, and his school threw itself into negative criticism. A system of confident dogmatism like that of the Stoics provided it with material exactly to the purpose. Carneades recognized his dependence on his opponents when he said, parodying the verse that made Chrysippus the effective founder of the Stoa, *εἰ μὴ γὰρ ἦν Χρυσίππος οὐκ ἂν ἦν ἐγώ*. The method was to apply to the Epicurean and Stoic tests of truth a stringent dialectic which, after the emergence of idealistic criticism, no naively realistic doctrine could bear. Indirectly, therefore, scepticism, earlier and later, was the preparation for the next constructive school, that of the Neo-Platonists,

¹ See *Republic*, end of bk. vi., for an exact account.

which, arising independently, at length absorbed the Academy.

(e) *Neo-Platonists*.—With a positive, and no longer a negative, aim, Plotinus revived the Platonic idealism, bringing into it more system through the study of Aristotle, and turning it critically against the Stoic materialism (see art. NEO-PLATONISM). Even sense-perception, he showed, is inexplicable from the basis of mere physiology; but, for the test of truth, he turned away from sense and insisted on reason as that which judges. Mysticism, though a distinctive feature of his thought, does not furnish the criterion. For the mystical experience, being a state beyond knowledge, seizing upon that which is beyond mind, cannot be explained to one who has not had it. The reasoned system points to it, but does not include it as part of a completely rational process: it is *ἐκστασις*, a standing out of system. The system itself consists of demonstrations, and its criterion is reason. Thus, after a long and fluctuating process, thought had returned to the dialectic and logic of Plato and Aristotle as offering the soundest principles of knowledge yet discovered.

This was, however, more clearly brought out by Proclus (A.D. 410–485) two centuries after Plotinus (204–270). For Plotinus the ideal of reason is an intuitive thought such as Spinoza¹ holds to be the highest order of knowledge. Proclus does not reject this, as he does not reject the more distinctively mystical experience beyond it; but for the definitive test of truth he selects a more generally applicable criterion. The criteria that the thinker may use for himself in relation to different kinds of subject-matter are many; but the soul is a unity as well as a multiplicity; and there must be some universal criterion for every soul. This he finds to be neither pure intellect (*νοῦς*) at one extreme nor sense-perception (*αἰσθησις*) at the other, but discursive reason (*λόγος*). Here is the process of explicit formulation by which the higher is mediated to the lower and the lower to the higher. The mind may start from the glimpses of intuitive reason and may use sense-perception as material for criticism or confirmation; but, if there is to be a system of knowledge, it must be established by a process of argument. The circumspection which he ascribes to Plato in assigning their proper part in knowledge to all the modes of mind is certainly to be found in the passage where he gives this guarded expression to philosophical rationalism:

εἰ τοίνυν τὸ κρίναι ψυχῇ ἐστιν—οὐ γάρ που τὸ ἡμέτερον σῶμα κριτικὴν ἔχει δύναμιν—ἡ δὲ ψυχὴ ἐν ἐστὶ καὶ πλήθος, καὶ τὸ κριτικὸν ἐν ἐστὶν αἶμα καὶ πολλά, καὶ μονοειδὴς ἡ κριτικὴ δύναμις καὶ πολυειδὴς, τίς οὖν ἡ μὲν δύναμις; φαίη τις ἂν, ὁ λόγος, φήσομεν (*Comm. in Tim.*, ed. E. Diehl, Leipzig, 1903, i. 254–255).

As first matter, or mere possibility, below the limit of true knowledge, is seized by a kind of bastard reasoning (*νόθῳ λογισμῷ* in Plato's phrase), so the One, at the other extreme above knowledge, is seized by a kind of bastard intuition (*νόθῳ νῶ*). Thus every test finally has a certain resemblance to the model test of explicit reason. If the other tests are to be regarded as having their own validity, it must be shown by argument how they can have it; though argument, of course, cannot enable us to dispense with direct perceptions whether of intellect or of sense.

For antiquity, therefore, what may be called in the philosophical sense 'rationalism' remained finally supreme.

3. *Mediæval and modern use*.—(a) *Scholasticism*.—In the mediæval schools rationalism (*q.v.*) became predominant in a narrowed sense. The passage cited above from Proclus might have been taken by the Schoolmen of Western Christendom,

without its qualifications, as a text to prove the exclusive value of their characteristic activity. It was long after Proclus, and long after the suppression of the school at Athens of which he was the last great name, that the revival of philosophical thought began in the West; but, when it came, it gave evidence of continuity with the latest thought of antiquity. Its first great movement was an immense development of discursive reason. Precisely because the Middle Ages had lost the freedom with which in classical antiquity ultimate beliefs could be discussed, there was such an elaboration of formal method as had never been known before. The value of this must not be underrated. In a sentence from W. Hamilton's *Discussions in Philosophy* which Mill prefixed to the first book of his *Logic* it is put thus:

'To the schoolmen the vulgar languages are principally indebted for what precision and analytic subtlety they possess.' Croom Robertson says:

'All the world has heard of scholasticism as an oppressive system of pedantic belief: it has still to be known as a system of rationalism struggling to be' ('The English Mind,' *Philosophical Remains*, London, 1894, p. 34).

The reverse side of the case remains, of course, that this rationalism was very limited. The Schoolmen made a fine art of formal reasoning; but the habit of accepting traditional authority for facts and data was so fixed that the attempt to bring again into view the claims of experience remained merely sporadic. To get out of the circle of things taken for granted or assumed dialectically, a revolt against the School-philosophy itself became necessary. The controversy about the reality of universals was primarily ontological. By their contention that only particulars are real, and that the genus or species is only a name indicating resemblance between the members of a class, the nominalists might seem nearer to modern experimentalism than the realists, for whom class-names indicated a reality like that of the Platonic ideas; but the methods of both were equally dialectical. An aid to the imagination in forming a notion of the time that it took new views about method to emerge is to remember that there is a longer interval between the exhortations of Roger Bacon to go to experience and those of Francis Bacon, than between the publication of the *Novum Organum* (1620) and the present date.

Roger Bacon is an isolated figure in the greatest period of Scholasticism, the 13th century. Another great English thinker, William of Ockham, in the next century, promoted by his dialectic the disintegration of the imposing dogmatism of St. Thomas Aquinas (*q.v.*) and John Duns Scotus (see art. SCHOLASTICISM). Then came the beginnings of the new movement of humanism (*q.v.*), taking the form at first of a more literary interest in the Latin classics. After the revival, in the 15th cent., of direct knowledge of Greek thought in its original sources, followed by the setting up, in the 16th, of older types of thinking, in conscious rivalry with the whole mediæval scheme of theology and philosophy, the movement against Scholasticism took a more systematic new departure.

(b) *Experimentalism and rationalism*.—This, in the 17th cent., expressed itself in the effort to establish once for all the right 'method' of seeking truth. The new aspiration for firm knowledge, instead of barren disputes about insoluble questions, culminated for the time in the philosophical reforms of Bacon and Descartes (*qq.v.*). Bacon not only clothed in the most impressive language the appeal to experience as the test by which every claim to possess real knowledge must be verified, but also developed some genuine outlines of a theory of induction, no longer unsystematic, but rising by stages from particulars to generals, as deduction descends from generals to particulars.

¹ *Eth.* ii. prop. 40, schol. 2.

Descartes, himself a discoverer in geometry, set against the sterile formalism of mere logic, which could bring out only what had been implicitly asserted, the real deduction of new truth in the mathematical sciences. Thus began the two great movements of philosophy known as English experimentalism and Continental rationalism; but it is important to note that these were not so definitely rivals as they had become later when Kant turned his 'critical' thought on both at once. The great Continental rationalists, Descartes, Spinoza, and Leibniz (*qq.v.*), all took occasion to recognize in some way the new departure of the English in their appeal to experience. In all the English thinkers, on the other side, unreduced elements from the rationalism of ancient science and of the Scholastic tradition remain over. It would be easy to show this in the case of Bacon, Hobbes, Locke, and Berkeley (*qq.v.*). And Hume (*q.v.*), who carried farthest the effort to resolve all 'principles of reason' into derivatives of pure experience, treated his results not as 'dogmatic' but as 'sceptical,' i.e. as suggesting problems for reconsideration; finally abandoning his first elaborate attempt to explain mathematics as an essentially empirical science. By Kant (*q.v.*), while the opposition with him arrived at the most explicit statement, the reconciliation of 'reason' and 'experience' as constituents of truth was most systematically attempted. Reason, according to Kant, does not merely enable us to arrive at 'analytical' judgments implied in what has been already said, but, in mathematics at least, yields genuine new truth in the form of 'synthetic judgments *a priori*.' Yet, while these are not given in mere experience, they have no valid application beyond all possible experience. All true science consists in carrying reason into the construction of nature so as to make it intelligible to thought. Even those highest principles that seem to go beyond this have value only as furnishing an ideal that the actually working system of science may try to approach and so gradually perfect itself.

(c) *The Kantian reaction and the revival of experimentalism.*—If we were to stop here, it might seem that now, as at the end of ancient thought, the supreme place, though with circumspection, was assigned to reason. Kant, however, did not, even at first, approximately satisfy any considerable group of thinkers. The problem became on the one side to develop him, on the other side to answer him. Hegel (*q.v.*) has been thought to have carried philosophical rationalism to the highest point. By a new logic, the whole order of the universe, he seemed to promise, was to be shown forth as a manifestation of reason. Yet, curiously, his power appears most in a strong grasp of experience intermittently attained, but unmediated by any method fitted to carry general conviction. The next representatives of experimentalism, in contrast, were men of pre-eminently deductive minds, whose strength was in reasoned exposition, and who, in the days of Scholasticism, might have been famous as irrefragable doctors. For the complex period at which we have arrived it is more true than ever, in the phrase borrowed by Hegel himself from Anaxagoras, that things are not 'cut in two with a hatchet.'

It would have contributed much to a clear issue for the thinkers just alluded to had they known Kant at first hand; but they knew him only indirectly or very imperfectly. Comte, who, like Descartes and Leibniz among modern philosophers, was a mathematician of original power, thought that he could explain even mathematics philosophically as based in generalizations from pure experience (see art. *POSITIVISM*). J. S. Mill (*q.v.*), who succeeded in founding a valid inductive logic by

deducing the actual tests of experimental science from a general principle, 'the uniformity of nature,' fell back, for the proof of this, on the weakest mode of induction—viz. that 'induction by simple enumeration' which the Baconian canons and his own had been devised to supersede. And this, in both cases, without any close consideration of Kant's arguments for the necessity of *a priori* principles in the sciences of nature as in mathematics. It is not surprising that, both in France and in England, the two countries where the experimentalism that took shape from Locke had been strongest, there was a reaction—or a forward movement, as some put it—in the Kantian direction. For the whole of Europe, however, it must be said that the predominant movement in the 19th cent., through the influence on philosophy of the enormous new developments in the sciences of experiment and observation, was greatly to enlarge the place given to experience as compared with that which it held in antiquity, and to reduce the principles of reason which science finds that it cannot do without to an attenuated form. The elaborate apparatus of Kant was not adopted by men of science; and in Germany the movement which took for its watchword 'Back to Kant' signified a return to the experiential side of Kant against the extreme speculative developments of his successors (see art. *NEO-KANTISM*).

There is, however, it has also become clear, an element in scientific knowledge not explicable as a resultant of accumulating experience. The most general principles of logic, whether of formal inference, of mathematical deduction, or of the natural and humanistic sciences, remain more than arbitrary linkings of ideas that can have their validity proved or disproved by their applicability to certain subject-matters. They are not in the end mere 'working hypotheses.' There is in reason, as Kant with all his over-elaboration proved, an *a priori* factor in virtue of which we distinguish it from pure experience.

4. *A priori.*—This term has been dealt with in a separate article, but calls for a brief discussion in relation to the present subject. Its source, as has been shown, was Aristotelian. Aristotle distinguished between that which is first in relation to us and that which is first by nature. In knowledge the experiences of sense-perception are first in relation to us, i.e. in the order of genesis; but, since, in his view as in Plato's, the formal essence (*εἶδος*), expressed in a concept, is the determining reality of everything, the ideal of knowledge for the philosophically trained mind is to begin with the general and proceed to particulars. Thus the syllogism, into which all formal reasoning can be thrown if we need expressly to test its validity, is 'first by nature' and has more in it of true cognition; but induction, which is the procedure from particulars to generals (*ἡ ἀπὸ τῶν καθ' ἕκαστον ἐπὶ τὰ καθόλου ἐφόδος*), is more persuasive and carries plainer evidence to the ordinary mind.¹ Quite fitly, therefore, the term *a priori* was adopted by Kant as the technical expression for reason in its purity, proceeding, whether theoretically or practically, as something necessarily general and not to be derived from experience conceived as a sum of unrelated particulars presented to the mind from outside. Since Kant the expression has become a kind of shorthand, understood without reference to its historical origin or to any distinctive system. Those who use it do not imply that they are reasoning from a formal cause, which has priority in the Aristotelian sense as being the real essence; nor even that they regard their general principles as transcendental in the Kantian sense, i.e. as not derived from ex-

¹ See *Top.* i. 12, 105^a 13, and *Anal. Pr.* ii. 23, 68^b 32.

perience though having possible application only within experience. Their claim is simply to be in possession of general principles, whatever the source of these, from which they are justified in inferring propositions applicable to groups of particulars. Herbert Spencer, *e.g.*, while he is always classed with the series of the English experimentalists, uses the term as freely as Kant, and he was at least as confident an *a priori* reasoner as Aristotle and decidedly less of an observer. The ground of his *a priori*, however, was quite different. For him the order of genesis is the real order of nature; and the *a priori* principles of the mind, though it can now apply them with scientific security, are valid only as the last result of accumulated experiences in the race and the individual. Yet, perhaps, in a very broad sense, a philosophical conception of the *a priori* akin to that of Aristotle or of Kant lurks behind. For experience, according to Spencer, does not simply consist of 'feelings,' but includes 'relations between feelings'; and these are not derivative, but constitute a kind of *λόγος*, or *ratio*, in which all explicit knowledge had a prior existence. In this extremely general sense of the *a priori*, Spencer also may be classed with the philosophical rationalists.

5. Reason in ethics.—Moral conduct may be considered as practically determined either by the notion of an end of action, a final good, or by the notion of a law to which action ought to conform. In whichever way it is considered, both reason and experience must be allowed a part in deciding what actual conduct shall be. For Greek and Roman antiquity moral philosophy was on the whole dominated by the idea of an end or good (see artt. ETHICS AND MORALITY [Greek] and [Roman]). This might be derived from experience and treated as something empirical to which the means had to be sought; or it might be determined in relation to some metaphysical reality that was thought to confer on it its ultimate desirability as an end. In the latter case it would naturally be regarded as ascertainable by the direct insight of reason. Plato's idea of the good is conceived as the final object of rational insight, conferring on all ends their desirability as on all modes of being their reality; but he admits that he cannot say what it is.¹ In Plato's and Aristotle's actual treatment of moral problems there is a mixture of points of view, both reason and experience being appealed to. This, however, does not make the philosophers illogical. Their ideal is that the end or the good should be rationally knowable; but they recognize, in the conditions of human nature, the need for much empirical balancing of one thing with another. The conceptions of 'pleasure' as the end, interpreted by Epicurus as in its highest degree tranquillity, and of the 'life according to nature,' selected by the Stoics as their final good, may be considered as experiential, in accordance with the theoretical philosophy of the schools that adopted them. In these schools, however, points of view came decisively forward that led on to the later 'ethics of law,' which in modern times has tended to become the type of rationalist, as distinguished from experiential, ethics. The Epicureans made considerable use of the notion of keeping contracts, already present in the Aristotelian theory of justice; and the Stoics brought the detail of their ethics under ideas of a natural justice or of a law common to all. This had much influence on the formulation of Roman legal conceptions. Neo-Platonism treated ethics on the whole from the metaphysical point of view, according to which degree of worthiness in ends corresponds to degree of reality in the scale of existences. Christian ethics adapted, for philosophical systematization,

Stoic, Platonic, and Aristotelian positions, in this chronological order. Its notion of a divine legislation tended to reinforce the beginnings that already existed of the 'ethics of law,' moral duties being put in the form of commands. Thus in the Middle Ages ethics took the name of 'moral theology.' In the early modern period a kind of ethics of law, placed on natural or rational grounds, was formulated by Hobbes (*q.v.*). Its precepts might be also divine commands, but they could be known, though not enforced, independently of all positive legislation, human or divine, as declarations by natural reason concerning that which ought to be done. A certain end was fixed, viz. social peace and security as the general condition allowing individuals to seek their personal good, which is no one thing, but consists in a multiplicity of things that present themselves as desirable in the course of experience. The end being fixed, the 'law of nature' in its ethical sense becomes demonstrable. Since, however, all ends are considered as known only empirically, and the law is determined ultimately by relation to these, Hobbes, though in part rationalist in his expressions, has always been classed with the experientialists in ethics and politics as in general philosophy. His successors and opponents, Cudworth and Clarke, with their appeal to 'right reason' and 'the fitness of things' as the proper determinants of action apart from command or self-interest, were stringently rationalist in form, but did not disentangle their ethics of law from the metaphysical points of view that they had inherited from Plato and his ancient or Scholastic successors. A new departure was taken by Kant when he insisted that the only generally valid form of ethics is that which expresses itself as the 'moral law,' obligatory without relation to ends; and that moral obligation is rationally determined by itself without reference either to experience or to any metaphysical propositions about the nature of a reality beyond experience. Ultimate moral judgments, stating what ought to be done, are determined by 'pure practical reason,' as the ultimate types of assertion about what is or may be real are determined by 'pure speculative reason.' This mode of ethical thought has since been developed and modified with most originality by C. Renouvier (*Science de la Morale*, 2 vols., Paris, 1869) and by E. Juvalta (*Il Vecchio e il Nuovo Problema della Morale*, Bologna, 1914). For further details on rationalist positions in modern ethics see artt. MORAL LAW, MORAL OBLIGATION.

6. Reason versus understanding.—An antithesis that has had considerable importance historically is that which was set up by Kant's distinction between reason in an eminent sense (*Vernunft*) and understanding (*Verstand*). Understanding relates one thing to another within experience, but does not go forward to the ideal completion of experience in a total system. Such an ideal completion is wrought by the reason, which rises above the bounds of experience and affirms the three transcendental ideas of the soul as a permanent being (the psychological idea), of the world as a totality (the cosmological idea), and of God as the necessary being who is the cause of the whole (the theological idea). These ideas of the reason, Kant argues, are not theoretically demonstrable; but neither are they theoretically refutable; and we have the intellectual right to assert them as postulates of the moral life. For, while this, being autonomous, is independent of any metaphysical doctrine, it does not simply rest in itself, but claims that it shall find its fulfilment in a universe ordered in relation to its demands. By Kant's idealist successors in Germany the antithesis of reason and understanding was often turned to account—in defiance of Kant's aim at limiting the pretensions

¹ Rep. vi. 506.

of the speculative reason—to claim the warrant of a higher faculty for their own utterances, all detailed criticism being treated as an affair of the ‘mere abstract understanding.’ To English readers this procedure became familiar through its use by Coleridge and his disciples to discredit attacks on tradition, political or religious. The reason saw in this a deep meaning, placing it at once beyond the vulgar hostility of crude radicalism and the arid defences of conventional conservatism, both alike bound within the limits of the inferior pedestrian faculty. In Germany Schopenhauer (*q.v.*) made an attempt to turn the tables by contending that the understanding is always the originaive thing, reason, as merely conceptual, being only the means of preserving consistency—*e.g.*, to be reasonable (*vernünftig*) is not necessarily to be moral; it may mean only consistency in pursuing well-understood self-interest; true morality implies a sympathetic insight that is not merely rational. Understanding no doubt includes what is below, but it also includes what is above, the process of logically connecting concepts—at once the instincts and perceptions of animals and the perception or ‘instinct’ of genius. This, however, means that Schopenhauer in his own manner continued the old distinction, while inverting the reference of the names. This he could easily do by limiting ‘reason’ to its sense of ratiocination. Whatever the terms used, the distinction in fact remains. A mind so strongly developed on the side of the understanding, or of reason in its sense of ratiocination, as that of J. S. Mill could acknowledge that in some respects Coleridge had deeper insight than Bentham. And Comte, while maintaining the claim of his philosophy to complete ‘positivity,’ found that, because it was philosophy and not merely science, the supreme place in it belonged to certain ‘vues d’ensemble.’ The problem of a truly philosophical reform must be to make the ‘esprit d’ensemble’ predominate over the ‘esprit de détail.’ ‘Dispersive specialism,’ when uncontrolled, becomes an aberration of the human mind, relatively justifying that conservative reaction which at least maintains the synthesis of the past. The Coleridgean distinction, it is evident in the light of these testimonies, cannot be dismissed as a mere verbal trick. The problem is to find the right terms. Thus only can we hope to set ourselves free at once from arrogance and from confusion. Now the right terms are ready to our hand in Milton,¹ who puts into the mouth of Raphael the declaration that the soul’s being is reason, ‘discursive, or intuitive,’ ‘differing but in degree, of kind the same.’ Those terms, taken no doubt from a Scholastic source, go back to Plato and Aristotle. Intuitive reason is the *voûs* of the Platonic theory of knowledge; discursive reason is the *διάνοια*. The former corresponds to the reason of Kantism; the latter to the understanding. These terms, ‘intuitive’ and ‘discursive’ reason, have the advantage of accurately rendering, without arbitrary specialization of meaning, a difference that really exists and is plain when it is pointed out. No difficult introspection is needed to see that there is a total grasp, a ‘synoptic’ view of things, and that there is also procedure from point to point. But it must always be borne in mind that, if the former is higher, it is unavailable till it has been mediated by the latter. The ideal of philosophic presentation is achieved by those who, like Plato and Berkeley, have both in due balance.

LITERATURE.—As the antithesis between reason and experience runs through all the history of philosophy, the following general authorities may first be mentioned: J. Burnet, *Early Greek Philosophy*², London, 1908; H. Ritter and L. Preller, *Historia Philosophiæ Græcæ*³, Gotha, 1898; F. Ueberweg, *Grundriss der Gesch. der Philosophie*, 1¹⁰, Berlin, 1909, ii. 10

1915, iii. 11 1914, iv. 11 1916. On the impossibility of reducing the supreme principle of inductive logic to ‘hypothesis,’ Carveth Read, *Logic*⁴, London, 1914, p. 286 f. THOMAS WHITTAKER.

REBELLION, REVOLUTION.—Rebellion, in the sense of active resistance to established authority, is a phenomenon as old as political society; the doctrine that there is a right so to resist was proclaimed somewhat late, and after the Reformation it came into collision with the theory that kings have a divine right to absolute power. The question was settled to their own satisfaction by the champions of absolutism, but Locke asserts (*Two Treatises of Government*, London, 1690, bk. ii. § 90) that a monarchy such as they advocate, arbitrary and unlimited, is no form of civil government at all; and he shows that the question of a right of revolution is not so easily disposed of. Still popular judgment on the subject of the rightfulness or wrongfulness of insurrection is so often influenced by religious considerations, by the ideas involved in the old theory of divine right (*q.v.*), that no fair conclusion can be formed without an examination of this theory, apart altogether from its political and historical importance.

All early government was monarchical, and the sovereignty of the ancient State was absolute. But this was not because of any belief in divine right, since on this and other kindred subjects men had not begun to hold theories at all; the reason was that they were not yet conscious of those rights as men and citizens which, by their very existence, limit the power of government. In more modern times, according to Bluntschli (*Theory of the State*, bk. vi. ch. viii.), among the Greeks and Germans, kings were regarded as being of divine extraction but not as being themselves gods or as superior to human laws. The Romans, again, chose their kings as a rule by election, and did not recognize a supernatural descent even for those who succeeded by inheritance, although they acknowledged the right of the gods to direct the affairs of the State (*ib.* ch. ix.). It was in mediæval times that it first became the custom to talk of a king as the vicegerent or anointed representative of God, responsible to Him alone. Even usurpers like Pepin regarded themselves as wearing their crown ‘*Dei gratia*.’ Such a claim as that of Louis XIV. to a monopoly in his own person of political rights could not find even outward justification except on the assumption that his power was divinely derived.

There is a sense in which this doctrine may be said to be based upon the teaching of the NT. It did not come from the Jews, whose chronicles show them to have been, as a nation, more rebellious than law-abiding, whose kings besides were in the strictest sense servants of Jahweh, subject in all their acts to the censorship of His prophets. Moreover, the God of the Hebrew people sometimes favoured insurrection, as we see in 2 K 18⁷, where it is stated that the Lord was with Hezekiah, the king of Judah, when ‘he rebelled against the king of Assyria, and served him not.’

On the other hand, the early Christian Church taught what amounted practically to a doctrine of passive obedience to the State. ‘The powers that be,’ says St. Paul, ‘are ordained of God’ (Ro 13¹). And again we find: ‘Submit yourselves to every ordinance of man for the Lord’s sake: whether it be to the king, as supreme; or unto governors, as unto them that are sent by him’ (1 P 2¹³). These words were held, after the Reformation, to support the theory to which we have referred, that kings

¹ Par. Lost, v. 486–490.

were the anointed representatives of God, who, according to Louis XIV., reserved 'to himself the right to judge their acts' (*Œuvres*, Paris, 1806, ii. 317). But such an inference leaves out of account the fact that the Christian religion made a sharp distinction between Church and State, between the all-embracing power of God and the mere temporal authority of the emperor. Its Founder was not a prince of this world, and He Himself expressly separated the things which were Cæsar's from the things which were God's (Mt 22^a, Lk 20^{2b}). The only divine rule belonged to the Almighty, but the early Church preached an unhesitating submission to the laws of the State, so long as these did not conflict with the higher mandate of religion (Ac 5²⁹).

The doctrine of an absolute sovereignty was first set forth in the form of a philosophical theory by Hobbes, and he urged passive obedience to the authority of the State under all circumstances whatsoever. Hobbes supported this extreme form of absolutism by an ingenious use of the theory of contract, which Locke employed later for the contrary purpose of upholding the ultimate right of the people 'to remove or alter the legislature'—the same theory which appeared at the time of the French Revolution to justify violent resistance to the government. We have to bear in mind, when reading Hobbes and Locke, that both are animated by the spirit of partisanship and are writing to condemn and defend, respectively, the rebellions of their time. But Hobbes did not carry his premisses to their logical conclusion. If right lies with might, as he asserts—and as has been held by J. Austin and the English jurists who strip sovereignty of every attribute but force—then right is with the people in any insurrection successfully carried out.

There can, in fact, be no legal right so called to disobey the established law of the land. We find it asserted, anarchical and contradictory as it is, in several of the American Declarations of Independence, along with other claims not less open to criticism (Ritchie, *Natural Rights*, pt. ii., esp. ch. xi.). But a constitutional right of resistance is a contradiction in terms, absurd and unthinkable, though plausible in a certain degree on the old hypothesis of a contract between a ruler and his subjects, according to which it was the part of the former to rule justly and of the latter to obey, the contract lasting only so long as each fulfilled these obligations.

There is, however, another point of view. It is generally admitted that the end for which the State was instituted is, as Locke put it, 'the good of mankind' (ii. § 229). And there are conceivable conditions under which continued well-being may be impossible and the existence even of a nation may be threatened. Under such circumstances it is generally agreed that there is a moral right or even duty of resistance.

The question then may properly be asked, When is revolution justifiable? No rule can be laid down, although the first necessity is that the common good should urgently demand reform of a radical kind. Other considerations must be taken into account. From an ethical standpoint, resistance is to be attempted only where it seems to have a chance of being successful, and approved only where the victorious party has been able not only to overthrow the ruling administration, but to construct on its ruins a government capable of preserving the independence thus attained. Moreover, there is the reservation that this should be done only after every form of conciliation has been tried, and where there are extreme misgovernment and suffering so intolerable as to make the cause seem worth the price of inevitable misery and

bloodshed. Given these conditions, no one will dispute the right of what Schiller calls the 'appeal to Heaven' (*Wilhelm Tell*, act. ii. sc. 2). Even so zealous a defender of the power of the Crown as Johnson was forced to admit that there is a remedy in human nature against tyranny:

'If a sovereign oppresses his people to a great degree, they will rise and cut off his head' (Boswell, *Life of Samuel Johnson*, ed. H. Morley, London, 1884, ii. 144).

Hence we may say that, on moral grounds, revolution, like war, is to be justified only by the necessity which urges a nation to save its own existence at any cost.

It has been frequently argued, in the praise of democracy, that the so-called right of revolution cannot exist under a popular government, because the resistance of a part of the community to the will of the whole is, firstly, immoral owing to the supreme right of the majority, and, secondly, futile owing to its superior might. Henry Sidgwick (*The Elements of Politics*, London, 1891, p. 619 ff.) finds an element of sound reason in both these arguments, but decides in favour of the right of the minority to follow the dictates of its reason and conscience, inasmuch as it may possess superior knowledge and even have at its command superior physical force. Indeed, neither democracy nor any other form of government can prevent the possibility of civil war. Rather, as Kant—himself an advocate of passive obedience—points out, the safety of a State and its security against internal dissension and discontent lie in the education and moral development of its citizens. This is the sense in which statesmanship may best be defined as the art of avoiding revolutions. As Charles James Fox is reported to have said (John Stuart Mill, *Autobiography*, London, 1873, ch. v.), the theory of a right of resistance is a doctrine to be forgotten by subjects and remembered by kings.

LITERATURE.—J. C. Bluntschli, *Theory of the State*, Eng. tr., Oxford, 1885; D. G. Ritchie, *Natural Rights*, London, 1916 (see also an essay on 'The Rights of Minorities,' in his *Darwin and Hegel*, do. 1893). The subject of the ethics of resistance is discussed by T. H. Green, *Philosophical Works*, do. 1906, ii. 455 ff. Among Hume's *Essays*, pt. ii., Edinburgh, 1752, is one on passive obedience. M. CAMPBELL SMITH.

REBIRTH.—See REGENERATION, TRANSMIGRATION.

RECAPITULATION (Biological).—The biological facts indicated by the terms, recapitulation, rudimentary organs, reversion, retrogression, regeneration, rejuvenescence, and regression may be profitably discussed together.

I. Recapitulation.—All the higher organisms reveal in their development certain features which recall a distant ancestry. On each side of the neck of the embryo reptile, bird, and mammal there are branchial pouches comparable to those which have a respiratory function and may or do persist throughout life in fishes and amphibians. In reptiles, birds, and mammals these pouches are on the whole transient, like fleeting reminiscences. The first seems to persist as the eustachian tube, and the thymus gland is connected with another, but the rest pass away without persistent result. Similarly, the embryos of higher vertebrates show for a time a notochord—a primitive skeletal axis derived from the roof of the embryonic gut, and thus of endodermic origin. It persists throughout life in lancelets and lampreys, serving as the dorsal axis of the animal, as the forerunner of the backbone which, from fishes onwards, develops from the mesodermic sheath of the notochord. The notochord does not become the backbone, though perhaps serving as a sort of tissue-scaffolding for it, and every stage of the replacement of the one by the other is to be seen in fishes. Yet

on to man himself the notochord appears in development, has its short day, and passes, leaving but an unimportant vestige behind. Similarly, in the establishment of the brain, the skull, the heart, and other important structures the foundations are laid down on old-fashioned lines, not directly suggestive of what is to follow. Thus in individual organo-genesis there is frequently a recapitulation of historical stages. The development of many an organ is circuitous, as if the old paths had to some extent to be re-trod, and yet the progress of a hundred thousand years may be condensed into one day. Another aspect of the same fact is that the developing embryos of, say, bird and reptile are for some days very much alike, moving on parallel lines along the great highway of amniote development, but, sooner or later—about the sixth day in the case of the chick—their paths diverge and become distinctively avian and saurian. It is thus that the individual development (ontogeny) tends to recapitulate racial evolution (phylogeny), that the past lives again in the present with a compelling force. Three saving clauses must be noted: (a) the recapitulation is on the whole very general and always much condensed; (b) the individual development (especially when there are larval forms) often has its recapitulatory features obscured by secondary adaptations to relatively recent conditions of life; and (c) a living creature is extraordinarily specific from the very first—itself and no other. Yet it remains an important fact that the organism's inheritance garnered for ages does in many cases express itself in a step-to-step development, from the general to the special, which is in some degree a recapitulation of stages in what is believed to have been the racial evolution. But the doctrine of recapitulation is one that requires careful handling.

2. Rudimentary organs.—The fact of recapitulation leads naturally to the occurrence of rudimentary or vestigial structures, which linger on in dwindled expression long after they have ceased to be of use. Darwin compared them to the unsounded letters in some words, quite functionless, but telling us something of history. Some of the whales have deeply buried remnants of hip-girdle and hind-limb; birds have a vestigial and useless right oviduct; the skate has a minute remnant of a gill in its spiracle; man has a useless vestige of a third eyelid, occasionally with a supporting cartilage, and a large number of other historical relics. Among vestigial organs may be included those definite structures which appear in the course of development in weak expression and disappear without leaving a trace. Thus the whale-bone whale has two sets of tooth-rudiments which never cut the gum. But the list must not include those structures which, though not attaining their original expression or form, are diverted to some new line of development. Thus the spinnerets of spiders are morphologically equivalent to two or more pairs of abdominal appendages—much reduced when compared with limbs, but in no true sense vestigial. The eustachian tube, which leads from the tympanic cavity to the back of the mouth, is a transformed and persistent spiracle, but it should not be called a vestige. In fact, one of the great methods of organic evolution has been the invention of novel structures by the rehabilitation or transformation of what is really very old. The three-linked chain of ossicles which convey vibrations from the drum to the internal organ of hearing was once in whole or in part included in the commonplace framework of the jaws. It is interesting to inquire whether there may not be vestigial functions and habits as well as vestigial organs and structure. Thus, according to Darwin, the dog that turns round and round on the hearth-

rug before settling to sleep is making a comfortable bed in imaginary grass. Its needless activity is a vestigial survival of what its wild ancestors did to a purpose among the rough herbage. Similar interpretations may be given of 'shying' in horses and so on, but they must be considered critically.

When, because of some defect in nutrition or the like, there is an arrest of development, an organism may present an appearance which recalls what is permanent in a remote ancestral type. Thus harelip in man has been compared to the naso-buccal grooves normal in cartilaginous fishes. It does not tend to clearness to call this sort of thing a reversion; it is an unfinishedness in development, often due in mammals to some extrinsic cause affecting the mother. If, as the result of famine, war, over-work, poisoning, or other causes, infants are born markedly arrested in development, it would be justifiable to describe this as reversionary, but it cannot be asserted that the offspring of these under-average individuals would in conditions of good nurture be under-average. Many reversionary conditions exhibited by individual organisms are due to modifications (indents), not to variations (new outcomes), and are not directly transmissible.

3. Reversion.—In the art. ATAVISM it has been pointed out that what may be described as a harking back to a more or less remote ancestor may not be due to the re-assertion or re-awakening of ancestral hereditary contributions which have lain for several generations latent or unexpressed, like dormant seeds in a garden. This must be re-emphasized, especially in the light of Mendelian experiment, for it seems probable that many domesticated races of animals (such as hornless cattle or tailless cats) have arisen by the dropping-out of some item or items in the heritable complex of the wild species or of its descendants. By taking advantage of the mysterious natural analysis or 'unpacking' of the complex pelage of the wild rabbit, man has established many true-breeding colour-varieties or races of domestic rabbit. It may happen that a crossing of two of these races results in offspring resembling the wild rabbit. But this is not to be regarded as a mysterious rehabilitation of a dormant 'wild-rabbit character' but as a 're-packing' of what had been previously sifted out. This is the Mendelian interpretation of reversion, and it is corroborated by many experiments. On the other hand, the sudden appearance of stripes on the fore-quarters of a horse, or of a horned calf in a pure-bred hornless breed, may perhaps be due to the re-assertion of a particular 'factor' which has lain latent for many generations.

4. Retrogression.—The term 'retrogression' should be kept for cases where structures pass in the individual development from a higher to a lower grade of differentiation, or for cases where a similar reversal may be recognized, on presumptive evidence, in the history of a race. The larval ascidian is a free-swimming creature, like a miniature tadpole, with a brain and dorsal nerve cord, a brain-eye, and a notochord supporting the locomotor tail. In the course of the subsequent adaptation to a sedentary mode of life the nervous system is reduced to a single ganglion, the brain-eye disappears, and the tail is absorbed. As regards these structures the ascidian shows retrogression, though it must be clearly understood that the adult is on the whole a much more complex organism than the larva. The respiratory pharynx, e.g., exhibits a high degree of differentiation. Individual retrogression is well illustrated in the life-history of many parasites. Thus the well-known *Sacculina*, which is parasitic in crabs,

starts in life as a free-swimming Nauplius-larva, with three pairs of appendages, a median eye, and a food-canal, which all disappear in the course of the adaptation to parasitism. Similarly the thymus gland is relatively large in most young mammals, but undergoes retrogressive development as age increases, and this again suggests that retrogression does not necessarily imply any degeneration of the organism as a whole, but rather a re-adjustment to a changed mode of life. The gills of a tadpole exhibit retrogression and are entirely absorbed as the lung-breathing frog develops. But the frog as a whole is obviously on a higher structural plane than the tadpole. Retrogressive changes are sometimes exhibited seasonally, as is seen in the dwindling of the reproductive organs of birds after the breeding period; or at crises in the life-history, as in the extraordinary de-differentiation that occurs in the metamorphosis of insects; or after serious injuries when a process of dissolution and reduction often occurs before the reconstitution begins.

5. Regeneration.—Great interest attaches to the regenerative capacity exhibited by many animals and by most plants. It is exhibited in the repair of injuries, in the restoration of lost parts, and in the regrowth of a fragment into a whole. It is rarely exhibited in regard to internal organs by themselves, though it includes them if they are removed along with a portion of the body as a whole; it is not common in relation to wounds that border on being fatal; it has a curious sporadic distribution among animals, and this, taken along with other considerations, points to its occurrence being adaptive. Weismann in particular sought to show that the regenerative capacity tends to occur in those animals, and in those parts of animals, which are, in the natural conditions of their life, peculiarly liable to a frequently recurring risk of injury, provided always that the part is of real value, and that the wound is not fatal. The facts of regeneration are very remarkable, such as a fragment of begonia-leaf or potato-tuber growing into an entire animal, one Hydra producing half a dozen when cut into pieces, a starfish arm forming a complete starfish, an earthworm growing a new head or a new tail, a lobster replacing a leg, a snail restoring its horn and the eye at the end of it forty times in succession, a newt's eye making a new lens, a lizard regrowing a tail, and a stork repairing a great part of its jaw. It is difficult to avoid the conclusion that, in the process of differentiation that goes on in normal development, the essential constituents of the inheritance are distributed throughout the body in all the cells though only a few of them are expressed in each cell. If we think of the inheritance as a bag of diverse seeds, and of the cells of the body as the thousand beds of a garden (some small animals have about that number), differing greatly in exposure or stimulation, we can imagine that, although each bed gets a representation of all the different kinds of seeds, only a few will develop in each case. Under extraordinary circumstances, however, it might be possible to awaken in a particular set of beds a full representation of all the seeds, and it is something like this that occurs in regeneration. In some tissues the re-awakening is easy, as in the cambium of plants or the bodies of polyps and simple worms; in other cases it is impossible, as in the supremely differentiated nervous tissue of higher animals which cannot even replace its own worn-out elements. It is not difficult to understand that the re-growth should not always be perfect; thus a lobster, instead of growing an eye for an eye, may grow an antenna instead, and an earthworm that has lost its head may re-grow an anterior tail.

Particularly instructive, linking regenerative processes back to recapitulation, are two facts: (1) the restoration is sometimes effected by stages which are different from those of embryonic development, and (2) the final result, as in the case of a lizard's tail or an insect's foot, may be of a somewhat simpler pattern compared with the original—may indeed be of definitely ancestral type.

The wide-spread distribution of the regenerative capacity among organisms is to be thought of in connexion (a) with the continual occurrence of recuperative processes that tend towards making good the wear and tear of bodily structure, for regeneration is this in a more thoroughgoing fashion; (b) with the frequent occurrence of asexual modes of multiplication, for it is impossible to draw a firm line between the development of a piece thrown off in the spasms of capture and the development of a piece separated off by more spontaneous autotomy. Many a starfish habitually surrenders an arm when that is seized by an enemy; as the creature has not a single nerve-ganglion in its body, there can be no question of calling its self-surrender deliberate; yet this reflex autotomy expresses the fact that the creature has organically learned the lesson that it is better that one member should perish than that the whole life should be lost. But there is at least one starfish which separates off arms as a mode of multiplication, as others do to effect escape.

6. Rejuvenescence.—It has been already mentioned that the process of re-growing a lost part, or of restoring a whole from a fragment, is frequently preceded by de-differentiation—a retreat preparatory to an advance. Thus regeneration is linked back to retrogression. But another fact of great significance has rewarded C. M. Child's prolonged study of Planarian worms: the process of reconstitution of a fragment separated off either naturally or artificially, or of a form greatly reduced by starvation, is preceded by a period of rejuvenescence. By rejuvenescence is here meant that the fragment or starveling shows a higher rate of metabolism than when it was part of the intact organism or was untampered with by starving. The rate of metabolism is gauged by the output of carbon-dioxide (measured by Tashiro's 'biometer') and by the change in susceptibility or resistance to certain poisons, such as cyanides. Similar exhibitions of rejuvenescence are discovered in the asexual multiplication of hydroids and some other relatively simple animals, and it seems very probable that senescence and natural death may be in this way indefinitely staved off. On Child's view the process of differentiation necessarily involves a retardation of the rate of life and a diminution of vigour, because of the establishment of complexities of structure in the colloidal substratum which forms the framework of the chemico-physical basis of life. This complexity of stable framework adds greatly to efficiency, but it also increases mortality. The very simple organism has practically perfect processes of rejuvenescence; in forms like the freshwater polyp rejuvenescence is never far behind senescence; in more complex forms there have to be special periods for rejuvenescence; in all the higher animals even this possibility is much restricted and senescence is inevitable. It may be that one of the several reasons why sexual reproduction by special germ-cells has replaced asexual reproduction (and has been added to it or kept along with it in cases, like Hydra, where it is far from being the main means of multiplication) is that it affords opportunity for re-organization or rejuvenescence at the very start of the individual life—thus lessening the risk of the organism being 'born old.'

Looking backwards over the various processes

briefly discussed in this article, we see the possibility of pathological variation or modification at every turn. (1) The degree of development depends in some measure on the fullness of appropriate nurture; the absence of certain stimuli in the nurture may inhibit the full expression of the inheritance. In man's case we know that this fortunately works both ways, for changes of nurture may hinder the opening of undesirable as well as promising buds. (2) The rehabilitation of a long latent ancestral character may spell mischief; it may be that some types of criminals are anachronisms of this sort. (3) Rudimentary organs often show a considerable range of variability, and a disturbance of balance may be caused by the undue prominence or activity of a structure which is normally dwindling away. (4) It seems important to recognize that a great part of what is called disease (apart from microbial disease) may be described as metabolic processes which are occurring out of place and out of time. What may be advantageous in one organism or organ or stage of life may be fatal in another. The involution or retrogression which besets the thymus is normal, but, if it besets the thyroid, it is likely to be fatal. The process which separates off the stag's antlers every year would be a serious necrosis of the bone if it occurred elsewhere. With what would in other cases be a pathological product of the kidneys the male stickleback weaves the sea-weed into a nest. The capacity which is normalized in one animal to effect regeneration may lead to a dangerous neoplasm in another.

7. **Regression.**—'Regression' is a term applied by Galton and Pearson to the tendency exhibited by the offspring of the extraordinary members of a stock to approximate towards the mean of that stock. It probably holds only in regard to blending characters, such as stature, and not in regard to Mendelian characters. It works both ways, levying a succession tax on the highly gifted and on those unusually defective. The mean height of the sons of a thousand fathers of 6 ft. will be 5 ft. 10.8 in., approaching the mean of the general population; the mean height of the sons of a thousand fathers of 5 ft. 6 in. will be 5 ft. 8.3 in., again approaching the mean of the general population of sons. The reason for the fact of filial regression is that the ancestry of any ordinary member of a human community is always a fair sample of the general population. Here again we have an illustration of the past living on in the present, the thread uniting the various subjects treated of in this article.

J. A. THOMSON.

RECEPTIVITY.—'Receptivity' is a technical term used by Kant and those influenced by his philosophy, and employed in one definitely restricted way. Kant always talks about the 'receptivity of impressions,' and uses this expression to describe the sensuous faculty of the human soul. Sense is to him a mere faculty of receiving passively what comes to the mind from a source outside of it; it is thus distinguished from understanding, which is a faculty in virtue of which the mind originates the concepts necessary for the scientific activity of thought.

The notion of sense being a receptive faculty is

ultimately derived from the Aristotelian philosophy. But the Aristotelian theory of the nature of the sensuous faculty differs markedly from the Kantian. According to Aristotle, sense is a faculty, and the sense-organ is an instrument, by which we receive in consciousness those characteristics which, taken together, constitute the form or knowable nature of material objects; but, while receptive, sense is at the same time discriminative, *i.e.*, it is able to distinguish the different sensuous qualities and to combine them (when they are compatible) in a single perception. Hence, according to Aristotle, sense manifests the characters both of receptivity and of spontaneity, features which Kant wished to assign to diverse faculties of the soul.

Wallace, *Outlines of the Philosophy of Aristotle*, London, 1883, p. 87 ff.; W. Windelband, *Hist. of Philosophy*, Eng. tr., London and New York, 1893, p. 150. G. R. T. ROSS.

RECHABITES.—Although the very existence of the Rechabites as a clan or community distinct from, and yet at least to some extent incorporated in, Judah would have been unsuspected save for the narrative of Jer 35, it is evident from the language there used that Rechabite characteristics were well known at the end of the 7th cent. B.C. It was maintained by Jeremiah (2^{10L})—perhaps not altogether justly, inasmuch as the prophet did not make allowance for the Canaanite elements in Israel—that his own nation had shown a fickleness in religion the like of which could be seen in no other people; and, by way of contrast, he showed the loyalty of the Rechabites to ancestral custom. Although the literal meaning of Jer 35⁸ is perhaps not to be pressed, the natural inference from this statement is that the Rechabites were not very numerous, since 'the whole house' (by which phrase we should naturally understand at least the adult male members) were taken by Jeremiah into one of the chambers of the Temple. Thereupon, in response to an invitation to drink wine, the Rechabites are represented as saying:

'We will drink no wine: for Jonadab the son of Rechab our father commanded us, saying, Ye shall drink no wine, neither ye, nor your sons, for ever: neither shall ye build house, nor sow seed, nor plant vineyard, nor have any: but all your days ye shall dwell in tents; that ye may live many days in the land wherein ye sojourn. And we have obeyed the voice of Jonadab the son of Rechab our father in all that he charged us, to drink no wine all our days, we, our wives, our sons, nor our daughters; nor to build houses for us to dwell in: neither have we vineyard, nor field, nor seed: but we have dwelt in tents, and have obeyed, and done according to all that Jonadab our father commanded us.'

The 'Jonadab the son of Rechab' here referred to is evidently the same who is mentioned in 2 K 10^{15ff} as a supporter of Jehu in his attack on Baal-worship. From the fact that he is called by the Rechabites 'our father' it might be inferred that he was either the founder of a sect or gild or the eponymous ancestor of a clan. Such an inference is, however, inadmissible, since Jehonadab himself is described (2 K 10¹⁵) as 'son of Rechab'; it seems better, therefore, to understand the word 'father,' as in Jg 17¹⁰, as used of a religious teacher or law-giver. It is not improbable that it was in the days of Jehu that the primitive Decalogue setting forth the exclusive claims of Jahweh to the ritual worship of Israel was drawn up (see art. ISRAEL), and at the same time Jehonadab may have given to his own clan the rule of life which thenceforth for more than two centuries they held fast.

The term 'Rechabite' has frequently been regarded as equivalent to 'teetotaler,' but it is to be noted that abstinence from wine was but part of the rule which Jehonadab imposed upon his

people, the sum total of which was insistence on the continuance of a nomadic life and on the repudiation of all Canaanite civilization. Jeremiah did not offer the Rechabites bread, which, with the Chaldean army in occupation of the land, was perhaps scarcely to be obtained; but it may certainly be inferred from the Rechabites' refusal to cultivate land and to sow seed that they also abstained from cereal food, living in nomadic fashion on milk. The intense interest of the episode lies in the fact that the Rechabites, having no concern with agriculture, could have had no share in the great agricultural feasts—the only feasts made obligatory in the older documents of the Pentateuch (Ex 23¹⁴⁻¹⁷, 34^{18, 22}; cf. Dt 16¹⁻¹⁷)—and consequently no share in the sacrifices offered on the occasion of these feasts (Ex 23¹⁸ 34²⁶). In 2 K 10²³, indeed, Jehonadab is represented as accompanying Jehu when the latter went in to the temple of Baal 'to offer sacrifices and burnt offerings'; but, since these sacrifices were offered to Baal, whose worship Jehu was bent on destroying, no argument can be drawn from the incident as to Jehonadab's view of sacrifice, even if he really was associated with Jehu on this occasion.

The great prophets of the 8th and 7th centuries B.C. (see Am 5²¹⁻²⁵, Hos 6⁶, Is 1¹¹⁻¹⁴, Mic 6⁶⁻⁸, Jer 7²¹⁻²³; cf. Dt 5²²) all use language which can scarcely be interpreted otherwise than as meaning that, according to the tradition to which the prophets confidently appeal, sacrifice was unknown in ancient Israelite religion; and, although it may be urged that those few passages can have little weight against the vast mass of testimony both of the Pentateuch and of the historical books, the wonder is, when we consider the dominance of Zadokite religion and its influence on the Hebrew Scriptures, not that we possess so few passages in denunciation of sacrifice, but rather that we possess any at all.

It is significant that the first prophet whose denunciation of sacrifice has come down to us is Amos, the sheep-breeder of Tekoa, *i.e.* a man whose manner of life, though he lived in a permanent dwelling, may be supposed in many respects to have approximated to the nomadic rather than to the agricultural life. Whether Amos, like the Rechabites, rejected wine is uncertain. He denounces the drinking of wine in the case of the Nazirites (2¹³), and he certainly disapproved of the probably excessive wine-drinking at Bethel (4¹); but the more natural interpretation of such passages as 2¹³ 4^{7, 9} 5¹¹ is that he did not object to agriculture in itself; and the same is probably true of Hosea and the other pre-Exilic prophets.

But, although the Rechabites kept their nomadic customs down to the last days of the kingdom of Judah, yet even they, or at all events some of them, were finally compelled, at least to some extent, to abandon their ancestral rule; for in the days of Nehemiah (3¹⁴) a Rechabite, Malchijah by name, repaired a portion of the wall—a fact which implies that some members of the clan had adopted a fixed habitation. Doubtless in Israel proper the change from nomadic to agricultural life was accomplished only gradually, and was more rapid in some clans than in others. Probably, as the prejudice against Canaanite civilization was gradually broken down, certain elements more definitely associated with Canaanite religion would still be resisted for a considerable time. Thus Hosea, though he says that Jahweh has given the corn and the wine and the oil (2⁹), regards raisin cakes (3¹) as an element of heathenism.

One thing, however, is certain: what was possible for the Rechabites was possible for other tribes also. The unity of the nation which later

Hebrew writers ascribe to the period of the monarchy is not attested by the older documents. The genuine Israelites—*i.e.* the immigrant clans who subjected the Canaanites—brought in with them a monotheistic religion immeasurably superior to the nature-worship of Canaan and possessing neither sacrifice nor other barbarous rites. It is their voice that speaks in the noblest passages of prophecy and of the Psalter, and they are the true precursors of Jesus Christ.

LITERATURE.—See W. H. Bennett, art. 'Rechabites' in *HDB* and bibliography there given. R. H. KENNETT.

RECOGNITION.—1. Recognition is the psychological process by which an object presented in perception or imagination gives the impression of having already formed part of our experience. The term 'object' is here used to include anything from a sensory quality, colour, taste, odour, etc., to the contents of a novel or a philosophical system; the most frequent cases are, however, objects of perception, as persons, animals, buildings, scenes, melodies, etc. The impression of 'already experienced' may have any degree of circumstantiality; thus a face, a gesture, a foreign word, may appear vaguely familiar without any definite thought of the previous occasion or occasions on which it affected us, while an odour or a scene may call up with extreme vividness the exact date and all the important details of the earlier experience.

2. Recognition has really two distinct stages, the second of which frequently remains unrealized. There is first the 'sense of familiarity,' an immediate awareness that the presented object is not new to us; this sense may not be formulated in words, or in any cognitive terms, but may remain a mere feeling; practically it shows itself in our adaptation or adjustment to the object; during mental abstraction a key, *e.g.*, is grasped in a different way from a knife or a pair of scissors. Common words, everyday objects, frequently repeated sense-qualities, etc., rarely pass beyond this stage of immediate, direct, or indefinite recognition. The second stage is that in which associated ideas arise in the mind, the name of a person seen, the place where a former meeting took place, the topic of conversation, etc.; such memories circumstantiate the process of recognition, and verify it if doubtful. This is mediate or definite recognition—recognition in the strict sense of renewed cognition. It is obvious that, as a form of knowing, recognition may be true or false, correct or incorrect. An 'already experienced' may fail to be recognized, may not excite the sense of familiarity, or call up the associated ideas; a scene revisited after a term of years may impress us as quite unfamiliar; a professor of philosophy is said to have read an article in an encyclopedia with much approval, and to have been greatly surprised to find his own name at the end. Again, a 'new' object may give the sense of familiarity that belongs to one that is 'old' or already experienced; an event that is being enacted before our eyes appears as if it were the repetition of something we have already known, and we seem to anticipate the details that are to follow. A modified form of this error is when an imagined event, a tale read, an adventure described, or a dream is falsely recognized as a real event that has happened to oneself—the so-called 'pathological lying.' Experiments show also that the degree of subjective certainty or confidence has very little relation to the objective accuracy of the recognition; a correct judgment may be hesitant and uncertain, while a false recognition may have absolute confidence behind it.

3. The psychological problem which arises is

that of the analysis of the process of recognition, as it actually occurs, the conditions on which it depends, and the differences between its forms. The classical theories of recognition are those which emerged in the controversy between Höffding and Lehmann (see Literature below). According to Höffding, the typical form of recognition is the immediate; it represents the first stage beyond pure sensation towards ideation, a half-way or transition process, in which memory is involved, a 'tied' or 'implicate idea,' as opposed to the 'free idea' of the memory-image. When a stimulus which has already given rise to a sensation (of colour, sound, or the like) is repeated after an interval, the new sensation will be different from the old, because of the latter's previous occurrence. Further, Höffding holds that this modification takes place through the re-excitation of the earlier sensation and the fusion of this element with the new or direct presentation. The revival may not be a separate or conscious one, the fusion being between processes rather than products. If A represents the direct sensation, and a its image or indirect revival, then recognition is really a complex of $A + a_1 + a_2 + \text{etc.}$ Höffding prefers the formula $\left(\frac{A}{a}\right)$, where a represents the one or more

past experiences called up by the direct process A and combining or fusing, subconsciously, with it. The theory was connected, inconsistently, it may be said, with the physiological assumption that, when a sensation is repeated or revived in memory, a similar modification takes place in the same part of the brain as the original process; each time it occurs, some trace is left, by which the change becomes easier with each successive repetition. Bain¹ had already ascribed to this supposed fact the effect of repetition in making any single impression *adherent*, i.e. more firmly impressed on the mind, more easily retained and recalled. The nerve tracks become more practicable the oftener they are traversed. 'A process,' as James says, 'fills its old bed in a different way from that in which it makes a new bed.'² Psychologically Bain infers only 'that a present occurrence of any object to the view recalls the total impression made by all the previous occurrences, and adds its own effect to that total.' Thus there is a constant re-statement of past impressions, and a corresponding deepening of the present impression, as an experience is repeated. But for Höffding a sensation or perception acquires through this repetition a distinguishing mark—the mark or character of knownness, or familiarity, by which it is clearly distinguished from entirely new sensations, or new perceptions.

4. Lehmann's theory takes mediate recognition as the typical form, and association by contiguity as the process chiefly involved in it. When an object is first perceived, we associate with it some of its accompanying events or circumstances—with a person, e.g., the name, the actions, or the words; with a sense-quality, its name also, or its effect upon us, some determining mark, some 'head of classification.'³ On a second occasion, the object tends to call up, by contiguity association, in memory the associated name or mark; this, according to Lehmann, is recognition. When the ideas are distinct (date, scene, etc.), we have definite or circumstantial or explicit recognition; but, after frequent repetitions, an object may cease to call up definite associates; these remain below the threshold of consciousness, but are none the less active, and we have implicit or immediate or direct recognition, which is thus a reduced form of the first type. James states it clearly when,

referring to the recovery of a name which we have sought for some time, he says:

'It tingles, it trembles on the verge, but does not come. Just such a tingling and trembling of unrecovered associates is the penumbra of recognition that may surround any experience and make it seem familiar, though we know not why.'

5. Recent experimental work suggests that the process of recognition is much more complex and varied than either of the above theories implies, and that we learn to know a repeated object by different signs or marks, just as we learn to know a distant or a near, a beautiful or an ugly, object. The characters which we learn to use as signs of repetition, or of the 'already experienced,' vary for different materials, for different individuals, and for the same individual at different times and for different purposes. They are, e.g., (1) the facility or ease with which we perceive or notice or grasp the object, its clearness and definiteness; (2) the feeling of agreeableness or pleasure, which often accompanies this facility; (3) verbal or other determining marks attached to the object on its earlier occurrence, and recalled by 'association'; (4) expectation or anticipation of changes or effects of the object, which are in fact realized, etc. (5) But the principal mark arises from the fact that our organic and intellectual reaction to a repeated object is different in a very characteristic way from that to a totally or partially new one. In the latter case, if we are interested, we make an effort to appreciate the object, 'run the eyes over' the outstanding points, imitate a movement with our head or limbs, try to follow a sound with our inward voice; by this means we appropriate it, link it on to our self 'complex.' When it is repeated, the whole reaction, through the law of habit, runs off with little or no effort, and the attitude of appropriation is instinctively taken up. Where for any reason the self-feeling is absent or weak, or where reactions do not easily take place, as in illness or senility or in any temporary lack of attention, recognition fails; in extreme mental feebleness or degeneration the simplest everyday impressions may appear entirely new and strange, however often repeated. Conversely, in intense pathological self-absorption, the strangest and newest objects may give the illusion of 'the *déjà vu*.' In the former case recent events may be revived as memories, yet fail of recognition; recognition and reproduction are, in fact, distinct processes. Recognition, says Claparède, implies a previous act of synthesis, an attachment to the personality. When the impression or image is repeated, it is coloured by the self-quality, as it were, which it received from being taken up or assimilated into our consciousness.² There is accordingly a primary and immediate certainty, given by the immediate feeling or attitude of the self to the impression; this is either weakened or strengthened by the memories and associations that subsequently arise, which, if adequate, make the recognition into a definite or circumstantial one. False recognitions mostly depend on the instinctive confidence in the primary feeling, which may be misled by some partial similarity between the new and some old impression.

The very interesting experimental work on the subject of recognition is summarized in Katzaroff and other papers; see references in Literature below.

RECORDING ANGEL.—In all the early literatures of the world the angel is called upon to perform a motley variety of tasks. The universe was recognized to be the scene of a ceaseless divine activity. But it puzzled men to know how God, who was pure spirit and infinite, could come into actual contact with matter, which was impure, imperfect, and finite. Hence arose the notion of the angel, a kind of offshoot of the divine, a being semi-human and semi-divine, standing on a lower rung of divinity than the Deity, mingling freely with earthly creations and exercising over them an influence bearing the strongest resemblance to that which came directly from the Deity. The angel, in other words, bridged the yawning gulf between the world and God. It follows from this that, as the innumerable experiences of man during life and after death were subject to angelic influences, the latter had, in the imagination of early peoples, to be pigeon-holed into separate and independent departments of activity. Each angel had its own specialized task to see to, and each religion particularized those tasks in its own way. The idea of a recording angel charged with a peculiar task of its own and bearing a distinct name or series of names figures in Judaism, Christianity, and Muhammadanism. The function which it performs is, in the main, identical in all the three religious systems, but the details vary considerably.

In Judaism the work of the recording angel is that of keeping an account of the deeds of individuals and nations, in order to present the record at some future time before man's heavenly Maker. The presentation of this record may take place during the lifetime of the individual or nation, or, as is more often the case, after death; and upon this record depends either the bliss or the pain which is to be apportioned in the after life. In the OT there are three passages which form a basis for these ideas. In Mal 3¹⁶ it is said: 'Then they that feared the Lord spake one with another: and the Lord hearkened, and heard, and a book of remembrance was written before him, for them that feared the Lord, and that thought upon his name.' Jahweh hears what His righteous servants say and resolves to reward them at some future time for their steadfastness. The figure of speech is derived from the custom of Persian monarchs, who had the names of public benefactors inscribed in a book, in order that in due time they might be suitably rewarded.¹ In Ezk 9⁴ the man 'clothed in linen which had the writer's inkhorn by his side,' is bidden to 'go through the midst of the city, through the midst of Jerusalem, and set a mark upon the foreheads of the men that sigh and that cry for all the abominations that be done in the midst thereof.' This man 'clothed in linen' is one of the six angels sent to exact speedy punish-

ment upon the defiant city of Jerusalem. But the punishment must be discriminating. While the unrepenting are to be slain without mercy, the angel was to 'set a mark' on those who expressed sincere grief for their backslidings and who dissociated themselves from the sinners. This mark was, presumably, to serve as a reference on the day when retribution would be meted out. The third passage is Dn 12¹: 'And at that time shall Michael stand up, . . . and there shall be a time of trouble . . . and at that time thy people shall be delivered, every one that shall be found written in the book.' When this is read in connexion with the succeeding verses, the underlying idea seems clearly that of some future divine judgment when the righteous classes and the wicked classes will each reap their deserts, and the record of 'who's who' will be found written in 'the book,' the angel Michael acting as recorder.

As B. H. Charles puts it, 'the book was "the book of life" . . . a register of the actual citizens of the theocratic community on earth. . . . This book has thus become a register of the citizens of the coming kingdom of God, whether living or departed' ('Daniel,' in *Century Bible*, Edinburgh, n.d. [1913], p. 139).

A rabbi of the Mishnaic epoch, Akiba ben Joseph (A.D. c. 50-c. 132), summarized and elaborated all these OT conceptions of the account between man and his Maker (without, however, introducing the idea of the recording angel) in a remarkably striking parable, thus:

'Everything is given on pledge and a net is spread for all the living. The shop is open and the dealer gives credit; and the ledger lies open; and the hand writes; and whosoever wishes to borrow may come and borrow; but the collectors regularly make their daily round and exact payment from man whether he be content or not; and they have that whereon they can rely in their demand; and the judgment is a judgment of truth, and everything is prepared for the feast' (Mishnâh, *Abôth*, iii. 16).

The 'feast' refers to the leviathan, on the flesh of which, according to a frequent idea of the Talmud and Midrash, the righteous Israelites will regale themselves in the beyond.

The rich angelologies of the Jews and Christians (as well as of the Muhammadans, who borrowed largely from the OT and the rabbinic writings) built further on these OT references to a recording angel, and transferred the work of recording to some one or other angel bearing a special name, the Deity becoming merely the recipient of the record. In rabbinic theology and in the mysticism of the *Zôhâr* and mediæval Kabbālâh generally, the recording angel is kept particularly busy in one great department of activity—viz. prayer. Metatron (Gr. *μητρώπ*, Lat. *metator*, 'guide') usually plays this rôle. According to a statement in Midrash *Tanhûmâ Genesis*,¹ as well as in the Slavonic *Book of Enoch*,² it is the angel Michael, originally the guardian angel of Israel, who was transformed into Metatron, the angel 'whose name is like that of his Divine Master'³—a piece of doctrine which may possibly have influenced the Christian doctrine of the Logos. So impressive was the work of Metatron that a rabbi of the early 2nd cent. A.D., Elisha b. Abuyah, confessed to seeing this angel in the heavens and thus being led to believe that the cosmos was ruled by 'two powers.'⁴ Of course such belief was heresy. According to a Talmudic statement, Metatron bears the Tetragrammaton in himself. This was derived from Ex 23²¹, where it is said of the angel who would in the future be sent to prepare the way for the Israelites: 'Beware of him . . . for my name is in him.'

According to a passage in the *Zôhâr* (Midrash *Ha-Ne'el-am* on section *Hayê Sarah*), Metatron 'is appointed to take charge of the soul every day and to provide it with the necessary light

³ T.B. *Sanh.* 38b.

⁴ T.B. *Hagigah*, 15a.

from the Divine, according as he is commanded. It is he who is detailed to take the record in the grave-yards from Dumah, the angel of death, and to show it to the Master. It is he who is destined to put the heaven into the bones that lie beneath the earth, to repair the bodies and bring them to a state of perfection in the absence of the soul which will be sent by God to its appointed place [i.e. the Holy Land where they will again be put into bodies, which have come thither through a process of terrestrial transmigration—a favourite idea of some rabbinic theologians].

The *Book of Jubilees*¹ speaks of Enoch as 'the heavenly scribe.' A similar description is applied to Metatron in T.B. *Hagigah*, 15a, where he is designated as 'he to whom authority is given to sit down and write the merits of Israel.'² In the Jerusalem Targum to Gn 5²⁴ 'And Enoch walked with God: and he was not; for God took him,' the rendering is 'And he called his name [i.e. Enoch's] Metatron, the great scribe.' In Targum *Jonathan* to Ex 24¹ 'And he said unto Moses, Come up unto the Lord,' the paraphrase runs 'And unto Moses, Michael the archangel of wisdom said, on the seventh day of the month, Come up unto the Lord'; while in *Ascensio Isaie*, ix. 21, it is Michael who is honoured with the name of heavenly scribe. From these various references one readily infers that Metatron, Enoch, and Michael were names given to angels who were pre-eminent in the realms of wisdom or scholarship, and who would, as such, be best qualified to act as 'scribes' or 'recorders' of men's deeds.

Passages in the Qur'an bear out this view of a special 'scholarly' angel who writes down the record of men. In *sūrah* ii. the rôle is given to Gabriel, who was so great an adept in the work that the act of writing down the Qur'an for Muhammad's benefit was actually ascribed to him. Man's work on earth and God's work in heaven were brought into touch with one another by the scholarly recording activities of Gabriel. In *sūrah* i. another view is propounded.

'When the two angels deputed to take account of a man's behaviour take account thereof; one sitting on the right hand, the other on the left: he uttereth not a word, but there is with him a watcher ready to note it.'

Two 'recording' angels seem to be in evidence here. The meaning seems to be that, although the dying man may refuse to speak, or be unable to do so, yet the two 'recording' angels can read his inmost thoughts and take complete account of them. Sale puts quite another construction on the text, which, however, seems very far-fetched and improbable.

Quoting from the native commentary of Al-Beldawi, Sale further tells of a Muhammadan tradition to the effect that 'the angel who notes a man's good actions has the command over him who notes his evil actions; and that when a man does a good action, the angel of the right hand writes it down ten times; and when he commits an ill action the same angel says to the angel of the left hand, Forbear setting it down for seven hours; peradventure he may pray, or may ask pardon' (note on *sūrah* i. in Sale's *Koran*, new ed., London, 1825, ii. 350).

The idea of the 'good' always preponderating over the 'evil' is taught abundantly in the rabbinic writings, as is also the idea of a respite ever being open to the condemned even at the eleventh hour, at the bar whether of human or of divine justice (see T.B. *Ta'anith*, 11a, where it is said that 'two ministering angels who accompany man, they give witness for him'). In the same passage in T.B. *Ta'anith* it is further said:

'When man goes to his everlasting home, all his works on earth are passed in review before him, and it is said to him, On such and such a day thou didst do such and such a deed! The man replies, Yea. Then it is said to him, Seal it [i.e. your evidence]. He seals it and thus admits the justice of the Divine decree.'

Here man after death becomes his own recording angel—obviously a higher and more philosophical view.

¹ iv 23; also *II Enoch*, liii. 2.

² In the *Ṣohār* the two names are frequently put together thus, Metatron-Enoch.

Further references in rabbinical and apocalyptic literature are as follows:

In T.B. *Megillah*, 16b, the phrase in Est 6¹ about the sleeplessness of the king is applied to God 'the king of the world,' who bids that 'the book of records of the Chronicles' be brought to Him. It is then found that Shimshai the scribe (see Ezr 4⁸) has erased the passage recording Mordecai's rescue of Ahasuerus, but Gabriel rewrites it 'for the merit of Israel.' Thus Gabriel becomes here a kind of national registrar. The *Testament of Abraham*, the *Book of Jubilees*, *Enoch*, the *Syriac Apocalypse of Baruch*, and 2 Esdras all speak of the day of the great judgment, when angels and men alike will be called before the bar of justice and the book in which the deeds of men are recorded will be opened. According to the *Testament of Abraham* (A. xii.), this book in which the merits and demerits are written is ten cubits in breadth and six in thickness (cf. Ezk 2⁹, Zec 5^{1f}). Each man will be surrounded by two angels, one writing down his merits and the other his demerits, while an archangel weighs the two kinds against each other in a balance. Those whose merits and demerits are equal remain in a middle state (corresponding to the purgatory of the Church) and the intercession of meritorious men, such as Abraham, saves them and brings them into paradise. The permanent recorder is Enoch, 'the teacher of heaven and earth, the scribe of righteousness,' and the other two angels are assistant recorders. This is probably the origin of the Qur'an statement alluded to above.

The Pharisaic school of thought, as reflected in the Mishnah, Talmud, and the Jewish liturgy generally, transferred a great deal of the eschatological connotations of the recording angel to man's temporal life on earth. Whilst admitting that man will be judged and his record taken in a hereafter, the rabbis taught that on the Jewish New Year's Day (Rosh Ha-Shanah, the first day of Tishri) the Books of Life and Death lie open before God, who as the Recorder *par excellence* looks through the records which He has put down against the name of each individual throughout the course of the year and then seals each one's destiny for the coming year. The mediæval Kabbalah has amplified this doctrine with the addition of large angelological hierarchies into which man's soul enters on New Year's Day to hear its own favourable or unfavourable record from the mouth of hosts of recording angels. But the main trend of Jewish belief is in the direction of that simple but higher faith which holds that there is but one recording angel for or against man—God.

RECREATION.—See AMUSEMENTS.

REDEMPTION.—In this article the question of the redemption of the first-born is discussed; the theological aspects of redemption are considered under SALVATION.

1. Introductory.—In the Pentateuch there are several references to the sacrifice of firstlings, and to the redemption of first-born sons and firstlings of unclean domestic animals. In E, 'The Book of the Covenant' (Ex 22^{29f}), first-born sons are to be given unto the Lord, also firstlings of oxen and sheep. According to J, every firstling male is to be set apart to the Lord and sacrificed. But the firstling of an ass is to be redeemed with a lamb, or, if it is not redeemed, its neck is to be broken. First-born sons are also to be redeemed, but the valuation is not fixed. This custom is connected with the deliverance from Egypt and the slaying of the first-born of man and beast there (Ex 13^{1ff}; cf. 34^{19f}). In P all first-born of man and beast are to be sanctified to the Lord (Ex 13^{1f}). The firstling of an unclean beast is to be ransomed

'according to thine estimation' *plus* one-fifth more, or 'sold according to thy estimation' (Lv 27^{26f.}). Elsewhere in P the hallowing of the first-born of man and beast is associated, as in J, with the smiting of the Egyptian first-born, but the Levites are said to have been taken instead of the first-born of the Israelites or of those more than a month old, and their cattle instead of the other Israelites' firstlings. Twenty thousand Levites take the place of as many first-born Israelites numbered at the time, and the overplus of 273 first-born are redeemed by a money-payment of five shekels each to Aaron and his sons (Nu 3^{11f.} 40^{f.}). In another passage from P the first-born of man and beast are made over to Aaron and his sons, but those of men, from a month old, are redeemed for five shekels. Firstlings of oxen, sheep, and goats are not redeemed; their blood is sprinkled on the altar, the fat burned, and the flesh eaten by the priests. The firstlings of unclean beasts are to be redeemed (Nu 18^{16f.}). Lastly in Dt 15¹⁹ firstling males of flock and herd are sanctified to the Lord, and are to be eaten by the owner and his household in the place which the Lord shall choose. Such as are blemished may be eaten at home (cf. 12^{15f.} 17^{f.} 14²³).

The main differences in detail in these passages may be noticed first. (1) Eating the flesh of firstlings: in Dt. this is done by owner and household, in P by Aaron and his sons. These differing laws seem to 'reflect the usage of two different periods of the history.' (2) The redemption of the first-born: in E nothing is said of the redemption of the first-born of men; in J their redemption value is left vague; in P it is fixed at five shekels; but again in P the origin of the Levites as a sacred class is referred back to a redemption of the existing first-born of men, the overplus being redeemed at five shekels. Here there is obviously a myth originating at a period when the redemption value of the first-born had become fixed. As to the cattle of the Levites being regarded as sacred instead of the firstlings of the other Israelites' cattle, which, according to Nu 18¹⁷, could not be redeemed, this may show that the myth belongs to a time when the legislation regarding firstlings had fallen into abeyance. (3) In E the 'giving' of the first-born of men to God is not connected, as in J and P, with the slaying of the first-born in Egypt. (4) Firstlings of unclean beasts: in J the firstling of an ass is to be redeemed; in P firstlings of unclean beasts, as if now other 'unclean' animals than the ass had been domesticated. In J and P the methods of valuation also differ.

We are thus confronted with legislation which varied from age to age, and which perhaps was no more than ideal at any given time. It also tended to be explained mythically, or fictitious reasons for the sanctity of the first-born were apt to be given.

2. Redemption of the firstling of the ass.—As the firstlings of domestic animals, like the first-fruits of the earth, were sacrificed or made over to God (see artt. FIRSTFRUITS, FIRST-BORN), those of the ass, a domestic animal, were His also. But asses and probably some other domestic animals were 'unclean,' i.e. unfit for sacrifice or for eating. Hence in their case arose the idea of redemption, the word used in Ex 13¹³, *pādāh*, being that which always was used with reference to redemption from death or slavery (cf. 1 S 14⁴⁵, Ps 49⁷⁻¹⁵). Another sacrificial animal was offered in its stead, or, if not so redeemed, it was killed, but not sacrificially; its neck was broken without shedding of blood, so that it could be of no further use to its owner. Later legislation permitted it to be redeemed at *plus* one-fifth of its value, or simply to be sold for the benefit of the sanctuary. In the

earlier legislation the breaking of the neck of the unredeemed animal shows that the firstling was regarded as itself sacrosanct, or tabu, whether it was sacrificed or not.

3. Redemption of the first-born child.—There is little doubt that some special sanctity attached to the first-born. He was the first gift of God after marriage. In a sense he was God's property. Or the blood of the kin flowed 'purest and strongest in him.'¹ Was he therefore sacrificed? That the Semites sacrificed children, and frequently the first-born, is certain, though whether all the first-born were once regularly sacrificed has not been confirmed.

The jar-buried infants found at sacred sites in Palestine cannot be proved to be first-born children. It has also been questioned whether they were sacrificial victims.²

The question of the redemption of the first-born by some rite or equivalent sacrifice or money-payment, which appears strictly as a Hebrew custom, is one which arose either (1) because of the inherent sanctity of the first-born or (2) because he ought to be sacrificed. Now the *regular* sacrifice of the first-born among the Hebrews in historic times is open to question. The references in the OT to sacrifices of children are frequently general (2 K 16⁸ 21⁶ 23¹⁰; cf. Lv 18²¹, 'any of thy seed'). A son or daughter (not males exclusively, and not always the first-born) was sacrificed. Nor was this sacrifice, when called for, always performed in infancy. The king of Moab sacrificed his eldest son, who was thus not an infant. (2 K 3²³), and so in the case of Isaac and of Jephthah's daughter. Thus even outside Israel the custom occurs not in infancy—a point not sufficiently noticed by writers on this subject—and only on occasion of some great calamity. That the Hebrews had such an occasional practice, or borrowed it, is not unlikely, and no more than this need be signified in Mi 6⁷, where 'thousands of rams' and 'ten thousands of rivers of oil' show that Micah is speaking hyperbolically. In Ezk 20²⁶ 'all that openeth the womb' is spoken of as sacrificed to Molech in Israel, as if the custom had become general. But, if general, it need only have been so upon certain necessary occasions, when, if human sacrifice was to occur, the first-born was chosen. As far as Israel was concerned, the practice in historic times was borrowed, whether in earlier times it had been more general or not. This is shown by the words of the prophets, who may be presumed to have known the facts.

Jeremiah and Ezekiel make this clear, but their words seem to show that the people, seeing these costly sacrifices among the Phœnicians, deemed that they were due also to God in time of disaster. The practice of redeeming the first-born was regarded as merely permissive. Occasion might arise when this permission must be disregarded. Jeremiah says that God never commanded such sacrifices (78¹ 19⁶), and Ezekiel (20²⁶) regards the current interpretation of Ex 13¹² as a mistake—a pollution.

Further, special privileges attached to the first-born, showing that he was not sacrificed (Gn 25²³, Dt 21¹⁶; cf. 1 Ch 5¹ [disgracing the birth-right]); and the method in which Israel is spoken of as God's first-born (Ex 4²²; cf. Jer 31⁹ [Ephraim], Ps 89²⁷ [Messiah as God's first-born]) shows that the first-born was specially favoured, not sacrificed. The words of Micah (6⁷) and Ezekiel (20²⁶) belong to the period when the Israelites borrowed the custom from their neighbours. So, too, probably does the story of Isaac's sacrifice, in which the victim is commuted or redeemed by a ram—a far less spiritual thought than Micah's.

Why then was the first-born redeemed? (1) If the custom of sacrificing the first-born had once been general in early times, as perhaps the state-

¹ W. R. Smith, *Religion of the Semites*², London, 1894, p. 465; cf. Gn 49³, Dt 21¹⁷.

ment of the law in Ex 22²⁹ and the similarity of expressions in the case of the first-born and firstlings (Ex 22^{29f}, 34¹⁹) suggest, the redemption must be a softening of the practice in an age which had morally outgrown it and demanded a more humane custom. Yet that age must have been previous to that of Moses, since he, a first-born son,¹ was not sacrificed. The idea that the first-born was due to God still remained; hence he had to be redeemed, and, even when redeemed, he might still be sacrificed when sufficient occasion arose. This appears to underlie the story of Isaac, which may be a later tale explaining the origin of the redemption. Otherwise it was explained by the fact that, since God had slain the first-born of Egypt, therefore the first-born of Israel must be redeemed—a theological explanation in an age when the true rationale of the practice was forgotten.

J. G. Frazer assumes that not the first-born of Egypt were slain, but those of Israel in some sacrificial ritual by priestly executioners at Passover. This was afterwards commuted by the sacrifice of a lamb, its blood being smeared on the doorposts instead of that of the child. That a strong tradition of some tragic event occurring to the Israelites should thus be transformed is most unlikely. That event was some species of plague, not slaughter, and it is most unlikely that a joyous feast should originate in such general sacrifice of Israelite children.²

In the curious story in Ex 4^{24ff}, if Zipporah's child was to be given as an offering in place of Moses, the circumcising of him would be a species of redemption. The story would thus be another method of accounting for the redemption of the first-born.³

(2) If, on the other hand, the practice of occasionally sacrificing first-born children arose through Israel's contact with peoples who regularly or occasionally followed this practice, it would be felt that the first-born was due to God, and, when not sacrificed, must be redeemed. The technical term for the Molech sacrifice was 'cause to pass over to Molech.' The same term is used in Ex 13¹², 'cause to pass over to Jahweh,' even when the redemption is insisted on.

(3) Again, apart altogether from sacrifice, if a special sacredness, 'a congenital holiness,'⁴ attached to the first-born, which resulted in his being regarded as God's property or as tabu, some act of removal of holiness or of tabu was necessary—the rite of redemption—before he could be considered as an ordinary mortal. The 'redemption' was a redemption from sanctity.

(4) Others, again, have supposed that in the redemption 'we are to see not a toning down of an ancient custom which had demanded human sacrifice, but only an expedient for extending the precept relating to firstlings so as to include men and non-sacrificial animals.'⁵ This is akin to W. R. Smith's view that, when the belief in the 'congenital holiness' of the first-born of men and animals came to mean that such holy things were set aside for sacrifice, the obvious unsuitability of human or unclean animal offerings led to their being redeemed.⁶ Wellhausen also regards the claim to the human first-born as merely 'a later generalization.'⁷

To sum up: the language regarding the first-born suggests an earlier custom of sacrifice; but the probability is that the legislation is late, and that the language is coloured either by that used of firstlings or by that used regarding actual sacrifices of the first-born among the Canaanites. Wellhausen and W. R. Smith reject the idea of the early general sacrifice of the Hebrew first-born. J. G. Frazer accepts it, but his evidence of similar

sacrifices of the first-born among other peoples needs sifting. Several instances refer not to sacrifice but to infanticide. Not all are supported by clear evidence, nor do all refer exclusively to the first-born.¹

4. Parallel ethnic practices. — The Hebrew custom finds an echo in folk-tales in which childless parents agree to give up their first-born to some one who offers to remove the wife's barrenness. These tales arose in some custom of dedication of first-born to a deity. In some such stories a gift or a substitute is offered instead—a suggestion of redemption.² It is also remarkable that Syriac women will vow an unborn child to a Muhammadan saint at his shrine, yet 'in that case the child is not slain, as may once have been the case, but is redeemed' by an offering.³ In Muhammadan custom the victim—a ram or goat sacrificed soon after the birth of a child—is called a ransom for the child.⁴ Reference may also be made to the May ritual described by Ovid, in which the house-father threw black beans over his shoulder to the ghosts, with the words nine times repeated, 'With these beans I redeem me and mine.'⁵ The custom of redemption, if it was actually redemption from sacrifice as illustrated in the story of Isaac, has parallels in ethnic myth and practice in which an animal takes the place of an earlier human victim, not necessarily a first-born. At the temple of Artemis Triclararia it had formerly been the custom to offer a beautiful youth and maiden, but in the time of Pausanias this sacrifice was commuted. Pausanias also mentions the offering of a goat to Dionysus at Potniæ in place of an earlier youth.⁶ At Laodicea the annual stag sacrifice was believed to take the place of a former offering of a maiden.⁷ In Babylonia the rite in which an animal was slain for a sick man—its life for his life, its head, neck, breast for his head, neck, breast—suggests some species of commutation or substitution.⁸ When human sacrifices were prohibited among the Celts of Gaul, the Druids offered a victim symbolically, pretending to strike him, and drawing from him a little blood.⁹ In many quarters other commutations of human sacrifice occur, often with legends attached to them showing that they originated in more humane feelings. Frequently effigies of human beings are offered, as among the Villalis, Gonds, Chinese, Japanese, and Romans; or a coco-nut is offered because of its resemblance to a human head;¹⁰ or, again, an animal victim takes the place of a human, when people cannot afford the latter, as among the Tshis.¹¹

These correspond to commutations of animal sacrifices, or in general to the offering of a less for a more important object. For, as Servius says,

'The simulacrum is accepted in place of the real object; hence when certain animals, difficult to obtain, are demanded in sacrifice, images of them are made of bread or wax, and are received in their stead.'¹²

REDEMPTORISM.—See LIGUORI.

RED INDIANS.—See AMERICA.

REFORMATION.—The great upheaval which we call the Reformation was very much more than a religious rising of Teutonic Europe in the 16th century. We can trace its origin to the beginnings of monasticism and Northern Christianity, and watch the gathering of the storm all down the Middle Ages. The acute religious conflict lasted all through the 17th cent., and is separated by no sharp break from its secular consequence and counterpart, the great Liberal movement which began with the English Commonwealth and the American Revolution, and now seems passing into social reconstruction. The issues of the Reformation have broadened out, but in altered forms they are the living issues of our own day, for they raise the permanent questions of the society and the individual, authority and reason, slavery and freedom, religious, intellectual, political, and social. Nor was the Reformation purely Teutonic in its origin, though it has maintained itself chiefly among Teutonic peoples. Latins and Slavs were as restive as Teutons under the yoke of Rome. Even now Protestantism can claim Slavs on the shores of the Baltic; and in France it has always been strongest in the Latin south. Least of all was it a purely religious movement. It was the issue of a vast complex of forces, intellectual, political, and social as well as religious, acting in different ways and with constantly varying intensity in different countries. In England and Sweden its course was guided by kings, in Germany by princes, in France, Bohemia, and Poland by nobles, in the German cities and Switzerland by burghers. Its first political tendency was in England to despotism, in Germany and France to civil strife, in the United Provinces to freedom. At Geneva it set up a theocratic republic, in Germany and England it gave the Church an Erastian form. Thus its first results were of bewildering diversity. 'The variations of Protestantism' were real, though the Romish argument founded on them is frivolous. A great revolution takes more than one generation to bring ideas and institutions into harmony. Its early leaders have to pick their way through many stumbles. They see its meaning dimly and in part, and often the boldest of them, like Luther after the Peasants' War, shrink from what they had thought they saw. So the Reformers carried over more mediæval ideas than they knew, and their successors have ever since been slowly and often reluctantly throwing them off. The greatness of the Reformation is less in what was actually done—though that was great—than in the still greater work which it made possible. Almost all the fruitful thoughts of Europe for the last four centuries, even in Roman Catholic countries, are direct or indirect results of the Reformation.

Our work is threefold: (1) we have first to trace the causes of the Reformation, giving a short view of earlier attempts at reform, and of the new conditions which made it possible in the 16th cent.; (2) we must then indicate the deeper principles of the Reformation, and say something of their practical tendency; (3) lastly, we must give a comparative view of the different forms which it assumed, and point out some of the causes and consequences of this variety. It is not our purpose to narrate events or to enumerate details which are better left to particular treatises. If our picture of the mediæval Church appears to some too darkly coloured, it must be remembered that a statement of grievances is not the whole

truth, and is not here presented as the whole truth. On the other hand, the grievances were more real, more general, more scandalous, more integrally connected with the doctrine of the Church than its apologists are willing to admit, and often too outrageous and abominable to be more than hinted at in the more decent language of modern times. If the picture is dark, the background is darker still, for much of the worst must be left untold.

I. Causes of the Reformation.—The loose organization of the apostolic churches was shaped by the needs of the next generation into a uniform system of government by bishops, and this again was consolidated by the needs of the Christian Empire into a great confederation of churches which called itself the Holy Catholic Church, and claimed to be the sole dispenser of salvation. It was a grand system; but where was the layman? His royal priesthood was forgotten, and more and more his access to God was only through the ministrations of the Church.

Then came the monks. Their flight was from an evil world which a worldly Church had failed to overcome; but it was almost as much a flight from the Church itself. True, they were neither heretics nor schismatics, but the most zealous of churchmen, whose ascetic zeal put to shame the worldliness of the priests. Many a time the monks rushed in where bishops feared to tread. None the less, the principle of monasticism was ultimately subversive of the Church system. That principle was neither asceticism nor seclusion, for these were confessedly no more than means to an end. It was individualism. The man retired from the world, not only because the world was wicked, but also because the Church in the world could not give him what he wanted. 'Doubt makes the monk' was a German proverb. What he wanted was to save his soul, and to save it in his own way, because he had not found the priest's way satisfactory. Therefore he sought out for himself a monastery of like-minded men, and in its rule he found his freedom. However the priest might magnify his office, there must be a direct access to God without him. Else how could hermits be saints? Yet neither was the monastery essential, whatever help and comfort his fellows might give him (for in the Eternal's presence he must stand alone), nor was the asceticism essential; it was only the belief of the time, and might be abandoned if he ceased to find it the more excellent way. But, though priests and monks were often at variance, they never clearly saw that their conceptions of religion were radically different. The Church made peace by taking the monasteries into the system, and allowing them services of their own which did not require the administration of sacraments. But the two antagonistic principles were held together chiefly by the common belief of churchmen that asceticism is the higher life. If ever that belief came to be discredited, the individualism would not fail to seek expression outside the Church system. It is not accidental that so many of the Reformers, from Luther and Bucer downwards, had once been monks or friars.

Then came the conversion of the Northern peoples. They were docile enough on doctrine, whatever their practice might be, and showed no taste for heresy. They accepted the Church system as it came to them, and even helped a little to develop it, for they took very kindly to lurid stories of hell-fire, and thought it only natural to pay for their sins as they paid for their crimes. No doubt God would accept a *wergild*. Nevertheless, the fact remained that the system was not simply Christian, but Latin and sectarian,

shaped by Latin hands and saturated by Latin thought. The Northern peoples were as yet no more than children in the faith; but, when they grew to man's estate, they were not unlikely to throw off the Latin tutelage and shape their religion into Northern forms, perhaps equally sectarian.

The next great step was the Hildebrandine reformation and the rise of the mediæval papacy. If the pope could bring some order into the anarchy of feudalism and the scandalous confusion of the Church, he was welcome to set St. Peter's chair above the thrones of kings. The opposition of the emperors was not a Teutonic revolt: the Saxons always held with the pope. The imperialist literature of Germany and Italy, joined for a moment by Gerard of York in England, only disputed some of the papal claims, and scarcely touched the doctrine and system of the Church. Its power was finally broken by the fall of the Hohenstaufens, and its echoes died away with the Schoolmen of Ludwig IV. The last imperial coronation at Rome was performed in peace (1452), because Frederick III. was not worth a scuffle in the streets.

But long before that time the Hildebrandine dream of a righteous papacy governing the wicked world had faded into the light of common day. The higher the pope's power rose, the more his kingdom became a worldly kingdom, seeking worldly ends by worldly means. It was indeed a mighty world-power, with its thousands of priests in the parishes and chantries; with its armies of monks, Benedictine, Clunian, Cistercian, recalling three great religious revivals; with its troops of friars prowling round the land; not to mention the vast numbers of dependents of the Church. Not half the inmates of a monastery were monks. It was a vast and ancient system, resting upon the twin strongholds of transubstantiation, which gave the priest a more than royal dignity, and auricular confession, which laid open to him every secret of private life, and above all upon the ancient horror of heresy. All sins might be forgiven, but the sin of heresy could not be forgiven, because it denied the only power which had authority on earth to forgive sins.

But the Church was full of scandals, moral, financial, and political; and these were the grievances which in the end compelled some to face the risk of heresy by questioning its doctrines. In the first place, the Hildebrandine reformation had failed to cleanse the Church. If celibacy was supposed to lift the priest above the mire of the world, auricular confession plunged him back into it, for the priest's ear became the sink of the parish. And the celibacy itself was full of dangers, on which we must not enlarge, for the grossness of the Middle Ages cannot be told in decent language. Suffice it that in practice the vow of 'chastity' commonly abolished nothing of marriage but God's holy ordinance. Many priests kept it faithfully, though often at the cost of struggles which hardened and demoralized them in other ways; but, unless all the evidence is false, a much larger number had *focarie*, or did worse, and many of these were compelled by their flocks in their own interests to keep *focarie*. Other temptations of a lonely priest settled among the rustics are obvious, and gave plenty of scandal to his neighbours.

Yet, after all, more offence was caused by the worldliness of the many than by the flagrant vice of not a few. The wealth of the Church was enormous. In Sweden it held two-thirds of the land, and perhaps one-third or two-fifths in England, where the accumulation had been checked by the Statute of Mortmain (1279). If

the bishops were generally modest in Italy, they were great lords in England, where the primate stood next to the sovereign, and the bishop of Durham ruled the Scottish border almost as a king. Still more magnificent was their state in Germany and Hungary. Men said that the donkeys and the women in the host of Christian of Mainz were more in number than Barbarossa's army. But this vast wealth was very unequally distributed. There were a few favoured pluralists, whose wealth was the envy of the rest and a scandal to the laity. One of these might hold perhaps half-a-score of church preferments and leave their duties undone, or done after a fashion by cheap hirelings, while he spent his time in the service of pope or king, or intriguing at their courts for new and more lucrative appointments. In England the bishoprics were commonly the reward of success in the king's business, from Flambard and Thomas to Morton and Wolsey; and in Germany it was much the same in Franconian and Hohenstaufen times. In the later Middle Ages we see a class of pure aristocrats, such as Courtenay and Arundel, Beaufort and Neville in England; and in Germany this was the prevailing type. The three clerical electors at the time of the Reformation were all nobles—Albert of Brandenburg, Hermann of Wied, Richard of Greiffenklau. The aristocratic character of the German hierarchy was not a novelty of the Reformation.

But large numbers of the priests were needy. Their endowments may have been sufficient, and were in some cases ample. But a great deal was 'appropriated' by the monks. A monastery took the endowments of a parish, and was supposed to provide for the cure of souls, perhaps only by sending a monk to say mass on Sundays. The Lateran Council of 1179 ordered them to provide resident vicars, and earnest churchmen of the next century managed at last to enforce this. The monastery took the great tithes of corn, and left the small tithes to the vicar. Thus many rich livings were reduced by 'appropriations' to poor curacies, while many more were impoverished by pensions granted on them by the popes. And a needy man is apt to be rapacious and ignorant. There could not be much respect for a priest who was forced to wrangle over petty dues, and could hardly say his old *mumpsimus*. He had some excuse for ignorance, but sometimes it was very dense.¹ Nor were his administrations edifying, for they were all in Latin, except parts of the marriage service. The mass was said in a low voice, and the people were not supposed to follow the service but to occupy themselves with their private devotions, and there were primers for such as were able to read. If the canonized emperor Heinrich II. could make a fool of his unlearned chaplain by erasing from the mass-book the first syllables of the prayer 'pro (fa)mulis et (fa)mulabus tuis,' we may imagine what a rustic parish would do with Sir John Lacklatin or Sir John Mumblematins. We must go to Russia for a modern parallel to the mixture of superstitious dread of the priest's mysterious powers with good-natured contempt for his person.

The monasteries were in a similar state in the later Middle Ages. Some were rich, some very poor, many were burdened with debt, and all were impoverished by papal exactions. An abbot could scarcely get his election settled without spending perhaps two years' revenue on a journey to Rome, with fees and 'presents' to pope and cardinals. Besides this, the monasteries had outlived their

¹ There were priests in the diocese of Gloucester in 1551 who did not know who was the author of the Lord's Prayer, or where it was to be found.

usefulness. They spent little on the poor, and learning had found a more congenial home in the universities. The monks had long ceased to labour, and had become mere landlords. The houses had been half emptied by the Black Death, and had never recovered their numbers; some, indeed, were so decayed that they had to be suppressed for want of inmates. Pious founders had ceased to build new houses, and endowed colleges and chantries. Their moral condition was various. Some were well conducted, others as bad as bad could be, for here again the worst cases are sheltered by their very foulness. But the larger number were worldly rather than depraved, though they had more than occasional scandals. There was always an aristocratic flavour about the monasteries; and now the inmates of the richer houses lived very much as their neighbours did. They hunted and hawked, attended chapel by deputations in rotation, ate flesh, and were notorious lovers of good living. This was very far from the rigour of the monastic rule, and gave much occasion for blaspheming, but at all events it was not flagrant vice. The worst of the matter was not that flagrant vice was by no means rare, but that it was hardly ever seriously punished. The rule of the order was strict enough, but the abbot was often himself the worst offender in the way of evil living, embezzlement, and even murderous assault. The bishop was sometimes an offender likewise, often too busy with State affairs to look after his diocese; and the strongest and most earnest might well hesitate to take in hand a bad case, where he was likely to be met by a claim to exemption backed up with forged charters and entailing years of litigation at Rome, to be finally decided by bribery or by the fixed policy of the Church to smother scandals rather than amend them. At worst, a peccant priest might be removed to another parish, or an outrageous abbot induced to retire on a handsome pension.

The condition of the friars was very similar, but distinctly worse. Their beginnings were splendid, but within a century the tale was different. They evaded their corporate poverty by vesting the property of the order in trustees or the pope; and, when some of the Franciscans insisted that their poverty must be real, Pope John XXII. decided against them that Christ and His apostles had property, so that poverty is not necessary for the highest Christian life. This decision stultified the whole system of mendicancy, so that henceforth, while some of the most earnest seekers after God still became friars, others formed simpler societies of their own, and others again turned to mysticism or heresy. Meanwhile, the ordinary friar was little better than a vulgar mountebank, puffing his pardons and relics as impudently as any other quack of the market-place. Of all the churchmen the friar was the least respected.

Besides vice and worldliness, there was a third great scandal in the divisions of the Church. True, the Latins never sank into Irish anarchy, where a bishop would wander about the country living on his ordination fees, and a whole monastery would turn out, monks, servants, women, and all, for a pitched battle with the next house of holy men. But the quarrels were continual and bitter. Bishops and chapters wrangled and litigated for years together. Seculars and regulars had a standing feud, and the friars were a plague to both. If a parish priest refused absolution to some offender, the next friar was likely to sell it with pleasure. But the most repulsive quarrel of all was round a rich man's deathbed. If masses profited in purgatory, how could he better dispose of his worldly goods than in having masses said for his soul? And they were all eager in the work of

charity. So the quiet of the chamber of death was continually disturbed by an unseemly quarrel of rival orders, each struggling to get the dying man into its own habit as the one sure passport to heaven. The wicked world looked on with wonder and disgust.

The economic evils of the Church system were neither few nor trifling. The Church was a corporation which constantly acquired property and never lost it, except by fraudulent dilapidation and waste, so that in most countries it secured the larger part of the national wealth; and this was in itself an evil of the first magnitude. If the monks were easier landlords than the lay improPRIATORS who followed them, their lands were not so well cultivated. Then the number of the clergy was excessive. The parish priests alone may have been half as many as we have now for a much larger population; and to these we must add the chantry priests, the monks, the friars, the nuns, and the minor orders. It is true that they were not all withdrawn from the common work of life. In the 13th cent. they were still the literary men, the founders of schools, the writers of chronicles, and the teachers of agriculture; but now they had little to show but troops of lawyers. The charge that they were nothing but a burden on the land was too sweeping, but a burden they were, and a heavy burden. They did a good deal of trading too, partly in spiritual wares like relics, pardons, and masses for the dead, partly in worldly things in which they were forbidden to trade. Indeed, it was not good that the parish priest should be a money-lender or a tavern-keeper, as the bishops complain that he not uncommonly was. Another great economic evil arose from the teaching that good works are an expiation (in practice often a payment) for sins, for it made charity more indiscriminate than it might otherwise have been. The good work rested to the credit of the giver, and the unworthiness of the receiver was not his business. The type of this kind of charity is a Spanish archbishop of a couple of hundred years ago, who spent a princely revenue in daily doles to an army of beggars at his gate. Mediæval charity was not all of this sort, but a good deal of it was, so that the relief of distress was more or less balanced by a vast encouragement of idleness and imposture, especially when the great age of beggars began in the 15th century. Even more keenly felt than this was the similar working of Church festivals, which had been multiplied beyond all reason, and made a large part of the year useless for trade or agriculture, for no work was allowed on the day itself or after the noon of the day before it. Idleness was compulsory, but not soberness, for no occupation was provided beyond the morning mass. To the abundance of holy days we may partly ascribe the marked taste of the later Middle Ages for shows, pageants, miracle-plays, and the like. But there were worse things than these. Besides encouraging drinking, revelling, quarrelling, and vice of every sort, these festivals, frequent and irregular, were a formidable hindrance to habits of steady work. They not only made serious gaps in the work, but demoralized what remained of it. The grievance was serious in the 13th cent., and was made more urgent by the growth of trade and the exhaustion of the land in the 15th. How far the holy days were observed it is not easy to say; but these were the commands of the Church, and there are complaints enough to show that they were enforced.

Before we come to the political grievances, we must note that the fundamental error of the Latin Church was the twofold error of the Pharisees. It mistook the gospel for a law, and again mistook the office of law. In fact, our Lord lays down

principles, not laws, telling us always the spirit in which we ought to do things, never the things we ought to do, except the two sacraments. He seems to care absolutely nothing for good or bad actions, except as the signs of a good or bad heart. A good deal of manipulation was needed to turn the law of liberty into a law of commands like the Mosaic. Further, it is not the office of law to teach right and wrong generally—only to put certain right and wrong actions in black and white, so that the criminal offends wittingly, and his condemnation is just. This tendency to make the gospel a code of law worked mischief in two opposite directions. The natural man is always glad to compound for the weightier matters of judgment and mercy by obedience to works of law; and even the better sort of monk was likely to be very well pleased with himself when he could say, 'All these have I kept from my youth up.' On the other hand, if a code of law contains all that God commands, it cannot contain all that is well-pleasing to Him. Common people might be content with doing what God commands, but the higher life consisted in doing more, and thereby earning merit, which would be available for self and others. And these works of supererogation—these *consilia evangelica*—were reached by generalizing words referring to particular individuals or classes of men. Thus the command to the rich young man must be a counsel for all; and, if those who are able to receive it are blessed, they must be better than those who are not called to receive it. The result of all this was a double standard which misdirected the saints to a false ideal, debased the sinners with a low ideal, and turned both away from the vital question, 'What lack I yet?'

This conception of the gospel as a law necessarily implied a concrete and visible Holy Catholic Church confronting the world with a law of its own, which it had a divine right to enforce on all men without regard to the secular power, or, if necessary, in defiance of the secular power. That law was professedly spiritual; but the Church drew the limits of the spiritual, and drew them wide. Most things, indeed, have a spiritual side, so that there were few on which the Church had nothing to say. The protection of the Church covered all priests and men of religion, minor orders, and the hosts of dependents of the churches, and beyond these the weaker classes of the laity and those specially attached to the Church—the widow and the poor, the leper and the sanctuary man, the crusader, the pilgrim, and the palmer. The jurisdiction of the Church covered not only ordinary spiritual matters but the special cases of heresy and witchcraft, and things of a more secular nature like usury and marriage, and some purely secular things like wills. In addition to this, the Church claimed that its bishops must be independent, and not appointed by the kings. The Hildebrandine popes claimed for them freedom from their feudal duties, and Boniface VIII. forbade them to pay subsidies; but these attempts were failures. The Church also constantly interfered in matters of high policy, forbidding wars, reconciling wars, and not uncommonly stirring them up. If a king was disobedient, he must be rebuked, or in graver cases interdicted or excommunicated, and even deposed, and his kingdom given to another. The law of the Church was canon law, consisting of decisions of certain councils collected in the *Decretum* of Gratian, with additional decrees of successive popes, especially Gregory IX. and John XXII. It was a milder system than the civil law, so that many were anxious to claim its protection; but it was generally unpopular as being foreign, expensive, and dilatory. Henry

VIII.'s six years' divorce case is no extreme sample of its delays. Obstinacy was visited with excommunication, which in its milder forms made the offender a leper to his friends and cut him off from the Church, outside which there was no salvation. In graver cases the secular power was called on to imprison him indefinitely, or, if a heretic, to burn him; and the form of excommunication was an elaborate curse by all the saints on every act of his life. 'As these candles stink on earth, so may his soul stink in hell.'

Some of the things which seem to us encroachments on the secular power were very rightly undertaken by the Church in times when the secular power was weak. Wills, e.g., almost necessarily came to the clerics when so few laymen could even read them. Marriage also needed some regulation in those gross and disorderly times, and the usurer was so unpopular that there could be no objection to any one who undertook to punish him. But on the whole the Church fulfilled its trust badly, even in the judgment of its friends. Its methods, to begin with, of anonymous accusation, concealment of charges, inquisitorial questioning, torture on suspicion, and indefinite imprisonment, were a terror to the innocent. The soundest Catholic ran a risk of the fire if somebody reported that he had eaten meat in Lent. Then the jurisdiction of the Church sheltered criminals wholesale. The criminal clerk must be judged by the spiritual court, which could not shed blood, and therefore had to remit an offender to the secular power when it wanted a heretic burned. Sanctuary also was a crying scandal, for it depended on the holiness of the place, so that it sheltered all comers without distinction, and did not even prevent them from issuing forth from sanctuary to commit new crimes. Holy places have always been chief haunts of unholy men, from the times of Diana of Ephesus to those of Our Lady of Mariavell or Loreto. So great were the disorders that strong kings like Henry VII. put down some of the worst abuses before the Reformation. Nor was the Church more successful in dealing with other matters. Marriage, e.g., was vainly consecrated by declaring it a sacrament, and effectually degraded by forbidding it to the clergy. In theory it was indissoluble, even for adultery; in practice it was continually annulled. So many and so various were the canonical impediments that no marriage was secure if any one had an interest in getting it dissolved—and could pay the fees. If other excuses failed, some forbidden relation could almost always be found within the seventh degree of kindred, affinity, or gossipry. All Henry VIII.'s marriages were faulty in canon law, except perhaps the last. But one mischief was mitigated by another. The Church sold dispensations for marriages forbidden by canon law, and supposed to be forbidden by the law of God. The case of Catharine of Aragon was not exceptional. This was one of the most lucrative of all the abuses of the Church, and one of those most deeply resented. Wills were in a similar state. The Church lawyers piled up mortuaries, probate fees, and other exactions till they set both rich and poor against them. Witchcraft was not a grievance, for all were agreed that dealings with the devil were the very worst of sins; but all that was called heresy was not equally heinous to the lay mind. If a man denied the faith, by all means let him be burned; and, if he disobeyed the Church, he might have punishment in due measure; but the Church had got into such a panic that it suspected heresy in every trifle, and brought the soundest Catholic into danger of savage persecution.

The majestic theory of the Catholic Church was

gathered round the pope. The vicar of Christ was supposed to be a father in God, guiding all the churches—all alike his children—in the way of righteousness and mercy; and for this purpose divine authority was given him to restrain the wickedness of kings, to smite the evil-doers of the earth, and to bring every soul into subjection to the apostolic see. Such was the dream of Gregory VII.; and it was at least a noble dream. But a dream it was; the facts were squalid. In the first place, given mediæval conditions of travel, St. Peter himself could not have guided all the churches from Rome or Avignon. No human genius was equal to this colossal task, especially when the righteous guidance had to be enforced by continual interference with almost every act of government. However well-disposed the pope might be, he was too far off, too ignorant of foreign peoples and their ways of thinking, and too dependent on the reports of interested advisers to govern wisely. Sometimes he did good service, as when the legates of Honorius III. helped William the Marshal to restore order in England, or when 15th cent. popes organized wars against the Turks, though their crusades were more often mischievous, like the Albigensian and the Hussite, and still more often they were pure and simple pretenses for exacting money. But the Latin Church of the Middle Ages was not organized with modern efficiency. To put it broadly, the pope can scarcely be said to have governed at all; he could not do much more than meddle, and seemed to meddle chiefly for the sake of filthy lucre. Four conflicting policies—of witnessing to the world, ruling the world, renouncing the world, and making gain of the world—could lead to nothing but confusion. The scandals and disorders caused by his interference were multitudinous and flagrant, notorious and in their own time undisputed. The nine cardinals who reported to Paul III. in 1537 were in entire agreement as to facts with the most violent of the Reformers. Their very first demand was that law should be observed as far as possible, and some limit put to the sale of exemptions, dispensations, and such-like breaches of law. In fact, the whole system was very much a system of extortion. Peter's pence dated early; and by the end of the 12th cent. papal taxation was enormously extended. There were heavy fees for almost every business in which the pope could interfere. Among the most offensive abuses were provisions, or papal nomination to preferments, often not yet vacant; reservations, by which the pope reserved to himself the right to fill such preferments or to grant pensions out of them; and annates, or firstfruits, invented by John XXII., or payment to the pope of the first year's revenue by every one receiving preferment. Provisions were politically important. It was an old custom in the 7th cent. that, if a bishop died at Rome, a successor was sent from Rome for the comfort of his flock. So, when Wighard died at Rome, Pope Vitalian sent Theodore of Tarsus to Canterbury. In later times this casual right was enormously extended. Not only bishoprics but other preferments were 'reserved' by the popes for nominees of their own, without regard to the rights of kings or other patrons; and papal nominees were commonly Italians, or French in the Avignon times. This system of reservations at last covered almost every preferment, and the strongest kings could scarcely resist it. Thus Nicolas III. refused Edward I.'s request for Burnell, and nominated Peckham to Canterbury. In the next century it was limited in England by the statutes of *Provisors* and *Præmunire*, and in France later by the Concordat of Bourges (1438). But the popes did not consider themselves bound by statutes, or even by their own concordats, and the kings often had

reasons of their own for conniving at papal encroachments.

In truth, the popes had put themselves in a false position, above the laws of God and man. The Renaissance popes broke solemn treaties and plotted assassinations at their convenience, and knew that they could do so with impunity. When they found resistance in the growing strength of nations, their foreign policy shrank back on Italy, and centred on the acquisition, by fair means or by foul, of territories for their nephews, so that each new pope had to begin the work afresh for a new set of nephews. Similarly their domestic policy was to turn everything into a source of revenue. Everything was on sale at Rome, from bishoprics and divorces downward. Jubilees were proclaimed; privileges, pardons, and the virtues of relics were sold wholesale all over Europe; and even the indulgences—the theory invented for them was purely academic—were no more than the latest development of a practical system of licences for every sin but heresy. 'God willeth not the death of a sinner, but rather that he should pay, and live.' Vanity Fair is the Rome of the Renaissance, drawn by an enemy, but drawn to the life, and in no way overdrawn.

Nor did the popes generally command personal respect. Some, indeed, were worthy men, and liberal patrons of learning and art, like Nicolas V. and Pius II. when he had put away the sins of his youth; but they were generally worldly, and in the Renaissance period they were mostly scandalous. What else was to be expected in a city where the harlots walked at noonday with a train of senators and clergy? We need not believe all the charges against John XXIII.; perhaps the Council of Constance did substantial justice when it suppressed the worst of them for decency's sake, and condemned him on the rest. Other condottieri may have been as bad, but they had not strayed into St. Peter's chair. So, too, some of the worst of the crimes ascribed to Alexander VI. seem to be society gossip; but the fact remains that he was a very bad man, and that the cardinals who chose him cannot have been much better. Such was the school from which the popes of the Renaissance came; and most of them worthily represented it.

At the end of the Middle Ages there was no dispute about the condition of the Church. From the bulls of the popes and the registers of the bishops to the allusions of the chroniclers and the lampoons of the profane, all the evidence of the time tells the same story of deep corruption without a hope of mending it. Two methods were imaginable. 'Heretics' might overthrow the Church system and replace it by something better; or reformers from within might clear away scandals and abuses. Both plans had been tried, and tried in vain. We need not ask whether the 'heretics' had anything better to offer, for they utterly failed to overthrow the Church system, or even to influence it—except in the reverse way, for terror of heresy hardened the Church to a savage cruelty which in the end turned every feeling of humanity against the persecutors. In fact, the 'heresies' bear the mark of reaction, and, like other reactions, the Reformation itself included, took over a good deal from the system that they were opposing. They all attacked the claims and the exactions of the priests, but each sect in its own way. The Cathari and Albigenses took over the asceticism of the time, but developed it in an anticlerical sense, and were therefore called Manichæans. The Poor Men of Lyons belonged to the same movement as the friars, and were preachers like the Dominicans, but soon showed a taste for Scripture which the Church could not tolerate. Most of the sects held that the unworthiness of the minister

invalidated his services, and the later 'heretics' had a new grievance in the refusal of the Cup to the laity. By far the deepest thinker among them was Wyclif, who not only started Lollardy in England, but gave the tone to 'heresy' in Bohemia, for Hus did little more than copy him. Wyclif began as a political controversialist, and gradually became a religious reformer of the boldest sort. His denunciations of the friars, and even of the pope, were only what many were thinking; and even his crowning enormity of denying transubstantiation as a philosophical absurdity—substance without accidents, and accidents without substance—was not the most formidable blow that he aimed at the Church. His translation of the Bible and the mission of Poor Priests to preach it made the complete suppression of the Lollards impossible. They appealed to the same religious instinct as the early friars, but turned it against the Church. But Wyclif's doctrines of 'dominion founded on grace' and 'no mesne lords in the kingdom of God' were a deadly offence, not only to the Church, but to the ruling class of nobles and landowners. Wyclif himself was not implicated in the Peasants' Rising of 1381, but some of his followers were in sympathy with the social unrest of the time. So the governing classes who urged Henry IV. to spoil the Church, as Henry VIII. spoiled it, were yet heartily agreed with the Church to put down heretics who were also social disturbers. So the House of Lancaster came in pledged to destroy heresy; and, if Henry IV. was not over-zealous in the cause, Henry V. was more active, and the gentleness of Henry VI. gave no relief to the Lollards. Still a remnant survived, a simple-minded, yea, forsooth, Puritanical folk, treasuring stray leaves of the forbidden Bible, and meeting secretly in the woods or the slums, till they were merged in the Reformation. There was more trouble in Bohemia. Crusade after crusade was preached against the Hussites, and each failed more disastrously than the last, till Frederick of Hohenzollern persuaded the Council of Basel to divide the heretics by conceding the Cup. They turned against each other; and after the victory of the moderates at Lepan (1484) Bohemia ceased to be the terror of Europe, though it did not cease to be troubled with heresy till it was brought fully under the yoke of the Hapsburgs and the Jesuits after the battle of the White Mountain in 1620. The German Peasants' War came in 1522, and was more barbarously suppressed than the English; but, instead of serfdom quietly dying out afterwards, it lasted till Napoleonic times, and in Mecklenburg till 1831. Its religious bearing was partly the same, for the Romanists of course laid the blame of social unrest on the disturbers of religion. But social movements had few supporters but extreme men and Anabaptists. Luther attacked them with unmeasured violence, and the Church in Lutheran States was even more closely allied to the governing classes than in England.

Reform from within was an equal failure. The efforts of individuals, and even of popes, were always defeated by the classes who had an interest in abuses. The successive monastic revivals had only partial and transitory effects, and even these had ceased to be possible since the decay of the friars. But could not the 'reform in head and members' be effected by the united wisdom of the bishops? The idea was in the air. Philip the Fair had appealed (perhaps not very seriously) from Boniface VIII. to a General Council, and in 1414, when two popes, and latterly three, had been dividing the allegiance of Christendom and cursing each other ever since 1378, a General Council met at Constance. When it had deposed John XXIII.,

it was faced by the question, 'Reform first, or unity?' It decided for unity, and allowed Martin V. to be elected. The mistake was fatal. The Council could deal with a scandalous pope, but a decent pope could deal with the Council. Reform was now impossible. Martin had only to make a few vague promises in separate concordats, contemptuously rejected by France and England. The Council of Basel (1431) took a bolder course. It made reforms, like the abolition of annates, and set the pope at defiance. But in the end Eugenius IV. was too strong for them, and the Council of Basel failed as completely as that of Constance. Men were inclined to think that, if the pope's rule was bad, the rule of the bishops was likely to be worse. After all, the Councils were too orthodox to touch the worst difficulty—that the abuses were not simply sins of individuals or miscarriages of administration, but logical, natural, and necessary results of the teaching of the Church. Only a reform of doctrine could reach the root of the matter; and that was the last thing that the bishops desired. They burned Hus in defiance of the emperor's safe-conduct, and made religious wars internecine by declaring that no faith was to be kept with heretics. The Council of Basel was forced by the exterminating Hussite wars to negotiate with the heretics; but it was as resolute as ever to allow no reform of doctrine. Therefore it failed, and with it vanished the last hope of real reform by a General Council. So by the end of the 15th cent. all were agreed that a drastic reform was urgently needed, but none could see how it might be made.

Something, however, had been done. In most countries particular abuses had been put down or limited by the civil power; and in Spain a real reformation—of a sort—had been carried out under Queen Isabella's guidance by Cardinal Ximenes, armed with the special powers conferred on the Spanish sovereigns by the bull of 1482. Ximenes aimed at the restoration of discipline, the removal of abuses, the encouragement of learning in the service of the Church, and the merciless extirpation of heresy. He succeeded in all—witness the Spain of the 17th century.

The dilemma was only too plain. The heretics wanted drastic changes; but could do nothing; the bishops would have no reform of doctrine, and could not carry even administrative changes against the pope's opposition. Had this been all, reform might never have got beyond epigrams in Italy and growlings in Transalpine lands. The forces which made the Reformation possible were growths of the later Middle Ages. First came the rise of nations. The tribal kingdoms of the early Middle Ages and the local feudalism which followed them might well be crowned with a Holy Roman Empire and a Holy Catholic Church. But first the Crusades, then the decay of feudalism, then the growth of commerce and general intercourse, had called forth a new sense of national unity, represented in France, in England, and latterly in Spain, by national kings who could rely on the support of national assemblies for the assertion of national rights, and not wanting where the kings were weaker or absent, as in Italy, Germany, and Scotland. The growth of nations in the 13th cent. may be measured by the failure of Boniface VIII. against Edward I. and Philip the Fair. The popes themselves weakened the imperial ideal by their contests with the emperors, the Catholic ideal by their astute negotiations with separate nations; and, now that the right divine of fallen emperors had come down to kings of nations, it was becoming possible to believe that the rights of the Catholic Church might be exercised by particular or national churches acting on their own discretion

The intellectual position of the Church was not improved by the efforts of the Schoolmen to defend by reason a system based on an agnostic denial of the competence of reason in matters of religion. Thomas Aquinas got over the difficulty by sharply separating the kingdom of grace from the kingdom of nature, so that the two could have no contact. But this could not stand the subtle scepticism of Duns Scotus, and the decline of Scholasticism was marked by the Ass of Buridan and other barren logomachy. It gave, however, an impetus to study; and the first discovery was that the papal claims which appealed to the False Decretals and the Donation of Constantine were based on shameless forgeries. Then came the New Learning. We see first an age of enthusiastic collectors—none more zealous than Pope Nicolas v. Then came an age of Christian Platonism, in Italy, often passing into frank paganism. If Greece was risen from the dead, it was not yet with the NT in her hand. Some, indeed, of the scholars would as soon have worshipped Zeus as read the 'bad Greek' of the Gospels. In truth, the Renaissance was terribly wanting in moral earnestness till it reached more serious peoples across the Alps. German mysticism was a sign of discontent with Latin thought; and the New Learning found an eager welcome in new universities like Erfurt and Heidelberg. England was a little behind; but in 1498 Colet was lecturing on St. Paul's Epistles; and it was Colet more than any one who diverted Erasmus from the exclusive study of the classics to the NT and the Fathers. Erasmus' edition of the Greek Testament in 1516 marks an epoch; and the invention of printing gave it a currency which earlier translations could never have attained. Popes like Nicolas v. and Pius II. encouraged the New Learning; Julius II. was a liberal patron of its art; and Leo X. was its worthy representative. Yet it was fraught with danger to the Church system. It revealed a world which was not Latin; and the romance of the Crusades paled before that of the old world of Greece. For a thousand years Europe had been moving in the Latin orbit; now it broke loose like a comet deflected by some great planet into a new path. The old Latin thoughts and ideals were compared with the older thoughts and ideals of Greece, and found wanting. And the Greek thoughts were not simply other than the Latin, but directly contrary to them. The spirit of the Greek philosophy—the love of truth for its own sake—was utterly foreign to a Church which had no conception of truth but as a tradition of the Church or a form of justice to our neighbours, and therefore set no value on truth of thought. The moral contrast was as great as the intellectual. The text of the Latin Church was 'De contemptu mundi,' and the sermon was more often 'Dies irae' than 'Jerusalem the golden.' To the natural man the goodness of God is always too good to be true: 'I knew that thou wast a hard man.' So the same spirit of unbelief which turned the gospel of free forgiveness into a slavery of good works also refused the goodness of God in the common joys of life. When the saint renounced the gifts of God as he renounced the works of the devil, he fixed on them a brand of sin which no formal teaching could remove. They were tainted even for common men, as inconsistent with serious holiness. To men who had grown up in the Latin gloom the old Greek joy of life and sense of order and beauty in the world came like a burst of sunlight, like a message of goodness from the realm of truth. It might be that God 'giveth to all men freely, and upbraideth not.' Nor did the message of the Renaissance come alone. Feudalism was society organized for war; and, when quieter times followed its decay, there was more room for domestic

life, for commerce, for learning, and for worldly interests in general. Then came the question whether the world was really as bad as the Church made out. The friars had shown that the higher life could be lived among the people; the Church itself had declared that poverty is not essential; and it only remained for the Reformers to renounce the asceticism and strive to live as children of God in a world which after all is God's world, and not the devil's. And this brings us once again to the individualism of the Reformation.

2. Principles of the Reformation.—It would be a mistake to find the principles of the Reformation in the rejection of the pope or of transubstantiation, or even in appeal from Church authority to Scripture. All these are only inferences; the principle behind them is that the knowledge of God is direct and personal. Any man may help us with example and spiritual counsel, and the priest may minister to us the services of the Church; but in the end we must know God for ourselves. But this principle may be embodied in many forms. Mysticism is almost independent of history, and not even specifically Christian. But movements are commonly shaped by historical circumstances, as monasticism by the asceticism of the Middle Ages, the Reformation by the reaction from it.

Individualism implies the duty of the individual to judge of spiritual truth; and the Reformers invited men to see for themselves the untruth of the Roman Church. But they did not see that the principle was equally valid against their own churches. They merely limited to nations the mediæval idea of a visible corporation with no dissent allowed. Hence in theory they were as intolerant as the Romanists, though their practice was commonly less ferocious. There was no real advance when Germany came to a deadlock in 1555, upon the principle, 'Cujus regio, ejus religio'; and a similar deadlock is marked in France by the Edict of Nantes in 1598. These were only political compromises which ended civil wars. The real struggle for toleration was decided for Germany in 1648 by the Peace of Westphalia, for England by the Act of 1689, for France only by the Edict of 1787.

But, if the individual is to judge, by what standard is he to judge? Scripture or tradition? If Scripture must be interpreted by tradition, it is resolved into isolated texts which mean whatever the Church may choose to say they mean, and the whole system rests on nothing more spiritual than an unreasoning assent to an unverified historical process. So the Reformers appealed to Scripture as a rational whole, to be interpreted by sound learning. In this appeal they are unanimous. Thus the Westminster Confession:

'The whole counsel of God, concerning all things necessary for his own glory, man's salvation, faith, and life, is either expressly set down in scripture, or by good and necessary consequence may be deduced from scripture: unto which nothing may be added, whether by new revelations of the Spirit, or traditions of men' (ch. i.).

Yet here, too, the Reformers hardly saw the depth of their own teaching. Calvin indeed, their one great systematic genius, expressly says that 'the word, *however conveyed to us*, is a mirror in which faith may behold God'; but that age could not see clearly that God speaks, not in Scripture only, but in nature, history, and life. Rome was right in looking to history for a revelation, but she merely interpreted Scripture by tradition, instead of seeing all history illuminated by the living Word of whom Scripture speaks. Moreover, the Reformers carried over from the Middle Ages the conception of revelation as a code of law. This blinded them to the progress of revelation, as if everything contained in Scripture were not only

divine, but equally divine. Luther indeed saw clearly that what speaks most of Christ is most divine, so that the Epistle of James is 'a right strawy Epistle' compared with that to the Galatians; and Calvin was too good a scholar to ignore the doubts about certain books of the NT. But to their successors inspiration became more and more mechanical, till Buxtorf took over from the rabbis the inerrancy of the text. The worst offenders were some of the English Puritans, who held that Scripture is a complete rule of conduct, so that no command is lawful without its express warrant. Hence the sarcasm, that the Holy Spirit had remembered the basons, and forgotten the archbishops; or, in more sober form, God is not the legislator of His Church, unless He has prescribed its government. This caused much straining of texts, and often led to great absurdities, as when the Puritans objected to square caps on round heads, and Laud replied by proving from Scripture that heads are square (Lv 19²⁷ 'Ye shall not round the corners of your heads'). One of the worst mistakes was about Sunday. The Reformers saw that it was more than a feast of the Church like All Souls or Corpus Christi; yet neither Luther nor the English Reformers nor even Calvin identified it with the Sabbath. But the tendency to find in Scripture a code of law led naturally to the rigid Pharisaism of the Puritan Sabbath. The best excuse for it is the formal services and noisy games—themselves an inheritance from the Middle Ages—of an English Sunday under Elizabeth and the early Stuarts. It must be noted that, when the Puritans had not got scent of Antichrist, their scruples were commonly definite objections to definite things which in their times ministered to vice. In the stage, *e.g.*, there is a steep descent from Shakespeare to Massinger, and again from Massinger to Dryden and other foul creatures of the Restoration. So against bear-baiting they entered the same plea of humanity as we should. They had very little of the ascetic's vague dread of the pleasure generally, as though every creature of God were bad, and to be refused.

The appeal to Scripture had far-reaching consequences. Whatever was contrary to Scripture must be reformed; and in some cases omission is prohibition. Thus transubstantiation is sufficiently refuted by the single argument that it cannot be proved by Scripture, and the silence of Scripture about prayers for the dead is significant.

Sooner or later the Reformers always came to the conclusion that the first great practical evil was the authority of the pope. On this they were all agreed, though Melancthon added to the Schmalkald Articles a note of his own, that, if the pope would allow the gospel to be preached, his authority might be accepted for the sake of peace and unity, but *humano jure* only. This, however, was an extreme concession which gave great offence, for the rest were much more disposed to call him Antichrist and the Man of Sin. We must note Melancthon's condition—'if he will allow the gospel to be preached'—because it shows that the objection was at bottom practical. The papacy was contrary to Scripture, not simply because there were sundry texts against it, but chiefly because it was the centre of a system which had been shown by experience to make void the righteousness of God revealed in Scripture. Justification was by faith (which Luther defined as trust in God), and by faith only, whereas the whole system ruled by the pope was an elaborate scheme for setting up a righteousness of our own which was not of faith. The sacraments were not simply signs or means of grace, but channels which conveyed it. The Church gave spiritual

life to the infant in baptism, nourished it with the Eucharist, consecrated it with matrimony or orders, renewed it in penance, and finally sealed it with extreme unction. And sacraments had their efficacy *ex opere operato*—from the due (*rite*) performance of the ceremonial with intention on the priest's part. They conveyed grace 'always and to all who do not put a bar in the way (non ponentibus obicem).' The Council of Trent nowhere expressly tells us what constituted a bar, though we may safely say that unconfessed mortal sin was a bar; but, if baptism conveys grace 'always and to all' infants 'who have no faith,' it is clear that want of faith is not a bar. The faith of the parents or of the Church is not the faith of the person concerned, and is therefore in this connexion irrelevant. Thus the whole sacramental system was involved in the primitive confusion of matter and spirit, magic and religion. Moreover, to put it in another way, the message of the gospel is one of free forgiveness—not that forgiveness will be given some day on conditions, but that in Christ it is already given to all that will by faith receive it. 'By grace ye are saved, through faith.' Faith—trust in God—is necessary for salvation, and sufficient for salvation. Works are the outward signs, but only the outward signs, of a good or a bad heart, and in and for themselves have no value before God. But the Church sought justification by works. Baptism indeed carried free forgiveness of past sins; but, if a man sinned after baptism, as he always did, he would have to earn forgiveness by good works and penances, and, if those were insufficient, he would have to pay the balance in purgatory, where accurate accounts were kept of sins and compensations for sins. But certain sins called mortal needed confession to a priest and absolution, if the sacraments necessary to salvation were not to be refused by the Church. Thus attention was concentrated on sins instead of sin, and on sins not as the signs of an evil heart—the particular answers that it gives to particular temptations—but as so many separate debts to God, which had to be paid or compounded for. Instead of repentance—the new heart—the Church required good works and penances. Penitentials—such and such penances for such and such sins, irrespective of motives and circumstances—date back early in the Middle Ages, and commutations became common after the rise of the papacy. A pilgrimage was meritorious, and a crusade atoned for all sins. The next step was that others might be paid to do the pilgrimage or to go on the crusade; and at last money was frankly accepted instead of good works. Further, a debt was cancelled in Roman law by payment, whoever paid it; so a vast system arose of vicarious satisfaction through the merits of the saints—a new application of the *communio sanctorum*. The climax of this was the traffic in indulgences (*q.v.*), which was the occasion for Luther's protest. The theory of these may be left to the canonists; in practice they were certainly understood by sellers and sinners alike as a public sale of licences for sins.

This is what made the Church system intolerable to so many persons of serious religion. Some, indeed, were content to pass lightly over its bad sides, many thought reform hopeless, a few took refuge in the detachment of mysticism; but many again were stirred to action. Their objection was not simply that the papal claims were unfounded, or that the Church was full of scandals, or that this or that doctrine was untrue, but that the system as a whole was a practical hindrance and not a help to devotion. Luther himself was a model of ascetic piety till he found in practice that, in St. Paul's words, it was of no value,

tending only to the full satisfaction of the carnal nature. And to this conclusion the more earnest Reformers always came. The Church stood not simply in error, but in deadly antagonism to the living power of Christ. It had returned to the principles of Pharisaism, and made the Saviour's work of none effect. 'If righteousness came by law, then Christ died in vain' (Gal 2²¹).

3. **Outward forms of the Reformation.**—Form being superficial, classification by form is apt to be superficial too. Apparently similar principles may issue historically in different forms, while apparently similar forms may conceal different principles. But form is the outward and visible sign which the world understands, and it always expresses a principle, though not always the deepest, so that we shall find it convenient to use the familiar classification of the Reformed Churches as Lutheran, English, and Reformed, meaning by the last the Zwinglian and Calvinistic Churches of the Continent and Scotland. Only we must not take for granted that their deeper affinities are precisely what their outward forms may seem to indicate. Each of them in different ways came nearer than the others to Latin thought; and, if the Calvinists bore the brunt of battle with Rome, it does not follow that their deeper principles were more unlike the Latin. The importance of the English Church and the difference of its government require for it an independent place alongside of the Lutheran and Reformed Churches. The doctrine, however, laid down especially in the Articles, is entirely that of the Reformed Churches, and was fully recognized as such on both sides, though predestination is taught in such general terms as do not exclude Arminianism. It is simply said that man 'is very far gone (*quam longissime*) from original righteousness,' and there is nothing about reprobation and irresistible grace. Thus it takes off the edges of the stricter Calvinistic doctrine. In addition to these three branches and their offshoots, we have the Arminian reaction from Calvinism, while Moravians and Quakers form an appendix of mysticism, and we cannot entirely ignore Socinians and Deists, though they pushed some principles of the Reformation into a denial of its fundamental doctrines.

On some great doctrines all the Reformed Churches were agreed; and these we shall review before we come to their differences. They were agreed that the revelation of salvation through Christ is contained in the Bible to the exclusion of tradition, and that the meaning of Scripture is determined by reason and scholarship, and not by any Church authority. Every Church must of necessity declare the terms of its own communion, but there is no infallible authority declaring truth. The chief exceptions are the Socinians, who limited the authoritative revelation to the NT, and the English Carolines, who spoke much of antiquity and general councils. In this, however, they had no intention of setting up tradition in the Romish way as a continuous inspiration which practically superseded Scripture; they were only giving to times of 'primitive purity' a weight which others thought excessive. The Reformed Churches were also agreed, except the outliers, in the full orthodox doctrine of the Trinity and the Incarnation. The only peculiarity is the Lutheran *Communicatio idiomatum*. Theories of a Real Presence consistent with a reception which is not 'only after a heavenly and spiritual manner' have before them the difficulty that the divine element of Christ is not carnally pressed with the teeth, while the human is not present everywhere, and 'the flesh profiteth nothing.' Rome calls transubstantiation a mystery, and leaves it a contradic-

tion of reason; but the Lutherans had to reconcile their consubstantiation with reason, and did it with their peculiar doctrine of the Incarnation, that the properties of the divine nature (ubiquity in particular) were communicated to the human. This is practically Monophysite, and carries the important consequence that the Body and Blood of Christ are verily and indeed taken and received, not only by the faithful, but by all who eat and drink in the Supper of the Lord. With this exception, they are generally agreed on the sacraments, accepting Baptism and the Lord's Supper, and denying the sacramental character of Confirmation, Orders, Matrimony, Penance, and Extreme Unction, though Penance has a somewhat ambiguous position with the Lutherans. They all have their solemn rites of marriage and ordination, and all endeavoured for a long time to keep up a disciplinary system of penance for gross scandals. But they entirely abolished extreme unction, and the confirmation of the Lutherans and the English has little more than the name in common with the Romish sacrament. The Calvinists have generally replaced it with some form of admission to full membership.

The Reformed Churches are further agreed that the work of Christ upon the Cross is complete and final, in the sense that there can be no more sacrifice for sin or priests to offer it, and also that no good works of ours can have merit or in any way contribute to salvation. Of the whole Church system there is nothing that they denounce more fiercely than the doctrine that the Mass is a true propitiatory sacrifice for the sins of the living and the dead. Thus, when the Council of Trent anathematized those who called the sacrifice of the Mass blasphemous, the English Church replied in deliberate and direct defiance that such sacrifices 'were blasphemous fables and dangerous deceits.' With the sacrifice went the sacrificing priest. The minister of Christ was restored to his true dignity and office, to preach the Word and offer with his people the higher sacrifice of praise and thanksgiving—'with them,' not 'for them,' for all the Reformed Churches use the vulgar tongue, and invite the people to take their part in the services. And, if the work of Christ upon the Cross is complete, then, as the Augsburg Confession points out, nothing can be added to it by any good works of our own. All that we can do is to receive it and be thankful. In other words, justification is God's act for Christ's sake, and the faith by which alone we can receive it is its result and not its cause. And, if faith itself is not a merit which claims reward from God, still less are good works, which are no more than the natural expression of faith before men. Least of all is it possible to acquire merit by doing more than God commands. Any such teaching directly contradicts the plain words of Christ.

The most conspicuous cause of the differences among the Reformed Churches was the action of the secular power. That action was entirely favourable only in Scandinavia. The favour of the princes in N. Germany and of the cities in the south-west was partly balanced by the hostility of the emperor, and in England there were two reactions before the Reformation was settled by Elizabeth. The secular power was hostile in Scotland, France, the Netherlands, Bohemia, and Poland; and in Spain and Italy it suppressed the Reformation without much difficulty. For the other countries there were long struggles, but in the end the Reformation was finally defeated in France, Bohemia, and Poland; in the United Provinces and Scotland it prevailed. Where the princes favoured it, they commonly favoured it—and shaped it—for political ends; where they were

hostile, it took its own course. Thus England would certainly have declared for Puritanism if Elizabeth had not seen political advantage in a show of Lutheranism. Few, indeed, of the sovereigns had much personal zeal for the Reformation—Edward VI. of England and Christian III. of Denmark excepted. In England and Scandinavia the Reformation was substantially a revolt of the laity, headed by the king, against the overgrown wealth of the Church and the vexatious claims of the priests; and this could not be carried through without a great reform of doctrine, for the pope's authority barred the way, and could not be overthrown without laying the whole Church system in ruins. In England, at least in London and the eastern counties, there was a party for doctrinal reform under Henry VIII., and similarly in Denmark and Sweden; but in Norway, where the scandals were fewer, there was less discontent with the Church; and in Iceland the new faith had to be established by violence. The Reformation was a popular movement in Germany and the United Provinces, and also in Scotland, where the scandals of the Church were especially flagrant. In England and Scandinavia the victory was gradual. Though Mary Tudor had made Romanism impossible, England became definitely Protestant only in the course of Elizabeth's long reign, and the issue was not beyond a doubt till the deposition of James II. In Sweden the Augsburg Confession was not formally adopted till 1593; and even now the Church is 'Evangelical'; but the nation had become thoroughly Lutheran when Sigismund was deposed in 1599 for bringing in a Polish army to restore the old religion. The danger was like that which faced England in 1688, and it was dealt with by similar laws. All holders of office were to be Lutherans, and only a Lutheran was to have any claim to the crown, such claim being forfeited if he married a papist. The marriage of John III. with Catherine Sagello caused nearly the same evils as that of Charles I. with Henrietta Maria—a more or less Romanizing father and an avowed papist son, and a policy directly contrary to the best interests of the nation, a policy which nothing but a lawless despotism could have carried out.

Princes and nobles had long coveted the wealth of the Church; and under cover of the Reformation they were able to plunder it at leisure. The magnificence of the bishops might well have been cut down, though some of them, like Alcock and Merton in England, were princely benefactors; and men of serious religion were generally agreed that the wealth of the monasteries might be turned to better uses; but the actual plundering was shameless. Neither the suppression of religious houses, nor their suppression by the secular power, nor the use of their revenues for secular purposes, was a novelty of the Reformation. The pope himself abolished the Templars in 1312, and many houses came to an end or were amalgamated with others for want of inmates after the Black Death. In England the alien priories were granted to Henry V. in 1415, and their wealth was partly used for the French war, though some of it remained for Henry VI.'s foundations of Eton and King's College. In fact, it was the habit of founders like Alcock and Wolsey to secure the revenues of some decayed houses. The only novelty of the Reformation was the extent of the suppressions and the undisguised rapacity of princes and nobles.

In Germany the great sees were filled by nobles, and in the later Middle Ages became something like apanages of the princely houses; and such they remained till the general secularization of

1802. Thus the sees of Osnabrück and Minden were commonly held by younger sons of Brunswick and Brandenburg, and Köln itself was given to cadets of the Wittelsbachs from 1583 to 1761. But in the reformed states the sovereign rights of sees were abolished, and the titular bishops were laymen and lived as laymen. The case was similar with the monasteries. The Duke of York, son of George III., was bishop of Osnabrück from his infancy till 1802, the commentator Bengel was abbot of Alpirspach, and a sister of Frederick II. closed the long line of abbesses of Quedlinburg. In some cases, however, the bishops were abolished.

In Sweden Gustavus Vasa could plead dire necessity; and the Recess of Westerås (1527) placed in his hands the whole property of the Church. He took the castles of the bishops and some of their estates. The monasteries were partly taken by the king, partly granted to the nobles, and those founded since 1454 were resumed by the heirs of the founders. But there was no violence. Monks and nuns were free to stay or leave; and one or two houses struggled on till 1595. In Denmark the estates of the bishops were given to Christian III. in 1536, but the royal power was not strengthened as in Sweden and England. The gain fell to the nobles, as in Scotland.

In England the monasteries fell first. They were granted to the Crown, the smaller houses in 1536, the larger in 1539. Some of the property was used for six new bishoprics and other foundations, or for the defence of the realm; but the larger part was granted or sold on easy terms to men in favour at court. Thus a new nobility was formed, pledged to the new order of things. But the monasteries had appropriated the tithes of many parishes on condition of providing for the services; and this right and this obligation came to the new owners. So far then the parishes lost nothing; and, if the new impropiators were laymen who frankly treated the tithes and advowsons as private property, they did no more than the monks had done before them. It was the same with the chantries, which became meaningless when it was declared by the Ten Articles of 1536 that masses cannot deliver souls from purgatory, and were suppressed in 1547. The parishes, however, lost much by the suppression of pilgrimages, relics, and other lucrative superstitions; and the churches were sadly defaced, and sometimes brought into a ruinous condition by the rough removal, especially in 1559, of images, roods, and other monuments of superstition. The bishoprics fared worst of all. Under Somerset and Northumberland, and again under Elizabeth, every vacancy was an excuse for spoliation, and the new bishop was not admitted till he had given up manors, perhaps receiving a poor compensation for them. Most of Elizabeth's bishops died in debt to the Crown, and left their families destitute; and the process was stopped only by the Act of 1604, which disabled bishops from making such exchanges with the Crown. But the spoliation was not all the work of Protestants; something must be allowed for the systematic dilapidations of the Marian bishops before they were deprived in 1559. They left Salisbury, for instance, in a beggarly state. 'This Capon hath devoured all,' said Jewel.

Coming now to the differences of the Reformed Churches, we note first that, though Lutherans, English, and Calvinists were in general agreement on the three great doctrines of justification, predestination, and the supremacy of Scripture, yet each of them laid the stress differently from the others. The Lutherans made justification by faith the *articulus stantis aut cadentis ecclesie*, while the Calvinists gathered their conceptions of right

belief round predestination and election. The English Church made no such distinctive doctrine avowedly central, but the central place was practically held by the supremacy of Scripture. Now this means that Lutheranism was essentially conservative. It removed practical hindrances to true religion—and they were many—but had no special interest in further changes. Luther's was the genius of vivid insight, not of systematic thought, so that he changed only when and so far as he was obliged to change. The English Church was conservative too, but more logical and systematic; and by its emphatic disavowal of any reception in the Lord's Supper which is not 'only after an heavenly and spiritual manner' it was enabled to deal more boldly with the Mass and the ceremonies generally. Calvinism stands apart from the others, for the individualism which to them was fundamental was to the Calvinists only an inference from their really fundamental doctrine of the absolute sovereignty of God. On that doctrine their whole system was moulded, and everything that seemed to conflict with it was ruthlessly swept away. The older the error, the more dangerous it was; and the more innocent the 'rags of popery' seemed, the more they were to be suspected. Hence the Calvinists were much less conservative than the Lutherans or the English. If the old system went about to establish the righteousness of man against the sovereign grace of God, as it undoubtedly did, they were disposed to count it not only false in principle, but bad in all its details. The farther from Rome, the nearer to Christ.

These different ways of thinking were reflected in the different forms of Church government which always seem the chief things to the natural man. In the Church of the Middle Ages there were priests to offer sacrifice for the living and the dead, and these priests were ordained by bishops, who were themselves consecrated by other bishops who were supposed to trace their spiritual descent in an unbroken succession to the apostles. Thus ordination, consecration, and apostolic succession (three legal questions) were vital. The Reformed Churches all abolished sacrificing priests, but all (except the Quakers) had a regular ministry, and all but the Socinians and some outliers required for it a regular call by the lawful authority of the Church, usually with admission by prayer and laying on of hands—for edification and solemnity, not as impressing any sacramental or indelible character. But here again Calvinism stands apart. To the Lutherans and the English Church government was a matter which every Church must determine for itself. No form of government and no ceremony of worship is officially held to be ordained of God. However ancient or edifying it may be, it is still only an ordinance of men, which may by men be altered or abolished. So they used their discretion in various manners. Luther's insistence on the universal priesthood implied the sanctity of the State, so that the civil ruler was the natural representative and ruler of the Church also. Thus Lutheran churches have commonly been Erastian, seldom giving serious trouble to princes who did not try to force them into Romanism or Calvinism. The old services and ceremonies (e.g., altar, vestments, etc.) they generally retained, only translating them into the vulgar tongue, and removing or explaining superstitions and excrescences. As regards Episcopacy, they had no objection of principle to it. The Confession of Augsburg says:

'It is not our object to have the bishops deprived of their authority. The one thing we ask is that they will allow the Gospel to be purely preached, and relax a few observances which cannot be kept without sin' (pt. ii. § 7).

But, when the bishops refused, the results were various. In Germany the spiritual office was abolished, and the princes took over the general government of their churches. The bishops had consistory courts where lawyers and divines sat together; and these, with extensions and modifications, became the chief subordinate authorities. In Denmark the bishops were equally intractable, and played a great part in the civil war after the death of Frederick I. So, as soon as Christian III. had captured Copenhagen in 1536, he arrested the bishops, and set them free only after their jurisdiction had been abolished by the National Assembly and the goods of the Church given up to the king. Then Christian appointed seven superintendents to work under himself as *summi episcopus*, and these were consecrated, not by bishops, but by Luther's friend Bugenhagen, and soon took the title of bishops. There was no consistory. Sweden was more conservative. There again the bishops were intractable, but Gustavus Vasa mastered the Church once for all at the Riksdag of Westerås in 1527; and Brask of Linköping, the champion of the old order, left the country in despair. The vast estates of the bishops, the chapters, and the monasteries were placed at the king's disposal. But the change was gentle and gradual: there were no martyrs on either side. The Mass was translated into Swedish and the ceremonies were explained. Unction, e.g., was only a symbol of the inward unction by the Spirit. The forms of Church government were very little changed. The old bishops were gradually replaced by Lutherans, chosen by the clergy and consecrated by other bishops. Even the apostolic succession seems to have been preserved (though this is disputed) by the unwilling hands of Petrus Magni of Westerås, though the Swedish Church leaves its spiritual value an open question. There was no central consistory—Gustavus Adolphus tried in vain to establish one—but parish priests are appointed by the bishops, and all dignitaries must have the king's approval.

The English Reformation took generally the same course as the Swedish, though the changes and the reactions were much more violent. The Tudors were stronger than the Vasas, and the antagonisms between Papalists and Nationalists, and between Catholics and Reformers, were much sharper than in Sweden. The English Church was Erastian because it was national, and therefore fitly represented by the civil power, and because further the dangerous political situation after the separation from Rome induced the English people to give Henry VIII. a practical dictatorship. Thus the strong monarchy of the Tudors was raised to its height by the Reformation. Henry VIII. mastered the Church once for all at the 'Submission of the Clergy' in 1532. The king was acknowledged as Head of the Church—Supreme Head; convocation was not to make or even to discuss any new canon without the king's permission, and, if the election of bishops remained with the chapters, they could elect none but the king's nominees. The king's supremacy was not exercised through a consistory, but in a harsher form by Cromwell as Vicar-general. Elizabeth took the less offensive title of 'Supreme Governor,' though she claimed the same powers as her father, and exercised them through the Court of High Commission (not fully organized till 1583), which was substantially a central consistory. She carefully preserved not only the rite of consecration but the apostolic succession. She may have cared for it as little as Gustavus Vasa, but its political value was evident, especially when it suited her to pose like a Lutheran prince prescribing the religion of his subjects according to the Peace of Augsburg.

Thus the English Church has it as a matter of fact, but has nowhere officially declared it to have any spiritual value. Indeed, it was not supposed to have any before the rise of the Carolines, which is commonly dated from Bancroft's sermon in 1589. There is no mention even of Episcopacy in the English definition (Art. 19) of the Church; and, though no one has been allowed since 1662 to minister without episcopal ordination, this is given simply as a domestic rule 'in the Church of England,' and passes no censure on churches which otherwise ordain. In Church government then the English were as conservative as the Swedes; in public worship they took a bolder line. The various books and the local uses were consolidated into the single national Book of Common Prayer in English for congregational use. The services were generally simplified, and the excessive number of the ceremonies was much reduced. Morning and Evening Prayer in 1549 contained little that was not in the Hours, and the Marriage Service is even now nearly what it was in the Middle Ages, nor was the Mass itself entirely changed. It was translated and much simplified; but it was still said by a priest in a vestment at an altar, and still provided for private confession and absolution. Its doctrine was upon the whole a spiritual Presence, but it was quite consistent with consubstantiation, though Gardiner needed a good deal of special pleading to get transubstantiation into it. But in 1552 the Prayer-Book was 'godly perused' and revised. Invocation of saints and prayers for the dead were entirely removed. The 'Service of the Lord's Supper or Holy Communion' was now to be said by a priest or minister in a surplice at the Holy Table. It provided for spiritual help and ghostly counsel, but individual confession was limited to the visitation of the sick, and even there was neither private nor compulsory. Moreover, the whole structure of the service was changed for the deliberate purpose of disavowing every sort of Presence that is not purely spiritual. Every passage quoted by Gardiner was altered. The Canon of the Mass was broken up into three parts. The prayer for the whole state of Christ's Church was limited to the living, the prayer of consecration was brought close to the administration in order to prevent 'eucharistic adoration,' and the oblation of the elements was turned into an oblation of 'ourselves, our souls and bodies' after the elements had been consumed. Thus in public worship the English made greater changes than the Swedes.

It will be noted that in N. Germany, in Sweden, and in England the new churches were or soon became national, not simply as independent of Rome, but as true expressions of national character. Luther was so intensely German that his influence continued to dominate the North, even after the inroad of Calvinism in the latter half of the 16th century. In Sweden the new religion owed its consolidation to the services of Gustavus Vasa, the reaction against John III. and Sigismund, and the work of the great kings of the 17th century. Dissenters were always very few, and even now they are less than one per cent. In England the transition was during the peace of Elizabeth. A nation which in 1558 was hardly more than disgusted with the fires of Smithfield had become firmly Protestant when it confronted Spain in 1585, and never wavered afterwards. Even the Carolines (except a few creatures of Charles I.) were heartily opposed to Rome. But from the beginnings of Christianity in England there was a cleavage of religious thought and feeling. The side which was always dominant, except in the time of the Civil War, preferred the regular and stately services of a national Church. The other,

represented in successive ages by friars, Lollards, Puritans, and Dissenters, leaned to the freer ministrations and looser order of local congregations. The Reformers endeavoured, and for a moment successfully, to bring the whole nation into a single Church. That hope was wrecked by the tyranny of Bancroft and Laud; and, if the tyranny of the Commonwealth made the Church thoroughly popular, the tyranny of the Restoration shut out men who stood for one whole side of the religious life of England. It condemned the Church to be a sect, yet a sect in which the other side is not forgotten. That it is the most national of the sects is shown at once by its powerful influence on English Dissenters and by its conspicuous failure to win the Celts of Wales and Cornwall.

Unlike the Lutheran and the English Churches were the Reformed. One marked historic difference is that they had the secular power against them everywhere but in the cities of the south-west—roughly, from Frankfurt and Lindau to Geneva. Where that power was friendly, they were guided and controlled by burghers instead of princes; where it was hostile, they had to form their churches as the early Christians did, according to their own conceptions of doctrine and expediency. As the Romish sacerdotalism created an aristocracy of priests who alone could dispense the necessary means of grace, so the Calvinistic doctrine of predestination created an aristocracy of the elect, for whom alone Christ died, who alone received saving grace and alone properly constituted the Church. This aristocracy was created not by some visible rite of ordination, but by God's eternal counsel secret to us, so that it could not form a visible class in the Church. The chief of sinners might be of the elect, and an apparent saint might prove a reprobate. So, while the distinction of priest and layman was denied, the acknowledged difference of elect and reprobate had to be ignored in the organization of the churches. Calvinism is indeed an inspiring creed—that God has foreknown me from all eternity, and sent me forth to do in His strength and not my own the work predestinated for me before the foundation of the world. It is the creed of the strong, as asceticism is the creed of the weak, when neither the one nor the other can rise to the higher faith, that Christ died for all men, and not in vain. It is only a half-truth, and, like other forms of the opinion of necessity, it must be treated in practice as if the limitation were false. As every Calvinist in his right mind believes himself to be elect like the boy in the English Catechism, he must presume that his neighbours also are elect, though he believes that some of them are not. It was like our own very necessary convention that our neighbours are honourable men, though we know that there are knaves among them. Only, a knave can sometimes be found out, a reprobate never. Hence a Reformed Church was in theory a democracy, with all spiritual authority deriving from the people. This principle was extended to civil authority by the English Independents in 1647, though the Commonwealth could not carry it out. It prevailed in America, where it was favoured by colonial conditions, and from America it was brought back to France, and became the basic principle of the Liberal movement of the last century. This principle would seem to require a free Church independent of the State; and to this ideal the Reformed doctrine pointed almost as clearly as the Romish. But the condition of freedom is persecution. The State cannot refuse to decide questions of Church property for any sect which is tolerated, and cannot decide them without judicial interpretations of its confessions and deeds of settlement. Hence the Reformed Churches

became subject to the State the moment they had mastered it. The burghers of Zürich or Amsterdam or the Lords of the Congregation in Scotland might be the stoutest of Protestants; but they were determined to keep the ministers in their place, and allow no such clerical rule as that from which the Reformation had delivered them. They had no objection of principle—the Germans have none now, and the English had none then—to what we should consider a most vexatious interference with private life. They were used to it. Every town was full of sumptuary laws and minute regulations on all sorts of subjects, and a few more or less made little difference. But there was more than this. Calvin's high estimate of the Lord's Supper and of the primitive Church led him to demand the restoration of the primitive discipline and its enforcement by the secular power; and in this the Reformed Churches generally, including the English, were more or less inclined to agree with him. They had some reason. Public morals were in a dreadful state, and this was keenly felt, now that the new preaching had roused the public conscience, which the mediæval Church had so debauched with formal righteousness and easy payments for sin that the foulest crimes passed with no more censure than in the old pagan times. The new discipline was hideously severe and did infinite mischief; but it was hardly more severe than the old would have been, if the Church had not preferred to make a traffic in sin. It was at least impartial. Magnates and even ministers had to do their public penance like other sinners. Neither the ministers of Geneva, nor the Scottish Kirk, nor the High Commission in England showed any respect of persons. None the less the system hardened the saints with formalism and spiritual pride, and drove the sinners to hypocrisy or despair. It was long before the Reformed Churches could shake off the belief taken over from the Middle Ages that it was their duty to punish sin as sin with spiritual censures enforced by temporal penalties. But laymen were jealous of this dangerous power of excommunication, and moderate churchmen like Bullinger disowned it. In German Switzerland it was not allowed at all; in French Switzerland (even in Geneva) and in Scotland it was not entrusted to purely clerical authorities. In England the frequency of excommunication and its misuses for secular offences were a standing grievance against the early Stuarts; and the endeavour of the Presbyterians to introduce the Scottish discipline was foiled by the lawyers, the Independents, and the nation generally.

On the other hand, there was a doctrine which often partly counteracted the natural dependence of a dominant sect upon the State. The holiness of the Church was nowhere more of a living truth than in the Reformed Churches, for they believed as firmly as any Romanist that it was ordained of Christ and guided by His Holy Spirit. Eternal predestination was a still mightier inspiration than the august tradition claimed by Rome, and there was no double standard of priests or monks to shelter common sinners from its fullest claims. So the ministers could stand up as boldly as any popes or bishops against wickedness in high places, and they did so with a courage which, though not wanting, was less often seen in the more courtly Lutheran and English Churches. The Reformed had much more trial of persecution than the Lutherans, for the Peace of Augsburg left them alone to fight the hardest of the battle against the treachery of the savage Catholic revival. Small wonder if their zeal was often fierce and narrow, quarrelsome and overscrupulous. But they are not fully represented by such extremists as Puritans, Covenanters, and Camisards, who were

more or less demoralized by Stuart or Bourbon tyranny. If we look to more peaceful churches like those of Zürich or Strassburg, or even Geneva, or to the early stages of the Reformation in Scotland, we shall find greater moderation. Calvin himself charged the English Liturgy of 1552 with nothing worse than *tolerabiles ineptias*, and the Scots used one like it (with ceremonies omitted and some freedom to the minister) till they were disgusted with all forms of prayer by the attempt of Laud and Charles to force an English form upon them. Bucer and even Laski urged Hooper in 1550 not to refuse the episcopal vestments, and in Elizabeth's time Bullinger and Gualter gave plain counsel to the Puritans. The surplice, they said, was not used at Zürich, and they did not like it; but the queen's enforcement of it was no reason for giving up their ministry.

In one direction the Reformed Churches far excelled the rest. The appeal to Scripture made the study of Scripture a duty for all according to their powers; so that instruction in religion had to be both deeper and more general than heretofore. The Reformers were conspicuously learned men. Luther himself was the greatest of German teachers; Cranmer and Jewel were above comparison with their opponents; and Calvin was not only the best patristic scholar of his time, but the greatest commentator since Augustine. However they may have erred, it was not for want of diligent and faithful study of Scripture with all helps thereunto then attainable. And this learning they sought to spread among the people. They translated the Bible, urged all to read it, and shaped the services for instruction as well as for devotion. The English Reformers did what they could, but were hindered by the rapacity of the nobles, who were much more inclined to plunder the old schools than to found new, and, moreover, saw no need of education for the lower classes. The Lutherans were less thorough in this as in other matters, and soon lost themselves in a jungle of controversies. The Calvinists did better. Geneva under Calvin and Beza was the centre of Protestant learning, and the village schools established by Knox and Melville gave Scotland such a system of general education as England has reached only in our own time.

4. Results of the Reformation.—We are now in a position to survey the Reformation as a whole, and form some estimates of its results. Shortly, national Churches replaced the catholic Church, Scripture became the standard instead of tradition, and the individual gradually gained first religious, then civil, liberty. This was a revolution, and the greatest since the rise of Christianity, so that it called forth the most violent opposition, and was the occasion for enormous evils—the savage persecutions and wars of religion, the desolation of the Netherlands and Germany, and a long severance of the comity of Europe, north and south. Strict Romanists and strict Protestants were never heartily allied till 1686, and the embers of religious hatred are not yet quenched. Even now the pope visibly prefers infidel Germany to heretic England. To the Reformation we owe further the religious divisions of N. Europe, the multitudinous sects of England and America, involving scandals without end to the unbelievers, and also the whole school of rationalists from Deism and the *Aufklärung* to the latest extravagances of the Germans and their imitators. To the Reformation again we owe the Tridentine reaction which (with some reform of scandals) consolidated the mediæval system into a firm barrier against all freedom in S. Europe. The age of the Jesuits and the Inquisition was brought to an end in the 18th cent. by the philosophic despots and the French Revolution, only to

be followed by something lower still. If there was much honest ignorance in the Middle Ages, there is much organized falsehood now.

Of all these evils the Reformation was the occasion, and of some the cause; and to these we may add the mischief done in the suppression of the monasteries and in the corruption of the upper classes by the plunder of the Church, the mischiefs caused by the too great subservience of the Lutheran and English Churches to the State. We now look at the other side. The abolition of a mischievous and sometimes unfriendly foreign authority gave the nations freedom to develop themselves, and made better order possible in both Church and State. What were scandals in the 18th cent. were matters of course in the 15th. National character became stronger and more earnest, and gained a new sense of duty from the new responsibility laid on every man when the new teaching abolished auricular confession, swept away a vast amount of superstition, and trading on superstition, and removed the poison from family life by its emphatic rejection of the ascetic ideal; and all this was summed up in a rational worship constantly challenging comparison with an open Bible.

Yet all this was but the prelude of the mighty evolution. The depth of meaning in the principles of the Reformation was reached slowly and through many conflicts, and is not exhausted yet. The Reformers were men of their own time, and took over from the Middle Ages many beliefs inconsistent with their own principles. They took over the old imperial conception of God as a despot in heaven, the old view of the gospel as a law of commands, the old belief in a rigid visible Church which could allow no dissent, and the old reliance on a penitential discipline enforced by the State. All these are finally inconsistent with the individualism of the Reformation. A God who calls on us to judge the righteous judgment cannot be despotic, so that despotism and slavery on earth stand condemned. A gospel of free forgiveness—in technical language, justification by faith—cannot allow a visible Church with no salvation outside it. If freedom from Rome did not at once bring freedom in religion, it made the coming of that freedom certain by throwing back on every man the burden of seeking for truth from which the Church had relieved him. And freedom in the highest sphere carried freedom in the lower, sometimes even for countries which rejected the Reformation as well as Rome. The supremacy of conscience proclaimed by the Reformation meant freedom first for heterodoxy. Persecution on a large scale was made impossible in Germany by the Peace of Westphalia, in England by the Revolution, in France by Voltaire and the Constituent Assembly. But it meant also political freedom, and the growth of freedom is bringing the whole conception of government into better accord with the divine ideal of goodness and unselfishness. All Protestant states except retrograde Germany are seeking justice, and the Catholic states nearly in proportion to their independence of Rome. The freedom won for criticism and science has been the occasion for many excesses; but the broad result emerging is confusion to the twin powers of agnosticism inside and outside the Christian Church. Above all, the free appeal to history has shown that the gospel is vaster and more varied, freer and more loving, than our fathers knew. The Reformation opened the way to a vision of God; and the vision of God is the inspiration of men.

LITERATURE.—[Dr. Gwatkin had finished this article, but had not added the literature, before his death. The following list has been prepared by the Editors.]

The writings of the Reformers and the works of leading Church historians may be consulted for the history proper of

the Reformation. Exhaustive lists of authorities will be found in the bibliographies attached to *The Cambridge Modern History*, i.-iii., Cambridge, 1902-04. In vol. i., *The Renaissance*, the section by W. Barry, describing 'Catholic Europe,' may be referred to, and that by H. C. Lea, on 'The Eve of the Reformation,' is also valuable. Vol. ii., *The Reformation*, gives the history of the movement in the different countries of Europe. Vol. iii., entitled *The Wars of Religion*, deals with those international and other conflicts which owe their origin to the Reformation.

Among books in which the ethical and other principles involved in the Reformation are unfolded may be mentioned: C. Beard, *The Reformation in its Relation to Modern Thought* (H.L.), London, 1883; A. E. Berger, *Die Kultur Aufgaben der Reformation*², Berlin, 1908; F. von Bezold, *Gesch. der deutschen Reformation*, ed. 1890; G. Bonet-Maury, *Les Précurseurs de la Réforme et de la liberté de conscience*, Paris, 1904; Lord Bryce, *The Holy Roman Empire*, new and revised ed., London, 1904; M. Creighton, *Hist. of the Papacy from the Great Schism to the Sack of Rome*, new ed., 6 vols., ed. 1901; A. Harnack, *Hist. of Dogma*, Eng. tr., from 8rd German ed., ed. 1894-99, vol. vii.; F. Imbart de la Tour, *Les Origines de la Réforme*, 2 vols., Paris, 1905-09; J. Janssen, *Gesch. des deutschen Volkes seit dem Ausgang des Mittelalters*¹², 16, 8 vols., Freiburg im Br., 1891-94, Eng. tr., 16 vols., London, 1896-1910; J. Köstlin, *Martin Luther: sein Leben und seine Schriften*², ed. G. Kawerau, 2 vols., Berlin, 1908; T. M. Lindsay, *A Hist. of the Reformation*, 2 vols., Edinburgh, 1906; Luther, *First Principles of the Reformation* (the Ninety-five Theses and Three Primary Works of Luther), tr. and ed. with introd., H. Wace and C. A. Buchheim, London, 1883; A. O. Meyer, *Studien zur Vorgesch. der Reformation*, Munich, 1908; L. von Ranke, *Deutsche Gesch. im Zeitalter der Reformation*, 6 vols., Berlin, 1839-47, Eng. tr., 3 vols. (no more published), London, 1845-47; E. Troeltsch, 'Protestantisches Christentum und Kirche der Neuzeit,' in *Kultur der Gegenwart*, i. iv. 1., Leipzig, 1905; C. Ullmann, *Reformatoren vor der Reformation*², 2 vols., Gotha, 1866, Eng. tr., Edinburgh, 1874-77; H. B. Workman, *The Dawn of the Reformation*, London, 1901-02.

The Roman Catholic view of the Reformation, its causes and its consequences, is set forth in the following: H. S. Denifle, *Luther und Luthertum im ersten Entwicklung*², 2 vols., Mainz, 1904-09; F. A. Gasquet, *The Eve of the Reformation*², London, 1905; H. Grisar, *Luther*, tr. E. M. Lamond, ed. L. Cappadelta, 6 vols., ed. 1913-17; L. von Pastor, *Gesch. der Päpste seit dem Ausgang des Mittelalters*, 6 vols., Freiburg im Br., 1886-1913, Eng. tr., 12 vols., London, 1891-1912.

REFORMED CHURCH IN AMERICA.—I.

The name and its meaning.—At first the churches of this body were addressed as 'the Reformed Dutch Churches in New York and New Jersey.' In 1789 the title, 'the Reformed Dutch Churches in North America,' was given. The minutes of Synod at the adoption of the Constitution use the term, 'the Dutch Reformed Church in North America.' But the name on the title-page of the first edition of the Constitution, printed in 1793, is 'the Reformed Dutch Church in the United States of America.' The same title appears on the second edition of 1815. In subsequent editions it is 'the Reformed Dutch Church of North America.' The act of incorporation of the Synod in 1819 gives the name as 'the Reformed Protestant Dutch Church.' In these terms the history and geographical position of the Church are outlined. It was 'Protestant' in contrast with Roman Catholicism. It was 'Reformed' because it belonged to the school of Calvin rather than to that of Luther. It was 'Dutch' because Holland was the country of its origin. The expressions 'America,' 'North America,' and 'United States' give the country of its development. In process of time the title was considered cumbersome, and the word 'Dutch' inappropriate, since the membership had become thoroughly American. In 1867 the name was therefore changed to 'the Reformed Church in America.'

2. History.—(a) *Period of the Dutch domination (1623-64).*—To the Dutch West India Company, chartered in 1621, was committed the government of the Dutch colony on the banks of the Hudson, called New Netherland. The policy of this company was to foster the Reformed religion in the Dutch colonial possessions. Therefore in 1623 the company sent Sebastian Jansen Krol, a comforter of the sick, to New Netherland. He conducted services according to the rites of the Church of Holland.

Because the office of the company for New Netherland was in Amsterdam, the Classis of Amsterdam, by the decree of 1624, took charge of the religious work of the colony. The first Dutch pastor, Jonas Michaelius, was sent out in 1628. In April of that year he organized a church of 50 members in New Amsterdam. Peter Minuit, the governor, was an elder in this church. This was the beginning of Presbyterian church government in America. The church thus formed became the mother church of the denomination. It has had a continuous, recorded history from that day to this. With ample endowment and ten church buildings, it conducts a great work in the metropolis of the Western world. Its school is probably the oldest educational institution in the United States.

Under the Dutch West India Company the Reformed Church was the Established Church of the colony. Other sects were tolerated, although Governor Stuyvesant showed personal hostility to them. Thirteen churches were founded, and sixteen ministers served during this period. Seven of these were on duty at the time of the surrender to the English in 1664.

(b) *Period of struggle for civil independence (1664-1787).*—By the terms of surrender the Dutch Church was assured of freedom. But the change of Government was a severe blow to it. Financial support from the State soon ceased. The Church owed civil allegiance to the English Government and ecclesiastical allegiance to the Classis of Amsterdam. The combination was fruitful of misunderstandings. Few people came from Holland, but many English poured into the colony. Within the first twelve years after the surrender only one Dutch minister arrived. In 1676 only three Dutch ministers were in the country. The English governors obeyed the letter of the treaty granting freedom to the Dutch Church, but there was a tendency for the Church to become a mere organ of the civil power. Several incidents during the first generation of English rule taught the Reformed Church to be on its guard against encroachments on its liberties.

The Revolution in England in 1688 produced the Leisler tragedy in New York. This made a sad division in the Dutch Church, in which the populace was on the side of Leisler and the ministers and higher classes on the side of the Government. Governor Fletcher took advantage of this condition to advance the Episcopal Church at the expense of the Dutch. At his request the Ministry Act was passed by the Assembly in 1693. This Act provided for the support by taxation of 'a good, sufficient, Protestant minister' in each of the four southern counties of the province. The Dutch members of Assembly did not intend by this Act to establish the Episcopal Church, but Fletcher and several of his successors affected to consider the English Church established thereby, and much friction resulted. The Dutch Church of New York City, taking alarm, obtained a charter for itself in 1696. By this the rights and liberties of that individual church were secured. It was therefore able to lend effective moral support in the struggle to other churches. The majority of the Dutch ministers stood their ground in all the

tedious disputes with the governors, but a few surrendered their ecclesiastical independence from motives of personal ambition.

In the fight against a State Establishment the Dutch Church as a whole was at an advantage compared with other denominations. It was a National Church, not classed with 'Dissenters,' able to appeal to the treaty rights of 1664. While no 'Dissenting' church could obtain a charter before the Revolutionary War, several Dutch churches secured this coveted privilege. The Dutch Church therefore won the victory in its contest with the royal governors. By the third decade of the 18th cent. the theoretical liberty of the earlier time had become actual.

During these years the Church was growing. The natural increase of the Dutch population was great. Religious persecution drove French Huguenots and German Palatines to America. These united with the Reformed Church and became an important element in its life. By 1737 the thirteen churches of 1664 had become 65, and the seven ministers had become nineteen. There was need for more ministers, but to obtain them from Holland was difficult. It had always been contrary to the policy of the Classis of Amsterdam to allow American ordinations. They grudgingly permitted a few with the understanding that they were not to become precedents.

(c) *Period of struggle for ecclesiastical independence (1737-92).*—Under the leadership of Theodorus Jacobus Frelinghuysen the religious movement known as 'the Great Awakening' took a strong hold of the Dutch Church. This increased the desire for more ministers and loosened still further the weakening bond which held the Church to the Classis of Amsterdam. Frelinghuysen proposed that an institution to train young men for the ministry should be founded, and the churches organized into an Assembly to ordain them and perform other functions of an independent Church. In the year 1737 a plan for such an Assembly or Coetus was sent to Holland for approval. The Classis of Amsterdam doubted the wisdom and ability of the American Church. They thought it better for them to unite with the Germans and Presbyterians. This plan came to naught. With the precedent of other American churches becoming independent before their eyes, after long delay, in 1747, they granted permission for the Dutch Church in America to form a Coetus. But this privilege was bound with such restrictions that it was practically worthless. Ordinations were allowed only by special permission, and appeals to Holland were granted. For six years this Coetus led an ineffectual life, and then in 1754 issued a declaration of independence. This offended some of the more conservative ministers, who seceded under the leadership of Domine Ritzema, senior minister of the Dutch Church of New York City.

The members of the new Classis or Coetus possessed energy and piety. They professed reverence to the Classis of Amsterdam, but took their own independent course. They ordained, when they thought proper, young men for service in the Dutch churches of America, and made strenuous efforts to found a college for the education of ministerial candidates. This they accomplished in 1766, when Queen's College, afterwards Rutgers, obtained a charter. The seceded ministers called themselves 'the Conferentie.' They were a minority in number, but possessed the weight of age and scholarship. They professed to be the legitimate successors of the old Coetus, and they retained the records of that body. They emphasized their subordination to the Classis of Amsterdam and were free in their criticisms of the Coetus brethren.

Yet they realized the necessity of theological education, and Domine Ritzema evolved the plan of a Dutch Divinity professorship in the newly-organized King's College, in New York City. The plan was adopted, but the chair was never occupied. In 1764 the Conferentie organized themselves into an 'Assembly subordinate to the Classis of Amsterdam.' The next year by special permission they ordained one young man.

The Classis of Amsterdam did not understand conditions in America. At first they favoured the Conferentie, but in time they perceived that the freedom usurped by the Coetus was necessary to the life of the American Church. John Henry Livingston, sometimes called 'the father of the Reformed Church,' was influential in enlightening them. A well-informed American, he studied theology at the University of Utrecht in 1765-70. He took every opportunity to explain conditions in the American Church to members of the Classis of Amsterdam. On Livingston's return to America he became pastor in New York City, and the next year (1771) under his influence a peace conference was held. At this a plan of union, proposed by the Classis of Amsterdam, was presented. Both parties were tired of strife, and peace was obtained with surprising ease. The freedom desired by the Coetus was secured, and the feelings of the Conferentie were soothed by the adoption of names not connected with the old disagreements. An organization, called a 'general body,' was formed with power to ordain, and five 'special bodies' were grouped under it. The Church, now acknowledged independent, was about to enter upon a full ecclesiastical and religious life.

But the clouds of the Revolutionary War were gathering, and the Reformed Church was directly in the track of the storm. The losses of the Church during that upheaval were great. Much property was destroyed and congregations were scattered. Within New York City a handful of Dutch Tories held service during its occupation by the British, although their pastors and most of their brethren had fled.

At the return of peace in 1783 the Church rapidly arose from its ruins. In 1784 the independent names of Synod and Classis were assumed without further regard to conservative feelings. The same year Livingston was chosen professor of Theology in connexion with his New York pastorate. In 1788 a committee was appointed to translate the standards of doctrine, liturgy, and the rules of order of the Dutch Church into English. They were to revise such statements as did not suit the free conditions in America. This was accomplished in 1792, and the next year the work was issued. Thus the organization of the independent Church was completed and the Church began its national life. Letters between the mother Church in Holland and the daughter Church in America were occasionally sent for about a score of years, but the custom gradually fell into disuse.

During the colonial period about 150 churches were organized, and about 150 ministers served in the Dutch Church.

(d) *Period of the independent American Church (1792-1916).*—The life of the Reformed Church in America during the years of its national existence has been similar to that of other Presbyterian bodies within the United States. The English language is generally used, and the membership has been drawn from Evangelical Christians of every name. It is not uncommon in the cities to find that the members of an individual Reformed church trace their ecclesiastical ancestry to a dozen different sources. The general public does not distinguish it from its Presbyterian neighbours.

In 1846 the Reformed Church received a stream

of emigration from Holland which increased its numbers, and caused the flavour of the Dutch Reformation to prolong its life in the Middle West. The Church had always been strong in New York and New Jersey. These immigrants founded about 200 churches in the region of which Chicago is the centre, and have extended their influence to the Pacific coast.

There have been a few secessions from the Reformed Church. In 1822 Solomon Froeligh and four suspended ministers, being more conservative in doctrine than their brethren, organized 'the True Reformed Dutch Church.' This became extinct in 1890. In 1882 another secession of certain Hollanders in the west took place. They were displeased because the Synod would not take action against Freemasonry. They joined with others to form 'the Christian Reformed Church.'

The Reformed Church in America has always been interested in missionary effort. In the generation succeeding the Revolutionary War the church of New York City received constant appeals for aid from weak churches. To these she seldom turned a deaf ear. Several Domestic Mission Societies were organized at different times, and the Board of Domestic Missions of the Church was born in 1831. Its chief work is to aid feeble churches and to organize new ones in proper places. Many of the strong churches of the denomination have received aid from it in their infancy. The first year of its existence its income was \$5,400. In the year 1915 it received \$197,555.55.

Foreign missionary work has received unusual attention. The first society for this purpose was organized in 1796. From 1826 to 1832 the Reformed Church worked in union with the American Board of Commissioners for Foreign Missions. From 1832 to 1857 its relation with that board was that of co-operation. Since 1857 the Reformed Church has conducted its foreign mission work independently but with hearty co-operation with other Churches in the foreign field. The receipts of this board in 1915 were \$300,752.51. The board at present maintains five missions, viz. Amoy, China, 1842; Arcot, India, 1853; N. Japan, 1859; S. Japan, 1859; Arabia, originally an independent mission, 1889, but adopted by the board in 1894. The women of the Church also maintain foreign and domestic mission boards.

Other boards of the Church are: the Board of Direction, which has charge of the property of the Synod; the Board of Education, which aids young men studying for the ministry and assists in the support of certain educational institutions; the Board of Publication and Bible Work; the Disabled Ministers' Fund and the Widows' Fund.

In 1915 there were reported 718 churches with 126,847 communicant members, served by 750 ministers.

3. *The doctrine and polity of the Reformed Church in America.*—The Constitution of the Netherlands Reformed Church, decreed by the Synod of Dort (1618-19), was formally adopted by the Reformed Church in America in 1771. That Constitution then contained the following elements: the Belgic Confession of Faith, the Heidelberg Catechism and the compendium of the same, the liturgy, the canons of the Synod of Dort, and the rules of Church government.

The standards of doctrine have remained unchanged, but the Church has been little troubled with heresy. It has been conservatively progressive in the interpretation of these standards. The Constitution and the liturgy have been revised in 1833, 1874, and 1916. Certain portions of the liturgy are optional. Some of these have fallen into general disuse. But certain portions are required; they are generally admired and perhaps

are the most distinguishing feature in the services of the Reformed Church.

The form of government is of the Presbyterian type, first proposed by Calvin and adopted by the Netherlands churches in 1568. It requires four classes of officers in the church: ministers, teachers (of theology), elders, and deacons.

The unit of government is the Consistory ruling the individual church. A group of churches forms a Classis. Of this body the ministers and an elder representing each church are members. In 1915 there were 37 Classes in the Reformed Church of America. Above the Classis is the Particular Synod, of which there are four. The General Synod is the supreme court. It has held regular annual sessions since 1812. It was incorporated in 1819.

While loving its own doctrine and method, the Reformed Church has always been charitable towards other views and methods, and ready to labour hand in hand with every other denomination of Evangelical Christians.

4. Educational institutions. — The Reformed Church has always insisted upon an educated ministry. Its institutions of learning are as follows: (1) Rutgers College, New Brunswick, N.J., 1766; its name was changed from Queen's to Rutgers in 1825; it is the State college of New Jersey and since 1865 is no longer under the control of the General Synod; (2) the Theological Seminary, New Brunswick, N.J., 1784; this is perhaps the oldest institution of its kind in the United States; it has been located at New Brunswick, N.J., since 1810, when Livingston, who had been both pastor in New York and professor of Theology, resigned from his pastorate and removed to New Brunswick to devote his entire time to teaching; (3) Hope College and the Western Theological Seminary, 1866, both located at Holland, Michigan. Besides these the Church has several schools of lower grade in America and important institutions upon its mission fields.

CHARLES E. CORWIN.

REFORMED CHURCH IN THE UNITED STATES.—This religious denomination, which was formerly known as 'the German Reformed Church,' is derived from the Reformed Churches of Germany and Switzerland. In government it holds to the Presbyterian system. Its confession of faith is the Heidelberg Catechism. It developed 'the Mercersburg Theology,' one of the phases of American theological thought.

Individual members of the Reformed Church emigrated to America early in the 17th century. Peter Minuit, the leader of the Swedish colony which in 1638 settled on the banks of the Delaware, had been a ruling elder of one of the Reformed churches of the German city of Wesel. Among the Hollanders who founded New York there were not a few Germans, but these generally identified themselves with the Reformed Dutch churches. In the southern colonies there were German and

French Reformed among the earliest settlers. Wherever Episcopalians or Presbyterians had occupied the field, they rarely attempted a separate organization. In Pennsylvania Reformed families are known to have settled before the arrival of William Penn.

About 1709 German Reformed people began to arrive in America in great numbers. Most of these were natives of the Palatinate on the Rhine or of neighbouring provinces, though there were also many Swiss. The principal cause of this extensive migration was no doubt a desire on the part of the immigrants to better their worldly condition. In the Palatinate great distress was directly or indirectly the result of the French wars which had devastated the land. Even after peace had been declared there was no immediate improvement. Finally came the terrible winter of 1708-09, which greatly increased the distress. It was reported that Queen Anne had invited the suffering Palatines to emigrate to the British colonies.

'Then,' says F. Löher, 'men looked into each other's faces and said: "Let us go to America, and if we perish, we perish."'¹

The condition of Switzerland was hardly more encouraging than that of the Rhine country. The people complained that great numbers of foreign refugees had crowded into Switzerland; and, as many of these were skilled labourers, they unintentionally deprived the natives of their means of subsistence. As early as 1663 Peter Fabian, of Bern, sent out by the English Carolina Company visited Carolina in the hope of establishing a settlement, but he does not appear to have been successful. In 1710 Christoph von Graffenried and Michell, natives of Bern and sailing from England, founded Newbern, in N. Carolina. About 1730 the stream of Swiss immigration turned northward, and in E. Pennsylvania the Swiss became especially numerous. There were no doubt some of them among the Palatines who went from Amsterdam to London in 1709; but the Swiss generally sailed directly from Rotterdam to America, and purchased land soon after they reached their destination.

The estimates of the extent of the German and Swiss immigration to America in the 18th cent. differ. Isolated settlements were founded here and there from Canada to Georgia, and for a long time there was little communication between them. Theodor Poesche, a careful authority, puts the number in America before the Revolution of 1776 at 200,000. A. B. Faust² at 225,000. About the middle of the 18th cent. there may have been 30,000 members of the German Reformed Church in Pennsylvania alone, but it is evident that nothing like that number was gathered into congregations. It was, however, in that province that the Germans were most numerous, and it is there that we find the beginnings of a general organization of the Reformed Churches.

The history of this denomination may be comprehended in five periods.

1. 1709-46: Isolated congregations. — This period is characterized by the founding of congregations and the beginning of missionary activity. The earlier portion is very obscure. Religious services were held in private houses, or sometimes in the open air. In the absence of regular ministers, sermons were read by schoolmasters or other intelligent laymen. Among the best known of these schoolmasters was Thomas Schley, the ancestor of Admiral Winfield Scott Schley and the founder of Frederick City, Md. He was singled out by Schlatter as the best teacher he had found

¹ *Gesch. und Zustände der Deutschen in Amerika*, Leipzig, 1855, ²Göttingen, 1855, p. 42.

² *The German Element in the United States*, i. 285.

in America, edifying 'the congregation on every Lord's Day by means of singing and reading God's Word and printed sermons.'

John Frederick Haeger (1684-1722) was the earliest missionary. He was ordained by the bishop of London on 20th Dec. 1709, at the solicitation of the Society for the Propagation of the Gospel in Foreign Parts, 'for service among the Palatines, New York.' He laboured in the settlements on the Hudson and began to build a church, but did not live to complete it. His father, John Henry Haeger, an ordained minister who had been rector of the Latin school at Siegen, in Nassau-Dillenberg, followed him to America in 1714, and became pastor in Virginia at a village, named Germanna, which had been built by certain miners who had been brought over by Governor Spotswood.

In Pennsylvania the earliest missionary labour appears to have been performed by a Hollander. At Neshaminy, in Bucks county, there was a Reformed Dutch church—the only one in the province—and from its records it appears that its pastor, Paulus Van Vleecq, on 29th May 1710, visited the (German) settlement at Skippach, where he baptized several children, and on 4th June of the same year ordained elders and deacons at White Marsh. These were probably the earliest German Reformed churches in Pennsylvania, though it is possible that some sort of organization may have been almost simultaneously established at Germantown and Falkner Swamp.

Samuel Guldin (1664-1745) was a Swiss minister who arrived in Pennsylvania in 1710. He had been associate pastor of the cathedral church at Bern, but was removed from his charge for Pietism. In America he seems to have lived in retirement, though he preached occasionally in Germantown. He published three small volumes, treating principally of his unhappy European experiences.

In 1725 the congregations at Falkner Swamp, Skippach, and White Marsh, after seeking in vain for a regular minister, extended a call to John Philip Boehm, who had previously served as their 'reader.' His ministry proved successful, and, after communications with the Classis of Amsterdam, he was ordained in 1729 by Dutch ministers of New York. John Philip Boehm (1683-1749), whose indefatigable activity and great importance for the Reformed Church in the U.S. have been recently established by W. J. Hinke,¹ had been a parochial teacher at Worms, and came to America about 1720. He prepared for his congregations a constitution, which was approved by the synods of Holland and was long regarded as a model. He was the author of several vigorous controversial pamphlets and founded many congregations, his missionary journeys extending from the Delaware river almost to the Susquehanna. Profoundly impressed by the helpless condition of the churches of Pennsylvania, he appealed for aid to the synods of Holland, and it was greatly by his influence that the European churches were awakened to a sense of their duty towards their brethren beyond the sea.

In 1727 George Michael Weiss (1700-63), an ordained minister, arrived at Philadelphia. He had been commissioned by the Ober-Consistorium of Heidelberg to accompany 400 Palatines to America as their leader and guide. In the year of his arrival he organized the Reformed Church of Philadelphia. In 1730 he accompanied Jacob Reiff on a journey to Europe, to collect money and books for several destitute churches, returning to America the following year. He subsequently served a charge in the province of New York, but finally returned to Pennsylvania.

¹ *Letters and Reports of the Rev. John Philip Boehm.*

John Peter Miller (1710-96) and John Bartholomew Rieger (1707-69), both natives of the Palatinate, arrived in 1730. After serving in the Reformed Church for several years, Miller joined the Seventh-day Baptists and became the head of a monastic institution at Ephrata. Rieger subsequently studied medicine, and, though he was at times active in the work of the Church, was in later years best known as a physician.

The name of John Henry Goetschius (1718-74) frequently appears in early congregational records. His father, Mauritz Goetschius, who had previously been pastor at Saletz, in the canton of Zürich, Switzerland, came to America in 1735, accompanied by his family. He died not long after landing in Philadelphia, and his son, John Henry, soon afterwards began to preach with great acceptance, though he was only seventeen years old. In 1736 he claimed to be pastor of twelve congregations. In later years he became an eminent minister in the Reformed Dutch Church. His brother-in-law, John Conrad Wirtz, also became a minister, and is regarded as the founder of the Reformed Church in the city of York, Pennsylvania.

In 1742 several Reformed ministers joined with Count Zinzendorf in the organization of the 'Congregation of God in the Spirit.' It was proposed to unite the German denominations (Lutheran, Reformed, and Moravian) in a higher unity without destroying their identity. Until 1748 this organization laboured earnestly, especially among the Reformed and Lutherans, but the movement finally proved unsuccessful, and most of its adherents identified themselves with the Moravians. The most eminent of the Reformed ministers who belonged to the 'Congregation' were Henry Antes, John Bechtel, Christian H. Rauch, Jacob Lischy, and John Brandmiller.

2. 1746-93: Denominational organization.—The leading event of this period was the founding of the 'Coetus,' by Michael Schlatter, in 1747. For eighteen years the Church of Holland had been directly interested in the German churches of Pennsylvania; but nothing had been done to secure a general organization. It was believed that the American churches were not ready for the establishment of an independent Synod; and it was, therefore, suggested that an advisory body, composed of ministers and delegated elders, should as soon as possible be organized. This body was to be known as the 'Coetus,' or 'Convention'—a term which was first applied by John à Lasco to a weekly conference of ministers which he established in 1544 at Emden, in Germany.

There were certain difficulties which may at first have appeared almost insurmountable. The Germans of Pennsylvania were not of Dutch speech or nationality; they had not been trained to acknowledge the national Confessions of the Netherlands, and it would have required much labour to bring them into full accord with their new ecclesiastical relations. A man was needed who could speak the language of both nationalities, who was willing to be the confidential agent of the Dutch Synods, and might serve as a personal link between the Old World and the New. There was, therefore, great rejoicing when a young Swiss minister appeared and offered to undertake the work.

Michael Schlatter (1716-90), a native of St. Gall, belonged to a prominent family and was thoroughly educated. Having spent a part of his youth in Holland, he was familiar with the language of that country. After his ordination to the ministry he preached for several years in his native country; but, having heard of the necessities of the American churches, he went to Holland and was commissioned by the synods of Holland to undertake the work of organizing them. Nine days after receiv-

ing his commission he set sail for America, where he arrived on 1st Aug. 1746. In his American work he manifested extraordinary energy and perseverance. He made extensive missionary journeys, organized thirteen pastoral charges, and convened the first Coetus in Philadelphia on 29th Sept. 1747, with four ministers and 28 elders in attendance. The ministers, besides Schlatter, were Boehm, Weiss, and Rieger. From this time the Coetus met annually, its proceedings being sent to Holland for revision and approval.

In 1751 and 1754 Schlatter visited Europe in the interest of the American churches. His first mission proved remarkably successful. In one year he wrote and published his *Appeal*, attended many conferences in Holland, Germany, and Switzerland, induced six young ministers to accompany him on his return to America, and collected £12,000, the interest of which was to be applied to the destitute churches of Pennsylvania and schools. The ministers who accompanied Schlatter to America were Philip William Otterbein, John Jacob Wissler, John Waldschmidt, Theodore Frankfeld, Henry William Stoy, and John Casper Rubel.

Schlatter's enthusiasm proved contagious, and David Thomson, pastor of the English church at Amsterdam, went to England to plead for the establishment of schools among the Germans of Pennsylvania. He was very successful, and it is said that the king gave a personal contribution of £1000. A number of so-called 'Charity schools' were founded in Pennsylvania, and Schlatter was made superintendent of this educational movement, a position which he filled till 1756. He was for some years a chaplain in the Royal American Regiment of infantry, and subsequently lived in retirement near Philadelphia.

The Coetus increased slowly. 'The fathers' in Holland sent a number of missionaries, who had, almost without exception, been well educated in German universities. They refused, however, to grant to the American body the privilege of conferring the rite of ordination, and this led to frequent disagreements. A considerable number of ministers failed to become members of Coetus.

Among the most prominent members of Coetus were the following: J. Conrad Steiner (1707-62), author of several volumes of sermons; Philip William Otterbein (1726-1813), pastor in Baltimore, who, under the influence of the Methodist revival, founded religious societies from which the denomination of 'the United Brethren in Christ' was developed; J. Daniel Gros (1737-1812), professor in Columbia College, New York, and author of an important philosophical work (in English); C. D. Weyberg and William Hendel, two ministers who united, in 1787, with several Lutheran pastors in founding at Lancaster, Pennsylvania, Franklin College, so named in honour of Benjamin Franklin, who was the largest individual contributor to its endowment.

The leading independent minister was John Joachim Zubly (1724-81), of Savannah, Georgia, an author, and elected in 1775 a member of the Continental Congress. In 1787 the Reformed ministers of S. Carolina joined with several Lutheran ministers in forming a union which received the double name of 'Corpus Evangelicum' and 'Unio Ecclesiastica.' This movement is interesting principally from the fact that it anticipated the Prussian Church union of 1817 in some important particulars.

During this period the Coetus remained warmly attached to the Church of Holland. In 1770 an attempt to unite the German and Dutch Reformed elements in a General Synod was defeated by the Germans on the ground of gratitude to 'the

fathers' in Holland and particularly to the Classis of Amsterdam. In the war of the Revolution, when communication with Europe was much interrupted, the American churches learned to depend upon their own resources. In 1792 the Coetus abandoned the custom of sending its minutes to Holland for revision. The period of dependence was at an end and the Coetus by its own act became an independent Synod.

3. 1793-1820: The independent denominational organization.—About twenty ministers united in the organization of the Synod which met at Lancaster, Pa., in 1793. The condition of the Church at that time could hardly be called encouraging. Congregations had grown numerous, but were apathetic. The pioneers had passed away, and the younger ministers were imperfectly educated. No provision had been made for higher education, and the number of candidates for the ministry was small, so that extensive districts were left without pastors. Important congregations called pastors, without much discrimination, from other denominations, and the people were in danger of being alienated from the faith of their fathers. The introduction of the English language was resisted by the older generation and led to serious conflict. Pastors generally laid stress on catechetical instruction, but the establishment of Sunday schools was viewed with suspicion, as were all so-called Methodist methods. The faith of the people was mainly traditional, and the prevailing theology was that of the Cocceian or Federalistic school. The Church, however, grew by natural increase, and a new and brighter era was ahead of it.

4. 1820-63: Consolidation and development, educational institutions and liturgical worship.—At the beginning of this period the number of ministers had increased to 70, and it was found difficult to bring them together at synodical meetings. It was, therefore, determined to divide the Synod into eight Classes, which held their earliest meetings in 1820. From this time onwards the Synod was a delegative body chosen by the Classes. The Classis of Ohio, on account of the Synod's refusal to grant to the Classes the privilege of conferring the rite of ordination, became in 1823 a separate body, known as the 'Synod of Ohio.' In this position it remained until the organization of the General Synod in 1863. Heidelberg College at Tiffin, Ohio, was founded in 1850. In 1820 a plan was adopted for the establishment of a Theological Seminary, which was opened at Carlisle, Pa., 1825, with Lewis Mayer as the first professor of Theology. Mayer wrote *A History of the Reformed Church* and valuable monographs.

In 1825 James R. Reily, one of the zealous friends of the Seminary, visited Germany to solicit contributions towards an enterprise that was so intimately related to the welfare of emigrants from the fatherland. He secured a good library and a considerable sum of money. Among the most liberal contributors was His Majesty Frederick III. of Prussia. In 1829 the Seminary was removed to York, Pa., and in 1837 to Mercersburg, Pa. Two years before (1835), this small town, afterwards to become famous, was made the seat of Marshall College.

Frederick Augustus Rauch (1806-41), the first president of Marshall College and associate professor in the Theological Seminary, had served a short time as professor extraordinary at Giessen, in Germany, and had just been appointed a full professor at Heidelberg when, on account of political troubles, he was compelled to leave his fatherland. He had been a favourite pupil of the great eclectic philosopher, Carl Daub, and, though he was recognized as a Hegelian, many elements of his thinking were derived from Schelling and

others of his great contemporaries. In theology he was orthodox, and he had been ordained to the ministry. At Mercersburg he wrote his *Psychology* (New York, 1846) and had begun a treatise on aesthetics, when he died suddenly on 2nd March 1841.

In 1839 Mayer retired from his professorship, and in 1840 John Williamson Nevin was elected his successor. He was at that time professor in the (Presbyterian) Western Theological Seminary at Pittsburgh, Pa., and was already known as an earnest student of German philosophy and theology.

Nevin was born in Franklin county, Pennsylvania, on 20th Feb. 1803, and died at Lancaster on 6th June 1886. He graduated at Union College, New York, and studied theology at Princeton. Before going to Pittsburgh he had been assistant teacher of theology at Princeton, and had published his *Summary of Biblical Antiquities* (Philadelphia, 1828). In accepting the invitation to Mercersburg he was convinced that he was called to perform an important task, and his transition to the Reformed Church was fully approved by his Presbyterian associates. For many years Nevin was the head of the institution at Mercersburg. The books which he wrote, though few in number, had great influence in his denomination. His tract *The Anxious Bench* (Chambersburg, Pa., 1843) aroused wide attention, and his book *The Mystical Presence* (Philadelphia, 1846) presented the real spiritual presence in the Lord's Supper. He was a profound thinker and a powerful controversial theologian. From 1849 to 1853 he edited the *Mercersburg Review*, and most of his theological articles appeared in that periodical.

In 1843 the Synod, convened at Lebanon, Pa., elected F. W. Krummacher, of Elberfeld, Prussia, to become Rauch's successor at Mercersburg. Benjamin S. Schneek and Theodore L. Hoffeditz went to Germany to present the call, and their visit attracted much attention in Berlin and other cities. When Krummacher declined the call, the attention of the commissioners was diverted by Neander, Tholuck, Julius Müller, and Krummacher to Philip Schaff (1819-93), who was at that time a *privatdozent* in the University of Berlin. On this recommendation Schaff was elected professor of Theology at Winchester, Va., on 19th Oct. 1843, and came to America the following year.

Schaff's inaugural address, *The Principle of Protestantism*, published with an Introduction by Nevin (Chambersburg, Pa., 1845), defended the doctrine of historical development, a theory at that time considered dangerous by many German Reformed ministers. For this reason and on account of alleged Roman Catholic tendencies, the inaugural was made the ground of a charge of heresy. Schaff was tried before the Synod and acquitted by a practically unanimous vote.

Through the teachings of Nevin and Schaff Mercersburg became widely known as the seat of the 'Mercersburg Theology.' Misrepresented as a Romanizing movement in sympathy with the Tractarianism of Oxford, it really was strongly Protestant, but stood for a high view of the Church and her ordinances and not for any peculiar system of divinity. Stress was laid upon the liturgical element in worship, the real spiritual presence of Christ in the Lord's Supper, and the importance of the early Church Fathers. Nevin's articles on 'Early Christianity' and on 'Cyprian' in the *Mercersburg Review* (1851, 1852) helped to increase the unrest which Schaff's inaugural had stirred up.

Schaff was active in literary labour as well as in the class room. He stated his views of historical development in *What is Church History?* (Phila-

delphia, 1846), and published his *History of the Apostolic Church* (first in German, Mercersburg, 1851,² Leipzig, 1854, Eng. tr., New York, 1853) and his *History of the Christian Church, 1 A.D.-600 A.D.* (2 vols., New York, 1858-67), a German *Hymn-book* (1859) still used in the worship of the German Reformed and Presbyterian Churches of the United States, and other works. Nevin resigned his professorship in 1851, subsequently becoming president of Franklin and Marshall College, the chief literary institution of the Church. Schaff remained in Mercersburg till 1863.

Influenced by the example of these teachers, many younger men engaged in literary work and became prominent as authors and Church leaders—H. A. Bomberger, E. V. Gerhart, Henry Harbaugh, Thomas C. Porter, George W. Williard, and Jeremiah I. Good. In 1851 Catawba College was founded at Newton, N. Carolina. In 1853 Marshall College was removed to Lancaster and consolidated with Franklin under the title of Franklin and Marshall College. In 1871 the Theological Seminary was removed from Mercersburg to Lancaster, where both institutions have since been successfully conducted. During this period also the Church was greatly disturbed over the preparation and use of a Liturgy, Schaff being one of the leaders in the preparation of the book (Philadelphia, 1857).

Missionary work in the West was successful, especially among the Germans. In 1860 a colony of emigrants from Lippe-Detmold founded the Mission House at Franklin, Wis., which has become an important centre of missionary activity.

5. 1863-1918: The peaceful growth of the Church.—The year 1863 was distinguished by the tercentenary celebration of the Heidelberg Catechism. There were several largely attended conventions, at which essays were read which were afterwards published in English and German in the *Tercentenary Monument* (Chambersburg and Philadelphia, 1863). A memorial edition of the Heidelberg Catechism in three languages was also published (*The Heidelberg Catechism in German, Latin, and English*, with Introd. by J. W. Nevin, New York, 1863, Bonn, 1864, and *Der Heidelberger Catechismus, nach der ersten Ausgabe von 1563*, etc., Philadelphia, 1863, rev. ed. 1866).

In the same year the General Synod was organized by the union of the Eastern and Western Synods. During their long separation these bodies had developed local peculiarities, and there were disagreements on the general subject of cultus. As early as 1847 a Liturgical Committee had been appointed by the Eastern Synod, and several proposed orders of service were published. During the heated controversy over the subject Ursinus College was founded, in 1869, by Bomberger. In 1879 the controversy was concluded by the appointment of a Peace Commission, which also prepared the order of worship now generally used. There is no disposition to abridge the freedom of worship, and the use of the Liturgy is not compulsory.

The Reformed Church is connected with the 'Alliance of Reformed Churches holding to the Presbyterian System,' and is greatly interested in the establishment of a closer federation. There have been several efforts for an organic union with the Reformed Church in America (Dutch) (*q.v.*), but these have hitherto proved unsuccessful, principally on account of a difference in doctrinal standards. A movement for the union of the Church with the Presbyterian Church in the U.S. of America came to an end in 1915; 220 presbyteries had voted in favour, but the majority of the Classes was against it. In 1869 the foreign patril adjective, 'German,' was removed from the official

title of the Church. In spite of difficulties and trials, the Reformed Church in the United States has greatly increased in numbers and influence. In 1916 there were, in connexion with the General Synod, 9 district synods, 1213 ministers, 1759 congregations, and 320,459 communicants, with contributions for congregational purposes of \$2,201,545 and for benevolence \$680,450. There are missions in Japan and China, with 6 schools. Of the synods 6 are prevailingly English, and 3 wholly English. There are 15 theological seminaries and colleges, and 26 recognized periodicals. Five orphan homes and a deaconess home are maintained.

The Reformed Church is sincerely attached to its ancient standards, but also believes in the principle of progress. Its theology is Christocentric—an attitude which has found elaborate and systematic expression in E. V. Gêrhart's *Institutes of the Christian Religion* (2 vols., New York, 1891-94, with Intro. by Philip Schaff). Religious services are conducted according to the general order of the Church year. Confirmation is practised, not as a sacrament but as an appropriate rite attendant upon admission to the Church. Its attitude towards other Christian denominations is fraternal.

JOSEPH HENRY DUBBS.

REFORMED EPISCOPAL CHURCH AND FREE CHURCH OF ENGLAND.—The Free Church of England, and, as its title indicates, the Reformed Episcopal Church in the United Kingdom, otherwise called the Reformed Church of England, claim, each separately, to possess the historic episcopate, indirectly from Canterbury, to which the old-fashioned, unemotional English Churchman, in his cautious self-guard and conservative ecclesiasticism, attaches supreme importance. In the Reformed Episcopal Church three orders of ministers are recognized: bishops, priests (*i.e.* presbyters), and deacons. The Free Church of England, in its published Declaration of Principles, says:

'Guided by the New Testament and by the ecclesiastical polity of the Primitive Church, this Church recognizes only two Orders of Ministers, Presbyters and Deacons.'

Nevertheless, the first order is divided into two offices, *i.e.* bishops and presbyters. The attitude of both the Churches is very clearly expressed about their view of episcopacy. The Reformed Episcopal Church says:

'This Church recognizes and adheres to Episcopacy, not as of Divine right, but as a very ancient and desirable form of Church polity.'

The Free Church of England expresses the same belief in similar words and adds:

'But for the avoidance of any possible misunderstanding, it hereby emphatically declares its repudiation of the Romish dogma of Apostolical Succession in the Ministry as involving the transmission of spiritual powers.'

Both of the Churches in similar terms condemn and reject the following 'erroneous and strange doctrines as contrary to God's Word':

'First.—That the Church of Christ exists only in one order or form of ecclesiastical polity.

Second.—That Christian ministers are "priests" in another sense than that in which all believers are a "royal priesthood."

How the Free Church of England came to be possessed of the historic episcopate, of which the founders never dreamt, must now be told. We are dealing with the history and polity of the Free Church of England before that of the Reformed Episcopal Church in England because of the two Protestant Episcopal Churches outside the Established Church the former was the first founded. In fact, the latter grew out of the former, withdrawals having quietly taken place from the Free Church of England on the question raised by Churchmen in the religious press concerning the historic episcopacy. Four of those who thus seceded, one of whom had been episcopally consecrated as a bishop in the Free Church of England, became subsequently bishops in the Reformed Episcopal Church. As three out of these four seceders had been at one time Congregational ministers, it may fairly be assumed that none of them was personally hampered by any deep conviction that, in order to secure valid orders, the 'laying on of hands' must be by a bishop in the historical succession, but that they took the important step because they thought that by so doing they would better meet the objections of rigid Church people to a purely elective episcopacy.

I. The Free Church of England.—The Free Church of England is a Protestant Episcopal Church, which, as regards orders, doctrine, and worship, takes outside the Established Church a position similar to that of the Evangelical party within. The Oxford Movement (*q.v.*), as it is generally called, which, according to Cardinal Newman, was started on 14th July 1833, in order to arouse the clergy of the Church of England from the cold, apathetic condition into which they had fallen, led to the formation of the Free Church of England, as an effective antidote to the advanced sacerdotal teaching of the pioneers of the ritualistic campaign—the eminent clergymen of the Church of England who had dived deeply into early Patristic teaching and pre-Reformation practices—and the materialistic exaggerations of their immediate successors, who did not possess the scholarship, sanity, or personal piety of such men as Keble, Pusey, Ward, and Faber, but who far surpassed them in zeal.

For a decade there had been simmering among the loyal Evangelical clergy an opinion, which gradually deepened and widened in larger and in even outside circles, that something effective should be done to counteract the rapidly spreading sacerdotal movement. In 1843 matters were brought to a head, and precipitated the formation of the Free Church of England.

The see of Exeter was presided over by Henry Phillpotts, who was a strong High Churchman, a strenuous controversialist; and, holding Cyprianic views as to the Divine authority of the episcopal office, to which he did not hesitate to give effect in his diocese, he was at times in serious conflict with one or another of his clergy. In Church history (1847) he is well known by his attempt to stretch ecclesiastical law by imposing an unheard-of test upon George Cornelius Gorham, a third wrangler and a Fellow of Queen's College, Cambridge, before instituting him to the vicarage of Bramford-Speke, Exeter, to which he had been appointed by Lord Chancellor Cottenham. James Shore had for ten years been the esteemed minister of Bridgetown Chapel-of-Ease. A new vicar, on coming into residence, informed him that his nomination to the Episcopal chapel could not be renewed; and the bishop withdrew his licence and declined to state his reasons for so doing. The Duke of Somerset, on being memorialized by 800 members

of the congregation, decided to re-open it, but this time without the bishop's licence. Shore wrote formally, and, as he thought, legally, resigning his position in the Church of England; and on 14th April 1844 he again preached in the chapel to his old well-beloved congregation; but this time as a clergyman in the Free Church of England. The bishop of Exeter, believing as a High Churchman in the indelibility of Holy Orders, because, when they are conferred, a special spiritual grace, mysteriously handed down from the apostles, is *ex opere operato* then imparted by the ordaining bishop, which can only be sinned away by the recipient, promptly instituted proceedings against Shore. The law, as it then stood, was in the bishop's favour. Notwithstanding this, Shore again preached at Spa Fields Chapel on 9th March 1849; and, when he came down from the pulpit, he was arrested by two officers of the ecclesiastical court for non-payment of the bishop's costs. Hereupon Thomas E. Thoresby, the minister of Spa Fields Chapel, London, inserted an advertisement in the *Times*, calling for a meeting at Exeter Hall 'to confer as to the best means of altering the law under which the Rev. James Shore had been committed; and of effecting his immediate liberation.' At that meeting 5000 men were present, and one of the speakers significantly declared 'that by God's help there would be a Church in which the Bishops would not be able to play such pranks.' It was Thoresby who thus spoke, and from henceforth he devoted his sound judgment, strong intellectual powers, and scholarly attainments to the establishment of the Free Church of England. Advice was sought, friends were consulted, and the draft of a plan, which he discovered among the documents in the possession of the Countess of Huntingdon (but which the Countess did not live to execute), formed the basis of a constitution, or deed poll, which was submitted to some of the leading Evangelical clergymen and ministers of the Connexion inviting suggestions, improvements, and criticisms, in order to secure as thorough and complete a Church polity as possible, moulded strictly upon NT authority. Fourteen years of the prime of his life did Thoresby give to the work which he had taken in hand and on which he had set his heart. The plan took definite shape in the year 1863, when at the annual conference of the Countess of Huntingdon's Connexion (*q.v.*), held on 24th June at Spa Fields Chapel, the 'Free Church of England' was formally organized and duly inaugurated by the passing of a resolution setting forth the position of the Connexion and the reasons which led to the adoption of the title of 'The Free Church of England.' The long preamble to the resolution, after alluding to the circumstances under which the Countess of Huntingdon's Connexion came into existence, goes on to say:

'Whereas by a solemn statement made by the Countess's devisees, the Connexion was declared to be essentially in the main, as to its doctrine and liturgy, one with the Church of England; and as to its government, whilst allowing the distinctness and separate government of the several congregations, was held to be Presbyterian and Episcopal: and whereas the congregations in the Connexion have, for the most part, borne a distinctive character inasmuch as they have used with slight modifications the Liturgy of the Church of England, and in their general action have been subject to a general guidance of Presbyters, under the guidance of a President Bishop: and whereas in the public mind of Great Britain, there is a demand for the sound doctrine expressed in the general sense of the Thirty-nine Articles of the Church of England, to be held in connexion with a Revised Liturgy of the Book of Common Prayer: and whereas the Connexion cannot change either its form or name; and the trusts contained in the several deeds upon which the existing Chapels are settled cannot be altered without a vesting order from the Court of Chancery or the Charity Commissioners, etc.; it is therefore resolved by the Conference, for the perpetuation and development of the principles on which the Connexion is founded, that it is highly expedient from this time that any new Churches, and Congrega-

tions gathered in them, shall be known as "The Free Church of England," holding the Doctrines, and governed by the Laws, Regulations, and Declarations hereinafter stated.'

The laws, etc., here referred to formed the constitution of the Free Church of England, and were finally embodied in a deed poll, which was duly registered in the High Court of Chancery on 31st Aug. 1863.

Largely in consequence of the action of the bishop of Exeter in pursuing Shore from one ecclesiastical court to another, incurring ruinous costs which it was quite impossible for Shore to discharge, and then imprisoning him for not paying them, the Free Church of England spread, and new churches in different parts of England were opened—among others, St. James's Free Church of England, Grosvenor Place, Exeter, and Christ Church, Portland Street, Ilfracombe, the congregation of which had as its minister Benjamin Price, who was at one time a member of the Countess of Huntingdon's Connexion, and who subsequently became the first bishop of the Free Church of England.

For three years in succession Price had held the high office of president of the Countess of Huntingdon's Connexion, and in that capacity had acted as its representative at ordinations and similar functions. But, as it was considered by the members of the conference to be simply a distinguished office, no service of consecration was held or deemed to be desirable. But the president of the Connexion was also at the same time *ipso facto* the bishop of the Free Church of England, and among the members themselves the demand grew that the head of the Church should bear a more thoroughly ecclesiastical title than 'president'—one which would convey to outsiders the idea of episcopacy. This internal desire found expression when, in 1868, St. John's Church, Tottington, Bury, Lancashire, was opened, and public announcement was made that it would be consecrated by the Rev. Benjamin Price, 'Bishop Primus' of the Free Church of England. On that eventful occasion the title was used for the first time—against Price's knowledge or desire, it is true. It was felt that the term 'president' did not appeal to Church-people, whereas 'bishop' was thoroughly understood by 'the man in the street.' The anomalous position in which Price found himself was this, that as executive officer he had to perform episcopal duties, without having been consecrated 'by men who have public authority given to them' to do so. Many evangelical clergymen, nevertheless, became warmly attached to the new movement; and their adhesion gave it a more distinctly Church character. This was emphasized by the following manifesto, which in 1873 was signed by over 50 influential clergymen:

1.—We, the undersigned Clergymen of the Church of England, hereby declare our solemn conviction that it is essential to maintain the distinctive Protestant character of our Church.

2.—We have noticed with alarm the tendency of the late 'Bennett Judgment' to lower that character, and to establish a compromise unworthy of our old Reformers and their traditions. The adoption of the principle that what our formularies do not in express terms condemn, they must be considered to allow, points to the conclusion that those who hold the doctrines of Rome have only to disguise them in sophistical subtleties and non-natural language in order to make their position tenable. We consider this a state of things fraught with dangerous consequences to the Church at large.

3.—We hold firmly that Romish errors, against which some of the Articles of the Church of England most emphatically protest, may not on any account be sanctioned.

4.—We lament exceedingly that Romish and Ritualistic practices and doctrines have made sensible progress of late years, in spite of all efforts which have been put forth to check them.

5.—We regard it as indispensable that objectionable passages in the Book of Common Prayer, which have been found to promote such practices and doctrines, should be removed.

6.—We look in vain for any sign of Liturgical Revision by authority in the Established Church.

7.—We have, therefore, determined, at this grave crisis, to express an open sympathy with those kindred Church bodies in England and Ireland which have made Revision of the Prayer-book a leading question. We allude to the Disestablished Church of Ireland and to the Free Church of England. Without pledging ourselves to the details of their respective arrangements, we shall be glad henceforth to act in friendly co-operation with both these bodies for the repression of Ritualism.

8.—We unhesitatingly approve the union of Church and State, and do not advocate secession; but we cannot ignore the fact that some Clergymen have determined otherwise; and unless some decisive step be taken to maintain the Protestant principles of the Reformation, we fear that many of the Laity may practically fall away from our Church, as sheep without a shepherd.

The above declaration was drawn up by Edward Vesey Bligh, son of the Earl of Darnley and vicar of Birling, Kent.

As the movement spread, it became more imperative that Price should be consecrated, according to Church order, with the accompaniment of 'laying on of hands,' according to apostolic custom. In March 1874 the Free Church of England made a friendly suggestion to the Reformed Episcopal Church of America, which had lately been organized, that the two Churches, inasmuch as their principles and doctrines were identical, should be united. The proposition was warmly entertained, and a federative union was arranged—the bishops and clergy of either Church to be eligible to attend and vote at all meetings. One of the bishops of the American Church, Edward Cridge, of British Columbia, an Englishman, and at one time a dean in the Church of England, came to England to visit his friends; and, at the special request of the Reformed Church of America, supplied that which seemed to orthodox Church people to be lacking in the episcopacy of the Free Church of England by publicly consecrating Bishop Price, by prayer and the 'laying on of hands,' to his sacred office. In time this union was allowed to lapse, and the Free Church of England is not now affiliated with any American Church.

The Free Church of England is free (1) to go into any parish to preach the gospel, although, as a matter of practice, she does not do so, unless invited; (2) to use the Book of Common Prayer, from which passages which are interpreted to confer 'absolving and retaining' powers on the clergy have been expunged; (3) from State control, under which ecclesiastical questions are surrounded with restrictions and difficulties; (4) to hold communion with other denominations, on the ground that the Church of Christ is one. 'Multi illi unum corpus sumus in Christo' (Ro 12⁵).

In its uncompromising Protestantism the Church denies (1) that the Church of Christ exists only in one order or form of ecclesiastical polity; (2) that Christian ministers are 'priests' in another sense than that in which all believers are a 'royal priesthood'; (3) that the Lord's Table is an altar on which the oblation of the Body and Blood of Christ is offered anew to the Father; (4) that the presence of Christ in the Lord's Supper is a presence in the elements of bread and wine; and (5) that regeneration is inseparably connected with Holy Baptism.

2. The Reformed Episcopal Church in the United Kingdom, otherwise called the Reformed Church of England.—The earliest settlers in the United States of America (Virginia) in 1607 were members of the Church of England, and therefore naturally desirous of having a bishop in canonical Church order for ordinations, confirmations, etc.; but their applications for the privilege were courteously declined, or postponed, by the English archbishops. In 1784, however, their wish was partly met by the consecration at Aberdeen of Samuel Seabury, rector of St. Peter's, New York, by three bishops of the Episcopal Church of Scot-

land (Robert Kilmour, Arthur Petrie, and John Skinner). The colonists thus had a bishop of their own; but nevertheless they were not completely satisfied. A renewed request of the descendants of the first English emigrants, that a colonial clergyman, whom they might elect, should be consecrated, so that the union with the old country might be strengthened and the Church creed of their fathers followed by their children's children, was favourably entertained; and on 4th Feb. 1787 the archbishop of Canterbury (John Moore), assisted by the archbishop of York (William Markham) and the bishops of Bath and Wells (Charles Moss) and Peterborough (John Hinchliffe), consecrated in his chapel at Lambeth Palace, first William White, of Pennsylvania, and immediately afterwards Samuel Provoost, of New York, as bishops. Three years later (19th Sept. 1790) James Madison, president of William and Mary College, Virginia, was consecrated at Lambeth by the archbishop of Canterbury (John Moore), assisted by the bishops of London (B. Porteous) and Rochester (J. Thomas). The first episcopal consecration in America took place on 17th Sept. 1792, when Thomas John Claggett was consecrated in New York bishop of Maryland, by bishops White, Provoost, Seabury, and Madison. The co-operation of Seabury invested this consecration with prime importance, as it joined the two sources of orders, the Scottish and English, in the Protestant Episcopal Church of America. On 15th Nov. 1866 George David Cummins, rector of Trinity Church, Chicago, was consecrated at Christ Church, Louisville, by the presiding bishop, John Henry Hopkins, of Vermont (who was assisted by six other bishops of the American Church), and appointed suffragan bishop of Kentucky. In the autumn of 1873 the Evangelical Alliance held in New York its annual Convention, which was terminated by a united communion service in the Presbyterian Church in Madison Square, in which Bishop Cummins, the dean of Canterbury (R. Payne Smith), and Canon Fremantle took prominent part. The bishop of Zanzibar (W. G. Tozer) and other extremists vehemently denounced these eminent clergymen, and charged them with infringing ecclesiastical law in participating in the sacrament of the Lord's Supper administered in a Non-conformist church. Keenly sensitive to the attacks made on him through the public press, and alarmed at the spread of ritualistic innovations in his own diocese, which, with the limitations imposed upon him as a suffragan bishop, he was unable to stem, he resigned on 10th Nov. 1873 his position in the Protestant Episcopal Church of America; and three weeks afterwards organized the 'Reformed Episcopal Church of America.' On 14th Dec. 1873 he consecrated Charles Edward Cheney as a bishop in the new Church; and on 24th Feb. 1874 he consecrated William R. Nicholson to the same high office, both at Kentucky. Generally speaking, these Church incidents would hardly have passing interest, and the record of them might be considered merely trifling; but to a Church claiming to possess the historic episcopate they are of supreme consequence.

Information concerning the inauguration of the Reformed Episcopal Church of America reached England through the usual channels, and led to a missionary movement on similar Church lines in this country, under the charge of T. Huband Gregg, formerly vicar of E. Harborne, Birmingham; in the following year a General Synod for Great Britain and Ireland was formed, with the right of self-government. In 1894 it was re-organized with P. X. Eldridge as presiding bishop; and 'Constitutions and Canons' were drawn up and agreed upon.

No good purpose would be served by reviving memories of the objections made as to 'form of service' at the consecration of Bishop Cummins, and 'intention,' and other trivialities, which marred the discussions in the first instance; suffice it to say that the Reformed Episcopal Church of Great Britain, although it possesses, equally with the Church of England, all that, from the extreme Churchman's point of view, is necessary for valid episcopal orders, yet in strongest terms repudiates the teaching that the sacraments of Holy Baptism and the Lord's Supper are mechanically operative as channels of spiritual grace, when administered by a 'priest' 'lawfully called' and 'episcopally ordained.' It declares for three orders of ministry, i.e. bishops, presbyters, and deacons, but fully recognizes that the ministry of the Word and sacraments of Nonconformist Churches is of equal value with that of the Episcopal. It was founded to maintain the Evangelical principles of the Protestant Reformation; the Holy Scriptures form its sole rule of faith and practice; the Book of Common Prayer being used at divine service, it is liturgical in its worship; the government, although episcopal, is vested in a General Synod, composed of bishops and presbyters, together with two lay representatives from each of the affiliated congregations; it is a refuge for members of the Established Church who are distressed by unauthorized ritual in their parish churches; and, being free from State patronage and control, it is legally able to hold fellowship with all Evangelical Churches, and delights to do so.

REFORM JUDAISM.—See LIBERAL JUDAISM.

REGALIA.—The word 'regalia' is not found in classical Latin bearing its present meaning. We meet with it, however, in the 12th cent. in the work of the monkish chronicler, William of Malmesbury, *de Gestis Regum Anglorum*,¹ in which, after describing the coronation of Emperor Henry V. by Pope Paschal II., he says that after the ceremony the pope laid aside his *sacerdotalia* and the emperor his *regalia*. In English the words 'regale' and 'regalia' at first bore the meaning of royal prerogatives. The word 'regale' in particular was used of the privileges enjoyed for centuries by the kings of France of receiving the revenues of vacant sees and abbeys and of presenting to benefices which were dependent on them. By the 17th cent. the modern significance had already become attached to the word 'regalia,' while the singular 'regale' had fallen into desuetude. The articles which have formed a part of insignia of kingship in all the different stages of human culture have of course varied enormously in character, and it would be impossible within the scope of an article like the present to attempt to state the significance of each of them. This article is therefore restricted to a brief discussion of their religious symbolism and magical attributes in general. The term 'regalia' will not, however, be limited exclusively to objects worn and carried by kings, but will be extended to cover such material objects as

confer upon their possessors the right to the throne.

I. Royal fetishes.—More than twenty years ago J. G. Frazer, in his *Lectures on the Early History of the Kingship*, called attention to the sacred character of the kingly office among primitive, semi-civilized, and, in a lesser degree, civilized peoples; and he inferred that, if it could be traced to its ultimate origins, it would be found to be identical with that of the priest, shaman, or medicine-man.¹ In its main outlines this hypothesis appears to be irrefragable. We must then expect to find among primitive peoples a resemblance between the royal insignia and the magical apparatus of the medicine-man. In this quest we are not disappointed, for we find that among the Malays the magician possesses insignia analogous to the regalia, both in fact bearing the same name (*kabésaran*).² In the Northern New Hebrides, according to R. H. Codrington, chieftainship is not in theory hereditary, but becomes so in practice, as a chief hands on to his son his charms and magic stones, containing the *mana* on which the chieftainship depends.³ The dependence of the royal authority on the possession of certain fetishes is found in its most extreme form in S.E. Asia and the Malay Archipelago. In S. Celebes it is said actually to reside in the regalia.

'In short,' says Frazer, 'the regalia reign, and the princes are merely their representatives. Hence whoever happens to possess the regalia is regarded by the people as their lawful king. For example, if a deposed monarch contrives to keep the regalia, his former subjects remain loyal to him in their hearts, and look upon his successor as a usurper who is to be obeyed only in so far as he can exact obedience by force. And on the other hand, in an insurrection the first aim of the rebels is to seize the regalia, for if they can only make themselves masters of them, the authority of the sovereign is gone. In short, the regalia are here fetishes, which confer a title to the throne and control the fate of the kingdom. Houses are built for them to dwell in, as if they were living creatures; furniture, weapons, and even lands are assigned to them. Like the ark of God, they are carried with the army to battle, and on various occasions the people propitiate them, as if they were gods, by prayer and sacrifice and by smearing them with blood. Some of them serve as instruments of divination, or are brought forth in times of public disaster for the purpose of staying the evil, whatever it may be. For example, when plague is rife among men or beasts, or when there is a prospect of dearth, the Boogineese bring out the regalia, smear them with buffalo's blood, and carry them about. For the most part these fetishes are heirlooms of which the origin is forgotten; some of them are said to have fallen from heaven. Popular tradition traces the foundation of the oldest states to the discovery or acquisition of one of these miraculous objects—it may be a stone, a piece of wood, a fruit, a weapon, or what not, of a peculiar shape or colour. Often the original regalia have disappeared in course of time, but their place is taken by the various articles of property which were bestowed on them, and to which the people have transferred their pious allegiance.'⁴

In Loowoo, on the south coast of the Celebes, two toy cannon, and in Bima a sacred brown horse, formed part of the regalia. Among the Malays the regalia are of the nature of talismans on which the safety of the State depends, and are clearly bound up with the sanctity of the king.

'Not only is the king's person considered sacred, but the sanctity of his body is believed to communicate itself to his regalia, and to slay those who break the royal taboos. Thus it is firmly believed that any one who seriously offends the royal person, who touches (even for a moment) or who imitates (even with the king's permission) the chief objects of the regalia, or who wrongfully makes use of any of the insignia or privileges of royalty, will be *kéna daulat*, i.e. struck dead, by a quasi-electric discharge of that Divine Power which the Malays suppose to reside in the king's person, and which is called "*Daulat*" or "*Royal Sanctity*."⁵

Similar tabus on the wearing of royal robes are found in various parts of the world. In Japan any one who wore the emperor's clothes without his leave was supposed to suffer from swellings all over the body.⁶ Similarly, in Fiji, disease is

'It is a singular custom in Bengal, that there is little hereditary descent in succession to the sovereignty. There is a throne allotted to each king; there is in his harem, a seat or station assigned to each of the Amirs, Wasirs and Mansabdars. It is that throne and these stations alone which engage the reverence of the people of Bengal. A set of dependants, servants and attendants are annexed to each of these situations. When the king wishes to dismiss or appoint any person, whoever is placed in the seat of the one dismissed is immediately attended and obeyed by the whole establishment of dependants, servants

Iron Crown
is received

sanctity as the relics of some kingly saint or national hero. Thus the ancient regalia of England, which were destroyed under the Commonwealth in 1649,¹ were venerated as relics of St. Edward, by whom they were believed to have been worn. The regalia of Hungary are regarded as relics of St. Stephen. The imperial and French regalia were to some extent relics of Charlemagne.

The English regalia consist of St. Edward's crown, the imperial crown, the sceptre with the dove, the sceptre with the cross, St. Edward's staff, the orb, the gold spurs, the sword of State, and the second and third swords, and the curtana, or sword of mercy. The regalia of the Holy Roman Empire consisted of Charlemagne's crown, his dalmatic embroidered with large crowns, the golden apple or globe, Charlemagne's sword, his golden sceptre, the imperial cloak embroidered with eagles, the buskins, gloves, and the hereditary crown of Rudolf II. The French regalia included the crown said to have been given by Pope Leo III. to Charlemagne, Charlemagne's sword, called 'Joyeuse,' a sceptre six feet high, the hand of justice, and Charlemagne's spurs, vestments, dalmatic, tunic, buskins or sandals, and mantle. The Scottish regalia included a crown, sceptre, and sword.² It seems to have been the custom for the English kings to be buried in their coronation robes, as was shown at the opening of Edward I.'s tomb in 1774. Owing to this practice, there existed, of course, no hereditary royal robes in England as in some other countries.

The most important regalia of the khalifas were the supposed relics of the Prophet—his striped cloak (*burdah*), his ring, his staff, and his sword.³ They are said to have been dug up in A.H. 132, and to have been brought to Constantinople in the reign of Selim I. (1512-21), who on his conquest of Egypt forced the last of the 'Abbāsīd khalifas to make over his rights to him. There seems, however, little chance that they are genuine, as, even supposing that the story of their being dug up is true, they would probably have perished when Baghdad was taken by the Mongols in A.D. 1258. As the origin and symbolism of the crown have already been dealt with,⁴ they need not be discussed here, but something may be said of some of the other more prominent insignia of royalty.

5. The sceptre.—John Selden, in his *Titles of Honor*,⁵ says:

'For the Scepter, some testimonies make it an ancient Ensign of a King than the Crown or Diadem is. Justin (or rather Trogus Pompeius) seems to deny that the old Kings of Rome had any Diadems; but that instead of them they carried Scepters. So I conceive him in those words spoken of the age of those Kings, "Per ea adhuc tempora reges hastas pro Diademate habebant, quas Græci SCEPTRA dixerunt." For their Diadems, enough already. But it is most clear that both in prephane and holy writers the scepter is much ancienter (as it was attributed to a King) than either Crown or Diadem.'

It is probable that the ancestor of the sceptre is far older than even Selden imagined. Possibly it is to be found as early as the old Stone Age. A shaft of reindeer's horn perforated at its broader end by one or more cylindrical holes has been found in certain Aurignacian and Lower Magdalenian deposits in France. In its later form it is decorated with incised designs. Gabriel de Mortillet, believing it to be a ceremonial object, gave it the question-begging name of *bâton de commandement*.⁶ Among the chiefs and medicine-men of the Plains Indians of N. America carved batons

served as emblems of authority. Their use was forbidden to ordinary persons.¹ More recently the resemblance of the *bâton de commandement* to the arrow-straightener of the Eskimo has been pointed out.² Neither in Greek nor in Latin is the word 'sceptre' (σκήπτρον, *scipio*) used exclusively of a royal emblem, and from this we may infer that in origin it did not differ from other staffs, but that in very early days a common implement was put to a ceremonial use. The σκήπτρον was a staff used in Greece by old men; the *scipio* was a wand carried by magistrates in Rome. Mommsen³ regards the story related by Livy of the senator M. Papirius striking the Gaul with his sceptre as unhistorical. That a staff was an emblem of kingly rank during the monarchical period we know from the well-known expression of Homer, σκηπτούχοι βασιλῆες.⁴ The σκήπτρον was handed down from father to son. At Rome the augur's baton, or *lituus*, was a stick curved like a shepherd's crook at the upper end. The *lituus* with which Romulus is said to have divided the city into regions was believed to have been miraculously preserved at the burning of Rome by the Gauls in 390 B.C. The *lituus* was probably of Etruscan,⁵ and therefore ultimately of Asiatic, origin. The Hittite priest-king is represented carrying a reversed *lituus*. A crook was also part of the insignia of the Egyptian kings.⁶ Pliny uses *lituus* as synonymous with *scipio*.⁷ The magistrate appeared in the triumphal car in the *processus consularis* at the games, bearing in his hand an eagle-tipped sceptre of ivory.

This, however, was an emblem of apotheosis, and unlike the other "ornamenta triumphalia," was never worn on other occasions during the life of the triumphator, nor was it carried at his funeral.⁸

On Etruscan and other coins Zeus holds an eagle-tipped sceptre, and on Cilician coins of the 4th cent. B.C. Baal Tars (Sandas) is also represented holding one. The ivory sceptre tipped with an eagle which was carried by the early kings of Rome is regarded by Cook as symbolizing the fact that the holder was an incarnation of Jupiter.⁹ All the Achæan chiefs had sceptres. Mention has already been made of the fact that Agamemnon's sceptre was worshipped at Charonea. Nestor reminds Agamemnon that he bears the sceptre of Zeus in his capacity as judge.¹⁰ This appears to have been an oaken staff or spear (δῶρον) of great sanctity. Cook believes that the royal sceptre which conferred the right of judgment was a conventionalized form of the oak of Zeus.¹¹

'The god whom the Chaeroneans honour most is the sceptre which Homer says Hephaestus made for Zeus, and Zeus gave to Hermes, and Hermes to Pelops, and Pelops bequeathed to Atreus, and Atreus to Thyestes, from whom Agamemnon had it. This sceptre they worship, naming it a spear; and that there is something divine about it is proved especially by the distinction it confers on its owners. The Chaeroneans say that it was found on the borders of their territory and of Panopeus in Phocis, and that the Phocians found gold along with it, but that they themselves were glad to get the sceptre instead of the gold. I am persuaded it was brought to Phocis by Electra, daughter of Agamemnon. There is no public temple built for it, but the man who acts as priest keeps the sceptre in his house for the year; and sacrifices are offered to it daily, and a table is set beside it covered with all sorts of flesh and cakes.'¹²

The veneration of staffs is world-wide. Hector and Priam raise their sceptres while taking an oath.¹³ Achilles also swears by a herald's staff.¹⁴

'In concluding a treaty the Romans took a sceptre and a flint from the temple of Jupiter Feretris; they swore by the sceptre and "struck (concluded) the treaty" with the flint.'¹

The war-clubs of celebrated warriors, *anava*, in Samoa were venerated by their families. It was regarded as indispensable to success in battle to perform certain rites in their honour.² A Mexican merchant carried a smooth black stick representing the god *Yacatecutli*, who was believed to protect him on his journey.³

'In Aneitum, New Hebrides, South Pacific, there used to be a sacred staff, made of iron-wood, rather longer and thicker than an ordinary walking-stick. It had been kept for ages in the family of medicine-men, and was regarded as the representative of the god. When the priest was sent for to see a sick person, he took the stick with him, and leaning on it harangued the patient, whose eyes always brightened at the sight of the stick.'⁴

In the OT the word 'sceptre' is frequently used as a synonym for royalty.⁵ The Hebrew *shēbet* may stand either for a short ornamental sceptre, such as Assyrian kings are sometimes represented as having, or for a long staff.⁶ The Roman emperors adopted the *sceptrum eburneum* of the triumphant general. When the empire became Christian, a cross was often substituted for an eagle. In some countries two sceptres came into use at an early period. In a 9th cent. English Coronation Order, which is said to be a copy of the Pontifical of Egbert, archbishop of York, 732-766, a sceptre (*sceptrum*) and a staff (*baculum*) are mentioned.⁷ The word *baculus*, *baculum*, was not applied to staffs of a ceremonial character in Rome,⁸ but merely to ordinary ones. The Coronation Order of Ethelred II. mentions a sceptre (*sceptrum*) and a rod (*virga*).⁹ Ethelred II. is the first English king on whose coins a sceptre is represented. Since the time of Richard I. the two sceptres have borne a cross and a dove respectively. The sceptre with the dove was a reminiscence of the peaceful part of the Confessor's reign after the expulsion of the Danes.¹⁰ Of the French sceptres one bore a *fleur-de-llys*, and the other a hand in the act of blessing. The latter was known as the *main de justice*. It was put into the left hand of the king. The human hand as an amulet was widely used throughout the Mediterranean, and in the same region an outstretched human hand is often painted on houses as a protection against the evil eye. A bronze relief at Copenhagen represents Zeus-Sabazios in Phrygian costume, holding in his right hand a pine-cone and in his left a sceptre tipped with a votive hand.¹¹ In early Christian art a hand was a symbol representing God the Father. As to the cause of the duplication of the sceptre, Lord Bute makes the following plausible suggestion:

'This may possibly have arisen from the words, "Thy rod and thy staff, they comfort me," in Psalm xxiii., which was treated as a Regal Psalm on account of the passage "Thou hast anointed mine head with oil," and was additionally appropriate in the Latin, from commencing, "Dominus regit me" as an acknowledgment of the Divine Sovereignty over earthly Princes.'¹²

'In the English Coronation Orders the sceptre is especially the sign of regal power, while the rod is more the ensign of the paternal authority of the sovereign.'¹³

6. The orb.—

'As the Sceptre,' says Selden, 'is the ornament of the right hand, so in the left the Globe or Mound, with the Crosse Infixt, in Statues and Pictures (and in some Coronations) of Kings, is a singular Ensign of Royall dignitie. The severall times where-in the solemn use of this in severall kingdoms began, is not so easily found, nor perhaps worth the inquiry. It shall suffice here to shew how it began in the Empire, whence the use of it was by example taken into all or most of other kingdoms of Christendom. That which we name a Globe or Mound here is also sometimes called an Apple, sometimes a Ball, and it is observed by learned men that it was frequent in the state of Rome before the Emperors were Christian to have both among their Ensigns in the field and in their monies the Ball or Globe, the beginning whereof ISIDORE also referres to AUGUSTUS. PILAM, saith he, IN SIGNA CONSTITUISSE FERTUR Augustus, PROPTER NATIONES SIBI IN CUNCTO ORBE SUBJECTAS UT MALUS FIGURAM ORBE OSTENDERET. Thus some copies have it, and not MAGIS FIGURAM etc. as we usually read here.'¹

At the imperial coronations the orb was carried by the Counts Palatine of the Rhine, under the name of *pomum imperiale*.² The apple was sacred to Aphrodite, and is a token of love in S.E. Europe at the present day, but does not appear to have been a token of kingship in the ancient world. In its origin, however, the orb appears to have symbolized the vault of heaven. Zeus is frequently represented with a blue *orbis*, or globe. A coin of Caracalla represents Jupiter Capitolinus holding a globe in his right hand and a sceptre in his left.³ Sometimes a globe rests beside the god's feet.⁴ From being a symbol of the sky-god the globe becomes one of the imperial insignia. Imperial coins of the 3rd and 4th centuries show the emperors holding a globe.

'These representations imply on the one hand that the emperor has stepped into the shoes of Jupiter, and on the other hand that his duties descend in unbroken succession from occupant to occupant of the imperial seat. . . . Frequently from the time of Commodus to that of Diocletian we find Jupiter delegating the globe to his human representative.'⁵

Both in Roman mosaics and in Pompeian paintings the globe is coloured blue or bluish-green, which indicates that it signified sky rather than earth. It is uncertain whether the cross was first added to the globe by Constantine or by Valentinian I.⁶ Julian the Apostate replaced it by a figure of victory. Under the name of *globus cruciger* it was a part of the Byzantine regalia. Though the orb formed a part of the regalia of the Holy Roman Empire and of England, it was not used in France. In the English coronation ceremonial it is treated as a symbol of the dominion of Christ over the world. On placing the orb in the sovereign's right hand, the archbishop addresses him in an exhortation containing these words:

'When you see this orb set under a cross, remember that the whole world is subject to the power and Empire of Christ our Redeemer.'

7. The sword.—The symbolism of the sword is of course self-explanatory. The girding of the new monarch with a sword is a practically universal feature of coronation ceremonies. It is a reminiscence of the days when the king was not merely the titular but the actual war-chief of his people. So intimate a part have weapons played in the religion of a warlike people that deities have been worshipped under their forms. A spear kept in the Regia was worshipped as an image of Mars; the Scythians sacrificed sheep and horses to an iron sword, and the war-god of the Alans was worshipped as a naked sword stuck in the ground.⁷

Indeed, in the case of the sultans of Turkey, the girding on of the sword of Osman in the celebrated mosque of Eyub on the Golden Horn is the formal ceremony of inauguration. At the coronation of the king of Hungary an impressive ceremony is connected with the sword of St. Stephen. After the coronation the king rides on his charger to a

mound made of earth brought from all the provinces of the kingdom and waves his sword towards the four points of the compass, indicating his determination to defend his kingdom against surrounding foes. The tendency of the various royal ornaments to become multiplied is also apparent in the case of the sword. No fewer than five swords now form part of the English regalia: (1) the sword of State which is carried before the king on various occasions; (2) a small sword which is substituted for it during the coronation ceremony, and with which he is ceremonially girded; (3) the sword of spiritual justice; (4) the sword of temporal justice; (5) the *curtana*, i.e. 'shortened' sword, or sword of mercy, which is blunted at the end by the removal of the point. Such swords were in ancient times carried by heralds. A similar idea is found in Japan, where certain officials such as doctors wore in their garments a wooden ornament resembling a short sword.¹

8. Bracelets and rings.—It is not unlikely that bracelets, anklets, and rings may have at one time been amulets, and have participated in the inevitable tendency of amulets to degenerate into ornaments. As emblems of kingship bracelets seem to have been more prevalent in the East than in the West. They were worn by the kings of Persia, and also formed part of the royal insignia of Saul, whose bracelets were, after his death, brought to David by an Amalekite.² They were formerly in use in England, and a pair belonging to the regalia was ordered to be destroyed under the Commonwealth. They have not been used in England since that date.³ The use of the ring is, however, almost universal. Though at an early period it may have been an amulet, yet before degenerating into a mere ornament it passed through a period of usefulness as a signet. The Spartan magistrates had a public signet with which they sealed everything that had to be sealed.⁴ That rings were royal ornaments from an early period we know from the curious legends surrounding the rings of Minos and of Polycrates, tyrant of Samos. In Rome the gold ring was often conferred as a military distinction. The *ius anuli aurei* limited its use. The emperor's ring was a kind of State seal. In the *Liber Regalis*, which represents the fullest development of the mediæval English coronation ritual, the ring is referred to as 'Catholicæ fidei signaculum.'⁵ In Europe the ceremonial use of rings is of course most familiar in connexion with betrothal and marriage. The coronation ring symbolizes the marriage of the monarch to his people, just as the episcopal ring symbolizes the marriage of the bishop to his see. The English coronation ring is indeed sometimes called the wedding-ring of England.⁶ The doge of Venice used to cast a ring into the Adriatic, symbolizing the marriage of the city to the sea. The ceremony was called *spozalizio del mar* ('the wedding of the sea'), and was celebrated annually on Ascension Day.

A curious legend attaches to St. Edward's ring. It is said that he once bestowed it upon an old man. Some years later two English pilgrims in the Holy Land met the old man, who restored it to them, revealing himself as St. John the Evangelist, and bade them return it to the king. There is also a superstition that the closer the ring fits the king's finger, the more loved will he be, and the longer will be his reign.⁷ Royal rings have served various symbolic purposes. Alexander the Great on his death-bed bestowed his ring upon Perdicas, as symbol of his intention to entrust the government

of the empire to him. The Anglo-Saxon king Offa is said to have appointed his successor by sending him his ring.¹ The bestowal of the royal ring may symbolize a pledge, as in the case of Elizabeth's gift to Essex, or it may symbolize a royal command. In the book of Esther Ahasuerus gives his ring to Haman as a warrant for massacring the Jews. Adrian IV. confirmed Henry II. on the throne of Ireland by sending him a gold ring. Mary Queen of Scots, by sending her ring, pardoned two burgesses who were about to be hanged.²

9. The umbrella.—Throughout Asia and parts of Africa the umbrella is one of the most important insignia of royalty. It is or has been in use among the Malays, in Burma, Siam, India, and among the Seljuk sultans and the Mogul emperors.³ An umbrella is shown on the reverse of a coin of Herod Agrippa I. It also forms part of the regalia in Madagascar. In one of the *Jâtaka* tales a prince who wishes to dispossess his brother of the throne says, 'Give the royal umbrella up to me, or give battle.'⁴ In 1855 the king of Burma, addressing the governor-general of India, spoke of himself as 'the monarch who reigns over the great umbrella-wearing chiefs of the Eastern Countries.' It seems most probable that the ceremonial character of the umbrella is due to the tabu which prevents certain sacred persons from being exposed to the sun's rays, and is a counterpart to the very common tabu which prevents their feet from touching the earth. The Mikado and the high-priest of the Zapotecs of Mexico were forbidden to expose themselves to the rays of the sun. Pope Alexander III. accorded to Ziani, doge of Venice, the right of having a canopy or umbrella carried over him as a symbol of sovereign power.

¹ Umbrellas appear to have been sometimes used in ritual for the purpose of preventing the sunlight from falling on sacred persons or things. . . . At an Athenian festival called *Scira* the priestess of Athena, the priest of Poseidon, and the priest of the Sun walked from the Acropolis under the shade of a huge white umbrella.⁵

10. Investiture with the regalia.—Whether a monarchy is elective or hereditary, it is usual for some ceremony to be held for the purpose of inaugurating a new reign. This ceremony usually takes the form of investing the sovereign with the royal insignia. The inauguration of the king of Tahiti consisted of his being ceremonially invested with a sacred girdle of red feathers in the presence of the image of the god Oro. By means of this ceremony he was formally initiated into divine rank. After describing the girdle, the officiating priest would say, 'Parent this of you, O King.'⁶

Among the Baganda, when the period of mourning for the dead monarch was over, the new ruler and his consort were ceremonially divested of their bark clothes and invested with new ones. This ceremony was called 'confirming the king in his kingdom.'⁷ In Madagascar the object of the inauguration ceremony was to secure for the king the quality of *hasina*, an intrinsic supernatural virtue, which renders an object good or efficacious.⁸ For this purpose the new ruler mounted a sacred stone, and exclaimed, 'Masina, Masina, masina v'aho?' The assembled people replied, 'Masina.' These words van Gennep translates, 'Have I acquired the powers of *hasina*? Am I holy?'⁹ Among the Ba-Thonga the inauguration of a new

chief is a purely military affair, and no religious ceremony takes place.¹

The coronation of the Egyptian kings was supposed to take place in heaven. In a description of the coronation of Rameses III. we read :

'Then my father Amon-Re, Lord of Gods, Re-Atum, and Ptah, beautiful of face, crowned me as Lord of the Two Lands on the throne of him who begat me; I received the office of my father with joy; I was crowned with the atef-crown bearing the uraeus; I assumed the double-plumed diadem like Tatenen. I sat upon the throne of Harakhte. I was clad in the regalia, like Atum.'²

Another inscription speaks of Rameses III. assuming the regalia of Horus and Set.³

The inauguration ceremony of a new emperor of Japan consists in the ceremonial taking possession of the three chief articles of the regalia. The principal one is a sacred sword which is called Kusanagi no Tsungi.

'This sword (so legend goes) was found by Susa-no-o in the tail of an eight-headed serpent, which he intoxicated with "sake" and then slew. Having been brought down from heaven many centuries ago by the first ancestor of the Mikados, it came into the possession of Yamato-take, and assisted that prince in the conquest of Eastern Japan. This treasure is never shown, but a great festival is held in its honour on June 21st.'⁴ The two others are a mirror and a jewel. They are kept at Kyoto and the inauguration takes place there, after the period of mourning for the dead ruler is over.

In Europe, with the exception of Hungary, to which reference has already been made, a coronation ceremony has usually served rather to ratify the election of a king than actually to create one. Before set forms came into use, it was often of a more or less spontaneous character. When Julian the Apostate was proclaimed emperor at Paris in 360, a standard-bearer named Maurus took off the torc which he was wearing, and placed it upon the head of the newly-elected ruler.⁵ The earliest known account of a coronation in Great Britain is that of King Aidan by St. Columba, which is found in St. Adamnan's life of the saint.

Throughout the Middle Ages the position of the Church was that of witness to a contract between ruler and people at the crowning of a king. The *Pontificale Romanum* provides a special Mass for the coronation of the king. The Church presents the newly-elected monarch with his investiture.

One of the bishops who are presenting the king to the metropolitan says, 'Reverendissime Pater, postulat Sancta Mater Ecclesia Catholica ut praesentem egregium militem ad dignitatem Regiam sublevis.' The metropolitan asks, 'Scitis esse dignum, et utilem ad hanc dignitatem?' The bishop replies, 'Et novimus, et credimus, cum esse dignum, utilem Ecclesiae Dei, et ad regimen hujus Regni.'⁶

W. Stubbs's view of the ceremony is as follows :

'The ceremony was understood as bestowing the divine ratification on the election that had preceded it, and as typifying rather than conveying the spiritual gifts for which prayer was made. That it was regarded as conveying any spiritual character or any special ecclesiastical prerogative there is nothing to show; rather from the facility with which crowned kings could be set aside and new ones put in their place without any objection on the part of the bishops, the exact contrary may be inferred.'⁷

The same view is taken by the French writer Menin, who says that in his own day (reign of Louis XV.) kings were recognized independently of all ceremony of investiture. No formal recognition of the king, however, is found in the French coronation ritual.

'Le sacre des Rois,' he says, 'est une ratification publique du droit qu'ils ont de succéder à la couronne de leurs ancêtres, et une confirmation du premier acte qui les a mis en possession du

Trône; c'est une espèce d'alliance spirituelle du Roy avec son Royaume qu'il épouse, pour ainsi dire, qu'il s'engage de maintenir, de défendre, et de protéger, en même temps que sa Royaume, par la voix des peuples, lui promet solennement fidélité et obéissance.'¹

Nevertheless a wide-spread belief seems to have grown up in the Middle Ages that the anointing of kings was of a sacramental nature, conferring a mark or character on the soul of the recipient. At all events a king was widely held to possess a quasi-sacerdotal character. The emperor was permitted to read the Gospel at his coronation Mass, and the French king to communicate under both kinds at his coronation. These facts led to the conviction that an unanointed and uncrowned prince was no true king. The French kings until the 12th cent. began their reign on the day of their coronation.² 'Le Roi dormoit,' said the old chroniclers, speaking of the period before a coronation. This belief had not completely died out even in the 19th century. Renan mentions the fact that some Bretons held that Louis Philippe, who had been neither anointed nor crowned, had no more right to exercise the functions of a king than any one who was unordained would have to exercise those of the priesthood.³

Precedent for the crowning of a prince during the lifetime of his father was found in the crowning and anointing of Solomon by order of David, and was frequently resorted to in order to ensure the stability of a dynasty. The survival of a coronation ceremony in Europe at the present day is not necessarily associated with the possession of great monarchical prerogatives. The German Emperor and the Emperor of Austria⁴ are not crowned, though the 'hereditary presidents' of England and Norway are. In Spain the coronation ceremony has been discontinued. In England its discontinuance was seriously discussed at the accession of William IV. In most of the monarchies founded in the 19th cent., such as Italy, Belgium, Greece, it has never been introduced, and the king merely takes an oath to observe the Constitution. One of the oldest coronation ceremonies in Europe is the crowning of the pope, who is crowned by the youngest cardinal-deacon with the tiara or triple crown, an ornament ultimately derived from the *camelaucum*, a head-dress worn by high Byzantine officials. It is not a liturgical ornament, and the papal coronation has no religious significance.

No definite rules can be laid down with regard to the crowning of queens-consort. In England, if the king is married at the time of his coronation, the ceremony has usually been performed, and sometimes it has been performed separately if he married afterwards. In France it was usually omitted, and, if performed, it generally took place at St. Denis and not at Rheims with the king. The coronation of a queen-consort merely typifies her participation in the royal dignity. Sometimes this is indicated in the coronation ritual; the king of Hungary holds the Crown of St. Stephen for a time on the right shoulder of the queen during the coronation ceremony, and the Tsar of Russia used to touch the Tsarina on the forehead with his crown before crowning her.

When a ruler has abdicated voluntarily and without pressure, he has often symbolized this act by publicly laying aside the royal insignia. Diocletian divested himself of the purple at Nicomedia in 305 in the presence of his assembled troops,⁵ and in more recent times the eccentric Queen Christina of Sweden laid aside her crown in the presence of the Swedish senate.

REGENERATION.—Through all theology and religion there runs a clear antithesis between outwardness and inwardness. In theology this shows itself in the opposition between transcendence and immanence, anthropomorphism and animism. It asks, Is God a glorified man or an indwelling potency? Does He operate on Nature from without or from within? Should we concentrate our thought and faith on Jesus as the risen Lord, the ascended Mediator; or on Christ as Spirit, operating in His Church and in us as believers? Sometimes the contrasts are accentuated, and the opposing views are polemically controverted; sometimes men are content to accept both as the two poles of an unsolved antinomy. A similar antithesis occurs also as to the nature of religion, causing men to ask, Is religion doing or being? Is the vital matter what a man does or what a man is? Ought my great concern to be, What am I to do? or, What ought I to become? *E.g.*, as to the nature of sin, it is disputed whether sin is transgression of a commandment moral or ceremonial, or is perversity and pollution. Again, as regards reconciliation with God, the two queries arise: Is this effected by having sin pardoned, or by having perversity rectified and pollution cleansed? Is the favour of God to be secured by righteously obeying the precepts of His law or by being inwardly changed and sanctified by a Power other and higher than we? Further, is this change to be studied as manifesting itself in outward life and conduct, or as a spiritual and psychological phenomenon? In the former case we are engaged with the subject of conversion, in the latter with that of regeneration.

1. **OT conception.**—Kirsopp Lake considers the antithesis between outwardness and inwardness to be characteristic severally of the Jew and the Greek. The Jew asked, What am I to do? He required a code of life and action to tell him definitely what to do. The Greek asked not, What am I to do? but, What am I to be? He wished to become something different. What distressed him was the feeling that his very being was corrupt, and he wanted a religion that would help him to become a new being.¹ There are just two criticisms which one would like to make on this: (1) instead of the word 'Greek,' the word 'Hellenist' would be more accurate—the orientalized Greek; and (2) it is unfair to the Jews to suggest that they were not sensible of the inwardness of religion. Both views find expression in the Jewish Scriptures. It is true that outwardness is prominent in the OT. We have much external morality and external observance of ceremonial requirements. Sin is often disobedience to God's statutes and precepts. Restoration to divine favour is secured by sacrifices offered in accordance with a meticulous ritual. But this is not the only conception of sin that meets us in the OT. Sin is also disorder. It is *מַחְלָה*, 'desolation,' 'chaos.' It

is *מַחְלָה*, 'restless agitation.' It is defilement, making men unfit to commune with God. It is *מַחְלָה*, 'abomination.' It is *מַחְלָה*, that from which men flee, because it is abhorrent; and as such it needs an internal remedy—a remedy which man himself cannot administer. There is a distinct vein of OT teaching which is very pronounced as to man's inability to cleanse himself (Jer 13²³, Pr 20⁹). Man's will is powerless to effect the needed change. Something must be done in man and for man, which divine intervention alone can accomplish (Is 6⁶, Ps 51⁵, Job 9² 15¹⁴⁻¹⁶). This is apparent from the way in which the best of men plead for divine help and cleansing (Ps 25^{11, 18} 41⁴ 6²), and from the way in which God promises to render the needed help (Jer 2²³ 33³, Ezk 36²⁸). Sin is not something to be merely pardoned, atoned for, taken away, or forgotten. So long as the propensity to sin remained, the OT saint groaned under its tyranny and pollution. He cried for cleansing (Ps 51²) and for healing (41⁴). But even this could not satisfy him. He longed for thorough renovation. Regarding the heart as the seat of the collective energies of the personal life, and conscious that this is depraved and that sin has thus banefully affected the very formative sources of character, he cries, 'Create in me a clean heart, O God; and renew a steadfast spirit within me' (51¹⁰). Saul was 'turned into another man,' and 'God gave him another heart' (1 S 10^{6, 9}), but, alas! he fell away; and so the Psalmist prays that the clean heart, imparted by a new creation, might, by constant renewal, be kept 'steadfast.'

2. **The Greek word and its synonyms.**—The word 'regeneration' occurs twice in the NT, in either case for the same Greek word *παλιγγενεσία* = *ἡ πάλιν γένεσις* (√ *γίνομαι*), a becoming new again, a reconstitution. The Greek word which would most accurately represent the ideas that we associate with regeneration would be *ἀναγέννησις* (√ *γεννώ*); but this does not occur in NT, though the verb is found in 1 P 1³. The word *παλιγγενεσία* first appears in Greek literature to represent the great Stoic conception of world-cycles, according to which the present world will come to an end by conflagration—to be followed, however, by a renovation or reconstruction, a *παλιγγενεσία* of everything just as it now is. Then, after a definite period, will come another conflagration and reconstitution, and so on—the period between one catastrophe and another being termed a 'great year,' a *περίοδος*. Hence Marcus Aurelius¹ speaks of 'a periodic *παλιγγενεσία* of the universe.' Being a high-sounding phrase, it was used hyperbolically to denote any extraordinary change; as when Cicero² describes his restoration to rank and favour after exile as '*παλιγγενεσίαν* nostram'; and when Philo speaks of the birth of Seth as the *παλιγγενεσία* of Abel,³ and of the sons of Noah as 'founders of a *παλιγγενεσία*,⁴ since they were 'pioneers (*ἀρχηγέται*) of the second period of the world'; so Josephus⁵ speaks of the restoration of the Jews after the Exile as a *παλιγγενεσία*. With a nearer approach to the original Stoic meaning, Matthew (19²⁸) describes the new heavens and the new earth, to which Christians (2 P 3¹²) and Jews (Is 65¹⁷; *En.* lxxii. 1; *Jub.* i. 29) were looking forward, in these words: 'In the *παλιγγενεσία*, when the Son of man shall sit on the throne of his glory, ye which have followed me shall sit,' etc. The second NT occurrence of our word is in Tit 3⁵, where *παλιγγενεσία* has an ethical or religious sense: 'According to his mercy he saved us, through the washing [marg. 'laver'] of regeneration, and the renewing of the Holy Ghost.'

⁵ *Ant.* xi. iii. 4.

¹ *The Earlier Epistles of St. Paul*, London, 1911, p. 4301.
The Stewardship of Faith, do. 1915, p. 881.

Other Greek words with kindred meaning found in NT are: (1) *γεννάω*, 'beget' (Mt 12¹⁶, Ac 7⁸⁺) and also 'bear children' (Mt 19¹², Gal 4²¹, Jn 16²¹⁺). In a religious sense it occurs in 1 Co 4¹⁵ 'I begat you'; Philem¹⁰ 'whom I begat in my bonds'. In 1 Jn the perf. pass. occurs eight times, and in RV is uniformly translated 'be begotten,' though in five of these instances AV has 'be born'—e.g., 'Every one that loveth is begotten of God' (47); 'Every one that believeth that Jesus is the Christ is begotten of God' (51); but in the eight occurrences in Jn 3⁵⁻⁸ RV everywhere retains 'be born.' (2) *ἀναγεννάω* (*ἀνά* is repetitive), 'beget again or anew': 1 P 1³ 'Blessed be God . . . who begat us again . . . by the resurrection of Jesus Christ.' The noun *ἀναγέννησις* is not found in NT, but is found in Philo¹ of the rebirth of the physical world. (3) *ζωοποιέω*, 'make alive,' 'quicken': Eph 2⁵ 'God . . . quickened us, together with Christ, when we were dead in trespasses.' (4) *ἀποκτείνω*, 'give birth'; often in an abnormal manner: Ja 1¹⁵ 'Sin bringeth forth death'; 1¹⁸ 'He having so willed, brought us forth [or 'gave us birth'] by the word of truth.' (5) *ἀνακαίνω*, 'make new again.' This verb, in NT, refers not to the initial quickening, but to the maintaining of the state of newness, 'keep new,' or 'renovate' (Ro 12², Col 3¹⁰).

3. **Cognate ideas and metaphors.**—It is proverbially difficult to translate emotions into words; and to very many of the early Christians who had previously been steeped in sin the change which took place when they entered on the Christian life was so radical and so thorough that it demanded many modes of expression. Such an experience can be expressed only in figures; and 'regeneration' is but one of many metaphors occurring in the NT, all of which are designed to express the fact that, before any man can enjoy the favour of God, a profound change must be wrought in him, which God alone can effect. The early Christians were so amazed at the change in disposition and character which had suddenly come over them that they framed all sorts of theories to account for it, describing their new experience in terms and preconceptions of their own age.²

A. **Repentance.**—The simplest metaphors meet us in the Synoptic Gospels. (a) Emphasis is laid on repentance (Mt 4¹⁷ 11²⁰, Lk 13³). The Aramaic word for 'repentance,' *נִחָנָה*, is derived from *נָחַן*, 'to turn' (cf. Mt 18³); and hence we may safely affirm that the repentance (*q.v.*) which Jesus insisted on was a practical one—turning the back on one's former life.

(b) 'Becoming as a little child' (Mt 18³).—The context discloses what our Lord intended by this. It is the abandonment of pride and ambitious self-seeking, the attainment of meekness, lowliness, and dependence on a father's love, that Jesus desiderated in His disciples. The need of divine grace for the attainment of this great ethical change is not so much explicitly taught as implied in the importance attached to prayer.

(c) The quickening effect of the divine Word and the need for co-operation between the human and the divine are taught very clearly in the Parable of the Sower. 'The seed is the word of God' (Lk 8¹¹); but three of the four kinds of soil are unproductive; there is only one which is so far receptive of seed as to yield the fruit of a new life within the natural heart of man.

B. **Impartation of a new life.**—The Fourth Gospel takes the three great ideas, life, light, and speech, and expresses the activities of Jesus Christ, the Son of God, and also the religious experiences of believers, under one or other of these categories. Jesus says: 'I came that they might have life' (10¹⁰); 'My sheep . . . follow me, and I give to them eternal life' (10²⁷); 'My words 'are spirit, and are life' (6⁶³); 'He that believeth on the Son hath eternal life' (3³⁶); 'In him was life, and the life was the light of men' (1⁴).

C. **New birth.**—This appears under two aspects, both contained in the word *γεννάω*: (1) the origina-

tion of life—begetting; and (2) the emergence into a new mode of being and into new relations—birth.

(1) In 1 Jn the perf. pass. *γεννησθαι*, indicating an initial definite act abiding permanently in its consequences, implies the impartation of a new life-germ, which develops in likeness to God, its veritable Father and fontal source. The same thought is presented in 1 P 1³ 'Blessed be God who begat us again unto a living hope.'

(2) In Jn 3, though both perf. and aor. are used, it is generally recognized that the metaphor is that of birth; not quickening or impregnation, but emergence into a new world—a new atmosphere, a new environment, and new objects of interest. This is clearly implied in the words of Nicodemus, when, in reply to Christ's statement, 'Ye must be born again,' he crudely asks, 'Can a man enter a second time into his mother's womb and be born?' (3⁴). Similarly we interpret 3⁵ *ἐὰν μὴ τις γεννηθῇ ἐξ ὕδατος καὶ πνεύματος*, 'Except a man shall have been born [not 'begotten,' as though the water had a vivifying effect upon him, but 'born'] out of [or from] water¹ and the Spirit' (water and Spirit being the elements out of which the neophyte emerges). The reference probably is to the words of John the Baptist in Mt 3¹¹ 'I indeed baptize you in water . . . but he shall baptize [or 'immerse'] you in the Holy Ghost.' The context implies that Nicodemus was a disciple of John, and Jn 3⁵ inculcates the lesson of Mt 3¹¹ that immersion in water and emergence from water are not enough; there is needed also an immersion in the Holy Spirit, from which one may emerge a new man, as one newly born emerges from his mother's womb into a new world. The same metaphor occurs in Ja 1¹⁸, where J. B. Mayor² is no doubt correct in saying that the verb *ἀποκτείνω* is 'properly used of the mother'—'Having so willed, he gave us birth.'

D. **A new creature** (*καὶνὴ κτίσις*).—It has been objected that regeneration is not prominent in Paul's teaching; but it would be rash to maintain that he ignored the doctrine of regeneration because he does not use the same metaphor as occurs in John, Peter, and James—indeed, when Paul says, in 2 Co 5¹⁷ 'If any man be in union with Christ, he is a new creature,' he is not far away from the same similitude. He is moving in the circle of OT ideas which find expression in Ezekiel: 'I will put a new spirit within you'; 'and I will take away the stony heart out of your flesh, and I will give you an heart of flesh' (11¹⁹ 36²⁶). Again, the Apostle says, 'We are his workmanship, created in Christ Jesus for good works' (Eph 2¹⁰), which evidently implies that such a radical change takes place in a Christian as to be comparable to a creation, that this creation is possible only in union with Christ, that God develops the new creation, and that the grand purpose of it all is practical and ethical. Similarly in Col 3¹⁰ and Eph 4²⁴ 'the new man,' i.e. the new self, is stated to be a divine creation, which, in the one case, is 'being renewed in accordance with the image of its Creator,' and, in the other case, is said to be in harmony with God (*κατὰ θεόν*), 'created in righteousness and holiness of truth.' Some would render *καὶνὴ κτίσις* in

¹ De Incorr. Mundi, 3 (Mangey, ii. 490).

² Cf. T. R. Glover, *The Conflict of Religions in the Early Roman Empire*, London, 1909, p. 150 ff.

¹ Lake (*Inaugural Address at Leiden*, 27th Jan. 1904) and F. C. Burkitt (*Evangelion Da-Mepharreshe*, Cambridge, 1904, ii. 809 f.) advocate that *ἐξ ὕδατος* should be treated as 'an interpretative gloss,' because it is sometimes omitted in the Fathers; but a consultation of the 86 variants in which 3⁵ is quoted in the early Fathers, given in A. Resch, *Paralleltexte zu Johannes*, Leipzig, 1897, p. 73 ff., seems to dispose of this theory; for, though there are several instances in which both 'water' and 'Spirit' are omitted, and several in which 'the Spirit' is omitted, there is not one citation from the Fathers in which 'the Spirit' is inserted and 'water' omitted.

² The Epistle of St. James³, London, 1897, p. 59.

2 Co 5¹⁷ 'there is a new creation' (as RVm), implying that man's entire outlook on earth and heaven, man, and God seems changed. Many Christians have testified that, when the spiritual nature is no longer enfeebled and diseased by sin, they seemed to be in a new world. The new life enters also into the larger world of spirit, recognizes its kinship with spiritual forces, feels a companionship with all that is holy and true, and sees God in everything.¹ This is very true and very beautiful, but probably RV represents Paul's thought best, as also in Gal 6¹⁵ 'Neither is circumcision anything, nor uncircumcision, but a new creature.'

E. *A change of clothing.*—This metaphor, though significant, is not fully adequate. Clothing is external; regeneration is internal, psychical, vital. Life only can illustrate life. Vital processes can alone fittingly represent it. Our best similitudes must therefore be drawn from botany or zoology. Character, as others know it, is compared to clothing in Eph 4^{22, 24}: 'Put off the old man which is corrupt . . . and put on the new man'; Col 2¹¹ speaks of 'the putting off of the body of the flesh,' and Col 3⁹ reads: 'Ye have put off the old man with his doings, and have put on the new man, which is being renewed,' etc.

F. *A passage from death to life.*—Jn 5²⁴ reads: 'He that heareth my word and believeth on him that sent me . . . hath passed from death unto life,' Eph 2¹: 'You did he quicken [cause to live] when ye were dead.' These texts are sometimes taken to imply the instantaneousness of the new birth and the absolute deadness and insensibility of the human soul, as well as man's native incapacity for goodness and godliness; and thus they present difficulties equally to the scientist and to the theologian. Many theologians feel obliged, however, by the general trend of Scripture to regard the 'deadness' here spoken of as relative rather than absolute, and to consider man's spiritual nature as diseased and inert rather than literally dead; while the scientist, who objects to admitting anything instantaneous and unprepared for, in any grade of life, organic or psychical, explains the apparent suddenness of the change in man's religious life by the hypothesis of the subliminal self. The new life at first is inchoate, working in the region of subconsciousness; and then, more or less suddenly, there is often a time of spasmodic volitional and emotional tempest, which comes as a great surprise, but which has really been quietly prepared for in that part of our nature where racial and inherited tendencies lie buried beneath the threshold of consciousness.² Paul was kicking against the goads of spiritual conviction for some time before his so-called conversion at Damascus.

G. *Burial and resurrection.*—This figure is similar to the above and occurs in the well-known passages Ro 6³ and Col 2¹².

All these metaphors are, of course, very valuable and carry us a certain distance in the way of elucidation; but scholars are unanimous in admitting that there is an inner fact which defies analysis and description. The universal Christian consciousness is ready to say of the change: 'It is "not of ourselves": it is the gift of God,'³ but the *modus operandi* is inscrutable.

'After analysis,' says B. Jowett, 'there remains something which eludes criticism.'⁴ 'The nature of regeneration,' says Hodge, 'is not explained in the Bible further than the account therein given of its author, God; its subject, the whole soul;

and its effects. . . . Its metaphysical nature is left a mystery.'⁵ W. James bears the same testimony. No one 'can explain fully how particular experiences are able to change one's centre of gravity so decisively.' We speak of "motor efficacy," but such talk is only circumlocution; for whence the sudden motor efficacy?⁶ So Starbuck: 'Who can tell what really happens in one's consciousness when one turns seriously into communion with one's deeper self?' 'What happens below the threshold of consciousness must, in the nature of the case, evade analysis.'⁷

4. Nature of the change.—(1) *The change is new.* —All are agreed as to its newness.

'As a new divine Principle,' says I. A. Dorner, 'the Holy Spirit creates, although not substantially new faculties, a new volition, knowledge, feeling—a new self-consciousness. In brief, He produces a new person.'⁸ 'All things are new,' says Horace Bushnell, 'Life proceeds from a new centre. The Bible is a new book. Duties are new. The very world itself is revealed in new beauty and joy to the mind.'⁹ And of course Hodge is in thorough agreement here, as he says, 'This new life, therefore, manifests itself in new views of God, of Christ, of sin, of holiness, of the world, of the gospel, and of the life to come.'¹⁰

(2) *The change expressed in terms of metaphysics.* —The Puritans expressed themselves very largely in terms of Aristotelian metaphysics.

Stephen Charnock († 1680), whose discourses on regeneration were for many years the great authority on our subject, defines regeneration as a 'powerful change, wrought in the soul by the efficacious working of the Holy Spirit, wherein a vital principle, a new habit, the law of God and a divine nature are put into and framed in the heart enabling it to act holily and pleasingly to God.'¹¹ The distinctions drawn are very subtle, if not conflicting. We note that 'a divine nature is put into the heart'; and yet on p. 93 Charnock assures us that regeneration is 'not an addition to nature,' or a 'change in the substance of the soul.' 'As in the cure of a man, health is not added to the disease; but the disease is expelled and another form and habit set in its place. Add what you will (we are told), without introducing another form, it will be of no more efficacy than flowers and perfumes strewed on a dead carcase can restore it to life and remove the rottenness.' We learn, then, that, though regeneration is 'not an addition to nature,' and 'the new creation gives no new faculties,' yet 'a vital principle is put into the heart' and 'a new form is introduced.' In regeneration there are 'no new faculties,' says a Princeton divine, 'but there are new principles';¹² and from him we obtain a definition of the word 'principle,' which we seek in vain in Charnock. He defines it as 'that foundation which is laid in nature, either old or new, for any particular kind or manner of exercise of the faculties of the soul.' In other words, a 'principle' is 'a new foundation laid in the nature of the soul, for a new kind of exercise of the same faculty of understanding.'

(3) *The change expressed in terms of psychology.*

—The great spiritual change which, when viewed causally and subjectively, is called regeneration and, when viewed in its manifest results in life and character, is called conversion (*q.v.*) is a psychical fact and therefore can be expressed in terms of psychology. Metaphysics is ambitious to treat of the soul as an immaterial entity, possessed of substance and faculties, form and principles. Psychology pursues the humbler path of analyzing consciousness and interrogating experience.

E.g., E. F. Scott describes regeneration thus: 'It is like another and higher will sustaining ours, and gradually subduing the whole nature to itself—till the natural life becomes "spiritual" life.'¹³ E. Reuss describes it as 'an abdication of our own individuality, allowing the Holy Spirit to evoke a complete metamorphosis of our human nature.'¹⁴ J. Strachan speaks of it as 'practically . . . a new life which turns all the forces of one's being into a new channel. All the energies that formerly made a man a sinner are now employed to make him a saint.'¹⁵ 'Such sudden and radical changes in a man's life' as those of Paul, says Percy Gardner, 'may often be led up to by many experiences and thoughts. But these often culminate in what may be called a violent spiritual and emotional tempest, which shakes the whole being to its utmost depths.'¹⁶ Starbuck

says of conversion (though what he says is much more true of regeneration) that it is 'the birth of new powers.' It is 'as if there had been the liberation of fresh energy, or as if new streams had flowed into consciousness.' It is 'life on a higher plane.' 'It is a process of realising the possibilities of growth; of making a draft on the latent energies . . . which might otherwise have lain dormant allways.'¹

The psychological expression of regeneration may well be subdivided as follows:

(a) *In terms of personality.*—'The new personality is formed,' says Dörner, 'in inner resemblance to the second Adam, on the same family type, so to speak.'² 'Grace and freedom meet,' says H. Martensen, and 'a new personality is established, a copy of the divine and human personality of Christ.'³ So J. Vernon Bartlett: 'A new personality arises from the new union of the will and the higher element dependent on and akin to the Divine: the man lives anew with a fresh type of moral life—that being dominant which before was subject, and vice versa.'⁴ And A. C. Headlam: 'St. Paul . . . thought of the Spirit as a beneficent Divine personality . . . inspiring our higher nature, giving us a new personality, a new power, a new life.'⁵ Putting the matter more scientifically, James says: 'What is attained is often an altogether new level of spiritual vitality, a relatively heroic level, in which impossible things have become possible, and new energies and endurances are shown. The personality is changed; the man is born anew.'⁶ So Starbuck teaches us that in adolescence, with its ferment and unrest, there are indications, when the influences of the Spirit of God which enlightens every man are not violated, that 'a personality is forming beneath that has capacity for self-direction and independent insight.' We thus witness 'the birth of selfhood, the awakening of a self-conscious personality.'⁷

(b) *Unification.*—'Every man,' says Percy Gardner, 'finds himself a human being of mixed tendencies.'⁸ 'We are each of us,' says G. Steven, 'as it were composed of many "selves." What we need is 'the unifying of the self or personality,' which was probably in the mind of the Psalmist, when he prayed, 'Unite my heart to fear Thy name.'⁹ So Frank Granger: 'The unity of the soul is thus something to be reached after and found both within God and within itself.' 'The soul is not there to begin with, but must be gained.'¹⁰ Accordingly, we find that James, who devotes a chapter of his great work to 'The Divided Self,' says that 'to find religion is only one out of many ways of reaching unity';¹¹ and defines regeneration as 'the process, gradual or sudden, by which a self, hitherto divided, and consciously wrong inferior and unhappy, becomes unified and consciously right superior and happy, in consequence of its firmer hold upon religious realities.'¹² Paul describes his experience of the divided self in Ro 7, and Augustine, who in so many ways duplicated Paul's experience, says, 'Thou didst gather me again out of my dissipation, wherein I was torn piecemeal; while turning away from Thy unity, I lost myself in many things.'¹³

(4) *The change expressed in terms of physiology.*—There seems to be a parallelism between cerebral and psychical processes, but modern psychologists have long abandoned the attempt of David Hartley and his school to maintain that mental acts can ever be adequately described, much less explained, as brain currents or vibrations, or indeed by any physical terms. While aware of the inadequacy of physiology, it seems a fascination to some of our scientific theologians to throw their account of mental acts and states into physiological terms.

E.g., Starbuck says: 'What happens below the threshold of consciousness must, in the nature of the case, evade analysis. It tends to fill in the chasm in our knowledge, however, to explain it in terms of the nervous system and its functionings.'¹⁴ And again: 'If we turn to our crude analogy of nerve cells and connections . . . we may get a definite picture, at whatever cost of accuracy.'¹⁵ Accordingly, we find him describing 'the phenomena' which 'cluster about the birth of a new self' as 'the organisation of nerve elements about a new centre.'¹⁶ In another passage he says that it 'seems entirely accurate' to speak of one who had experienced the 'awakening of new powers and activities' as 'born of the Spirit,' but he immediately adds: 'It is as if brain areas which had lain dormant had now suddenly come into activity—as if their stored-up energy had been liberated, and now began to function.'¹⁷ Starbuck insists strongly that conversion is an adolescent phenomenon; that the periods of physical and mental maturity are the periods when the vast majority of conversions occur. In these periods

'the life-forces tend upward toward the higher brain centres,'¹ and biologically the new birth is 'coming to live on the highest level of the nervous system.'² James describes the new birth 'symbolically' thus: that a 'new centre of personal energy has been subconsciously incubated';³ and Lake attaches so much importance to the theory of a subliminal self that he considers that the really serious controversy of the future will be to determine whether religion is merely 'communion of man with his own subliminal consciousness, which he does not recognize as his own, but hypostatizes as some one exterior to himself.'⁴

5. *The efficient cause of regeneration.*—(1) *The power of the Spirit.*—The teaching of the NT is emphatic that man needs a drastic inward change as a condition of salvation (Mt 18³, Jn 3³), and in the Acts and Epistles it is everywhere implied that the primitive Christians had experienced such a change (1 Co 6¹¹, Eph 2⁵, Col 1¹³, 1 Jn 2²⁰). It is equally clear that man is unable to effect this change by himself. There is need of the inworking of a power other and holier than himself. This power is the Holy Spirit. The NT teaches that man is to a greater or less degree controlled by an evil spirit (Ac 5³, 2 Co 4¹, 1 P 5⁸, 1 Jn 3⁸); but over against man in his sin and weakness there stands a Divine Spirit, endowed with creative energy; and into hearts which are opened to receive Him He enters, vivifies latent faculties, and supports men in the struggle of life. Christians in all ages have testified that they were changed. Another will controls their will. A new light illumines everything. A new force controls their emotions, stimulating the higher, repressing the lower. 'Old things are passed away; behold, they are become new' (2 Co 5¹⁷). God gives the Spirit (2 Co 1²², 1 Th 4⁸, Gal 3², Ph 1¹⁹); man receives the Spirit (Ro 8¹⁵). The Spirit dwells in man (1 Co 3¹⁶)—not that there are two entities, the human spirit and the divine, existing side by side; but that the Divine Spirit energizes, dynamizes the human spirit, ennobling, dignifying, purifying it. As A. Sabatier expresses it,

'The Spirit of God identifies itself with the human Me into which it enters and whose life it becomes. If we may so speak, it is individualized in the new moral personality which it creates.'⁵

When we come to inquire more minutely what is the divine power which the Christian receives, we find some indefiniteness. There are three terms which are used in NT interchangeably—'Christ,' 'the Spirit of Christ,' and 'the Holy Spirit.' The same verbs are used with each, and the same functions are ascribed to each (cf. Ro 8⁹, 2 Co 3¹⁷, Gal 2²⁰ 4⁶, Jn 14¹⁶ 20²², 1 P 1¹¹). But does identity of function necessarily imply identity of person or agent? That is a question much discussed. There are not a few scholars who maintain that the 'Holy Spirit' of the Christian dispensation is the spiritual, ascended Christ; e.g., A. Tholuck⁶ and Reuss⁷ both maintained that the Holy Spirit in the NT is not a self distinct from Christ, but is Christ Himself glorified into a spirit, or the spiritual presence and manifestation of Christ to His disciples after His departure from earth. Franz Delitzsch also maintained that all communications of the Spirit, since the Ascension, are effected through the Spirit of the Son of Man.⁸ G. A. Deissmann says:

'The living Christ is the Spirit . . . "The last Adam became a life-giving Spirit."'⁹

Other scholars express themselves more cautiously. E.g., R. C. Moberly says: 'The Holy Ghost is, to us, immedi-

ately, the Spirit of the Incarnate Christ. . . . To us, He is the Spirit of God through, and as, being first, for us, the Spirit of the Christ.¹ So E. F. Scott says: 'Practically, the Spirit is to Paul the power of Jesus acting on believers';² and R. J. Drummond, while maintaining that 'it would not be true to say that the Spirit is simply the spiritual presence of the Exalted Christ,' yet, after quoting Christ's words, 'I will send,' 'I will come,' admits that 'the presence of one is practically the presence of the other.'³

The important matter is to insist that, since the resurrection and ascension of Christ, there has been a new potency on the earth. Whether we seek to explain the matter metaphysically, in terms of the Church's Creeds, or, more wisely, are content to leave it unexplained, the truth is that the Spirit, which, under the Christian dispensation, regenerates and sanctifies believers, is endowed with the properties of the God-man. At Pentecost, and ever since, the Church has been animated by a new power—not the power of the Logos, but a theanthropic power, the power of the glorified Christ. 'The Holy Spirit was not yet, because Jesus was not yet glorified' (Jn 7³⁹). The Holy Spirit of the Christian dispensation has the value of the ascended Christ, and has become in the Church a new moral, religious, personal force—the efficiency of Him who 'became in all things like unto his brethren' that we may be 'transformed into his image.' To quote from Dörner:

'The Spirit of God is the πνεῦμα Χριστοῦ.⁴ As the Spirit of Christ, He carries in Himself the power to diffuse the divine-human life. . . . In fixed historical continuity, the divine-human personal unity . . . is employed for the purpose of propagating the life of the God-man. . . . Through the Holy Spirit, as the Spirit of Christ, humanity is led back to God, appropriated by Christ's theanthropic life; and this is the Church.'⁵

(2) *Human co-efficients.*—The co-efficients of regeneration, on the human side, are repentance and faith.

(a) *Repentance.*—It has been an error on the part of some Calvinists to maintain that at the time of regeneration man is passive or perhaps even antagonistic. It is very true that no man can come to Christ 'except the Father draw him'; that God always takes the initiative in man's salvation; that 'we love him because he first loved us.' But, before the new birth can be effectuated, there must be a period of unrest and self-dissatisfaction. It is not the first touch of the Spirit upon a sinful soul that regenerates. There are preparatory dealings of God with the soul. Christian experience often testifies to convictions, pleadings, drawings, remorse, and self-accusation, which may perhaps be compared to birth-pangs preceding the new birth. There are, it is true, many cases all down the history of the Church in which the new birth seems to occur very abruptly and suddenly, but the modern mind distrusts the sudden and catastrophic in all departments of life. Accordingly, the modern method of accounting for apparently sudden conversions is to assume that in such cases there is a much richer, inherited subliminal self than in others, and that the upheavals of unrest and remorse have been long taking place beneath the threshold of consciousness. Most modern psychologists⁶ very properly raise a protest against the procedure of some denominations which seem to recognize the sudden, remorseful, spasmodic type of conversion as the only genuine one. They do this on the ground that such experiences are entirely a matter of temperament and that some constitutions are incapable of developing spasmodically.

(b) *Faith* is the second antecedent to the new

birth (Eph 3¹⁷, Ro 8¹⁰, Gal 2²⁰)—faith in its double meaning of (1) appropriation of a message and trust in the person whom it declares; and (2) self-surrender to a power other and purer than we, which seeks to control our life (see art. FAITH [Christian]). (1) It may be quite true that there are ethnic phenomena which resemble conversion, but Christian regeneration can be effected only by contact with Christ—on the divine side, dynamically, by the operation of the Spirit of the God-man upon the heart of man, and on the human side by hearing of Christ and by trusting and loving Him. Regeneration is conditioned by personal trust in Jesus as Saviour. Every true Christian can say, 'For me to live is Christ.' (2) Self-surrender finds an important place in all religious psychology. It is compared to 'relaxation of effort' on the verge of discovery, when, after hours or days of research, the solution comes unexpectedly, perhaps immediately after awaking from sleep. Many of Starbuck's cases confessed that, after long and weary efforts to conquer sin and to secure, with the much-coveted suddenness, a sense of pardon and regeneration, they found themselves obliged to desist from the wrestling and struggle, and to yield themselves up into Christ's hands. When the surrender is made, then often the new birth—the emergence from darkness to light, from bondage to freedom—takes place.¹

6. *Subsidiary causes.*—(1) *The word.*—Divines often call this 'the instrumental cause.' The efficacy of the written or spoken word as the expression of the mind and heart and will of God is often taught in Scripture. When we read that 'man does not live by bread alone, but [is endowed with a life which is nourished] by every word that proceedeth out of the mouth of God' (Dt 8³), when we read that 'the word of God is living and powerful' (He 4¹²), when Jesus says, 'My words are spirit and they are life' (Jn 6⁶³), and when Paul reminds the Corinthians that 'in Christ Jesus' he had 'begotten' them 'through the gospel' (1 Co 4¹⁰), we cannot escape the conviction that a 'word' was believed to be endowed with potency. Certainly the rabbis held this view; and, when they read in the story of Creation that God said 'Let light be,' and light was, they considered that the very words were a *vera causa*, operating in the physical realm, and effectuating 'that whereunto they were sent' (Is 55¹¹), as we read in Is 9⁶, 'Jehovah sent a word into Jacob and it alighted upon Israel,' and as in Zec 5⁴ we read of 'a curse' that should 'enter a house and consume its timbers and its stones.' In a similar manner the causality of a divine word is taught in the NT, where we read that we are 'begotten again . . . through the word of God' (1 P 1²³), that 'God gave us birth through the word of truth' (Ja 1¹⁸), that 'the word of the message worketh in those who believe' (1 Th 2¹³), and that the gospel is 'God's *δύναμις*' (Ro 1¹⁶). Evidently the 'word' is conceived as having the efficacy to regenerate and sanctify; and, when those of us who have listened to the recital of Christian experience recall how often the decision for Christ—the entrance into joy and liberty—is traced to the effect of some divine word, embodied in some hymn or passage of Scripture, we cannot but feel that there was some ground for the peculiarly Semitic conception of the potency of a word.

(2) *Thoughts or beliefs.*—The psychology of religion strongly emphasizes that thoughts are forces, that one phase of regeneration is enlightenment, and that ideas have psychical, if not indeed physical, potency.

⁵ *iv.* 160 f.

⁶ James, *Varieties*, p. 236; Granger, p. 77; Coe, p. 213; Starbuck, p. 173.

'Every idea that is relevant to our condition moves us,' says Steven;¹ and James dwells on 'the regenerative influence of optimistic thinking' and on the 'doctrine that thoughts are forces'; maintaining that 'one gets by one's thinking reinforcements from elsewhere for the realization of one's desires; and the great point in the conduct of life is to get the heavenly forces on one's side by opening one's mind to their influx.'² Undoubtedly thoughts are forces, whether they originate from our own cogitations or from suggestion by others, though persons differ very widely as to their impressionableness to suggestion. Hypnosis is just the focusing of suggestion. We may not enlarge on this; but it enables us to realize how efficacious it is to centre the thoughts on God, to have a firm belief in His wrath or His love, His goodness or His severity, during the period which elapses between the time when the soul is quickened by the Divine Spirit and the time when, more or less suddenly and joyously, the soul enters into the liberty of the sons of God.

7. Ethnic and Jewish parallels.—(1) *Hindu*.—In ancient India there were three castes of Aryans—the Brāhmins, the Kṣatriyas, and the Vaiśyas—who were believed to have the spiritual capacity for being 'twice-born.' The second birth was foreshadowed in the sacred ceremony of initiation, known as *upanayana*, which took place at various ages between eight and sixteen, according to caste. The boy was brought to his *guru* (spiritual preceptor), and, after a prayer in ancient Sanskrit, he was invested with the sacred cord, which consisted of three slender cotton threads—white, to typify purity—and tied in one place by a sacred knot. The cord was placed over the left shoulder and under the right arm and worn perpetually. It was of no use unless blessed by Brāhmins, consecrated by the recitation of Vedic texts, and sprinkled with holy water. The ceremony was accompanied by the ten-times-repeated prayer, 'Let us meditate on the excellent glory of the Divine Vivifier [*i.e.* Regenerator].' After this act of investiture the novitiate commenced his study of the Vedas, and by and by, according to his period of study, he became qualified to teach and expound the Vedas, to recite prayers, and to take part in religious services and sacrifices. The disciple was taught to revere his *guru* very profoundly; indeed, in the *Institutes of Manu* it is enjoined:

'Of the two, the one who gives natural birth and the one who gives knowledge of the whole Veda, the latter is the more venerable father, since the second or divine birth ensures life, not only in this world but hereafter eternally' (II. 146). 'The twice-born man who shall have passed the period of his studentship, shall ascend after death to the most exalted of regions and no more again spring to birth in this lower world' (II. 249).³

(2) *Jewish*.—Judaism at a very early period applied to its proselytes the ideas of birth and creation, as we see from Ps 87, 'Behold Philistia and Tyre; this one was born there,' and 102¹⁸, 'A people that shall be created shall praise Jahweh.'

Similarly in *Berēshith Rabbah*, xxxix. 14, on Gn 12⁵, R. Eleazar ben Zimra says: 'If all who come into the world were met together to create one fly, they could not impart to it life; but he who induces a man to become a proselyte is as if he created him.' *Shir R. i.* 3 says: 'Every one who gathers one creature under the wings of the Shekinah is as if he created and formed him'; vii. 2 reads: 'The house of my mother'—*i.e.* Sinai. R. Barachiah said: 'Why do they call mount Sinai my mother? Because there Israelites were made, infants a day old.' *Babā M'tā*, ii. 11, teaches that a man ought to reverence his teacher more than his father: 'His father only brought him into this world. His teacher who taught him wisdom brings him into the life of the world to come' (cf. above, [I]). *Y-bāmōth*, 62a: 'The stranger who is proselytized is like a child who is newly born, because he must break away from his former teachers and principles, customs and habits, as well as from the ties of kinship. It is expected of him that he will lay aside his vicious habits and comport himself as if he were born that very day.'⁴

Philo often dwells on the necessity of a radical change before a man can secure the favour of God. He employs the figure of regeneration in a more psychical way than the Palestinian Jews and contemplates the change as a profound religious experience.

'What length of time could ever transform the harlotry of a soul trained in early and habitual incontinence? No time could do this, but God alone, to whom all things are possible; even those which among us are impossible.'¹ 'I have learned to appreciate my own nothingness (*οὐδένειαν*) and to gaze at the indescribable summits of thy munificence and then I recognize myself to be "dust and ashes" or something worse. . . . I am so elementally-changed (*ἀνεστοιχείωμένος*) that I do not even seem to exist.'² Again, 'How could the soul ever have known God, if He had not breathed into it and touched it *κατὰ δύναμιν*?'³ 'Who is it that sows good seed in human souls but him who is the Father of existing things, the unbegotten God who begets all things?'⁴ Our next quotation reminds us of the 'once-born' man of W. James, whom Philo calls *αὐτομάτης*. 'Every self-taught man is one who does not grow better by struggle and conflict, but from the outset found Wisdom ready prepared for him, showered down on him from above.' Of such men Philo says further on: 'The *αὐτομάτης γένος* is something new, surpassing description and really (*ἐντως*) divine, subsisting not by human conception but by inspired frenzy.'⁵ And once more he says: 'If a divine thought (*ἐννοια*) enters the *διάνοια* of man, it at once blesses it and heals all its diseases.'⁶

(3) *Stoicism*.—Stoicism had before NT times become a religion quite as much as a philosophy, announcing its ability to free men from the domination of evil and to bring them into union with the divine. It appealed strongly to the sturdy Roman character and had a deep influence on the best men in the early Roman Empire. S. Dill speaks of Seneca as 'the earliest and most powerful apostle of a great moral revival,' and as 'one of the few heathen moralists who warm moral teaching with the emotion of modern religion.'⁷ Seneca speaks of multitudes stretching out hands for moral help; and there is evidence that he himself was seized with a passion to win souls to goodness and truth, and seriously regarded it as his mission to form or reform human lives. He taught clearly that 'no mind is good without God.'

'God comes to men, nay! nearer still! he comes into men. . . . Divine seeds are sown in human bodies'⁸ and will grow into likeness to their origin if rightly cultivated.'⁹ God is within us, inspiring good resolves and giving strength in temptation. God is without us, bestowing on us His gifts and chastising us in His wisdom.

Many Stoics taught a doctrine of instantaneous regeneration. Goodness is brought about not by addition, but by a thorough change. There may be a progress from folly and wickedness in the direction of wisdom, but the actual passage from one to the other must be momentary and instantaneous. It may be a long preparation, but it is followed by a change (*μεταβολή*), sudden and complete. Just as a drowning man¹⁰ may be rising for some time towards the surface, but his experience when he emerges into the air is totally different from that which he passed through while rising, and must be instantaneous, so the final step in which a man suddenly finds himself transformed is different in kind from all the steps that have gone before. Cicero says of himself: 'I consider myself not merely to be amended but transfigured';¹¹ and Stoicism claimed many indisputable instances of men who had experienced a thorough and sudden change of character, as, *e.g.*, Polemon, the dissolute son of a wealthy Athenian who was thoroughly changed by listening to a discourse by Xenocrates.¹²

(4) *The mystery-religions*.—In the 6th cent. B.C. a remarkable wave of religion swept over Greece, the cause of which was largely personal, being due

to the influence of such men as Pindar, Hesiod, and perhaps Orpheus—men who were at once poets and prophets. The period was marked by (1) a more serious appreciation of right and wrong; (2) a yearning to know what awaits the righteous and the wicked after death, and a conviction that the wrongs of this life will be righted hereafter; (3) a deeper sense of the turpitude of sin and its defiling influence; (4) a growing belief in henotheism; and (5) a longing for fellowship with God. All this was accompanied by a disposition to give to religious beliefs a visual, scenic form and dramatic representation. Foreign rites and ceremonies were appropriated, old rustic symbols and mystic plays—in fact anything that could evoke intense religious feeling. Into these weird symbols men read new meanings, and used them to mediate a crude sense of communion with the divine—everything appealing quite as much to their highly-sensitized organisms as to their psychical or moral nature. Men in the distant past were far more truly 'children of Nature' than we are; and they experienced real pain and joy in the changes of the seasons, bemoaning the apparent death of vegetal life and indulging in ecstatic revels at the return of spring. They were keenly sensitive to the parabolic significance of Nature. Their life was *en rapport* with the life of Nature. Their soul was believed to be a fragment of the great World-Soul. The annual renovation of Nature in springtime fostered two anticipations: (1) that, as Nature puts on her beautiful attire in spring, after months of ugliness and deformity, so there must be a possibility, if one could only enter into thorough unison with the World-Soul, of renovating, cleansing, and beautifying the human soul, of whose pollution they were so painfully conscious; (2) that, as Nature lives again yearly after apparent death, so it must be possible for the human soul to undergo some processes which shall render it incorruptible and secure for it a glorious immortality. During the two centuries before and after Christ this movement spread and deepened immensely, gradually orienting Roman paganism and acclimatizing Phrygian, Egyptian, and Persian divinities and ceremonies, in every great centre of the empire. Everywhere there was found a deep sense of the pollution of sin and a longing for immortality; and in consequence there was a readiness to submit to any crude, pre-historic ceremony, resuscitated with new symbolism, in the frenzied longing to be inwardly changed, to become a child again, and to be made fit hereafter to dwell with God.¹ These ceremonies were the mysteries (*μυστήρια*).

(a) *The Eleusinian mysteries*, as held in Athens, furnished the grandest artistic display and scenic ornamentation. The great object of mystic contemplation was an ear of corn. There were ablutions in salt, fumigation with sulphur, and smearing with clay or with blood—all done with the intense desire to cleanse the soul. There were scenic representations of events in the history of Demeter and Persephone, on which the mystics gazed with wild, frenzied stare, in the hope that the experiences of the risen Persephone might be reproduced in their soul. Speaking of the lustrations, Tertullian says:

'The nations ascribe to their idols the same power of imbuing water with the self-same efficacy as we do. . . . At the Eleu-

sinian mysteries, men are baptized, and they assume that the effect of this is their regeneration and the remission of the penalties due to their perjuries.'²

(b) *Egyptian*.—In this religion Osiris was slain and dismembered by Set, and his limbs were concealed all over the world. The limbs were sought and found by Isis and her son Horus, and were re-constructed, and Osiris received a new life, divine and eternal. The one absorbing desire of his worshippers was to become partakers, in a mystical, spiritual sense, of the new life of Osiris.³

In the great Parisian magic papyrus published by Carl Wessely, we read of a mystic who has been allowed access to the divinity Set, and who is instructed by the mystagogue to address the divinity thus: 'O mighty Typhon, sceptre-bearer and ruler of the upper kingdom. . . . I am thy soldier. . . . I fling myself before thee. . . . energize me (*δυναμωσον*), I implore thee.' Having done this, he is bidden to put on white raiment, and to say to the god: 'I am united with thee in a sacred form. I am energized by thy sacred name. I have met the effluence of thy good gifts,' and he is assured that he has obtained a god-like nature (*ισοθεον φινεω*) which has been effected by the union with god. Another prays: 'Come into me, O Hermes, as children are in the mother's womb'; and in another passage we read: 'Come into the soul of this child that it may be fashioned (*τυποθεσας*) after thy immortal form in thy powerful imperishable light.'⁴

Lucius Apuleius, who wrote about A.D. 130, humorously describes his metamorphosis into an ass, from which condition he was delivered by the priest of Isis, and was initiated at Cenchreae into the mysteries of Isis. He describes the day of his initiation as his sacred birthday. He says that on that day he penetrated to the boundaries of death and trod the threshold of Proserpine.⁵ He compares this to 'a voluntary death' and his restoration to life to 'a salvation vouchsafed in answer to prayer.' He is certain that through the goddess Isis he has been in a manner born again ('quodam modo renatus') and placed again on the course of a new salvation.

The Hermetic literature.—Reitzenstein, in his work *Poimandres* (Leipzig, 1904), publishes and copiously edits a strange compilation of eighteen sacred documents made about A.D. 300 by an Egyptian priest. The Greek fragments are of various ages and belong to several religious communities; but the type of religion presented is generally Hellenized Egyptian. Among them is a remarkable dialogue between Hermes and his son Tat on the subject of regeneration (*παλιγγενεσία*).

The son reminds his father that he once said that no man can attain to *σωτηρία* unless he is born again and looses himself from this world of seeming. Tat says that he has done this, and begs to be instructed as to the doctrine (*λόγος*) of regeneration. Hermes replies: 'It cannot be taught. God causes it to grow in human hearts. The event is a begetting. God's will begets. Those begotten are reborn; they are sons of God.' Tat still presses his father to reveal more. He seeks to have a description of the new nature, and asks: 'He who is born, of what sort is he? for that which is born will be another and will have no share in the noetic being which is in me.' The father can only reply that such knowledge is not taught, but, when God wills, He can cause it to come to mind. But the son asks again: 'Do you mean that I who am by nature descended from my father am another's son? Explain to me the manner (*τρόπον*) of the regeneration.' Hermes can give little light as to the method; but the results of the change are remarkable. Form loses its outline, and magnitude loses its dimensions. The mind cognizes; no longer do the senses perceive. The injunction is: 'Nullify the perceptions of the body and the birth of Deity will take place in thee.'⁶

(c) *Phrygian*.—The Phrygians elaborated their conception of psychical regeneration from the myth of Attis, the devotee of Cybele, who bled himself to death under a pine-tree for his imagined unfaithfulness to his goddess and was restored to life by the Earth-Mother. Men weary of earthly life and of sin yearned for a thorough change—a death, a burial, a new life. Under the influence, probably, of Mazdæism, according to which a mystic bull is the originator of creation and resurrection, the old custom of devouring the bull, and thus receiving the strength of the bull into themselves to renew their physical energy, underwent a

sublimation of meaning, and was used as a means of acquiring eternal regeneration of the soul. They appropriated the blood-bath, in which the novitiate descended into a grave over which were boards, and on them a bull was slain. The man underneath received on his naked person, and into all the orifices of his body, the warm blood, under the belief that his sins were thereby cleansed and his nature regenerated.¹ For some time the fiction of the new birth was kept up by feeding the mystic on milk and tending him as a babe (*ὡς περ ἀναγεννώμενον*).

(d) *Mithraism*.—Mithraism (*q.v.*) employed, and probably initiated, the bath of blood, and on many tombstones, even of Roman patricians, there are found the words 'in æternum renatus', indicating that they believed themselves regenerated by the Mithraic ceremony. Albrecht Dieterich has published a papyrus which he believes to be a liturgy of Mithraism. Its opening prayer is very striking:

'O! first genesis of my genesis! First spirit of the spirit which is in me! First water of the water which is in me! . . . May it please thee to translate me, who am trammelled by the nature which underlies me, to an immortal genesis . . . that I may be born again (*μεταγεννηθῶ*) in my mind; that I may be initiated and the sacred Spirit may breathe on me. Though I was born a mortal from a mortal mother . . . having been sanctified by sacred ceremonies, I am about to gaze with immortal eyes on the immortal Æon.'²

When all is over, he says to Helios, lord of heaven and earth:

'I have been born again by thee: one, out of so many myriads, I am immortalized in this hour.'

8. Metaphors common to NT and the mysteries.

—The researches of late years, and especially the discovery of papyri, have disclosed that many technical NT words are also found in the vocabulary of the mysteries. In NT times the mysteries were very popular, not only the national ones, but also those of a more private character, held in halls or private houses; and almost every respectable man was a member in one or other of these mysteries.³ The ceremonies were kept secret, but the results claimed to be effectuated thereby were no secret; and Paul could not live in an intellectual centre like Tarsus without becoming familiar with the technical phrases of the mystery-religions. And, though we admit that Paul was antipathetic to them, and though it be true, as A. Jacoby maintains,⁴ that the keenest struggle of Christianity was with the mystery-religions, yet we need not be surprised that Paul should borrow metaphors from them; for he often derives metaphors from the athletic games against which Christians showed vehement opposition in later years. Early Christianity did not invent a religious vocabulary; almost all its terms were in vogue at the time. The professed aim of the mysteries was *σωτηρία*, to secure union with God and eternal life. Regeneration is the central theme in the Mithraic liturgy, in the Isis ceremonies described by Apuleius, and in the conversation between Hermes and Tat. Hence many of the pagans who listened to Paul and Silas were members of mystic brotherhoods; and, 'when this new group of travelling preachers from the East proclaimed the promise of *σωτηρία* and the assurance of life eternal, their message was bound to appeal to such an audience.'⁵ The early Christians used familiar terms and metaphors, but infused a vastly higher meaning into them. We proceed now briefly to show how the metaphors of the NT concerning regeneration are found, though not with the same significance,

in the mysteries (the sections are the same as in § 3 above).

A. '*The seed is the word*' (Lk 8¹¹; cf. 1 P 1²³, Ja 1¹⁸).—In the Hermetic literature it is taught that 'regeneration is the end and aim of all revelation.' While Tat, in silent devotion, sits listening to the instruction of his father Hermes concerning the divine potencies, these potencies manifestly enter into him and form his new 'I';¹ and it is taught that the reader of the book recording the conversation between Hermes and Tat might also be regenerated, under the grace of God; but a translation of the book would not have the same effect.² Tat asks his father of what sort of mother he was regenerated, or of what sort of seed, and receives the answer: 'The will of God is the sower, and the seed is the true Good.'³

B. *Impartation of life*.—As we have seen, there was a deep longing for immortality in the period from 600 B.C. onwards, and the popularity of the mysteries was chiefly due to the fact that they claimed to confer life and joy hereafter. The gods worshipped in the mysteries were those who, like Osiris, Attis, and Kore, died and lived again; and, while gazing at vivid spectacular displays of their sufferings, death, and rebirth, accompanied by mournful addresses, listened to with sobbings and wailings and self-mutilations, the *μύσται* strove frantically to become partakers in the sufferings and death of the gods, that they might become partakers in their glorious life. In the mysteries of Attis, when the worshippers have almost spent themselves in sympathetic grief over the sad death of Attis, the priest chants in low tones:

'Be of good cheer, O mystics, since the god has been rescued from death, there is *σωτηρία* for you from your toils.'

Similarly it is said of one who has become mystically united to Osiris:

'As truly as Osiris lives, shall he live. As truly as Osiris is not dead, shall he not die.'⁴

C. *New birth*.—It is extremely probable that the words *παλιγγενεσία* and *ἀναγέννησις*, to describe the change which the *μύσται* claimed to have undergone, are pre-Christian. It was believed that the lustrations and the sympathetic dramas causally produced this state of regeneration. Of course, we need scarcely remark that the *παλιγγενεσία* was vastly different from that of the NT. In the mysteries the phenomena were hyperphysical, due to sensuous excitement, akin to that of the *faqir* in India, or the prophets of Baal. In the NT the change was supremely ethical (1 Co 6⁹⁻¹¹). In some cases, it may be, the result of the mysteries was morally elevating, but that was not their primary intent. They were designed to evoke a sensuous religiousness—to appeal to the feelings and to foster the condition in which men and women of neurotic temperament see visions and dream dreams. They encouraged manticism as distinct from prophecy. The church at Corinth was in danger of reverting to a 'mystery.' It is doubtful whether those who claimed *ἀναγέννησις* through Attis and Isis lived on a much higher moral level than their neighbours.

D. *A new man or a new creature*.—There is everywhere in the mysteries the notion that the soul, as a highly attenuated material entity, undergoes some change. This is emphasized when, as in the Mithraic liturgy, the word *μεταγεννώσθαι* is used instead of the other synonyms. We find constantly the idea of union (*συνουσία*) of the divine with the human, cleansing, ennobling, and transfiguring it. Osiris, Attis, Adonis were men. They died as men; they rose as gods. If men unite themselves with them, 'receive them,' 'put

them on,' they are thereby deified. They become sons of God.¹ Yet in one place we have a sort of Nestorian conception—*συνάρπεια* rather than *σύγκρασις*—when Tat asks whether the inborn son of God is himself or another, and prays for Hermes to come into him 'as children are in the mother's womb.'²

E. *A change of clothing.*—Here we meet with the conception that the soul cannot be changed while in the body. It must first be 'out of the body.' The soul wanders through the heavens, and receives a new *μορφή* before it returns. The soul of one who is admitted to the mysteries of Isis travels through the twelve houses of the zodiac and in each puts on a different garment—twelve different transmutations. He returns to earth wearing an Olympian garment, stands before the assembled mystics, and is revered as a god.³ So in the cult of Mithra the soul of the mystic is born again by means of wandering through the heavens. Arrived there, he calls out for his own heavenly body, which God has formed for him in the world of light, and wears it for a time; but he must lay it aside when he returns to earth, and put on the garment of his earthly body.⁴

F. *A passage from death to life.*—Development is quite a modern conception. It was simpler to the ancients to conceive of transition, as death followed by life. Even yet we can speak of the death of the old year and the birth of the new. The great change to which the initiates to the mysteries laid claim was often represented as a death, followed by a changed life. When the initiation was being celebrated, it was usual for the *μύσται* to simulate death, from which they were aroused by the call of the *μυσταγωγός*. Apuleius, describing his own initiation, says: 'I went to the confines of death. I trod the threshold of Proserpine.' Among some savage tribes youths were beaten till they were unconscious, that they might enter on a new life; and for a time they were expected to behave as babes.⁵

G. *Burial and resurrection.*—This, of course, is a very similar metaphor. Burial was designed to emphasize the reality of the death. In the cult of Attis a pine-tree was felled, and the trunk adorned with garlands and solemnly buried. The mystics wailed for Attis, who had died again in his sacred tree; they gashed themselves and sprinkled their blood on the altar. Next night they assembled in the temple, simulating death, and a light and the resurrected pine-tree were brought in, while the priest moved round among the prostrate *μύσται*, informing them that the god had been rescued from death, and besmearing their throats with oil that they might sing the praises of the risen god.⁶ Dieterich, speaking of the customs of some uncivilized peoples, says:

'The adepts are besmeared with chalk or mud; then suddenly cleansed and assume a new name. They are buried and then fetched up out of the grave. They are beaten almost to death and then brought back to life.'⁷

Proclus (fl. A.D. 450), in his work on the *Theology of Plato*, iv. 9, says:

'What is most wonderful of all is that the priests command the body to be buried, except the head, in the most sacred of all the ceremonies.'⁸

It is certain that in the mysteries all the effects were believed to follow magically rather than ethically. The ceremony produced the results irrespective of the ethical condition of the novice. Physical contact with the water regenerated the soul. The words uttered by the priest were

believed to have a magical effect on the soul. The burial and besmearing with clay or mud, followed by restoration to life, were held to produce in the votary a psychical death, burial, and new birth. The new birth produced a sense of union with God, compared with marriage to the god or having him as a guest in the soul. All was in the realm of feeling, and left the moral nature of most men untouched.

9. *Connexion between regeneration and baptism.*—The subject of Paul's teaching as to the significance of baptism has been a burning question during the past decade. The disputants fall into three classes:

(1) Those who believe that baptism (which in this case is restricted to believers) is nothing more than (α) a symbol of a spiritual union which already exists between Christ and the believer; (β) a declaration of allegiance to Jesus as Master and Lord; (γ) a public avowal of faith in God the Father, Jesus Christ the Redeemer, and the Holy Spirit the Sanctifier.¹

(2) (α) Those who hold the sacramentarian view that baptism remits all sin, original and actual; that it bestows regenerating grace and endows the soul with the germs of the Christian virtues (for this view see art. BAPTISM, vol. ii. pp. 390-400).

(β) There are some modern scholars who, trained in the rigour of modern exegetical methods, claim, in the light chiefly of recent research in the mystery-religions, that in his doctrine of baptism the apostle Paul was inconsistent with himself and with the rest of the NT; that he was indeed a sacramentalist; and that, while demolishing with one hand the efficacy of Jewish rites and ceremonies, he was with the other building up a doctrine of the mechanical efficacy of baptism, which was quite incongruous with his ordinary teaching.

'The latest exegetical phase,' says F. Rendtorff, 'is this, that with a frame of mind thoroughly disinclined to sacramental conceptions, so many feel themselves historically bound to ascribe such views to Paul. Such men as Gunkel, Heitmüller, and H. J. Holtzmann maintain that Paul held such views and that he derived them not from the OT nor from Jesus Christ, but from the trend of thought in ethnic religions current in his time.'² E.g., W. Heitmüller says: 'Baptism, in Paul, is throughout a sacramental act, which works not *ex opere operantis*, but *ex opere operato*, in the Catholic sense. Its operation is not conditioned by the faith of the recipient or the administrator. Of course, faith is pre-supposed in the candidate. Only those who believed sought baptism, and yet, notwithstanding the mode of the operation baptism is not thought of in an ethico-psychological manner, but in a purely sacramental manner.'³ H. Gunkel has laboured at the Osiris cult, and he expresses himself thus: 'In baptism (so Paul teaches) the believer is joined to Christ. Baptism is the symbol of dying and being buried. He who allows himself to be baptized into Christ experiences thereby the death of Christ. He comes out of the water, as one who has died, but been roused to a new life. He has put on Christ: that which happened to Christ on the cross completes itself again in the case of individuals.'⁴ Percy Gardner writes in the same strain: 'St. Paul's view of baptism is distinctive. He speaks of burial with Christ in baptism, and of being baptized into the death of Christ, and of rising with him from the dead. . . . In his own way, he transforms the rite of baptism, not into a thaumaturgic process, but into a spiritual experience of a mystic intensity. To him baptism does not merely mean repentance for sin, and attempt at a purified life; it was burial with Christ and rising again with him; it was incorporation into the earthly (heavenly) body of Christ, and becoming a new creature. There can be little doubt that in this matter, as in others, Paul innovates by grafting upon a Jewish rite a deeper meaning, of which the germs lay in the Pagan Mysteries.'⁵ So Kirsopp Lake, after quoting Ro 6³ and Gal 3²⁷, says: 'Baptism is here clearly indicated as effecting the union with Christ. . . . Baptism is, for St. Paul and his readers, universally and unquestioningly accepted as a "mystery" or sacrament which works *ex opere operato*; and

¹ This is the view usually held by Baptists and is represented in A. H. Strong's *Systematic Theology*, 3 vols., Philadelphia, 1907-09; T. Armitage, *A Hist. of the Baptists*, New York, 1890, *passim*; and T. G. Rooke, *Doctrine and Hist. of Christian Baptism*, London, 1894, ch. ii. etc.

⁸ Quoted in Dieterich, p. 163.

from the unhesitating manner in which St. Paul uses this fact as a basis for argument, as if it were a point on which Christian opinion did not vary, it would seem as though this sacramental teaching is central in the primitive Christianity to which the Roman Empire began to be converted.¹

(3) It can hardly be doubted that Paul had some acquaintance with the mystery-religions, and that he intentionally used metaphors there in use; but there are many scholars, equally eminent with those named above, who cannot believe that the Apostle could be so illogical as to embitter his life for years by denying the efficacy of Jewish rites and ceremonies to secure salvation, and at the same time set up an external ordinance like baptism as having the efficacy to regenerate the souls of men.

Deissmann, *s.g.*, says: 'It is not correct to say that Paul considered baptism to mediate our access to Christ. There are passages, as Gal 3²⁷, which, read aloof from their context, might be thus interpreted, but it is more correct to say that baptism is not the restoration to fellowship, but the sealing of our fellowship with Christ. With Paul himself it was not baptism which was the deciding-point, but the Christophany at Damascus. He was sent not to baptize, but to preach the Gospel.'² Rendtorff maintains that 'the ground presupposition of all that Paul says on baptismal experiences is faith. Not that Paul always mentions faith, as the *causa medians*, but he does so frequently in express words, as in Gal 3²⁶, Ro 6⁴. The whole baptismal experience of Ro 6 culminates in the eminently ethical thought: "that we may walk in newness of life." This cannot refer to a natural physical-hyperphysical new creation, analogous perhaps to the Mithra magical liturgy with its *anabaptisatio*. It can only imply the restoration of a new religious-ethical life.' Quoting Col 2¹³, he insists that 'the efficacy of the baptism rests on and consists in the forgiveness of sins.'³ Clemen steadily opposes the attribution of sacramentarian views to the Apostle. He admits that the implications of 1 Co 15²⁹ are magical, but denies that the text represents Paul's own views. As to Ro 6 and Col 2¹³, he contends that the operation of baptism is based on the significance of the death of Christ. There is with the Apostle no reference to a sacrament. 'Certainly with him, union with the Lord, the receiving of the Holy Spirit, the renewal of life and the blotting out of sin are realities of religious experience. . . . This conversion comes to expression in baptism which is a symbol not only of what is to happen but also of what has happened already.'⁴ There is much force also in the argument of J. C. Lambert when he maintains that from Ro 3²⁵⁻²⁶ the Apostle asserts and reasserts his fundamental doctrine of justification by faith, then in 6²⁻⁶ he abruptly introduces baptism, for the first and only time in the Epistle, and consequently 'it seems impossible, on the ground of this single reference to baptism in the course of his longest and most doctrinal Epistle, to set aside his cardinal thought that in the principle of faith itself there lies the whole potency of salvation.'⁵ Later he says: 'The precise point which he wished to enforce was the intimacy of the union which faith brings about between the believer and the Lord.' Baptism suggests a being buried with Christ. 'But a burial is not a death: it is only a public certification and sealing of death. And, in like manner, baptism is not a dying with Christ, but rather a sealing of that death in Him and with Him which is immediately brought about by faith.'⁶ The same view is ably defended by H. A. A. Kennedy, in *Epp* viii. iv. [1912], and in his work on *St. Paul and the Mystery-Religions*, ch. vi.

It remains now to examine what sort of constructive criticism the last-named scholars have to offer, having disposed of the other two views, for, of course, in repudiating sacramentarianism, they are equally pronounced in their conviction that the statements in Paul's Epistles as to baptism, such as Gal 3²⁷, Tit 3⁵, imply more than that baptism is merely a symbol of spiritual facts. (1) It clears the air considerably that they all agree that all the persons whose baptism is recorded in the NT had avowed repentance and faith in Jesus as Christ and Lord before they were baptized.⁷ (2) They agree that a candid exegesis of the passages in which Paul speaks of baptism obliges us to admit that he believed that in baptism 'something happens.' The believer 'puts on Christ'; he 'dies to sin,' he 'is raised to new-

ness of life.' Paul was exhorted to 'be baptized and wash away his sins.' Christ 'cleansed' the Church 'by the laver of water by means of the word' (Eph 5²⁶). Clearly the early Christians were taught to expect that in their baptism they would receive some influx of spiritual power—some rich spiritual blessing. Lambert expresses it as 'a marked accession of spiritual life and power.'¹ Kennedy speaks of 'a wonderful spiritual quickening; a new enhancing of the power and grasp of faith.'² (3) They draw a very proper and vital distinction between 'cause' and 'occasion.' They do not believe that the literal act of baptism—contact with the water, or the utterance of the formula—in any sense causes these spiritual blessings; but they do believe that Paul taught that it was a divine appointment that those who obeyed their Lord by making a public confession of Him in baptism should receive therein a rich spiritual reward.

E.g., Clemen, speaking on Gal 3²⁷, says: 'Baptism as such is not the cause of the "putting on Christ" . . . for 3²⁶ says, "Ye are all sons of God through faith"; accordingly baptism can only be the occasion on which one confesses his sins, not a sacrament';³ and Lambert is equally explicit: 'it was not with the baptismal water that men were sealed, but with the Holy Spirit of promise. Baptism was the occasion of the sealing, rather than the sealing itself. . . . Even this sealing of the Spirit is not a creative but a declarative act.'⁴

Baptism was not the cause of spiritual gifts, but the occasion of their bestowal. Baptism does not literally wash away sin, but NT believers were taught to expect a consciousness of pardon and a full sense of sin forgiven in connexion with their baptism. Nor does baptism regenerate in a causal sense, but NT baptism was normally the occasion of the bestowal of the gifts of the Holy Spirit—so much so that Paul was astonished that it was possible for any disciples who had been baptized not to have received them (Ac 19²). Regarding Jesus as their great Exemplar and His baptism as the type of, and authority for, Christian baptism, it was natural that they should expect somewhat similar spiritual blessings to be conferred on them to those which were conferred on Him.

LITERATURE.—This has been sufficiently indicated by the numerous quotations throughout the article.

REINCARNATION.—See TRANSMIGRATION, SOUL.

RELATIONS (Buddhist).—Buddhist philosophy has from the outset resolved all 'things,' all 'states' of matter and mind, into a flux of 'happenings.' That which happens is a series in the flux of transient, even momentary, complexes of elemental factors, determined and determining, according to the fivefold law of cosmic order (*niyama*). And these complex happenings are determined and determining, both as to their constituent factors and also as to other happenings, in a variety of ways that we should express by the term 'relations.' The Buddhist term is *paccaya* (Skr. *pratyaya*). Etymologically the word is nearly parallel to 'relation' (*paccaya*=*pati*= 're,' and *ay*, causative of *i*, 'to go or come,' in place of *latus*, 'borne'). A greater discrepancy, however, lies in the causal emphasis of the Pāli term, which is lacking in our word. The commentators emphasize this: '*paccaya* means because-of-that it-makes-to-come.' The prefix (*pati*) is here given the added force of *paticca*.⁵ It is true that one of the most recent discussions of the notion of cause⁶ expresses 'the general scheme of a causal law' in terms of relations. But this is only one among

the inevitable, if unconscious, approximations of modern European 'philosophies of change' to Buddhist ideas.

Another characteristically Buddhist definition of relations, beside that given above, is to assign them a place among the marks or characters of things (i.e. events) in general. Thus all things (except the philosophic Nibbāna) have (a) the three marks of impermanence, liability to suffering, and soullessness; (b) the threefold mark of the conditioned: genesis or birth, cessation or decay and death, and a relatively static point or interval between; and lastly, (c) the marks of causation, viz. relations, or correlation.

The third group of marks was developed under 24 heads in the last of the analytical works in the *Abhidhamma Piṭaka* of the canon, called the *Paṭṭhāna*, also 'the Great Book'.¹ They are the most—one may say the only—distinctively constructive contribution to Buddhist philosophy in those six analytical books. The 24 heads are developed at great length in application to the material and mental facts of experience. The commentary, ascribed to Buddhaghosa, adds some useful explanatory matter, especially in its insistence on the necessity of regarding the correlation, or *paccayatā*, in every one of the 24 modes as an 'assisting agency' (*upakāra*):

'Where one *dhamma* by its arising or persisting is a helper to another *dhamma*, that first-named is the (causally) relating *dhamma* to the last-named.'

It is impossible to say how soon after the closing of the canon, how long before Buddhaghosa's date, this aspect was evolved. But it is of the greatest importance to an understanding of the Buddhist philosophy of change, and it has remained a keynote in that tradition to the present day. Thus Ledi expands it as follows:

'Just as an heir normally inherits the property of his deceased parent, so does a succeeding unit of consciousness inherit all the energy, the functions, the impressions of the expired unit.'²

The same is believed with regard to material units. And the legacy itself came, in later works, to be spoken of as a force, *vim*, influence of the *paccaya*, or causally relating term, viz. the *paccaya-satti*.³ Thus:

'In the exposition of the *Paṭṭhāna* relations there are three main features to be carefully noted, i.e.:

- (i.) the relating thing (*paccayadhamma*),
- (ii.) the related thing (*paccayuppannadhamma*),
- (iii.) the distinctive function (or influence) of the relation (*paccaya-satti-vīseṣa*).⁴

The 24 *paccayas*, under the title *Paccaya-saṅgaha* ('Compendium or Category of Relations, or Causation'), occupy the eighth part of the standard manual, entitled *Abhidhammattha-saṅgaha*. This work (in which *-satti* does not occur) dates from the 9th, 10th, or 11th cent. A.D., and is translated in *The Compendium of Philosophy*. The author, Anuruddha of Ceylon, begins his exposition thus:

'Now let me tell e'en as is fit how such
And such a state of things⁵ related stands
To other states conditioned like itself,'

and proceeds:

'In the category of relations we have two schemata:—the law of happening by way of cause⁶ and the system of correlation.'⁷ Coming in due course to the second, he writes:

'The system comprises the following relations:

- | | |
|--------------------------|-------------------------|
| (1) condition | (6) co-existence |
| (2) object | (7) reciprocity |
| (3) dominance | (8) dependence |
| (4) contiguity | (9) sufficing condition |
| (5) immediate contiguity | (10) antecedence |

¹ *Paṭṭhāna* means 'predominant cause': hence a specific form of *paccaya*.

² State, thing, presentation, phenomenon.

⁴ S. Z. Aung, *Compendium of Philosophy*, p. 42.

⁵ From a letter by Dr. Ledi to the writer.

⁶ *Dhammā*.

⁷ *Paṭṭhāna-samuppāda-nayo*.

⁸ *Paṭṭhāna-nayo*.

- (11) consequence
- (12) habitual recurrence
- (13) action
- (14) result
- (15) support
- (16) control
- (17) *jhāna*

- (18) means, way
- (19) association
- (20) dissociation
- (21) presence
- (22) absence
- (23) abeyance
- (24) continuance.

(1) is *hetu*, one of several synonyms for causal antecedent, or condition, in general; it is technically reserved for the six moral 'roots' (*mūla*) of personal character: appetite, enmity, ignorance or dullness, and their opposites, disinterestedness, amity, intelligence. (2) is object of consciousness, viz. five objects of the five senses, and one of intellect, namely, impressions and ideas. (3) refers to an overruling factor in consciousness at any given moment: intention, energy, volitional apperception, intellectual investigation. Of (4), (5), the latter applies to a sequence in time so apparently indivisible as that of mental states or moments. By (6) 'co-nascent', or simultaneous and co-inhering genesis, is meant. In (7) both terms of the relation are mutually relating and related. (9) differs from (8) only as indicating a cause or group of conditions effective enough to bring about immediately a given result. (12)=repetition so as to form a habit.¹ (13), *karma*, is the relation between an act of will and its result. (14) is literally ripeness, maturity; causally conceived, it is a relation of effortlessness.² (15) implies mental or material nutriment. (16) refers to the influence of psycho-physical, mental, and moral faculties or controlling powers. (17) is concentrated energy physical and mental. (18) is thought or conduct under the aspect of a shaped course of procedure towards an end. (22), positively regarded, implies 'opportunity for a successor to arise.'³ So for (23).

In comparing these groups with corresponding lists in European philosophy, we notice coincidences and discrepancies. The familiar relation of 'resemblance' is wanting, and one of its modes: 'equality, inequality.'⁴ As explanation it may be suggested that (a) the Buddhist list claims to give not all, but only the most important, relations;⁵ (b) resemblance is not so much an objectively valid relation as an impression of a dual or plural *object* on a subject, hence it is a species of (2); (c) resemblance, even if objectively valid, is not a causal relation, an 'assisting agency,' as is every *paccaya*. A... this holds good as to 'equality.'

Two other relations—'subject-attribute,' 'container-content'⁶—indicate a standpoint that is opposed to orthodox Buddhist philosophy, viz. the positing of a substance or agent. It may be said in rejoinder that the second class of relations—'object'—involves a subject. This is true for our philosophic tradition and idiom, but not for those of Buddhism. *Āramāṇa* (object) involves no correlate of metaphysical import, such as we are entangled with, in 'subject.' The ever-changing 'object' is regarded as the thing-which-relates (*paccaya*); the ever-changing mental aggregates are the thing-related (*paccayuppanna*).⁷ The only constant factor is the concept of the specific relation.⁸

RELICS (Primitive and Western).—In the art. **CANNIBALISM** (vol. iii. p. 197 f.) it has been shown that by eating the dead or part of them the eater acquires their souls or their qualities, and thus obtains power over the soul or is united to it. It is not necessary to eat the whole man; to eat part is enough, because of the principle involved in sympathetic magic that the whole is contained in the part, or that the influence working in the whole works also in the part, although separate from it. On analogous grounds the dead man's soul or his powers or qualities may work from his body or from any fragment of it, from his clothes, or from any object or part of any object with which he has once been in contact. Any one who wears or carries these, who touches them, who prays to them, or who uses them in a variety of other ways, benefits by his action. The soul or power of the dead man is so far subject to him, or at all events aids him in varying ways. This is the explanation of the use and cult of relics, which of course are valued in proportion to the extent of the power, strength, miraculous gifts, or saintliness of the person to whom they originally belonged, as well as of the love or respect in which he was held. The supernatural virtues of relics, originating in such beliefs as have been referred to, may be traced through a series of examples in all religions and in all degrees of civilization, beginning with the lowest savages.

1. **Relics in savage life.**—(a) Just as enemies are eaten to obtain their qualities, so their kidney or caul fat, as a special seat of life, is abstracted and used as a lubricant for the body—a common custom among Australian tribes.¹ Similarly, relics of a dead enemy are sometimes worn for protection. In E. Africa, if enemies can unearth the body of a dead warrior, parts of it are used as charms—eyebrows, nose, little finger or toe, pudenda, etc. These are reduced to ashes, and, when not used in tattooing or mixed with food, they are sewn up in a bag and worn round the neck.² Among W. African tribes also parts of an enemy's body or sometimes of an ancestor are used in making a fetish—part of the brain to give wisdom, of the heart courage, the eye influence. A spirit is supposed to be lured by these to reside in the fetish.³ The Tenimberese wear the vertebrae of an enemy round the neck as a charm in war-time.⁴ Men of Mowat, New Guinea, after slaying a great warrior, wear his penis in order to increase their strength.⁵ Another method is to attach the relic to the arms, etc., used in battle. Thus in Mexico, if any one could secure the middle finger of the left hand and the hair of a woman dying in childbirth, he tied these on his shield to make him brave and fierce and to blind his enemies.⁶ Rubbing weapons with part of a dead man's body to give them his strength and skill is sometimes practised also, as among the Koniagas (piece of dead whaler used) and Aleuts.⁷

(b) With many tribes magical rites are performed with part of a dead man's body—e.g., in healing, in rain-making, as love-charms, to keep off thieves, to rob a man of his strength. In one such instance practised in Queensland, where an enemy is flayed and his skin used to cover a sick man,⁸ there is analogy to the use of a dead man's clothing or part of it as a relic in more civilized regions.

Reference may here be made to the so-called 'hand of glory' used to produce sleep or inanition.¹ Other parts besides the hand were also used—e.g., the skull to make one invisible like the ghost who owned it (Blackfoot Indians).² Another instance is found in the use of the pointing-stick or bone among Australian tribes to cause death. The bone is 'sung' and curses are pronounced while it is pointed in the direction of the victim. The most powerful form is made out of the femur or fibula of a dead man among the Gnanji and other tribes in the Gulf region. These tribes also attach the radius of a dead man to a spear when setting out to avenge his death. The spear cannot fail then to go straight and slay the murderer.³ Analogous to this is the use in the Melanesian area of arrows tipped with human bone. These are much dreaded. After incantations are said over them, they acquire *mana*, or the ghost works through them. The danger of these arrows is proportionate to the power of the dead man whose bones are used.⁴

(c) The practice of head-hunting and scalp-taking, in which undoubtedly the purpose was to gain power over the ghost (the head being a seat of the soul⁵), illustrates these various uses of relics of the dead, and shows that the relics are vehicles of spirit-power, things through which the ghost still acts. Another illustration of the connexion of spirit and relic is found in a group of folk-tales in which a man, having stolen a skull from a churchyard, is haunted by the ghost until he returns it.⁶

(d) The custom of the widow carrying her husband's skull as a relic or amulet, and the widespread practice of preserving heads of relatives or ancestors for cult or magical purposes have been described in the art. **HEAD** (§ [f], [g]); cf. also **DEATH AND DISPOSAL OF THE DEAD** (Introductory), XXI. 5; **CHARMS AND AMULETS** (Mexican and Mayan), (1). The whole body is sometimes preserved as a relic. Herodotus relates this of the Ichthyophagi (Macrobii), who offered sacrifices to the body for a year, afterwards removing it to another place.⁷ So with the Kurnai the mummified corpse is carried about by the family, and later placed in a hollow tree.⁸ Among some W. African tribes all the bones of father or mother are dried and kept in a wooden chest, for which a small house is provided, and to which son or daughter goes to hold communion with the spirit.⁹ For other instances of preservation of the corpse in the family dwelling, with accompanying rites, see *ERE* iv. 418* (Australia), 423*^b (Tahiti, Muong of Tongking, Baoulé of W. Africa, Yumbos of S. America, Gilbert Islanders). In some instances the wife or nearest relative carries about the bones after they have been exhumed (Woodlark Islanders, Mosquito Indians; also ashes of the cremated body, Tacullies).¹⁰ So among the Aibonones the bones of medicine-men were carried about by the tribe in their wanderings.¹¹ Among the Andamanese necklaces are made of a child's bones (also of an adult's) and distributed among the relatives. The bones cure diseases and shield from attacks of evil spirits, through the intervention of the ghost, who is pleased by the respect paid to his memory.¹²

(e) Separate parts of the body are sometimes regarded as sacred.

(1) *Finger and toe*.—First joints of these, along with the nails, part of the lobe of the ear, and a lock of hair, are used to form a family fetish with which the spirits of the dead are associated. Fresh relics are added to the fetish as new relatives die. It descends by inheritance (Benga of W. Africa).¹ Finger-bones (also sometimes skulls or teeth) of important men are preserved in a shrine at the village in the Solomon Islands. The ghost haunts these relics.²

(2) The *arm-bone* is a sacred relic among the Mara, Anula, and other N. Australian tribes. After a year it is given to the messenger who summons to the final burial rites. The messenger carrying the relic is himself sacred, and, when he shows it to the tribesmen, they must begin their journey to the scene of the rites.³

(3) *Hair and teeth*.—These are used as amulets by the family priest in praying to the dead at places other than that where the skulls are stored.⁴ In Florida, Solomon Islands, in the private cult of a ghost, the worshipper wears as a relic a lock of hair or a tooth of the helpful ghost when fighting; at other times it is kept in the house.⁵ So also in the Loyalty Islands priests, when praying, tied to their foreheads or arms relics consisting of teeth, hair, or nails of ancestors. To these magical power was ascribed.⁶

(4) The *jaw-bones* are sometimes an important relic. They are carried by the Andaman widow along with the skull;⁷ and among the Kiriwina (New Guinea) the widow suspends the jaw-bones, ornamented with beads, from her neck.⁸ But the most striking use of the jaw-bones as a relic is found among the Baganda, who preserve those of kings as a precious heirloom, along with their umbilical cord, in temples, guarded by hereditary custodians. The ghost was believed to cling to them and to give help when they were duly honoured. Jaw-bones of very ancient kings were thus treasured.⁹ This is undoubtedly connected with the idea that a king's or hero's body or head is a talisman upon which the safety of the tribe or state depends. They are carefully guarded lest they should be removed and disaster follow.¹⁰

(f) In savage custom certain articles are sometimes connected with the mythic life of gods and spirits, and may be regarded as relics. Of these the *churinga* of the Arunta and other Central Australian tribes form an example. Each one was associated in the Alcheringa (*g.v.*) period with a totemic ancestor and remained on earth as the abode of his spirit when his body entered the ground. Such *churinga* and those associated with reborn spirits are carefully preserved in sacred store-houses, or *ertnatulunga*. They are much venerated and are used in various sacred ceremonies. When ill, a man may send for a *churinga* of his totem, scrape off a little of it, and drink it in water, thus absorbing part of the essence of the stone endowed with attributes of the spirit. Besides being associated with ancestors, the *churinga* have 'feelings' which can be soothed by rubbing them with red ochre. The store-houses are sometimes solemnly visited, just as shrines with relics are elsewhere.¹¹ The Melanesian hero Qat left behind him the stump of a tree that he had cut down for a canoe, and men who cut down trees for canoes sacrifice at this stump for the preservation and power of these vessels.¹² Among the Creek Indians a powerful charm carried by war-parties consists of parts of the horns of a mythic snake; these preserve from wounds.¹³ In other instances stones may be regarded as members of a divinity or supernatural being, or sacred places or instruments are thought to have been instituted or handed over to men by them, or sacred musical instruments represent a god or contain his voice.¹⁴

(g) In all parts of the world, both in the higher and in the lower culture, marks on rocks or hills are regarded as foot- or hand-prints of spirits, gods, or demons, and are in a sense their relics, which are sometimes regarded with veneration. Examples of this are found not only in savage, but also in classical, Teutonic, Celtic, Semitic, Hindu, Buddhist, and Christian folk-lore. Where divinities are mythically supposed to drive about in vehicles of one kind or another, and where their worshippers set the image of a divinity in a cart or chariot and drive it about for ritual or magical reasons, such a vehicle would be regarded also as a relic of the god himself—his property, once used by him as it is now used for his image. Examples of this ritual use occur in Teutonic religion,¹ as well as in Roman, Celtic, and Hindu cults.²

2. *Greek*.—(a) The cult of relics in Greece was inseparably connected with that of heroes, mythical or real, as that in turn was linked on to the worship of ancestral ghosts. The remains of the hero usually rested in the agora, and over them was erected the *ἡρώων*, a kind of chapel, but sometimes the grave or *ἡρώων* was in the temple of a divinity. The cult at the *ἡρώων* was a cult paid to the hero's relics quite as much as to the hero himself, though these relics were generally not visible. Their presence within a town or district was a guarantee of safety. Sometimes not even parts of the hero's remains were visible. The head of Orpheus was buried in Lesbos or in Smyrna,³ and the head of one of the Korymbantes was buried at the foot of Olympus.⁴ The supposed relics of Orpheus at Libethra were never to see the sun, or the city would be destroyed by a boar. When they were exposed, the river Sys (boar) came down in flood and overthrew it.⁵ Nothing further need be said regarding the cult of heroes whose relics rested in a grave (see art. HEROES AND HERO-GODS [Greek and Roman]). There are occasional instances of bodily relics not buried in graves but otherwise preserved. The skin of Marsyas was suspended in the city of Celænæ—by Apollo, according to the myth.⁶ The alleged shoulder-blade of Pelops was preserved in a bronze coffer in the temple of Zeus at Elis, after having been found by the fisher Damarmenos in the sea and identified by an oracle.⁷ The bones of Tantalus were kept in a bronze vessel at Argos, over against the grave of Pelasgos.⁸ The bones of Orpheus rested in a hydria on a pillar at Dion in Macedonia.⁹ The hair of Medusa was preserved in a hydria at Tegea.¹⁰ At the festival of Europa in Crete, where she was revered as Hellotis, her bones were carried in a great crown of myrtle.¹¹

(b) When a hero died abroad, his remains were brought with pomp to the place of intended sepulture. From every city through which the remains passed priests, magistrates, and citizens thronged to meet them, or citizens were deputed to follow in mourning. Trophies, crowns, and armour were offered, chaplets were sent to adorn the urn, and finally the most honourable burial was given to the hero. Examples of this are found in the pages of Plutarch.¹² The possession of a hero's relics was important for the safety of a town or state; hence such relics were often eagerly sought for in times of danger, even when they were already possessed and honoured by another town or district. Generally an oracle

announced that it was necessary to obtain these relics and told in oracular fashion where they were to be found, as the place of sepulture was often kept secret by the owners. Sometimes the actual discovery of their position was the result of a prodigy, as when Cimon, seeing an eagle tearing at the ground with beak and talons, was inspired to dig there, and so found the bones of Theseus. Opposition was often offered to their removal; hence they had to be taken by force or by fraud; and sometimes the hero himself resented the removal of his relics. Once obtained, they were brought with great reverence, the citizens met them with processions and sacrifices, they were duly buried, and a shrine was erected over the spot. A festival day was annually or oftener held in their honour. Many examples of this occur even in the case of the relics of mythic heroes, and probably they originated as a means of explaining local cults.

Plutarch describes at some length the translation of the relics of Theseus from Scyros to Athens.¹ Herodotus tells how an oracle made known to the Lacedaemonians that they would never conquer the Tegeans until they had obtained from the Tegean territory the bones of Orestes, which were further said to lie where two winds by hard compulsion blew and stroke answered to stroke. This proved to be a blacksmith's forge—the bellows being the winds. The smith had found there a coffin seven cubits long containing a body of equal length. Having obtained the relics, the Lacedaemonians were now always superior to the Tegeans.² Other instances occur in Pausanias, who says, e.g., that during a plague at Orchomenus the Pythian priestess announced that the only remedy was to bring back the bones of Hesiod from Naupactus. A crow would show them the place of burial; it perched on a rock, and the bones were there found in a cleft.³

(c) In numerous instances different regions claimed to possess the relics or bones of the same hero, who had thus more graves or shrines than one. In all these particulars there is a close resemblance to the data of the Christian relic cult, but one usual aspect of that cult is lacking—the translation of part of the bodily relics instead of the whole. This occurs only in the case of the mythic shoulder-blade of Pelops.

(d) Frequently where very large bones—probably fossil bones of large animals—were discovered, they were assumed to be those of heroes of the past, who were thought to have been of gigantic size. The Syrians, having found such bones in the bed of the Orontes, were informed by an oracle that they were those of a hero.⁴ The bones of Orestes were seven cubits long, according to Herodotus.⁵

Huge bones, alleged to be those of the giants, were also shown in temples—e.g., those of Hopladamos in the temple of Asclepius at Megalopolis, and those of Geryon among the Thebans.⁶

(e) Besides bones, other relics of heroes were preserved and honoured. Among these weapons were conspicuous—the spear of Achilles in the temple of Athene at Phaselis, the sword of Memnon in the temple of Aesculapius at Nicomedia, the shield of Pyrrhus over the door of the sanctuary of Demeter where his death took place.⁷ Of other relics, the lyre of Orpheus was preserved in more than one temple, the flute of Marsyas in the temple of Apollo at Sicyn, the sceptre of Agamemnon in Chæronea, the sandals of Helen in the temple of Athene at Iapygia, at Cyzicus the stone which served as anchor to the Argonauts, as well as their ship and those of Agamemnon, Aeneas, and Theseus in other places.⁸ Elsewhere chariots, thrones, necklaces, and other things belonging to the mythic personages of antiquity were shown.⁹

Other curious relics were the egg of Leda and the remains of the clay with which Prometheus had made man.¹ These relics were shown to admiring travellers and pilgrims, but there is little known of any cult of them. The sceptre of Agamemnon was much revered at Chæronea, and daily offerings were made to it.²

(f) Animal relics were also preserved—e.g., the teeth of the boar of Erymanthus, the skin and teeth of the Calydonian boar, the bones of the monster to which Andromeda was exposed, and the like.³

(g) As has been seen, the possession of a hero's relics gave safety or victory to a city or district. They also promoted fruitfulness and fertility, warded off pestilence and famine, or caused rain to fall in time of drought. Many other wonders were related of them. Legends of their healing powers existed, and in many instances the sick were carried to tombs of heroes in order to be cured there by their power.⁴

3. Egyptian.—In Egypt the careful preservation of the mummy shows great reverence for the dead, but hardly amounts to relic-worship, as there was little actual cult of the dead, save in so far as the dead man was identified with Osiris. The cult of relics was largely associated with the worship of Osiris and with myths of his death or dismemberment. The burial-places of Osiris or of his members are mentioned in texts giving lists of 'the graves of Osiris.' The lists vary, and in some instances one member occurs as a relic in two or more places—numerous legs, the head at Abydos and at Memphis. Thus the honour of possessing some of the members was claimed by more than one city. These sanctuaries in Græco-Roman times were forty-two in number, each with its central shrine or Serapeum.

The Serapeums were so called by the Greeks 'without regard to the distinction between the tomb of a dead bull which had become an Osiris and the sepulchre of the god-man Osiris himself. But to the Egyptians they were the sanctuaries of Osiris, of him who dwells in the Underworld.'⁵

Abydos owed its importance to its possession of the head, and its symbol was a coffer containing it, surmounted by two plumes. But from the XIIth to the XVIIth dynasty the whole body was also supposed to be buried there, and an early royal tomb was regarded as that of Osiris. It became an important holy place, to which numerous pilgrimages were made, and burial near his relics was considered most advantageous. At Busiris was the backbone or 'pillar' of Osiris, the *ded*, kept there as a sacred relic. It had been discovered at Mendes and brought to Busiris.⁶ Lucian also mentions the hair of Isis as an important relic preserved in Egypt.⁷ Herodotus refers to a curious myth current in the Theban district regarding Perseus. Here the Chemmitæ had a temple in his honour, and here he sometimes appeared. A sandal worn by him was sometimes found after his visit. It was two cubits long, and its presence denoted prosperity for Egypt.⁸ As in Greece, large bones were shown as those of giants.⁹

4. Celtic.—The Celtic cult of human heads and the myths respecting them show analogies with savage custom, and the presence of a hero's head in any given territory seems to have been regarded as a guarantee of safety against enemies and evil

influences,¹ just as in classical and Christian belief about relics of hero or saint. Mythical relics of divinities seem to be referred to in a passage of the Rennes *Dindsenchas*, where the remarkable things in the Brug of Mac Ind Oc are enumerated. Among these are the monument of Dagda, the rampart of the Morrigan, the bed of Dagda, the two paps of the Morrigan, the comb and casket of Dagda's wife, the stone wall of Oengus, and many tombs and cairns of divine or heroic personages.² Certain things belonging to the Tuatha Dé Danann are also of the nature of mythical relics. The stone of Fal was brought out of Falias and used to roar under every king who would take the realm of Ireland. This is supposed to be identical with the present coronation stone. Out of Gorias came the unconquerable spear which Lugh had, and out of Findias the equally unconquerable sword of Nuada. Out of Murias came Dagda's miraculous cauldron. Possibly actual weapons, etc., in Ireland were thus connected with the gods as their relics,³ like the *churinga* of ancestral spirits among the Arunta (§ 1 [f]).

5. Christian.—(a) *Origins of the cult.*—The early Christian use of relics, like the use of relics everywhere, may be traced to affection, which makes the survivors cling to the mortal remains of a relative or visit the place of sepulture, and to the instinctive reverence for or curiosity concerning any notable person. Added to this in the case of the early Christians was the desire to shield the remains from the malice of persecutors, while the belief in the resurrection and in the body of the living as a temple of the Holy Spirit naturally increased the reverence paid to the dead. It was also believed that spirits of saints hovered near their tombs and, later, the shrines where their relics were preserved⁴—a primitive survival which aided the reverence paid to body, relic, or tomb. Feelings of reverence for the martyr's body easily passed over to anything which had been in contact with him. In the case of the living, this principle is seen at work already in Ac 19¹². As to dead martyrs, an early example of the preservation of relics occurs in the case of Ignatius.

After he was eaten by the beasts, only his larger bones remained. These were carried to Antioch and there placed in a napkin, 'as an inestimable treasure left to the church by the grace which was in the martyr.'⁵

Another early instance is found in the reverence paid to a martyr's blood.

Prudentius tells how the witnesses of the martyrdom of St. Vincent (A.D. 304) dipped their linen vests in his blood, so that it might be a safeguard to their homes for generations.⁶ This custom existed in still earlier years—e.g., in the case of the martyrdom of St. Cyprian (A.D. 258)—and is often referred to in the *Acta* of the martyrs.

The extraordinary reverence shown in the matter of burial, care of the grave, and in the cult which went on there, especially on the anniversary of a martyr's passion, all aided the growth of the relic-cult. The Eucharist was celebrated at the tomb, often on the stone slabs which covered the body (see art. ALTAR [Christian]).

An early instance of this is found in the case of St. Polycarp. 'Taking up his bones, more precious than the richest jewels and tried above gold, we placed them where it was fitting. There, assembled as we shall have opportunity, with joy and gladness, we shall be permitted by the Lord to celebrate the anniversary of his martyrdom.'⁷

We can hardly doubt that the cult at the martyr's tomb, if it was not an actual continuation of the pagan hero-cult, was influenced by it.⁸

⁸ H. Delehaye, *The Legends of the Saints*, Eng. tr., London, 1907, p. 165, maintains that the relic cultus is an outcome not

Theodoret says that the Lord has substituted martyrs for heroes, and that churches were built over their tombs or relics just as temples were erected over tombs of heroes.¹ But, while the remains of the pagan hero generally rested in the grave and were not seen by the worshippers, the development in the Christian cultus was to a reverence of relics in reliquaries and to an occasional visible exhibition of the same.² Among Greeks and Romans reverence for the dead forbade the dividing of their remains, and severe laws existed against violation of tombs and bodies. These laws continued in force under the earlier Christian emperors. The prejudice against dividing the remains of the dead continued active in the Western Church, but both there and in the East the desire to possess the bodies of martyrs led to large sums being paid for them and to disputes concerning their ownership. But in the Eastern Church the division of a martyr's remains into relics began to prevail at a comparatively early period. Graves were rifled and bones stolen, and a traffic was begun in these, though the use of such relics was apparently a private one, as in the case of Lucilla (p. 654*). At what time precisely the dismemberment of bodies of saints began is uncertain. Possibly the practice was aided by the fact that, where martyrs were burned, nothing but a few bones and ashes remained, which might be regarded differently from a complete corpse or skeleton. But that it was already in vogue in the 4th cent. is shown by the law of Theodosius,³ forbidding the translation of a dead body already buried, the selling (or dismembering?) ['*nemo martyrem distrahit*'] or buying of a martyr's remains. A law of Valentinian III. speaks of bishops and clergy who were guilty of robbing graves, apparently for the purpose of obtaining relics. St. Augustine already speaks of pretended monks who went about selling relics of martyrs, if indeed they were martyrs, and refers to scandalous abuses in connexion with the cult.⁴ Even in A.D. 593 Pope Gregory the Great was amazed at the Eastern custom of disturbing the remains of saints, and, when the empress Constantina asked him to send her the head of St. Paul for a new church to his memory, he refused, saying that he could not divide the bodies of the saints, and pointed to the danger of invading their tombs. It was not the Roman custom to do this. He therefore sent her a cloth which had been in contact with the body and had the same miraculous powers.⁵

Influences from the Jewish or Hebrew side are not discernible in the Christian relic-cult. Among the Hebrews any actual cult of relics of the dead was hindered by the idea of uncleanness which attached to a dead body (Nu 19¹¹) and by the disgrace which attended lack of burial. Joseph's body, after embalming (a custom which is here Egyptian, not Hebrew), was by his direction carried up from Egypt to Palestine and there buried; but, though it would naturally be treated with reverence, there is not the least evidence of a relic-cult here (Gn 50²⁶, Ex 13¹⁹, Jos 24³²). The pot of manna and Aaron's rod within the Ark of the Covenant were not worshipful relics, but in the one case a memorial of God's mercy, in the other 'a token against the children of rebellion' (Ex 16³³, Nu 17¹⁰, He 9⁴). The 'brazen serpent that Moses had made' appears as an object of worship down to

of hero-worship, but of reverence for the martyr. There was a logical and parallel development of the two cults, without interdependence—'the natural outcome of an identical state of mind under similar conditions' (p. 167).

Hezekiah's day, but was destroyed by him. In all likelihood it was the image of an adopted serpent-cult rather than a relic (2 K 18⁴).

(b) *Growth of the cult in early times.*—Apart from the usual cult of a martyr at his tomb and the celebration of the Eucharist there, or the building of a shrine or church over the tomb, the use of separate relics was at first a private custom rather than a practice officially recognized. This is suggested in the statement made in the account of St. Polycarp's martyrdom¹ that care was taken by the Roman authorities to prevent the least part of his body being taken, although *many desired to do this* and to be made partakers of his holy flesh. The Roman governor, at the suggestion of the Jews, pretended that the Christians might forsake the worship of the Crucified and begin to worship this Polycarp. The *Acta* of St. Fructuosus and his two deacons tell how the brethren collected the ashes and divided them. But he appeared in a vision to some of them and bade them restore and bury them in one place.² At the beginning of the 4th cent. Optatus tells how Lucilla, a Donatist, was accustomed, before receiving the Eucharist, to kiss a relic of a supposed martyr which she had procured, and for this she was rebuked by Cecilian, archdeacon of Carthage.³ In the time of Diocletian a Roman lady, Aglae, sent her favourite steward to the East with gold and aromatics to obtain relics of the martyrs. The evidence of St. Augustine to the traffic in relics is also important as a witness to the private practice. But there is no doubt that the cult of actual bodily relics, as well as dust from the shrine, and cloths which had been in contact with a martyr's body, was becoming general in the 4th cent., by which time St. Cyril of Jerusalem († 386) also speaks of the wood of the Cross as distributed piecemeal to all the world in his day.⁴ The growing cult is also proved by the desire of the pagans to prevent it—e.g., in the case of St. Polycarp, perhaps also in that of the martyrs of Lyons, whose ashes were thrown into the river that no fragment (*ελίψανον*) might remain to give hope of resurrection, and in the refusal of sepulture to martyrs in the Diocletian persecution, lest the survivors should gain courage in worshipping those whom they regarded as gods.⁵ References in the Fathers to the cult at tombs show how easily that could develop into a cult of separate relics.

Gregory of Nyssa says that to touch the tomb is a blessing, and, if it be permitted to carry off dust which has settled on it, this is a great gift. As for touching the remains themselves, only those who have done so know how desirable it is and how worthy a recompense of prayer.⁶ St. Chrysostom describes how the faithful gathered in crowds round the martyrs' tombs, and he praises the power of the sacred remains. Not only their bodies, but also their vestments are objects of homage.⁷

The custom of dividing the remains of a martyr is certainly found in the East in the latter half of the 4th century. It, as well as the translation of the body, was now promoted for ecclesiastical and political reasons; e.g., the enriching of Constantinople with innumerable relics from other parts gave it a high standing as against the old capital of the West. Eastern Christians liberally shared their relics with others as an honour to the martyr and a widening of his circle of admirers, while it also flattered their own pride. The custom was common among the Christians of Egypt, and Chrysostom refers to it.⁸ The church of Sinope presented many places with relics of Phocas.⁹ Basil tells how the church of Sebaste gave relics of its forty martyrs to other districts.¹⁰ Paulinus of Nola placed in the church which he founded there

(c. 400) relics of various apostolic martyrs, including also some of those of St. Nazarius sent by St. Ambrose.¹

As has been seen, the division of bodily relics was hardly known in classical Greece, or, where separate parts of a hero existed, they were still within a grave. Yet already in the East separate relics of Buddha were known and revered, his bones, after cremation, having been divided among eight clans or individuals, and mounds erected over them. Buddhist influences on the growing custom of dividing the remains of a saint may be regarded as remotely possible.

Theologians soon began to recognize the cult of relics and to supply reasons for it. They referred to such passages as 2 K 13²⁷, Sir 48¹³, and Ac 5¹⁵ 19¹² in support of the practice. The bodies of saints, formerly temples of the Holy Spirit, were now as worthy of reverence as their souls;² or, as their bodies were instruments which God had used and which were destined to share in future bliss, this suggested continued reverence to them.³ Their bodies were endued with mystic power (*δύναμις*), or grace (*χάρις πνευματική*), and so also were their graves,⁴ and this power was as much in the parts as in the whole. 'When the body is divided, the grace remains undivided.'⁵ He who touched the bones of a martyr received a share of the sanctification (*ἀγιασμός*) from the grace dwelling in them.⁶ This power was already inherent in saints while alive, as their alleged miracles showed, and it was even then apt to overflow upon other objects, which could produce wonderful effects also (Ac 5¹⁵ 19¹²). If, then, argues Chrysostom, clothes, handkerchiefs, and even the shadow of saints on earth had wrought such miracles, a blessing is certainly derived from the relics of saints by those who devoutly touch them. The relic, as containing supernatural grace or power, was like a spring which overflows and never grows dry, or like a light always sending out beams, but never losing the power of shining, and this power passes over to all persons or things brought into contact with the relic.⁷ These views, apart from their theological aspect, differ little from the theory implicit in savage magic, as far as that concerns the use of relics.

Lucius points out that the power in the relic forms a kind of ponderable stuff, and gives as an example the overflowing of oil in a lamp or vessel near a martyr's tomb, as if something material had passed into it from the remains. Such oil had miraculous virtues equalling those of the relic.⁸

A clear distinction was drawn, however, between worship paid to God and reverence to the relics of a saint. This was already recognized in the case of St. Polycarp's relics. Christians worshipped (*σεβασθαι, προσκυνῶμεν*) Jesus Christ, but loved (*ἀγαπῶμεν*) the martyrs and their relics; they did not worship Polycarp, as the pagans avowed.⁹ 'We honour the martyrs,' says St. Augustine, 'but do not worship (*colamus*) them.'¹⁰ St. Jerome, in contending against Vigilantius for the use of relics, maintains that relics are not worshipped, but honoured. 'We honour (*honoramus*) the relics of the martyrs, that we may worship (*adoremus*) Him whose martyrs they are.'¹¹ Popular practice probably went farther; and even now, in the opinion of leading Roman Catholic theologians, the supreme worship of *latria* may be accorded to relics of the Cross, the nails, the garments of the Saviour.

the bodily remains of a holy person—the whole of these or any part of them, even the most minute (*tantillæ reliquiae*, in the phrase of St. Gregory of Nazianzus).¹ In later theology a division as far as rank was concerned was made between different parts of the body as relics. *Reliquiae insignes* include the whole body, or its chief parts—head, arm, leg; *reliquiae non insignes* include other parts, and these are again divided into *notabiles* (hand, foot) and *exiguæ* (teeth, fingers).² As already mentioned, the blood of a martyr was also a sacred relic, and the *Acta* describe how it was collected in napkins, sponges, etc., which were preserved as talismans. But anything which had been possessed by, or had been in contact with or in proximity to, a holy person or his relics might in turn become a relic. Among these were his books, his instruments of torture, his garments, of which St. Chrysostom says:

‘How great is the power of the saints. For the homage of Christians is directed not only to their words and bodies, but also to their vestments.’³

Earth and dust from graves, coffins, and shrines; oil from lamps hanging there; pieces of cloth (*brandea*) laid for a time upon them, were all as efficacious as the remains themselves, as far as miraculous power was concerned. Flowers which had touched a relic were also revered. Many names were in use for *reliquiae* besides the general term—e.g., *exuviae*, *busta*, *beneficia*, *lipsana*, *insignia*, *cineres*, *pignora* or *xenia sanctorum*, etc.

A change similar to that of the elements in consecration was supposed to have taken place in pieces of cloth after contact with the relic. Pope Gregory the Great is said to have shown this to some sceptical Greeks; he cut such a piece of cloth, and blood flowed from it.⁴

Among other relics those associated with our Lord naturally occupied a high place, although in most cases (like many other relics) they were fictitious. The alleged discovery of the Cross was accompanied by a miracle, and a few years later the holy wood of the Cross had almost filled the whole world.⁵ Paulinus says that the part of it kept at Jerusalem gave off fragments of itself without diminishing, having imbibed this power from the blood of that Flesh which underwent death, but saw not corruption.⁶

Calvin jeers at the quantity of wood in the relics of the Cross, so much that three hundred men could not carry them. But G. Rohault de Fleury maintains that existing relics would measure 5,000,000 cubic millimetres, whereas the whole Cross contained at least 180,000,000—an ingenious calculation. But was the ‘true’ Cross that on which our Lord was crucified? Honorat Nicquet, writing of the multiplication of the wood of the Cross, assimilates the latter to the Body of Christ in the Eucharist.⁷

The alleged letter of Christ to Abgarus preserved Edessa frequently from attack in the 4th century. The pillar to which our Lord was bound, the crown of thorns, the spear, sponge, and reed, the linen clothes, the stone of the sepulchre, and earth from the sepulchre or from the Holy Land, even our Lord’s footprints, were all relics from the 4th cent. onwards, and are referred to in pilgrim itineraries and other writings. Later known relics are the much-multiplied *sudarium*, the boards of the manger in the church of S. Maria Maggiore in Rome brought from Bethlehem in the 7th cent. by Pope Theodorus, and the Holy Coat of Treves, existing also at about twenty other towns. The nails of the Cross, found with it by St. Helena, became also much multiplied. Many nails, however, are said merely to contain filings of the originals, though they are usually alleged to be genuine.

Dust and earth from Palestine were most efficacious against demons, and were brought thence in large quantities and sold at high prices.¹ Some relics of the Passion and the like may at first have been part of the properties used in liturgical mystery-plays.

Relics of the Virgin are mentioned from the 6th and 7th centuries onwards. Among the early relics were a stone on which she had rested on her journey to Bethlehem, the pitcher and bucket which had been near her at the time of the Annunciation, and the stool on which she then sat, articles of her clothing, her girdle, and her headband.² These and the like were to be seen in Jerusalem, Constantinople, and other Eastern cities. But even at this period relics of the Virgin were known in Western churches or in the possession of private individuals.³ Probably the legend of the Assumption prevented the existence of actual bodily relics, though a lock of her hair was treasured by Charlemagne, and her milk was a favourite relic all over Western Europe.

Innumerable relics of the Apostles came into existence as the cult increased, and at first none were so popular as the chains which had bound St. Peter and St. Paul. Chrysostom mentions St. Paul’s chains, and in the 6th cent. they existed at Rome.⁴ Those of St. Peter were given to the empress Eudoxia on her visit to Jerusalem in 439, and one of them was presented by her to her daughter, wife of Valentinian III., at Rome, who built the church of S. Pietro in Vincoli in its honour. Filings from these chains enclosed in keys or crosses were greatly valued, and Pope Gregory the Great was accustomed to send keys containing them as gifts.⁵

(d) *Abuses of the relic-cult.*—Many of these relics were fabulous, but, as the reverence for them increased, it was natural that innumerable new ones should be brought to light. The inventories in churches and references in religious literature during the Middle Ages show the extent and the absurdity of the cult. Relics of the patriarchs and saints of the OT became common from the 4th and 5th centuries onwards. Their graves and places connected with their lives were pointed out without hesitation, and are mentioned in itineraries⁶—e.g., the rock smitten by Moses, the cave of Elijah, the place where David composed the Psalms. Among relics were Moses’ rod and the horns attributed to him, parts of the burning bush, the bones of Isaac, hairs of Noah’s beard, fragments of the Ark, soot from the furnace of the Three Children, portions of manna, Job’s dung-heap, feathers from Gabriel’s wings, and St. Michael’s buckler. Equally absurd were the breath of St. Joseph, the Virgin’s milk, our Lord’s tears,⁷ sweat, blood, tooth, even the *præputium Christi* (in several churches),⁸ the wood of the three tabernacles which St. Peter proposed to make, and the corner-stone rejected by the builders! In vain were laws passed regulating the cult. The passion for relics became greater still, and the trade in them increased as the centuries passed. From at least the 4th cent. many burial-places of Scriptural and ecclesiastical saints and of martyrs were alleged to have been discovered by means of dreams and visions, in which the dead man appeared and revealed the

place of sepulture in order that a *martyrium* might be built or due honour paid to him. Dream discovery of a saint's remains still occurs now and then.¹ Fraudulent persons early took advantage of this and produced bodies of alleged martyrs. On the other hand, the ghost of a thief whose tomb was honoured as a martyr's appeared to St. Martin at his prayer and avowed his real character and crimes.² Pilgrims to the East and to the holy places returned with such relics as water from the Jordan and earth from the Sepulchre, or with false relics imposed upon them in return for large payments. At a later period the Crusades, especially after the sack of Constantinople, gave an immense impetus to the traffic in relics, by bringing them from the East and by multiplying in the West relics already known in the East. Demand created an extensive supply, and traffic in relics became one of the greatest scandals of the pre-Reformation period, while imposture was freely practised upon credulous and ignorant people.³ Although prohibitions were issued by 12th and 13th cent. councils, bishops sometimes permitted the existence of avowedly false relics, on the ground that to deceive the people was not expedient—an argument still in use. Theft of famous relics was not uncommon and was soon regarded as praiseworthy—e.g., when the people of one district or the members of one monastery wished to gain possession of a relic from another.⁴ Hesychius stole the body of St. Hilarion after his death in Cyprus in 371, and carried it to Palestine, but the Cypriotes maintained that his spirit remained with them. Stolen relics still worked miracles. In other cases actual combats for the possession of relics took place, as when the people of Tours and Poitiers fought for the body of St. Martin.⁵ The desire for relics, and for the marvellous in connexion with them, led also to the reduplication or multiplication of the same relic in different places—numerous bodies, heads, legs, etc., of the same saint; many holy shrouds, coats, and the like; innumerable thorns from the crown of thorns, and pieces of the Cross. Indeed scarcely any relic did not exist in duplicate or more.⁶ Credulity and pious fraud, as well as intentional imposture, were responsible for many of these, though theologians sometimes explained them by a miraculous multiplication through divine intervention.⁷ Others maintain that each relic is only part of a whole, conventionally described as entire, or that similar relics are those of different saints of the same name. These explanations do not cover all the cases, nor even the more important of them. Many relics, again, were admitted to be facsimiles of an original, and, having been brought into contact with it, are now possessed of all its miraculous virtues.

Some attempt was made by authority to distinguish false relics from true. The 5th Council of Carthage (A.D. 398) ordered bishops to remove altars raised over relics without authentic proof. Individual saints imposed tests, or notable ecclesi-

astics like Pope Gregory the Great¹ insisted upon the assurance of authenticity. Hence arose the custom of testing relics. Those possessed by Arians and found in Arian churches were subjected to the ordeal by fire by order of the Spanish Council of Cæsar Augustus in 592. This custom was common in later centuries, and liturgical forms were used in connexion with the test.² Before the 15th cent. the traffic in relics was forbidden, as well as the showing of them outside a reliquary and the stealing of them. No new relics were to be venerated without due authority, and bishops were to prevent fictions and false documents about relics from being circulated.³ Where the cult was so deeply rooted, and where relics, whether true or false, had already wrought miracles, not even the highest authority could destroy popular belief in them. But, as their abuse was one of the grievances of the Reformers, the Council of Trent tried to regulate some of its more notorious aspects—their superstitious use, the association of filthy lucre with them, and the degradation of the visitation of relics into revels—while no new miracles were to be acknowledged or new relics recognized unless the bishop of the diocese had taken cognizance of and approved them.

(c) *Relics in churches.*—The custom of building a chapel over a martyr's body gave rise in the time of Constantine to that of building churches over tombs of great apostles or martyrs. From the middle of the 4th cent. it also became customary to build a church in memory of a martyr and to bring to it his relics, or to place such relics in an existing church. This gave rise to continual translation of relics. The translation, whether of whole or of partial remains, was effected with great reverence and pomp. It first occurred in the East, an early example being that of the remains of SS. Andrew, Luke, and Timothy to Constantinople. The Westerns for some time shrank from meddling with bodies, once they were buried, although the remains of St. Stephen are found first at Calama and then at Hippo in St. Augustine's time, and even in 593 Pope Gregory the Great wonders much at the Eastern custom.⁴ Even when the West accepted the custom, certain restrictions were imposed; e.g., the sanction of the prince or bishop and permission of a sacred synod had to be obtained, as a council of Metz (813) appointed. In general, translation came to be preceded by miraculous circumstances attending the discovery of remains. When they were brought to the place appointed for them, crowds of all ranks came to welcome them and to accompany the procession with lamps and candles. The relics were enclosed in costly wrappings or in precious receptacles. Similar joyous scenes marked their passage through towns on the way. Usually the day was marked by a yearly commemoration besides the day of the saint. An early example of the manner of translation—that of the body of Phocas to Constantinople—is given by St. Chrysostom,⁵ while a recent instance is that of the remains of St. Aureliana from the Catacombs of Rome to Cincinnati in 1870.

As the custom spread, the idea arose that no church was complete without relics. Traces of this are found in the 4th cent.,⁶ and soon relics were carefully sought for to place in new churches. Where none could be obtained nearer, application was made to Rome in the 7th and later centuries, and a cloth (*brandeum*) consecrated by being held

over the relics of SS. Peter and Paul was sent. Old churches were also supplied with relics. Consecration of a church with relics under the altar was made obligatory by the 2nd Council of Nicæa (787). As the altar had previously been built over the body, so now relics were placed under it, or in a cavity within it. There was also a reference to the 'souls underneath the altar' of Rev 6^o. Both in the Eastern and in Roman Catholic churches the consecration of a church is attended by the solemn placing of relics in the altar. The cavity in the altar is known as the *sepulchrum*, *loculus*, or *confessio*; and in the Latin Church it must contain relics of two or, since 1906, one martyr.¹

In the Eastern Church *antiminsia*, or corporals, consecrated at the dedication of a church, are used, but several may be hallowed at the same time. Relics are pounded up with a fragrant gum; oil is poured over them by the bishop, and, distilling on to the corporals, is supposed to give them all the virtue of the relics. The Eucharist must be celebrated on them for seven days, after which they are sent forth as they are wanted. In use this corporal is spread out on the altar at the beginning of the liturgy. It is practically a portable altar.²

Relics were sometimes placed at doors of churches, where the faithful kissed them, and in various parts of the architecture of the building, and were also contained in precious reliquaries, in cupboards on the left or right of the altar, or in sacristies. They were also carried in processions, and were exhibited to the faithful, who were blessed with them, generally on a specific day. Numerous pilgrims flocked to the place for this purpose. Booklets which described the relics, and also aided the pilgrims to follow the ceremonies at their public exhibition, were for sale, and contained instructions as to the indulgences to be obtained.

Receptacles of relics, or reliquaries, had a variety of names (*arca*, *capsa*, *capsella*, *pidiula*, *sanctuarium*, *scrinium*, *theca*) and were made of different materials—wood, metal, bone, ivory, glass. Many of them were richly ornate. Their form was equally various. Some were made to imitate a church, house, ship, tower, or sarcophagus. Some had the form of a cross, others of a statuette, a bust, or a medallion. Still others were shaped to resemble their contents—foot, head, etc. Besides reliquaries for use in churches, a smaller kind was made for carrying on the person.

(f) *Customs in connexion with relics.*—Relics being so sacred and powerful, an early custom arose of taking oaths upon them. As prescribed by Dagobert in 630, the compurgators placed their hands on the *capsa* containing the relic. The accused put his hands above theirs, asking God so to help him and the relics under the hands which he holds that he may not incur guilt in the matter of which he is questioned.³ Another custom was that of obtaining a saint's advice by laying on the altar where his relics were a letter with a blank sheet for the answer, which was sometimes given in writing, sometimes not at all.⁴ There is some analogy here with modern methods of spirit-writing. The assistance of saints was also thought to be obtained at ecclesiastical councils by the presence of their relics.⁵ While at first burial near a martyr's grave was avoided, it soon became a matter of strong desire to be interred near the relics of a saint or martyr. St. Augustine wrote a treatise in support of the practice.⁶

(g) *Relics and miracles.*—The veneration of relics soon led to the belief in them as powerful to work miracles. Being associated with the spirit of a

dead saint or filled with his supernatural grace, they were naturally supposed to possess such miraculous powers as he had possessed in his lifetime. A comparatively early instance of this, but one which shows that the belief was already strongly grounded, is found in St. Augustine's account of the relics of St. Stephen first at Calama and then at Hippo. He mentions as many as seventy accounts of such miracles already written within two years after the coming of the relics. He describes the miracles as countless, and gives cases of the cure of blindness and other diseases even through flowers which had come into contact with the relics, of cures of gout, fistula, stone, and broken limbs, and of restoration of the dead to life. Augustine's theory is that the martyrs died for the faith of Christ and can now ask these benefits from Him. The miracles attest the faith which preaches the resurrection of the flesh to eternal life, whether God acts directly, producing effects in time, or by His servants, perhaps using their spirits as He uses men who are still in the body, or by means of angels—at the prayer of the martyrs. Augustine also refers to miracles wrought through relics as common in his time—e.g., through those of Protasius and Gervasius.¹ Other early instances are the miracles ascribed to the relics of St. Cyprian by Gregory Nazianzen,² and those recorded by St. Gregory of Tours, especially in connexion with the relics of St. Martin or with dust from the tomb of the martyrs of Lyons.³ He also tells how a nail of the Cross thrown into the Adriatic by Queen Rade-gund made it safe ever after for navigators. Pope Gregory the Great, whose veneration for relics was extreme, cites many miracles by means of relics in his *Epistles*. Where relics were possessed by churches and wrought miracles, it became common in the 5th cent. to hang up models of limbs which had been cured—a practice continued long after. At the translation of relics miracles were matters of frequent occurrence, as well as at their exhibition, and at the shrines of famous saints. From the 6th cent. onwards, with increasing force during the later Middle Ages, the credulity of the people increased, and miracles by means of relics, genuine or false, or by means of articles in contact with them, or at the shrines which contained them, were multiplied and were frequently of the most absurd nature. Not only were the sick healed, the blind given sight, the dead raised, and demons tormented or chased away, but relics cured or kept off poison, had power over storms, thunder, rain or floods, gave victory when carried in battle, or kept enemies at a distance,⁴ overcame robbers, and supplied succour of every kind. See also art. CHARMS AND AMULETS (Christian), vol. iii. p. 427^b.

While miracle-working relics in any given church or monastery were usually welcomed as a source of revenue from the crowds which flocked there, these crowds were sometimes a source of annoyance to the course of monastic life.⁵

Relics were worn on the person as amulets from early times, usually hanging in a case from the neck or in rings. They warded off evil through the union of the wearer with the saint whose relics were worn. Warriors placed them in the hilts of their swords; kings wore them in their crowns and regalia, or parts of crowns were themselves made of most sacred relics—e.g., the fillet of the iron crown of Lombardy from one of the nails of the Cross. St. Thomas Aquinas discusses the propriety of wearing relics round the neck as a protection, and approves of the practice, provided ostentation and superstition be avoided.⁶ This opinion was challenged by other theologians.

(h) *Opposition to the cult of relics.*—Cultured pagans taunted the Christians with the cult of the relics of martyrs—men 'hateful to gods and men'—and Julian inveighs with scorn against the practices in connexion with the tombs and relics of martyrs and the worship of the wood of the Cross. While some of the leaders of Christian thought protested against the extravagances of the cult, most of them admitted its value. Protests arose, however, from time to time against the whole practice. Vigilantius, a Spanish presbyter, wrote against the cult and its superstitions, and describes it as idolatry and insanity. His work is known only from the violent reply of St. Jerome, who maintains that the souls of martyrs hover round their relics, but that Christians neither worship nor adore but only venerate relics of martyrs, in order the better to adore the martyrs' God¹—a statement hardly true of the popular attitude. In connexion with the iconoclastic controversy, the emperor Constantine Copronymus desired the abolition of the cult of relics, though the iconoclasts generally had no objection to them. Many relics were thrown into the sea, and popular feeling was aroused by the loss of such as had been highly valued. At a later date, in the West, Claude, bishop of Turin (c. 817), desired to see religion freed from superstition, and inveighed against the use of relics, intercession of saints, and pilgrimages to their shrines, while he caused the destruction of relics in his diocese. He was condemned by a local synod. In his work, *de Pignoribus Sanctorum*, Guibert, abbot of Nogent († 1124), attacked the worship of saints and relics, and its many anomalies and absurdities—e.g., reduplication of relics—and, in particular, he proved the imposture of the tooth of Christ, alleged to be possessed by the monks of St. Medard.² Among the mediæval mystic groups faith in relics was sometimes set aside, though not by all. The pantheistic mystics of the 13th cent. scoffed at the reverence paid to the bones of martyrs.³ Individual Reformers (e.g., Wyclif and reforming groups before the Reformation (Waldenses and Lollards) were opposed to all practices connected with relics, and the Reformers themselves indignantly repudiated their use. Calvin wrote a *Traité des reliques*, in which he pours contempt upon them and those who believe in them. The Thirty-Nine Articles of the Church of England describe the Roman doctrine concerning them as 'a fond thing, vainly invented' (art. 22), and the Second Book of Homilies (1563) is still more emphatic. Since the 16th cent. the use of relics has been abandoned in all Reformed churches. Nevertheless, so strong is the instinctive feeling of reverence for anything pertaining to a great man that various things belonging to famous divines—letters, books, apparel, furniture, and the like—are carefully treasured, and are objects of interest and of some degree of reverence by both Protestant and Catholic admirers. Further, in all Protestant and Roman Catholic countries relics of interesting personages of the past, apart from saints, are often treasured with every sign of interest and respect.

The modern Roman Catholic doctrine of relics is based on that of the earlier theologians already cited, and is set forth by the Council of Trent. The bodies of saints and martyrs were the temples of the Holy Spirit and members of Christ, and will be raised to eternal life. Therefore the faithful should venerate them. Through them benefits are bestowed on men by God. Hence those who deny the power of relics and the folly of the visitation of them are to be condemned. Reference is also made by the Catechism of Trent to such passages as Ac 5:15 19:12, 2 K 13:21, Sir 49:14. J. H. Newman finds in the view which Christianity takes of matter as susceptible of grace, and in the

fact that matter as well as spirit recovered through the Incarnation, Atonement, and Resurrection what it had lost as a result of the Fall, a sufficient reason for the sanctity of relics.¹ Although modern Roman Catholic theologians deprecate the extravagances of the relic-cult, they find some justification, e.g., for keeping up that of doubtful relics in the scandal which might be given to ignorant minds long accustomed to regard them with devotion, if they were removed. Whether relics are authentic or fictitious, if the prayer made before them is sincere, that is all that matters.²

6. *Conclusion.*—Although reverence for the remains of the dead or the treasuring of some of their more personal belongings is natural and instinctive, the preservation of these remains in whole or in part for veneration, or as incentives to greater faithfulness and goodness, or as reminders of the example offered by the lives of their whilom owners, is a forcing of that instinct beyond its legitimate place. There is not a little that is barbaric in the dividing up into larger or smaller fragments of the mortal remains of a saint and disseminating them over a wide area even for purposes of veneration. The admitted great uncertainty which surrounds any relic, the certainty of impudent fraud in the case of many, the gross superstitions and abuses to which they have given rise and which have attended the cult from early times, far outweigh any positive good which they may ever have done.

There are some curious likenesses between the classical and the Christian cult of relics. Circumstances attending the discovery and translation of relics, the rivalry of different places for them, fighting for or theft of them, falsifying and reduplication, the respect shown to them, the miracles and prodigies associated with them, the safety expected from them, are instances of these.³ But, while the influence of the pagan cult of relics upon the origin of the Christian cult may be affirmed, most of these likenesses owe their existence to similar results following from similar conditions, rather than to influence from the pagan side. There is also the fundamental difference already noted—viz. that pagan relics of heroes were almost invariably enclosed in a tomb, were not divided up, and were not visible, while those of saints were at an early date dismembered, enclosed in reliquaries, and made visible to the faithful.

RELICS (Eastern).—The worship, adoration, or veneration of relics is widely diffused in Asia, and is not wholly confined to the adherents of any one religion, although chiefly practised by Buddhists. The Tridentine definition of relics as comprising (1) the bodies of the saints, or portions of them, (2) such objects as the saints made use of during their lives, or as were used at their martyr-

dom,'¹ applies to non-Christian Asiatic usage. Class (1) is known to the Buddhists as *śarīrīka*, 'body-relics,' while class (2) is termed *paribhogika*, 'objects used,' the term 'used' being understood in a wide sense as connoting 'closely connected with.'

In Asia relic-worship rests on the same foundations as in Europe. The relics may be venerated simply as memorials of the sainted dead, serving, like images, as points of attachment for the reverence and devotion of the pious; or they may be regarded as intrinsically possessing magical powers which enable them to work miracles. The treasuring of relics as memorials or souvenirs of the dead is a natural exhibition of emotion to which no objection can be taken, but, when the relics are believed to possess intrinsic magical properties, the veneration of them passes into rank superstition, open to every kind of abuse and fraud. The transition from the sentimental to the superstitious veneration of relics invariably takes place in all countries, so that the innocent sentiment is forgotten while the superstition develops a vast mythology. The Buddhists further hold that the honouring of relics is an act of the highest merit, conferring much personal benefit on the worshipper. In this article we propose to give a sketch of the most prominent features of relic-worship as practised in Asia throughout the ages by the followers of non-Christian religions.

1. **Buddhism.**—The Buddhist cult from the earliest age of Buddhism, as it is known to us from the most ancient remains and documents until the present day, has always been characterized by the prominence of relic-worship. The practice is older even than the historical religion of Gautama Buddha, and may be traced back to the time of the half-mythical 'former Buddhas' about whom so little has been ascertained. A great tower, or *stūpa*, a few miles from Śrāvastī enshrined the relics of Kāśyapa Buddha, the predecessor of Gautama. The relics comprised his entire body. That statement seems to indicate that in the remote times when Kāśyapa lived burial rather than cremation was the approved method for disposing of the remains of a notable saint.² The erection of the *stūpa* was ascribed to Aśoka, but his building must have been raised on the site of a more ancient memorial.

A footprint reputed to be that of Kāśyapa Buddha was venerated at a place to the west of the Indus.³ Hiuen Tsiang saw a miraculous image of the same 'former Buddha' to the north-west of the Bodhi-tree. The pilgrims also note the commemoration of the birth-places of Krakuchanda and Kanakamuni (Konāgamana), the other semi-historical 'former Buddhas,' who preceded Kāśyapa. Aśoka, in or about 255 B.C., enlarged for the second time the *stūpa* of the last-named saint, and almost certainly that building must have contained relics of his body. Other notices of a similar kind exist. The inference is reasonable that relic-worship had been established as an element in the cult of the 'former Buddhas' centuries before the appearance of Gautama Buddha in the world. The religion of the 'former Buddhas,' whatever it was, seems to have arisen in the sub-Himalayan plain lying to the north of the modern Basti District in the United Provinces. The origin of Buddhist relic-worship, consequently, may be assigned to the same region.

Relic-worship as practised by the followers of Gautama Buddha began with the proceedings connected with his funeral, when the relics of his

burnt body were collected by the Brāhman named Droṇa and distributed among eight 'kings.' Droṇa himself retained the vessel in which the fragments were gathered together, while another Brāhman took the embers from the pyre as his share of the sacred spoil. Ten famous monuments were erected accordingly over the relics thus obtained, and in due course each appears to have become the centre of an important group of religious establishments. The story of the distribution of the relics, as told originally in the *Mahāparinibbāna Sutta*¹ and retold in a multitude of other books, need not be repeated here.

The fragments of bone deposited with extreme reverence in the early *stūpa* at Piprāvā on the Basti-Nepāl frontier by the Śākya of Kapilavastu may represent one of the original eight shares. Relic-worship clearly must have been a well-established practice long before the death of Gautama Buddha. From the time of that event (c. 483 B.C.) until now it has always been one of the most prominent features of the external Buddhist cult, closely associated in India, Ceylon, and Burma with all holy localities and places of pilgrimage, and consequently with the development of religious art in every form. Buddhists believe that their Master himself directed the veneration of his relics as a pious duty. Whether he did so or not, the supposed duty has been zealously performed.

The four canine teeth, the two collar-bones, and the frontal bone of Buddha were termed the 'seven great relics.' The other fragments, which were numerous, were believed to comprise grains no bigger than a mustard seed.² The relics so collected were gradually dispersed all over the Buddhist world, the dispersal being associated by legend with the name of Aśoka. Some of the pieces, genuine or supposititious as the case may be, have become the subject of long histories, among which the story of the tooth-relic in Ceylon is the most famous. The reputed hairs and nail-parings of Buddha, which have supplied many reliquaries, are venerated as fervently as the relics believed to have come from his funeral pyre. The *paribhogika* relics, or objects in some way connected closely with the person of Buddha, command similar reverence. The Buddhist passion for relic-worship is so ardent that anything said to be a relic is certain to secure much popular attention, without serious criticism of its genuineness. The relics need not be either those of Buddha himself or objects associated with him personally; fragments of the bodies of the saints and things used by or connected with them are valued almost as highly. The Tibetans carry their interest in relics of recently deceased or even living Lāmas to a disgusting extreme.³

The smaller objects of veneration naturally were enclosed in suitable reliquaries or caskets, which were made of various materials, including among others soapstone or steatite, rock-crystal, bronze, silver, and gold. Many examples have been discovered in India, Ceylon, and elsewhere. Three specially notable examples may be mentioned. The earliest known specimen appears to be the steatite reliquary found in the extremely ancient Piprāvā *stūpa*, erected probably soon after the death of Buddha. There is reason to believe that the fragments of bone in that casket were genuine relics of Gautama Buddha, and that they were enshrined not long after his decease by his Śākya clansmen; but absolute proof of the genuineness of the relics is necessarily unobtainable, and the

date of the monument is the subject of differences of opinion.¹ The reliquary, with a crystal bowl and other vessels, stood on the bottom of a massive coffer measuring 4 ft. 4 in. by 2 ft. 8½ in. by 2 ft. 2½ in. constructed with perfect skill from a single block of fine sandstone. Another exceptionally interesting reliquary is the gold casket from a *stūpa* at Bimārān between Kābul and Jalālabād, enriched with Hellenistic repoussé figures. A third is the Kaniska casket made of an alloy of copper and found in the ruins of the great *stūpa* at Peshāwar.²

The pious people who deposited relics in carefully-prepared, costly receptacles usually honoured the precious fragments by placing with them a multitude of objects of intrinsic or artistic value, including jewellery of various kinds. All the known examples of ancient Indian jewellery seem to come from such honorific deposits. The workmanship both in metals and in gems is of high quality. We are thus indebted to relic-worship for the greater part of such knowledge as we possess concerning the jeweller's art in ancient India.

Relics, whether *śaririka* or *paribhogika*, were usually secured against accidents by burial in a *stūpa* (*thūpa*, 'tope,' 'dagoba'), which in its early Indian form was a low solid cupola of massive masonry, with a relic-chamber in the interior, ordinarily placed near the base. Such buildings, although not so difficult to enter as the Egyptian pyramids, were sufficiently impenetrable to offer no small degree of security. Some ancient monuments of the kind preserve their secret inviolate to this day, some were despoiled ages ago, and others have yielded their treasures to keen archaeologists in recent times. Although *stūpas* were built occasionally merely as memorial towers to mark sacred spots, and in that case contained no internal chamber, most of them in ancient times were erected specially for the purpose of enshrining in safety highly venerated relics of either Buddha or his saints. The modern *chorten* (*q.v.*), the equivalent of the *stūpa* in Tibet, rarely contains relics.

The story of the *stūpa* as an architectural form, beginning with the low solid hemisphere of Piprāwā and ending with the slender Chinese pagoda, is a long one. That long development would never have taken place but for the cult of relics. Most of the important groups of early Buddhist sacred buildings, especially in India and Ceylon, comprising monasteries, temples, and structures of many other kinds, were formed round a relic *stūpa* as the nucleus; and in that way the worship of relics may be described with approximate accuracy as being the foundation of the art of architecture in its application to the special purposes of Buddhist religion and public worship. Reginald Farrer justly observes:

'It is thanks to the cult of relics that Ceylon possesses such a store of ancient shrines. And the tremendous artistic impetus that the competition of shrine-building aroused was of inestimable service to national activities, to the consolidation and centralization of the Cinhalese Kingdom.'³

The same cause operated more or less in other countries of Asia in the same way; just as in Europe the cathedrals at Gloucester and many other places were built from the proceeds of the offerings of pilgrims visiting the enshrined relics of reputed saints and martyrs.

The *stūpas* erected in Buddhist countries to provide safe custody and permanent honour for relics include some of the largest buildings in the world. The most considerable structures of the

kind still standing probably are those to be found in Ceylon and Burma. The ancient *stūpa* at Anurādhapura in Ceylon, commonly, although inaccurately, called the Jetawanārāma, stands on a stone platform nearly 8 acres in extent, and is still 251 ft. high. The Shwé Dagōn pagoda at Rangoon, a more modern building, 368 ft. high in its existing form,⁴ is reputed to contain within its mass eight hairs of Gautama Buddha, as well as the bathing-garment of Kāśyapa, the water-dipper of Koṇāgamana, and the staff of Krakuchanda—*i.e.* articles used by the three latest of the 'former Buddhas.'

Among the destroyed *stūpas*, one of the greatest was the famous monument at Peshāwar constructed c. A.D. 100 by Kaniska (*q.v.*). The relic-casket excavated from its foundations has been referred to above.

The gigantic monument at Boro Budūr in Java is essentially a *stūpa*, but there is no record of its erection or of the relics which may lie hidden somewhere in its recesses.

Buddhist public worship in India and Ceylon during the early days centred in the relic-*stūpas*, which formed the goals of innumerable pilgrimages. Kings emulated one another in the lavishness of the ceremonial with which the relics were first enshrined and then from time to time exhibited to the faithful. The best descriptions of such ceremonies are those given repeatedly in the *Mahāvamsa*, a monastic chronicle of Ceylon, written about the 5th century A.D.

Ch. xix. relates how the site of the Mahāvihāra was consecrated in the presence of an enormous international assemblage of monks, including deputations from the foreign lands designated as Pallavabhogga (? Persia) and 'Alasanda the city of the Yonas,' probably meaning Alexandria in Egypt. Ch. xxx. is devoted to an exposition of the glories of the spacious relic-chamber, and ch. xxxi. describes fully the enshrining of the relics and the many miracles accompanying the act. The theory governing the proceedings is frankly stated at the end of ch. xxx. in these words:

'If the wise man who is adorned with the good gifts of faith, has done homage to the blessed (Buddha) the supremely venerable, the highest of the world, who is freed from darkness, while he was yet living, and then to his relics, that were dispersed abroad by him who had in view the salvation of mankind; and if he then understands—"herein is equal merit"—then indeed will he reverence the relics of the Sage even as the blessed (Buddha himself) in his lifetime.'⁵

The same intense belief in the efficacy of relics still prevails; and, when occasion arises, as on the presentation of the Piprāwā relics to the king of Siam, the sacred objects are welcomed with extreme enthusiasm, although the splendour of the ancient ceremonial in Ceylon may not be emulated.

In A.D. 1763 certain pagodas at Shwēbo in Burma were dedicated by the four queens of the reigning monarch. At the close of 1902, thieves having rifled the contents of one of the buildings, the local authorities decided to open the other pagodas and remove the treasures enshrined in them to a place of safety. A silver scroll, forming part of the deposit and then taken out, records the motives which influenced one of the royal ladies to erect her pagoda.

'Finally,' she observes, 'by virtue of the merit acquired by me through building this pagoda, in which the relics of Buddha are enshrined, may I enjoy such happiness and prosperity as cannot be disturbed and detracted [from] in every form of existence counting from the present one till the attainment of *Nirvāṇa*, and, like Visakhā and Queen Anoja, may I attain *Nirvāṇa*, without the necessity of further transmigration, at the feet of the coming Buddha Ari Metteyya.' In the preceding sentences Her Majesty had invoked similar benefits for the king, the members of the royal family, the ministers and officials, and had prayed that 'the spirits of the pagodas, trees, the earth, and the sky, together with the ogres, *ghouls*, and ghosts, who inhabit the declivities of the earth,' might share in her merit and keep constant watch and ward over her pagoda.⁶

The document affords interesting and conclusive proof that the modern practice of relic-worship in

Buddhist countries is turned to extremely practical purposes. The relics are regarded as an excellent and profitable investment. It is clear that in the Shwebo case no trouble whatever was taken to verify the alleged relics, because another scroll in one of the adjoining pagodas declares that the relics of Buddha consisted of 3001 large pieces, with the same number of small pieces, besides a multitude of other fragments still more minute—which is manifestly incredible. The so-called relics were placed in an amber bowl of great value, which was enclosed in a miniature pagoda made of silver, gold, and glass. The miscellaneous objects deposited in the relic-chambers as honorific and protective additions by the queens include an extraordinary variety of things, hundreds in number, and duly catalogued in the accompanying inscriptions. Besides many jewels and articles of gold and silver, the collection comprises copper or brass models of war-boats, cannon, and arms of various kinds. The figures of soldiers, horses, and elephants, with the miniature guns and weapons, were intended to protect the relics.

Thirty-four years later (1797) P. Hiram Cox, the British Resident at Rangoon, was allowed to inspect the collection prepared for deposit in another new pagoda, the relic-chamber of which measured no less than 61½ ft. square on the inside. The objects deposited, although not quite so varied in character as those collected by the queens, were numerous and included the strange item, 'one of Dr. Priestley's machines for impregnating water with fixed air.' Ancient honorific deposits were ordinarily restricted to jewellery—using that term in a wide sense—and coins, including specimens valuable as rarities or curiosities. That practice explains the frequent occurrence of Roman coins of various reigns in the *stūpas* of Afghanistan and the Panjāb.

Relic-worship attained its highest prominence in ancient India and Ceylon. Burma comes next in devotion to the cult. In all other Buddhist countries the adoration of relics is but a minor incident of popular religion. The Sera monastery to the north of Lhāsa prides itself on the possession of the metal thunderbolt (*vajra*, or *dorje*) of the god Indra, which fell down from heaven, and was used by Buddha; but Tibet, on the whole, sets little store upon ancient relics, while keen on the quest of relics, even the most offensive, of recent or living Lāmas, which are believed to possess magical curative properties of the highest value.

Certain monasteries in China rejoice in their custody of famous relics; but the number of notable places of the kind does not seem to be great. One of the most celebrated of such places is the temple, or *stūpa*, on the Five-peaked Mountain (U-tai-shan) in N. China, built by a Wai sovereign in the 5th century.¹ The absurdity of the cult of relics has not escaped the ridicule of Chinese scholars. In A.D. 819 Han Wan-kung, an eminent writer and statesman, deeply offended the reigning emperor by mocking at the honours paid to an alleged finger-bone of Buddha, preserved at a pagoda in the prefecture of Fung-tseang. His candour was punished by official degradation, and he narrowly escaped execution. But ordinarily, in all countries, sceptics have been content to preserve a discreet silence.

Japan, Korea, and Siam seem to care little for relics properly so called, although the Siamese venerate a much-esteemed alleged footprint of Buddha.

Burma excepted, most modern Buddhist countries prefer to expend their devotional enthusiasm on

images rather than on alleged relics. Sometimes copies of the sacred books serve the same purpose as relics and are used to consecrate by their presence *stūpas* or pagodas, built primarily to gain a store of merit for the donor.

In Burma 'pagodas are built over relics of the Buddha, or models of them, over the eight utensils of a mendicant, or imitations of them, and over copies of the sacred books.'²

'No work of merit,' the same author observes, 'is so richly paid as the building of a pagoda,' and the structure, in order to have proper efficacy, must be sanctified by the inclusion of relics, if practicable, and, when they are not available, by the best procurable substitute. In ancient India also copies of sacred texts, such as the twelve *Nidānas* or the so-called 'Buddhist creed,' were often used as a substitute for relics in order to give the requisite sanctity to a *stūpa* or an image.

2. Brāhmanical Hinduism.—The veneration of relics seems to be practically unknown to Brāhmanical Hindus, one reason being that their ill-defined religion has no recognized founder like Jesus Christ, Buddha, or Muhammad. All accounts agree that the rude log which does duty as the image of Jagannāth (*q.v.*) at Puri encloses a mysterious deposit which is transferred when the image is periodically renewed; and, according to one story, the deposit consists of the bones of the demi-god Kṛṣṇa.³ If the deposit really consists of bones, the fact may be regarded as a survival of Buddhist relic-worship. The cult of Jagannāth certainly is connected with Buddhism.⁴

It would be difficult to specify any clear instance of relic-worship practised by Brāhmanical Hindus. The honours paid to reputed footmarks of Viṣṇu (*Viṣṇu-pada*, *pāduka*) resemble those rendered by the Jains to the vestiges of their Tirthaṅkaras, and by Muhammadans to those of their Prophet, but are not exactly relic-worship.

3. Jainism.—The statement of Fergusson, that the Jains 'have no veneration for relics,'⁵ although possibly true for the present day, is not quite correct with reference to ancient times. Jain *stūpas*, indistinguishable from Buddhist ones in appearance, were numerous, and some of them may have contained relics, although no record of the existence of such contents has been published. Bhagwān Lāl Indrajī, referring in general terms to Jain literature, asserts that the early Jains honoured bone relics of the Tirthaṅkaras, corresponding to Buddhas, and that survivals of the ancient relic-worship may be traced in modern practice.

He states that 'at the present day the Jain *Sādhus* of the Kharatara *gacchha* use for worship a five-toothed sandal goblet called *thāpanā*, and this is a copy of the jaws of the Tirthaṅkaras. So the Jaina nuns or *sādhvis* use for worship as *thāpanā* a kind of shell (*śaṅkhā*), which they take to be the knee-bones of Mahāvīrasvāmī.'⁶

A Jain *stūpa* was built in honour of Akbar's friend and teacher, Hiraṇyaka Sūri, who was cremated in A.D. 1592 at Unā or Unnatpur in the Jūnāgarh State, Kāthiāwār. Various miracles having occurred at the spot, the *stūpa* was erected to mark the holy ground. It has not been described, and may or may not contain relics.⁷ Recent European works on Jainism do not make any allusion to either relic-worship or *stūpas*. Mrs. Stevenson, however, mentions that childless women attending the funeral of a nun strive to tear a piece from the dead *sādhvi's* dress, believing

that it will ensure their having children.¹ That practice is a near approach to relic-worship.

4. **Muhammadanism.**—Although the treasuring and veneration of relics are hardly consistent with the spirit of Islām, Musalmāns have followed to some slight extent the example of their heathen neighbours and have been tempted occasionally to cherish and reverence tangible memorials of their Prophet. Such limited compliance with non-Muslim practice has not produced any considerable effects, and the few instances of Muhammadan reverence for relics which can be cited are detached phenomena with no special significance. Certain places pride themselves on the possession of hairs from Muhammad's beard. Two such relics (*āsūr*) were brought to Bijāpur in the Deccan, India, at some time in the reign of Sultan Ibrāhīm II. 'Adilshāh of Bijāpur (1580-1626), and were deposited in a palace now known as the Āsār Mahal, 'Relic House,' where they are treated with much reverence. Even foreign Muhammadan potentates send rich offerings in honour of the relics, which are venerated by a special ceremonial on the Prophet's birthday, 12th Rabi' I.² The box in which they are kept is never opened, so that 'no one living has seen the relic.'³ Rohri (Rūhi) in Sind boasts of a similar treasure, a single hair, which is kept in a jewelled gold case in a shrine named the Wār, or Wāl, Mubārak, a building erected for the purpose by Nūr Muhammad in or about A.D. 1745. The relic is exhibited to the faithful once a year, when, by means of some trick, it is made to rise and fall, the movement being regarded by the crowd as supernatural.⁴

¹ In the Mogul armies, before the introduction of European tactics, an elephant always marched in the van, bearing on its head a long pole, from which floated a large flag. Sometimes this was followed by another elephant carrying a rich howdah, on which was placed a box containing a priceless relic, which usually was, if one may believe it, an actual hair from Mahomet's beard.⁵

Certain relics of the Prophet are kept in the Topkapu Palace at Constantinople and visited by the Sultan at the beginning of a new reign.⁶

The reputed footprints of the Prophet on rocks or slabs of stone are venerated in many places, which need not be specified. J. Burgess mentions examples at Ahmadābād, Gaur, and Delhi,⁷ and many more might be collected from various countries. The honours paid to the tombs of numerous *pīrs*, or reputed saints, in Muhammadan lands are near akin to relic-worship, but are not quite the same thing.

LITERATURE.—Innumerable books dealing with the Buddhist cult treat more or less fully of relic-worship. Some of those books have been cited in the text. Works deserving of special mention are: trr. of the travels of the Chinese Pilgrims, especially Fa-Hian (q.v.) and Hiuen Tsiang (see YUAN-CHWANG), by various authors; P. RELIEF CHURCH.—See PRESBYTERIANISM.

RELIGION. — I. **INTRODUCTION.** — 1. **The subject.**—From time to time men find themselves forced to reconsider current and inherited beliefs and ideas, to gain some harmony between present and past experience, and to reach a position which shall satisfy the demands of feeling and reflexion and give confidence for facing the future. If, at the present day, religion, as a subject of critical or scientific inquiry, of both practical and theoretical significance, has attracted increasing attention, this can be ascribed to (a) the rapid progress of scientific knowledge and thought; (b) the deeper intellectual interest in the subject; (c) the widespread tendencies in all parts of the world to reform or reconstruct religion, or even to replace it by some body of thought, more 'rational' and 'scientific' or less 'superstitious'; and (d) the effect of social, political, and international events of a sort which, in the past, have both influenced and been influenced by religion. Whenever the ethical or moral value of activities or conditions is questioned, the value of religion is involved; and all deep-stirring experiences invariably compel a reconsideration of the most fundamental ideas, whether they are explicitly religious or not. Ultimately there arise problems of justice, human destiny, God, and the universe; and these in turn involve problems of the relation between 'religious' and other ideas, the validity of ordinary knowledge, and practicable conceptions of 'experience' and 'reality.'

The very nature of the subject, therefore, forbids any one-sided treatment. No one particular aspect or phase can form the basis; nor can it be ignored that upon no other subject are differences of opinion so acute, and the risk of causing offence and pain so great. The subject of religion inevitably involves both the 'non-religious,' or secular, and the 'anti-religious' (irreligious, blasphemous, etc.); and, while its very intimacy compels a restrained and impartial treatment, its importance demands an impartiality and objectivity which in turn may easily seem 'irreligious.' None the less, the actual problems are such that, if any critical or scientific treatment is once legitimate (and everywhere there is a tendency to treat quite freely the religion which is not one's own), it must be pursued as thoroughly as possible, with the consideration for the convictions of others that one would ask for one's own (the Golden Rule of criticism) and with the clearest recognition of the fact that the subject concerns the most vital beliefs and practices of human beings, all of whom may, on purely scientific grounds, be regarded as closely related—physiologically and psychologically.¹

2. **Definitions.**²—(1) The term 'religion,' whatever its best definition, clearly refers to certain characteristic types of data (beliefs, practices, feelings, moods, attitudes, etc.). Its use presupposes criteria, and therefore some preliminary conception of what does and what does not come under the category. But it soon appears that there is no absolute gulf between religion and what, in some one respect or other, closely approximates it (e.g., art, morality). Different people draw the line differently. A man will be swayed by his conception of what religion is or is not; but such conceptions vary, not only among individual members of the same society, but even in the lifetime of any one of them. Only in the course of his mental or psychical growth does a man acquire the conception and come to distinguish between

¹ On standpoints and methods of inquiry reference may be made to S. A. Cook, *The Study of Religions*, London, 1914.

² Two derivations are familiar, one from *relegere* (so Cicero, *de Nat. Deor.* ii. 28: 'qui autem omnia, quae ad cultum deorum pertinent, diligenter retractarent, et tanquam relegerent, sunt dicti religiosi, ex relegendo, ut elegantes ex eligendo, tanquam a diligendo diligentes, ex intelligendo intelligentes, his enim in verbis omnibus inest vis legendi eadem, quae in religioso'), the other from *religare* (so Lactantius, *Div. Inst.* iv. 28: 'hoc vinculo pietatis obstricti deo et religati sumus; unde ipsa religio nomen accepit'). But, whether *religio* was what is re-read and reflected upon, or whether it had the idea of obligation, what was more to the point was the meaning of *religio* and its relation to *superstitio* (see Mayor's note of *de Nat. Deor.*, loc. cit.).

what is and what is not religion; and this development—which is of the greatest *personal* significance for the individual—finds an analogy in the history of the race, where the distinctions which we draw (e.g., between religion and law or ethics) are not found among rudimentary or backward peoples. Herein lies the fundamental importance of such questions as: How and why do we come to distinguish the 'religious' from the 'non-religious'? Is there a border-line?, and If we rely upon a prior definition, how did that definition originate? Consequently, the subject is seen to involve not only (a) the various beliefs and practices which obviously belong to the subject-matter, but also (b) the mental or psychical aspects of all the individuals concerned. In a word, besides the ordinary stock of religious data, one has to consider the individuals who, as a result of certain vicissitudes in their development, have the beliefs which are called 'religious,' or who, again as a result of their experiences, will differentiate between the religious, the non-religious, and the anti-religious.¹

(2) A survey of the numerous definitions of religion would be more informing than any one that might be proposed. Even the simple minimum suggested by E. B. Tylor (religion is 'the belief in spiritual beings') at once brings in the question of the nature of these beings, the origin of the belief, and its validity for every individual.² Every definition ultimately implies theories of reality and indicates the place that religion should hold in the world of life and thought.³ Directly or indirectly, some very significant terms are involved (e.g., 'death,' 'heaven,' 'sacred,' 'supernatural,' etc.). These require definition and justification, and, when pursued logically, the ideas ultimately concern man's whole body of thought, both religious and non-religious. In general, the definitions themselves are a valuable contribution to men's conceptions of what religion was, is, or should be. They convincingly demonstrate the *personal* interest in the subject: even the one-sided and unsympathetic definitions show how intimately the self feels itself at stake. They point to subjective convictions of the most vital importance; they characteristically recognize a gulf between man and the 'divine,' while at the same time emphasizing feelings of the closest relationship with or the most absolute dependence upon a 'higher Power.' Especially characteristic are (a) the admission of the strength, support, peace, and consolation afforded by religion, and (b) the intensifying and 'sanctifying' of otherwise non-religious phases of life and thought. The effects of religion are seen to be varying

emotional and intellectual, leading to practical, social, aesthetic, speculative, and other efforts. The results for the individual are now narrow and egoistic, and now broad, self-less, and social; and while, on the one hand, religion typically has its 'supernaturalistic' aspects, on the other, all the profounder and more permanent values of life are in some way religious or quasi-religious, even though the characteristic supernatural or other typical religious features be wanting. In other words, there is that which is of supreme *personal* significance, whether it concerns the self (1) alone, or (2) in its relation to others, or (3) in its relation to a higher Power. Thus, as opposed to any efforts to set religion in a watertight compartment by itself, there is evidence which represents it as belonging to so many phases of life that religious data are, so to say, only a special form of otherwise non-religious data. Religion none the less claims to be *sui generis*; hence it is explicable why some observers see only the features which distinguish religion from that which is non-religious, whereas others do not recognize the distinctive features. The paradox of the immanent and the transcendent rests upon the fact that certain kinds of experience and evidence tend to destroy the distinctiveness of religion, whereas other evidence as unmistakably compels or enhances the subjective convictions of the transcendence and distinctiveness of the divine. Other paradoxes relate to 'this' world and 'the other,' to the ideals for mankind and 'this' life, and those for a future which is felt to transcend this world. Paradoxical features are also very marked in the varying normal, abnormal, and pathological aspects of religious life, which clearly prove that the problems are ultimately bound up inextricably with those of ordinary 'mundane' existence. In a word, the subject of religion inevitably involves the problems of personality and existence, and the deeper vicissitudes of life and thought.

3. *Method.*—(1) Every reader tends to approach the subject with certain more or less definite preconceptions touching some of the most essential terms or elements of religion. Herein is clearly seen the individual's implicit reliance upon his personal experience, reflexion, and ideas of truth and reality. But, since differences of opinion and of method at once arise in the problems of religion, it is impossible either to start with theories or convictions of the ultimate realities or even to adopt some one standpoint as opposed to another. Yet, though much may be disputed, there can be no dispute that men differ profoundly over the ultimate facts, and that their inmost convictions will tend to be entirely authoritative and to regulate their lives. So, e.g., whatever be the ultimate realities underlying the data of 'psychical research' and the like (occultism, astrology, angelic visitations, etc.), no one can doubt that there are three typical attitudes: (a) believing, if not unduly credulous; (b) incredulous, if not contemptuous; and (c) discriminating, on the basis of some authority. These are real facts of importance for human nature and the history of religion, inasmuch as a *rational* conception of religion has to find a place for all the evidence and dare not ignore the inconvenient data, from whatever side they are brought. Now, all beliefs (theological, scientific, political, etc.), and whatsoever they imply, have a value as apart from questions of historical credibility, rationality, value, etc.; and in religion as in history much can be learned from the study of beliefs, explanations, and the like, as apart from their particular value for the inquirer and the ultimate facts themselves. Hence, although religion concerns the most vital truths of man and the universe, there can be a critical, objective, or

¹ On the 'genetic' and 'psychological' treatment of the subject see below, § 10. On the importance of tracing these differentiations cf. A. Sidgwick, *Distinction and the Criticism of Beliefs*, London, 1892, *The Use of Words in Reasoning*, do. 1901.

² PC¹ i. 424. For criticisms of definitions see J. H. Leuba, *A Psychological Study of Religion: its Origin, Function, and Future*, New York, 1912, ch. ii. and appendix; E. Durkheim, *The Elementary Forms of the Religious Life*, Eng. tr., London, 1915, bk. i. ch. i.; G. Galloway, *The Philosophy of Religion*, Edinburgh, 1914, ch. iv. Durkheim's definition may be noticed: 'A religion is a unified system of beliefs and practices relative to sacred things, that is to say, things set apart and forbidden—beliefs and practices which unite into one single moral community called a Church, all those who adhere to them' (Fr. ed. p. 65, Eng. tr. p. 47). Galloway (p. 184) suggests tentatively that religion is 'man's faith in a power beyond himself whereby he seeks to satisfy emotional needs and gain stability of life, and which he expresses in acts of worship and service.' C. C. J. Webb (*Group Theories of Religion*, London and New York, 1916, p. 59) asserts, on the other hand, 'I do not myself believe that Religion can be defined.'

³ Cf. the words of E. Caird: 'A man's religion, if it is sincere, is that consciousness in which he takes up a definite attitude to the world, and gathers to a focus all the meaning of his life. Of course, the man's world may be, and in earlier times is, a comparatively narrow one' (*Evolution of Religion*², Glasgow, 1894, i. 81).

scientific treatment which considers, not the goal or destiny of things, but men's beliefs and theories on the subject; not the ultimate facts, but men's convictions of them; not the final objective reality, but religious and related conceptions of this reality.¹

(2) Just as every religious individual has his non-religious side—and the term distinguishes certain data from those outside the category—so an objective treatment of religion can aim at a conception of religion which would find a legitimate place among the other conceptions which, forced by experience and reflexion, are necessary for a rational description of the entire range of human experience. In other words, the best conception of religion will not be severed from the best conceptions of all else that is relevant; for religion is not something in and by itself, but in the whole world of life and thought, has a part which has to be determined. Now, as a matter of fact, quite characteristic of modern research has been the study of religion along non-religious and purely technical lines and from various points of view. But, owing partly to differences of method, scope, and aim, and partly also to the difficulty of controlling an enormous field, the more synthetical and comprehensive works have been no more convincing than the more analytical and specialistic. Still, the collection of material and the organization of it proceed *pari passu*; improved methods lead to a better treatment of the evidence, and the latter in turn discovers defects in past methods. Everywhere difficult problems arise, and the persistent crux is the conflict between the infelt conviction that religion can be handled in a way that satisfies the reason and the individual's refusal to go against his inmost convictions, even though these cannot be logically or consistently formulated. Preliminary questions of method thus become indispensable, for no one can approach the subject with an entirely blank mind. But these questions will also serve another purpose; for we have to assume that, between the ultimate realities (whatever they may be found to be) and current conceptions of them, there is no absolute gulf. Of these conceptions we can gain some notion by continued comparison and classification and by psychological interpretation. Moreover, only through some implicit or explicit theory of reality can we handle and interpret the data. Consequently the methodological questions contribute both to our own conceptions of reality and to a better understanding of those which have prevailed elsewhere; cf. below, § 26 (3).

II. METHODS, PROBLEMS, AND CRITICISMS.—

4. The comparative method.—(1) Among the most conspicuous features of modern research has been the application, in their widest extent, of anthropological and comparative methods of inquiry.² The effect has been to break down racial, social, intellectual, and psychical boundaries, and to bring into relation all classes and races of men, all types of organic life, all forms of 'matter.' Step by step the most advanced and the most rudimentary of psychical and physical phenomena are related and classified; man is brought into connexion with the rest of the universe, and his conscious, purposive thought-activity comes into line with all types of psychical and other energy. New conceptions thus arise of man's place in nature, and these, in so far as they can be co-ordinated, correspond to the cosmogonies and cosmologies of rudimentary and early peoples, whose general body of religious and non-religious thought was more or less organized and coherent, but whose stock of knowledge was, relatively speaking, extremely small. Now, the comparative method is the unbiased co-ordination of all comparable data irrespective of context or age. It has led to the accumulation of much valuable material. As a popular, simple, and interesting inquiry, it has familiarized many people with the miscellanies of folk-lore and religion. It illustrates popular beliefs and practices, and reveals a remarkable resemblance among peoples all the world over. But, while it supports or suggests various theories and explanations, it does not prove that others are excluded. Moreover, similar practices can have different meanings or motives, and similar ideas and beliefs can be differently

expressed. It does not follow that a belief or practice in one environment has precisely the range of feeling, meaning, or application that its parallel or analogy has elsewhere; nor is the apparent origin of any datum necessarily significant for its later meaning or function. In fact, everywhere mere comparison may be legitimate for some purpose—as, e.g., between men and apes—but in every problematical situation the question of the validity of particular inferences is exceedingly urgent, and confusion has often been caused by naive comparisons and rash inferences. Hence, where sweeping theories have been suggested on the basis of comparison (e.g., primitive promiscuity, ignorance of paternity, phallic, serpent, or astral cults, the priority of magic over religion), they must invariably be tested by other methods.¹

(2) The comparative method is commonly bound up with certain persistent and prevalent notions of the 'evolution' of thought and the 'survival' of rude, superstitious or otherwise irrational beliefs and practices from an earlier and more backward stage in the history of culture. But every datum which can be regarded as a survival must be viewed psychologically; the individuals whose beliefs and practices are so stigmatized are not actuated solely by the mere fact that these belong to the past or have an ancestry. Some feeling of value is characteristically present. The 'survivals' have survived because, while much else has been neglected or forgotten, they have been selected and retained along with the entirely rational data which also have come down from the past. To regard certain data merely as survivals is to ignore the question of their origin, persistence, and function; for the type of mind or the conditions which explain their rise may also explain their continuance. Besides, comparison itself reveals innumerable subtle differences; and these indicate that there has been no artificial or mechanical borrowing or imposition, but a process of re-adjusting and reshaping for which the individuals concerned have a certain responsibility. In fact, whenever beliefs and practices can be compared, a distinction can invariably be made between what it is that recurs and the form in which it recurs. The types of beliefs and practices which are selected, assimilated, or reshaped are not to be confused with the external aspects which can be treated historically. Thus, beliefs in witchcraft everywhere contain similar elements, and one can distinguish (a) the subjective or psychological aspect (e.g., the tendencies responsible for their persistence and retention), and (b) the more external details, which may be of traditional or legendary interest, due to borrowing, external influence, etc. Indeed, an analysis of typical survivals reveals a fundamental resemblance between data that are distinctly religious and those that usually rank as superstitions or survivals; but, while the latter will generally be sporadic, isolated, and out of harmony with current thought, the former will be more or less organized, socially and intellectually, and will at least claim to be in accordance with the 'best' thought.²

(3) The presence of survivals, superstitions, and other signs of cultural differences in an environment shows that, as a general principle, any apparently rudimentary or irrational datum need not

¹ Hence the terms 'truth' and 'reality' (or 'system of realities') must be used with a certain looseness, and with the assumption that every one admits that there are truths and realities of ultimate validity, even though men now differ as to what they are.

² On the no less conspicuous employment of psychology see § 26.

¹ E.g., one may note the care taken by J. G. Frazer in *The Golden Bough* to emphasize the difference between the great mass of material collected and classified in this monumental work, and the various important theories, conjectures, and explanations with which they are more or less closely interwoven; see, e.g., pt. i., *The Magic Art*, London, 1911, i. p. ix f., pt. vii., *Balder the Beautiful*, do. 1913, i. pp. v. f., xi.

² On the fallacies in the current popular theories of survivals see, further, Cook, *chs. v., vi.*

on that account alone be older than one more advanced or elevated. Moreover, a culture can decay and be followed by one of a lower, ruder, or less organized type. Not only has this often happened in the East, but in Arabia, e.g., the old civilization reflected in the Minaean and Sabaean inscriptions was followed by the pre-Islamic Jahiliyya, the age of savagery or barbarism, and this in turn by a new growth—the rise and development of the specifically Muhammadan culture. Facts of this sort bring intricate problems of the rise and fall of systems or cultures, and their consequences for the development of thought. There has undoubtedly been a profound advance from the first appearance of man onwards, but the persistence of all that is styled irrational or superstitious, and the frequent cases of decay, retrogression, and new growth, shatter all facile theories of a simple, continuous, mental or psychological evolution.

(4) Evolutionary ideas hold such a prominent place in conceptions of religious development that it should be noticed that there are really two types of theory. The one involves ideas of survival, retrogression, decadence, recidivism; and it lays the emphasis upon man's savage ancestry in an extremely remote past. The other does not measure the difference between the civilized and uncivilized by centuries or millennia, but it sees the savage 'beneath' the civilized man, the barbarian 'below' the veneer of culture, and so on. The former seems to offer an easy explanation of the presence of lower features (cf. Tennyson's 'the Ghost of the Brute that is walking and haunting us yet' (*The Dawn*)), but the latter is probably more important. The ante-natal stages have a profound significance for the development of man's psychical nature. These stages, and the dependence of the infant upon the mature experience of parents and environment, are as fundamental for his psychical life as the more complex and obscure factors of heredity, or the influence of human or animal ancestors 'hundreds of thousands of years' ago. The actual history of the ancient civilizations shows that there is no inherent momentum in a culture or a religion; its fate depends upon the individuals who are involved. Hence, whatever may be proved to be due to heredity and pre-historic evolution, more attention must first be paid to the traces of the ante-natal stages with all their suggestiveness for lower levels of psychical development which the individual may not have entirely outgrown.¹

5. Historical and sociological methods.²—(1)

The purely comparative method of inquiry has emphasized the necessity of constructing conceptions of religion upon a wide basis of data. While indicating resemblances between different religions and peoples, it has also brought to light many significant differences, whether in single environments, at some given time, or in the course of their historical development. Religions can be fruitfully studied in their relations to the political, economic, social, geographical, and other features of the people or area where they flourish. Here attention is paid to the influence of surroundings (mountains, plains, deserts, swamps, etc.), to the proximity of higher or lower cultures, and to means of intercommunication.³ Of special importance are the food-supply and means of livelihood. Thus, hunting and agriculture conduce to different types of mental and therefore, also, of religious outlook; and, where the food problem is negligible,

the religion is without the positive features that recur when the supply is limited or a source of anxiety. The influence of city-life and of political and social interests upon an earlier religion is especially noticeable in the vicissitudes of the Homeric gods. The differences among the various religions are thus due very largely to quite recognizable factors and vicissitudes; and a distinction can be drawn between the history of religions, which is that of definite systems, peoples, or areas (so far as the material permits), and the history of religion, i.e. of the development and advance of religious and related thought in human history generally. It is the task of the latter to determine the character and the principles of the development; but the two inquiries are interdependent, and it is a natural presumption that the various religions reflect the working of similar principles, which, moreover, will hold good in the future. But every treatment of the development of religion forces some recognition of 'lower' and 'higher' stages, of which the latter will irresistibly be related to our own ideals (whatever these may happen to be), and our own ideas of what must be the outcome of a progressive development. As for the 'lower' stages, primitive pre-historic men are unknown.¹ Nor can one estimate confidently all the religious and other ideas of, say, the pre-historic cave-painters.² If, on the one hand, primitive man once lacked the traditional experience of the lowest of modern savages, on the other, there are tribes so rudimentary that a lower level can hardly be conceived, while possibilities of development are recognizable. The latter may then be called (relatively) 'primitive,' even though their beliefs and practices are complex and have a history behind them.

(2) Thus the relation between a primitive religion and the actual religion of primitive pre-historic people is fairly analogous to that between the child or the savage and the actual 'childhood' of mankind; there will be certain parallels, but there will be essential differences, due to the fact that the environment in the one case has a history and an experience which in the other case are quite wanting. It should be observed that, although some typical developments can be discerned everywhere, we nowhere find the actual dawn of religion in an entirely non-religious environment. Further, all theories and ideals of religion implicate societies or systems, and not particular individuals or details. All significant movements have been collective, and development has been due, not merely to individuals (who often find no following), but to the tribe, society, church, organization, or people who were influenced by them. Consequently, every conception of the lowest stage of religion must refer, not to the first 'religious' individual, but to the group which could be styled 'religious,' not to separate ideas, beliefs, or concepts, but to the whole mental fabric or system in which these found a place. The earliest conceivable religion would necessarily be a system; behind this one can scarcely go. In like manner one can conceive exceedingly rudimentary or primitive groups of individuals, but not isolated human beings who had not yet associated with one another. Only in this way can the problems be methodologically pursued; and it is the great merit of sociological inquiries that they illuminate the relatively stable and coherent beliefs and practices of ordinary social groups, and not the individuals who may be exceptional, extreme, or even abnormal. On the other hand, one cannot ignore the individual and what society owes to him. The social group is not an absolutely homogeneous, undifferentiated, and self-moving unit. Every body that can be regarded as a unit moves through those who in some respect are outside it, and cannot be properly described without taking into consideration the environment. No group is actually a closed system, but it is necessary to regard it as a

¹ Cf., e.g., the 'vegetative' soul of Aristotle and the Schoolmen; see M. Maher, *Psychology*, London, 1910, pp. 33 ff., 357, 556, 575 f.

² See, among other works, F. Ratzel, *Hist. of Mankind*, Eng. tr., London, 1896-98, bk. i.; E. Meyer, *Einleit. Elemente der Anthropologie (Gesch. des Altertums)*, i. 1, Stuttgart, 1907; Durkheim, bk. i. ch. i.; R. R. Marett, *Anthropology*, London, 1912; C. H. Toy, *Introduct. to the Hist. of Religions*, New York and London, 1918; G. F. Moore, *Hist. of Religions*, Edinburgh, 1914, i.

³ Thus the old Indo-Iranian stock, as illustrated by a comparison of the *Rigveda* and the *Avesta*, divides into two markedly contrasting streams: the Zoroastrian, or Persian, which is strenuous, practical, and ethical; and the Indian, which is typically passive, mystical, pantheistic, and metaphysical. Differences of climate are adduced to account for the psychological differences. Moreover, the geographical and other features of Egypt and of Babylonia and Assyria favoured a certain unity and fixity of life and thought, in contrast to the broken nature of the lands of the Aegean and Hellenic cultures and the absence of physical links. See Moore, pp. 145, 201, 359, 411 f.

¹ 'A culture would be absolutely primitive if no antecedent mental development whatsoever could be presupposed' (W. Wundt, *Elements of Folk Psychology*, Eng. tr., London, 1916, p. 20; cf. pp. 21, 32).

² All artistic and other human workmanship will imply some mental equipment, observation, and reflexion, with perhaps social, ethical, or moral interests. In any case the data will point to some 'psychical context,' and the task is to determine the certainties, probabilities, and possibilities, and not (say) to suppose that the artists of the Reindeer Period were in no degree inferior to modern artists. The necessity of determining the context of data is obvious when one observes the very different beliefs and practices which can be associated with any particular god (e.g., Jahweh in the OT) or the divergent conceptions entertained of some particular significant term.

simple unit and to neglect provisionally the more complex and difficult details.¹ The group, like the concept, is a methodological necessity, and not an ultimate reality. See, further, § 13.

6. Social practice and myth.—(1) Sociological inquiries have thrown a vivid light upon the interconnection of life and thought among rudimentary societies and upon the place that religious and related ('superstitious') beliefs and practices hold in the life of the individual or the social group.

The birth of the child brings ideas of legitimacy and kinship, incarnation or rebirth, tabus, and various 'superstitious' usages (cf. art. BIRTH [Introduction]). With the early training and initiation into the group all the deep values of the group are associated. Marriage and marriage-bars involve highly complex ritual and practice. Illness, death, burial, and the fate of the dead almost invariably bring beliefs of the relation between the dead and the living. Religion characteristically embraces all that is for the continuity and security of the social group—entrance into the group, adoption, expulsion, outlawry; vengeance, manslaughter, blood-feud; the protection of property (including women and slaves); the rights and responsibilities of prominent or representative individuals; defence and war; fear of famine and disaster; the preservation of the (animal and plant) food-supply and means of livelihood. Here are inextricably blended tabus and regulations which modern observers from their own standpoints will variously style religious, superstitious, mystical, irrational, rational, secular, and so forth.

A fact of the greatest significance is the increasing differentiation of departments of life and thought and the growing complexity of society.² At certain stages there is no clear division, e.g., between ritual, moral, and religious requirements, or between religious, economic, and legal ideas. The appearance, disentanglement, and separate development of special departments of life and thought (e.g., astronomy, anatomy, law, physics) continue on higher levels the early and rudimentary processes which at previous stages enabled men to differentiate and classify simple phenomena and thereby to describe their experience and organize their scanty knowledge. In this differentiation, specialization, and co-ordination there are typical processes which subsequently account for the co-existence of the various conflicting religious and non-religious views of the universe.³

(2) A special problem is that of the relative value of the evidence contained in ritual behaviour, social practice, etc., and that in myths, legends, and the like (see art. MYTHOLOGY). The controversy 'myth versus ritual' arose as a reaction against excessive reliance upon myths.⁴ Myths appear to be of only secondary value in so far as they are intended to explain, and have secondary aims which are political, ecclesiastical, philosophical, etc. On the other hand, the ritual or practice may be a lifeless inheritance from the past, bereft of its original significance or motive, and modified by reflexion or myth. The same actions are not necessarily accompanied by the same feelings and ideas, and the latter in their turn can express themselves in very different forms. This is one of the clearest results of the comparative method (§ 4 [12]). Further, every behaviour or action is earlier than reflexion upon it or the desire to explain it; it presupposes feelings, impulses, and needs of which men may be barely conscious. But myths, however artificial they may be, are significant for some stage of thought and for its movement, even though their contents be useless for modern knowledge. Both ritual and myth bring difficult questions of the meaning of each for a people. The true meaning of a rite for us (i.e. our interpretation) is not necessarily that which it has for those who practise it; and the relation between (a) ritual, behaviour, action, etc., and (b) subsequent reflexion, explanation, myth, interpretation, etc., is analogous to that between impulsive, instinctive activities and the reflective, intelligent states of consciousness, or between any activity and the apparently obvious purpose which, however, was not recognized at the time. In fact, one of the most

interesting features of the more rudimentary religions is the presence of earlier forms of what is fully explicit in the higher religions (e.g., vegetation rites and the later belief in a resurrection), of apparently logical transitions, and of a striking continuity or development, such as to permit continued interpretation, and to suggest theories of a progressive revelation or the like (cf. also the view in Gal 3²⁴). See, further, § 30.

7. The group unit theory.—(1) It is a fundamental postulate that social life and social-religious practices cannot be founded upon hallucinations; the basic feelings and convictions are both genuine and effective. Moreover, while, on the one side, all maxims, principles, and rules of life, business, recreation, etc., are for the better ordering and organization of activities, on the other side, all practical working life or activity implies principles which, however, may not be consciously realized or formulated. Systematized social religious organizations imply systems or principles of regulative ideas; and all social organization or disorganization corresponds to a sufficient equilibrium of the ideas involved or to an absence of the indispensable harmony. The interrelation between the constituents of any effective group, or between different groups, depends on the essential ideas which unite or disunite; and the development or decay of such a group (e.g., a political party) is coincident with that of the constitutive ideas. An active group or body does not ask, 'Is it true?' but in the stress and conflict of life, as also in reflexion upon the ideas and principles that underlie or are implied in its activities, their 'truth' is put to the test. Hard events and explicit discussion thus try the effectiveness of the convictions and ideas; and every state of equilibrium, after a period of severe crisis or disintegration, points to some equilibrium of ideas, of greater or less permanence, uniting the group. Hence we may speak of a system of ideas, even though they are not necessarily consciously recognized.

(2) Now, at certain stages of development the social and religious ideas form an inseparable part of one and the same system—a practical system; life and thought are relatively undifferentiated, and every man is born into the nexus of beliefs and obligations which obtain throughout the group. Such a system, with its body of cults, practices, beliefs, and traditions, implies a system of ideas, ways of thinking, standpoints, explanations, etc. But, further, Robertson Smith, whose *Religion of the Semites* brilliantly illuminated the sociological aspects of religion, especially emphasized the important fact that 'the circle into which a man was born was not simply a group of kinsfolk and fellow-citizens, but embraced also certain divine beings.' 'The social body was not made up of men only, but of gods and men.' 'The gods are part and parcel of the same natural community with their worshippers.'¹ Here, then, ideas of gods and men and of the supernatural and natural, would tend to form part of a single coherent whole—a unitary system, so to say, of thought and practice. It is necessary to grasp this conception and contrast the 'psychical' solidarity of such groups with those situations where life and thought are extremely differentiated, where religion is kept quite apart from the non-religious, where the social system is undeveloped, or, finally, where (as in totemism) there are no clear ideas of gods as part of the social

¹ Cf. Marett, *Anthropology*, p. 169 ff.

² See, e.g., W. H. R. Rivers, in *Science and the Nation*, ed. A. C. Seward, Cambridge, 1917, p. 310 ff.

³ As these processes are of fundamental importance, it may be observed, at this point, that it does not follow that, historically, society goes back to an absolutely undifferentiated state, or that its earliest phase was wholly or essentially religious. What undergoes development can be regarded as an individual datum or detail which is a part or aspect of something, and what can be regarded as a system will be preceded by another system. Thus, e.g., a distinction must be observed between some particular logical prerequisite (e.g., an alphabet) and the actual earliest historical stage (e.g., of intercommunication).

⁴ See W. R. Smith, *Religion of the Semites*, London, 1894, p. 17 ff.; A. Lang, art. 'Mythology', in *EB*¹¹, xix, 128; M. J. Lagrange, *Études sur les religions sémitiques*, Paris, 1905, pp. 28-40. For an intermediate position see D. G. Brinton, *Religions of Primitive Peoples*, New York, 1897, chs. iii., v.

¹ See *Rel. Sem.*, 2, pp. 11, 20 ff., 23 ff., 51, 58, 74, 255, 263 ff. Note also p. 32: 'The principle that the fundamental conception of ancient religion [and of all religion at a certain stage (ib. p. 31)] is the solidarity of the gods and their worshippers as part of one organic society (with common interests and common aims (p. 31)), carries with it important consequences.' This may be supplemented by Durkheim's purely sociological investigation (esp. bk. ii. ch. iii.), and by his argument that the ideas of the social group, the sacred beings, and the outside world are interrelated in one solid system all parts of which are closely united. In the present article, also, the attempt is made to develop Robertson Smith's remarkably suggestive statements.

system. In a word, the conception of a system of belief and practice where gods and worshippers are very closely related and belong to the same system of ideas serves as a standard or type. All views of divine immanence and transcendence, of the nearness or remoteness of a Supreme Power, of the permanent or negligible part that this Power takes in mundane affairs, and therefore all views, both of the necessity of a distinctive concept 'God' and of its meaning, depend essentially upon the coherence or systematization of the leading relevant conceptions of life, and upon the interrelation between the differentiated aspects of life and thought.

8. Totemism and exogamy.—(1) Some extremely interesting questions are raised by totemism and exogamy. Totemism (*q.v.*) is especially remarkable for its striking contrast to all anthropomorphism or anthropopathism, where the spirits or gods who are venerated, respected, or feared are thought of or described as partly or wholly human and with human traits. In totemism the social group, and particularly an exogamous one (see § 9), stands to a species of animal or plant (generally edible), or to an object or class of objects, in an intimate relation of friendliness or close kinship; and the totem is treated, not precisely as a deity, but as a cognate and one to be respected (*e.g.*, not to be eaten or used, or at least only under certain restrictions).¹ Totemism is essentially a social cult (with some remarkable forms in Central Australia); but 'individual' totems are also found (notably the 'spirit-guardians' of N. America). There are many variations, and it is disputed (*a*) which particular variety is to be treated as typical, and (*b*) whether totemism is a primary and invariable stage in all human evolution.² Animal features (theriomorphism) frequently recur on higher levels; of this there are noteworthy examples in Egypt of the Hellenistic age. But here we have not so much pure totemism as totemistic tendencies and modes of belief and practice analogous to those which among really rudimentary peoples characterize totemism as a social or individual system. As for anthropomorphism, it is certainly not absolutely primitive; it represents a stage typically later than theriomorphism; and, when the latter appears on the higher levels, it is not the thorough-going system of the lower levels. While typical totemism has not reached the level of typical anthropomorphism, the latter can become indefinite, inadequate, and crude. The late Egyptian theriomorphism is best regarded, not as a mere survival, but as a popular and unsystematized tendency at a period when the national religion was decadent and unsatisfying. What is really most characteristic of all totemism is its non-anthropomorphism (below, § 17 ff.); but, while the totem is impersonal or 'sub-human' to the outside observer, to the totemist it is as personal as is the doll or toy-animal to the child. Totemism and all theriomorphic features involve problems of symbolism, imagery, and the consciousness of human personality in its relation to animal and other life. A feeling of peculiar affinity with animal or plant life is by no means confined to totem-clans or rudimentary peoples; but the characteristic *systems* distinguish totemism from all those cases where the theriomorphic details might seem, in the absence of evidence to the

contrary, to point to totemism or its survival. In any case, the alleged survival or re-appearance of totemism on a generally higher level of society will indicate typical modes of feeling and expression which help to explain the undeniable totemism of the lower levels. Here are data of the greatest significance for the development of the consciousness of human personality.¹

(2) In Babylonia there is a characteristically 'unstable anthropomorphism.' The imagination in its highest exaltation is, on the whole, anthropomorphic, 'but often in the ecstasy of invocation the religious poets felt the human image too narrow and straitened for their struggling sense of the Infinite. Then the expression becomes mystic, and . . . avails itself of theriomorphic imagery.'² Thus, totemism is not merely an extremely curious animal (and plant) cult, but it illustrates systematized and socialized modes of thought which recur 'outside' as well as 'below' the anthropomorphic mode of thought. The anthropomorphic ideas—perfectly familiar and intelligible in the higher religions—are not only not of primary origin, but they do not always do justice to human experience, and that on many different levels. The tendency then is to find an outlet in ideas which are non-anthropomorphic and, for this reason, are often spoken of as 'mystical'; but, strictly speaking, it is always a question whether mystical ideas are then really superior or inferior to those that they repudiate.³

9. Exogamy and kinship.—(1) Although exogamy (marriage outside the group) in contrast to endogamy (marriage within it) concerns the history of kinship and society rather than that of religion, certain points require notice. Especially noteworthy is the classificatory system of kinship, where a man's status and marriage-rights are the criterion, and the social practices and the terms of relationship refer to a group or class as a whole, and not to individuals (see art. KIN, KINSHIP). The point of view is collective: the group thinks of itself as a single unit, and the feeling of solidarity readily tends to be absolute. Hence it can happen that the fact that a child is a member of a group is more important than the identity of the father, or even of the mother. Now, while exogamy proper avoids the close and incestuous marriages which occur in an endogamous society, exogamous tendencies sometimes appear, and even to the extent of forbidding marriage between persons of the same district or name. Moreover, endogamous tendencies appear, and are sometimes influenced by the desire to preserve unity, to keep together property, or to prevent a clan from dying out. Hence the tendencies which re-appear in different forms are not to be confused with the special cases of exogamy and endogamy proper. On the other hand, definite ideas are implied throughout: endogamy made for solidarity, unity, and oneness, whereas exogamy avoided the physical and psychical effects of any close unity and made for the movement and exchange of ideas.⁴ In any case, the physical or material aspects, however conspicuous, are not so fundamental as the feelings and convictions which now allow what a later generation will reject, and now enforce, on occasion, a chastity and restraint for no obvious 'rational' reason. In other words, the practical working group is not necessarily united by ties of blood-kinship as we reckon it.⁵ Any group of individuals united by profound ideas may look upon themselves as one, and the bond will be closer as regards the particular functions of that group than

¹ See artt. ANTHROPOMORPHISM, PERSONIFICATION, and, for a suggestive treatment, Caird, I. 213 f., 264 ff., 270 ff., 294 ff.

² L. R. Farnell, *Greece and Babylon*, Edinburgh, 1911, p. 55, also p. 13 f., and all ch. iv.

³ On the general relation between totemism and mysticism cf. J. E. Harrison, *Themis*, Cambridge, 1912, *passim*, and *Ancient Art and Ritual*, London, 1913.

⁴ Marriage into another group constantly forces adjustment of beliefs and practices; on the lower levels the wife may be dedicated to the husband's deity (Frazer, *Totemism and Exogamy*, I. 72; cf. iv. 242), or the bridegroom may discard his own totem and paint on his face that of the family of the bride (E. S. Hartland, *Primitive Paternity*, London, 1908-10, II. 44).

⁵ Note the prevalence of adoption, blood-covenant, artificial kinship, the levirate, etc.

¹ See the definition of W. H. R. Rivers, *The Hist. of Melanesian Society*, Cambridge, 1914, II. 75. This section confines itself particularly to animal totems; other aspects of totemism are noticed below, § 17 ff.

² See, generally, F. B. Jevons, *An Introd. to the Hist. of Religion*, London, 1896; Frazer, *Totemism and Exogamy*, IV.; Durkheim, bk. II. The methodological question is: What conception of totemism best enables us to handle the relevant facts? (Similarly the methodology of religion has to determine the conception of religion that best answers all the facts of life and thought.)

the bond between the members and actual blood-relations who are not members. The group feeling, it is true, can kindle extreme ideas of communism and oneness; but, although physical and sexual factors are near at hand, and grave excesses can occur, the unit or group idea is not logically or fundamentally physical, and in fact, in social-religious systems, sexual aspects of life are explicitly regulated and subordinated to what may be called the ideal (cf. also below, § 23 [3]).

(2) The distinction between exogamy and endogamy proper, as primitive social systems, and exogamous or endogamous tendencies is analogous to that between totemism and totemistic or theriomorphic tendencies (above, § 8 [1]). The history of society and that of thought do not advance *pari passu*; none the less, the social vicissitudes and the religious ideas constantly interact. The closer the social unity, the more do gods and men form a single whole—the gods are 'our' gods, and not of the royal, priestly, or any other exclusive class of society. Moreover, the conception of a dominant goddess implies ideas of dominant women, and the entire psychology of sex will reflect itself in ideas concerning female saints and deities. Hence also the paradoxical extremes, where goddesses and priestesses are prominent—chastity and gross impurity, tenderness and fierceness. Again, the conception of the Fatherhood of God would be meaningless where paternity was of little account; and the notion of divine sovereignty is hardly intelligible where there is no experience of overrule or lordship. So ideas of social equality and democracy influence the way in which men think of a deity; and, conversely, every adequate conception of deity involves adequate views of the relations between both man and man and man and God. Convictions of a 'chosen' people or of some particularistic and narrowly 'national' God reflect in their turn the interrelation between current sociological, historical, and psychological conditions; and they emphasize the fact that man's religious ideas and conceptions, where genuine, cannot be torn away from his ordinary life and thought, but all form some sort of a system, however imperfect.

10. Psychology.—(1) Theories of religious development must be based upon observation of actual historical vicissitudes and the psychological aspects of religion. Complexity of thought, found even in Central Australian totemism and other primitive cults, points to complexity of history; for complex history makes complex thought. Here, principles of historical criticism are indispensable. There is a common tendency to focus upon outstanding persons, events, and periods changes more numerous and greater than those for which they are actually responsible, and to assume periods of almost absolute stagnation (e.g., the 'Dark Ages'). On the other hand, movements of thought are, alternately, relatively slow and fast; sweeping and sudden changes are not permanent in themselves, though they can leave permanent results, and they are the outcome of slow preliminary steps which may not be recognizable. The whole environment invariably moves more slowly than the reformers or the reforming tendencies, which are usually local, one-sided, partial, specialistic, or extreme. The actual facts of religious development, and the relationship between different stages of the process, can be directly ascertained by historical study.¹ Against the apparently obvious cases of immediate and deep influence must be placed the cases of drastic adjustment, cataclysm, and relapse and failure.² These prove that beliefs and customs are not mechanically accepted or assimilated, and that the ethnological and historical factors have their psychological side (cf. § 4 [2]). From a psychological point of view, questions of external influence are not necessarily so important as the mental factors and processes which are involved—e.g., the ability of the individual to accept, retain, and utilize certain ideas, the preliminary mental development necessary, his psychical, moral, or spiritual needs and aspirations. The psychological method is concerned with men, their mental states,

their interests and values, and the relation between the religious and other aspects of their life and thought. It considers the *subjective* value of the beliefs and practices of the individual. Many relatively simple inquiries must be made before complete synthetic statements can be ventured, and consequently no 'superhuman' or 'supernatural' factors, causes, or elements can be presupposed. That men have experiences which compel them to distinguish what they call the 'divine' from the 'human' no one can dispute; but the psychological method can deal only with the human side of the great questions, as apart from the problem of the actual underlying realities.

(2) To the psychological department belong many extremely important inquiries: (a) the growth of the mind (the mind of children and of savages), the relation between human and animal psychology; (b) the dawn of religion in the young, and notably the data of 'conversion,' as regards both the psychical states of the individual and the effect of the 'regeneration' upon his ideas, attitudes, and conduct; (c) 'the varieties of religious experience' (the title of a striking work by William James [London, 1902]), together with the facts of religious revivals, mysticism, spiritism, occultism, ecstasy, and prophetism; (d) the 'subconscious,' a field with many pitfalls, although the elementary facts show that that of which the individual is conscious at any time is part of a larger whole, that he can attend only to partial aspects, and that *theoretically* there must always be a less imperfect synthesis than that which he gains by his fragmentary glimpses, and, therefore, that there must be the possibility of a less imperfect, less undeveloped Self than the present one; (e) noteworthy also are the elementary facts of the effect of mind upon body (faith-cure, Christian Science, New Thought [q.v.], etc.), and *vice versa*, all of which are significant for the ultimate relationship between what we distinguish as the physical and the psychical. Further, (f) through abnormal and pathological phenomena a clearer idea is obtained of the sound and healthy mind-body, and the evidence is instructive for all conceptions of personality (normal or 'dissociated'), for alienation of personality and double consciousness, the danger of weak control, of absence of homogeneity and of continuity of interests, of extreme and morbid egotism, and of persistent obsession. Finally, (g) the interconnection of the physical and the psychical sides of the individual (illustrated especially at adolescence, in the sexual life, and in ideas associated with birth, marriage, and death) involves facts of which account must be taken by any science of religion. No doubt the enormous stock of data from which to reach a just conception of religion includes much that belongs to the extreme, the irrational, and the abnormal. There is much that is without the elements of practicability, permanence, and progressiveness, and that forces a contrast with those conditions where these elements recur, and there is a certain equilibrium of religious and social life and thought. All inquiry which is scientific, and not purely antiquarian, has the future in view, and a just conception of religion must treat religion as a persisting phenomenon; hence it must determine the elements in question, and distinguish them from the features which, however frequently they recur, do not make for endurance or advance. Proceeding in this way, we have to consider man as the outcome of a lengthy evolution, a progressive, thinking animal, able to speak, to form concepts, to preserve his experiences in oral tradition and in writing, to reflect upon the past, and, by so doing, able in greater measure to shape the future. Man is thus part of other organic life which has made its appearance in the course of the history of the universe; and as a result of development he is able to differentiate the human and the non-human, the psychical and the physical, the religious and the non-religious. From these biological, anthropological, and evolutionary points of view, the development of man is that of increasing knowledge, function, and ability, though what is most significant is the individual's increasing consciousness of the past, of the self, and of the universe; for this development in consciousness is one of quite another type.

11. The psychological method.—Characteristic of the psychological treatment of religion are (1) the insistence upon the human aspects, and (2) the association of data, however unusual, with familiar beliefs and practices. The general aim is to fasten upon the features which unite the religious and non-religious sides of our common human nature. Thus, the deification of kings, saints, and heroes in the past finds analogies in ordinary modern hero-worship; the individuals throughout are personalities *qualitatively* different from others. Again, the psychological efficacy of the fetish and that of the modern mascot are akin. Moreover, all initiation ceremonies involve similar typical ideas, which recur wherever it is a question of entrance into privileged groups or private societies; jealous of their rights and of their solidarity; even

¹ Note, e.g., the history of religion in W. Asia and India (cf. esp. Alfred C. Lyall, *Asiatic Studies: Religious and Social*, London, 1907), the influence of invading Romans and Normans upon England, the effect upon Japan of the thought of China and W. Europe.

² See, for a notable example, the monotheistic reform of Amenhotep IV. (art. PHILOSOPHY [Egyptian], vol. ix. p. 858).

'hazing' is in some respects reminiscent of the torments and tortures inflicted elsewhere upon the novice. Also, it is *à propos* to note the 'best clothes' feeling, the impressiveness of uniform and ceremonial, and the attitude of the average individual to his treasured souvenirs and all other centres of deep feeling. Instructive, too, is the spontaneous, unreflective, and unsystematized behaviour of him who kicks the table 'which has hurt him' (not 'against which he has hurt himself') and the attitude of children to inanimate dolls and toys. The strange effectiveness of tabu and magic can be psychologically associated with everyday facts of conscience and with ordinary features of suggestion, telepathy, and hypnotism. Especially interesting from a psychological point of view are such topics as sin, confession, forgiveness, sacrifice, communion, prayer, and ritual. Whatever be the reader's conception of religions or of religion in general, there are everyday facts of human nature of the first importance for the study of the nature of man. All enduring religion has specific psychological aspects, material for the science of human nature; and, conversely, the psychological study of man is of the first importance for a better knowledge of his religious and other 'deeper' sides. In general, the psychological method emphasizes (a) the essential and fundamental resemblances throughout mankind, underlying the many different beliefs and practices, (b) the undoubted subjective value to the individual of his religious and other convictions, as apart from their value for his or another environment, and (c) the tendency of religion, when it is genuine or effective, to be inextricably bound up with what is not specifically religious.¹

12. The theory of interpretation.—(1) Important methodological problems at once arise. It has been urged that savage or rudimentary men are psychologically so different from the civilized individual that the latter's interpretations of them are inapplicable. But the savage is, by definition, a human being; some intercommunication is possible between him and the civilized. Besides, all men share certain instincts, and on ordinary biological and other grounds some essential resemblances must recur among all men. The problem is obviously the extent of the resemblances. Everywhere there are differences; no two leaves or stones are absolutely identical in all respects. But ordered thought must invariably start with the points of resemblance—otherwise there can be no further progress; and what is necessary is to ensure that these justify the conclusions one draws, and that the latter are not invalidated by the differences. There are undoubted psychological differences, even in the same family, circle, or environment; but these are not so important for preliminary inquiry as the undoubted points of similarity, and no sound reasons can be given for denying a fundamental psychological resemblance between the highest and the lowest individuals.²

(2) In interpreting another mind (savage, child, animal-pet, etc.) it is easy to ascribe to it a consciousness or knowledge which it does not possess, or to discern in its activities a meaning or purpose of which it is ignorant (cf. above, § 6 [2]). Here the data on one level or in one environment are interpreted from the point of view of the observer. This, however, is an everyday normal process, and there is everywhere some risk of more or less serious misinterpretation. But the risk may be lessened by considering the data in their own context, and by determining whether the interpretation demands facts outside the scope of the subject under consideration. The interpretation may lie between two extremes, as when the care of animals for their young is too closely paralleled with that of parents for their children, or, on the other hand, is treated as merely mechanical and devoid of all suggestion of feeling. Every in-

terpretation involves some notions of reality, which of course may be ultimately erroneous. Now, if other levels were psychologically quite distinct from our own, not only would they be entirely unintelligible, but every theory or interpretation, however absurd or incredible, could defend itself by declaring that our conceptions of reality did not apply. But we intuitively demand an intelligible interpretation, and thus implicitly assume a psychological relationship (see above, [1]). If every theory of the beliefs and practices on levels other than our own may legitimately be tested by our logic and by our own conceptions of reality, this psychological and humanistic type of interpretation is sounder than a crude rationalism which betokens a mentality utterly different from that of those whom it condemns or opposes, and would implicitly ascribe to savages and others mental processes and ideas so different from those we can understand that they would really lie outside the scope of criticism. See below, § 15.

(3) Every interpretation represents the observer's conception of the true meaning, and it may have involved some significant psychical development on his part to reach it. Moreover, every sympathetic appreciation tends to discern the features felt to be permanent and worthy, and to pass over those which have lost their value. Thus, the data always become much more significant for the observer and his level than for their own. In fact, what some other level or mind *really* is often eludes us; nor is it always so important for us as what it contributes to us or what it can or did develop into. A perfect interpretation—to see things as another mind sees (or saw) them—is often impossible, unnecessary, or of secondary importance. What is essential is a sympathetic comprehension which can retain its independence, objectivity, and power of criticism. Such a combination would find an illustration in the attitude of parent to child or of teacher to pupil. The mental or psychical situation involves the co-existence of mutual intelligibility and the consciousness of a psychical difference. Now these two represent phases of immanence and transcendence. Consequently, the principles of the relation between mind and mind (and especially when there are significant differences between them) are extremely suggestive for the religious problems of a divine (transcendent) mind in immediate (immanent) relationship with man. All ideas of the unknown, including those of the relation between God and man, are influenced by the known (by conditions, data, etc.), which are felt to be suggestive and analogical; hence, not only are the principles of the interpretation of minds, and of the relationship between minds, of very great importance for the theoretical study of religions—and also for the practical and political problem of the attitude to minds which are felt to be inferior—but the very tangible problems which they bring have a real bearing upon the more ultimate religious problem of the interrelation between personality human and divine.¹

13. The individual and the group.—(1) It has also been objected that there is an essential difference between the psychology of the individual and that of the group. Certainly, the spontaneous contrast of society and the individual is the recognition that society is more than a mere aggregate or sum of separate individuals. But, while society is a working system or unit, every man of individuality is measured by his value to society, and a man with no social instincts whatever would scarcely be a human being. Society moves only through the constituent individuals who differ and who initiate movement; men of some individuality are found on low levels, and it is obvious that the first pre-historic social group was sooner or later disturbed by men whose beliefs and practices differed from those of the rest.² Hence, from the very first, human progress has depended upon individuals who differed in some particular respect from their fellows. Now, the psychology of a group is that of individuals *qua* social beings. Whether in the madness of the 'Terror,' in joint religious service, or in quiet normal intercourse, there are seen merely different states in the life-history of individuals. When all has been said of 'the psychology of the mob,' and of its ultra-emotional and irrational aspects, the fact remains that there can be no absolute gulf between (a) the normal states of an individual, and (b) the unusual or even abnormal states when, as he may afterwards protest, he was 'not himself'—states which may be repudiated, or which, again, may manifest some rare, profound, and unsuspected depths. Thus, man's modes of thought and action are variously individual or collective, normal or intense (abnormal, etc.); and he who is now entirely one with the mob, the team, or the social group, and now markedly egoistic or individualistic, is one and the same individual at different points of one and the same life-history.

¹ The most important literature on religious psychology is French and American. Among recent works may be mentioned: I. King, *The Development of Religion: a Study in Anthropology and Social Psychology*, New York, 1910; E. S. Ames, *The Psychology of Religious Experience*, do. 1910; J. H. Leuba, *A Psychological Study of Religion: Its Origin, Function, and Future*, do. 1912; G. A. Coe, *The Psychology of Religion*, Chicago, 1916. It should be observed that a psychological study of religion can treat religion as a human phenomenon, and in its functional, individual, sociological, and other aspects, but it cannot nullify the subjective distinctiveness of religion, nor can its theories of the objective source or foundation of religion (e.g., in humanity) be more than merely theories.

² See G. S. Patton, *The Philosophical Review*, xxi. [1912] 455-462; J. M. Baldwin, *Thought and Things: or Genetic Logic*, London and New York, 1906-11, vol. iii. p. xff.; W. H. R. Rivers, *HJ* x. [1911-12] 393 ff.; Webb, ch. vi.

¹ It is to be observed at this point that the resemblances which the comparative and psychological methods emphasize are not to be allowed to obscure the differences. Where comparisons are made (between religions, minds, etc.), there is, logically, something which appears in varying forms, which might re-appear in some new and as yet unknown form, or which might be supposed to exist in some ideally perfect form. Logically, therefore, religious data could conceivably take new forms without the limitations found or alleged in those that are current, old interpretations of data could be replaced by new ones, and the existence of minds varying in powers of comprehension and sympathy will suggest the possibility of a Mind infinitely wiser than that of man. Further applications of this principle (on which cf. § 4 [2]) will be found below.

² Men of distinct individuality may be found low down in the ethnological scale; see Spencer-Gillen's, pp. 12, 14 ff.; Frazer, *Totemism and Exogamy*, i. 854.

(2) Although nothing seems more real than the individual with all his self-consciousness, there must be some more ultimate reality of which he is but a part. A group or organization may appear more real than the individuals upon whom it depends, and who in turn operate through it. But it is not a complete or ultimate reality, because it is only part of an environment which is indispensable to it, and there are other individuals outside it. Moreover, the human group came into existence at a relatively late stage in the evolution of the universe, and such is the relationship between human and other life, and between the organic and the inorganic, that ultimate reality must be sought, not in society, the state, or any other organization, nor even in mankind (as in some modern types of ethical religion), but in something of which all that which is shown to be ultimately interconnected forms a part (cf. § 10 [2], end). Here, however, we have all kinds of convictions, theories, and so forth, so that while, on the one side, the self-conscious individual has no doubt of his own real existence, it cannot be doubtful, on the other side, that there are ultimate realities concerning which opinions differ. Hence we may say that (a) between the real self-conscious individual and the ultimate realities there come all the sociological, naturalistic, religious, and other conceptions of the place of the individual in the universe, and of the nature of the realities; and further, (b) that these supply material for perfectly objective investigation.

(3) Sociological inquiry has already emphasized the indebtedness of the individual to his social environment. He is born into and grows up in the current thought of his age, and he both selects from it and contributes to it as his own body of thought develops. But he does not 'become' a member of society; rather, as an integral part of some larger whole, and starting from an inconceivably rudimentary individuality, he gradually manifests an ever more distinctive and complex self, the real value of which depends upon his relation to his fellows. The more conscious and purposeful selection and choice of his later years are preceded by a less conscious procedure, which, however, is generally effective and beneficial; and the conscious efforts to co-ordinate mental and physical activities and to prepare for the future follow upon stages where co-ordination and preparation have already been at work. The growth is one of awareness and consciousness, and of deeper and wider realization of existing facts and possibilities. It brings the possibility of greater effectiveness, and not only can the individual take an objective attitude towards many of his own beliefs and practices, but he can even realize the painful difference between an ideal self and that congeries of dispositions, convictions, practices, and so forth, wherein he manifests himself and which he may desire to remedy, improve, or even escape. Consequently, one can view the life-history of the individual as a great complex series of vicissitudes, differing in their significance for his development—like the events in the history of a country; beneath its manifestations lies the self that undergoes development, and the individual will recognize realities profounder than the most real events of ordinary experience. Thus, not only must the individual be regarded as a part of some larger whole, but the nature of his development points to an 'ultimate' self underlying all its manifestations, to a reality transcending ordinary knowledge, and to an increasing consciousness of that which is felt to be most essential for the further progress of the self. The psychology of the individual and that of the social group are not opposed, although the man as a distinct individual or as a fraction of society manifests himself differently. What is of supreme importance throughout is the individual, for he contributes to society, he is for or against his environment, he accepts or opposes current ideas, and he is a living personality; on the other hand, the society, group, or state depends for all effective purposes upon a body of principles, ideas, practices, and institutions, and these again and again prove to stand in need of reconsideration and correction by the constituent individuals.

14. Psychological truth.—(1) Among the individual's states of consciousness are those which differ so profoundly from the rest that they compel some distinctive description. Through them the individual comes to have convictions of 'another' world, as distinct from the world of ordinary experience of time and space—the empirical world of which, however, his knowledge is based only upon partial aspects. While all 'religious' and related experiences are felt to be entirely different from those of 'ordinary' life and thought, they occur interspersed amid the latter, and are interpreted and described through them. All the intenser experiences are typically of the profoundest personal significance and of abiding value; they are visions to be realized, starting-points for further reflexion and explanation, and intuitions authoritative for subsequent conceptions of the universe. But the experiences, viewed broadly, are not all necessarily religious, or even beneficial in their results, and one may distinguish between similar types of psychical state and the content—whether it belongs to this or the other religion, or has no religious

characteristics, or is without permanent ethical value. Throughout, prior experience and knowledge condition both the content of the new experience and the subsequent reflexion which elaborates it. A criticism of the form, expression, or content does not necessarily affect the fundamental psychical facts, and between the most intense and abnormal states and the normal and healthy examples there are many stages, but no impassable gulf. Religious literature abounds in evidence which is of the greatest importance for the psychical nature of man; and it emphasizes the fact that all the religious states, whatever their content, are natural, integral, and inseparable parts of existence and experience. Consequently, the psychological investigation of religious and related (aesthetic, etc.) experience does not find that the relationship with the divine, the knowledge of higher truths, or the consciousness of a transcending happiness or grandeur is only for the chosen few: what is psychologically applicable to the normal individual has a virtually universal application—for all individuals. Indeed, this relationship, especially among rudimentary and naive religions, is almost mechanical (below, § 18 [3]). Nor is this altogether unexpected (cf. Mt 7¹¹). But this experience of a relationship, as also the familiar ideas of God's need of and love for man, must be balanced by the recognition that not every religious expression or practice is *effectively* religious (cf. v. 21¹⁶). Religion characteristically tends to set an exceedingly high standard of motive, thought, and conduct; it demands an absolutely sincere manifestation of the inmost self, and an absence of selfishness and guile (cf. 1 Co 13). Hence religion must be regarded as involving all that which is profounder, more constructive, and more permanent than all the ephemeral, casual, and superficial things of life; it is bound up with a development of personality which is to be in all respects 'whole' and 'healthy.' Consequently, to determine the essential nature of religion, it is necessary to look beneath the surface of men's beliefs and practices and determine what is dynamic. The problems of ultimate truth and reality, whether among rudimentary or among advanced peoples, are bound up with our knowledge of the depths of human personality; and the familiar religious conviction, that a Supreme Power to whom all 'reality' is known can see into the hearts of men and distinguish 'true' religion, really implies that ideas of a Supreme Power, of Ultimate Reality, and of the underlying self must be essentially interconnected. The goal of the science of religion is to see religion as God would see it!

(2) The religion that is most effective involves the very depths of man's personality, and inevitably concerns the greatest realities which he can conceive. But, although the religion of every sincere individual may be subjectively conclusive, its objective value will unhesitatingly be tested by the men and knowledge of his or of a later day. The truth of an individual's religion cannot therefore be necessarily regarded as ultimate, complete, objective truth. Even the savage can find peace and strength in his religion, and fetishes and mascots can be psychologically efficacious. But the progress of knowledge and all thought cannot be set aside with impunity. No religion has ever been able to remain aloof from the trend of thought without suffering the penalty; and, although again and again the religion and thought of some environment may be in conflict, the recurring periods of harmony have been more significant for progress. It is necessary to recognize the persistent efficacy and persuasiveness of religious and other (e.g., superstitious) beliefs and practices, even where they represent a knowledge or a mode of thought very different from one's own. Hence, a distinction must be maintained between the fundamental psychical tendencies, underlying convictions, and the like—which are proved by the comparative method to recur in manifold different forms (cf. § 4 [2])—and the particular forms, arguments, etc., which may no longer retain their old validity (cf. p. 669b, n. 1). This is to distinguish between some expression and what it is intended to express, and between a conviction and the various ways in which it is substantiated (e.g., beliefs in a soul, or in a superhuman guardian, or in an approaching 'new age,' etc.).

Here another important distinction is to be drawn, viz. between that which has a psychological basis in immediate experience and the further secondary more or less logical elaboration of it. Thus a genuine belief in the kinship of a deity can rest primarily only upon certain experiences which seemed to find a natural expression in terms of relationship (cf., e.g., the 'Fatherhood of God'). But they are symbolical or analogical, and errors multiply whenever the origin of such terms is forgotten, and the words, taken in a literalistic manner, form the basis of argument unchecked by resort to the original data of experience. Similarly, the idea of a 'Kingdom of Heaven' will primarily be justified by psychical facts (aspirations, longings, etc.), although it is at once capable of development suggested by the experience of earthly kingdoms. The words, 'the kingdom of God is within you' (Lk 17²¹), represent a profound transition from concrete imagery, which was open to misunderstanding, to a more psychological statement, and this in turn is capable of a certain psychological development which, however, can go astray.

15. The theory of reality.—(1) On sociological, biological, and even chemical grounds, the individual is in various respects a 'part' of that which is greater and more permanent than his growing and dying body. Not only do his intuitions and convictions testify to some greater and more permanent reality, but these are the mainspring of his life and they take into their service all that we call material and physical, and that belongs to space and time. The various polytheistic and monotheistic convictions of men, like the conflicting religious, philosophical, and other conceptions of the universe, indicate either that there are no stable or dependable realities or that it is men's convictions and conceptions of the realities that vary and develop. The latter is the only rational view if there is to be any effort to think coherently about the world; and a distinction must be drawn between the ultimate realities and the conceptions, formulas, etc., which may be felt to be the realities themselves. Thus, the mystical experience, e.g., is felt to be reality itself, although the striking and conflicting varieties of experience indicate that it must be of subjective and not objective validity. That variation and development are to be expected is shown also by the vicissitudes of religion, due to individuals who are unable to accept what to others has absolute validity, and who have convictions which are felt to be more real than those already current. Human personality is profounder than any given system of life or thought, and consequently the soundest theory of reality must be based upon the existence of (subjective) convictions of reality which obtain among men. These and their vicissitudes provide the material for the most logical theory of reality.

(2) Explanations, interpretations, theories, and the like all imply some notions of ultimate reality. Thus, e.g., the popular theories of primitive or universal serpent, stone, phallic, or astral cults, if taken seriously and rigorously pursued in their implications, would have the greatest significance for all conceptions of God, man, and the universe. As a general rule, even sweeping theories may seem immediately plausible or absurd, as the case may be, but the logical aspects are invariably complicated, and the theory will be favoured, because it explains a certain number of facts, or condemned, because of the facts which are ignored or interpreted in some forced manner. Indeed, the most absurd theory covers some unimpeachable facts; but, when it has once been obtained, evidence is forthwith more or less ingeniously twisted to it and it becomes Procrustean. Concepts, theories, systems, methods, attitudes, and positions have this twofold aspect—their *origin* in the presence of data which have been experienced and must be interpreted and organized, and their subsequent *application and employment* when the data, instead of being used to test or control them, are tested by them and viewed or interpreted in their light. This holds good of (a) modern theories, beliefs, convictions, concepts, etc., which flourish because of the sound elements they contain, and are injurious when their origin is forgotten and they become Procrustean; and (b) those of old, which in like manner must have flourished only because of their effective elements.

(3) Of the first importance for the theory of reality is the problem of religion and magic. It is obvious that any persistence of both must be due psychologically to certain effective elements (e.g., subjective satisfaction). But, since magic is admittedly impermanent and unprogressive, and religion admittedly has had its periods of decay

and revival, both contain certain ineffective elements which, in the case of religion, were not irremediable. Both include elements which are often styled irrational; and both involve convictions of man's relationship with the powers and processes of the universe and of the possibility of utilizing or of co-operating with them. But magic typically involves attitudes of compulsion and coercion; there are processes in the universe which are *not* beyond man's control; whereas dependence and humility are characteristic of religion. Yet the latter are not the only notes in religion (cf. § 18 [3]), and there is frequently a behaviour and attitude which can be styled magico-religious, being magical in its 'irrational' and external aspects and religious in its temper and spirit. Thus, we find convictions of a really profound relationship between man and the universe which are not confined to crass magic, but there are two fundamentally different attitudes (direct coercion or command, or indirect appeal or prayer), and, where the contemporary religion and magic are in conflict, the latter is typically anti-social and individualistic (cf. art. MAGIC [Introductory]). Here, magic is felt to be not so much untrue as a wrong handling of the truth; and it is regarded as irreligious and blasphemous, and is feared and dreaded. Consequently the problem of magic and religion involves (a) our own views, both of religion and of what is antithetical to it and to the progress of society, and (b) our own views of causation and reality; for we rely upon our own ideas of the relations between ourselves and the universe, and we must assume that the ultimate realities are the same everywhere. It follows, therefore, that the concept 'God' is fundamental: (1) because, from a theistic point of view, God is the ultimate judge between religion and magic, and (2) because, unless we have definite ideas of the ultimate realities and of God's place in the processes of the universe, the crassest magic cannot be finally estimated—for to hurt a rival by sticking pins into an image, and to expect rain by sympathetic magic or by prayer to a rain-god or a Supreme Deity, is to imply a theory of some ultimate interconnexion and causation, and upon this we have to make up our minds.

16. The concept 'God.'—(1) The value of all convictions and theories of God, man, and the universe must be at the mercy of the ultimate realities themselves, whatever these may prove to be; and this fact obviously conditions all critical inquiry. The concept 'God,' however it originated, both influences and is influenced by conceptions of reality and truth, and the fundamental problem concerns the necessity of the concept and its content. The theist will naturally accept the concept which, however, will tend to control his argument and as a rule will be only imperfectly analyzed. On the other hand, a procedure which seeks to be purely inductive and to construct a systematic view of the universe will, if it admits the concept, tend to use it illogically and without the wealth of significance which characterizes it for the theist. All the theories of the origin of religion are, therefore, extremely instructive for what they both spontaneously concede and imply. They are usually obliged to assume some most essential features (e.g., awe, reverence, sacredness); or they confuse what *evokes* a religious feeling with the *origin* of it. It is meaningless to suggest to the true theist that his belief in a living God originated in the ancestor-worship, animism, or animatism of the past; such a notion is part of the fallacious theory of survivals (§ 4). However persuasive be the parallels, however striking the links between theistic and other beliefs, the external observer can easily overlook

the qualitative differences and the different 'systems' involved in each. The most rudimentary form of a feature is not thereby the origin of what appears in more advanced forms, and the data of totemism suffice to prove that the origin of a religion is not so practicable a problem as the interpretation of the rudest type of it.¹

(2) The qualitative differences between the child's care for the doll and that of the mother for the babe, or between mere affection and genuine love, override any attempt to trace an actual linear or serial development from lower to higher, or the like. No intense or new experience (evoked by love, religion, crisis, war, etc.) can be successfully imagined, grasped, or calculated before its arrival; love is not a magnified affection, and religious experience is *sui generis*—save to the outsider. All intenser experiences are typically private, ineffable, and incommunicable; and ordinary language is admittedly a description in lower terms. So, in religion the 'Fatherhood of God' is—from a theistic point of view—an analogical expression of an experience, and, if it is developed in a purely literalistic manner, it loses its distinctiveness and is without the elements of development and progress. From another standpoint, the term might seem to be a construction, a figment, a theory, suggested primarily by mundane experience. But this will not explain the qualitative difference for the theist and the typical system of thought in which it appears.² In other words, the concept 'God' is inexplicable save as the result of a growth of consciousness, a realization, an awareness of that of which man can find only an imperfect and inadequate description. It is only in the secondary stages of each moment in the process that the term is treated as itself an object of knowledge; primarily the concept can be justified only as representing a reality of which man has come to have some conscious experience, and which he has been able to express only in a partial and limited way.

It is self-evident that, if we assume the existence of the reality whom man conceives of as God, this Supreme Power does not depend upon man's recognition. Wherever the conception makes its appearance, it must owe its authority and validity only to the consciousness of something distinctive and unique, something not covered by other terms; at the same time, it will be intelligible only because the new experience is blended with what is known and familiar. These are among the elements which go towards forming man's idea of God's transcendence and immanence (see § 31). The blend of old and new is significant, for, if man is ever to become aware of the (objectively) ultimate realities, his new conceptions cannot, for psychological reasons, be absolutely disconnected from those which he previously possessed; the realities to be intelligible cannot be absolutely unrelated to the prior experience. Finally, the fact that conceptions of God or of the ultimate realities have undergone development does not justify the supposition that either or both conceptions develop. The objective existence and nature of God do not depend upon this or the other theory or thinker; on the other hand, the great variety of religious beliefs and convictions would justify the theistic view that any 'divine revelation' must take up the individual as it finds him; it must come 'through the medium of our own

mental and moral experience and equipment,' and 'this medium fashions its form.' Consequently, from a purely critical point of view, the remarkable variation in men's beliefs and practices, and the impossibility of reconciling many of the theistic and non-theistic convictions, make it necessary to approach even the profoundest and most sacred questions from the human side.

(3) Without a preliminary survey of some introductory questions it would not be possible to thread a way through the mass of data. The ultimate realities touching man, God, and the universe must be such that the different conceptions of them and their development can be in some measure explained; otherwise we imply innumerable realities and ignore both the results of careful comparison and the psychological relationship among all men. The data of religion can be handled methodically only on the assumption that there are certain profound truths, principles, and realities which are apprehended (a) in ways that can be shown to be related to one another, and (b) among men who are psychologically more alike than unlike: either experience and existence must be entirely irrational or some way of organizing and co-ordinating the diverse data can be found. The method is both deductive and inductive. The simplest classifications, even the merest beginnings, involve postulates and assumptions; all organization of data is due partly to prior selection—not to chance—and to some view which will be replaced later by other and more developed views. There is continuous alternation between the 'structure' or 'content' of a standpoint or of an attitude to things or of a 'world-view' and the things themselves, between the concept and its material, between the theory and the facts it embraces, between the method and the evidence it handles, between the vision of the goal and the method of reaching it. Neither member of each pair remains unchanged. Man has a consciousness, an awareness, a mode of experiencing, which is capable of progressive development; and in the history of religion we discern the vicissitudes of men's conceptions of what to them were the supreme ultimate realities. Just as data cannot be handled unless we are given methods of classification, postulates, etc., so we cannot 'construct' or 'invent' conceptions of reality, but must test, verify, and develop those which we find already in our possession, and which, such as they are, are the result of past experience. And, so long as the best description of reality depends upon men, and personal experience and convictions control both men's life and thought and their attitudes to one another, so long must a critical inquiry seek the road to reality in their conceptions of reality and in human personality.

III. THE ELEMENTS OF RELIGION.¹⁻¹⁷ Totem and other names.—(1) For the classification of the 'elements' of religion it is necessary to observe the psychological identity of all religions, including even totemism, and the general similarity of the psychological, the historical, and the other factors in their development. Especially significant is the close connexion between theistic religion and totemism and all other cults or religions which are not theistic. The explicitly theistic convictions, when they enter the history of religion, produce, as in the history of the individual, a genetic development of thought, and not a stage entirely unrelated to its predecessor; and this allows the conclusion that theistic religious experience is not to be entirely separated from other religious experience. The theistic convictions undoubtedly cause a profound development, and there is no doubt a reshaping of the world of beliefs and practices. But there is none the less a genetic relation between earlier and later stages, and, consequently, it does not appear that the ultimate reality which we call 'God' was isolated from the consciousness in which He had not before been explicitly present. That is to say, it is a development in the human consciousness which—however caused—is the fundamental fact, and this conclusion is of vital significance for all interpretation of religion, especially on the 'lower' levels (cf. §§ 16 [2], 24 [1]). Totem-groups naturally owe their unity to the implicit or explicit recognition of principles and ideas which make for unity. The

¹ Cf. p. 669^b, n. 1. It should be observed, therefore, that although it may be possible to see a certain continuity or sequence in data, it does not follow that there has been a simple development from any one of them to the next in the series.

² A theistic system is not a belief in God *plus* a system fitted to it, but an organic whole; cf. similarly the problem of the origin of totemism (§ 17), and of all else that can be regarded as a single unit.

¹ Although this division of the subject forms the real inductive starting-point, there must be preliminary ideas of method, classification, and so forth, otherwise (as can be seen from the conflicting results of the application of the 'comparative method') the evidence cannot be critically handled (see § 16 [3]). Here, only the merest outline can be represented, and further reference must be made to the works of Tylor, Frazer, Toy, Durkheim, etc., and, for §§ 17 ff. in particular, to the *arts HOLINESS, TABU*.

totem is the emblem, badge, symbol, or link; it is more than the mere animal or plant species, and its value lies in the meaning that it has for the group, in the system of beliefs and practices of which it is the centre. Though it has been denied that totemism is a religion, it is undeniably on the border-line, and there are variations such that, in Samoa, *e.g.*, the totems are almost, if not quite, gods.¹ No single element by itself is a proof of totemism; *e.g.*, animal names alone have no weight. The point lies in the context or system of thought, even as any given name compounded with Baal or Nebo does not necessarily prove the existence of a contemporary belief in those gods.

The suggestion that totemism arose through a literal interpretation of metaphorical, symbolical, or similar names, or that an animal or plant nickname was the origin, does not explain the organic system of cult. This suggestion emphasizes 'the usual savage superstition which places all folk in mystic rapport with the object from which their names are derived.'² But it begs the question; for a name could originate totemism only provided we grant the psychological and other factors which await explanation—viz. the meaning of 'superstition,' 'mystic,' and 'rapport.' What is important, however, is the assumption that a system can come into existence at a bound, since the fact of its being a system, and the presence of many gradations of totemism, as also the close parallelism between it and other cults, tell against the view that it can be explained by pointing merely to a particular element (*viz.* the name) and not by regarding the cult as an organic whole.³

(2) In fact the names of totems usually function similarly to those in other types of cults. For (a) not only will a particular stock of names often be reserved for the members of a totem-group, but (b) sometimes the names refer to the totem, as truly as compounds of Jah(weh), Baal, or Nebo indicate some sort of relationship between the god and the people.⁴ Sometimes it is a solemn duty to keep the names in use, for otherwise the totem will feel neglected and be angry. Sometimes a native on lying down or rising up will murmur the name of his totem, which is believed to be helpful only to those who belong to the particular group. Again, the name of a totem must not be spoken heedlessly, or it is referred to indirectly; thus the Warramunga of Australia tell of a huge world-snake which is not called by its proper name, because to mention it too often would cause them to lose control over it, and the reptile would come and eat them up.

(3) Characteristic everywhere are not merely the associations of the name of revered or sacred objects, and what they betoken or presage (*nomen, omen*), but also the claims involved when names are conferred or assumed ('Name spells claim'). The name indicates the known, and there is a common tendency to identify the name with that for which it stands, to connect the name and the nature of a thing. So it is that change of name often suggested or indicated change of nature or personality, or a new stage in the history of an

individual or a place.¹ As indicating a claim, the name is the written symbol or mark representative of the owner. A name will be kept secret lest an enemy by knowing it should have power over the holder of it; and the greater the owner, the more potent the name and the greater the need for care. To name the dead is to bring them vividly before one; hence the names of venerated and sacred beings, as also of harmful and evil ones, may not be used freely. The customs are psychologically quite intelligible. Consequently, the names that have valued or treasured associations, that mean much, are neither to be ignored or forgotten nor used carelessly and heedlessly. Two transitions are possible: the one is to keep the name secret, to avoid it, to replace it by another which will not have the old psychical force; in this way it falls out of use, or it is retained among the few, or it has a magical value—it is self-effective, automatic; the other makes the name too familiar and robs it of its earlier worth. Two stages can therefore be recognized—one where a name is effective on psychological grounds, as being part of a system of interconnected feelings and ideas, and the other where it is becoming or has become isolated and barren, with little or none of the former psychological, social, and intellectual significance. The latter stage is evidently ineffective and impermanent, whereas the former must have recurred from time to time; for, whether the name stands for what is visible (*e.g.*, the totem species) or for the invisible (the distant, the dead, a spiritual deity, etc.), it has an effective value only because of the appropriate feelings or ideas which it evokes. The first stage, then, is essential for all progressive development.

(4) Tabus against looking at or touching things are rarely applicable to totems, because the species is generally common; but they apply to the objects or vessels used in the totem cult. Everywhere there are sacred objects which may not be heedlessly gazed at or handled. Just as a sacred name calls up that to which it refers (*i.e.* typically, the reality itself, as it is apprehended), so objects are sacred and effective because of the associations. Thus, relics, bones of saints, etc., are used for magic; and parts of a man's body, or even his shadow or footprint, are regarded as essentially himself.² If, on the one hand, an object may lose its sanctity (*cf.* the vicissitudes of the bull-roarer and of sacred masks), on the other hand, an object that is treated as sacred appears as an organic part of an entire rite, cult, or system.

18. The sacred relationship.—(1) Psychologically, the sacredness of things (names, visible objects, etc.) is akin to the natural delicacy where one's treasured souvenirs and memories are concerned, where one's inmost personality is felt to be at stake, and where there are ideas which are neither to be obliterated or forgotten nor treated with familiarity and tactlessness. The fear of gazing heedlessly upon sacred objects applies also to particular individuals (priests, kings) who must be kept in seclusion because of the tabus.³ The OT, in turn, illustrates the real danger felt in being in the presence of a divine being. The psychological foundation throughout is similar; there are some things which are too closely bound up with ideas of ultimate reality and personality to be lightly handled, or even to be treated objectively—the thought and the reality fuse into one.⁴ That 'the pure in heart shall see God' (*cf.* Lk 5⁸) is

¹ Hence the idea of changing a name in order to change the personality finds a concrete parallel in the custom of changing clothes in times of crises (see W. E. Hahiday, *BSA* xvi. [1909-10] 212 ff.). The tendency noted above finds its parallel in the higher (conceptual) development of thought when thought or description is confused with actual existence or reality.

² *Cf.* the evidence collected by Frazer, *GB³*, pt. i., *The Magic Art*, i. 174 ff.; pt. ii., *Taboo and the Perils of the Soul*, London, 1911, pp. 77 ff., 258 ff.

³ *Cf.* *GB³*, pt. ii., *Taboo*, chs. i., iv. § 1.

⁴ *Cf.* Emerson, in his essay on Intellect: 'I would put myself in the attitude to look in the eye an abstract truth, and I cannot. I blench and withdraw on this side and on that. I seem to know what he meant who said, No man can see God face to face and live.'

¹ This is only to be expected, for, where we find the earliest stage of what we agree to call 'religion' (or 'ethics,' § 13 [1]), the distinctive features will appear in an environment which admitted of the development, and, as is the case wherever the necessity for a new concept appears, there must be a combination of the old and the distinctively new.

² Andrew Lang, in *EB¹¹* xxvii. 80, *Secret of the Totem*, London, 1905, pp. 121, 125.

³ This reliance upon single elements and not upon their context or their system is a common cause of fallacious argument, when the comparative method is uncritically employed. *Cf.* also the erroneous view that theism originates in the super-addition of the belief in a God (above, p. 672n. 2). For the 'birth' of systems of the sudden rise of sikon cults (*e.g.*, A. J. B. Wace, *Annals of Archaeology and Anthropology*, Liverpool, 1910, iii. 22 ff.), of new religious cults in British New Guinea (E. W. P. Chinnery and A. C. Haddon, *HJ* xv. [1917] 448 ff.), of new castes in India (with an entire caste system), of cults of deified men in India and elsewhere, and the strange cult around the ideas of Fatherland, Liberty, and Reason at the French Revolution (Durkheim, p. 214).

⁴ For (a) and (b) respectively see Frazer, *Totemism and Exogamy*, ii. 343, 473, iii. 13, 329, 360, and i. 53 f., ii. 473 f., iii. 34 f., 77, 101 f., 272.

the complement of the fear of an Isaiah (Is 6⁵), and the convictions herein involved are quite inexplicable unless they were based upon certain intense experiences and endorsed throughout the ages by those who had similar types of experience and could realize their validity. The evidence naturally varies in significance and spirituality. From totemism and upwards purificatory ceremonies on all solemn occasions abound. Among rudimentary and simple people the practices are extraordinarily concrete: fire, water, abrasion, scarification, change of clothing, etc., prepare the individual for the sacred ceremony. So, too, guilt is treated as something physical or material, to be washed away, removed by an emetic, or dispatched upon a scapegoat. The data represent a pre-ethical rather than an ethical stage. What we call 'ethical' was not born in a day (cf. p. 673ⁿ, n. 1); and practices which were purely external could have no psychical or subjective efficacy. Ritual can be accompanied by its appropriate psychical, moral, or spiritual accompaniment, and can readily lose it; and the difference is between an apparently magical (or rather magico-religious) rite and a purely magical one (§ 15 [3]). Of the two, the former and not the latter can permit progressive development.¹ The apparent edification, the psychical transitions from feelings of fear, grief, or unworthiness to those of relief, forgiveness, and the like, and the persistence of the rites in practical social groups are incomprehensible unless the data are treated as entirely *bona fide* and rational within their limits. It is to be noticed that the purificatory and similar ceremonies are for practical purposes, when great values are at stake, and the welfare of the people is concerned. They have the effect of producing or strengthening a certain psychical state, a desired relationship; and, in point of fact, genuine feelings of confidence and security recur even among rudimentary religions in the midst of strange and apparently quite irrational tabus.

(2) Even the totem is supposed to help and succour the clansmen who respect it, and the individual totems or spirit-guardians are ready to strengthen those who own them. The help may be of a very general character, or the beliefs may be shaped by the attributes of the object: thus the eagle gives keen sight, and the bear gives strength—but the bear is slow and clumsy, and hence the protégé may suffer! The central object of the religious feelings and beliefs will thus stimulate thought; hence it is possible to consider separately (a) its objective nature, character, reputation (whether totem, deified ancestor, etc.), and (b) the feelings, needs, and psychical nature of the worshipper (see § 31 [4]). Throughout there is a reliance upon some explicit source or centre of definite or indefinite efficacy; and it is not unrelated to the perfectly vague and implicit reliance upon 'something' in the universe which will respond to the flung-out curse, the earnest adjuration, and the resort to lot or divination (cf. § 29 [1]). Whether the individual has explicit convictions or no, and however they may be shaped, the underlying ideas are essentially similar in spite of their profoundly different shapes and their effects upon his intellectual development.

(3) Especially noteworthy is the intuitive idea of reciprocal relationship; the evidence is strong enough to suggest the *do ut des* formula of sacrifice (*q.v.*). Yet the idea of a mutual undertaking which may seem a veritable bargaining (cf. in the *Rigveda*; also Jacob's vow [Gn 28^{20ff.}]) is not necessarily so crude and unethical as it may appear (cf. the ideas in the Deuteronomic threats and rewards—*e.g.*, Dt 28 f.). But the conception of a god as unswerving and unalterable is the parting of the ways for religion and for magic. There are convictions of a certain uniformity, and a free response (cf. Mt 7⁷), which make the promises of religion a free gift to 'everyone that thirsteth' (Is 55¹), and a reward for importunity (Lk 11^{9ff.}). In striking contrast to the tendencies of the tabu to maintain a gulf between the sacred

and the profane is the respectful friendliness, or the easy, confident, and even naive behaviour, as reflected, *e.g.*, in popular stories in the OT (Abraham [Gn 15⁸], Moses [Ex 3¹²], Gideon [Jg 6¹⁷, 22, 36f., 39], Hezekiah [2 K 20⁸]). The child-like attitude in all its phases—good and bad—has parallels in personal religion and mysticism, and stands in the strongest contrast to the attitudes of subservience, humility, resignation, and submissive faith. So, in the OT itself, quite opposed to the spirit of the popular narratives in question is the Deuteronomic teaching which sternly forbids man to 'tempt' the Deity (*i.e.* put Him to the test).¹ The data are exceedingly instructive, especially when viewed in their historical development, because (a) the attitude to all that is delicate, intimate, and sacred readily passes from naive, free innocence to an attitude that is blameworthy—in this manner a relationship with one who is felt to be psychically superior can pass through familiarity to one with loss of respect; and (b) the institutional religion, like all organized thought, has commonly to restrain a certain individualism which from being markedly individualistic becomes extreme, antinomian, and irreligious.²

19. Ideas of imitation and identification.—(1) Signs, symbols, and tatu-marks can be used, like names, to indicate relationship, claim, or possession; and they are effective, provided they have an appropriate meaning and call up the required feelings and ideas. The symbol which stands for the totem, spirit, or god may be carved upon weapons, boundary-stones, utensils, etc., to signify the presence of a protective being, to warn off the evil-doer, and so forth. The symbol may even be cut or painted upon individuals, or the latter may wear skins, helmets, etc., to represent or symbolize the totem, spirit-guardian, or other protective power. Whether we find a realistic imitation or a symbol more or less conventional or no longer intelligible, the individual is very closely associated with a being who, however superior, stands in an intimate personal relationship with him. In war, *e.g.*, the wooden images of dead ancestors may be invoked or taken into the fight; and there may be an appeal to old heroes or to war-gods (who are sometimes deified heroes). But, when the warrior in some way imitates his protective genius, there is a virtual identity—the warrior does not fight *for* his god, but *with* or rather *as* his god. Sometimes the totem is painted on the dead, or otherwise associated with the corpse—a fitting climax when the individual and his totem are supposed to be of the same 'substance,' and the man is born of the totem stock. Even in totemism there is a certain identity of nature of man and his totem, together with the realization of a difference, and this co-existing 'immanence' and 'transcendence' faithfully reflects feelings of the paradoxical relationship between what we call the 'human' and the 'sacred' or 'divine.'

(2) The various imitative practices occur in commemorative ceremonies (*e.g.*, where dead ancestors are supposed to be present); but of far greater interest are those which represent needs or wants and their fulfilment. There are mimetic ceremonies to effect cures, to bring rain, to further the

¹ Cf. Driver's note on Dt 6¹⁶ in ICC.

² Psychologically, and apart from any theory of ultimate realities, it is significant that human personality develops, in religion, as in human life, where great values are concerned. A path has to be found between (a) utter familiarity, with the loss of the earlier recognition of one's own psychical inferiority, and (b) feelings of aloofness, remoteness, and of the gulf between the self and another self; see § 31 (3). Just as sacred objects are to be named, seen, or handled only with respect, so in religion there is an experience of a relationship which has to be treated similarly, and, although the relationship has human analogies, yet it is characteristically more vital than any in ordinary human life.

¹ Intermediate steps in the advance are illustrated when the rites are explicitly associated with appropriate sentiments; cf. He 10²², and the Syriac story of the woman who in the ceremonial washing cleansed her thoughts also (F. C. Burkitt, *Euphemia and the Goth*, London, 1913, p. 156).

increase of edible animal and plant totems, etc. In these cases (especially in Central Australia) the groups or the headmen, by virtue of their relationship with the totem, are supposed to be able to exercise some control over it for their own purposes.¹ The practices are noteworthy for the solemnity, self-denial, and restraint which accompany them and forbid us to style them purely magical. Elsewhere it is not uncommon for groups or individuals to be ascribed power and authority over some one department of nature (rain, winds, crops, etc.), and the general principle implied is twofold: A can control B because of some relationship (resemblance, etc.) between them; or, to control B, or gain B's help, A must first enter into some close relationship.² The manifold beliefs and practices turn upon ideas of likeness, resemblance, and identity; and the main lines of development are: (a) a testing and verifying of the ideas, (b) the choice, on the one side, of special individuals, and the recognition, on the other, of special sources of activity such that, instead of a rain-totem group, we find (a) *individuals* credited with the power of controlling the rain, and (β) spirits and gods, either of rain or of less restricted powers (see § 25).

(3) Throughout, what is fundamental is the imitation, whether of the venerated being, the particular need, or the activity required. Now, the idea of imitating the holiness or perfection of a deity (e.g., Mt 5⁴⁸) could not spring up suddenly; the desire for a spiritual, ethical, and inward resemblance cannot be separated psychologically from the rudimentary rites where men, *externally at least*, in some way assimilate themselves to their sacred beings, and not rarely with every sign of earnestness and solemnity. In this psychical state there is a communion, approaching identity, with the object of the profoundest ideas; there is a typical desire to reach the state and to profit from it. All imitation gives a certain reality to the conception entertained of the person who is being represented. Moreover, intense ideas and desires will tend to realize themselves in appropriate gestures and activities.³ Hence the apparently magical representation of rainfall is not unintelligible from a psychological point of view, and it is significant that some of the ceremonies typically involve attitudes which are characteristic of religion. It is true that there is in religion a characteristic submission (not necessarily an attitude of passivity) to the supremacy of the divine will—'Thy will be done.' On the other hand, in magic 'there is too much "My will be done" about it all.'⁴ But there is the third attitude, naive and confident, and for this the formula would be 'Our will be done.' This corresponds to the group-unity where men and their sacred beings form part of the same social system, and it is taken as a matter of course that the gods and men perform one another's will (cf. § 7 [2]). Moreover, logically speaking, this is a primary attitude and one that tends naturally to become that in which the individual acts as though he had only to control, coerce, or set in motion the required activities. The first attitude ('Thy will') is certainly not primary; and, while it is easy to understand the transition from an implicit 'Our will' to 'My will,' it is impossible to explain, psychologically and logically, any transition if the magical attitude is original. This is vital for all conceptions of religion; the apprehension of a qualitative difference must be taken as primary and fundamental. All human activity implies that there are processes

in the universe with which man is co-operating; man in the course of development tests and purges his more unconscious presuppositions. The religious conception of reality involves the recognition of some ultimate interconnexion between the human and the divine, between man and the Supreme Power of the universe.¹ Even the crude imitative rites imply something worthy of imitation with self-denial, sacrifice, etc.; and the practices, together with the vague curse and the lofty prayer, imply a certain belief in their efficacy. To achieve his ends, man must make the necessary preparation and use the necessary factors; hence comes the need of concentration, discipline, self-control, and self-sacrifice, and the progress of thought consists in the better knowledge of what is indispensable if effective results are required (see, further, § 29). Here the efficacy of prayer and sacrifice comes under consideration.

20. *Sacrifice and prayer.*—(1) The data of sacrifice undoubtedly include some gross ideas of mere bargaining, and of cajoling and feeding the gods; they typically point to a relationship for utilitarian purposes, and thus the sacrifice appears as a preliminary gift in order to win the favour of the gods, or as a thank-offering afterwards. But, in its more suggestive form, the sacrifice is communal—it is a ceremony in which members of a unit participate, one which creates between them, for a time at least, a stronger bond of connexion than ties of blood.² In such a unit or bond the profoundest ideas are realized, and men and their sacred beings are brought into the closest relationship. The ceremony is psychically impressive, it is an intensifying and strengthening experience; and the state typically involves feelings of union and solidarity, and of communion or even identity with the sacred being. While sacrifice is felt to be effective, conversely, effective results are to be obtained by sacrifice and self-sacrifice. Hence extravagant asceticism, torture, and extraordinary self-mutilation (the last even before a fight [GB³, pt. ii., *Taboo*, p. 160 ff.]) can produce a state of exaltation, infel strength, and the conviction that the desired help *must* be forthcoming. Indeed, violent measures may be adopted in times of crisis or distress; and gloomy rites can reappear or be more intense in order to bring help or to stave off disaster or decay. Healthy asceticism, sacrifice, and self-denial—all psychically and physically beneficial—can thus take perverse forms in order to ensure, or virtually to *compel*, the benefits that are sought. That man by these measures can achieve his ends is in keeping with what proves to be a common presupposition: that the efficacy of 'nature' and the course of 'natural events,' in general, are connected with the behaviour of men, and particularly of such powerful and representative individuals as semi-divine kings and priests (cf. § 25 [3], and art. BRĀHMANISM, vol. ii. p. 800). Sacrifice has as its central idea the implicit or explicit assumption that there is some connexion between human behaviour and natural causation, whether directly or indirectly (e.g., through a deity), and such an assumption goes behind the usual differentiation of man and nature, human and divine. Hence, the distinctively religious and the obviously magical aspects are often closely akin, although their significance for the development of thought is essentially different.

(2) Similarly as regards prayer.³ The spell or

¹ The fact that we distinguish human and divine (and other antitheses—e.g., man and animal) means, not that the two are absolutely distinct and unrelated, but that we realize a distinction between the constituents of some larger realm.

² For the latter cf. A. Barth, *Religions of India*, p. 274, and see, in general, W. R. Smith, *Rel. Sem.*²

³ See especially L. K. Farnell, *The Evolution of Religion*, London, 1906, pp. 163-281; F. B. Jevons, *An Introd. to the*

² Cf. therefore the semi-magical character of the symbolical toilet or dress of old Oriental priests and kings, etc.

³ See art. MAGIC, and cf. G. F. Stout, *A Manual of Psychology*³, London, 1913, pp. 166, 392 f., 602 f.

⁴ Marett, *Anthropology*, p. 208.

charm involves ideas of self-sufficiency and compulsion, and of a mechanism which has only to be set working, whereas the prayer primarily means a call upon the inner self, and is typically a communion with or an appeal to a Superior Power. But from the explicit prayer to a Heavenly Father for the daily bread there cannot be isolated the deeply-felt earnest wish, as when the Gold Coast negro cries: 'Heaven! grant that I may have something to eat this day.' On the one side is the psychical nature of man, whose appeal is formulated to a sacred being who either is the centre of a systematized body of thought or is perfectly vague and unsystematized; and on the other side is the question of the ultimate realities—whether the prayer or wish has any effect save upon the man himself, his courage, confidence, etc., and whether a Supreme Power pays heed to the appeal, be it systematized or vague. Moreover, the earnest prayer or wish cannot be severed from the earnest behaviour which requires or manifests needs to be satisfied. That prayer easily decays and becomes the spell, charm, or magical formula is well known in the history of religion; the efficacy is then thought to lie in the expression itself, as apart from the psychical state which is typical of prayer. This primary psychical aspect of prayer is fundamental, and it is instructive to observe among rudimentary peoples indications of it in practices of an apparently magical character.¹ Under the stress of emotion men help out their ideas with gestures, and there is always a tendency for feelings and ideas to realize themselves in action; children commonly 'play' at that which impresses them (see p. 675, n. 3). So it is that upon the lower levels of mankind there are mimetic rites for explicit needs, whereas on the higher levels there will be explicit prayers, and also a recognition of explicit powers to whom an appeal can be made. But all earnest, sincere activity is purposive, implying wants and aims, and the growth of knowledge and the development of religion are marked by better conceptions of the necessary factors and means to achieve success. Hence we can scarcely sever genuine purposive activity and a prayer for some effective activity.

Sooner or later the need is felt of some theory of reality to connect, rationally, human activity and the processes at work in the universe. The vicissitudes of thought—the periods of scepticism and of credulity, of doubt and of faith—do not affect the underlying realities, whatever they may prove to be; and what is implied in religious, magical, scientific, and philosophical conceptions points, not to many different realities, but to different and even contradictory apprehensions of one reality or system of realities. It is because the religious conceptions claim to be the nearest to truth, and because the consequences of an infelt conviction are so potent, that serious differences between religious and non-religious conceptions are feared or resented; and indeed the history of religion from the rudest types upwards proves that these differences are vital for the progressive development of life and thought (see § 25 f.).

21. Ideas of soul and spirit.—(1) A survey of the whole field of religion brings to light two fundamental convictions or, rather, presuppositions: (a) there are ideas of agency, causation, activity, or function in the universe, such that man can enter into relationship with the effective processes and utilize them; (b) man is more than the

sensible body; there is a part which is separable, which can leave the body temporarily (a common explanation of dreams, fainting, illness), is not annihilated at death, may go far away or remain in the old haunts, or may enter another body, or be reborn.¹ These ideas overlap: the ideas of a soul or of some non-bodily part of man are extended and refer to the life after death and the unseen; and the ideas of power or causation are connected with powerful individuals (especially dead ancestors and heroes), saints, spirits, deities, and powers of nature.

But the ideas are never consistent, nor are the categories distinct. Life, feeling, consciousness, mind, spirit, and soul are confused; and physiological, psychological, aesthetic, theological, and other points of view are unreflectively mingled. The progress of differentiation marks the progress of observation and classification. The 'spiritual' part of man may be thought of as a double, material, minute, and ethereal, or it may be identified with certain parts or constituents of the body. Modern Western thought, with its attempt to distinguish the material from the non-material, goes beyond the common conception of body and spirit as a grosser and a finer material.² But in turn is scarcely consistent when it distinguishes at the same time mind and matter, living and non-living, organic and inorganic. Consequently, it is impossible to determine clearly the ideas of those whose thought is not the same as ours, the more especially as our modern categories are confused and not co-ordinated. It is sufficient to observe that everywhere it is possible to distinguish systematically some A and non-A (e.g., organic and inorganic), but every separation of an A and a B (e.g., the living and the dead, body and mind) invariably raises the question whether the two are rightly kept apart or are to be related and regarded as different forms of some one underlying substance.³

(2) Ideas of soul and spirit are not to be treated as 'survivals,' though special beliefs and practices may be traced historically (§ 4 [2]). There is a tendency to accept the ideas and to justify them—e.g., by reference to dreams, of which, however, only those will be cited which are actually in harmony with the predisposition. Much also depends on the extent of the individual's experience and knowledge by which he is able to discriminate between the waking hours and the dreams, or any unusual subjective experiences (e.g., 'ghosts') which may seem to have objective reality. The ordinary familiar theories of the 'origin' of the ideas do not account for the great social and intellectual systems with which they are organically interwoven, and which could not in any case be based upon isolated ideas or dream-experiences (cf. Durkheim, pp. 56-60, 268). Moreover, no theory of the spiritual world can be considered satisfactory which applies solely to a particular age, land, or sect; and a careful distinction must always be drawn between the particular ideas under consideration and the common psychological aspects which indicate that the essential features of the ideas of soul and spirit are logically *a priori*.

(3) All the world over there are many words to denote a power manifested in special or general forms, material or other, whether in human, animal, or 'nature' phenomena.⁴ The Melanesian term *mana* (q.v.) is often used typically by modern writers; but, while this more especially restricts the power to one originally manifested in human activity, other terms are not necessarily limited in this way (cf. our use of [Holy] Spirit and Power). The words are characteristically applied (a) to what has an emotional effect, exciting surprise, wonder, marvel, admiration, reverence, and awe;

¹ As is quite intelligible, it is especially when an individual has been powerful or famous that the continuance of his presence and effectiveness is commonly and quite spontaneously assumed.

² Cf. mediaeval ideas of a more or less material soul (Telesio, Bacon); cf. also the Jainist views above, vol. vii. p. 468.

³ Cf. the controversies between the dualistic and monistic systems, and the relation between polytheism and monotheism.

⁴ See especially A. E. Crawley, *The Idea of the Soul*, London, 1909; E. S. Hartland, *Ritual and Belief*, do. 1914, pp. 36-100; I. King, *The Development of Religion*, New York, 1910, ch. vi.; Marett, *Threshold of Religion*, pp. 13, 120 ff.; Durkheim, p. 192 ff.; J. E. Harrison, *Themis*, chs. iii. and iv.

Study of Comp. Rel., New York, 1908, pp. 139-174; R. R. Marett, *The Threshold of Religion*, London, 1914, p. 58 f.

¹ E.g., in one case a mimetic rite is employed when a woman desires a child and a father of a family is called in to offer up a prayer (Babar Archipelago). But, while this is magico-religious rather than magic, elsewhere we hear of a similar rite but no explicit prayer or appeal is recorded (*GE*³, pt. i., *The Magic Art*, i. 72; Hartland, *Primitive Paternity*, i. 139 ff.). To conclude that whether the latter is really pure magic or not depends on the record of the observer is extremely unsatisfactory. For all critical inquiry the issue concerns the psychical state (which determines whether we are to style the evidence magical or not) and our view of the ultimate realities—in other words, (1) what is the rite in the eyes of God? and (2) how much efficacy is there in it, according to our own conception of the universe (cf. §§ 25 [3], 32 [4])?

and (b) to the unusual, impressive, striking, and inexplicable examples of all kinds of causation. Religious, non-religious, and magical aspects are interwoven; and everywhere the tendency is to differentiations (religious, moral, æsthetic, physical) which depend upon the current tradition, knowledge, and stock of categories. The psychological aspect of this 'power' is more primary than the logical, and this is illustrated, e.g., when a real (psychological) reverence for the Sabbath leads to tabus wherein the (logical) question enters whether such-and-such an act does or does not break the Sabbath.¹ There is an *a priori* readiness to recognize a mysterious or profound cause or activity outside the run of ordinary experience; increase of knowledge may seriously disturb the beliefs, by making the activities 'natural,' but a distinction must be drawn between the psychological tendencies and the particular beliefs which prevail. Hence, theories of naturism and the like do not really explain origins, but only show how the religious ideas could be engendered and brought to the birth. In like manner, theories of the transition from polytheism to monotheism, or (as can be suggested in the case of India) to pantheism, overlook the important fact that the recognition of a number of phenomena which can be classed together and given one name, because they are similar in some one respect (e.g., as being gods or spirits), logically implies an apprehension of some underlying undifferentiated unity. It seems impossible for the observer to draw any line objectively, save with the help of some prior presuppositions, and consequently it is necessary to admit the prevalent and normal apprehension of some 'power,' or the like, the nature or quality of which is realized only when it is identified, and that on the basis of current categories and in accordance with current thought—although the very act of categorizing or naming shapes the apprehension and interpretation and gives it a form. And, while continued comparison of the data of religion tends to weaken the barriers between the manifold manifestations of *mana*, etc., it is solely through the categories, differentiations, and distinctions that the progress of knowledge is possible, even though the underlying unity be ignored from time to time.²

22. Life and death.—Among other ideas which are presupposed and which rule and control human activity, conscious and unconscious, is especially that of the persistence or continuity of the individual. No rational description can be given of oneself or of others without implying it, even though the arguments which are conclusive proofs of existence after death to one man may make no impression on another whose personal experience and body of thought are different. But the conviction, instead of being distinctively 'religious,' is one taken up by religion, regulated by it, and sometimes even abused. The firm conviction that death is merely the gateway into another realm, or that the individual cannot escape some sort of continuity of existence, is not in itself religious; it has justified barbaric cruelty and irrational practices, and in India religion is devoted partly to remedying the evils of rebirth. The wide prevalence of initiation or of baptism ceremonies illustrates the tendency to prepare the individual

for a life of which bodily existence is only the prelude. Here the crucial point is not death, but the ceremony during his lifetime when the individual becomes an integral part of an enduring body—the group, brotherhood, society, church.¹ The persistence of the individual is felt to be in some way ensured by becoming part of a larger, tangible, or intelligible unit. Who dies if his country lives? Now, death is the occasion of feelings of grief and distress (significantly rare, however, among the dying), of peace and sublimity, of doubt and uncertainty. Moreover, the life after death is also a matter of perfect assurance (allowing, among rudimentary and barbaric peoples, horrible sacrifice and callousness), and even an astonishing self-complacency (as being one of the 'elect,' and so forth). Again, the 'next' life has often been regarded as essentially a replica of the present, so that even gods and men are thought to enjoy only a limited existence and not an eternal one. Thus, everywhere psychological and logical factors intermingle in the history of the ideas; but those which represent the apprehension of a *qualitatively* different state are in every respect more vital than those which view the other world as a mere 'super'-world. Indeed, the fact of some qualitative difference alone explains the analogical character of the results of the intuitions, experiences, and feelings. It would be impossible to attempt a rational description of man unless there were fundamental psychical facts which transcend the ordinary conceptions of 'this' world. Conceptions of 'another' or the 'next' world are inexplicable unless man is already in touch with a larger existence, and unless 'this' world, as he understands and describes it, is the empirical description of some part, phase, or aspect of a profounder reality the full comprehension of which transcends human mental processes.²

23. Synopsis of the evidence.—(1) It is a common belief that the 'soul' (vital principle, etc.) can be, temporarily at least, separable from the body; it can depart when a man dreams or is ill; it can be lost, enticed, or stolen (*GB*³, pt. ii., *Taboo*, ch. ii.). It can also be transferred; hence the common idea of the 'external soul,' where a man believes himself to be secure as long as the 'soul' is hidden or guarded in some safe, remote, or unknown spot (*GB*³, pt. vii., *Eldest the Beautiful*, ii. 95-278). The idea is akin (a) to the belief that one's name may be written, or a piece of one's person (e.g., hair) or property left, in some holy place as an essential part of oneself and for one's welfare, (b) to the conviction (on a higher level of thought) that the soul can be entrusted to a saint or deity or be in his care (see a curious form of this in 1 S 25²⁸). Moreover, a man's life may be intimately connected with a tree, which becomes an 'index' or 'sign' of life, indicating his strength, weakness, or death; or, again, the weakling may be symbolically united with a tree to gain thereby something of its strength and vigour.

(2) Trees, like animals, plants, and even inanimate objects, may be ascribed a 'soul'; deities may eat the 'spiritual' part of the food-offerings presented to them, and utensils may be broken ('killed') in order that their 'soul' may accompany the dead. Animate and inanimate objects can contain a man's 'external' soul or his 'twin' soul; they can also be the vehicle of some power or spirit (see art. FETTERISM). Both among men and among inanimate objects the 'spirit' can be ceremonially transferred; and it is necessary to distinguish between any object (human, etc.) viewed (a) as a vehicle, a representative of some power or spirit, or (b) as the actual power itself.³ It is

¹ The practice of associating oneself with that which outlives one is illustrated by the means whereby men endeavour to make their name 'live' (so notably in ancient Oriental thought), by building enduring works (e.g., a pyramid), by inscribing their name upon lasting objects, by beneficent and other deeds, which will not soon be forgotten, and so forth.

² The point of view (explicit or implicit) according to which (bodily) life is only 'part' of a larger existence represents a psychological and logical *suppositio*, 'unit' or 'universe of discourse' more comprehensive than that which confines itself only to 'this' world, and refuses to go beyond it consciously. Every description of 'this' world at length shades off into a theoretical account which goes far beyond actual knowledge, involves metaphysical problems, and leaves out the prime fact—the development of the individual who has become conscious of the world.

³ For the transference cf. *FL* vii. [1897] 325 ff.; J. H. Breasted, *Anc. Records of Egypt*, Chicago, 1906-07, ii. 179, n. c.; Hartland, *Ritual and Belief*, p. 55.

¹ The Dakota Indians, who believe that the mysterious whirlwind must be endowed with *wakonda*, proceed to associate with it analogous phenomena—e.g., the fluttering moth, and the buffalo bull pawing the earth and throwing up dust in the air (I. King, pp. 139 f., 161).

² Differentiation tends to obscure the logical unity which is more obvious (a) on rudimentary levels of society, (b) in particular psychical states (concentration, mysticism, etc.), and (c) as a result of any stringent comparison of the manifestations; but it does not follow that there was or is in existence an absolutely undifferentiated unity (cf. similarly p. 666, n. 3).

an especially common belief that the vital essence of some powerful being can be found in anything belonging to or associated with him; hence the virtue of relics, the dust from the tombs of saints, etc. Human life can be vitally bound up with animals, trees, fire, and inanimate objects, and the dead can reappear in another human form (whether in the family or not) or in animal shape. But amid all these variations it is to be observed that, while the fetish tends to be of private and temporary value, the idol is generally the centre of a more permanent cult; and, while the spirit-guardian represents a relatively stable but individual cult, the totem is rather the affair of the clan. The question of the stability and clientele of the sacred object is always important for the body of beliefs and practices involved. A sacred object may be shared by father and son, by mother and daughter, or by the whole family; it may be inherited, accepted by other families, or imposed upon them. There are many gradations between the purely individual cult of a spirit-guardian and the cult accepted by a confederation of clans or a whole people, between the most ephemeral of cults (cf. art. MOMENTARY GODS) and those which are a fundamental part of a people's life and thought.

(3) Thus, the ideas of a 'spiritual' relationship between the individual and something outside him are extremely variable, and everything depends upon the social and logical co-ordination. Throughout, the ideas tend to overrule the crudely physical or literal aspects. The beliefs are usually far from simple, and the common ideas of rebirth and re-incarnation make it difficult to distinguish (a) the individual who will be reborn, and (b) the maintenance of his own individuality, which now seems to be partially admitted and now seems to be entirely merged with the family or group. Sometimes the dead are supposed to rejoin some sacred stock or nucleus, as it were; and from birth to death the man is periodically in touch with the 'essence' from which he came and to which he will return.¹ A great deal of evidence, it is true, might seem to support the theory of a primitive ignorance of paternity.² On this theory there was a primitive belief that every birth was due to supernatural causes; every child was a 'spirit child.' The theory implies the existence of an appropriate body of thought connected with it and outweighing the purely physiological considerations. Now, the OT illustrates the explicit conviction that the Deity can restrain child-bearing or grant it (e.g., Gn 15³ 16² 10 etc.), i.e. that the 'supernatural' considerations are stronger than the 'natural.' This co-existence is in harmony with the evidence elsewhere among rudimentary peoples.³ In fact, rites of puberty, initiation, marriage, and adoption indicate not only that certain physical aspects are not unknown, but that 'ideas' implicitly predominate. So, also, the collective or social feeling which treats questions of parentage as secondary, provided the child is one of the group, does not necessarily point to ignorance of paternity, but to the fundamental importance of the ideas which are implied in the social life. The theory of spiritual conception clearly assumes the predominance of regulating beliefs or convictions, but is needlessly hampered by the inference that the physiological facts were not known.⁴ The evidence rather proves the significance of ideas which, on a higher level, become explicit and would be called 'spiritual'; and, if rudimentary man thus falls into line with the higher levels (cf., e.g., the OT), where the co-existence of physical and psychological ideas is at once obvious, it has to be added that the greater importance of the psychological aspects appears not only in the practices and beliefs relating to the dead, but even in totemism, where the totem and totem-clan may be said to be 'constituent' (cf. Durkheim, bk. ii. ch. viii.). Thus, even on the lower levels, the system of behaviour implies some system of ideas, which, however, has not yet become explicit, though we must describe it in such terms.⁴

(4) The ideas of soul and spirit are extremely complex, but they reduce themselves to a few fundamental principles: (a) there is no absolute individual—he is always bound up essentially with something outside himself; (b) he is constantly becoming conscious of a relation with something 'not himself,' stronger, vaster, more enduring—he is what one may call 'psychically incomplete,' a part of some larger psychical whole; (c) the difference between life and death, between 'this' world

and the 'other' or the 'next,' is not absolute, and the ideas concerning these depend essentially for their origin upon states of experience and their interpretation; (d) finally, while the ordinary facts of sympathy, interest, and enthusiasm indicate the ease with which limits of space and time are felt to be removed wherever deep personal feeling is aroused (viz. in reference to distant or past events, people, etc.), there is everywhere a network or pattern of particular beliefs and convictions, conventions and prejudices, categories and classifications, such that the particular character or expression of the underlying feelings is thereby shaped and guided. There is an (logically) *a priori* feeling of kinship and oneness with something of which one is a part; it is ready to be evoked and shaped, but it is shaped, limited, and obscured—usually inconsistently—by current clan, social, tribal, and national circumstances, and by the current body of thought. These determine man's 'kinship' with the rest of mankind, with the 'lower' orders, or with nature.

24. Analysis of the concept 'God'.¹—(1) The widely different conceptions touching the validity and content of the concept 'God' prove the difficulty of making any statement that can be considered adequate. What is most prominent is the characteristic conviction (feeling, doctrine, etc.) of a profoundly vital personal relationship between the individual and an external transcendent Power (see § 18). But convictions of some relationship are wide-spread, and there is remarkable variation touching (a) that with which the individual is very intimately related, and (b) the ethical, social, intellectual, æsthetic, and other ideas involved. Moreover, although the data of mysticism, ecstasy, and the like, point to a psychical state of such intense subjective value that the experience will be felt to be 'divine,' yet the common recognition of a difference between 'true' and 'false' religion, prophetism, mysticism, etc., forces the necessity of distinguishing between the subjective and the objective value of every such experience. Besides, the individual who feels a close and intimate relationship with an external protective Power does not necessarily regard it as a deity. Here the experience and the interpretation may tend to interact, and the various beliefs in the reality of spirit-guardian, genius, ancestral spirit, or deity combine essentially similar types of experience with essential differences of form and expression, which are obviously of great importance for the history of religion. The ordinary facts associate the human and the divine in such a way that a criticism of them may seem almost blasphemous, and this in itself is an indication that the depths of human personality are concerned with the realities which the experiences involve.

(2) Moreover, the great concept involves ideas of causation, the manifestation of power, etc. The belief in a divine Power is typically in its effectiveness. This will commonly depend upon man's behaviour, and will entail ideas, not of magic (automatic or mechanical working, coercion, compulsion), but of religion (dependence, prayer, sacrifice, necessity of moral behaviour, etc.). While, on the one hand, the concept 'God' raises the question, What do men expect from their Deity?, on the other hand, all important functions, operations, and departments of life and nature will often be attributed to a patron or effective power.² Especially is this the case where men's personal needs and interests are concerned; this is true not merely of concrete activities (e.g., corn-goddesses), but also of those which we treat as abstractions, but which none the less could be regarded as evident causes, sources, etc. (e.g., deities of piety, concord, righteousness). In this way we also obtain the results of continued observation of operations, the classification and co-ordination of functions and processes, the deter-

¹ The religious and philosophical systems of India are especially important for the different ways in which essentially similar ideas are developed.

² For this see Hartland, *Primitive Paternity*, ch. i. 'Spiritual Conception,' ch. ii. 'Magical Practices'; Frazer, *Totemism and Exogamy*, iv. 61 ff., 155.

³ Cf., e.g., the corporeal and spiritual husbands of the Akamba women (Frazer, *Totemism and Exogamy*, ii. 423 ff., GB³, pt. i., *The Magic Art*, ii. 317 f.; see, further, *Totemism and Exogamy*, i. 536 f., 576, ii. 83, 90 ff.; iv. 287; Hartland, *Prim. Pat.* i. 56, ii. 275 f., 278 ff.; Spencer-Gillens, p. 265; Spencer-Gillens, p. 606; B. Spencer, *Native Tribes of the N. Territory of Australia*, London, 1914, p. 268 ff.; and especially B. Malinowski, *JRAI* xlv. (1916) 403 ff.

⁴ Cf. above, §§ 6, 9 (1). The complexity and inconsistency of ideas of life and soul, even among so rudimentary a people as the natives of Central Australia, emphasize the futility of any attempt to present a perfectly logical and co-ordinated picture of all their ideas. More important is the fact of their presence, the recurrence of similar types of problems on different levels (viz. in creationism, traducianism), and the necessity of a more methodological treatment (e.g., of co-ordinating logically all the evidence together with modern knowledge and convictions).

¹ See especially, among recent literature, W. E. Hocking, *The Meaning of God in Human Experience*, London, 1912.

² Cf. the Roman *indigitamenta* (q.v.); also the *genius* permeating and actuating all that is highly organized (see W. Warde Fowler, *Roman Ideas of Deity*, London, 1914, p. 17 ff.).

mination of classes and categories, and the arrangement of the contents of the universe. By the side of this rudimentary 'logical' process is the more psychological tendency to respect, admire, and venerate significant operations and organizations in the abstract, or the concrete objects or persons associated with or representative of them (cf. the Navy, Army, Church, etc.). The psychological aspect is also illustrated in the attitude to those who 'know' or 'do' (cf. the derivations of 'wizard' and 'fetish'). Individuals of unusual personality or ability are outside the normal, and, as frequently seen in India, tend to be regarded as more or less divine. The fusion of psychological and quasi-logical factors (potent and therefore divine, divine and therefore potent) has complicated the history of men's conceptions of the Deity. On the one hand, the attribution of deity to operations and processes of nature readily explains polytheistic features (gods of rain, sun, etc.); while, on the other hand, intense feelings of relationship encourage a monotheistic or rather a henotheistic attitude (as in the hymns of the *Rigveda*). Consequently, gods of similar or related functions are easily associated, as also are the departmental and other gods of tribes or districts which coalesce or federate themselves. But, while the functional god is typically that and nothing more—and the problems involved are those of knowledge and observation—the part played by feeling (e.g., in the relations between peoples and their gods) has to be considered; and, when the gods are felt to be personally related to man, depth of feeling forces the individual to co-ordinate his ideas, to consider the relation between this 'our' god and the gods of causation, who are gods of function rather than of relationship. In this way men's ideas of the universe and of the ultimate realities constantly have new and different patterns which can be objectively compared and traced, and the vicissitudes of which would be inexplicable unless account were taken both of the more logical processes of ordinary thought and of the more obscure problems of the immediate consciousness of some underlying reality (see § 25).

(3) Moreover, the concept embodies ideas of co-ordination and the systematization of ideas of climax and limit. It 'completes' the needs of feeling and reflexion; it answers the grievous and perplexing experiences of life and the deep-reaching questions of the intellect. In this way conceptions of 'God' (according to their nature) tend to satisfy human personality on all its sides, and they will respond to religious, moral, æsthetic, and intellectual demands. But everywhere there arises the necessity of co-ordinating conceptions of 'God' with conceptions of nature, physical science, society, the State, etc. For, while, on the one hand, the conception inevitably concerns the ultimate facts and values of life, on the other hand, everywhere there is an absence of strict co-ordination, and a man's conception of God influences other conceptions, and *vice versa*. Viewed as an 'ultimate' concept, beyond which the mind cannot proceed, it involves ideas of extreme intensity and limit (as when the Psalmist speaks of the mountains and trees of God). It is then easy to regard it as expressing a superlative or infinite form of the ordinary and finite (e.g., God as infinite love, justice, etc.). By this linear, serial, or semi-mathematical mode of thought the Deity has been regarded merely as a Superman, even as heaven has been thought of as a superior copy of mundane life. But in all new religious experience the concept is typically transcendent, involving that which is *qualitatively* different—that of which thought is a very imperfect representation—and compelling (characteristically) some systematic

re-organization of one's earlier body of thought. 'Linear' development is an aid to thought, but it does not answer the experience where a new stage of consciousness forces a development of the whole body of thought, comparable in some cases (e.g., of 'conversion') to the more or less drastic developments of organisms. The 'linear' symbol does not explain that awakening and new vision which justify the conception of a 'transcendent' God; and only an undiscerning comparison will suggest to the outsider that the ideas concerning a Supreme Being are 'constructions' made up of everyday sensuous experience (cf. § 16 [2]). It is precisely when one considers the relationship between human personality and the meaning of the concept that the problems of each are seen to be inter-related, and with both are interwoven the problems of the development of ordinary life and thought.

(4) It is evident that the development of *personality* in its totality and that of the conception itself are interconnected. Group-totemism is more in harmony with the undeveloped ideas of individuality among rudimentary peoples, whereas the individual totem or spirit-guardian, although it is a man's private possession, is on the road to become a personal Deity—at the same time as the man's own personality is becoming more marked.¹ There is an inter-relation between a man's personality and his conception of the universe and its ultimate realities. It is true that he may fail to recognize any ultimate authority outside himself, but this phase cannot be permanent. Characteristic of religion is the recognition of an external Power *personally* interested in the individual; and, consequently, from both the psychological and the metaphysical points of view, this phase, together with the ideas of the 'fall of Lucifer' type, will require a closer criticism (see below, p. 688^b, n. 2).

25. **Social - religious development.**²—(1) The growth and differentiation of society, its internal development, and the relation between different societies combine to shape the development of religion. The religious ideas extend to all that is for the preservation of existence; hence food-supply, livelihood, trade, war, and government are commonly found associated with religious ideas (§ 6 [1]). But, when there is a differentiation between the religious and the non-religious, the modern inquirer is hampered because he may be (perhaps unconsciously) swayed by some differentiation (e.g., law and religion) which is not recognized by the society under consideration, or he may fail to observe another particular mode of differentiation (e.g., magic and religion). Throughout the history of religion there has been no continuous, orderly, logical development; periods of greater cohesion and unification of thought have alternated with periods of greater incoherence and incompatibility. There are, however, some typical features of importance for the trend of thought, and these can be sketched in outline. Specialism of function, with its inevitable disintegrating effect upon the collective social thought, occurs when, instead of a group as a whole officiating in some solemn ceremony, special individuals or representatives are employed. In the Kei Islands, e.g., girls are chosen and must submit to extraordinary restrictions for the benefit of a trading expedition; but elsewhere tabus and restrictions of a sympathetic and telepathic character are frequently imposed upon a people as a whole (*GB*³, pt. i., *The Magic Art*, i. 126 ff., and pt. ii., *Taboo*, ch. iv. § 4). In Central Australia each clan performs ceremonies for the increase of the totem (if edible), whereas in the north, where the organization is more advanced, a headman will officiate, and he assumes the responsibilities and privileges of the group.

¹ See § 8, and cf. Frazer, *Totemism and Exogamy*, iii. 452 ff. The sense of personality was vaguer among the Romans and the Semites than among the Greeks, and in Buddhism one may observe the absence of a personal God (from the theistic point of view) and of distinctive individualism.

² An interesting attempt to work out the 'psychological history of the development of mankind' is made by W. Wundt, *Elements of Folk Psychology*, tr. E. L. Schaub, London, 1916.

Now, men of elevated position are commonly felt to be *psychically* superior, and those to whom important or valuable powers are ascribed tend to acquire position and authority. Such individuals, all the world over, have a significance which is both psychical (because of the ideas entertained of them) and material (because of their actual abilities); and in this way the authority acquired by the 'magician' or any other potent individual and the powers ascribed to chiefs, kings, and other authorities are factors that are continuously at work in the history of society and thought (see especially *GB*³, pt. i., *The Magic Art*, i.).

(2) The Central Australian totem-group that officiates for the increase of its totem (*e.g.*, the emu) stands to the rest of the tribe like some departmental god (*viz.* emu-god) on another level. The group is almost wholly debarred from tasting the totem-food, except on the occasion of the ceremony. But among the Dieri it is the headman of the seed-totem group who is effective, and who boasts of being the stay of life; while on higher levels not only are there gods especially associated with particular departments of nature, but the firstfruits will be the property of the god or his representative, the priest. In this development of the different constituent features of the once simple cult the office of headman, or of the man selected for his powers, readily becomes hereditary; and frequently there are religious rulers, chiefs with priestly powers, or priests with secular authority—a circumstance which soon leads to rivalries between religious and secular classes. Meanwhile, the chief's abode and the sacred place are most closely associated, and the claims of the palace (or the king) and of the temple interact in the history of taxation, of royal and priestly regalia and ceremonial, and of the structure of the buildings, of the *personnel*, and the pantheon. It is in the course of such social development that initiation ceremonies are no longer for the group as a whole; they are for special classes, or for entrance into brotherhoods, sects, guilds, or secret societies (*q.v.*).

The development from totem-species to the single specimen, or to an image of it, is easy, and the anthropomorphic treatment of the object can turn the latter into the god of the tribe or district. Conversely, although gods with remarkable animal-elements in their cults or myths are not necessarily derived from totems, sometimes the ancestry can be clearly traced (*cf.* Frazer, *Totemism and Exogamy*, II, 19 ff.). Further, a very significant but as yet obscure development is that of ideas of group-marriage (§ 9 [1]). Sometimes the men of one group will have marital rights over the women of another, and these may be exercised before a woman marries away. But elsewhere there has been the *jus primæ noctiæ*—the claim asserted not by a group, but by a local head or representative, or by a priest (who is the representative of the god)—or there has been a preliminary dedication to the god. It is conceivable therefore that the earlier rights of the group were taken over by a representative (*a*) of the group, or (*b*) of the group's deity, and that the custom on the higher levels is connected with what is found on the lower. That the custom has a primary psychical explanation is suggested also by the law of the Council of Carthage in 398, on which *cf.* *EB*¹¹ xv. 593.

(3) Where a group and its sacred object (totem and totem-group, god and tribe) practically form, as it were, a single unit (§ 7 [2]), the selection of a representative (headman, priest, king) would tend to disturb it. The effect of the development is illustrated in the varying relations between a people or land, a ruler or priest, and the god or gods. The intermediary is the representative of the people before the god, or *vice versa*; and in the religions of China, Egypt, and Babylonia there are many examples of the consequences. Moreover, the king is often regarded as the source of the people's prosperity and is responsible for disasters. He is the central figure, and therefore there are tabus to protect and safeguard him; he may be kept in seclusion or supplemented by a secular partner. In fact, the representative individual, king or priest, is so essentially associated

with processes in the universe that his death may be a sort of cosmical catastrophe. Hence it may be thought necessary to ensure that he is always vigorous, and even to kill him before his powers weaken.¹ The 'divine' chiefs or kings are of cosmical significance, like the Brahman priests elsewhere; hence these visible and accessible functionaries exercise a great influence over the course of thought. As ethical ideas prevail, such men must possess moral attributes; and, when things go wrong, they—like all representative individuals and functionaries—are the obvious and most tangible scape-goats.² Throughout there is interaction between ideas of the effective gods (the ultimate realities) and the very human representatives, incarnations, and the like; men's ideas of the gods are swayed by the good or bad behaviour of these individuals as truly as, in course of social development, conceptions of the moral nature of the universe are influenced by the good or evil which men find in their environment.

(4) Intercourse with other groups, the rise of a central authority, and the vicissitudes of history invariably force movements in religious thought. The local god, the chief, and the district find their parallels in the national god, the king, and the land; there are units within a larger unit, and complications arise in the effort to co-ordinate the various gods of the local districts and of the whole area. This co-ordination can be regarded as one of convictions, ideas, etc. The local gods, patron deities, and saints (*cf.* the Muhammadan *walis*) are felt to be near at hand, and directly interested in their small circle—like the local chief; and often, while a land, viewed from without, seems polytheistic, the average individual is henotheistic. The problems of co-ordinating the local cults are illustrated in the relation between the Israelite Jahweh and the Baals, the Muhammadan Allah and the *walis*, or the Deity and the saints and Madonnas in Roman Catholic lands. When the local being was identified with the national god, the result was partly to drag the latter down to the popular level, partly to elevate the former, and partly also to remove the former away from popular veneration to the court and temple. In the many vicissitudes that occur, and in the ebb and flow of ideas, there are complex problems (*a*) of the psychological consequences for the individual whose sacred being had once been 'personally' related to him, and (*b*) of the quasi-logical developments of doctrines and theories of the gods. Personal experiences and the theories of the universe and the gods have to be adjusted to each other. Especially significant are the vicissitudes of the intimate relationship between the gods and their representative individuals; for, although the latter are, properly speaking, subordinate to the former, yet, because they are visible, accessible, and more 'real' than the unseen powers, there is a tendency to regard them as actual gods (*cf.* *GB*³, pt. i., *The Magic Art*, i. 397, 401). This tendency is in harmony with the readiness of all individuals with functions and powers to ignore their subordinate position and (when they become increasingly conscious of their value) to be a law unto themselves. The data point to profound vicissitudes in the beliefs and convictions of the men concerned, and are of the

¹ This is the *motif* of the *Golden Bough*; see Frazer, *Totemism*, II, 529 f., 608; *GB*³, pt. i., *The Magic Art*, II, 5, 322, pt. III, *The Dying God*, London, 1911, ch. II. Although the remarks above are not everywhere applicable as a whole, they refer to inter-related bodies of ideas which recur, in one form or another, almost universally.

² Hence, in the development of society, one of the most difficult of problems is to fix responsibility and determine just conceptions of responsibility. Such problems are much less serious in undeveloped communities, where there is little differentiation of function and religious ideas are not separated from social life.

first importance for any attempt to deduce the nature of the ultimate realities (see § 32 [2]).

(5) The necessity of maintaining the unity and security of every group, tribe, and people explains the various means that are taken (*e.g.*, in rites of adoption). Ideas outweigh purely physical or material considerations. There is a deep-seated feeling that powerful representative individuals should be above chance and change; hence there are innumerable practices and beliefs which refer to their immortality, rebirth, re-incarnation, etc., while, later, attention is directed not to the individual, but to the stability of the function, agency, or office. If the death of the semi-divine king was more or less a cosmoical disaster, royal marriages and births, too, had a national or even greater significance for current thought, and ideas of increase and growth were associated (in an undifferentiated sort of way) with the course of nature generally. Moreover, the superior significance of representative individuals explains the early importance attached to their participation in religious ceremonies—*e.g.*, in solemn acts of confession. Hence, also, the greater interest attached to records, ritual, hymns, etc., relating to them, and to the careful preservation of them (cf. the priestly hymns of the *Rigveda*, Babylonian ritual, and penitential hymns). While the life and thought of the ordinary people are generally colourless, with few distinctive features, the representative and other outstanding individuals leave their mark upon a people's history, although they, in their turn, are far more subject to change than the ordinary level of thought which pursues its way, rejecting what it cannot assimilate and rehabilitating, though no doubt in a new form, beliefs and practices which well-meaning prophets and reformers had sought to eradicate.

26. Eras of crisis and transition.—(1) As the vicissitudes which we have been noticing break up the social or national unity, with it disappears the congruence of thought. The loss of collective feeling and the absence of a feeling of harmony of aims and interests proceed *pari passu* with a great increase of individualism. Individualism is already present in some degree where there are individual totems or spirit-guardians, or where the man has his own protective genius and does not share that which either is common to the group or is tended by a recognized representative. But the differentiation of society, labour, intellectual and all other work, steadily increases the heterogeneity of convictions, modes of thought, interests, etc.; and, as it disintegrates the thought of the environment as a whole, there is the more urgent need for some new strong unifying impulses. Now, there is always a logical relationship between the character of a people and their religious convictions; thus one may note the combination of fanaticism, gloominess, and fear of divine anger both among the barbarous Assyrians and among the fiery zealots of early Arabia. And, as regards individuals, the psychology of Calvinist and Puritan, of a Francis of Assisi and a Luther, of a Paul and a John, of a Hosea and an Isaiah, illustrates varieties of religious character which will be even more varied, though naturally of very different value, whenever individualism becomes excessive. In other words, where there is excessive individualism, there is every opportunity for markedly different varieties of religious and other strongly subjective convictions, and also for a dangerous amount of extremeness, which at other times would be checked and suppressed by the great body of average thought. The experiences, ideas, etc., will always be subjectively impressive, but there will be no coherent body of objective thought whereby to test their real value.

(2) In the disorganization that ensues coherence of social life and of the fundamental ideas gives way to an incoherence which has a disturbing effect upon the religious conditions. The early social-religious beliefs and practices lose both their practical and their traditional authority; religion tends to be severed from life and is often mechanical or magical. Scepticism, agnosticism, and pessimism find fertile soil; and the needs once nourished by the current religion now atrophy or find other supplies. Old beliefs return, foreign and incompatible ones are admitted, fanaticism and superstition balance trustful faith and a new spirituality. The vision shifts to the 'next' world, or it ignores

it—only the 'visible' is real; there is a deeper insight into social conditions and a freer attitude to sacred things. Amid many extreme tendencies in all directions there will be found dangerous excesses (cf. the frightful human sacrifice of the Aztecs, gross licentious cults, irrational and suicidal tabus), which, like all features that are incapable of development or persistence, are not to be regarded as typical of normal religion or life.

(3) Meanwhile there is a general levelling. The divisions which had disturbed the earlier solidarity are blurred, the privileges of the few are claimed by the many and become less distinctive, and exclusive ideas are common property and are popularized. In Egypt, *e.g.*, the belief in a life after death, once demanded on behalf of the king, was extended to ordinary men; it involved their recognition of the moral requirements once imposed upon the monarchs, but at the same time the belief was loaded with popular superstition. The general effect of the transitional process with its 'secularization' can be seen in the history of the drama, of certain toys (*e.g.*, the bull-roarer), and of games. The traces of a foundation-sacrifice have been found in the game 'London Bridge is broken down,' and echoes of grim rites lingered on in the stories of wells and woods which it was dangerous to pass. European folk-lore has thus preserved remains of old barbaric religion; and elsewhere traces of earlier organized cultures can be recognized by their incompatibility with the current systems of thought.¹ Thus, too, the great gods among rudimentary peoples may sometimes be the last fragments of earlier and even more advanced cultures; and, where the religious vicissitudes can be traced over many centuries (as in the East), considerable complexity of beliefs and practices is caused by the recurring periods of decay and new growth.

(4) The factors which, taken by themselves, would make for change and disintegration, and those which, by themselves, would lead to conservatism and stagnation, interplay and produce new growths, the inauguration of new ages, periods, cycles, etc. They involve a harmony of the deepest ideas, and thus affect the history of religion. Characteristic of every new harmony and solidarity is the religious spirit by which, first, individuals and then whole peoples are stimulated and undergo development. When, as in the history of Judaism, Buddhism, and Christianity, the religion of exceptional individuals becomes that of a people, it must adapt itself to many different classes, minds, dispositions, and needs. The tendency then is for the religious and other aspects of life and thought to become harmonious, an adjustment is made between new and old, and the religion is a socialized one, as distinct from the theosophical, ethical, or philosophical cults of select minds.² Everywhere these transitional periods are profoundly significant both for individuals and for peoples. The line of development is not necessarily snapped; a land will undergo periods of new reorganization, as, *e.g.*, in India and in early Babylonia and Egypt. On the other hand, the teaching of the Israelite prophets apparently caused a drastic revolution in the old Hebrew religion, whereas Babylonia and Egypt sought to satisfy their unrest by a conscious and artificial return to the conditions of a happier and distant past. Centuries later, one line of development ceases

¹ Cf., *e.g.*, W. H. R. Rivers, *The Todas*, London, 1906, p. 462 ff.

² It is now a religion which the diverse minds of the social body can understand and elaborate; the whole environment thus receives a new stimulus, although the steps from the ideals of individuals to the practical social-religious results in the environment as a whole may seem to mark a retrogression.

with Rabbinical Judaism, while a fresh growth begins with Christianity; but both passed outside the land of their home. The rise of Islām is virtually a new beginning, just as Arabic itself represents the 'proto-Semitic' language more closely than do any of the other languages. After many centuries of the old native religions, after Hebrew ethical monotheism, Hellenistic syncretism, and the conflicts between Rabbinical Judaism and the young Christianity, there is seen a new religion. It is in harmony with the psychology and cultural level of the people as a whole, and is thus in contrast both to earlier Jewish and Christian doctrine, which was above their level, and to the remarkable syncretism which in fact appealed only to the educated and governing classes. The new religion re-introduced God (Allah), not new conceptions of God or new developments in earlier ideas. Yet, although Islām thus begins at an earlier point than Judaism or Christianity, it speedily developed beyond the grasp of popular thought; and, although the lands were, as a whole, culturally below the level of the earlier ages, Islām quickly reached a high level, since it was able to utilize in some measure the theological and philosophical work of Greek and Christian thinkers. In such vicissitudes (illustrated in other ways in India and China) there is a recurrence of similar steps, though under different circumstances, and the earlier stage of a (chronologically) later religion can be more advanced, in certain respects, than a later stage of an earlier one; just as, in the psychical growth of the individual, the youth will certainly represent an earlier stage than his mature parents, but in various respects may be more advanced. Hence the danger of unchecked comparison and of facile theories of evolution, and the necessity of a deeper analysis of the content of religious thought (see § 4 [3]).

27. *The advance of thought.*—(1) Throughout, the social-religious development can be suggestively viewed in terms of thought, the organization and disorganization of every social body corresponding to that of the implicit or explicit ideas which prevail (§ 7 [1]). That there has been some great advance is shown (a) by the fact that, even though cultures and civilizations disappear and sweeping reforms fail, the apparent retrogression is not without traces of the beneficial influence of the preceding stage. Moreover, (b) although theriomorphic and low anthropomorphic cults may be prominent in times of decadence or relapse, there is not that characteristic totemism which is essentially pre-anthropomorphic (§ 8). Again, (c) the serious crises and hard vicissitudes have put the current ideas to the test and have compelled practical, adequate, and acceptable solutions of the difficult problems of life and thought. Consequently the recurrence of similar types of belief and practice is significant, and more especially when the old reappears in some new form—the new testifying to the positive progress of thought. The crises that bring scepticism and despair also bring new faith and hope, and the history of religion is the repeated justification and re-expression of old values (§ 33 [2]). The death of a member of a totem species was to be deplored; but, when a single animal was venerated, the death was then a catastrophe, until in some way (e.g., in ideas of rebirth or re-incarnation) the disturbance of beliefs was remedied. But the former case, with its less disastrous consequences, belongs to a lower stage; and, in like manner, endogamy, with its good and bad consequences of close group-solidarity, is relatively lower than exogamy, which at once brought new and often difficult problems. The problems become more complex as life and thought develop; they take new forms and require

new solutions in harmony with the thought of the time. At one stage there is a natural relation between the group and its sacred being; and, when this is viewed as an automatic or mechanical condition, it is psychologically harmful—it is 'magic.' But at another stage it is God who graciously chooses man, and who uses him as His instrument; the ideas are more advanced, and there is a logical development which, whatever be the ultimate realities, is extremely important both for deducing their nature and for the study of the human mind. There is a continuity between rudimentary and higher religions no less than between the different stages of the individual mind (§ 17 ff.). There is an ever more conscious awareness of current beliefs and practices, and reflexion can make explicit what had been implicit in behaviour.

¹Redemption, substitution, purification, atoning blood, the garment of righteousness, are all terms which in some sense go back to antique ritual.²

Rudimentary religion already accustomed men to facts of self-control, self-denial, the sacrifice of valued objects, the forgiveness of sins, and atonement. Already the road was taken for the later deepening of ideas of mutual interdependence, sacrifice, and the relationship between man and the universe. In mimetic and other ceremonies man represented sacred beings, or acted a rebirth or a resurrection; on higher levels the imitation is definitely in the spiritual realm, and the ideas of a new life are worked out in the world of thought. At one stage men fight, clad with the symbols of totem or god; they fight *as* or *for* the god. Later the principles and ideals associated with their sacred Being are more explicitly recognized. Men acted and behaved as though there was a life after death before they discussed the possibility and embarked upon speculation. In Egypt the Pharaoh lived again because Osiris came back to life, while the ordinary man subsequently found safety in identifying himself with a saving god.³ Identification, whether as ritual, imitative behaviour, etc., or as the vivid realization of thought and the experiencing of a belief, is profoundly effective, and points the way to both religion and magic. Mental concentration, absorption, and surrender lead to results subjectively final, thought and the absolute conviction of reality become one, and hence every religion is hostile to what is felt to be an irreligious attitude to or treatment of the great truths.

(2) Where life and thought are in harmony, the profound concepts have each a sufficiently similar meaning. But widely different conceptions—e.g., of the term 'God'—will represent a very secondary stage, because the terms must previously have been used to denote that which was distinctive and which had a certain identity of meaning for all concerned. Only as complexity of life and thought increases do the differences in meaning and application have serious consequences; and it is only in those periods where the religious and non-religious concepts become harmonious that the varied aspects of life and thought are in a state of equilibrium. The presence of some body or system of thought at one time guides and regulates, and at another it represses. It is weak or lacking at critical periods of the development of both individuals and peoples. Then it is that men, being without the help of a system tested by past experience, are at the mercy of ideas—new, original, extreme, and outside the limits of what had been normal. The nature of personal experience is profoundly varied, and of great subjective significance, whatever be its value for the environment. The less normal

¹ W. R. Smith, *Rel. Sem.*², p. 439. See, generally, G. Gallo way, *The Principles of Religious Development*, London, 1909.

³ G. F. Moore, *Hist. of Religions*, I, 174, 194.

experiences and convictions which abound at the critical periods resemble the rarer examples at other times, when, instead of a prevailing dislocation and incoherence of life and thought, there are relatively few individuals out of touch with the system and conventional thought of their day. That men of conspicuous religious and other genius are not always normal (i.e. not in harmony with the average life and thought) is well known; and for the science of human nature it is significant that (a) the great figures to whom the world's thought is indebted often had unmistakable human frailties and shortcomings, even of a sort that shock the average 'conventional' thought, and that (b) the 'religious' life itself is characteristically described as a constant struggle and fight.

(3) Religious and all deep experience points to profounder realities than ordinary human thought can realize; and in fact the institution of special individuals (priests), places, and seasons is due partly to the necessity of regulating man's life in a socially beneficial manner, so as to adjust ordinary life and the consciousness of some overpowering ultimate truth. Did not religion express some realization of what was felt to be overwhelmingly vital, it is impossible to find an explanation of the facts and the vicissitudes of religion, or of the relation between them and man's knowledge of the universe. The more intense experiences are the basis of reflexion, and they develop the experiences of others. The great religious works represent a limit or height which men continue to find stimulating and satisfying to feeling and thought, to aspirations and ideals. They are intelligible because of the similarity of men's psychical nature; they are supreme because they are not surpassed. The religious aspects continue to appeal, and, although there can be a phraseology which makes them lose their value, because they belong to a different world of knowledge and thought, yet by looking beneath the letter it may be possible—by the comparative and psychological methods—to recover the spirit. So, too, rude savage ritual may prove to embody an idea which can be appreciated, though not necessarily tolerated, in the form which it takes. Similar experiences and periods understand and interpret each other; and the fundamental psychical similarity of all men accounts for the similarity in the great recurring ideas and in the convictions of the ultimate realities, and allows the possibility of a certain genuine process of re-interpretation and reshaping of old beliefs. But mere archaizing or a mechanical return to the old—as in Babylonia and Egypt—is decadence, whereas the recovery of the real psychical value of the old and its restatement in accordance with the progress of knowledge, mark an advance, and correspond to what has happened in the history of religion.¹ By the comparative and other methods the religions can be brought into one focus, and the inquirer can go, not only to the great orthodox or classical utterances (Bible, Talmud, Qur'ān, Vedānta, etc.), but also to the experiences, tendencies, and all the facts of man's psychical nature which lie beneath them, and explain their origin, acceptance, and persistence. In this way the relationship between a sacred book and the environment which found in it its highest truths is replaced by that between the re-interpretation of it and the modern environment. In other words, the positive advance of religious thought is always part of that of the total world of thought in which it is embedded; and it

remains, therefore, to turn to some points in the relation between religious and non-religious thought.

(4) Psychological comparison, it will be noticed, brings a reconsideration of the old familiar typology and symbolism of Scripture. There are fundamental similarities relating to a past or future Golden Age, an Armageddon and Last Judgment, and especially to the re-appearance of popular heroes and religious saviours—an *avatār*, Buddha, or Messiah. Moreover, not only are there similar psychological experiences among those who are conscious of a mission, but they are not unnaturally influenced, consciously or subconsciously, by such knowledge as they have of their predecessors.¹ And, as regards the OT and the NT, psychological as well as historical similarities (e.g., the Suffering Servant and the Crucified Christ) enhance the familiar insistence in the history of Christianity upon the connexion between the NT and the 'Messianic' passages in the OT; and this interconnexion is of supreme importance for man's religious nature, as apart from the historical data which, in the case of the OT, are entirely problematical, and, in the case of the NT, stand in need of criticism. Further, observation of and reflexion upon the recurrence of similar types of events have suggested the notion of cycles or world-periods. Yet there is always the demand for something permanent, and the Scriptural identification of Alpha and Omega symbolizes a common intuitive feeling of duration or continuity underlying development, of permanence in spite of change. It may perhaps be regarded as the counterpart in time of the idea of the One and the Many in space. Although modern evolutionary ideas seem to favour a 'linear' movement, there is no single line of progress continually shedding old beliefs and truths, and leaving behind what is outgrown. In history, too, the most revolutionary changes appear less drastic when a sufficiently long view is taken, and a continuity is discovered beneath the dislocation of life and thought. What is fundamental is the readiness of the mind to discover continuity, permanence, unity, and structure; and, while religion involves an apprehension and conception of an ultimate reality which is superior to all catastrophes, the vicissitudes of history and knowledge in the past have never caused more than relatively temporary disturbances of the convictions. Only in such unity and continuity has man been able to find a practical working solution of his difficulties and problems; and, since the religious view of the universe claims to be the nearest to reality, it is necessary, therefore, to note some features in the vicissitudes of the religious and non-religious conceptions.

IV. RELIGIOUS AND NON-RELIGIOUS THOUGHT.
—28. The differentiation of thought.—(1) The foregoing sections would, at this point, be properly followed by some account of the steps which lead from the more rudimentary stages of thought to the highly differentiated and specialized thought of modern life (see § 6 [1] *ad fin.*). But it must suffice to say that the comparative study of religion not merely affects the ethical, theological, and philosophical ideas of the inquirer; it also leads insensibly and logically to the comparative study of ethics, theology, philosophy, etc. The typical prevailing religious beliefs and practices imply principles, ideas, and convictions which become explicitly recognized and shaped; they represent the experience, observation, and reflexion of men of different temperaments and at various stages of the history of thought. As a result of continued application of the comparative method similar fundamental and prevailing principles and ideas can be traced underlying the different religious, ethical, theological, and philosophical expressions. Such are, e.g., the presuppositions or the conscious convictions of the individual's continuity, of his intimate relationship with something grander and more permanent than his brief bodily existence, and of a oneness underlying the many various differentiated aspects or divisions of life and thought. Only in the light of such unity can one gain any rational conception of the many complex temperamental and other variations and divergences of thought; these find their logical basis, not in any ultimate heterogeneity, but in processes of differentiation with developments in various specialistic, diverging, and individualistic directions.

(2) Especially noteworthy, therefore, is the comparative study of the phenomena of ecstasy, inspiration, mysticism (*q.v.*; cf. also *artt.* *POSSSESSION*, *ŚŪRĪSM*, and *YOGIS*). Here are

¹ But this does not mean that some one department of thought is wholly adjusted to another. Rather, in every advance, individuals are so stimulated that every department (such as it is) undergoes a development which, like that of the individual himself or of his country, may be either orderly or somewhat drastic.

¹ Cf. M. Anesaki, *Nichiren, the Buddhist Prophet*, Cambridge, Mass., 1916, pp. 67 f., 72 f., 95, 97, 100.

involved the rarer psychical states where the individual has intense convictions of a deeper and profounder self, of the One behind the Many, of the Reality beneath all phenomena, or of the Ultimate Truth as set forth in his religious beliefs. The state is always exceedingly impressive and potent; and, all the world over, means are taken to induce it artificially. At a higher stage of development the passage from the more normal state to the rarer is considered more carefully, with a more conscious recognition of the roads, the goals, and the results. In Indian and Buddhist thought, in particular, the problems have been diligently studied; and, instead of the old mythological reification of the illusion (see *MAVA*), or the veil severing ordinary life from the profound states, there have been psychological and philosophical inquiries of a suggestive and fruitful character. The problem as to what stands between man and his inmost self, and between the outside world of appearance and the ultimate truth, is a very real one, forced by actual experience (§ 13 [2]); and efforts were made to analyze and classify (a) the constituents and processes of the mind that has the experiences, and (b) that which was experienced. While Indian thought went its own way, Western thought found its 'spiritual home' in Greece, where the problems were apprehended and treated at a higher and more differentiated stage of development. Consequently the East has preserved more of a primary undifferentiated experience; it has a more immediate view of its reality; whereas Western thought has become highly specialized and 'scientific,' the tendency being for the unity to be obscured, if not ignored. Yet it is soon found that no adequate synthesis can be made by combining the results of extreme specialistic analysis of experience; there is a unity in experience and in the experiencing mind which analysis destroys. None the less, although continued differentiation and specialization tend to destroy the unity and give scantier and more disparate conceptions of reality, every new and genuine synthesis is all the richer for the prior stage of disintegration. Just as all intuitions and immediate views are the fuller when the mind has had a laborious preparatory discipline, so the deep-searching introspection of Eastern thought is to be balanced by the less introspective, less subjective, but more specialistic training of the West; and, while the one has a nearer view of the problem, the other has the better tools, for what is fundamental in the development of religious and non-religious thought is the character of the concepts which both influence and are influenced by the interpretation of experience.

(3) Complexity of thought corresponds to the complex mental structure of individuals who are at a more highly differentiated stage than those in rudimentary society. All classifications, whether complex or not (law, morality, religion, etc.), are the result of growth, and they are not stationary. There is that in the conscience and in the ideals of the individual which tests, criticizes, and adjusts the legal, moral, religious, æsthetic, and other conceptions, principles, etc., of the environment. Such individuals go beyond current conditions and work for an unknown future. To say that they are ahead of their age is to beg the question, for their achievements, whatever their subjective impressiveness, become objectively valuable as they are adjusted to and assimilated by the environment. Hence the development of thought in history must undoubtedly be regarded as the collective result of the innumerable individuals concerned, and the ideals, aims, and processes in the whole environment will then represent some profounder 'whole' which transcends the conscious individuals themselves. At the same time, all existing systems, institutions, categories, and classifications — by which alone rational life is possible — are also transcended by the individuals who frame, accept, or amend them. Thus men are unconsciously shaped by processes, certain aspects or parts of which at least they are able to shape; they are an integral part of that of which they are more or less objective critics. Consequently, the most complete description of reality must take in the developing individual who both controls and is controlled by his conceptions of reality. It is a necessary assumption that of the ultimate realities men's conceptions are imperfect approximations, and consequently even the completest view of reality would have to be regarded as itself the outcome of a natural process of mental development still unfinished and always hampered by determinable limitations of the human mind. So, in all human development there is a combination of the transcendent and the immanent; there is a process

which transcends the men who are consciously and unconsciously a part of it.

29. **Fundamental ideas.**—(1) Every activity has its necessary conditions and principles, which are indispensable if it is to be successful. Everywhere are to be recognized necessary fundamental principles, all closely interconnected, but recurring in various forms, and associated with our own ideas of efficiency, law, order, right, and truth. Every group and every activity which can be regarded collectively as a unit has its unifying and necessary principles upon which success and efficiency depend; consequently, freedom of action, even of existence, involves adherence to some indispensable requirements. Liberty and subordination to law, freedom and discipline, are thus correlative, and they also involve ideas of aim and purpose. In practical life the difficulties usually concern the precise requirements, the relative value of the units and their aims, and the relations between those that impinge or conflict. From the earliest times the social group has acted up to certain obligations upon which group-unity alone could depend; but often it is only periods of crisis and incoherence that manifest the vital significance of principles formerly unrecognized, obscured, or questioned. Now, every genuine feeling of group unity is commonly reflected in spontaneous feelings of collective privilege and responsibility; the members participate in one another's merits and misdeeds.¹ Among rudimentary peoples this unity will frequently include both the gods and the processes of nature (§ 7). Hence, when the gods are felt to be near at hand, the behaviour of the group is bound up with that of the processes of nature controlled by the gods; cf., e.g., the common belief that great crimes will disturb the order of nature. But the action of the gods in thus requiring man's behaviour is only one form of a fundamental conviction uniting man with the rest of the universe. Often certain representative individuals are directly connected with the welfare of the people or land, and they are responsible for drought and other disasters (§ 25 [3]). But, if this applies to the evidently conspicuous men, who is to determine who are 'the salt of the earth' (Mt 5¹³)? The fundamental ideas, partly of common responsibility, partly of a profound interconnexion, re-appear in ritual, ethical, and other forms, in the ideas implicit in 'magical' control or in 'religious' prayer, in explicit curse or appeal, and in vague denunciation and adjuration, in instinctive ideas of retribution and recompense, and in emotional, poetical, and æsthetic feelings of man's kinship with nature or the universe. And notably in law and justice, and in the instinctive resentment to what is felt to be inimical to human welfare, the individual is no longer an 'individual,' but as his 'brother's keeper' implicitly associates himself with the progress of the universe as a whole and with the upholding of its principles, in so far as he realizes and can apply them.

(2) There is a continual rediscovery of a universal unity and interconnexion which specialized thought must necessarily ignore. But confusion arises when concepts, the result of such specialization, are criticized on account of what they lack, as, e.g., when nature is spoken of as impersonal, blind, and morally and spiritually indifferent. Now, in so far as conceptions of nature have been based upon phenomena where personal, moral, and spiritual aspects are irrelevant or out of the question, such criticism is beside the mark. Moreover, it would ignore the order, uniformity, and regularity which are indispensable for the processes of nature, and which are the counterpart of the requirements of every effective and ordered human society. The behaviour of animals and young children cannot be discussed throughout in terms of adult psychical life (e.g., ethics, insight, learning, etc.), but they commonly manifest

¹ Conversely, from an examination of customs, light can be thrown upon an otherwise barely recognizable social system (as by W. R. Smith, in his *Kinship and Marriage in Early Arabia*, London, 1903).

what in their sphere corresponds, in a rudimentary way, to the attributes that we apply, in another sphere, to adults. Similarly, the processes of nature are the 'natural' counterpart of the anthropomorphic processes in the 'psychical' realm. The 'natural' and the 'spiritual' laws reflect essential similarities differently shaped according to their realm. Moreover, a law is from one point of view the essential principle of some effective process or activity, while, regarded subjectively, it is our most essential, reliable, and effective formalization of the regularity of phenomena. True, the concept law has undergone different vicissitudes as nature and human society are considered separately; but what appears to be fundamental is that in a 'natural' law there is involved the explicit recognition of some immanent and effective principle, while human law is not really 'man-made' and 'imposed,' but is the attempt to make explicit the conscious recognition of what is essential for the better efficiency of human life, although for this purpose laws as prohibitions of what hinders successful growth become more conspicuous than the positive requirements of what ensures it.¹

(3) (a) The objective value of every group or activity lies in its relations to others, and ultimately, therefore, to the whole of that of which all of them are part. This applies equally to principles, ideas, concepts, and theories; their real value is tested by their relation to a larger field than that where they are first recognized. So the value of all that can be treated as a unit or whole lies in its place in the ultimate whole; and in practical life there are conflicting theories, activities, principles, groups, and so forth, which force the conclusion that either the ultimate realities are incoherent and discordant—which is clearly irrational—or there is a final solution which we shall judge rational. Of such conflicts those between law and mercy, or between 'nature' and the individual, may be specially mentioned. Yet the highest love is compatible only with the strictest regularity of cause and effect; and God's forgiveness of the penitent sinner is not arbitrary, but in conformity with some greater law, some profounder conception of justice. Moreover, in 'nature's' regard for the whole lies the hope of him who is an integral part thereof; for by nature's disregard of the individual we mean the conflict between our largest 'scientific' concept of order in the universe and the ever-developing individual who can command Nature only by obeying her. In either case there is a higher explanation, such that the absolute uniformity (order, justice, or love) is for the ultimate advantage, happiness, and consolation of those who can realize its sway, although offenders and others may suffer by rebelling against it. To pursue this further would be to turn aside to the 'burden' of the law, the question of free will, and the need for mediation and atonement.

(b) The power and responsibility of the individual are seen in the fact that, just as the total conditions at any time are the result of everything that has preceded, so all men are jointly and severally contributing to the good and evil conditions of the future. Consequently, the religious aspect is particularly significant, whether when evils and wrongs arouse the cry, 'Can there be a God to allow such things?' or when men more or less instinctively feel themselves the guardians of justice and order in the universe. An orderly and just universe is the underlying postulate. All insistence upon the worth of the individual is, therefore, a deeper and more personal expression of the fundamental interconnexion of the universe, of the autonomous value of all the constituents, and of the entire dependence of the efficiency and welfare of the whole upon all the constituents.² Throughout, we have to seek a rational explanation; for, as apart from the question whether the universe is ultimately rational, only by treating it as such can we find any basis for our ideas, avoid mental suicide, and develop in the future as we have in the past. The most perplexing vicissitudes lead now to

¹ Another important example of specialization with tendencies to forget the undifferentiated aspects is afforded by the contrast between the terms 'psychical' and 'physical.'

² Cf. esp. the ideas as expressed in Mt 10:29f. 13:12-14, Lk 15.

doubt, scepticism, and despair, now to some firmer and wider conception of life; but the latter has been the line taken in the history of progressive thought. Self-sacrifice and renunciation of all that is most obvious and tangible find their rationality in the conviction that the unknown will bring a greater reality than the known. So, too, the frequent disturbing success of evil is a guarantee, not of lawlessness, but of the success of perfect good; for, when evil succeeds, there are, on analysis, factors which in themselves make for success, and, when good fails, once more analysis reveals factors which have not the elements of permanence and progress. And, when examples of this are clearly realized, one gains a more rational conception than if good and evil are treated as absolute, conflicting entities. The ultimate must be regarded as rational, else there can be no ordered life or thought.

30. Myth and knowledge.—(1) Ideas of the fundamental unity of the universe are implied also in the remarkable imitative and other ceremonies where men represent spirits, gods, etc., or perform the desired 'natural' processes themselves, or otherwise act on the assumption that the effective controlling powers can be moved (cf. § 19). In addition to this, the recital or description of processes or operations is often felt to be potent, so that, e.g., myths are not things to be lightly or irreverently spoken, because they arouse the sacred beings to whom they refer. Hence the commemoration of stirring and sacred events in the past has a very real value for the future; it stimulates appropriate feelings and ideas, and gives a new and intense vividness to the reality of the sacred beings who are the sources of action.¹ A very great part is taken in religion by imitation and mimetic representation, and to these processes of absorption and identification can be joined the deep mental concentration and the effort to realize for oneself beliefs and truths. In this way ideas are realized, if not reified; they are so assimilated that, e.g., in ancient Egypt an effective means of escaping the perils of death was to identify oneself with some saving god who had successfully overcome them himself.² From the myths and traditions which concern the great things of life it is an easy step to the esoteric aspects, the secrecy of all knowledge which is in any way potent. Not only are there innumerable examples of the fact that knowledge is power (cf., e.g., the possession of the name of a god), but the psychological effect of increase of effective knowledge upon the individual is exceedingly instructive from the religious point of view. The inter-relations between knowledge, wisdom, reverence, and the 'fear of God' are, however, disturbed by the progress of thought and by the usual arbitrary and subjective distinctions between sacred and 'secular.' None the less, it will be freely admitted that moral and ethical qualities (sincerity, intellectual honesty, patience, sobriety, moderation, etc.) are requisite for the best 'secular' and 'scientific' labour; and in this way the whole self, and not a human intellectual machine alone, is involved. Thus the complete outlook (*Weltanschauung*) of the individual becomes, so to say, the mathematical function of his current stage of intellectual, ethical, æsthetic, and

¹ Cf. the influence of traditional history upon Israel, and note, e.g., Hab 3, the commemoration of the Deity's deeds in the past, the present distress (v. 17), and the brave confidence (v. 18). Cf. also the naive attitude (between confident 'magic' and submissive religious 'humility') in Nu 14:18f., Dt 9:27f.

² Moore, *Hist. of Religions*, i. 174; cf. 162f., 165, 194. The same psychological process appears in both Buddhism and Christianity. The numerous beliefs and practices which illustrate the connexion between thought, action, and reality are of the greatest interest for theories of causation and knowledge, for which it must suffice to refer to Durkheim (bk. iii. ch. iii § 3, Eng. tr. p. 362ff.).

spiritual development; and, in so far as 'like is known only by like,' the completest conception of reality requires the completest conceivable development of personality.¹

(2) All myths and all conceptions of the universe, even the most extreme, have a threefold value: (a) they purport to add to our knowledge of reality; (b) they illuminate the mental structure of the inquiring, reflecting, realizing individual; and (c) they contribute to the further study of the way in which the mind experiences and interprets its experiences, and thus point to the nature of the objective realities which can be so variously apprehended. The emotional, poetical, metaphorical, and undifferentiated characteristics of myths correspond to the psychological character of those who frame and accept them. The spontaneous mythologizing, anthropomorphizing, and personifying mind always persists, and it contrasts with the careful intellectual efforts to be objective and impersonal, and to avoid irrelevant or misleading concepts. While myth is 'personally' interesting and intelligible, it is, when at its best, 'super-personal'—like the ballad—representing aspirations, ideas, and modes of thought that are collective, national, or universal, and not merely individualistic. In course of time the myth may become a fixed, authoritative statement, embarrassing the movement of thought; then its crudities and imperfections will perplex the faithful, fortify the sceptic, and even excuse the wrong-doer. It may then pass from being 'super-personal' to 'impersonal,' when it is no longer in touch with the people. There will be a failure to analyze and distinguish the permanent from the impermanent features—although this distinction is always made unconsciously by all who uphold any body of religious or other thought against their opponents. The more empirical knowledge, on the other hand, will avoid the arbitrariness and subjectivity of myth, but it tends to leave out human personality with all its richness of feeling and potentiality. It will present a synthesis which is in no sympathetic relation with the experiences of the generality of mankind. It will acquire a false 'impersonal' objectivity, and become dogmatic, restricting personal development. Hence, although science and religion can exist for a time side by side, sooner or later the question arises of the validity of their several concepts and of their value for the further progress of personality.²

(3) The course of thought is directed by what is known, and it is in terms of familiar experience; so, e.g., cosmical processes have commonly been thought of in terms of human vicissitudes (birth, conflict, marriage, death). In like manner, on other levels, democratic ideas, sovereignty, or an age of mechanism will be reflected in both the religious and the non-religious thought.³ Conceptions of the universe are influenced by the current conditions, and *vice versa*; and in the development of thought the efforts to explain experiences and phenomena often proceed without the necessary reference to the primary data themselves. The psychological and logical paths then diverge, and the fluctuations in the progress of thought can be illustrated in the varying personal and impersonal conceptions of Providence, Nature, God (cf. the word 'agency' itself, used of both process and agent). The result is that isolated religious terms no longer have their primary subjective content, although there may be noble and quasi-religious feelings outside the religious phraseological framework, and associated, e.g., with art, science, or humanity. The expression of feelings, it is true, may seem to partake of the nature of religion, yet, from a point of view which must be regarded as primary and ultimate, religion must be treated as *sui generis* and distinctive (§ 33 [3]).

A belief in a life after death has no ethical or religious value in itself, and a monotheistic religion is not always superior to a henotheism or to the polytheism which most practical religions

are. The word 'God' may express more of a logical or intellectual necessity than the personal experience of a Supreme Being; yet the experience of some transcendent 'Presence' is not necessarily interpreted as that of a deity, and men have had their *daemon*, guardian-angel, or some psychologically effective experience, which has been identified in harmony with their conceptions of reality and the thought of the environment.

The interdependence between experience, interpretation, and the development of thought is well illustrated in the vicissitudes of such words as *Heaven*, *σπουδαία* (see *EBI*, s.v. 'Elements'), the Chinese *Tao*, *Tien*, *Li*, and the Buddhist *Dharma* and the various personal, ethical, universal, and metaphysical conceptions of Buddha himself. A simple and typical example of development is afforded by ceremonial washing, which is religious or magical according to the precise ideas that accompany it (cf. p. 674*, n. 1). If it persists as a mere rite, the efficacy lies merely in the ritual, and not in the psychical state, and this is 'magic.' Proceeding to the other extreme, men avoid the ceremony with its beneficial and utilitarian aspects as a piece of worldly luxury, and misguided religiosity delights in afflicting and tormenting the body. Again, the utilitarian purpose can be retained and the religious aspect ignored, and this secularization is very common in the history of culture; cf. the rise of astronomy, anatomy, and medicine from the astrological and more or less 'magical' soil in which they once flourished. All such changes are significant for the relation between the psychical states of the individual and the ultimate realities.

(4) The developments in the history of religion furnish valuable material for all conceptions of the relation between the religious and the non-religious aspects of life and thought, and for the criteria of religion. One can scarcely allow with Schiller that he who has art and science has also religion, though religion should possess the immediacy and beauty of art, and both it and science should be in touch with reality; or with Matthew Arnold that religion is the application of emotion to morality, though religion without either would hardly be so styled. Thought cannot be treated so atomically, and the fact is that purely non-religious thought can or cannot find a logical place in a religious system, and *vice versa*, just as two departments of natural science may be in some respects entirely separable, but in others may so intertwine that the problems of the one cannot be severed from those of the other. Now, the evident seat of all the varying relations is the individual mind and the connexion (such as it is) between the entire contents involved in its concepts and ideas. Differentiate as one may the religious and the non-religious, the moral and the non-moral (where morality is irrelevant), and the emotional and intellectual, all these find an ultimate common ground in the whole individual; and it may well be the case that the final aim of 'science' is not the perfect systematization of the many diverse tendencies and departments of thought, but the systematic treatment of the systematizations—of the metaphysical, the philosophical, the theological, the scientific, and all other minds ratiocinative and naive. Co-ordination of different legitimate interests, and not a perfect homogeneity of interests throughout will then be the goal.

31. Immanence and transcendence.—(1) Characteristic of religion is the combination of the known and the unknown, the natural and the supernatural, 'this' world and 'the other,' immanence and transcendence (see art. IMMANENCE). Despite all that can be said against the second member of each pair, they are the outcome of experience; and, while the difficulty has been to give a rational statement and justification of the experience, counter-criticisms and objections, often of a crudely rationalistic kind, overlook the prevalence of similar types of experience, and attack the particular forms in which it is interpreted and presented. The members of each pair are correlative; and therefore, as regards the last, conceptions either of immanence or of transcendence taken separately have neither permanence nor progressive value. The belief in a transcendent Deity has led to religion falling into the hands of the few; the God of the State or of the Church has seemed remote from the ordinary

¹ So, too, the great religious and other leaders, through their own total personality, have enabled their disciples to gain deeper and more powerful conceptions of reality.

² On the whole subject of mythological and scientific thought, and on the influence of personalizing even in science, see Olive A. Wheeler, *Anthropomorphism and Science; a Study of the Development of Ejective Cognition in the Individual and the Races*, London, 1916, esp. p. 180 ff.

³ Cf. § 9 (2), and see G. Murray, *Four Stages of Greek Religion*, New York, 1912, pp. 112 f., 116, on the conception of Fate as a goddess just at a period when men's fortunes seemed to bear no relation to their merits or efforts. Cf. also the interest in eschatology, the millennium, and a new age at the present day (see S. A. Cook, *The Study of Religions*, pp. 189, n. 2, 802). For a methodical treatment of the inter-relation of different branches of thought and their vicissitudes the work of Wilhelm Dilthey may be especially noted.

individual, and the latter has relied upon some intermediary, or else in some more private or individualistic cult has found an outlet for that which the institutional religion would otherwise have guided and developed. In the course of this process his experiences, ideas, and conceptions of reality clearly undergo profoundly important changes. Again, in the Deism which makes God a supreme majestic Being with no place in ordinary life and thought, He becomes as remote as when He is thought of as unknown or unknowable. Thus the concept may be characteristically intellectual, and without the immediate personal significance which it has when God is felt to be near at hand. But, when in many forms of popular and personal religion God is felt to be near, this feeling of His greatness can subsequently be lost, and then the gulf diminishes between the frail individual of a few decades and the Supreme Power of an inconceivably vast universe. Through the experience of immediacy there is no need felt for priestly ritual, ceremonial, dogma, or mediator; even reverence may disappear. Thus both immanence and transcendence have their extreme logical sequels. The God who is solely transcendent becomes remote and unknown: to say that there is One whom man cannot know is at first to recognize an incompleteness; but the next step is to be unconscious of the gulf, and then to ignore how the experience of it could ever arise and persist. On the other hand, the conception of the immanent God is near to pantheism, and so can lead to the absence of any religious distinctiveness in the term. In this way the distinctively religious content of the concept God is lost; and, while it is easy to trace the secularizing process, it is impossible to explain the personal meaning and psychical value of this supreme concept, unless some immediate personal experience is regarded as logically primary. The history and vicissitudes of the concept become intelligible only if the immanent and transcendent aspects are retained, only if there are ultimate realities of the universe—of human existence—of which these apparently paradoxical terms attempt to interpret the experience.

(2) The religious ideas of immanence and transcendence are a fundamental part of human nature, and are but the most intense form of what otherwise is not peculiar to religion. They find some analogy in human relationships (e.g., between parent and child), where complete understanding and friendliness co-exist with respect, reverence, and a consciousness of a psychical gulf (cf. § 12 [3]). Moreover, there is a similar co-existence as regards the attitude to those great human figures who are not isolated, unintelligible, or extreme, but who are at once on a much higher level than ourselves, yet are felt to be thoroughly intelligible and near to us. It corresponds with this that every individual can gain a more vivid realization of himself and a profounder and more potent personality when he sinks and subordinates himself to that with which he identifies himself, so that, in apparently becoming one with the environment, and therefore 'lost' in it, he rises above it and transcends it. It is the paradox of religious and other thought that, according to the view-point, the processes of the universe can be described 'naturally,' so that men have no need of the concept God, or 'in him we live, and move, and have our being,' and the experiences of immanence and transcendence co-exist.

(3) The key to the correlatives, mentioned above, lies in the progressive development of the individual, and in the phenomena of imitation and attraction which are familiar in personal, religious, and non-religious experience and are invariably significant for personality.¹ Development follows in man's striving to satisfy needs, reach goals, follow ideals, attain some psychical equilibrium, or bridge some gulf. It is essentially no passage from the known to the unknown, but a clearer or

newer apprehension of that of which one was already in some degree conscious. But here the process of attraction, when there is a successful issue, is readily followed by a deadening satisfaction and complacency which would impede further progress. Not only in intellectual development (e.g., the search after some hypothesis), but most significantly in personal relationships of all kinds, can the psychical gap which formed the attraction give place to indifference. Yet, however complete the subjective feeling of finality may be, the passage, transition, or development is not objectively complete, and especially in religion there prevails a spiritual pride, arrogance, or consciousness of 'election,' which is as harmful for the further progress of the individual as for religion itself (see § 32 [2]). Even the saint has still to strive and may yet fall; and various attempts are made to determine the final goal of human development, and to distinguish, e.g., between conversion or baptism into a 'new life' and the state after death (q.v.), or to determine whether the final stage is reached immediately after death or after some purgatory.¹ The most intense consciousness of the ultimate realities appears readily combined, now with a greater complacency, but now with a profounder feeling of weakness and unworthiness, when the very nearness of the 'divine' enhances the frailty of the individual and his entire dependence upon God. Whatever be the best formulation of the experiences and their consequences, the 'healthy' and 'whole' development of the individual is at stake, for all development depends upon the possession of some transcendent object of attraction which shall call forth the utmost from the individual and be for the complete growth of his personality.

(4) All ideas, aims, needs, and quests are potent for personal development; but men's varying attitudes to some manifestation of 'divine' discontent, as it is felt to be, illustrate the difference, between its singular impressiveness for the subject and its worth as viewed from the outside by others. Personal development is due both to the individual nature in its entirety and to the total environment. Thus the child is influenced in varying degrees by toys, animal-pets, playmates, parents, teachers, etc. His potentialities are actualized and shaped by the 'object'—by its psychical inferiority, equality, or superiority, and by its ability to respond to the child and to shape his growth. There is a subjective feeling of personal relationship even with the toy and the animal, as distinct from the objective personal or impersonal character of the 'object,' whatever it be. So, too, in the history of religion the centre of religious beliefs and practices has been inanimate or animate, totem, spirit-guardian, or ancestor; and there has been throughout a (subjective) feeling of 'personal' relationship, although in course of development we pass (objectively) from the totem, fetish, or idol to a Supreme Being. Whatever be the actual realities, whatever part a Supreme Power—or any process outside man—takes in shaping this development, it is at least possible to recognize that men's ideas will be shaped differently according to (a) their empirical knowledge of the totem-animal or bird, the deified ancestor, and so forth; and (b) the conceptions which they entertain of the sacred object or being, whether visible or not. The latter, (b), is fundamental, for in both religious and non-religious thought development depends on the full meaning of the concepts used.

(5) It is of course evident that neither the empirical objects nor the conceptions of any object can in themselves account for the phenomena of religion—it is precisely when the totem is

¹ Cf., e.g., the *Imitation* of Thomas à Kempis, and the well-known words of St. Augustine, 'Lord, Thou hast made us for Thyself and our hearts are ever restless till they rest in Thee'; also the frequent testimony of those who admit themselves led by degrees ('One step enough for me') towards a Supreme Personal Being or to some personally vital ideal or goal.

¹ Cf. in Buddhism the distinction between *Nirvāṇa* and *Parinirvāṇa*; see also vol. ix. p. 378^b (4).

merely an animal, when the once deified ancestor is merely a dead man, or when the god is merely a name or an intellectual term, that the distinctively religious colouring is wanting. It is this colouring that is primary, and what is impressed upon the consciousness of the individual is that which is logically anterior to the phase where the distinctive religious colouring is wanting. The correlatives (immanence and transcendence, etc.) could not arise except together and in some sort of system (see § 32); and there must be some awareness of the as yet unknown and unattained, as apart from what is already known and attained, else there could be no consciousness of an incompleteness. What may be felt to be a whole is but part of some ultimate whole; for one can attend only to parts or aspects of things at a time, and the individual can present only the results of his own individualistic and partial development. By means of objective comparison, therefore, something can be determined of the ultimate worths and values which men collectively or individually feel to be essential for themselves or for the universe. Whatever the completest totality of experience and consciousness may be—and this would at least require the most ideally complete personality—exhaustive classifications can be attempted (e.g., the categories of the Good, the Beautiful, and the True); and these point conclusively to the objective inadequacy of any conceptions of the ultimate facts which concentrate upon particular parts or phases (e.g., humanity, nature, or art), and ignore values which other individuals insist upon conserving.

32. The religious system.—The greatest religious conceptions imply a system which is rational, disciplinary, and dynamic. (1) The psychical experiences which alone explain the origin and persistence of the characteristic religious concepts of the holy, supernatural, sacred, etc. (as opposed to the common, natural, secular, etc.), are followed by an assimilation wherein the primary immediacy, freshness, or uniqueness is deadened or lost. The actual process of secularization applies rather to parts, whereas the reverse process (idealization, sanctification) affects whole psychical states or systems of ideas (cf. p. 672*, n. 2). Various steps have everywhere been taken to induce the valued psychical states and experiences; and the difference between the rarer states and the ordinary ones is between two phases, orders, or realms of existence—the real problem is to describe the data adequately—such that the sources of the conceptions of 'this' world and of the 'other' lie within the scope of the single individual, and the character and interpretation of the rarer states are conditioned by his prior development (cf. § 14 [1]). Individuals will usually connect the rarer states with the objectively 'divine' (cf. also 'divine' discontent, above, § 31 [4]); but the social, intellectual, and generally rational value of the consequences of the states is prevailingly tested, and every claim to inspiration and other divine privileges is, sooner or later, submitted to intellectual, practical, social, and ethical tests. Good and bad mysticism, true and false prophetism, beautiful spirituality and harmful religiosity exemplify the necessity of objective tests; and the environment or the course of history enables one to determine the result. Thus the supernatural and unknown in religion are not necessarily taken at their own valuation; the average prevailing type of mind insists upon passing its own judgment upon the data, and the holy is so, not because it happens to survive or is merely imposed upon men (cf. the notion of 'survivals,' § 4 [2]), but because in the long run the mind, of its own will, recognizes it as such. The natural and the supernatural, the known and the unknown, come within the horizon of the individual consciousness, and in the lengthy history of religion the prevailing, practical, average opinion spontaneously recognizes the necessity of distinguishing between good and bad religion—a distinction which again and again individuals are genuinely unable to realize.

(2) Entirely characteristic of the experiences of the 'divine' is the consciousness of uplifting power and strength, such that the self-confidence and mastery which characterize 'magic' have a certain kinship with religious confidence and conviction. But 'magic' has no place for transcendence; and

a very striking feature throughout the history of religion is the recurring insistence upon the gulf between the human and the divine—an emphasis upon the transcendent rather than upon the immanent. In religion, generally, the two fundamental conceptions of *mana* and *tabu* (q.v.) are correlative: on the one side, the wondrous power which man may, can, and should utilize and, on the other, the indispensable heed and caution; for *mana* without *tabu* becomes magic, and *tabu* without *mana* can lead to grovelling superstition.¹ This co-existence is the outcome of the need which is experienced for the two. It is extremely instructive to notice the data preserved in the Bible, for the religions of the Semites, as opposed to Indian quietism and pantheism, and to Chinese practical ethical religion, constantly manifest a passionate vehemence which in its religious aspects will at one time insist upon the might, jealousy, and arbitrariness of the Deity (corresponding to the psychology of the old Oriental despot), and at another will emphasize His favouritism for a people or for an individual who is the divine instrument, representative, or incarnation. The data in question are of the 'fall of Lucifer' type (Is 14¹²), where the gulf between man and God is arrogantly or wrongfully ignored.² Hence, also, the Israelite conviction of divine privileges is very intelligibly balanced with ideas of greater responsibility, as in Am 3². Yet the religious data, profoundly vital as they are, are in harmony with the non-religious parallels in ordinary human nature, in the recognition of certain gulfs not to be bridged, in the detestation of arrogance, of conceit, and of *ὕβρις*, in the need of modesty in good fortune and success—even to the feelings underlying the 'evil eye' and 'touch wood.' So also, in taking too much for granted or in trifling with one's deepest realizations and ideas, there is a recognition of the vital necessity of dignity, respect, reverence, as regards both oneself and others, in order that personality may develop wholesomely. These disciplinary and dynamic features of human nature are only more comprehensive, personal, and ultimate in their religious counterparts, and they tend to form a system, and that a dynamic and not a static one.

(3) Among rudimentary peoples the initiation ceremonies not only prepare the youth for tribal life, but at a critical physico-psychical period provide him with regulative and steadying ideas.³ Social-religious beliefs and practices cover the matters of everyday possibility, which, however, are of the deepest significance for the individuals concerned (§ 6 [1]). Where the individual is thrown back upon himself, so to speak, in all the great crises and occasions of life, a way is found between what would be utterly indifferent, callous, and animal-like and what would tend to be ultra-sentimental, emotional, or ascetic; for either extreme would preclude practical life and could not long persist. Thus, although the 'other world' is so near that death is naught, yet to act heedlessly upon this would be dangerous. Moreover, the intuitive feeling of disapprobation, fear, and dread as regards suicide is confronted with an intuitive appreciation of all self-sacrifice. Killing in war and murder are commonly distinguished even among the lower religions. There is a recurring average recognition of what is essential for continuous progressive movement, and the conventions touching sacred and delicate matters afford

¹ See especially R. R. Marett, *The Threshold of Religion*², ch. iii. f.

³ See Marett, *The Threshold of Religion*², p. 169 ff., 'The Birth of Humility.'

many examples of one aspect of a self-educative and disciplinary process whereby life and thought are systematized so that with every new growth of consciousness the individual may be able to develop in a way useful to himself and others. Things may be true (e.g., God's forgiveness of the sinner), but the truths do not and cannot exist in isolation, and the system of which each is part goes to the depths of the individual. Therefore the individual is now infinitesimally small and frail, and now one whose beliefs and practices unite him with the greatest and most ultimate realities. And truly life would seem irrational save as a part of some larger existence, and the severity of its discipline unjust save as a training; the audacity of man's aspirations would be childish or outrageous save as a genuine though imperfect apprehension of actual realities, and his humility and sense of unworthiness unintelligible save as an education for other responsibilities and privileges. The ideas in religion are not merely intellectual; they can be psychologically and subjectively effective.¹ The ideas are not merely cognate to those implicit or explicit in non-religious life and thought; they also represent the apprehension of realities which are nowhere set forth in completely systematized form, but which appear (when religious and other thought is compared) in many independent and variously differentiated forms. There is not some single body of truths 'imposed' upon men from without, but there are truths of which men become conscious in their own individualistic, specialistic, temperamental manner, and according to their own development and that of their environment.

(4) The common psychological effectiveness (a) of artificial means to produce mystical and similar states, (b) of magical beliefs and practices, and (c) of all else that could be styled superstitious or irrational brings up again the difficult question of ultimate and absolute rationality. Whether the answer be in terms of theism or not, conceptions of ultimate order, power, and rationality are involved: thus it is 'God' who sees into the hearts of His children, grants their legitimate wishes, consoles and guides them; or it is in 'the nature of things' that what is effective is so for reasons which, if we only knew them, we should judge rational. If the absolutely irrational or evil succeeds, there is no foundation for ordered life and thought; only the postulate of an ultimate and absolute good and rationality allows any systematization of experience, and our human nature is ultimately deceiving us if this postulate is not true and final (cf. above, §§ 28 [3], 29 [3]).

Moreover, it is evident that many beliefs and practices (e.g., in oaths and curses), however irrational they may appear, are effective only when all share similar ideas or convictions.² The whole system of cause and effect becomes self-supporting, as it were, and a pseudo-rationalistic condemnation of the crudities of a past age is not so helpful as attention to the efficiency of the system in which one lives—the dead must be left to bury their dead. Besides, condemnation is not only the recognition of a standard by which one may be judged in one's own turn; it is due to a new development of consciousness which is significant for the individual himself. Finally, all condemnation seriously affects one's conceptions both of theodicy and the rationality of human nature and of the ultimate order of the universe; the choice lies between absolute justice and absolute chaos, but the latter is logically unthinkable.

33. The dynamical aspects.—(1) Fundamental in development is the explicit recognition of evil which apparently was not regarded as evil, and of all that which can no longer be done with impunity. When good comes out of evil, either evil has not been justly punished—and this would mean an

¹ The pragmatic test—that the religious truths can be proved by the individual—is so far conclusive as against the objection that everything that we conceive (e.g., Kant's case of the dollars in his pocket) must exist. The religious argument is that there are truths which are the outcome of actual experience, which can be elaborated and described, and which under certain conditions can be put to the test, so that the description (seemingly intellectualistic) in one case can be part of a living experience in another.

² To take a simple case: in 1 S 25:39-39 (a) David commits his cause to Jahweh, (b) the guilty Nabal is conscience-stricken and dies, and (c) the immediate common ground is the body of convictions shared by David and Nabal. But the psychological effectiveness of witchcraft, black magic, etc., rests equally upon the system of ideas shared by the parties concerned.

ultimately irrational universe—or, in the midst of a complex process and among all the subsequent vicissitudes, good is seen to predominate. But to do evil that good may come is to assume a complete knowledge of and power over all the processes or factors that are necessary.¹ When, therefore, in religion God's grace or help is implored, the hope is implied that, as apart from man's own activities, the Supreme Being will ensure the co-operation of the totality of conditions necessary. The whole system of cause and effect is involved, and it is precisely in times of difficulty and crisis that, where religion enters, this union of human and non-human (and so divine) factors always persists. If the convictions are sincere, the subjective and objective aspects can be viewed separately. The unanswered prayers, and other instances of defeated hopes, are not necessarily followed either by despair or by unbelief; there are subjective psychical transitions and developments which are often more recognizably significant for the individual than would have been the objective fulfilment of the particular request. Throughout, the sincerity of the individual is at stake, and various developments are forced as his faith becomes blind, as his behaviour becomes 'magical,' or as he seeks to determine what processes are 'natural' and what are not. To expect God to act contrary to one's explicit convictions of Him, and of the inevitable processes of nature, is a mark of unsystematized thought which paves the way, not for simple faith (which has no theory of causation), but for crude superstition; and it easily happens that popular—and other—naturalistic and materialistic conceptions of the universe do not logically permit those subjective notions and convictions of the ultimate reality which are expressed in more or less religious terms. Man cannot have it both ways, and his conceptions of God's power or existence, if claimed to be rational, must be in harmony with those which he has of 'natural' processes, and *vice versa*. So—to mention only one point—it becomes irrational for the individual to protest against conditions without inquiring into the nature of that freedom and liberty which he claims for himself; he has first to see whether the fundamental principles upon which he is entirely dependent are not those which are working in that which he is condemning, and whether what he condemns is only another form of that upon which he himself relies.

(2) Men can justly be judged in the light of those principles which they consciously recognize, although their beliefs and practices imply a profounder system in which they are unconsciously participating. The growth of consciousness breaks down the current concepts; they are no longer taken as starting-points, but are first tested in the light of the individual's own experience. It is a 'deeper' self that criticizes the categories, terms, and thought of its environment, and all profounder experience transcends them and commonly finds them inadequate. Development results, not merely in the use of new terms and formulas, but more especially in the subjective changes, the attitudes, points of view, the contents of one's terms, and in all that fresh flow of experience which language seeks to interpret and express. Now all deeper feeling compels a certain modification and adjustment of thought, and all sincerity and intellectual honesty force a certain systematization—although unfortunately the data which are not readily amenable are easily handled in some new Procrustean manner (see § 15 [2]). In the long run sincerity and genuineness are more

¹ Thus it is recognized in common life that the sweetness of the reconciliation after a quarrel does not justify another quarrel to reproduce the experience, nor, in the religious sphere, does the 'grace abounding' for the penitent sinner justify continuance in sin (Ro 5:20-6:1).

potent than what is cynical, indifferent, and merely conventional; and throughout human history, wherever 'lower' and 'higher' alternatives were recognized, the latter alone caused progress. Were there no sense of the lower and higher, there could be no consciousness of progressive development. The lower and all less desirable features have no elements of permanence or progress in any rational universe, while the higher constantly elude an immediately natural explanation, and manifest themselves in self-sacrifice, renunciation, self-denial, faith, and confidence in the future or the unseen. These higher factors are familiar in both the religious and the non-religious life; and either one must infer that progress is due to the apparently irrational side of man, or—since this, again, allows no ordered conception of the universe—the factors must be treated as thoroughly rational, by regarding the individual as part of the environment, or rather as part of the realities of the universe itself—an ultimate rational and interconnected 'whole.' It is impossible in the long run to sever human activities from those throughout the entire universe, and, although it is necessary to differentiate for practical purposes, the differentiation is never consistently carried out, and there is throughout a virtual co-operation of processes, variously regarded as 'human,' 'divine,' 'natural,' 'supernatural,' and 'cosmical' (cf. § 28 f.).

(3) (a) The factors that make for progress and development do not exist in isolation and cannot be severed from the field where they are manifested. Further, all that makes for permanence and progress must form the basis of conceptions, not only of religion, but also of science, art, ethics, etc. Hence, though religion in the course of its history has had very many extreme, unlovely, unprogressive, and impermanent features, these cannot go to form any critical or scientific conception of what it has been, is, or will be. Men's ordinary working concepts are based upon the persisting and average conditions; and, although thought thus seems to move in a circle, apparently determining what to select for its purpose, not only is the process inevitable, but each concept has to be adjusted to the rest of the system of thought to which it belongs. And, further, not only is the process of selection one of which men are primarily unconscious, but concepts will have characteristic 'ideal' aspects, with standards and criteria which enable men to realize approximations and defects. The origin of such 'ideal' aspects or types is an especially interesting inquiry, because in the spiritual life there is a frequent conviction of a decline or 'fall'—a real experience which it has been difficult to express except in myth, poetry, or metaphor. There is no reason to believe that man is gradually rising from a state of maximum grossness—here all judgments are relative—or that man has 'fallen,' in the terms of the Biblical narrative. None the less, the consciousness of a certain deterioration and decadence is familiar, and man is usually 'below the best' of what he feels to be within his capacity. The experience, which has its spiritual, æsthetic, ethical, and other forms, is bound up with the principle of attraction and with a recurring consciousness or vision of some great worth, existence, and reality which can and must be attained.

(b) Actual development is not to be described as from a part to a whole; but, like that of the child, it is from a rudimentary system to one less so (cf. § 5 [2]). Nor can thought be traced back historically to single concepts or ideas, but only to very rudimentary systems of what may be called 'psychical ability.' Yet even here the legitimacy of the term 'psychical' will be questioned, and it may be observed that what can be regarded as developing (e.g., 'mind' or psychical ability) will go back to some stage where it is non-existent, or where we are in another realm of conditions, or where our present thought cannot follow. Either the nature of what is viewed as developing, or the nature of our concepts, or, again, the limitations of our experience will preclude the solution which we seek. The limitations of the mind forbid more than a certain rough systematization of experience; the mind can determine the conditions of the solution, rather than the solution itself, of some great problems which it becomes aware. Thus the question of the origin of religion can be treated only as a problem of method or logic. It is evident that, when 'God,' 'life,' or 'thought' first appeared in the history of the universe, the prior situation was such as to permit the development (cf. p. 673^b, n. 1), and it cannot be completely described without taking into account that which was shortly to affect it. The factors and conditions that make for development do not exist in isolation, and they cannot be conceived as entirely independent of the field upon which they are first recognized. Neither in the individual nor in history could the objective reality which we call 'God' enter upon a field from which He had before been isolated. The mind is unable to pierce to the ultimate realities themselves and, from primitive cosmologies and cosmogonies to the latest philosophical and other syntheses, it is confronted with a similar difficulty—an

experience of the absolute transcendence and priority of a Supreme Being or Principle, and the necessity of some conception of the actual steps in the differentiation of the universe. Differentiation as a process leads back logically to a single undifferentiated unit; but so far as our evidence goes we reach more and more rudimentary types of differentiation until the mind can reach no further. The steps are from system to system, and consequently it is important to distinguish between a static system of thought, which can allow no real development, and a dynamic one, which, if true to the history of the individual and the race, would embrace all the constituent or contributing minor systems (e.g., human society, the State, Church, etc.), which cannot be regarded as eternal. There are progressive steps from ideal to ideal and system to system, like the continuous development of methods (§§ 3 [2], 16 [3]). We can distinguish the vision and the reflexion upon it, the ideal and the effort to follow it up, the system and what it systematizes, the concept, method, and all that 'organizes' material, and the material itself. There is, however, a tendency to give a certain absolute priority to the former of each pair, and so also to the plan or purpose which appears to precede the development, but continuously undergoes development itself. This tendency reflects itself in static conceptions of an absolutely prior vision, a heavenly origin of the soul, primitive archetypal ideas, some primary all-containing concept or principle, and a pre-determined (static) reality which is slowly being recognized, and of which new portions are being discovered from age to age. On the other hand, there is in point of fact a continuous process which takes us back to earlier stages where thought can no longer follow, and it points forward to an 'unknown' which will blend with the already known, for this is characteristic of the growth of consciousness.

34. The rationality of the unknown.—(1) It is wholly in accord with familiar religious convictions of the ephemeral character of human life, as a prelude for a future, that human thought must not expect to comprehend the ultimate truths. If man cannot see God and live (cf. §§ 18 [1], 32 [2]), if perfect Truth is with God alone, he is confined by his mode of thought, although the significant fact is the mind's sure consciousness of its being limited. Hence what is truly rational is not the ignoring of the unknown, but the realization of all that is essential for every new step of development. Just as our knowledge of anything in space or time is fundamentally incomplete if we ignore the environment, prelude, or sequel, so the true point of view of human life must be based upon the most comprehensive ideas, and one must 'think universally' (cf. p. 677^b, n. 2). The terms 'supernatural' and 'miraculous' have some unfortunate associations, and need careful definition, but they can be used rationally when they imply a God who is not arbitrary, but One whose laws transcend those of which men are cognizant. A disbelief in the supernatural and miraculous can, at the best, only assume an ultimate *impersonal* law and order in the universe to which certain alleged phenomena would be entirely contrary. While an unchecked credulity hinders progress of thought, by giving facile explanations of all difficulties, an irrational incredulity, on the other hand, can be as repressive as the typical rationalistic treatment, for both burke inquiry or offer facile explanations of no rational or scientific value.¹ The issue is faith in a Supreme Personal Being who is absolute justice, or in a supreme impersonal process or principle. In the history of religion now the personal and now the impersonal ultimate stands at the head; and all exceptional occurrences and phenomena which disturbed current convictions have led typically to wider conceptions of some ultimate order.

(2) The multifarious phenomena of life are such as to allow diverging and conflicting opinions. Hence, as in compiling a grammar of a language, regularities and uniformities must form the starting-point. There must be an actual selection of data. The great fundamental truths do not lie in the phenomena themselves—this is very evident from the way men's opinions differ—but they manifest themselves in men's consciousness of them.

¹ Hence (a) alleged miracles cannot be accepted without preliminary examination of the evidence, but (b) they also cannot form the starting-point of any rational argument; cf. Lessing's important remark: 'Accidental truths of history can never become proof of necessary truths of reason.'

They are in this respect *a priori*. He who avers that God's ways are just, or that honesty is the best policy, has neither counted the cases nor balanced the evidence with anything like logical adequacy. But he can make the principles his standard, part of his life, and he lives up to them. There is a common and largely unconscious recognition of regulative principles which might seem to find innumerable exceptions everywhere, but they become permanent and ultimate. Men make them so. Thus do men lay down the lines of their future and form the framework of the unknown; and, like the organism, they will tend to be 'true to type.' But, in addition to this, they will become explicitly conscious of the type to which they must be true, if their personality, in its ultimate development, is to be in every respect efficient (§ 29 [1]). When in the course of mental development the implicit becomes explicit, there is a rigid logical connexion between the old and the new; the lines upon which development will proceed have already been laid, and the data are viewed, selected, and systematized in ways conditioned by earlier processes of selection. Yet this selective process, as it appears, *e.g.*, among the young, is one of which they cannot be said to be conscious; and, while its extraordinarily beneficial character cannot be gainsaid, it is very common for the process, as a man's individuality becomes more distinctive, to be markedly biased, one-sided, and so forth. Development thus brings greater freedom and a more conscious choice of action, and the individual more deliberately shapes his personality. This increase of consciousness gives the impression that the early years were blind, unconscious, and so forth; but consciousness is never complete, as the developing individual can realize on retrospect. Even the very young have an individuality of their own. The selective process, with the gradual recognition of guiding principles, is at work in these rudimentary beings, and we may speak of some 'system' embracing the child, his immediate environment, and all the factors that make for development. Of some of these factors the individual becomes aware, and continued increase of consciousness makes acute the relation between the individual's conception of himself and the supreme realities, so far as he has apprehended them. Now, whatever these may be found to be, they must always have had a significance, such that that of which man becomes conscious was already existing and had some meaning for his earlier stages. The entire process in the midst of which man develops must embrace all that which comes under the category of the transcendent, the supernatural, and the unknown; and in the course of his purposive, self-guiding development he becomes a more responsible part of that co-operative and progressive process which he can now more deliberately help or hinder. It is at this point that the comparative and historical treatment of all ideas of sin, forgiveness, and atonement deserves fresh attention (see artt. EXPIATION AND ATONEMENT, CONSCIENCE, SIN).

(3) In various forms there prevail beliefs and practices of entire surrender, whether to a Supreme Power or to principles in the universe, or of thoroughgoing asceticism or quietism. But self-suppression and surrender are in themselves normal. In entering upon any new system of thought, they are necessary in a greater or less degree, as against inhibition, objectivity, and insistence upon one's own individuality and point of view. Especially significant is the surrender of self to potent ideas or theories, to a body of thought or a Church, and, of course, in all cases where the self entrusts itself to another personality. Throughout, the step has its important

consequences, and the realization of the step becomes more impressive until it is felt to be a veritable leap into the unknown. The ideas and theories may lead one one knows not whither; the person to whom one surrenders oneself will to a greater or less degree affect one's unknown future. The process, a normal one, thus involves the question of the objective value of that to which the surrender is made, of that which is to be assimilated and realized. Progress is throughout due to innumerable acts of faith, trust, surrender, and reliance; and, as the occasions vary in intensity and objective significance, some part of the self is affected and developed, and at times the whole self seems to be renounced only to gain a 'higher' or a better self. However intense the feeling of surrender in human relationships, it is in the religious sphere that the significance of the step is most profoundly felt, and here the leap into the unknown is no less an one, even though there is the confidence that 'underneath are the everlasting arms.'¹ Here are experiences varying in degree and uniting the individual and his ordinary life and thought with that which is most profound and ineffable in the universe, correlating uniquely the non-religious and the religious, the known and the unknown, and forming the basis of all adequate conceptions of existence, knowledge, and reality.

35. Reality.—(1) It will have been seen that the trend of thought has advanced the study of religion to a new stage, and has interwoven it with the progress of other departments of research. In this article the endeavour has been made to introduce the reader to the wider field in which the study of religion must be placed, and to indicate some of the more important questions. Much more might of course be said, but the central problem would still remain: the underlying ultimate realities. Here it must suffice to observe that by the religious consciousness must be meant a consciousness of reality. The realities of religion must be more personally vital than those recognized outside the realm of religion; in fact a religion that would live must be able to claim to approach nearest to the ultimate realities. But even in religion we have to do, not with reality itself, but with intuitions, apprehensions, or convictions of it. The religious mode of thought appears to be essentially a very intense form of otherwise non-religious thought, and the most characteristic features of religion are a highly distinctive form of what otherwise is not peculiar to religion. Religion is 'natural' because the ultimate realities must be a 'natural' part of the universe of which man becomes conscious. Ideas of 'this' world and of 'the other' originate in the mind of one and the same experiencing individual; and there can be only one total existence of which he has such varying intuitions and conceptions as his nature, temperament, and training favour. Moreover, not only is there an interconnexion between the progress of religion, its increasing wealth of expression, and the general development of thought; it is also self-evident that the deliberate effort to raise the level of thought and to improve the mental equipment (*e.g.*, in education) enables one to experience life more fully and to utilize its data more effectively. Indeed, one has only to consider the meager life of primitive men to perceive that the positive advances of thought have conduced to the general advance of religion, and to a clearer apprehension of all that is felt to be profoundly real and true. Thus thought—especially in its dynamic aspects—and reality are not to be separated.

(2) But, while progress brings better conceptions

¹ Cf. also the 'dark night' of the mystical experience; see artt. MYSTICISM, NEO-PLATONISM.

of reality, at the same time it certainly increases men's abilities, duties, and responsibilities. It magnifies the possibilities of good and evil. The development, therefore, is extremely significant for the relation between men and reality, whether one considers (a) the actual progress of physical science and the strides taken in utilizing the realities of the physical world, or (b) the deepening recognition of the necessity of higher standards of moral, spiritual, and intellectual life. Thus, the development of conceptions of reality powerfully affects human welfare as a whole. Moreover, they correspond in their remarkable variety to the variation of individual temperament, training, experience, and so forth. It is obvious that the striking differences—ethical, spiritual, and intellectual—in men's conceptions of God are due to differences, not in the nature of God Himself, but in human nature. 'God' is the name given to that sublimest of realities, of which man becomes conscious as standing in a uniquely 'personal' relationship with him. Whatever be the true *objective* reality, it is evident that both the Reality and man's own individual nature contribute to the resultant varying conceptions. And, in general, all the ultimate realities, as formulated, are man's imperfect conceptions of them, conceptions whose vicissitudes can be objectively studied, and which can develop further and, in so doing, lead to newer and more effective convictions of reality. Consequently, it is necessary to observe, on the one hand, the evident significance for the individual of his own conceptions of reality, and, on the other, the problem of the part taken by reality throughout. To the genuine theist God is the most essential, if not the only, reality, and it is impossible to isolate His working in the universe from the man who has an erroneous conception of God, or, perhaps, no consciousness of Him at all. None the less, it is of essential importance whether men's conceptions of any reality are adequate or not, and, to some extent at least, God's influence upon men is admittedly conditioned by men's conceptions. Hence the question is vital, how far God can influence man as apart from man's explicit consciousness of Him, how far God Himself is affected by human activities (e.g., by gross evil) contrary to man's consciousness of His nature. (For we must evidently distinguish between human activities not yet recognized by men to be evil and those which they know within themselves to be wrong.) Moreover, since 'God' is the theistic consciousness of reality, the problem is essentially that of the relation between the ultimate realities in general and men with their varying consciousness of them. Vitally significant as this is on practical grounds, it is also a problem of the greatest methodological importance, i.e. if the data of the growth of consciousness, of religion and magic, and of science and philosophy are to be rationally and thoroughly handled. Reality must always be significant for men; it must have some effect, as apart from a man's particular conception of it. Only in this way can one gain a coherent view of the universe. Consequently there is need both of (a) an adequate conception of the ultimate realities to take the place of those felt to be imperfect, and of (b) a scientific and more theoretical treatment of such conceptions in human history, the development and differentiation of thought, and all that makes for the greater fullness and richness of life.

(3) All growth of consciousness brings increased power for good or for evil. The development is not so much of the self alone as of an environment or a system of relations of which the self is the centre. The development demands continued discipline and reorganization, for the consequences are harmful if the self is lacking in responsibility, morality, and all that encourages healthy progress.

The limit of such development furnishes the conception of absolute coherence, perfection, truth, justice, etc., whether as regards (a) an absolutely self-conscious, supreme, and personal Self, or (b) an impersonal system of regulative principles and uniformities, as manifested in the universe—the ultimate 'environment'.¹ Now, the entire complex field of religion becomes more manageable and intelligible only when notice is taken of the beliefs and practices which connect human activities with those of the universe, whether directly (especially in magico-religious and magical data) or indirectly (e.g., through prayer to the gods). But this fundamental underlying interconnexion, implicit in life and thought, becomes explicit only in the development and differentiation of thought—when, e.g., spiritual and non-spiritual forms of energy are distinguished, and definitions or theories mark off matter from mind, and the physical from the psychical. The primary logical interconnexions are continually being obscured through the growth of special knowledge, which, however, brilliantly illuminates the varied departmental (moral, spiritual, aesthetic, intellectual) aspects of the universe.

There is a perilous kinship between religion and magic; typically and characteristically they are respectively right and wrong ways of dealing with what is regarded as fundamentally real and true. Since strong convictions and supremely intense states of consciousness are the more potent for good or for evil, there is a bifurcation such that what can take a religious form might also become magical or irreligious. Thus, there is a sane and an insane supernaturalism, a healthy and unhealthy mysticism, and genius has its cases of perversity and depravity. Accordingly, it is possible either to distinguish the good and the bad examples or to refuse to admit the latter within the category; that is to say, either we have good and bad religion, genius, etc. (or examples of these) or the bad cases come under another category, as, e.g., in the antithesis of religion and magic, (good) mysticism and (irrational) occultism, and the like. Whatever course be generally adopted, it is extremely important to distinguish the psychological and subjective aspects of data from their logical and other more objective value. It is important to distinguish religion, genius, etc., as a whole or absolute feeling and the more specialized forms which are examples of religion, genius, etc., and which can be more objectively regarded. In this way, the fact can be emphasized that, although the ultimate realities are in a sense religious (e.g., as relating to a Supreme Deity or to life after death), they are not religious in themselves, although religion is directly concerned with their apprehension and formulation. For the subjectively impressive experiences so easily lead along beneficial or harmful roads, either to religion or to its worst enemy, that a careful disciplinary and regulative system of belief and practice is at once required for the sake of both the individual and society. In other words, reality—i.e. our own subjective conceptions of it—at once requires a formulation, a logical theory, an embodiment.

(4) From one point of view, then, religion, mysticism, etc., are one of many phases, aspects, and departments of the totality of existence. The most 'religious' individual has his non-religious times, and many 'good' men have had their anti-religious or rather irreligious occasions. The test of a religion lies in its relation to what is, as such, non-religious, viz. to the best moral, spiritual, aesthetic, and intellectual consciousness of the age as manifested in conduct, thought, ideals, and so forth. But, owing to the differentiation and specialization of thought

¹ The latter is not the objective universe of the senses, but a logical construction, and the former depends upon man's present stage of consciousness. The ultimate which the mind can conceive depends upon the stage of development reached by the mind.

—with the corresponding (objective) incompleteness of individual minds—no one mind can form a logically adequate estimate. It is impossible for any individual to grasp totality as a whole, although it is possible to do justice to the various aspects under which the universe is apprehended, and to investigate their growth, development, and interrelation. Proceeding on these lines, one can realize the necessity of proving and improving current conceptions, definitions, and other tools of thought, for, in the advance of thought, and in the better organization of the data of experience, one comes to realize more vividly and truly the universe of which one is an integral part. While the actual religious life implies principles, ideas, and the rest, the scientific or critical treatment of religion is concerned in determining these and in maintaining the progress of thought, inasmuch as nothing is more potent than the continued knowledge of reality and the convictions which sway mankind. The apprehensions of reality unite man and objective reality itself, and, varying, as they do, according to the individual, they are a key to a science of human nature and experience. It is obvious that there must be realities of a sort to allow the prevalent types, although the ultimate realities of the universe are not to be confused with the realities of our human nature. Thus, a conception of 'God' can be formulated and accepted; it will correspond and answer to personal experience at a certain stage of psychical development; it can prove the most vital and stimulating truth that man can possess. There must be some objective reality such that men become conscious of it in ways varying according to their individual nature and stage of development. Moreover, human personality is such that the conception of a reality in a personal relationship to man, and alike immanent and transcendent, is not merely a subjective reality; it is demanded by the data of religion, by the characteristic features of personal development, by the consciousness of the necessity of continued development in every direction which man feels to be good, beautiful, and true. In a word, the objective reality of 'God' is demanded if man is to give a rational account of himself so far as his intellect allows him, and the most objective theory of reality must be based upon the facts of human consciousness.

(5) All the ultimate realities themselves lie beyond human vision (cf. 1 Co 13¹²). Between them and the self there are, as a psychical veil, the impulses, ideas, convictions, and theories, the whole body or world of thought which makes every man what he is, and enables him to say, 'Here is reality.' Some mysteries of reality, from a psychical point of view, are hinted at in the strange data of psychical research, occultism, and ecstasy, in all abnormal and pathological phenomena of the mind, in the disastrous effects of vagaries, or of doctrines and theories which healthy opinion repudiates. Although progressive thought may reject certain explanatory conceptions or theories—e.g., now of evil spirits, and now of guardian angels—men require some organization of experience, some adequate body of thought, some tolerable outlook upon the universe, which will enable them both to

direct and understand their experiences and to realize the significance of human existence so as to be able to live healthy and useful lives for the good of a universe from which they can never escape. Upon their body of thought depend their sanity and effectiveness. Even reality itself seems to some extent to be powerless against the will which we regard as bad and evil; while, on the other hand, how far reality can be objectively and positively influenced, under given conditions, is a vital problem which can at least be theoretically handled. Certainly religion has not been without daring conceptions of the practical relations between God and man—and, suppose religion proved to embody the truth about reality?

So the study of man's psychical tendencies, his ideas and ideals, his modes of thought, his beliefs and practices, his doctrines, theologies, and philosophies—all contribute to one's knowledge of human nature and of the universe. In the investigation of the development of conceptions and of the workings of the mind, whether in its immediate consciousness of reality or in its reflexion upon past experiences, one comes to know a little more of the realities themselves and of the objective relationship between them and man. If, then, it is judicious to venture upon a definition of religion on the lines upon which this article has proceeded, the following may be suggested, provisionally: Religion primarily involves some immediate consciousness of transcendent realities of supreme personal worth, vitally influencing life and thought, expressing themselves in forms which are conditioned by the entire stage of development reached by the individual and his environment, and tending to become more explicit and static in mythologies, theologies, philosophies, and scientific doctrines. But, as this article has tried to indicate, there is a positive development of consciousness and thought in history, and consequently it is possible to seek to correlate both the static aspects, which are essential for all stability, and the dynamic, which are indispensable for future progress. For to do justice to the ultimate facts of harmony and of development in the universe is one of the main functions of a living religion.

LITERATURE.—The more important special technical works have been mentioned throughout the article.

RELIGIOUS ORDERS (Christian). — I. GENERAL CHARACTERISTICS AND CLASSIFICATION.—Under the title 'religious,' in the Christian Churches, are included all those who make profession of a life in conformity with the precepts and counsels of the gospel, and who withdraw from the world in order to practise this life more perfectly.

The art. MONASTICISM deals with the origin and chief characteristics of this form of life, of which monasticism is itself the principal species. In monasticism we have the religious life in its essential elements; and it may be said that, from the 6th to the 20th cent., it has been a question merely of combining those elements according to different methods to serve special purposes, and that no new conception, no essential difference, has been introduced—nothing, in fact, that was not already existing in germ in the monastic life of the earliest centuries. The vows of poverty,

chastity, and obedience, the practice of mortification, labour, prayer, and silence—sometimes even preaching and other external work—were the obligations of religious life in all ages, whether under the cenobitical or under the eremitical form. We are concerned in this article with the different forms of the religious life distinct from monasticism. The first task of the historian, in presence of the number and variety of these forms of the religious life (they exceed 380 in number, even without counting certain religious societies of minor importance), is to attempt a classification. This is no easy task. Neither geographical nor chronological considerations will serve as a basis of classification, since, owing to the universal character of Christianity, these religious families are found in all nations, and some have put forth shoots in every age and thus belong to no one century more than to another. The attempt has been made to group them in families, placing side by

side those which offer analogous features or which follow the same Rule. Here, however, historian and canonist will not be in perfect accord.

If, e.g., the attempt is made to place under the same rubric all the orders in which the Rule of St. Augustine is followed, the result will only lead to confusion, for these orders are in other respects quite dissimilar and belong to different groups. The Dominicans, hospitaliers, and several congregations of women, e.g., all alike follow the Rule of St. Augustine, but they differ entirely from one another as regards the end and object of their respective institutes. This results from the fact that the so-called Rule of St. Augustine consists in reality of a set of general principles of spirituality which can be adapted to any form of religious life. It is the constitutions of each order, rather than the Rule, that give it its distinctive character. The Carmelites originally followed the Rule of St. Augustine. Some orders have followed different Rules at different times. The Premonstratensians combine the Rules of St. Augustine and St. Benedict.¹ The Dominicans, who also follow the Rule of St. Augustine adapted from that of the canons regular, especially the Premonstratensians, seem to belong, with practically equal right, to two very different forms of religious life—that of the canons regular and that of the mendicant friars. The Brothers of St. John of God, who are hospitaliers, were attached to the mendicant orders by Urban VIII. It was the same in the case of the Jesuits to a certain extent, although these 'religious' belong to a totally different category—that of clerks regular. The title, in fact, of 'mendicant friar,' which distinguishes certain orders, came in time to be attached to those which were not originally comprised under this designation, such as the Augustinian Hermits, the Carmelites, as well as the hospitaliers and others mentioned above. The Theatines and Barnabites, who are clerks regular, received the privileges of the canons regular of the Lateran. Some—e.g., Vermeersch—regard the question from the point of view of canon law, and classify the orders according to whether they possess solemn vows, simple vows, temporary vows, or a mere promise. This method of classification, while legitimate in itself, has no historical foundation. Moreover, it leads to confusion, for some orders have adopted in turn temporary vows and simple vows, or have even practised both systems simultaneously for different members of the order. Finally, if we take as specially characteristic of an order the particular work undertaken by its members—education, care of the sick, preaching, etc.—it is not easy to judge to what class certain orders belong that exercise all these various activities at once.

Without flattering ourselves that it is in all respects a perfectly satisfactory system of classification, we shall adopt here, as the most practical for our purposes, one that is both chronological and pragmatic—one that keeps in view the different periods of time, while grouping together those orders which possess certain characteristics in common. We shall also keep to the traditional mode of designation.

1. From the 1st to the middle of the 3rd century: virgins, widows, and ascetics.—In primitive Christian society there were certain of the faithful who led a life more austere than that of their brethren and who formed a class apart. Among these ascetics there are even indications of an attempt at community life. They may be regarded as the earliest representatives of the religious life.¹

2. From the middle of the 3rd to the end of

¹ Cf. art. MONASTICISM.

the 12th century: the monks and the canons regular.—Under the title 'monk' are comprised the hermits and anchorites of all descriptions, the cenobites or monks living together in community, and those who combine both elements in a life partly eremitical and partly cenobitical. To the same period belong the canons regular, whose life has much in common with that of the monks, and who enjoy the same privileges.

For the different kinds of monks cf. art. MONASTICISM. The principal varieties of canons regular are: the Premonstratensians, Canons of St. Victor, Canons of the Lateran, Canons of St. Maurice (Agaune), Canons of the Holy Cross, Canons of St. Saviour, Canons of St. Rufus, Canons of the Holy Sepulchre, Canons of Verres, Canons of Marbach, Canons of Pampeluna, Canons of St. Antony, Canons of the Immaculate Conception, and the Gilbertines.¹

The Brothers of the Common Life, Beghards, and Beguines form a category of their own, but may be classified together with the monks and the canons, since their life is founded on the principles of the monastic and canonical state.

3. From the 11th to the 16th century: the military orders and the knights hospitaliers.—Strictly speaking, these orders might be classed with the monks, since they usually followed one of the monastic Rules (e.g., that of St. Benedict). But they possess so marked a character of their own that it is better to treat them separately. They are as follows: the Knights Hospitaliers of St. John of Jerusalem, Templars, Teutonic Knights, Knights of Evora or of Aviz, Knights of St. James of Compostella, Knights of Calatrava and of Alcantara, Knights of the Order of St. Lazarus.

4. From the 11th to the 20th century: the hospitaliers (non-military).²—These include the Order of Mercy, the Trinitarians, the Servites, the Paulinians, the Alexians, the Jesuati or Hieronymites, the Ambrosians, the Brothers of the Apostles, the Good Brethren, the Order of the Holy Ghost, the Brothers of St. John of God.³

5. From the 13th to the 16th century: the mendicant orders or friars (frati).—The friars adopted a mode of life differing in many respects from that of the monks or canons regular, viz. the absence of the element of stability in a particular monastery, and of perpetuity in the superior, the exercise of the sacred ministry, preaching and teaching, reduction of the solemnity of the choral office, suppression (at least originally) of all property and all power to possess lands or money even in the name of the community. They are called mendicants because, unlike the monks, having no possessions and no stable means of livelihood, they were obliged to live on alms.

The four principal mendicant orders are: the Dominicans, the Franciscans, the Carmelites, the Augustinians.⁴ There are, besides, other lesser mendicant orders in some of which the Rule of St. Augustine is observed, in others that of St. Francis. Among the former are the Order of

¹ For other examples cf. Heimbucher, *Die Orden und Kongregationen der katholischen Kirche*, II, 24-29.

² It must be remarked that several of these orders follow the Rule of St. Augustine and have obtained both the title and the privileges of the mendicant orders. Hence they are sometimes classed under one, sometimes under the other, of these two categories. Since, however, both their special object and their manner of life are practically identical in all these orders, and since they possess many of the characteristics of the military hospitaliers treated above, it would seem to be as well to group them together under the rubric of hospitaliers.

³ Some of the hospitaliers are also among clerks regular, like the Camillians.

⁴ The Augustinians belong, by their Rule, to the canons regular rather than to the friars and, in some of their branches, have more affinity with the hermits or monks. They have been counted, however, among the mendicant orders since the day when they obtained a share in the privileges of the latter.

Mercy, the Trinitarians, the Servites, the Paulinians, the Alexians, the Hieronymites, the Jesuati, etc. These are already mentioned under the category of hospitaliers, to which they also belong. Among those that follow the Rule of St. Francis are the Minims, the Third Order of St. Francis, and the Scalzetti ('discalced Friars'), or Order of Penance.

Orders of women are the Brigittines, Annunciades, Ursulines, Angelicals, Salesian Sisters, Penitents, etc.

6. From the 16th to the 17th century: the clerks regular.—These 'religious,' while practising the religious life in community (as the title 'regular' indicates), belong essentially to the clerical order, as shown again by the title 'clerk' and by their dress, their external life, and their exercise of the sacred ministry. They possess solemn vows, like the monks and canons regular, but have not, like the latter, the choral office, nor do they practise stability. Generally speaking, they have, in addition to the exercise of the religious life, some special object or particular line of work. Most of these societies admit only priests to their ranks, and lay brothers are received as 'coadjutors.' Some—e.g. the Theatines and the Barnabites—possess, as already remarked, the privileges of the Canons of the Lateran. The clerks regular are: the Jesuits,¹ Theatines, Barnabites, Clerks Regular of Somascha, Clerks Regular of the Good Jesus, Clerks Regular of the Mother of God, Camillians, Minor Clerks Regular.

7. From the 17th to the 19th century: religious congregations.—These religious congregations resemble the clerks regular, and they are called in canon law 'quasi-regulars.' They have usually only simple vows and are distinguished from the clerks regular proper by this fact and also by the more recent date of their foundation.

The principal congregations are: the Passionists, Redemptorists, Lazarists, Eudists, Oblates, Marists, Assumptionists, Salesians, Paulists, Sulpicians, Oratorians.²

8. From the 18th to the 20th century: missionary societies or congregations.—These societies, founded specially for the foreign missions, may be considered, as regards their manner of life, as clerks regular or quasi-regulars; but, since they all have a common end in view, we have placed them together in a group apart.

They are: the Society of Foreign Missions, the Society of the Sacred Hearts of Jesus and Mary (or Fathers of Picpus), the Fathers of the Holy Ghost, the Fathers of Scheut, the Fathers of Mill Hill, the White Fathers, the Society of the Divine Word, the Society of the Divine Saviour.

9. From the 17th to the 20th century: teaching brotherhoods and congregations of women.—These include the Piarists, Brothers of the Christian Schools of St. John Baptist de la Salle (Christian Brothers), Brothers of the Society of Mary (Marianists), Brothers of Lamennais, Brothers of St. Gabriel, etc.,³ Sisters of Charity of St. Vincent de Paul, Sisters of Wisdom, Sisters of Evron, Sisters of Nevers, Sisters of the Good Shepherd, Sisters of Nazareth, Little Sisters of the Poor, Society of the Sacred Heart, Sisters of St. Joseph of Cluny,⁴ etc.

II. CANONS REGULAR, BROTHERS OF THE COMMON LIFE, BEGHARDS AND BEGUINES, MILI-

¹ The strictly chronological order is as follows: Theatines, 1524; Clerks Regular of the Good Jesus, 1526; Barnabites, 1530; Somascha, 1532; Society of Jesus (Jesuits), 1534.

² We include the Sulpicians and Oratorians among these congregations, although canonically they are not considered as such, since they have no vows. They may, however, be assimilated to societies such as that of the Lazarists by their object, the training of the clergy.

³ For the detail cf. Heimbucher, iii. 356 ff.

⁴ Ib. iii. 364 f.

TARY ORDERS AND HOSPITALIERS.—I. Canons regular.—(a) *The name.*—The name 'canon' is of ancient origin. The Councils of Antioch (341), Chalcedon (451), and 'in Trullo' (692), speaking of the clerics attached to the service of certain churches, say that they are *ἐν τῷ κανόνι* or *ἐκ τοῦ κανόνος*, i.e. inscribed in the *kanón*, the *matricula*, *tabula*, or *album*.¹ According to du Cange,² a *canonicus* is one who is inscribed *sub canone frumentario*, i.e. is maintained by the revenues of the Church. St. Athanasius employs the term *τὸν τε κανόνα τῆς ἐκκλησίας*.³

In the West the 2nd and 3rd Councils of Toledo and that of Friuli (791) speak of clerics 'sub canone ecclesiastico'.⁴ The 3rd Council of Orleans in 538 and Gregory of Tours make use of the term *canonici* to describe the clergy of a church.⁵ The Council of Clermont in 535 extends this title to all priests and even deacons attached to a church, whether in town or in country. These priests and deacons were obliged, at great feasts, to assemble in the cathedral church to celebrate divine service together with the bishop. In 538 the 3rd Council of Orleans deprived of the title of 'canon' all clerics who refused to obey their bishop.⁶ It may be gathered from these different texts that the term 'canon' was applied to two classes of people differing widely from one another. On the one hand were clerics, like those of the diocese of Hippo, who lived with their bishop in community and in the practice of monastic asceticism. On the other hand were those who lived in their own churches, practising neither the community life nor monastic poverty, and bound to their bishop by an obedience that did not press very heavily upon them. This vague use of the term lasted throughout the ages. In order to avoid confusion, the custom finally arose of distinguishing between the two classes of canons by calling the first 'canons regular' and the second 'secular canons' or 'canons' pure and simple. The latter cannot, of course, be regarded as in any sense belonging to the religious orders; it is with the canons regular alone that we are here concerned.⁷

(b) *Canons regular till the 10th century.*—In art. MONASTICISM we have shown that in the 4th cent. there was a tendency among many bishops to gather the clergy of their churches around them and to live with them in the exercise of asceticism according to the example of the monks. The attempts that have been made to find examples earlier than this date, in order thus to trace back the origin of the canonical order to the time of the Apostles, are entirely without value. St. Augustine, who was so well versed in the knowledge of the ecclesiastical institutions of the past, does not even mention the canonical life in his *de Moribus Ecclesie Catholicae*, written in 388, although it would have afforded him an excellent and most natural opportunity for doing so, had any such institution existed before his time. Nor can any traces be found in the writings of St. Cyprian or any other writer of earlier times. St. Augustine was himself, in fact, one of the first to have the idea of gathering his clergy around him in order to live with them in common in the practice of poverty and religious discipline after the example of the cenobites. He made his first trial of this way of life at Tagaste, his second at Hippo (388

⁷ Cf. du Cange, s.v. 'Canonicus.'

and 391). We have accounts of the life led in his monasteries written by Possidius in his life of St. Augustine and also by St. Augustine himself.¹ It resembled to a great extent the life of the monks—life in common under a common discipline. The bishop was the head of this family of clerics, and obedience was doubly due to him—as bishop and as the quasi-abbot of the community. He was also the temporal administrator of the affairs of his ‘monastery,’ and the clergy were bound to abandon their personal property and to live in the practice of poverty and chastity. The chief difference between them and the monks lay, firstly, in the fact that these early ‘canons regular,’ instead of living apart from the world, had their dwelling in the midst of a town or city; secondly, in the fact that they were essentially the clergy of their churches and exercised the sacred ministry. Their régime and manner of dress were again different from those of the monks, and their practice of poverty and obedience was less severe. The example of St. Augustine was followed by other African bishops, at Carthage, Tagaste, and in other cities. We find the same custom in existence even beyond the confines of Africa, in the case of St. Paulinus of Nola, Hilary of Arles, and others.²

One of the most remarkable among these examples is that of St. Eusebius of Vercelli—an earlier case than that of St. Augustine—about whom we have a considerable amount of information.³ But the life led by St. Eusebius and his clergy resembled far more closely than that of St. Augustine and his ‘canons’ the life led by the monks proper. In St. Augustine’s case it was in fact a seminary for the clergy or a college of canons, rather than a monastery for monks as in Eusebius’s institution. The clergy of Eusebius observed the monastic enclosure, celebrated the day and night hours of prayer, and practised all the austerities of the monastic life. St. Fulgentius, in the midst of the Vandal persecutions, and, no doubt, other African bishops also, went farther still and obliged monks and clerks to live together. But this attempt to unite two incongruous elements should be regarded as a mere expedient demanded by the special needs of the time.⁴ This quasi-monastic form of life seems to have been practised only in certain exceptional cases by the clergy of the Eastern Church. St. Jerome, who was so well acquainted with all that concerned ecclesiastical life, does not mention any example of it. Cases have been quoted of monks living with their bishops, but these are not to be regarded as institutions distinct from that of the ordinary monastic life, and the only actual example is that of Rhinocorura quoted by Leclercq from Sozomen.⁵

In the West, however, at the end of the 5th cent. and during the 6th the canonical life became an official institution. The 4th Council of Toledo provides us with a picture of the bishop in his episcopal residence surrounded by his priests and deacons, while in a neighbouring dwelling the young clerics were educated under his supervision.⁶ In Gaul the 2nd Council of Tours also laid down that the bishop should live with his priests and deacons in the episcopal palace.⁷ Gregory of Tours

makes frequent allusion to those clerics who shared the dwelling and the table of their bishop—*mensa canonicorum, convivium mensæ canonicæ*.¹

Other councils, as we have already seen, laid down new regulations for these clerics, now called *canonici*—e.g. the Councils of Clermont and Orleans.

With regard to England, St. Gregory the Great advised St. Augustine of Canterbury to live in common with his clergy. But the latter apparently wished to go even farther than the recommendation of the holy pontiff. At Canterbury and in the greater number of cathedral churches founded among the Anglo-Saxons the chapter was formed by a monastic community properly so called. The clergy of the cathedral were monks and carried out the full monastic régime, to which they also added the exercise of the sacred ministry. These monastic chapters remained in force in the greater number of English cathedrals up to the Reformation in the 16th century. Certain churches, however, founded after the first Christian mission in England, were served by secular canons.²

Finally, it may be said that, outside the church of Hippo and certain others that had followed the example of St. Augustine, the word ‘canon’ was applied to a class of clerics whose obligations and forms of life varied from place to place. But in the 8th cent. a bishop of Metz, St. Chrodegang, gave the canonical life a more definite character by means of the Rule that he drew up for canons. This bishop (742–766) played an important part in the religious and political history of his time. He wrote for the clergy of his own church a Rule, *Regula Canonicorum*, which obtained the support of Pepin and Charlemagne and was given the force of general ecclesiastical law in the *Capitularies* of the latter monarch and by the Councils of Aix-la-Chapelle (802), Mayence, Tours, Rheims (813), Arles (813), and especially by that of Aix-la-Chapelle (817).³ This Rule is largely founded on that of St. Benedict. It subjects the canons to the common life, enclosure, and the ordinary exercises of Benedictine life, while at the same time leaving them a certain amount of liberty and the right of possessing property.⁴

(c) *Canons regular from the 9th to the 20th century.*—The period of St. Chrodegang and that which immediately followed were the most flourishing in the history of the canons regular. Charlemagne and Louis the Pious endeavoured to impose his Rule on the clergy of their empire, and the Councils of Aix-la-Chapelle in 802 and in 817 followed suit.⁵ Amalarius composed his *de Institutione Canonicorum* with the same intention. The Lateran Council in 1059⁶ renewed these decrees and obliged the clergy attached to a church to live together and share their property in common.

The Rule of St. Augustine, although it is taken from his works, was in reality only drawn up in the 8th–9th centuries. It was followed side by side with that of St. Chrodegang, which was far more complete and precise in details. It was adopted by certain groups of canons and became for them the expression of the *vita apostolica, vita communis perfecta*. These canons came to be known as ‘Canons of St. Augustine,’ ‘Augustinian

⁶ *Id.* iv. 1166.

or Austin Canons.¹ Their houses were at first independent of one another, but were later united in a congregation which had its general chapters, its statutes, etc. The decrees of the 4th Lateran Council and those of Benedict XII. in 1339 are concerned with the Austin Canons. In spite of all these decrees, however, religious life among them had but a short period of brilliancy.

In the 14th cent. new efforts² at reform were attempted by Cardinal Branda de Castiglione, by John Bush, and by Nicholas of Cusa.

The Protestant Reformation struck a fatal blow at the Canons Regular of St. Augustine properly so called. Other societies, however, had been formed on the Augustinian model under a severer Rule, and these were better able to resist the shock of the great upheaval. Some of them are still in existence at the present day, such, *e.g.*, as the Canons Regular of the Lateran, the Premonstratensians, and several other congregations. We can give here only an outline of some of the principal ones.³

Premonstratensians.—The Order of Prémontré is the most illustrious of all among the canons regular. Its founder was St. Norbert († 1134), a canon of Magdeburg, who established himself at Prémontré with a few companions in order to lead a retired and holy life and at the same time to give themselves to preaching and the sacred ministry. Their life was ordered according to the Rule of St. Augustine and guided by the example of the Canons Regular of St. Victor of Paris. This order developed rapidly, owing partly to the sanctity and personal influence of its holy founder, partly to its object and nature, which had a special appeal in an age in which the idea of clerical and monastic reform had given rise to institutions such as the Camaldolese, the Carthusians, and the Cistercians. St. Norbert founded, besides the canons regular, a second order for women, which also had great success, and a third order for lay people. At the present day the order possesses five provinces or circles (*circaria*), seventeen abbeys, five priories, eight convents of nuns of the second order and three of the third order, besides parishes, missions, and a few colleges. The members number 997 men and 258 women.

The Premonstratensians follow the Rule of St. Augustine along with special statutes of their own. At the head of the circle is the *circator*, whose rank and office correspond with those of the provincial in other orders. Their constitutions resemble those of Cîteaux. The abbot of Prémontré is abbot-general of the whole order and is assisted by the abbots of Floreffe, of Laon, and of Cuissy, the first houses of the order. The general chapter is held at Prémontré. This constitution came to an end before the Revolution, and in 1883 a new constitution took its place. The habit is white and resembles the monastic habit except that in

¹ The Rule of St. Augustine is divided into twelve chapters and contains only general principles (of an extremely elevated character) on the love of God and our neighbour, humility, prayer, fasting, duties towards the sick, purity of soul and body, obedience, etc.

choir a rochet, the badge of canonical dignity, is worn, and in winter a mantle also.

This order has rendered signal services to Christianity by its missions on the banks of the Elbe and the Oder and in the Low Countries, by the institution of hospices for pilgrims, the making of roads and canals, the foundation of libraries and schools, but especially by its reform of the clergy and the foundation of parishes. It even had an influence on architecture. It has produced also a certain number of chroniclers, historians, and ecclesiastical writers.¹

Canons of St. Victor.²—From the point of view of theology and literature, the Canons of St. Victor hold the first place. Their founder, Guillaume de Champeaux, is known as one of the most illustrious doctors and professors of the 12th century. These canons take their name from a chapel erected in honour of St. Victor, the martyr of Marseilles, on Mt. Sainte Geneviève in Paris. They were, moreover, actually affiliated to the Canons of St. Victor of Marseilles. Their teaching reached its highest expression in the persons of Hugh and Richard of St. Victor, whose theological and mystical works may be counted among the most remarkable of the Middle Ages; while Adam of St. Victor, with his hymns, ranks foremost among the poets of his time. The Canons of St. Victor were established in a number of churches in France (notably in that of Ste. Geneviève in Paris, whence their name of 'Genovefains') and also outside France. St. Victor de Paris remained the centre of the institute. Unfortunately divisions soon arose within the order, and after the beginning of the 14th cent. it began to decline. On the eve of the Reformation it existed in a state of mere vegetation. The school of St. Victor is most important for the history of mediæval mysticism, and the works of its teachers are still of great value.

Like the greater number of canons regular, the Canons of St. Victor followed the Rule of St. Augustine, with their own special statutes composed by Gilduin, one of their abbots, and inspired to a great extent by the Rule of St. Benedict.

Canons of the Lateran.—The Augustinian Canons of the Lateran were founded shortly after the Lateran Council in 1059, and were attached to the celebrated basilica of St. Saviour in the Lateran. They possessed a considerable number of houses in Italy and Poland. They were obliged to leave the Lateran basilica for the first time in 1299, for the second and last time in 1471. They have to-day about 200 members and 24 houses and possess the Church of St. Peter ad Vincula in Rome.³

Canons Regular of St. Maurice.—The congregation of Canons Regular of St. Maurice of Agaune in Switzerland owes its fame to the martyrs of the Theban legion. An abbey existed at Agaune from the 6th cent., in close relation with that of Lérins and having, like the latter, the custom of the *laus perennis*. In 824 the monks were transformed into canons regular—an event of frequent occurrence at that time.¹

2. Brothers of the Common Life.—This religious society, like that of the Beguines and the Beghards, forms a class apart in the history of the religious orders. From some points of view, it would seem to belong to the monastic order, from others, again, to that of the canons regular. In any case it forms one of the most interesting pages in the history of mediæval religious life and mysticism. It is treated separately under the title **BRETHREN OF THE COMMON LIFE**.

3. Beguines and Beghards.—These congregations originated in the Low Countries. According to some, they go back to the time of St. Begga, daughter of Pepin de Landen, in the 7th century. But it seems that their founder was, in reality, a priest of Liège, Lambert Beghe (or 'le begue,' † 1187).

The Beguines are not nuns or 'religious' in the strict sense, for they take no vows. They are simply pious women living in community. In certain towns a special quarter was given up to them. They lived there in little hermitages, sometimes singly, sometimes several together, under the direction of a superior (known nowadays as 'la grande dame'). They had a common chapel, in which they met for their religious exercises. Some followed the Rule for the tertiaries of St. Francis, others that for the tertiaries of St. Dominic. The Reformation in the 16th cent. and the French Revolution put an end to many *beguinages*. Some, however, still exist in Belgium, Holland, and Germany. This institution never had a very wide vogue, but it presents certain original characteristics worthy of note.²

The institution of the Beghards was founded for men on the analogy of the Beguines. They soon underwent the influence of the Lollards and other heretics, and were condemned by several popes and councils.³

4. Military orders and hospitallers.—In the 11th cent. sprang up a new class of religious orders which, from a certain point of view, are connected with the monastic order, while possessing their own marked characteristics. Some of these were purely military in character; others were concerned also with the care of the sick (hospitallers). The hospitallers pure and simple form a third category, which will be treated apart.⁴ The military orders were regarded by the Church as true religious orders. They had the three vows of poverty, chastity, and obedience, celebrated the divine office, were under the discipline of a Rule and an observance of fasts and abstinence, and enjoyed the same privileges as the monks, being exempt from episcopal jurisdiction and immediately subject to the Holy See. Some followed the Cistercian statutes, others the Rule of St. Augustine, and

others that of St. Benedict. It is for this reason that we regard them as belonging, in a sense, to the monastic order. Contemporary with the Crusades, their principal object was to fight against the Saracens and to protect the Christian pilgrims to the holy places. Their life may, in fact, be regarded as a permanent crusade against the Musalmān. In these orders, at their origin, we have united in one the ideal of the monastic life and of the life of chivalry of the Christian knight. This ideal stood them in good stead in an age when all institutions were so profoundly imbued with the spirit of religion. Unfortunately such an ideal proved to be too high, and elements so incongruous as the religious and the military could not long endure together.

Knights Hospitallers of St. John of Jerusalem.—This is the most ancient of all the military orders. In 1048 some Italian merchants built a hospice or hostelry for pilgrims and for the sick in Jerusalem. Certain French noblemen who served it formed themselves into a religious congregation. This was the cradle of the order. Gérard de Tenque (of Martigues in Provence) organized it into a military order, i.e. an order in which there were brethren attendant on the sick and members who were knights, and who had as their special object to defend pilgrims against malefactors and infidels. The order was approved by Pope Pascal II. in 1113 under the name of the Order of St. John of Jerusalem. Later its members were known as the Knights of Rhodes and, later still, Knights of Malta, from the fact that they defended both these islands against the Musalmān. Foundations were soon established along the shores of the Mediterranean, and at one period of their history they possessed houses to the number of 13,000.

The knights acquired a wide-spread influence and power and also considerable riches, which enabled them to serve as money-agents or bankers to princes and kings.¹ They rendered great services to the Christian religion, and their prowess in the wars against the Turks won them great renown. Their heroic defence of Rhodes and of Malta against an enemy six times their number forms a veritable epic. The most illustrious of their grand masters were Pierre d'Aubusson, Villiers de l'Isle Adam, and La Valette. Napoleon confiscated their property in France, and Nelson annexed Malta for the English Government. The title of Knights of Malta still exists as a title of honour. Those who bear it form a society and give themselves to works of charity.

Knights Templars.—Although of more recent date than the Knights Hospitallers, the Templars soon became of greater importance and greater power. Their founder was Hugues de Payens, a French noble, who in 1118 gathered together a number of companions for the defence of the pilgrims to the Holy Land against the Saracens. The name of Templars, or 'Order of the Temple,' was given to them because their house in Jerusalem was built on the site of the Temple of Solomon. St. Bernard, in 1128, drew up a Rule for them, adapted from the Rule of St. Benedict and the Statutes of Cîteaux. The order comprised the knights (all of whom had to be of noble birth), 'sergeants,' who were of the bourgeoisie and who acted as esquires, and then the chaplains. The first grand master was Hugues de Payens.

⁴ We shall say nothing here of the secular orders of knighthood that were founded more or less on the model of the military orders but were in reality purely civil and instituted by kings and princes as a reward for the services of their subjects. Such, e.g., are the Orders of the Garter, the Bath, the Thistle, etc.

The order was purely military. We need not here enlarge on the great part played in mediæval history by the Knights Templars, on the influence which they wielded far and wide (they had in the 12th cent. 9000 manors distributed through every land in Christendom), on the services which they rendered to Christianity against the Saracens in Palestine and in Egypt, the riches which they accumulated and which were the cause of their downfall, the abuses which crept into the order, or, finally, their lamentable end under Philip le Bel and Clement v. after the cruel execution of their grand master, Jacques de Molay, and his companions in 1307.¹

The Templars were succeeded in Portugal by the Order of Christ, and in Spain by the Order of Montesa.

Other orders were founded on the model of the Templars and the Hospitallers, but we shall speak only of the principal of these lesser orders—the Teutonic Knights, the Knights of St. James, and the Knights of Calatrava and Alcantara.

Teutonic Knights.—About 1128 or 1129 a rich merchant of Germany who had taken part in the siege of Jerusalem, struck with compassion at the sight of the sufferings of the pilgrims, built a hospital for them, in honour of the Blessed Virgin. He was soon joined by others, with whom he organized an order on the model of the Hospitallers of St. John, to care for the pilgrims and protect them against the Saracens. After the capture of Jerusalem by Saladin they were constituted one of the military orders (1190 or 1191) and changed their name from 'Hospitallers of the Blessed Virgin' to 'Teutonic Knights of the Hospitality of the Blessed Virgin.' They adopted a Rule similar to that of the Templars and the Knights of St. John. The order was composed of knights with their servants, esquires, and chaplains.² To the three vows of religion the Teutonic Knights added a fourth—to devote themselves to the care of the sick and of pilgrims, and to combat the enemies of the faith. They celebrated the divine office and other prayers, and were under a severe discipline. At the head of the order was the grand master, and under him the grand commander, the marshal, who was the lieutenant of the grand master in battle, and a grand hospitalier, who supervised the hospitals under the care of the knights. The members of the order were always of German nationality. The knights took part at first in the struggle against the Saracens, then joined forces with another military order, the Knights of the Order of Christ in Livonia, which had been founded to fight against the pagan nations of the Baltic. While thus devoting themselves specially to the war against these pagans, they did not cease to take a part in the Crusade against the Saracens in Palestine. The emperors of Germany, Frederick I. and Frederick II., gave the order their protection and endowed it with vast possessions.

When at the time of the Reformation the grand master became a Lutheran, the order was divided, one part following the grand master in his apostasy, the other taking up the cause against the Protestants. The order fell from its first fervour, and

Woodhouse, *The Military Religious Orders of the Middle Ages*, London, 1879; cf. full bibliography in Chevalier, s.v. 'Templiers.'

² It was the custom at that time for knights to be accompanied, when on horseback, by esquires to serve and assist them.

Napoleon took measures to abolish it in 1809. It still survives, however, as an order of hospitallers in Austria. There are 20 professed knights, who are bound to celibacy, and 30 knights of honour, not so bound. Both classes of knights must be of noble birth. The grand master is always one of the imperial archdukes. The order has charge of 50 parishes, 17 schools, 69 hospitals, for the service of which it supports two congregations of priests and four of sisters. Its members also do ambulance work in war-time. There is a Protestant branch of the order in Holland.¹

Other military orders were founded at the same time in Spain and in Portugal, on the model of the above, in order to fight against the Moors. That of Aviz in Portugal arose in 1147, in the reign, it is believed, of Alfonso I. The knights followed the Rule of St. Benedict in its Cistercian interpretation. They were known at first as the 'New Soldiers,' then as the Knights of Evora, and finally of Aviz. Their campaign against the Moors was conducted with success.

The Order of St. James of Compostella was founded to protect the pilgrims to the shrine of that saint against the brigands and the Moors. Those of Calatrava and Alcantara had also as their aim to make war against the Moors.

The Order of Calatrava owed its origin in 1158 to a Cistercian abbot who became its first grand master, his monks being transformed into knights. It remained in union with Cîteaux and was victorious against the Moors. Unfortunately its members took part in the civil and political contests in Spain and ended by falling completely into the power of the Spanish kings, ceasing to be a religious order and becoming an honorary order of knighthood. Meanwhile it became united with the Orders of Aviz and Alcantara. The latter, founded probably in 1153, also followed the Rule of St. Benedict and was affiliated to Cîteaux. The knights also made war on the Moors, but, like the Order of Calatrava, they took part in politics and ended, like them, in becoming a courtly order of knighthood.²

Among less celebrated orders are the Order of the Holy Sepulchre, which claimed to go back to the time of St. Helena; the Order of Christ or of the Sword, founded by Guy de Lusignan, king of Jerusalem, for the defence of Cyprus against the Turks; the Sword-bearers, founded in Livonia to fight against the heathen in that country; the Order of the Cross or Army of St. Dominic, against the Albigensians; the Order of St. Thomas of Canterbury, an offshoot of the Knights of St. John of Jerusalem, for the service of pilgrims in England, etc. The innumerable orders of knighthood founded by kings and princes in order to confer honour upon and to reward their dependents were not religious orders and do not belong to our subject.

The Order of St. Lazarus, of which St. Basil was the reputed founder, and which was united with that of St. Maurice de Savoy for the care of lepers, had several dependencies and annexes in Palestine and was also an order of military hospitallers. It acquired its military character after the first Crusade, and resembled closely the Templars and the Knights of St. John. This order constructed a vast number of leper-houses

¹ E. Lavisse, 'Chevaliers teutoniques,' in *RDM* xxxii. [1879] 219-340, 794-817; J. Voigt, *Gesch. des deutschen Ritter-Ordens*, 2 vols., Berlin, 1857-59; [(G. E. J. de) Wall], *Hist. de l'ordre teutonique*, Paris and Rheims, 1784-90; Chevalier, s.v. 'Teutoniques' and 'Porte-Glaives.'

² For Alcantara cf. *Bullarium ordinis militiæ de Alcantara*, Madrid, 1759; Woodhouse, *op. cit.*; for Calatrava, *Bullarium ordinis militiæ de Calatrava*, Madrid, 1761; M. de Guillemas, *De las ordenes militares de Calatrava, Santiago, Alcantara, y Montesa*, do. 1858; Woodhouse, *op. cit.*; cf. Chevalier, s.v. 'Alcantara,' 'Calatrava,' 'St. Jacques.'

(or 'lazar-houses') in France and in the other countries of Europe.¹

The Order of Mercy presents an analogous case. Founded in 1218 by James, king of Aragon, for the relief of Christian captives and their deliverance from the hands of the Moors, it also became a military order and ended by dividing into two bands—the knights joining the military order of Montesa and the clerics and lay brethren the Order of Trinitarians (see below, p. 706).

Hospitallers (non-military).—These orders were exclusively concerned with the care of the sick. We can name only the principal ones here.

The Hospitallers of the Order of the Holy Ghost were founded by a certain Guy at Montpellier and were approved by Innocent III. in 1198. They devoted themselves, from their foundation, to the care of the poor and the sick. The order was confined at first to Languedoc; then it spread to other provinces and founded hospices in Italy, Spain, Poland, Hungary, and Scandinavia. There were hospitals belonging to it in most of the larger towns in France. Dijon possessed one with 40 dependencies; Marseilles had 30, etc. The historian of the order, Brune, has discovered 26 hospitals of the Holy Ghost in Germany, 11 in Austria-Hungary, 6 in Poland, 8 in Belgium, 40 in Denmark, 35 in Sweden and Norway, 110 in Spain, 18 in Portugal, nearly 280 in Italy, nearly 400 in France—i.e. nearly 1000 for the whole order. The hospitals of the Holy Ghost at Montpellier and at Rome are souvenirs of these foundations.² There were, besides the hospitallers, sisters of the order who had the care of founding children, for whom they showed a solicitude that was truly maternal.³

The Jesuati offer certain curious characteristics. They were founded in 1360 by John Colombini, who showed so extraordinary an example of zeal and penance in Siena. He gave to the members of his society as their aim the practice of mortification and the love of their neighbour, especially by means of care shown to the sick and burial of the dead. At first its members were simple lay brethren. But Paul V. ordered them later to have a priest or two ordained for each house. Their name Jesuati came from the device of the society, 'Live Jesus.' They were also known as Hieronymites, and recognized St. Jerome as their patron.⁴ Their constitutions were at first based on the Rule of St. Benedict and later on that of St. Augustine. They were suppressed in 1668.

There were Jesuataesses also, or Sisters of the Visitation of Mary, who were founded at the same time as the Jesuati, and who were remarkable for their practice of penance.

One of the most curious among the orders of hospitallers is that of the Congregation of the Blind in Paris, Chartres, and other towns in France. St. Louis gave them a hospital in Paris for 300 blind—the Hospital for 'Quinze-vingt Aveugles' (15 × 20 = 300).

The Frères pontifes, founded at Avignon in 1177 by St. Bénézet, were also hospitallers, and took their name from their special work of

¹ Gautier de Sibert, *Hist. des ordres royaux, hospitaliers et militaires de Saint-Lazare de Jérusalem et de Notre Dame du Mont-Carmel*, Paris, 1772; cf. E. Vignat, *Les Lépreux et les chevaliers de Saint-Lazare de Jérusalem*, Orléans, 1884; L. Cibrario, *Dei Templari e della loro abolizione, degli ordini equestri di S. Lazzaro, etc.*, Firenze-Torino, 1868.

² P. Brune, *Hist. de l'ordre hospitalier du Saint-Esprit*, Paris, 1892.

³ L. Lallemand, *Hist. des enfants abandonnés et délaissés*, Paris, 1885, p. 411 ff. This writer refers also to a number of hospitals of the same class served by other orders.

⁴ The name 'Hieronymite' was borne also by an order of hermits in Spain in the 14th cent. which played an important part under Cardinal Ximenes. It was into one of the monasteries of these hermits at St. Just that Charles V. withdrew from the world. Philip II., who made use of them in the evangelization of the Indies, built the Escorial for them. The same name was also given to certain minor congregations in Italy.

building bridges over streams and rivers for the convenience of travellers. They also built hospices for pilgrims and for the sick near the bridges and ferries. The famous bridge of St. Bénézet on the Rhône at Avignon was constructed by them.¹

The Alexians, or Cellites, were founded in Flanders about the middle of the 14th cent., while the Black Death was raging, in order to care for those struck down by the plague. Originally they formed a society of simple laymen, but later they took solemn vows and were governed by the Rule of St. Augustine. They established houses in Flanders, in Brabant, and on the banks of the Rhine. In 1854 the order was restored at Aix-la-Chapelle and was given new statutes. There were also Cellitine nuns, or 'Black Sisters,' who are in existence at the present day.

The Brothers of St. John of God were founded at Granada in 1540 by the saint of that name. They adopted the Rule of St. Augustine and devoted themselves exclusively to hospital work. They had such success that in Spain, in the time of Urban VIII., they were in possession of 79 hospitals. They had others in Italy, France, and other countries. Divided at first into two sections—one under the general of Granada, the other under that of Rome—they were united in 1878. At the present day the order possesses 9 provinces and 103 hospitals with 14,562 beds. There are 1572 members.²

With the Brothers of St. John of God must not be confused similar congregations, some of them called by the same name, such as the Brothers of Montabaur, the Brothers of Mercy of St. John of God, the Brothers of St. John of God. These others were all local societies founded in the 19th cent., and have not the same importance as the Brothers of St. John of God strictly so called.

Two other congregations, the Brothers of St. Hippolytus, founded in the 16th cent. in Mexico, and the Bethlehemites, founded in Guatemala in 1655, were devoted, like the Brothers of St. John of God, to the care of the sick and also to educational work. The first of these societies still possessed 120 houses in 1885; the second was suppressed in 1820.

The Camillians, who were also occupied with the care of the sick, are treated below. There are, besides, a large number of other communities of hospitallers, mention of which will be found in Hélyot and Heimbucher.

III. THE MENDICANT ORDERS.—1. Dominicans.

—(a) *Origin.*—The founder of the Dominicans, St. Dominic, was born in 1170 at Calaroga in Old Castile. He was thus only twelve years in advance of St. Francis of Assisi. He made a thorough study of theology at the University of Palencia, and in 1195 became a canon of Osma and gave himself to the work of preaching. He associated himself later with the reform of those canons upon whom the bishop imposed the Rule of St. Augustine. We find him next in close relation with the papal legates sent against the Albigenses, in the south of France, and it was there that his future vocation was to be decided. He preached against the heretics, not only by word of mouth, but also by his example of evangelical poverty. It was then that St. Dominic conceived the idea of founding a religious order for the conversion of the Albigenses—an order consecrated to the work of prayer, preaching, and

the study of divine things. In 1215 he went to Rome and obtained from Pope Innocent III., during the 4th Lateran Council, the approbation of the new order. The saint returned several times to Rome at a later period, and obtained fresh approbation from Honorius III. and also numerous privileges for his order. The order developed rapidly, and convents were founded in France, Spain, and Italy. During one of his journeys in Italy St. Dominic had a meeting with St. Francis, in whom he recognized a true spiritual brother. He died at Bologna on 6th Aug. 1221.

(b) *Constitution.*—The Dominicans follow the Rule of St. Augustine, with which St. Dominic had become acquainted while a canon of Osma, and with which he combined the usages of the Premonstratensians, who hold a place in the first ranks of the canons regular. From this point of view, the Dominicans form an order that is essentially clerical and hence differs from the monastic order. Their principal object is preaching, with which, as a logical consequence, was soon united the exercise of the sacred ministry and teaching in the schools. Unlike the monks, the Dominicans have no bond of stability to unite them to any particular monastery; they may be sent from one house to another as necessity or utility may dictate. Like the Franciscans, they are mendicants, i.e. they are forbidden to possess property and depend for their maintenance upon Christian charity. They are governed by a master general and the general chapter—an institution borrowed by St. Dominic from the Premonstratensians. The constitution of the order already established at the general chapter of Bologna in 1220 was confirmed by Jordan of Saxony and his successors. At the head of each convent or priory is the prior, at the head of each province the provincial. The general chapter is held every three years. It is composed alternately of provincials and definitors or delegates from each province, and has very wide powers. The general is elected by both provincials and definitors united in chapter—originally for life, now only for twelve years. He resides at the Convent of the Minerva in Rome. The provincials are elected by the provincial chapters composed of the priors of the province and delegates from each convent. Each house must have at least twelve members, and the prior is elected by the community for a term of three years. He has under him a sub-prior. The priors are confirmed in office by the provincial, the provincial by the master general. The actual constitutions given to his order by St. Dominic were curtailed and rearranged in better order by St. Raymund of Pennafort, and they are added to and completed by the decisions of the general chapters.

(c) *Studies.*—The Dominican Order gave itself from an early date to the study of theology. The general chapter of 1248 instituted four provinces—those of Provence, Lombardy, Germany, and England—in order to found, in these regions, a *studium generale* at the four cities of Montpellier, Bologna, Cologne, and Oxford. Albert the Great and St. Thomas Aquinas greatly promoted the element of study by the brilliancy of their renown. Each province was obliged to send two students every year to the *studium generale*. The convent of the Jacobins in Paris (situated in the Rue St. Jacques) soon formed the chief centre of Dominican studies. In each convent there was also a *studium particulare*. In 1259 the general chapter of Valenciennes (of which Albert the Great and Thomas Aquinas were members) laid the foundations of a system of studies for novices and lecturers to last eight years—two years of philosophy, two of fundamental theology, Church history and canon law, and four for the study of scholastic

theology. At the end of this course those who merited it received the title of *lector*. After seven years of lectorate the student became *magister studentium*, then bachelor, and finally *magister theologiae*—a degree equivalent to that of Doctor of Theology. For merit in preaching the title *prædicator generalis*, equivalent to that of Master of Theology, was bestowed.

The life of the Dominican is one of austerity, implying perpetual abstinence, fasting, and other practices of asceticism—silence, life in community, and the divine office in choir. His chief work is preaching and teaching.

In 1231 the Dominicans had a Chair of Theology at the University of Paris. They were the first of the mendicant orders to arrive at Oxford in 1221—the Franciscans did not come there till 1224, the Carmelites till 1254, the Austin Friars till 1268. They soon possessed chairs at Bologna, Padua, Salamanca, Cologne, Prague, and Vienna. Their activity as theologians and preachers was directed principally against the Jews, Moors, and Albigenses. They also played an important part in the tribunals of the Inquisition.

There are no fewer than 152 commentaries written by Dominicans on the *Sentences* of Peter Lombard and nearly 200 on St. Thomas. Under their influence colleges of Oriental languages were founded for the study of Hebrew and Rabbinic.¹

(d) *History.*—In 1214 St. Dominic founded in Rome the convent of Santa Sabina, which has remained a centre of Dominican life. In Paris he founded the monastery of St. Jacques—whence the name of Jacobins by which his sons were sometimes known. He founded other houses also at Bologna, Seville, and other places in Spain. After his death the order continued to make rapid progress, and soon reckoned eight provinces—Spain, Provence, France, Lombardy, the Roman Province, Germany, England, and Hungary. Later, foundations were established in Norway, Sweden, etc. Under the generalate of Jordan of Saxony († 1237) a great advance was made. This master general founded nearly 250 houses in Europe, Asia, and the north of Africa, and received more than 1000 members into the order. At the beginning of the 14th cent. the order had 562 houses in 21 provinces—in Germany alone there were 49 houses of men and 64 of women. In 1821 the pope granted to the mendicant orders the privilege of preaching and hearing confessions in any church without having to obtain the special permission of the bishop of the diocese.

During the course of the 14th cent. the era of decadence set in, brought about chiefly by the Great Schism, which divided the order into two 'obediences,' each with its rival general chapter and master general. Unity, however, was restored in 1409, and from the time of the schism efforts were made at reform. To one of these reforms belong Fra Angelico and St. Antoninus from the cloister of Fiesole, as well as Savonarola. Another reform was started in 1389 by Raymund of Capua, in which St. Catherine of Siena took part. This reform had success in Italy and Germany. In the 15th, 17th, and 18th centuries reformed congregations arose in different countries—in Holland, the province of Toulouse, Brittany, Provence, and Italy. The best known of these reforms was that established in France by Lacordaire (1850), who won for himself a special place in the history of the order.

To the Dominican Order belong a considerable number of saints, authors, theologians, preachers, and artists. To those already mentioned we may add here St. Hyacinth, Peter of Tarentaise (who

¹ On Dominican studies cf. P. Mandonnet, in *Dict. de Théol. cath.*, s.v. 'Frères Prêcheurs (Les Etudes chez les)', vi. col. 868 ff.

became Innocent v.), John the Teuton, Humbert de Romans, St. Ceslaus, St. Vincent Ferrer, etc. The order numbers among its members four popes, 80 cardinals, and a large number of archbishops and bishops.¹

(c) *The Second Order.*—This order, founded for women by St. Dominic at Prouille in 1206, also follows the Rule of St. Augustine together with special constitutions. The sisters devote themselves to a life of prayer, silence, and manual labour in the cloister. Some writers give as the real date of the foundation of the Dominican nuns that of the establishment of their first convent in Rome, the Convent of San Sisto (1219). The Second Order spread rapidly.

(f) *The Third Order.*—The Third Order of St. Dominic comprises a number of different societies of brethren and sisters, some of whom are 'regular,' i.e. live in community and follow the religious life, others 'secular,' i.e. live in the world. It is impossible to go into their history here.² The best known among these societies is the 'Third Teaching Order of St. Dominic,' which was founded by Lacordaire in 1852, and had the direction of the famous colleges of Arcueil, Oullins, Sorèze, etc.

2. **Franciscans.**—Under the general title of Franciscans, Order of St. Francis, or Friars Minor, may be reckoned all those 'religious' who recognize St. Francis of Assisi as their founder. They are divided into a number of different groups—the result of the divisions that took place among the sons of the saint almost as soon as he was dead, and even during his lifetime.

(a) *Origin.*—St. Francis, born at Assisi in 1182, is one of the saints who have exercised the most profound influence on the interior life of the Roman Catholic Church. The son of a rich draper, in his youth he lived a somewhat dissipated life, but, being converted and in consequence cast out by his father, he gave himself to a life of voluntary poverty, depending for his support upon alms. His beautiful and fertile nature, his wonderful gifts, his generosity and heroic sanctity attracted numerous followers. The society thus constituted received an unwritten approbation from Innocent III. in 1209; in a few years' time it numbered thousands, and was spread all over the world in order to carry on the work of preaching the gospel of poverty and the love of God. In 1212 Clare, a daughter of one of the noblest families of Assisi, associated herself with this apostolate and founded the Poor Clares, the Second Order of St. Francis. In 1219, according to tradition, was founded an order for lay folk, who were thus affiliated to the Franciscans, while remaining in the world. This was the Third Order of St. Francis, which soon also numbered its thousands and exercised a vast influence far and wide. Francis himself longed to go and preach the gospel to the Saracens and thus gain the crown of martyrdom, but the divisions that so soon arose in his religious family obliged him to give up the idea and to return to Italy. He received the stigmata in 1224 on Mt. Alverno and died on 3rd Oct. 1226.³ The name by

which the Franciscans are usually known, that of Friars Minor, was given to them by St. Francis himself from motives of humility and is based on the words of his Rule: 'et sint minores et subditi omnibus.'

(b) *Rule of St. Francis.*—The first Rule of St. Francis is very simple. It was approved by Pope Innocent III. in 1209, but underwent frequent modifications in the chapters or general councils of the order held by the saint every year. During his journey in the East the order underwent a grave crisis, in consequence of which St. Francis drew up in 1221 another Rule, more complete than the first. This is known under the very incorrect title of 'First Rule' of St. Francis. The saint twice modified or rewrote this Rule, and it was solemnly approved by Honorius III. in 1223. Its most striking characteristic is its insistence on the practice of poverty in its most absolute form, not only by each 'religious,' but by the community. The friars could possess no fixed revenues, but lived upon the voluntary offerings of the faithful.

In 1242 fresh difficulties arose concerning the Rule. An authorized interpretation was given by the four chief authorities of the order, at the head of whom was Alexander of Hales. This did not, however, prevent the formation of two parties in the order—the Rigidists and the Mitigated. St. Bonaventura, who was minister general from 1257 to 1274, belonged to the latter party. The Rigidists, who called themselves 'spirituals,' ended by denying to the Church the right of interpreting the Rule of St. Francis and so fell into schism. The friars of the Mitigated Observance took for their distinctive title that of 'Conventuals.' The popes, Nicholas III. (1279), Martin IV. (1283), Clement V., and John XXII. (1317), were obliged to interfere in order to regulate the question of the observance of poverty, the source of all the divisions in the order. A party among the spirituals formed themselves into an independent congregation under the name of 'Poor Celestine Hermits'—a tribute to Pope Celestine V., who favoured them. Angelo Clareno, chronicler of the order, and Ubertine da Casale, also famous among Franciscans, belonged to this party. Under John XXII. part of the order took up the cause of Louis of Bavaria, and were even on the point of forming a schism with an anti-pope at their head.

(c) *Foundation of 'the Observance.'*—In 1334 certain hermitages and convents were established in Umbria and the Marches, in which the observance practised in the lifetime of St. Francis himself was revived in all its austerity. These houses belonged to what was called 'the Observance,' and the friars were called 'Observants.' St. Bernardine of Siena, St. John Capistran, and St. James of the March belonged to this branch of the order. The Observants, kept in the background under Benedict XIII., Alexander V., and John XXIII., succeeded in gaining their cause at the Council of Constance in 1415.

The other branch of the order, in which the primitive austerity had been mitigated, and whose members were known as 'Conventuals,' strove to form a reaction against the Observant element. All attempts at reunion came to nothing, and the two parties continued the strife against each other, sometimes with great violence, by means of pamphlets, lampoons, etc. In 1517 Leo X. made a new effort to reunite the divided order at the *capitulum generalissimum* of the Ara Coeli. The bull 'Ite et vos' only succeeded in accentuating the division vols. v.-vii., ed. C. Eubel, do. 1898-1904; *Monumenta Franciscana* (Rolls Series), ed. J. S. Brewer, 2 vols., London, 1885-82; *Analecta Franciscana*, Quaracchi, 1885-97; *Documenta antiqua Franciscana*, do. 1901 ff.; *Études franciscaines* (periodical), Paris, 1899 ff.; Heimbucher, ii. 308, 'Literatur über den Franziskanerorden'; de Smedt, p. 375 ff.; Chevalier, s.v. 'Franciscans.'

by creating two distinct branches of the order—the Observants, with whom were united all the other reformed congregations under the title of 'Friars Minor of the Regular Observance,' with a minister general of their own, and the Conventuals, or 'Friars Minor Conventual.'

(d) *Capuchins, Discalced, Reformati, Recollects.*—New divisions soon arose in one or other of the two branches. Among the Observants arose in Spain the Discalced under St. Peter of Alcantara, in Italy the Amadeans (Blessed Amadeus de Silva) and the Poor Hermits of Angelo Clareno. But the most important of all these reforms is that of the Capuchins under Clement VII. in 1530, to whom we shall return shortly. Besides these were the Recollects, so called from their convents named 'recollecion-houses,' where a stricter observance of the Rule was practised, and where the more fervent withdrew to renew their spiritual vigour.

The Conventuals also had their difficulties and their efforts at reform. Whole provinces broke off from them and attached themselves to the Observants. Nevertheless they continued to hold their own in Italy, France, Switzerland, and other countries. At Assisi it is the Conventuals who have the guardianship of the tomb of St. Francis and at Padua that of St. Antony.

The Capuchins, however, were destined to become the most prosperous of all the branches of the order. They were founded in 1525 by an Observant friar called Matteo di Bassi. In spite of the strong opposition directed against them from the first and the miserable end of their second founder, Louis of Fossombrone, who was turned out of the order, they continued to prosper and to spread abroad, in France, Africa, Spain, Switzerland, Germany, Austria, etc. Their constitutions were approved by Urban VIII. in 1643. The name Capuchin, derived from their long pointed hood, has remained their characteristic title. Pius X. restored closer relations between the three Franciscan families—the Friars Minor of the Leonine Union, the Conventuals, and the Capuchins.

(e) *Activity of the order.*—In spite of its divisions and internal strife, the Order of St. Francis has taken an important part in ecclesiastical history. A number of bishops, cardinals, and even popes, have come forth from its ranks. Many of its friars have filled confidential posts at the courts of kings and popes and have been directors of their consciences. St. Francis carried on the apostolate among the infidels by preaching and by his own example. In 1230 the Franciscans founded a house in Jerusalem. Later they evangelized the north of Africa, Egypt, Ethiopia, Russia, Scandinavia, and Lapland. The travels of John of Plano Carpini in 1247 in Mongolia, of William of Rubruck in Tartary and Tibet, of Odoric of Pordenone in China are well known. Not less known is the mission of John of Parma, sent by Innocent IV. to bring about reunion with the Eastern Churches. In India Thomas of Tolentino was martyred in 1321. The friars were the first to set out for the New World. In the 17th cent. the Capuchins were in the Congo, Brazil, Abyssinia, and the Levant. In the front ranks of the adversaries of the Albigenses, the Vaudois, and the Patarins we find the Friars Minor. St. John Capistran is celebrated for his opposition to the Hussites in 1456; St. Fidelis of Sigmaringen and many others were martyred by the Protestants in Switzerland, England, Holland—in the latter country we have the martyrs of Gorkum. A considerable number of Friars Minor have gained renown as preachers and missionaries—e.g., St. Antony of Padua, St. Bernardine of Siena, St. James of the March, Joseph of Leonissa, St. Leonard of Port Maurice, Bernardine of Feltre, Ladislaus of

Gielnow, Angelo d'Aciri, etc. There were also theologians and savants among them.

In the early days of the order there was a certain degree of hesitation regarding the question of study. The spirituals were entirely opposed to it, but St. Francis never showed himself hostile. As long as the interior spirit of his children was not thereby endangered, study might well find its place in their life. Hence we find at an early period Franciscans teaching in the universities of Bologna, Paris, and Oxford. Certain houses, called *studia*, were established, as among the Dominicans, for purposes of study. The various branches of the order have produced a large number of theologians and of mystical and ascetical writers, whose names will be found in the works cited in the literature below.¹

(f) *Minims.*—We may regard as belonging to the Franciscan order that of the Minims ('Fratres Minimi'), an order of mendicant friars founded in 1435 by St. Francis of Paula (Paola in Calabria) to whom he gave the name of Minims, or 'very little ones,' to teach them the spirit of humility and penance in which he wished them to live.² The Rule of the Minims does not differ in substance from that of St. Francis of Assisi, but is distinguished by greater severity. It was confirmed by Julius II. in 1506. Being called to France to assist at the last moments of Louis XI., Francis of Paula remained there till the day of his death, and his order took root in that country. It had a period of great prosperity, especially during the lifetime of the saint and the years immediately succeeding his death. At the beginning of the 16th cent. the order possessed 430 houses in France, Italy, Spain, Germany, and even India. St. Francis of Paula, like his namesake and patron of Assisi, founded a second order for women and a third order for people living in the world.

3. *Carmelites.*—(a) *Origin.*—Long and fierce discussion has raged on the origin of the Carmelite order. From the time of the prophet Samuel there existed in Palestine a society whose members were known as 'the sons of the prophets' and who lived a quasi-monastic life as cenobites or hermits on Mt. Carmel. Among these pre-Christian monks lived Elias and Eliseus. The sons of the prophets disappear from the history of Israel before the fall of its kingdom, but in the 4th cent. of the Christian era (perhaps even in the 3rd cent.) Mt. Carmel was a place of pilgrimage for Christians. St. Basil and St. John Chrysostom, the great masters of the monastic life, represent Elias and Eliseus as the models of monasticism and as the ancestors of the Christian monks. Christian anchorites, moreover, had settled on Mt. Carmel as in other places in Palestine hallowed by their connexion with Biblical times, and early writers on the Carmelite order connect it through these hermits with the sons of the prophets and see in Elias and Eliseus the founders of the order. The Carmelite constitutions, their chronicles, their liturgy, and innumerable other documents unite in maintaining this tradition. The evidence on which it reposes is, however, without historical value (see the criticism of Zimmerman), and the negative argument—the silence of all pilgrims on the subject up to the 12th cent.—is of the highest significance.³ It would appear that the Order of Mt. Carmel was in reality founded by St. Berthold about the year 1155. The pilgrim John Phocas (1185), Rabbi Benjamin of Tudela (1163), Jacques de Vitry, and others speak

¹ Cf. esp. U. d'Alençon, in *Dict. de Théol. cath.*, vi. col. 835 ff.

² Perhaps also in allusion to Mt 2540.

³ Cf. B. Zimmerman, 'Carmelite Order,' in *CE* iii. 354-370; 'Carmes (Ordre des),' in *Dict. de Théol. cath.*, ii. col. 1776 ff. On this discussion cf. D. Papebroch, *AS*, March, iii., and J. B. Pitra, *Études sur la collection des Actes des Saints*, Paris, 1850. It lasted thirty years and is not yet over, although the Holy See, in 1698, imposed silence on the rival parties.

of Berthold and the hermits who lived with him in Carmel under the patronage of Elias. The patriarch of Jerusalem, Albert de Vercelli, gave them a Rule which was a literal transcription of the Rule of St. Augustine. The hermits were to elect a prior, to live in separate cells, and give themselves to manual labour. They met together for the divine office in their oratory. Their life was, in fact, a blending of the cenobitical and eremitical elements, like that of the early monks and of the Camaldolese, Carthusians, and similar foundations of the 11th and 12th centuries.

Foundations were made from Carmel at St. Jean d'Acre, Tyre, Tripoli, and Jerusalem. They were, however, in part destroyed by the Saracens, some of the hermits suffering death at their hands. Other colonies were founded in Cyprus, in Sicily, at Marseilles, at Valenciennes, and in England. St. Louis of France paid a visit to Carmel in 1254 and brought thence with him some of the hermits whom he established at Charenton.

(b) *Migration to Europe.*—A new phase in the history of the Carmelite Order is marked by its migration to Europe. At the first chapter held at Aylesford in England St. Simon Stock, an Englishman, was elected general (1247-65). He modified the primitive Rule to a certain extent, and obtained for the order in 1247 an interim approbation of Innocent IV. The order was finally approved by the Council of Lyons in 1274, though not without some difficulty on account of the decree of the Lateran Council in 1215 which forbade the foundation of new orders. It now underwent a new development. Foundations were made in the towns; community life took the place of solitude; and various mitigations were introduced into the primitive Rule. The solitaries were transformed, in fact, into mendicant friars and obtained the privileges attached to the existing mendicant orders. The original title of 'Fratres Eremitæ de Monte Carmelo' or 'Eremitæ sanctæ Mariæ de Monte Carmelo' was changed into 'Fratres Ordinis B. M. de Monte Carmelo.' St. Simon Stock, the great partisan of the active life, founded houses in Oxford, Cambridge, London, York, Paris, Bologna, Naples, etc., choosing cities that possessed universities or schools, in order to secure instruction for his young 'religious' and also to obtain recruits for the order among the students. But this new and rapid development was not without its dangers; and, when St. Simon Stock died, he left to his successor a difficult situation to cope with. The latter, Nicholas Gallicus (1265-71), was opposed to the active life and wished to bring back the order to a more contemplative ideal, but was obliged to resign his office. In an unedited work entitled *Ignæ Sagitta* he denounces strongly the practice among the Carmelites of preaching and hearing confessions. The order continued, however, to develop in this direction. It met with great success in England, where the kings themselves founded houses. Many of its members were in their confidence and carried out important missions for their royal masters. Among these was Thomas Walden, who accompanied Henry VI. to France. The English Carmelites never accepted the reforms introduced into other provinces of the order, as they were always well and strongly organized. Under Henry VIII. the greater number submitted to the Act of Supremacy and separated themselves from the other branches of their order. Only two of the English friars remained faithful, and suffered martyrdom for their faith. The submission of the others, however, did not prevent the suppression of their order in England, the plunder of their possessions, and the dispersal of their libraries. At the time of the Reformation there were 39 Carmelite monasteries in England.

(c) *Constitutions and studies.*—The earliest constitutions of the Carmelite order are those of 1324, but it seems that an earlier redaction existed in 1256. The constitutions of 1324 divide the order into 15 provinces according to the different nations. At the head of all is the general, elected by the general chapter. At each of these chapters he was obliged to give an account of his administration, and was then either confirmed in or deposed from office. His ordinary place of residence was Rome, and he had two assistants chosen by himself. The general chapters were held at first every three years, then every six years, and even as rarely as once in sixteen years. In England the court usually contributed towards the expenses of the general chapter—the journey, horses, hostelries, etc. The provincial chapter chose the definitors for the general chapter. It was the business of those officials to receive reports on the administration of the provinces, to confirm or depose the provincials, to audit the accounts, to nominate the professors for the universities, to revise existing laws and add new ones, and to reward or punish members of the order according to their merits or demerits. The acts of the general chapters of the past exist only in a fragmentary condition and, such as they are, have been published. The provincial chapter, which was usually held once a year, was composed of all the priors or vicars of the province. Four definitors were chosen at the chapter. These officials exercised in the province the same duties as those exercised by the definitors general in the whole order. They had power to depose the priors, to choose those who were to be sent to the houses of study (*studia generalia* or *particularia*) or to the universities, and to decide on the foundation of new houses. Each house had its prior, assisted by a vicar. The administration of the prior was controlled by three guardians. He could be confirmed in office every year, indefinitely. Certain monasteries were set apart for the study of philosophy, others for that of theology. In 1324 there were eight *studia generalia*—Paris, Toulouse, Bologna, Florence, Montpellier, Cologne, London, and Avignon. Their number increased until at last every province had its house of studies. The number of Carmelite students in Paris averaged 300, in London more than 100. Some students went through a short course only, others remained as long as twelve years in the universities. It may be said that the order, from its approbation at the Council of Lyons up to the Great Schism, continued to develop steadily. There were certain abuses against which the general chapter itself continually raised its voice, such as the entrance into the order of poor students who came for the purpose of pursuing their studies gratis, the seeking of ecclesiastical benefices or posts of honour outside the order by certain of its members, the attempts of superiors to make their office perpetual or the fact that they showed favour to nephews or other relatives. Again, the professors in the universities dispensed themselves from choir, took their meals outside the monastery, caused the lay brethren to wait on them as their servants, etc.

A first attempt at reform was made at Mantua in 1413 and embraced 52 houses. Another took place under the general John Soreth (1351-71); another at Albi in 1499, which issued from that of Mantua. In 1514 we have the reform of Mt. Olivet near Genoa; in 1604 that of Rennes, modelled on St. Teresa's reform, the last by far the most important (see below). The reform of St. Elias, or the Italian congregation inaugurated at the instance of Clement VIII., established itself in Genoa, Rome, and Naples, and also in France, Germany, Austria, Poland, and Lithuania. In

1731 this reform numbered 4193 members. It gave greater scope for activity and the exercise of the sacred ministry than the Spanish reform.

(d) *St. Teresa's reform.*—St. Teresa (†1582), assisted by St. John of the Cross, founded at Avila a convent in which a more austere observance of the Rule was carried out in the practice of poverty, penance, and the contemplative life. The account of her subsequent foundations and of the reforms carried out by her in several Carmelite convents, both of nuns and of friars, will ever remain unique in the annals of the religious orders. This reform was introduced into France by Madame Acarie (Blessed Marie of the Incarnation) and by the celebrated Cardinal de Bérulle. It has always possessed in France a special character of its own and has always been very prosperous. Among its most celebrated members are Louise de la Miséricorde (Louise de la Vallière), Thérèse de St. Augustine (Madame Louise, daughter of Louis XV.), and Anne of Jesus.

(e) *Affiliated members.*—The Carmelite Order has also its affiliated members. Several communities of Beguines in the 15th cent.—notably those of Gueldre and Dinant—were affiliated to the order and thus originated the Carmelite nuns. From these, foundations were made in France, Italy, and Spain. As among the Dominicans and Franciscans, there is a third order, of whose members some live in the world, while others live in community.

(f) *Missions.*—The Carmelites had some flourishing missions in America (Mexico, Peru, Florida, Rio de Janeiro, Guadeloupe, San Domingo). St. Teresa, although her great object was to bring back the contemplative life to her order, favoured missionary activity on behalf of heretics and pagans. In 1604 the reformed Carmelites sent a mission to Persia, which succeeded in establishing itself at Baghdad, at Basra, and in India. Flourishing missions were also founded at Bombay and at Goa; others in China, Turkey, Armenia, Syria, and North America. The Carmelite nuns of Spain founded convents in S. America—in the Argentine, Bolivia, Brazil, Chile, Colombia, Ecuador, and Peru. Among the Carmelite missionaries there were several martyrs. Colleges existed for the missionaries, which contributed towards the foundation of the famous Congregation of Propaganda at Rome.

(g) *Desert convents.*—An institution peculiar to the Carmelite order is that of the 'deserts,' or convents where the purely contemplative ideal was carried out. This institution owed its foundation to the memory of the eremitical life led by the early members of the order on Mt. Carmel and to the passages of the Rule and constitutions that encourage the contemplative life. In these and in other documents this form of life was recommended for certain convents to be founded apart from towns or cities, in forests or desert places. The idea of the 'desert convents' properly so called seems to have been originated by Thomas of Jesus, Discalced Carmelite of Spain. Certain of the brethren in these convents were destined to remain there always, but the greater number came only for a year and then returned to the houses whence they had come. The first 'desert' was founded in 1592 at Bolarque on the banks of the Tagus in New Castile, and soon after one was founded for every province. The total number was 22. These 'deserts' followed the plan of a charterhouse, and the life resembled that of the Carthusians, but was even more severe. The practice of strict silence, fasting, and other penitential exercises were held in honour. Attached to each 'desert' were separate hermitages, where the brethren could retire to lead a life more completely solitary even

than that of the 'desert' itself. There were also anchorites and recluses attached to some convents, among whom were Thomas Scrope of Norwich and the Blessed Jeanne de Toulouse.

(h) *Activity.*—We have seen that in many of their provinces the Carmelite friars gave themselves to the active ministry and to teaching in the universities. There, however, their influence was disputed by the Dominicans and Franciscans, who were already in the field—there was no room for a third school of thought. The Carmelites then, instead of creating a school of their own, followed the Dominicans and were rigorous Thomists. They have had among their numbers theologians of renown. St. Teresa and St. John of the Cross were founders of a school of mysticism which has produced some remarkable writers.¹

4. *Hermits of St. Augustine.*—We have already dealt with the Canons Regular of St. Augustine and other congregations of canons who follow the Rule of that saint. Here we are concerned only with the hermits of St. Augustine. These hermits, sometimes called simply Augustinians, date from the 12th–13th century. At that period there were certain communities of hermits who, either then or subsequently, followed the Rule of St. Augustine. Chief among these were the Williamites (Guillemites) (founded by William of Malval in 1155, near Pisa), who were spread abroad in Italy, Germany, Belgium, and France. Besides these there were the Bonites (so called from their founder, the Blessed Jean Buoni, †1249); the Brittinians (founded by St. Blasius de Brittinis in the Marches of Ancona in the 12th cent.); the Tuscan Hermits of the Blessed Trinity; the Brothers of the Sack (Fratres Saccati, Saccophori, Sacceti, Sachets), so called from the shape of their habit. The last were also known as the Brothers of Penance.

So many different congregations, leading what was practically the same life with the same object in view, needed to be brought together; and Alexander IV., on 4th May 1256, promulgated the bull 'Licet Ecclesiæ Catholica,' which united them all in a single order under the title 'Hermits of St. Augustine.' He exempted them from episcopal jurisdiction. A general chapter of all the superiors was held in Rome in 1256; the Rule of St. Augustine, together with special constitutions, was imposed upon the hermits; a superior general was elected; and the order was divided into four provinces—Italy, Spain, France, Germany. In 1567 Pius V. included it among the mendicant orders, giving it rank after the Carmelites. At the period of its greatest prosperity the order possessed 42 provinces and 2 vicariates, numbering 2000 monasteries and about 30,000 members. The title of 'Hermits' was not altogether appropriate, at least in the case of some of the now united congregations whose members practised the conventual life and had their convents in the midst of towns and cities.

In the 14th cent. efforts were made to reform certain abuses that had crept into some of the houses. New congregations also were founded—e.g., that of Ilceto in 1385, that of St. John ad Carbonariam (in the kingdom of Naples) in 1390,

the Congregation of Lombardy in 1430, that of Our Lady of Consolation, and others.¹ Two reforms of greater importance were effected in Spain: the first, in 1430, imposed on all the houses of Castile; the second, more austere, in 1588, that of the Discalced Augustinians or Recollects, extended to the Spanish colonies, the W. Indies, and the Philippines. There were reforms also in France, among which must be mentioned that of the 'Petits Augustins.' Some of these congregations had flourishing missions in the E. and W. Indies, in Mexico, Peru, China, Japan, and India. In Spain, where they were always more prosperous than in any of the other provinces, the reformed Augustinians were favoured by Philip II. Among celebrated Augustinians we may mention St. Thomas of Villanova, Panvini, Lupus, Lancelotti, Noris, Luis de Leon, one of the greatest writers in Spain, and Florez.

From the 15th cent. onwards efforts were made by the Augustinians to bring about the reform of their order in Germany. One of these efforts at reform—that of Andreas Proles († 1503)—was extended under his successor Johann von Staupitz by the desire of the pope to all the Augustinian friars of N. Germany. Seven houses opposed the reform, among them the monastery of Erfurt, to which Martin Luther belonged. The apostasy of Luther brought about the ruin of the Augustinians in Germany. Many followed the arch-Reformer in his revolt against the Church. But some of these German Augustinians were, on the contrary, determined opponents of the Reformation. In 1526 the communities that had remained faithful to the Roman Catholic Church were united to the province of Lombardy.

In France the Revolution of 1789 struck another blow at the Augustinians and destroyed the greater part of the 157 monasteries, while in Spain the Revolution of 1835 closed 105 out of 153.

In recent years the Augustinians have begun to flourish once again. Leo XIII. endeavoured to bring about greater unity among them in 1896. New constitutions were drawn up, and the order was divided into 23 provinces, distributed among two congregations, and it numbers about 2300 members. In Rome the Augustinians possess the church of St. Agostino. The famous Angelica library formed by one of their friars, Angelo Rocca († 1620), is now a public library. They have also, at Genazzano, in the neighbourhood of Rome, a celebrated place of pilgrimage.

Other saints of the order worthy of mention are St. Nicholas of Tolentino († 1305) and St. John a S. Facundo († 1479). Among its members must also be reckoned a certain number of theologians, dogmatic and moral, of erudites, and of missionaries.² The Assumptionists, who form a branch of the Augustinian order, are treated below, p. 708^a.

The bull 'Licet Ecclesiae Catholicae' which in 1256 united the Hermits of St. Augustine in a single order was not enforced against the nuns. Each convent remained autonomous. To this congregation belonged St. Juliana of Mt. Cornillon at Liège († 1258). The reform known as the Recollects was one of its branches.

After the four great mendicant orders come a number of others known as the lesser mendicant orders. We have given a list of these above (I. 5) and can speak here only of the principal ones. The greater number of them follow the Rule of St. Augustine.

5. **Trinitarians.**—The Trinitarians (or Order of the Blessed Trinity for the Redemption of Captives) were founded by St. John de Matha and St. Felix de Valois, at Cerfroid in the diocese of Meaux, in 1198. The object of this order was to ransom the numerous Christian captives taken by the Moors and Muhammadans. Its members follow the Rule of St. Augustine, and the observance prescribed by their constitutions is very severe. The members were obliged to be ready to offer themselves as slaves to the Moors in exchange for the captives whom they desired to ransom. The Trinitarians were approved by Innocent III., and soon took root in France, Italy, Germany, England, Ireland, Spain, and later in America. The order possessed 800 houses. The name of Mathurins, by which the Trinitarians are sometimes known, came from their monastery of St. Mathurin in Paris. A reform of the order was inaugurated in Spain, that of the Discalced Trinitarians. Members of this order delivered 900,000 captives from the clutches of the Moors. Their work received the praise even of Voltaire. Since the Revolution the order has greatly declined. It possesses the Convent of St. Chrysogonus in Rome. The Trinitarians offered themselves to Leo XIII. for the work of ransoming the slaves of Africa.¹

6. **Order of Mercy.**—Another order founded with the same object as the Trinitarians was that of Montjoie in Spain, but it had only a short existence (1180–1221) and was incorporated, after a term of 40 years, with the Order of Calatrava. In 1218, however, St. Peter Nolasco founded in Spain an order that was to become a rival of the Order of the Blessed Trinity. This was the Order of Our Lady of Mercy (de la Mercede), whence the name of Mercedarians, or Fathers of Mercy. Like the Trinitarians, the Mercedarians devoted themselves to the work of ransoming captives—those taken by the pirates of Barbary—and were occupied also in the service of the galley-slaves and in missions to the heathen. Their special field of operation lay in Morocco, whereas that of the Trinitarians was in Tunis and Algeria. The Order of Mercy was approved by Gregory IX. In origin it was a military order composed of knights, chaplains, and serving brethren. The name of St. Raymund Nonnatus is one that is quoted with pride by the order. The Rule of St. Augustine is followed, whence the Mercedarians have sometimes been reckoned among the Augustinians.²

7. **Servites.**—The Order of the Servants of Mary, or Servites, so called from their special devotion to the Blessed Virgin, was founded in 1233 on Monte Senario, near Florence, by seven members of seven patrician families of the city. The Rule is that of St. Augustine together with special constitutions which were approved in 1249. St. Philip Benizi was the fifth general of the order. It was on the point of being suppressed in 1274 in consequence of the edict of the 4th Lateran Council renewed by the 2nd Council of Lyons, but it was finally approved by Benedict XI. in 1304. It spread abroad in France, Spain, Hungary, Bohemia, Poland, and even as far as India. In 1910 the order numbered 700 members and 62 monasteries.³

Considered as belonging to the mendicant orders are also certain congregations of women which follow the Rule of St. Augustine. Chief among these are the following.¹

8. The **Brigitine Order**, founded by St. Brigit of Sweden († 1373), resembles in some respects that of Fontevrault (see art. MONASTICISM, vol. viii. p. 796). In each convent there were 60 nuns governed by an abbess, who had also under her jurisdiction, in a separate house, 13 priests, 4 deacons, and 8 lay brothers. There were houses of the order in Norway and Sweden, Flanders, Prussia, Poland, Russia, and England. There exist now only 9 convents, 8 in Germany, Holland, and Spain, and 1 in England—the last a pre-Reformation foundation.

9. The **Ursulines**, founded at Brescia in 1537 by St. Angela Merici, devote themselves to Christian education. St. Charles Borromeo gave them his protection. They were very successful. In France alone in 1789 there were 350 convents with 9000 members. At present there are about 7000 nuns in some 300 convents scattered throughout the world.

10. **Order of the Annunciation, or Annunciades.**—This order is divided into three branches: the Annunciades of Lombardy (or Sisters of St. Ambrose), founded at Pavia in 1408, the Annunciades of Italy (or Celestial Annunciades), founded in 1604 near Genoa, the Annunciades of France, founded by the Blessed Jeanne de Valois († 1505), daughter of Louis XI.

11. **Order of the Visitation of the Blessed Virgin Mary.**—These sisters, who also follow the Rule of St. Augustine, deserve a place to themselves in the history of the religious orders, both on account of their founders, St. Francis de Sales and St. Jane Frances de Chantal, and on account of the special spirit of the order and the wonderful fervour shown by its members during the early years of the foundation.

IV. **CLERKS REGULAR.**—1. **Jesuits.**—In order of time the Theatines, Barnabites, and Somaschi rank before the Jesuits; but in number and importance in the history of the Church the Jesuits occupy without dispute the first place among the clerks regular. See art. JESUITS.

2. **Theatines.**—Founded at Rome in 1524 by St. Gaetano di Tiene († 1547) and the celebrated Cardinal Caraffa, afterwards Pope Paul iv. (1555), the Theatines are in order of time the first society of clerks regular. From his entry into the ranks of the clergy, Gaetano was possessed with the desire of forming a community of zealous priests for the service of God and the work of preaching. He founded first the Society of Divine Love, then that of the Theatines,² which closely resembled the former foundation, but had a stricter Rule. Its object was the renovation of the priestly and apostolic life by means of prayer, the practice of poverty, and study. All its members were to be priests. Poverty was to be observed to an extraordinary degree and in an altogether new manner. The society must possess no revenues, and must not ask alms like the mendicant orders, but simply accept whatever was offered to it. It was approved by Clement vii. in 1524, who gave to its members the privileges of the Lateran Canons. He decided, moreover, that the Theatines should take solemn vows, follow the Rule of St. Augustine, and elect their superiors every three years. Caraffa was the first superior elected. The sack of Rome by the soldiers of Charles v. obliged the Theatines to leave the city for a time and to establish themselves at Venice and at Naples. Towards the end of the 16th cent. they had houses in many of the towns of Italy. In the 17th cent. they were very numerous in France and in other parts of Christendom. They exercised a salutary influence on the reform of the clergy and of Christian society in general, by means of their preaching, teaching in the confessional, and visitation of the sick, and by prayer and study. They had missions in Armenia, Mingrelia, Circassia, etc. Their constitutions, drawn up by Caraffa, eventually underwent certain modifications. In 1588, at the incentive of Pope Sixtus v., a general was elected for the whole order. The general chapter is held at Rome every six years. Among their distinguished members must be mentioned, besides the two founders, Verano, St. Andrew Avellino, Tomasi, Merati, etc.¹

¹ For congregations of women occupied with the education of girls see below.

² The name 'Theatine' comes from Theate (Chieti), a city of the Abruzzi of which Caraffa was bishop.

3. **Barnabites.**—The Theatines served as a model for other congregations founded soon after and also having as their object the reformation of the clergy. Chief among these congregations are the Barnabites, founded in 1530 at Milan by St. Antonio Maria Zaccaria. Nowadays their mother house is at San Carlo in Catinari in Rome. To them were also conceded the privileges of the Lateran Canons Regular. The name Barnabite is derived from one of their principal houses at Milan, S. Barnabas.² See, further, art. BARNABITES.

4. **Somaschi.**—This order was founded in 1532 by St. Jerome Emiliani and devotes itself chiefly to the education of orphans and the care of the poor and the sick. Somascha was the hermitage where the founder wrote his Rule and whence the name is derived. The Somaschi endeavoured unsuccessfully to amalgamate with the Society of Jesus in 1547, and then with the Theatines; in the latter case they succeeded, but the union lasted only eight years. St. Charles Borromeo was one of their protectors.³

5. **Camillians.**—The Camillians were founded to care for the sick by St. Camillus de Lellis († 1614). They rendered the greatest service in the hospitals and became renowned for their courage and charity during the plague, cholera, and other epidemics that devastated Italy.⁴

6. **Piarists, or Scolopes** (a contraction of their full title 'Cleri regulares scholarum piarum').—This order was founded by St. Joseph Calasanz († 1648). Its special work, as its name indicates, was the education of children and, in particular, of poor children. It was founded at Rome, whence it spread abroad in Italy and in other countries.⁵

V. **RELIGIOUS CONGREGATIONS FROM THE END OF THE 17TH CENTURY AND SOCIETIES OF SECULAR PRIESTS.**—i. **RELIGIOUS CONGREGATIONS.**—1. **Passionists.**—The Passionists (Clerici Passionis D.N.J.C.) were founded to honour the Passion of Christ. Their founder, St. Paul of the

Cross († 1775), was known for his great austerities and his zeal for souls. Pope Clement XIV. gave them the famous Church of SS. John and Paul in Rome. The congregation is spread abroad in many lands of both the Old and the New World, and is divided into thirteen provinces with 1400 members. The Passionists give themselves to preaching and mission work.¹

2. **Redemptorists.**—The Redemptorists (Congregatio SS. Redemptoris) have as their founder the celebrated St. Alfonso Liguori (*q.v.*; † 1787), whose great theological knowledge has won for him the title of Doctor of the Church, and who exercised great influence on the Catholic doctrine and piety of his time. The members of his congregation devote themselves to the work of preaching in the towns and country districts. Like the Passionists, the Redemptorists are spread all over the world. They number at the present time 4000, possess 215 colleges or hospices, and are divided into 29 provinces.

3. **Oblates.**—The Oblates (of Mary Immaculate) were founded by Mgr. de Mazenod, bishop of Marseilles, at the beginning of the 19th century. Their work is preaching, the education of the clergy, and foreign missions. They have at the present day 301 houses and 3110 members.²

4. **Marists.**—This congregation was founded at Fourvières in 1816. The members follow the Rule of St. Augustine together with special constitutions. Like the Oblates, their work is preaching and foreign missions.³

5. **Assumptionists.**—The Assumptionists were founded in 1850 at Nîmes by P. d'Alzon († 1880). Their activity is employed in the direction of pilgrimages, the press, mission work, the education of children, etc. They form a branch of the Augustinian Order, and their official title is 'Augustinians of the Assumption.'⁴

ii. **SOCIETIES OF SECULAR PRIESTS.**—With these congregations may be compared, as regards date of foundation, manner of life, and special object, certain societies of priests, either with or without lay brothers (coadjutors), who usually take simple vows or are bound only by a promise. These societies, like the above religious congregations, are employed in the education of the clergy, the study of sacred science, preaching, and, some of them, in foreign missions. They have community life, but not the choral office, and they are under episcopal jurisdiction.

1. **Oratorians.**—This congregation has played an important part in the history of the Counter-Reformation of the last few centuries. It is divided into two branches—the French and the Italian. In the Italian Oratory (to which that of England owes its origin) each house is autonomous and independent, while in the French Oratory they are united under a superior-general. The former was founded by St. Philip Neri in Rome, about 1575, as a society of secular priests devoted to the exercise of the sacred ministry and to study, under the title of 'Patres Oratorii.' Most illustrious among its many well-known members is the historian Baronius. The names of Aringhi, Bianchini, and Gallandi also deserve mention, while, in England, those of Newman and Faber have given immortal lustre to the Oratories of Birmingham and London. Their centre in Rome is the house of La Vallicella with its magnificent library. The French Oratory, founded by Cardinal de Bérulle

¹ Heimbucher, iii. 309.

³ O. Egremont, *L'Annee de l'Eglise*, 1900, Paris, 1901; Heimbucher, iii. 389.

⁴ *Missions des Augustins de l'Assomption*, Paris (periodical); Heimbucher, iii. 343.

in 1611, vied with that of Italy in carrying on the work of clerical reform, and presents us with names such as de Condren, Bourgoing, Lejeune, Jean Morin, Amelotte, Cabassut, Thomassin, Richard Simon, Guénin, Lamy, Malebranche, Lelong, Le Brun, Massillon, Houbigant, Quesnel, and Duguet. At the Revolution the French Oratory had 70 houses and 751 members. There were numerous colleges, seminaries, and parishes under its control. It was restored in 1852 and counts among its members Pétetot, Gratry, Perraud, Ingold, Largent, Baudrillart, Lecanuet, Laberthonnière, etc. It possessed houses also in Belgium and Spain. The Italian Oratory, besides its offshoot in England, has foundations in Spain, Austria, India, and America.¹

The Lazarists, Eudists, and Sulpicians worked along with the Oratorians for the education and sanctification of the clergy, and exercised themselves in the sacred ministry, preaching, and mission work.

2. **The Lazarists**, founded by St. Vincent de Paul in 1625, took their name from the priory of St. Lazare in Paris, which had been handed over to them. They form a congregation under a superior-general with assistants, a general chapter, and visitors. They have missions in Abyssinia, Persia, Mexico, Chile, Tibet, Constantinople, and Palestine. They possess 240 houses and 3000 members.

3. **The Sisters of St. Vincent de Paul**, or **Sisters of Charity**, were founded by that saint with the assistance of Mlle. de Marillac (Madame Le Gras) in 1634. They are the largest of all the congregations of religious women and form an army of 35,000 members with more than 3600 houses. They are to be found in almost all the countries of Europe and America and in the greater number of the colonies. They nurse the sick and the poor in hospitals, orphanages, schools, etc.

4. **The Eudists**, founded by Jean Eudes at Caen in 1643, and dispersed at the Revolution, were afterwards brought together again and now number about 400 members.

5. **The Sulpicians** devote themselves exclusively to the training of the clergy. Their founder, M. Olier († 1657), belonged to that company of zealous priests who were the friends of St. Vincent de Paul and Père de Condren. In 1903 the Sulpicians possessed 24 seminaries in France and others in Canada and the United States. They number about 300.²

6. **The Salesians**, founded in 1859 at Turin by Don Bosco, are occupied with mission work and schools, especially for poor children in order to fit them for the different trades. They developed rapidly, and exercise a wide influence. At the death of Don Bosco 130,000 pupils had passed through the schools of the institute. In 1888 it had 956 members; to-day there are 4137. There are 34 provinces with 320 hospices, schools, oratories, orphanages, schools for the arts and crafts, seminaries, printing-presses, and mission-stations. The last are found principally in Patagonia, Tierra del Fuego, and other parts of S. America.

The Sisters of Mary, Help of Christians, or Salesian nuns, also founded by Don Bosco, are engaged in the education of girls, and number more than 2000. They have 250 foundations.³

¹ I. Marciano, *Memorie storiche della Congr. dell' Oratorio*, 5 vols., Naples, 1693-1702; Hélyot, viii. 12 ff.; Wetzzer-Welte², ix. 2019 ff.; *Linziger Quartalschr. für kath. Theol.* liv. 965 ff.; A. Perraud, *L'Oratoire de France au XVII^e et au XVIII^e siècle*, Paris, 1866; M. Adry, 'Gesch. der Oratorianer in Frankreich' (ed. H. Reuchlin), in *Zeitschr. für hist. Theol.*, 1859; A. Ingold, *Bibliothèque oratorienne*, 13 vols., Paris, 1880 ff.; Hélyot, viii. 63 ff.; Heimbucher, iii. 413 ff.

³ *Brevi notizie su Don Bosco e sulle opere Salesiane*, San Benigno, Cavanese, 1906; Heimbucher, iii. 491.

7. **Paulists.**—In 1857-59 Thomas Hecker, with a number of companions, left the Redemptorists, to whose congregation he belonged, in order to found a new missionary society—that of the Paulists—whose principal object should be the conversion of Protestants in America by means of sermons, lectures and public discussions, the press, and social work. The number of converts made by the society from 1898 to 1904 was 1485; in the year 1905 alone it exceeded 1000. The society has to-day about 100 members.¹

There are many other less important societies of priests, formed on the above models. For a list of these see Heimbucher, iii. 519 ff.

VI. **MISSIONARY SOCIETIES.**—Many of the congregations enumerated in the preceding paragraphs possess, as we have seen, missions in infidel lands. Those with which we are now concerned, while closely resembling the above in their organization and manner of life, are dedicated either exclusively or at least principally to this foreign mission work.

1. **Society of the Foreign Missions.**—Most important among these is the Society of the Foreign Missions founded at Paris, Rue du Bac, in 1660-63, by Mgr. Pallu, Vicar Apostolic of Tongking, and Mgr. L. de la Motte, Vicar Apostolic of Cochin-China. During the Revolution the seminary was closed, but it was re-opened in 1820. At the present day the society possesses 34 missions, episcopal sees, vicariates, and prefectures apostolic, numbers among its members 34 bishops, 1700 European missionaries, 710 native priests, 6279 sisters, and has numerous colleges, schools, hospitals, and other establishments. It has, in all, 1700 European members. Before 1869, 26 of its members gained the crown of martyrdom. Its chief missions are in Manchuria, Tibet, Korea, China, and Japan.²

2. **The Society of the Sacred Hearts of Jesus and Mary** is better known as the **Fathers of Picpus** from the Rue de Picpus in Paris, where the mother house was opened in 1805 by the Abbé Coudrin († 1837). Its chief work was at first the education of poor children. It then became possessed of seminaries and finally took up mission work, and has missions in Oceania—the Marquesas Islands, New Guinea, the Marshall Islands, and Tahiti. The society numbers about 600, has 12,000 pupils in its schools, 350 mission stations, and 6 hospitals.³

3. **The Fathers of the Holy Ghost** were formed in 1848 by the amalgamation of the Society of the Holy Ghost (founded in 1707) with that of the Immaculate Heart of Mary, founded by François Libermann. They possess missions in Senegambia, French Guinea, Nigeria, Congo, Zanzibar, Mauritius, and Madagascar. They have also seminaries, of which the best known is the French Seminary in Rome. The statistics of the congregation give 1643 members, 9 missionary bishops, and 203 foundations.⁴

4. **The Congregation of the Immaculate Heart of Mary, or Fathers of Scheut**, was founded at the town of that name in Belgium in 1863. It is an exclusively missionary society. Destined principally for the mission in China and Mongolia, the society has nevertheless missions in a part of the Belgian Congo. In China more than ten of its members have already suffered martyrdom. The Fathers of Scheut take simple vows. They number

at present nearly 600. In their different missions there are 66,000 Catholics, nearly 50,000 catechumens, 228 churches or chapels, and 291 schools with more than 8000 pupils.¹

5. **The Society of Saint Joseph for Foreign Missions.**—In England Roman Catholics have also seminaries for missionaries. In 1866 Father (later Cardinal) Vaughan founded the above society of priests and laymen at Mill Hill near London. The field of their labours lies chiefly among the negroes of Africa, America, and the Indies. They have novitiate houses in the United States, Holland (Rosendaal), and the Tyrol (Brixen), where missionaries from every nation receive their training. They have missions in Madras, Borneo, Uganda, the Congo, the Philippines, and New Zealand, where they have already met with great success.²

6. **The Society of Our Lady of Africa in Algeria** was founded by Cardinal Lavigerie. This title speedily gave place to the popular name **White Fathers**, given to the missionaries on account of the white burnous and cassock worn by them. Their object is the evangelization of the pagan population of Africa. They have had a rapid success. Soon after their foundation in 1868 they established Christian colonies of native orphans gathered together by Cardinal Lavigerie, which resembled, to a great extent, the famous 'reductions' of Paraguay. Their missionary activity embraces the Sahara, Morocco, the Sudan, Central Africa, and Tunisia, and has extended beyond the confines of Africa as far as Syria and Palestine, not to mention their seminaries and colleges at Jerusalem, Carthage, Mechlin, Antwerp, Rome, Paris, Lille, Marseilles, etc. According to the latest statistics, they possess in these different countries 158 establishments, 1706 schools with more than 70,000 children, 310 charitable foundations, such as orphanages, hospitals, leper-houses, etc., where more than 800,000 sick persons, abandoned children, and old people are cared for. They number 880 members, among whom are 9 bishops and 350 sisters. Travellers who have visited their missions speak with great praise of their zeal and the success of their methods. Several of their missionaries have published interesting works on the language and customs of the tribes evangelized by them.³

7. **The Society of the Divine Word** was founded in 1875 by Arnold Janssen at Steyl in Holland. From its very beginning this society has been in the front ranks of mission societies. For the training of its missionaries it possesses a course of studies extremely well organized at Vienna, Rome, and elsewhere. The scientific works produced by its members on the language and religion of savage tribes have a very high reputation. They publish reviews in German, Spanish, English, and Chinese, of which the best-known is *Anthropos*. They also possess printing-presses.

There is a congregation of sisters attached to the society known as **Servants of the Holy Ghost**.⁴

8. **The Society of the Divine Saviour.**—Similar to the above society, this institute (also, like it, of German origin) was founded in Rome in 1881. It has missions in India, the United States, and Brazil (with 35 stations). There are also Sisters of the Divine Saviour or Salvatorian Sisters. This society has a printing-press in Rome for the printing and spreading of Catholic literature.⁵

VII. TEACHING BROTHERS AND CONGREGATIONS OF RELIGIOUS WOMEN.—i. **TEACHING BROTHERS.**—Ever since the 17th cent. there has existed an apostolate for the education of the poorer classes. For this purpose new congregations have been formed whose members are simply 'brothers,' bound usually, and even by vow, to give up all idea of aspiring to the priesthood. These brothers take simple vows, sometimes only temporary, and their activity is consecrated to the work of teaching, and especially of educating the poorer classes of society.

The Brothers of the Christian Schools, or Christian Brothers (to give them the name by which they are commonly known), is the best known of these institutes. They were founded by St. John Baptist de la Salle (1681-84) and have since served as a model for many other societies of the same nature. Before the founder's time there had been several similar attempts, notably that of St. Joseph Calasanz, none of which was so successful. The success of the Christian Brothers is due, no doubt, in the first place to the sanctity of their founder, his wonderful power of initiative, the excellence of his educational methods, and the wisdom and solidity of the constitutions that he gave to his congregation. At his death in 1719, in spite of the opposition of the Jansenists, school-masters, and others, his institute numbered 274 brothers and possessed 27 houses and 122 schools with about 10,000 pupils. It spread rapidly beyond France and founded primary schools, schools for the arts and crafts, agricultural schools, orphanages, and young men's societies in England, Ireland, Italy, Spain, Austria, Africa, the United States, and S. America. In 1904 there were 15,472 brothers, 2019 schools, and 326,000 students. The superior-general and his twelve assistants are elected by the general chapter, which is composed (besides the above) of the procurator-general, the secretary-general, the procurator of Rome, the provincial visitors, deputies from each district chosen by the professed members, and sometimes former superiors or assistants. The twelve assistants form the ruling authority and are placed over the different nations.

It is unnecessary to do more than mention the names of the other institutes of teaching brothers, since all are formed on the model of the Christian Brothers of St. John Baptist de la Salle, pursue the same object, and make use of the same methods. Among the principal are the Irish Christian Brothers (an independent foundation), the Brothers of the Society of Mary, or Marianists, in France, the Brothers of Christian Doctrine in Lorraine, the Brothers of Christian Instruction founded by Father Jean-Marie-Robert de Lamennais, the Brothers of St. Gabriel, and those of St. Vincent de Paul in France, the Josephites in Belgium, etc. For those congregations and for their bibliography cf. Heimbucher, iii. 356 ff.

ii. **CONGREGATIONS OF RELIGIOUS WOMEN.**—The greater number of the older orders have seen arise side by side with them foundations for women subject to the same Rule and inspired by the same spirit. Thus we have the Benedictine nuns, the Cistercians and Trappistines, Franciscans, Carmelites, Augustinians, and Recollects, besides the various orders of canonesses. These foundations are usually in close connexion with and dependent on the orders to which they are affiliated and, as far as the Rule and constitutions are concerned, possess no original characteristics of their own.¹ But from the 16th cent. onwards we find that, apart from certain institutes already referred

to in treating of the Salesians, the White Fathers, and others, the greater number of sisterhoods or societies of religious women that have arisen since that period are entirely independent of any existing order of men. These institutes deserve a special place to themselves in the history of religious orders, since many of them owe their foundation to original ideas, and possess in their annals many an interesting page. But in an article like the present it is impossible to enter into a detailed history or even to give a complete list of these congregations; a few of the principal names must suffice.

1. The Sisters of Wisdom were founded in the year 1703 by Grignon de Montfort. Like the Sisters of Charity,¹ they devote themselves to the education of the poorer classes, to the service of hospitals, and to every work of mercy. In number about 5400, they are to be found in nearly every one of the Christian nations. The centre of their congregation is at St. Laurent-sur-Sèvres.

2. Sisters of Evron.—This institute was founded in the 17th cent. at Evron in the department of Mayenne, France. Their work is chiefly the education of children, but they also look after the sick.

3. The Sisters of Nevers were founded in the 17th cent. by a Benedictine monk, J. B. de Laveyne. They devote themselves to the care of the sick and to the education of poor children. The institute numbers about 2200 sisters.

4. The Sisters of the Good Shepherd were founded in the 17th century. The congregation was re-organized at Angers by Marie de Ste. Euphrasie Pelletier and possesses houses of refuge for women and young girls. In 1906 they had 248 houses and 7400 members.

The beginning of the 19th cent. witnessed a wonderful increase in new foundations of religious women. We give here some of the most important.

5. The Sisters of Nazareth were founded in 1820 by Madame de la Rochefoucauld. They are an institute of teaching and nursing sisters. They have houses in France, Palestine, and Syria.

6. The Little Sisters of the Poor were founded at St. Servan in Brittany for the care of the poor and of the aged. In 1906 they had 5400 members occupied with the care of more than 40,000 sick or old people, in 290 hospitals.

7. The Society of the Sacred Heart of Jesus was founded by Madame Barat († 1865) in Paris and has 142 schools and 6500 members.

8. The Sisters of St. Joseph of Cluny were founded for the education of young girls and poor children by Madame A. M. Javouhey. In 1886 they had more than 300 houses (several of which are situated in missionary countries) and 4000 members.

For all those congregations cf. Heimbucher, iii. 370 ff., 555 ff.

VIII. ORGANIZATION.—i. **Internal organization.**—The constitutional history of the religious orders may be divided into two periods: (1) the 3rd to the 13th cent., and (2) the 13th to the 20th century.

(1) In the first period religious life presents an aspect of great simplicity and appears in only two distinct forms or types—the hermits, who lived alone, and the cenobites, who lived in community. Somewhat later we find certain forms of religious life in which the eremitical and the cenobitical elements were combined—e.g., the Camaldolese, Carthusians, and Vallombrosians. The canons, especially in the earlier part of their history, are hardly to be distinguished from the monks (cenobites), at least as far as their constitution is concerned. The military orders form a

¹ We have drawn attention above (p. 707a) to certain exceptions—e.g., the nuns of Fontevault, the Brigittines, etc.

¹ For the Sisters of Charity see above, p. 708b.

class apart. They came into existence, moreover, only towards the end of this period, and may be regarded as an exceptional form of religious life. Hence it may be said that, during the first nine or ten centuries of its existence, the religious state was characterized by its uniformity. We find everywhere the same life either under the monastic (eremitical or cenobitical) or under the canonical rule. There are, as yet, no distinct 'orders' or congregations; each monastery forms, with its superior and various officials, a unit of its own, autonomous and independent of any higher monastic authority. The first attempt to unite monasteries together in a kind of federation was made in the 9th cent. by St. Benedict of Aniane.¹ But it was unsuccessful and can hardly be regarded as even the beginnings of a congregation. Cluny, in the 11th cent., had more success, and united those monasteries which accepted its reform in a very close union under the supreme authority of the abbot of Cluny as head of the 'order.' Under this authority the autonomy of the monasteries—of those, at least, that depended directly on the great abbey—almost completely disappeared. The reform of Cîteaux was inspired by a principle of centralization differing from that of Cluny, but tending towards the same result. The close union of monastery with monastery was assured by means of a hierarchical organization that submitted some houses to the authority of others, while the unity of the whole order was guaranteed by the institution of general chapters, visitors, and a superior-general. This tendency towards centralization continued and increased from the 13th to the 20th century.

(2) The second period presents certain new characteristics. In substance the religious life remains the same as in the earlier period, but new forms begin to arise. We have now the foundation of the mendicant orders, or friars, whose life is very different from that of the monks. The clerks regular, again, who came into being in the 16th cent., differ as much from the friars as the latter from the monks. Certain congregations founded during the period from the 16th to the 20th cent.—e.g., the Sulpicians, Oratorians, and the various missionary societies—form a new class distinct from the clerks regular. The congregations of religious women founded independently of any of the existing orders of men are a still more striking development of the religious state. The tendency to centralization is emphasized more and more during the course of this period of history. The friars have a superior-general, general chapters, visitors, provincials. The monastery, which in the preceding period represented the unit of monastic organization, loses all autonomy. The superior of each convent is elected, generally speaking, every three years. Often the nomination of the officials, or at least of some of them, is not in his hands. He is, in fact, but the representative (and that for only a short period) of an authority whose seat is elsewhere. The 'religious' themselves are not permanently attached to any one house, but can be sent from one to another of the houses of the order. These houses are united to form a province under the authority of a provincial. The various provinces united together form the order, which is governed by a superior-general and a general chapter, composed, in most cases, of the provincials and delegates elected by each province. The centralizing process reached its perfection in the 16th cent. with the Society of Jesus (see art. JESUITS), which

has served, at least in its general outlines, as a model for a great many religious orders and has even been adopted to a certain extent by some of the older orders.

At the same time, it must be remarked that this law of centralization was not absolute, and it must not be forgotten that at this time certain societies were founded—e.g., the Sulpicians or Oratorians—in which the bonds of union between the different communities were, as in earlier times, of a more or less elastic nature. Besides this, the general tendency towards centralization did not exclude another tendency which, at first sight, would seem to be opposed to it—namely, the tendency to develop new forms of religious life. This is, in fact, one of the most striking characteristics of the period with which we are concerned.

Down to the 13th cent., as we have already seen, all 'religious' were either monks or canons, the latter scarcely differing at all in their mode of life from the former. In each monastery a similar life was lived and practically the same Rule was followed, and yet, thanks to that autonomy which was the law of primitive monasticism, each monastery (especially before the new state of affairs introduced by Cluny and Cîteaux) possessed its own special physiognomy. The foundation of 'orders' like the Camaldolese, the Carthusians, the Vallombrosians, and the orders of Fontevault and of Cîteaux brought new ideas into the old conception of religious life. The hospitalers, military orders, and mendicant orders (Dominicans and Franciscans) accentuated still more the growing tendency to variety, so much so that a reaction took place, and councils and popes in the 13th cent. issued decrees forbidding all further foundations¹—a vain attempt. The movement was too strong; first one, then another new order—the Carmelites leading—forced the hand of authority and obtained recognition, in spite of the decrees of councils and of popes.

From the 16th cent. onwards the older forms of religious life seem to have sunk into the background, and hardly a quarter of a century goes by without the foundation of a new order corresponding to every separate need of society. There are orders whose object is to combat the attacks of heresy, orders for the education of youth, orders for the care of the sick, preaching orders, missionary orders, etc. In the 19th cent. it seems as though every sluice-gate had been opened to the flood, and the multiplication of orders attained to such a pitch that fresh attempts were made at the Vatican Council to set a limit to this love of novelty. At the same time efforts were made to amalgamate different religious families having the same object and to reunite those which had been divided into different branches. Hence we see that the tendency (perhaps excessive) towards centralization was counterbalanced by a tendency equally strong towards an excess of individualism.

2. Laws.—The laws of each religious order are to be found in a species of code known as the Rule. We have already discussed in art. MONASTICISM the origin of the monastic Rules. The chief Rules are those of St. Basil, St. Benedict, that attributed to St. Augustine, and that of St. Francis. These four may be regarded as the source from which all later Rules have been derived and the greater number of religious orders have adopted one or other of them. But, since they are usually somewhat general in character—e.g., the Rule of St. Augustine—or because it has become necessary to modify some of their prescriptions, each order or congregation possesses in addition to the Rule its own special usages called 'Constitutions,' which

¹ The 4th Lateran Council (1215) and the 2nd Council of Lyons (1274).

¹ For those attempts and for the origin of the congregations cf. U. Berlière, 'Les Chapitres généraux de l'Ordre St. Benoît avant le IV^e concile de Latran (1215),' 'Les Chapitres généraux O.S.B. du XIII^e au XV^e siècle,' in *Revue Bénédictine*, viii. [1891] 255-264, ix. [1892] 545-557, xviii. [1901] 364-398, xix. [1902] 88-75, 268-278, 374-411, xxii. [1905] 377 ff.

have the force of law. It is these constitutions, in reality, that give to each order its special characteristics; hence to attempt a classification according to Rules is not practical. The best-known constitutions are those of the Dominicans, the Carmelites, the Capuchins, the Theatines, and the Jesuits.

3. **Dress and costumes.**¹—It might be said with some justice that the existence of the various tendencies above referred to could be gathered from the history of the costume of the religious orders alone. From the earliest days a special dress was worn by those leading the religious life, and this soon became traditional. It consisted of a tunic, girdle, scapular with hood, and a cowl, stockings, and sandals; sometimes a kind of breeches were also worn. All these garments were of an inferior quality (see art. MONASTICISM). Naturally, considerable variety existed with regard to shape and colour. This costume was the rule for many centuries and remains so still for the older monastic orders, having undergone but slight changes and modifications in the course of time. The mendicant orders adopted the monastic dress in part—tunic, girdle, scapular, and hood, cowl, or mantle—but attached perhaps greater importance to the details of shape and colour than the early monks. It was the colour of their habit that often gave to these 'religious' the name by which they were popularly known. Thus the Carmelites were known as the White Friars, from the white mantle which they wore; while the Dominicans, who wore a black mantle, were called Black Friars. In our own day we have the White Fathers, as the missionary fathers of Algeria are called; while the Cellitines bear the name of Black Sisters, and the Beguines are called Grey Sisters or Blue Sisters, after the colour of their habit. Sometimes it is the shape of part of the habit that provides the distinctive title. Thus, as already mentioned, the Capuchins are so called from the special shape of the hood worn by them, the Friars of the Sack from the sack-like form and stuff of their dress.

Some orders attribute the special form and colour of their habit to a divine vision, as, e.g., the Order of Mercy. Again, the return to a more strict observance of the Rule outwardly symbolized by the practice of going barefoot has given the title of 'Discalced' to the reform in the Carmelite order for men and women, and to a number of other orders or divisions of orders.

The military orders adopted a costume that was more in keeping with their character and only distantly related to that worn by the monks, with whom, however, they were connected by their rule of life. It was quite an innovation when the clerks regular, in the 16th cent., forsook the monastic habit together with so many other monastic observances and adopted the costume of the secular clergy.

With regard to the nuns and sisters, those who belonged to the older orders adopted, as was but natural, a form of the habit worn by the monks or friars. The later and modern congregations have, on the other hand, too often allowed themselves to be guided by mere fancy, apart from all tradition. On this point, it is said, the Vatican Council had also intended to introduce a reform.

IX. **ACTIVITY: SCIENTIFIC, LITERARY, SOCIAL, ECONOMIC; SERVICES RENDERED BY THE RELIGIOUS ORDERS, DIFFERENT WORKS.**—We have already seen in art. MONASTICISM that the monks had no special object in entering that state of life beyond their desire to lead a life in closer

conformity with the spirit of the gospel. But by force of circumstances and from the fact that both manual and intellectual work had from the beginning a special place in monastic life, they were led to develop their external activity and thus to exercise considerable influence on society at large. The monastery became in most cases a centre of civilization as well as of religious life and often a flourishing city rose up around it. Many monasteries had their schools of literature, and of grammar, their song-schools, and their schools for the arts and crafts. Libraries that often became famous were formed in the cloister. It was in the monasteries that MSS were copied and preserved. Thus they were for centuries a refuge for the sciences and the arts. The clearing of forests, the making of roads, bridges, and canals, the cultivation of the wide lands that belonged to them—all this was the work of the monks. It was in the cloister, too, that the great missionaries who went forth to conquer the pagan world for Christ were trained—Augustine, Boniface, Adalbert, Anshar, and many others.

In the 13th cent. the social influence of the monastic order, which had begun to decline, passed to the newly-founded mendicant orders. The latter came into being at a period when Christian society, disturbed and upset by the errors of the Albigenses and other heretics, had begun its process of disintegration. Their object was precisely to arrest this process—in the case of the Dominicans, by means of preaching, and teaching in the schools; in the case of the Franciscans, by means of a living example of evangelical poverty and by the exercise of the sacred ministry among the people. The Carmelites, the Augustinians, and the other orders that rose between the 13th and 15th centuries had their part also in this good work. Other orders founded about this time had a more special object in view: for the Order of Mercy and the Trinitarians this was the redemption of the Christian captives taken by the Moors; for the military orders, the protection of pilgrims to the Holy Land and the war to be waged against the forces of Islām; for the hospitallers, the care of travellers, the poor, the sick, and those stricken with leprosy. In the 16th cent., and onwards till the 19th, the activity of the religious orders was extended still further. The Jesuits set forth to fight the battles of the Church with all her foes, by means of their preaching, their schools, and their spiritual direction. The Oratorians, the Sulpicians, the Eudists, and the Lazarists devote themselves more especially to the education of the clergy. The Theatines, the Barnabites, the Passionists, and the Redemptorists show them the example of an austere and holy life, and assist them in the sacred ministry. The missionary societies are spread abroad in every quarter of the globe, to bear the teaching of the gospel to the heathen nations. The teaching brothers and sisters give themselves to the education of the poorer classes of society—each order or congregation has its part to fulfil in the carrying out of the Church's mission on earth.

We may give here a résumé of the services rendered to religion and society by the religious orders. The mission work and that of preaching and teaching, carried out in the earlier period almost exclusively by the monks, the canons, and the secular clergy, is from the 13th cent. in the hands of the mendicant orders—the Dominicans, Franciscans, and others founded at that time. From the 16th cent. the clerks regular, the religious congregations, and missionary societies—Jesuits, Lazarists, Assumptionists, the Fathers of the Holy Ghost, etc.—extended far and wide the domains of the Church. It was especially in the 19th cent.

¹ P. Hélyot and V. Philippon de la Madelaine, *Hist. complète et costumes des ordres monastiques, religieux et militaires*, 8 vols., Paris, 1839-42; cf. also Hélyot and Bonanni, *op. cit.*

that the missionary movement began to spread. It is estimated that in 1792 of every 557 men 174 were Christians. At the present day for the same number the proportion is 186 Christians. This progress is due to the activity of the missionaries.¹ Out of 18,000 missionaries 15,000 belong to different religious orders. Besides these must be reckoned 120 congregations of women with 53,000 sisters, of whom 10,000 are natives.² During the period of their prosperity the monasteries served as schools for children and youths. The 12th cent. saw the foundation of the universities, which soon gathered round their chairs of learning students from every part of Christendom. In these universities, after a long and violent conflict, the Dominicans, Franciscans, and Carmelites succeeded in gaining a foothold and became renowned for the brilliancy of their teaching. In the 16th cent. the Jesuits, especially as regards teaching in the secondary schools, are found at the head of the movement, while the societies of teaching brothers take up the work of teaching the children of the poor the elements of learning and the various trades. Other societies, again, like the Sulpicians or Eudists, are founded for the education of the clergy, and the congregations of women that continually arise devote themselves to that of young girls.

Study, the copying of MSS, and literary work of every description remain, to a great extent, the prerogative of the monks, but, as time goes on, the new orders of mendicant friars, and, later still, the clerks regular dispute this prerogative with them. Dominicans, Franciscans, Carmelites, Augustinians, Jesuits, Oratorians, Sulpicians, Barnabites, and Redemptorists—all these can quote among their members the names of theologians, historians, critics, mystical writers, and savants of outstanding merit.

Special orders or congregations are founded to preach the Word of God to the country people, too long neglected, or to the poorer population of the cities and towns—the Lazarists of St. Vincent de Paul, the Oratorians of St. Philip Neri, the Piarists, the Barnabites, the Redemptorists, the Passionists, etc.

From the 11th cent. onwards it is chiefly works of charity that absorb the activity of the religious orders. Full justice has been done to the work of mercy carried on in early times by the monasteries and to the liberal hospitality shown to pilgrims and travellers in the guest-houses and hostels that abounded along all the roads leading to the important places of pilgrimage, such as St. James of Compostella, Rocamadour, Rome, etc., and which marked out the various stages on the way and were to be found especially near bridges and ferries.³ Besides these there were houses of refuge, leper-houses, and other charitable establishments that depended on the monasteries, and abundant alms in money or in kind were regularly distributed at the monastery gates. To give one example alone: we find in the *Monasticon Anglicanum* and the *Notitia Monastica* a list of about 115 leper-houses in England and Scotland.⁴ The 11th cent. and the centuries that follow up to the 15th, with the foundation of the orders of hospitaliers already spoken of and of the 'Maisons-Dieu,' the 'Hôtels-Dieu,' the leper-houses, and other charitable institutions, form together a glorious chapter in the history of Christian charity.⁵ But it is especially from the 16th cent. onwards

that the activity of the religious orders in works of charity is seen at its greatest and is found ready to cope with almost every ill that human nature is heir to. Vincent de Paul, Camillus de Lellis, and John of God are counted among the greatest benefactors of the human race. As an example we may notice that the Brothers of St. John of God, popularly recognized in Italy as the 'Fate bene fratelli' or 'Benfratelli,' who, besides the ordinary vows of religion, bound themselves by a fourth vow to care for the sick throughout life, possessed from the 17th cent. and in the generalate of Granada alone 138 hospitals with 4140 beds, while in that of Rome they had 155 hospitals with 7210 beds.

In the province of charity the congregations of women exercise a more important office even than the orders of men. In 1904 the statistics give us 457,000 sisters throughout the world devoted to works of mercy—in charge of orphanages, homes, hospitals, houses of refuge for penitents and Magdalens, infant asylums, homes for the old, for consumptives, and for lepers, and many besides who are occupied with the service of prisons.¹

This is a very incomplete résumé of the manifold activity of the religious orders, but the subject, to be fully treated, would require volumes.²

RELIGIOUS ORDERS (Indian).—The religious orders in general are already partly treated in artt. ASCETICISM (Hindu), HINDUISM, MONASTICISM (Hindu), and some of the different orders in artt. AJIVIKAS, JAINISM, PATIMOKKHA, etc.; the doctrines which feed the religious life of the 'friars' are studied in such artt. as BHAGAVAD-GITA, BHAKTI-MARGA, JÑANA-MARGA, SAIVISM, VAISNAVISM, while the artt. AUSTRALITIES, FASTING (Introductory and non-Christian), YOGI, DRAVIDIANS (N. India), vol. v. p. 16, etc., describe some of the outward features of this life.

The aim of the present article, therefore, is to draw up a general scheme. While avoiding the technicalities and especially the intricate and innumerable details of modern institutions, it is possible to state the most important features of asceticism as organized in the religious brotherhoods, and the most remarkable steps in this organization.

I. 'FAQRISM'.—I. Crude asceticism.—The chief

element—the raw material—of the Indian religious life is what we may conveniently style 'faqīrism.' This word is of course modern and its technical meaning is precise,¹ but it seems an appropriate term to summarize the crude ascetic, mystical, and orgiastic beliefs and practices which, as far back as our information goes, have been characteristic of the Indian people. Such beliefs and practices may be traced in almost all primitive civilizations.² Outside of India they have been crushed or chastened to a large extent by the progress of social life or of a religion which found its leading motives in ideas more human and more truly religious than a bare asceticism.³ In India, on the contrary, the ascetic tendencies underwent an enormous development owing to certain climatic and racial circumstances, and, moreover, they were one of the chief factors of the religions and philosophies themselves. From time to time throughout history spiritual leaders succeeded in organizing and moralizing these tendencies, constructing 'theosophic' or devotional theories of no mean moral and spiritual value; but the starting-point of those theories is often to be found in raw asceticism. The Buddhist—the Jain or the Tridandin—is a philosopher, but he is also a chastened *faqīr*. The morbid devotee who practises catalepsy on the cross-roads for a living is the prototype of the Vedāntist who sinks his soul into the universal Self, and of the Buddhist monk, the *arhat*, who enjoys the meditations leading to *nirvāṇa*. To put it otherwise, the sorcerer, the saint, and the god form a continuous chain; all saints are ascetics and thaumaturges: Siva is a penitent; the androgynous Śiva embodies the most morbid form of asceticism. It is certain that the religious leaders were able to educate a large number of professional devotees; but many ascetics remained outside the great orders and formed only lax associations for begging or not much more. Nowadays, even when he is backed up by a Church and professes to be a member of an order endowed with a literature and with half-divine and infallible *gurus*, the ordinary 'friar' is too often a man of a low intellectual level. His literary or doctrinal knowledge is frequently confined to a few *mantras*, or formulas; his sectarian peculiarities (form of dress, amulets, etc.) are not much more than a pretence or a mark of distinction. It is safe to infer that this state of things is an old one.

The Indian orders are apt to split up and to degenerate. The old crude faqīrism is eternal and really unmodifiable. When we compare the data to be found in the Buddhist *Piṭakas*, in the Jain *Āṅgas*, and in the Greek sources with mediæval and modern descriptions, we are struck by the constant recurrence of the (1) penitential (*tapas*), (2) mystical (*yoga*), and (3) orgiastic (*puṣṭimārga*, 'salvation through dalliance') practices.

The earliest references that we possess to ascetic mystical practices have been studied by A. Barth and H. Oldenberg. The long-haired ascetic, or *muni*, naked or dressed in rags of reddish colour, is 'possessed with the gods,' and, inversely, the god Sun is once celebrated under the aspect of a *muni*.⁴ 'Here we have a living picture of the orgiastic outbreaks of the old Vedic world, still confined as they are in the narrow limits of Shamanism, not yet purified by the aspiration to the final deliverance.'⁵

¹ See art. DERVISH; H. Yule and A. C. Burnell, *Hobson-Jobson: a Glossary of Anglo-Indian Colloquial Words and Phrases*, London, 1886, s.v. 'Fakier.' One of the earliest references (1653) describes the *faqirs* as 'une espèce de religieux Indou qui foulent le monde aux pieds et ne s'habillent que de haillons qu'ils ramassent dans les rues.'

² See art. INTUITION (Introductory and Primitive).

³ See art. MONASTICISM, vol. viii, p. 786 f. the obligation of work, study, and active charity is fully recognized by the Western monk.

⁴ *Rigveda*, viii, 17, 59, x, 136.

⁵ See A. Barth, *Quarante Ans d'indianisme*, Paris, 1914, I.

(a) *Tapas*.—The 'religieux' of the old and of the new times is often a penitent (*tāpasa*) who indulges in extreme mortifications, or in morbid self-torture or mutilation—e.g., the Bahikathas, feeding on excrements (Aghoris), holding the arms or the face upright until paralyzed;¹ imitating the cow, the horse, the dog, or the rook;² (*govrata*,³ *āśvavrata*, *kukkūṭavrata*, *kakavrata*).

Tapas culminates in suicide—a common practice in ancient times. While the Brāhmins forbid suicide as a religious act, they nevertheless admit it as an atonement for certain sins.⁴ With the non-Brāhmins suicide, by starvation, drowning, fire, or exposure, is a regular way of salvation.⁵ See also art. ASCETICISM (Hindu), AUSTERITIES, FASTING (Introductory and non-Christian).

(b) *Yoga*.⁶—Mystical devices, comprehended under the general name of *yoga*, are as a rule associated with *tapas* or, at least, with a semi-penitential life. There are a number of *āsanas*, 'modes of sitting,' attitudes of the lower part of the body, and of *mudrās*, attitudes of the upper part of the body. In the *khecharī mudrā* the ascetic inserts his reverted tongue into the gullet, while fixing the gaze between the eyebrows. There are many devices to induce trance—protracted rigidity of body, fixity of look, repetition of strange sets of formulas, counting the respiration or stopping it (*prāṇāyāma*).

(c) *Makāras*.—On the orgiastic side of faqīrism, the use for 'religious' purposes of the five *makāras*—the five things the name of which begins with *m* (meat, fish, alcohol, copulation, and *mudrās*)—we are only too well enlightened as regards mediæval and modern times; but we are rather in the dark as to old Hinduism. With the Jains (*q.v.*), before their reformation by Nāṭaputta, and with the Ājivikas (*q.v.*), continence was not one of the obligations of the ascetic. There are unmistakable signs that the unmorality of the modern Śāktas is not a new development. In the days of Patañjali (2nd cent. B.C.) the violence of the fanatical devotees was already a proverb; in the *Mṛchchhakatikā* 'nun,' or *religieuse* (*gostāviā*), is a synonym of 'harlot' (*veśyā*). The motto, 'Omnia sancta sanctis,' had many followers.⁷

By penance and trance a devotee obtains important advantages and is supposed to obtain some still more important ones.

(1) This mode of life, not always very uncomfortable, assures a living. No one will refuse alms to an ascetic mendicant. Further, the ascetic is able to render many services, either of white or of black magic. The mass of the ascetics practised the 'low arts' which are enumerated in the Buddhist *suttas* as unworthy of a monk.⁸ The list is a long one and is as valuable for modern times as it is for ancient.⁹

(2) A religious mendicant, especially when

qualified in penitential observances, in ecstatic devices, or in thaumaturgic formulas, is supposed to possess magical powers—the *rddhis* of the Buddhists or the *siddhis* of the classical *yoga*, elsewhere *bhūtis*.¹ He was able to communicate with all sorts of supernatural beings, male and female. He was assured of a happy rebirth, as a god or a demon. But Śākyamuni states that by the 'practice of the cow' (*govrata*) a man is reborn, not as a god, but as a cow.

2. The task of the religious leaders.—This was in short (1) to group ascetics under a certain rule of life, and (2) to give a spiritual meaning to the ascetic, mystical, and orgiastic practices.

(1) We possess no information as to the earliest steps towards the organization of the orders. All the evidence points to the conclusion that religious non-Brāhmanic bodies had been flourishing for a long time when Indian history begins with the Jina and the Buddha. The former was only the reformer of an existing brotherhood and the latter adopted from the non-Buddhists some of the most important rules of the cenobitic life (fortnightly meetings, etc.). A dogma of both Jains and Buddhists is that there have been in the past a number of Jinās and Buddhas; this dogma is historically true.

(2) While a mendicant, who was hitherto his own master, has to become a member of an organized body, to undergo a novitiate, to submit himself to the authority of a fixed rule or of the elders (*thera*, *thaira*), he is expected to become at the same time a 'philosopher' who strives towards a supernatural goal. Penance, trance, and even the *makāras* are turned by the spiritual leaders into means of spiritual progress.

Some leaders try to check the exaggeration of penance and ecstasy and prohibit the *makāras*; others systematically approve of the most morbid form of asceticism. Nevertheless, the general standpoint of the leaders may be illustrated by two instances: (i.) the gods were scared by the penances and the pious deeds of the future Buddha, fearing that he would dethrone them by the magical power which was the natural fruit of such penances and deeds. The future Buddha comforted them: a saint does not care for 'secular' advantages; his only aim is *nirvāṇa*. (ii.) The 'mystic' discipline is twofold—*rājayoga*, an intellectual theosophy, and *hathayoga*, a theurgy or mechanical theosophy in which medicine and trance are mixed. The former represents the loftier side of Indian mysticism, and is the work of the thinkers; the latter embodies the immemorial tradition of the ascetics.

A few topics may be mentioned. (a) Ancient Brāhmanism regarded penance as a method of atonement for sin, and Jainism strongly emphasized this view, which is a general one. With the Buddhists penance, either moderate or severe, is expected to crush desire. With the devotional sects one pleases the gods by self-torture.² (b) As concerns trance, a Brāhman employs in the *grand œuvre* of 'deliverance in this life'³ the very devices through which a *faqir* induces trance and obtains magical powers. Since the immanent Absolute dwells in the heart, an ascetic might 'draw the self from the non-self' and concentrate his individual soul in the real soul. With the Buddhists trance does not directly work out *nirvāṇa*, but it is none the less necessary; in order to be really efficacious, it must be 'without content.' With the devotional sects the devotee realizes during trance a transitory union (*yoga*) with his god, a foretaste of heavenly happiness. (c) As concerns the *makāras*, no moral distinction can be made between, on the one hand, the Tantric (*śākta*, left hand) ceremonies, whether Buddhist,⁴ Śaivite,⁵ or

Vaiṣṇavite,¹ which aim at the identification of the ascetic (*yogin*) with the god—by intercourse with a *mudrā*, a female, who, through 'baptism' (*abhiseka*) or 'marks' (*nyāsa*), has been transformed into a Bhagavatī (a female Buddha), into Bhairavī, into Rādhā, a Buddhist becomes the Buddha Vajrasattva, a Śaivite becomes Bhairava, a Vaiṣṇavite becomes Kṛṣṇa—and, on the other hand, the gross rites which have as female protagonists the fanatical girls known as 'mothers,' *yoginīs*, *dākinīs*, etc. But the Tantric ceremonies are looked upon as a 'path to deliverance': the orgy is a sacred orgy; moreover, we are told that some of the ascetics addicted to that 'worship' interpret even the most shocking obscenities of their books in an allegorical way.²

II. ANCIENT BRĀHMANIC ASCETICISM.³—The Brāhman asceticism was influenced by the established ideas on penance, but it remained foreign and hostile to faquirism. While it did not directly give birth to religious orders properly so called, it developed both the type of the Indian friar and, as far as the earlier period is concerned, the leading ideas of the religious life.

In short, the *brahmachārīn* is the type of the Buddhist novice, *śrāmaṇera*, and the *sannyāsin* ('apostate') is the type of the *bhikkhu* (Kern). On the other hand, the goal aimed at by the Brāhman ascetics (*nirvāṇa*, liberation from the sufferings of individual existence, identification with the Absolute) became, *mutatis mutandis*, the goal of the Buddhists and of the earliest orders.

The Vedic-Brāhmanic religion inherited from an early date both the ceremony of initiation (*g.v.*)—preliminary to marriage and to the exercise of the rights of a member of the clan—and the rules stating the duties of the youth to be initiated. The young Ārya had to remain some years in the house of a preceptor (*guru*) as a servant and as a student in the sacred lore (hence his name *brahmachārīn*); he begged his food, avoided certain articles of diet, and practised continence. The last feature is important, and the very term for novitiate or studentship (*brahmacharya*) comes to mean continence and, in the time of Śākyamuni, religious life.⁴

When the speculations on rebirth and deliverance from rebirth were ripe, continence was regarded not only as the way to heaven, but as the best means of deliverance from death. While old men, after having paid their debts to the gods (by sacrifice) and to the dead (by the birth of a son), abandoned secular life (*sannyāsin*) in order to reach holiness before dying, young men agreed to spend their whole life as *brahmachārīns* in the house of their *guru*.⁵ This house was a hermitage. There are in the *Mahābhārata*, in Śakuntalā, and in the *Harsacharita*⁶ beautiful pictures of the quiet retreats of the *śloṇīas*.

In contrast with the settlements of hermits devoted to meditation together with moderate asceticism, and not averse to sacrifice, early Brāhmanism had 'penitent hermits' (*tāpasa*), the *munis* or *rṣis* of the *Mahābhārata*, either of priestly or of kingly parentage. The *munis* have abandoned sacrifice; they feed strictly on roots and fruit;

they perform severe penances (the *tapas* properly so called, 'heat'), but they remain dignified and free from vulgar charlatanism.

There have been a number of Brāhmanical mendicants or wandering ascetics (*yati*, *bhikṣu*, *parivrājaka*), although we know only two associations of such men.¹ The law-books (in which is embodied the *smṛti*) regard this mode of life with little favour.

We possess a few details concerning the *jaṭilas*, *jaṭilakas*, or *dirghajata*, 'ascetics with matted hair,' who joined the Buddhist order when Śākyamuni proved his magical efficiency to them. Their Brāhmanical character is established inasmuch as they sacrificed to the fire.²

III. RELIGIOUS ORDERS: GENERAL REMARKS.

—I. Sects and orders.—Apart from pure Brāhmanism—i.e. Brāhmanism freed from any tinge of Saivism or Vaiṣnavism, as it was at the beginning and as it has remained in certain circles—religious India is sectarian. On the whole (there are exceptions) each sect—a fluid group of the worshippers of a certain deity, or of a certain form of a deity—has its religious order, sometimes two or three religious orders. The *prima facie* view is that, in early times, the orders—e.g., the Buddhist brotherhood—stood by themselves and had no intimate connexion with the mass of the people: a number of ascetics followed a certain discipline, both practical and doctrinal, and the good people who fed them were left to their own religious beliefs, a mixture of paganism and old inherited family, tribal, and trade rules. Such a view is not complete. It is true that, in the case of Buddhism or Jainism, the order came first, and the sect afterwards; and the same process was repeated through history more than once. But the leaders, the Buddha or the Jina, gathered adherents who did not join the order and who formed a body of laymen, a sect, whether Buddhist or Jain.³ In contrast with the lax associations of wandering mendicants, like the modern Aghoris, no organized monasticism could develop without being backed by a sect. The saints, especially the Master and his predecessors, the relics, the holy places, the symbols (tree, etc.), were the focus of a popular Buddhist devotion. The title of Rhys Davids' book, *Buddhist India*,⁴ is somewhat misleading, for India, as a whole, has never been Buddhist, but the Buddhist sect has, for a long time, been one of the most important sects of India, and is really a Church.

If we are right on this point, we have to infer that the modern constitution of Indian sectarianism is really very old. There is a sect which finds its unity in the worship of a god, either a natural or mythological god (Siva, Viṣṇu) or an euhemerist god (Buddha, Jina). The sect is divided into two sections: (1) the laymen, more or less initiated into the theology of the sect (*sampradāya*, *darśana*, *mata*), and (2) the ascetics, or *vairāgis*; some are hermits (*vānaprastha*, ἀναχωρηταί, ἐρημίται); some lead a common life (*koivōbioi*, *mathadhāri*) in a convent (*viḥāra*, *maṭha*), in the neighbourhood of a temple or a holy place as a rule; some wander from one *maṭha* to another, from one *chaitya* to another, from one place of pilgrimage to another (the Circumcelliones of the West).⁵

⁴ London, 1903. On Buddhist cult see Kern, tr. Huet, ii. 136-245; J. P. Minayeff, *Recherches sur le bouddhisme*, tr. from Russian, Paris, 1894, pp. 115-186.

⁵ For description of the *maṭha* see ERE viii. 803; for contrast of the resident monks (*mathadhāri*) with the itinerant, art. KHAKIS; for rules for the initiation of foreign monks, ERE viii. 74.

2. Evolution of the doctrines of the orders.—While emphasizing the permanent character of the Indian religious institutions—there is no great difference, from a certain standpoint, between the temple in the form of a *chaitya* and that in the form of a *linga*-shrine—it is necessary to avoid wild anachronism as well as pedantic chronology. The beliefs of the sects have not been completely modified; everywhere and always a certain monotheism, more or less devotional, kept asserting itself in spite of an overwhelming mythology and polyatry. It is quite unlikely that 'India fell asleep Vedic or atheist some centuries B.C. to awake devotional, Saivite or Vaiṣnavite some centuries later.'¹ But there has been a revolution in the leading ideas of the 'intellectuals' of the sects, i.e. of the ascetics. The institutions which we study (below, IV.) as 'ancient religious orders' are, as a rule, atheist; the Buddhist monk, like the Brāhman *sannyāsin* of old, aims at *nirvāṇa*, and he does not expect any help from any god or saint. Buddhism and Jainism, if the doctrines of the brotherhood only are taken into account, are not 'religions'; they are atheist paths of salvation,² like Sāṅkhya or Vedānta. With the mediæval or modern orders (below, V.) *bhakti*, an ardent devotion to a 'deity of election' (*iṣṭadevatā*), goes hand in hand with the doctrine of grace (*anugraha*).³ The neo-Buddhism (see art. MAHĀYĀNA), contrasted with early Buddhism (see art. HINAYĀNA), illustrates the change: it aims at a rebirth in Sukhāvati,⁴ not at *nirvāṇa*, just as the devotee of Viṣṇu aims at a rebirth in Goloka, not at *brahmanirvāṇa* (losing oneself in the Absolute). But the idea of *nirvāṇa* has not altogether disappeared in neo-Buddhism, although it is kept in the background; and, in the same way, the monism or semi-monism (*advaita*, *viśiṣṭādvaita*) of the *Upaniṣad*-Vedānta schools furnishes the sects of *bhakti* with an esoteric or 'superior' theology.

3. Religious vows.—Of all the Indian orders, the Buddhists seem to have understood the nature of the religious life best. The theory of the vows in the *Abhidharmakośa* reminds us of Western theology.

A Buddhist is a man (or a woman) who has taken the vows of the religious life (*saṃvara*, 'restraint,' 'discipline'), i.e. who, after taking refuge in the Three Jewels (Buddha, *dharma*, *saṅgha*), has solemnly undertaken to live his whole life under the rule of Śākyamuni. The vows are either (1) the vows of a *bhikṣu* (the vows of a novice and of a nun are different in practice, but the same in kind), or (2) the vows of a layman (*upāsaka*) or laywoman (*upāsikā*): an *upāsaka* is not, as generally understood, a worshipper, but a 'religieux'; he is actually a member of the third order, a tertiary.

The *bhikṣu* binds himself to avoid all occasions of sin (i.e. of desire), and practises a mortification which develops the humility and the energy necessary to salvation. The *upāsaka* avoids the occasion of many sins and plants roots of merit which will ripen in a future life.⁶ The difference between the two rules of life is characterized by the *saṃvara* on carnal desire: while the *bhikṣu* is absolutely continent and therefore remains untouched by the fire of passion, the *upāsaka* is to avoid only illicit love (*kāme mithyāchāra*), either intercourse with an *agamyā* (neighbour's wife, nun, etc.) or illicit intercourse with his own wife.⁶

¹ A remark often emphasized by A. Barth.

² See L. de la Vallée Poussin, *Way to Nirvāṇa*, Cambridge, p. 1917.

³ See *Vajrachchedikā*, § 2.

⁴ See SBE xlix. [1894], pt. ii. pp. 1, 161.

⁵ A *bhikṣu* follows the Ten Precepts (ERE vii. 820*). An *upāsaka* follows the first five of these precepts—the third, continence, being understood *mutatis mutandis*.

⁶ In *Paramathajotikā*, ii. (vol. i. p. 43), the *sāddrasantosana*, 'avoiding adultery,' is styled *brahmacharya*, 'continence.'

A point worthy of notice is that an *upāsaka* is expected to take the eight vows of an *upavāsastha* every fortnight, i.e. to live twenty-four hours as a monk (continence, not eating at a prohibited time, etc.).

The man who has taken the vows either of a *bhikṣu* or of an *upāsaka* is a 'disciplined one,' a 'restrained one' (*samvṛta*); he is not like other men, for the vows create the special sort of *karma* which is styled *avijnapti*.¹

In Mahāyāna Buddhism the old organization of the order remains, theoretically at least, as it was; but a new *saṃvara*—the 'discipline of a future Buddha'²—comes to the front. *Bhikṣus* and *upāsakas* have to undertake the duties of a *bodhisattva*, i.e. to 'produce' the thought of becoming a Buddha and to practise the perfect virtues. Now, according to the dogma and the legends, a *bodhisattva* may be married; and it is a common fact that a man, after taking the vows of a *bhikṣu*, may 'exchange' these vows for the vows of a *bodhisattva* and marry. The consequence was that the Buddhist order in Nepāl—and partly at least in old Kāśmīr—became an order of married *bhikṣus*³ (Banaras, Gubharjūs, Vajrāchāryas).

4. The Church and the State.—An important point in the history of the orders is the intervention of the State. Buddhists, Jains, and Ājīvikas secured, through the zeal of Aśoka,⁴ important advantages. On the other hand, while the religious orders carefully respected the rights of the kings, nobles, and parents⁵ (no son, slave, or officer can be admitted into the Buddhist order without the permission of father, owner, or king), there are evidences that the civil power did not always respect the rights of the churches.⁶ The history of the so-called persecutions remains to be studied. Scholars now believe that the Buddhist narratives on this subject are on the whole inaccurate.⁷

IV. ANCIENT RELIGIOUS ORDERS.—From about the 8th to the 6th cent. B.C. a number of religious leaders gave a regular form to the wandering ascetic life. The best of them had a high moral standard and a high intellectual standpoint; they condemned in theory, even when they were forced to tolerate in practice, the less honourable devices which were popular among their followers (magical performances, etc.); they preached a path to salvation, and contrived to adapt to this lofty aim the penitential and ecstatic practices. They were great organizers and also great men; while the brotherhoods which they had established were living, robust organisms, they themselves became the gods of new religions.

I. Buddhist and Jain.—The rules of the Buddhist⁸

¹ See art. KARMA, vol. vii. p. 674, § 5. The *prātimokṣasaṃvara*, 'discipline according to the rules of the Prātimokṣa on the Vinaya,' is the essential condition of the *dhyānasamvara* and *loketarasaṃvara* (see art. DHYĀNA), which, being the path to *nirvāṇa*, constitute the mystical side of the life of a monk. In Occidental language the *upāsaka* is a tertiary, the *bhikṣu* is a regular friar who is expected to be a mystic. In fact, only the *bhikṣu* is qualified for mysticism and *nirvāṇa*.

and Jain¹ brotherhoods are well known and may be easily studied both in the sources, the greater number of which have been translated, and in a number of summaries or essays.

It is often forgotten that the Saṅgha contains two classes of 'religieux': (a) the monks who follow the old rule of asceticism (the twelve or thirteen *dhutaṅgas* or *dhūtagaṇas*),² hermits, 'men of cemeteries'—they are often very holy men,³ although they have a bad reputation and are even forbidden to approach the village; and (b) the monks of lax observance, the *kowḍḍi*, who not only disregard the *dhutaṅgas*, but indulge in the 'extra-allowances' (*atirekalābha*) authorized by the Vinaya—i.e., they are solemnly taught the four *nīṣayas* (alms poured in the bowl as sole food, dress made of rags, a tree as a house, cow-urine as sole medicament), but they do not take any account of these rules.⁴

2. Other orders.—Side by side with the Buddhists, the Jains, and the Ājīvikas (q.v.), there were several religious orders or associations which are known only by name. We may mention the followers of the teachers named in the *Sāmañña-phalasutta*⁵ and the stereotyped list of *Āṅuttara* iii. 276.⁶

While, in accordance with the rationalistic ideas which came into the foreground at that time (*Brāhmaṇas*, *Upaniṣads*), the earlier orders were mostly atheist 'disciplines of salvation' or 'paths to *nirvāṇa*,' there are evidences that many worshippers of some 'deity of election' (*iṣṭadevatā*) constituted themselves into congregations or orders. Such names as Devadhammika,⁷ Indavattika, Brahmavattika, Vāsudevavattika, etc.,⁸ point to that conclusion. Ascetics, to be sure, exerted themselves, both by penance and by ecstasy, to be reborn in some heaven. According to the Buddhists, Brāhmaṇas have only such a rebirth in view; and the Buddhist Scriptures, which do not approve of the Brāhmaṇa sacrificial method of obtaining this rebirth, have a theory on the meditations through which such a rebirth may be obtained. The mediæval and modern orders (below, V.) have certainly had a long history previous to any information now available.

Theology.—*Bhakti*,¹ i.e. devotion to God—a Heavenly Father, and often, like the Vaiṣṇavite *avatāras*, an incarnate Saviour—gave rise to a lofty mysticism,² a solid theology of divine grace. Meditation, when *bhakti* remains pure, has a reasonable object, and compares to advantage with the 'meditation without an object,' which is the highest stage in the 'disciplines of salvation.' Asceticism has a truly religious meaning. Religious orders have been the ornament and the focus of the powerful and intense sectarian worships which have been since the *Bhagavad-Gītā* (*q.v.*) the leading forces of Indian religious thought.³

Bhakti, whether Buddhist or Hindu, has its drawbacks and its failures.

'It was deemed the essential condition of salvation; it became the unique condition. A single act of faith, a single sincere invocation to God, cancels a life of sin. Finally, the exaggeration of *bhakti* destroys *bhakti*.'⁴

To pronounce the name of Avalokiteśvara or of Kṛṣṇa, even by chance, even in a blasphemy, is enough. Further, the devotion due to God is due (1) to the *guru*, who is often regarded as an incarnation of God Himself; Hinduism, in that direction, went almost as far as Lamaism (*q.v.*); and also (2) to specialized forms of God and to idols; hence all forms of superstition. Again (3) devotion is often paid to the *śakti*, or 'female energy,' of God; hence the 'religious' justification of the eroticism of the Śāktas (left-hand worship).

2. **Classification.**—The rôle of the religious orders has been sometimes to purify *bhakti* from its pagan features, sometimes to emphasize those features and to organize the *puṣṭimārga*, 'salvation by dalliance.' They may be described either as Vaiṣṇavite or as Śaivite, according to the name that they give to God.

(a) *Vaiṣṇavite*.⁵—(1) Rāmānuja (*q.v.*), and (2) Rāmānanda,⁶ who belonged to the school of Rāmānuja and was possibly the immediate *guru* of (3) Kabir (*q.v.*); (4) Anandatīrtha, who originated the Mādhvas (*q.v.*); (5) Chaitanya (*q.v.*), and (6) Vallabhāchārya (*q.v.*; 16th cent.), with the (5^a) Kārtābhājas and the (6^a) Charaṇ Dāsīs (18th cent.), with the (5^b) Rādhāvallābhīs, the Sakhibhāvas, etc.

L. DE LA VALLÉE POUSSIN.

RELIGIOUS ORDERS (Japanese).—In the native religion of Shintō there have been from early times certain hereditary religious corporations which may be regarded as a kind of religious brotherhoods. The Nakatomi, though hardly a priestly caste, were recognized as vicars of the Mikado, and they also largely composed the officials of the Jingikwan, or department of religion. Another hereditary corporation was the Imbe, descended from the god Futodama. Their duty was to prepare the offerings and to exercise the most careful avoidance of impurity in so doing. A third order was that of the Urabe, or diviners, mentioned already in A.D. 585, and later divided into four branches belonging to as many provinces.³

J. A. MACCULLOCH.

RELIGIOUS ORDERS (Mexican and Peruvian).—1. **Mexican.**—In the higher civilizations of America we find religious orders akin to the religious brotherhoods of higher faiths. In Mexico one of these orders was the Tlamāxcacayotl, an ascetic order attached to the service of the god Quetzalcoatl. The head of it was named after the god, and never issued from his seclusion except to speak to the king. The brothers dressed in black robes, lived on coarse fare, and worked hard. They kept a night watch, singing hymns to Quetzalcoatl. At times they retired to the desert for penance and in order to pray in seclusion. Children were dedicated to this order from birth, wearing a distinctive collar, called *yanuati*, until the age of four, when they might be admitted to the brotherhood.⁴

Another outstanding order was that of Telpochtli, the 'congregation of young men,' youths who lived at home, but met at sunset in a special house to dance and sing praises to the god.⁵ Each temple had also a monastery.

The Tlamāczqui, 'deacons' or ministers, and the Quāquacultiu, 'herb-eaters,' dedicated themselves for life to the service of the gods. Both were ascetic orders performing acts of penance in imitation of their patron, Quetzalcoatl. These orders had monasteries for both sexes, and their head was the high-priest of Quetzalcoatl.⁶ Female children were dedicated to the service of the gods when forty days old, by being presented to the priest in the temple, carrying a miniature broom and censor. At the required age they then

⁵ *Id.* iii. 436.

⁶ *Id.* ii. 208.

entered the monastery, either for a period of years or for life-long continence. Under the care of a matron they were employed in weaving and embroidering temple-tapestries, filling the incense braziers, and preparing bread for the priests.¹

The Totonacs had a strict order devoted to Centeotl. Its members were widowers over sixty, of irreproachable character, who lived a secluded and austere life. They dressed in skins and ate no meat. They were much respected by the people, who consulted them, and regarded their answers as oracles.²

2. Peruvian.—In Peru the most remarkable example of a religious order was that of the 'Virgins of the Sun,' girls who had been dedicated to the service of the god in infancy, and at the fitting age placed under the care of matrons in convents. Here they lived in absolute seclusion, for none but the Inca and his queen could enter. Their employment was to watch over the sacred fire and to weave and embroider temple-hangings as well as the dresses for the Inca and his household. They had to live a life of strictest continence, and any one who failed to do so was buried alive, while her lover was strangled and the village or town where he lived was razed to the ground. Yet from their numbers the most beautiful were selected as 'brides' or concubines of the Inca. The 'houses of the virgins of the sun,' or monasteries, were low ranges of buildings, surrounded by high walls, to exclude them from observation.³

3. Both in Mexico and in Peru there were orders of knights corresponding to the European religious orders of chivalry. The initiation to these orders was protracted and severe, testing both the bravery and the endurance of the candidates.⁴

J. A. MACCULLOCH.

RELIGIOUS ORDERS (Muslim).—In this article attention is confined mainly to the N. African orders. For the religious orders in other countries reference should be made to the series of articles on MUHAMMADANISM. See also artt. DERVISH, SŪFIS.

I. GENERAL CHARACTERISTICS. — **1. Preliminary observations.**—In the East the religious orders of Islām are not numerous, but their members are subject to religious obligations of the most precise kind, to a most rigorous discipline alike in spiritual and in temporal things, and to a strictly defined procedure in political matters, so that they are at once initiates (in the exact sense of the term) and agents of their official head. In N. Africa, and especially in the Maghrib, on the other hand, the orders are found in large numbers, but their organization is lax. Thus, as we proceed from Morocco to the Far East, we notice that the orders gradually decrease in number and importance; while, in passing from East to West, we find an unmistakable ebb in the current of Pan-Islāmism. It would seem, in fact, that the ideal of the religious order is incompatible with that of Pan-Islāmism; each tends to exclude the other. In the East and the Far East the breath of Pan-Islāmism has sometimes excited, or threatened to excite, the Muslim populace to revolt; while in N. Africa, where the Pan-Islāmic idea is but little diffused, it is the orders that have now and again disturbed the public peace or provoked conflicts in the colonial or protected countries.

It should also be noted that in the Maghrib the fact that the Sharifs, i.e. the real or supposed descendants of Muḥammad, are found in great

numbers tends to diminish the importance of the orders. The Sharifs form a highly-esteemed religious class, their descent itself providing a sufficient basis for their authority. As it is not to their interest that religious associations which may divert to their own uses some portion of the religious offerings should be making headway alongside of them, the Sharifian families are essentially hostile to the orders, except those which they have founded and in a sense absorbed, thus appropriating the advantages and emoluments of both the Sharifate and the order.

The orders are very numerous in N. Africa, and the majority of them have a large, some even an enormous, membership. Definite, or even approximate, enumerations of their adherents are altogether out of the question. In countries subject to European Powers, as Algeria, statistics have been compiled and published, but they have only a relative value. In independent Muslim countries, such as Morocco, the numerical estimates are purely fanciful. Questions put to native members of one and the same order or community will elicit the most remarkable diversity of estimates; thus, as regards a particular confraternity, one will speak of hundreds of members, another of thousands, while a personal investigation will perhaps reduce the total to a few dozens or even units. Still, after making all allowances, we are safe to say that the membership of the orders in N. Africa is very large; the present writer is of opinion that in Morocco about three-quarters of the male population belong to these communities.

Another noteworthy fact of a general character is that some orders are specially connected with particular districts or particular tribes. Thus the order of the Nāsirīyah and that of the Mbuoniin recruit their ranks almost exclusively among the inhabitants of the Wādī Drā'a (S. Morocco); while, as an instance of a group wholly confined to a certain ethnological stratum, and affiliated with a religious order, we may refer to the Bukhārā (plur. of Bukhārī), descendants of the famous Black Guard instituted by the sultans of Morocco, whose privileges were ratified by an imperial decree in 1697; this negro aristocracy belongs in the main to the 'Isāwīyah (below, II. 1).

Finally, from the category of religious orders properly so called we exclude certain associations possessing a religious character (all associations in Islām may be said to have a religious character—corporations, trade guilds, shooting clubs, etc.), but having nothing else in common with the orders (of which religion is the sole *raison d'être*, and which have an essentially religious purpose). Thus we do not regard the acrobatic society of Sūs called the Ulād Sidi Ḥammad u Mūsā as a religious order; still less the Ghnāwa, the negro jugglers of the public grounds and market-places. Their open-air performances and their manner of taking the collection do not suggest a religious fraternity.

2. Organization.—At the head of the order (called *iriga*, 'way,' or *taifa*, 'band') stands the *shaiikh*, who exercises absolute authority. Under the *shaiikh* is the *khalīfah*, or *nāib*, who acts as his vicegerent or deputy, and, in more remote parts, represents him and his authority. Next come the *mugaddams*, heads of the various groups into which the order is divided, and engaged in the work of propaganda and management; they enrol new members, and initiate them, collect the offerings, and convey the instructions of the *shaiikh* to members within their jurisdiction; in short, they are pre-eminently the agents of the order. The members, again, are styled *khwān*, *ikhwān*, 'brothers' (Algeria, etc.), *fugarā* (plur. of *faqir*, 'poor') (Morocco), or, more rarely, *darwishes*, which is rather an Oriental term; one also hears

¹ NR II. 204 f.

² Ib. II. 214, iii. 437.

³ W. H. Prescott, *Hist. of the Conquest of Peru*, London, 1890, p. 52 f.

⁴ NR II. 194 f.; Prescott, p. 10.

the word *aṣḥāb*, 'companions.' The several chiefs of an order are kept in touch with one another by foot-messengers (*raqqāb*); the *naqīb* is a kind of master of ceremonies; the *shāuṣh* is charged with temporal affairs.

The members of an order hold regular meetings, called *ḥadrahs*, at stated times, and at these they engage in their devotional practices—prayer, singing, dancing, etc.—and hear the instructions and counsels of their *muqaddams*. The order has also an establishment called the *zāwiyah*. This word is rather vague in its denotation, but in a general way it signifies an abode of *murābit*, or monks, and is thus often rendered 'convent,' 'monastery,' or even (quite wrongly) 'hospital.' The *zāwiyah*, in fact, may be a group of buildings—sometimes a very extensive group—comprising a mosque, a school, apartments for disciples (*ṭalabah*), pilgrims (if it has a saint's tomb), dependents, travellers, the poor, etc., or it may be no more than a place of meeting and instruction.

3. **Initiation and the chains.**—The rite of initiation is called *wird*, lit. 'going down,' and so 'descent to the watering-place,' 'act of drinking,' and is administered to the novice (*murīd*) by the *muqaddam*. The *muqaddam* receives his investiture from the *shaikh*, who delivers to him a diploma styled *ijāzah*. The prerogative of the *shaikh* rests upon tradition and derives its sanction from the 'chains' in which the tradition is embodied. There are two kinds of chains: (1) the chain of initiation (*silṣilat al-wird*), i.e. the series of 'saints' from whom the founder of the order received his instruction, and (2) the chain of benediction (*silṣilat al-baraka*), or series of *shaikhs* who successively held the headship of the order, and so transmitted the divine benediction. The former goes back from the founder to Muhammad through a complete series of real or supposed personages directly linked with one another, and then ascends, with the archangel Gabriel as intermediary, to Allāh himself.

4. **Mysticism in the orders.**¹—Mysticism (*q.v.*), which is one of the fundamental elements of religion, if not indeed its very essence, was, in Islām, the needed, and in a sense the inevitable, recoil from the intellectualism of the Qur'an. Mysticism is highly developed in the orders, and in some of them reaches its zenith. It takes various forms. It appears in the 'saints' chains' mentioned above, connecting the founders of the orders with Muḥammad, and through him with Gabriel and Allāh, thus securing for them their divine authority. The significance attached to these chains rests wholly upon the mystical element. It manifests itself strikingly in the religious language—formulae of initiation (*wird*) and of prayer (*dhikr*, etc.), instructions and counsels of the *shaikhs*, speculations regarding the stages, and descriptions of the psychic states, through which the votary passes in order to attain to ecstasy and union with God—speculations and descriptions that recall in striking fashion the analogous theories and delineations of Christian mysticism and Buddhist asceticism.

5. **Ritual and ceremonial.**²—Mysticism, though in origin and principle a reaction against the systematizing and the abuse of rites and formulae, has given rise in the orders to a ceremonialism of its own. This finds expression, first of all, in litanies—the manifold repetitions (extending to 50, 100, 1000, 10,000, and even 100,000 times) of the same religious affirmations or invocations. In some orders the members devote all their energies to the recitation of the *dhikr*, spending the day and sometimes the whole night in repeating the same forms of prayer. Ritualism and religious

formalism, one would think, could hardly go any farther.

Ritualism appears also in the strange ceremonies and practices characteristic of special orders (see below, II. 1)—forms of ritual which secure for such orders an extraordinary influence over the mass of believers.

6. **Political aspects.**—The orders differ greatly from one another in their political aspects. We shall confine ourselves here to a single country, Morocco, where these communities, in contrast to the important political rôle which they formerly played, have now all but ceased to manifest any activity whatever in this respect—a fact well worthy of note. From the end of the 15th cent. till 1830—the beginning of the French conquest of Algeria—N. Africa was dominated by two rival authorities, viz. the Sharifs of Morocco and the Turks of Algiers. These two powers had sprung into being almost simultaneously as the result of a religious movement against the Christian conquest of Muslim Spain and against the active designs of Portugal and Spain upon Morocco. This twofold activity on the part of Christian Powers aroused the fanaticism of the Berbers and the Arabs, and kindled a revolution which, directed by the orders, resulted in the overthrow of all the Maghribene dynasties, these being replaced by sovereignties established through the influence of the orders and the *murābit*. In Morocco the first of the new dynasty, that of the Sa'adian Sharifs, was Abū 'Abdallāh al-Qāim bi Amrillāh, who, after an understanding with the *murābit* of Sūs, advanced a claim to the sovereignty c. 915 A.H. (A.D. 1509–10). In the eyes of the people this dynasty stood for a government constituted according to the purest traditions of Islām.

To-day, from a variety of causes,¹ these orders, in spite of the anarchy prevailing in Morocco, have all but ceased to exercise any influence whatever in political affairs. In essence the causes are two: (1) the divisions and rivalries existing among the orders, these being particularly rife in Morocco; and (2) the prerogative of the Makhzen, i.e. the Moroccan government, which is now able to have the highest positions in the leading orders conferred upon its foremost representatives—ministers, the imperial family, and even the sultan himself.

7. **Place in social life.**—As in Muslim countries religion is even more decidedly a social concern than it is among Christian peoples, the social rôle of the orders is closely connected with their religious aspect. Mysticism, which is cultivated more or less in all the orders, has a strong fascination for the African peoples, both those which labour under the violent and arbitrary administration of native governments (Morocco) and those which have been forcibly subjected to the rule of infidel Powers, such as France and Britain; and, by enabling its votaries to become absorbed in God, or at least to engage without restriction or hindrance in religious practices to which the authorities take no objection, mysticism offers to the oppressed not only an open gateway towards heaven, but also a means of deliverance from all the trammels and miseries of earth. Now, to this powerful attraction of mysticism in the orders is added the no less inviting aspect of their social function. The religious order is a form of association peculiarly congenial to the Muslim mind. Among the Muslims of Africa in particular the spirit of combination and co-operation is remarkably well developed. Every active form of social life tends to embody itself in associations—trade guilds, shooting clubs (which are very numerous), charitable societies, etc. This intense need of

¹ For full discussion of Muslim mysticism see art. *Sūris*.

² Cf. art. *PRAYER* (Muḥam. madan), *PIR*.

¹ See E. Montet, *Les Confréries religieuses de l'Islam marocain*, Paris, 1902.

acting everywhere and in all things in conjunction and communion with one's fellows is then invested with a sacred character by religion. Thus, on the one hand, the mysticism of the orders acts as a social force in bringing individuals together under the ægis of religion, while, on the other, the orders, as religious associations, form one of the most active and most potent phases of the social entity known as Islām.

II. THE SEVERAL ORDERS.—I. 'Isāwīyyah.—This order, one of the most important in Africa, was founded by Muḥammad b. 'Isā, who was born of a Sharīfian family in Mekinez (Morocco), where he also died (c. 1523–24) and was buried. Having become a member of the Shādhiliyyah Jazūliyyah (below, § 30), he performed the pilgrimage to Mecca, and either in Arabia or in Egypt was in touch with certain dervishes who instructed him in the observances of the Oriental orders Haidiriyyah and Sa'adiyyah. Returning to Morocco with the reputation of being thoroughly proficient in mystical theology and capable of performing the most wonderful miracles, he became so popular that the sultan himself took umbrage and gave orders that 'Isā and his disciples should quit Mekinez.

It was during his exile that, when on one occasion his disciples were in the last straits of hunger and crying out for food, the master bade them eat what was to be found upon the road. There was nothing but stones, snakes, and scorpions; yet such was their confidence in their leader that they devoured these without hesitation, and his miraculous powers warded off any ill effects of the unnatural meal. This incident was probably the origin of those singular practices of a similar kind in which the 'Isāwīyyah still engage. Legend ascribes a great number of miracles to 'Isā, and the report of these led the sultan to recall him to Mekinez.

The chief convent of the order is in Mekinez, and the supreme council of forty members is housed in it. The order has a loose organization, and appears to lack cohesion, though in Morocco, where it is strong in numbers and influence, it is more compact and better organized. As regards doctrine the 'Isāwīyyah are fundamentally at one with the Shādhiliyyah; and indeed their founder used to say that the life he lived was 'that of the Sūfis, that of the Shādhiliyyah.' A Muslim savant has thus summarized their teachings:

'In religious things—continuous progress towards the deity, sobriety, fasting, absorption in God carried to such heights that bodily sufferings and physical mortifications are unable to affect the now impassible senses; in moral things—to fear nothing, to acknowledge no authority but that of God and the Saints, and to submit only to such as permit the principles of the Sacred Book to be carried into practice.'

In doctrine, accordingly, the 'Isāwīyyah are mystics.

The remarkable ritual practices for which the 'Isāwīyyah are noted have often been described. The German traveller, H. von Maltzan,¹ who had an opportunity of witnessing them at Mekinez, has given an account of an 'Isāwīyyah meeting, and this, being little known, we may give here, more especially because the present writer regards it as the most accurate and authentic of its kind, and because, having been present at similar functions in Morocco and Algeria, he is able to confirm the circumstantial character of its details.

The religious ceremony opens with the nasal intoning of the formula expressing the Muslim confession of faith, *Lā ilāha il 'Allāh* ('There is no god but God'), repeated over and over again. The sacred words are chanted in all tones to the point of satiety, yet always in measure. Then all at once, when the chanting and the outcry, accompanied by the regular beating of tomtoms and drums, are at their loudest, one of the brothers of the order rises up and begins the religious dance (*ishdeb*). The *ishdeb* is not in the strict sense a dance, but we

have no better word by which to render the Arabic term. It consists in regular movements of the body—slow to begin with, then more and more rapid, and at length convulsive. At the outset there are rhythmic oscillations of the head and the upper part of the body, and deep and rapid bowing. The dancer having continued to perform these motions for some minutes, a second rises, then a third, until at last six of the 'Isāwīyyah are vying with one another in vehement swaying and bending. This preliminary scene lasts for about half an hour. Each of the actors in the strange performance carries on till he comes to the paroxysm of the *ishdeb*. The movements become more and more rapid, the bending deeper and deeper, the turnings of the head and the body more and more violent, until at length the exhausted 'Isāwīyyah are seized with vertigo, froth gathers on their lips, their eyes stand out of their sockets and roll with the shifting gaze of the insane, and the fanatical dancers fall staggering to the ground; they have attained the state of blissful ecstasy.

The state of physical prostration signifies that the spirit of the founder of the order has gained control over the disciple, so making him capable of swallowing with impunity the most virulent poisons and all things that lacerate or cut. Soon the six 'Isāwīyyah are wallowing upon the ground in wild disorder, giving vent to frightful yells of an altogether unhuman character, and resembling now the snorting of the wild boar, now the roaring of the lion. Some of them, like wild beasts, grind their teeth, from which drips a whitish foam. In their disordered and threatening movements, it would seem as if they were about to rend the onlookers in pieces.

A large dish is then brought forward, and is uncovered by the *muqaddam* who presides over the ceremony. It contains serpents, scorpions, toads, lizards—a jumble of loathsome and venomous creatures. Hardly has the *muqaddam* removed the cover when the six frenzied maniacs fall upon the foul mass of living things with the voracity of famished beasts of prey, and in a moment the whole is torn in pieces and devoured. No trickery here! I see the reptiles torn in pieces by the powerful teeth, while the blood of the serpents and the slimy secretion of the scorpions tinge the saliva at the corners of the mouth. This revolting meal is followed by another, possibly even more dangerous. A dish of broken glass, needles, and cactus leaves is brought forward, and its contents are immediately snapped up and swallowed. I hear the glass cracking between the teeth, and the sap of the cactus leaves trickles over the cheeks; the blood of the injured mouth mingles with the juice of the plant. Finally, a red-hot iron is brought in, and a negro, even more fanatical in appearance than the six Moroccans who have just played their part, takes it in his mouth and licks it on all sides. This ceremonial is followed by the reception of a new brother into the order. The neophyte is brought in by two members, and prostrates himself before the *muqaddam*. The latter exhorts the candidate and then performs the sacred rite which is an essential condition of joining the 'Isāwīyyah. The rite is as follows: the neophyte opens his mouth wide, and the *muqaddam* spits three times into his gullet. The miraculous saliva suffices of itself to endow the neophyte with the power of consuming poisons, glass, or cactus spines, without injury to himself.

These curious and extraordinary performances are to be explained less as the tricks and devices of conjuring than as phenomena of a psychical kind—phenomena of which the ecstatic state has yielded countless examples in all ages, among all peoples, and in all religions. In 1900, at Rabat (Morocco), in the house of M. D—, formerly French consular agent in that town, the present writer saw a most interesting collection of instruments of torture used by the 'Isāwīyyah in their exhibitions—huge and heavy clubs studded with large nails, flagellants' rods formed of short supple sticks strung together in a ring, etc. It would, in fact, be quite wrong to speak of the 'Isāwīyyah as mere jugglers and tricksters. It is certainly the case that, e.g., in Algiers and elsewhere they are ready enough to exhibit their performances for money, and at Kairwan the present writer was offered—on terms—a view of their frenzies; but the aberrations of a group should not throw discredit on the members generally, who (in Morocco, at least, where the present writer has studied their mode of life) are in the main honest and peaceable tradesmen and tillers of the soil.

The 'Isāwīyyah are very numerous in Morocco, being found in all parts of that vast country. They draw their members from all ranks of society. At Marrakesh, in 1900–01, certain exalted personages of the Sharīfian court were mentioned by name to the present writer as belonging to the order; the former sultan, Mulāi Hasan, was a member (cf. also the reference to the Bukhārā above, I. 1). The order is also well represented through-

¹ *Drei Jahre im Nordwesten von Afrika*, Leipzig, 1868, iv. 276 ff.

out Algeria, where, in 1900, they numbered at least 3500. The most important of their *zāwiya*s (of which they have about a dozen in this country) is that of 'Alī b. Muḥammad in the Duar Uzara, where the panther's skin on which the founder of the order is said to have slept is preserved as a relic; a skin with the identical claim is preserved at Mekinez. The 'Isāwīyyah maintain a footing likewise in Tunis, and are found in almost all important localities; they are met with also in Tripoli, at Benghazi (Barka), in Egypt, Syria, and the Hedjaz.

2. *Ḥamadsha*.—The *Ḥamadsha* or *Ḥamadushia*, a Moroccan order, though far behind the 'Isāwīyyah in influence and expansion, are closely akin to them in their peculiar usages, and are noted for their practices of striking the head with an axe and of throwing cannon-balls into the air and catching them on their skulls. They are often met with in company with the 'Isāwīyyah. Their name comes from that of their founder, 'Alī b. Ḥamdush, who lived in the 16th cent., and is interred near Mekinez.

M. Quedenfeldt¹ mentions religious orders or sub-orders related to the *Ḥamadsha*, but we have little information regarding them. The following four, more or less connected with the *Ḥamadsha* in origin or religious practice, have but a small membership:

3. *Daghughiyyīn*.—The patron saint of this group, Ḥamid Daghughī, who was near of kin to the founder of the *Ḥamadsha*, was born near Mekinez (Jebel Zerhun). A characteristic practice of his community is that of throwing cannon-balls and clubs into the air and catching them on their heads.

4. *Šādiqīyyīn*.—Muḥammad al-Šādiq, the patron saint of this order, came from S. Morocco (Tafilalt, Drā'a, Tuāt). The members in their dances butt their heads violently against one another.

5. *Riāhin*.—Their patron saint is al-'Amir Riāhī, who belonged to Mekinez. His followers stick the points of knives or forks into the lower front of the body without drawing blood.

6. *Melāīyyīn*.—Mūlāi Meliāna, the founder, was a native of Mekinez; his votaries are fire-eaters, and swallow live coals.

Of the following three communities, related to the foregoing in origin and tendency, scarcely anything is known to us but their names and the fact that their membership is exceedingly small:

7. *'Alamīn*.—Founded by Qaddur al-'Alamī, of Mekinez.

8. *Sejīnīn*.—Founded by Ḥamid Sejīnī, also of Mekinez.

9. *Qāsmīn*.—Founded by Qāsim Bū-Asria, who belonged to the neighbourhood of Mekinez.

10. *'Ammāriyyah*.—This Algerian order, whose religious practices are like those of the 'Isāwīyyah, is found in Algeria and Tunis, and in those countries has over 6000 members and 26 *zāwiya*s. It was founded by 'Ammār Bū-Senna, born c. 1712 at Smala ben Merād in the Wādī Zenati (Alg.), and was reorganized c. 1815 by al-Ḥajj Embārek al-Maghribī al-Bukhārī († 1897), a Moroccan who belonged to the famous negro aristocracy referred to above (I. 1). It is reported that a dissenting branch exists in the district of Guelma (Alg.) under the leadership of a certain b. Nahal.

11. *Tuhāmiyyīn*, or *Tayyibiyyah*.—This Moroccan order, which in Morocco itself bears the former name and in Algeria the latter, was instituted in 1678-79 by Mūlāi 'Abdallāh b. Ibrāhīm, a member of the Jazūliyyah (below, § 30), and the founder of the *zāwiya* of Wazzān, which subsequently gained such fame. The great political rôle once played by this order was due to the noble lineage of its

founder and of his successors in the hierarchy. For the Sharifs of Wazzān—such is the title given them—belong by blood to the house of Mūlāi Idris, a descendant of Muḥammad, who founded the first Moroccan dynasty in 788, and this lineage ranks in Morocco as, if not more genuine, yet purer and better established, than that of the sultans themselves.

The name *Tayyibiyyah* is derived from that of Mūlāi Ṭayyib, the successor of Mūlāi 'Abdallāh in the government of the order, and a contemporary of Sultan Mūlāi Isma'il (17th century). The order powerfully assisted the latter in his efforts to gain the throne. The name *Tuhāmiyyīn*, again, comes from that of Mūlāi al-Tuhāmi b. Muḥammad († 1715), who won distinction by his reorganization of the order.

From the time when Mūlāi 'Abd al-Salām b. al-Khajj al-'Arbī 'l Wazzānī, a former head of the confraternity († 1894), became a *protégé* of France,¹ it has in a manner been at the service of that country—a circumstance to which, it seems, it owes its subsequent decadence. Its influence in Morocco is nowadays quite inconsiderable, as was evident in 1904, when M. Perdicaris was a captive in the hands of Raisuli, and the intervention of the Sharifs of Wazzān utterly failed to secure his liberation. 'Abd al-Salām had strong leanings towards European culture; he renounced his native wives in order to marry an Englishwoman; he liked to wear the uniform of a French general of artillery. His successor in command was his eldest son, Mūlāi al-'Arbī.

The *Tuhāmiyyīn* are found principally at Wazzān, where their parent institution is, and in N. Morocco; in the rest of that country the present writer has scarcely heard a word about them. In Algeria the *Tayyibiyyah* are represented mainly in Ōran; in the whole country their membership has been computed at over 22,000, while they have only eight *zāwiya*s—a fact that speaks well of their organization and cohesion. The order has a numerous following also in Tuāt.

12. *Tijāniyyah*.—This Algerian order was founded by Ahmad b. Muḥammad b. al-Mukhtār al-Tijānī, who was born at 'Ain Mādhi, near Laghuat (Alg.), in 1737 and died at Fez in 1815. He was a descendant of a devout Moroccan Sharif who built the *zāwiya* of 'Ain Mādhi. The order has spread far and wide; in Africa the majority of its members are found in Algeria, Morocco, Tunis, Tripoli, the Sūdān, the Congo, and in Adamawa, Adrār, and Tuāt, with some even in Egypt, and it has *zāwiya*s also in Constantinople, Beirut, Medina, Mecca, and Yambo. In Algeria, where its membership was found recently to be over 25,000, with 32 *zāwiya*s, it has been split since 1875 into two branches—that of 'Ain Mādhi and that of Temasin (Wādī Ghir). The direct descendants of the founder reside in the *zāwiya* of 'Ain Mādhi. The two rival divisions stand quite apart from the rest of the Algerian and foreign orders, and are crippled by their dissensions and (in the Temasin branch) by the personal conduct of some of their chiefs. The Algerian *Tijāniyyah*, however, have all along supported the French ascendancy, and have rendered great service to the Government, while, as an aristocratic society of liberal outlook, they have shown themselves markedly accessible to European influence.

The case is very different in Morocco, where the order, while certainly aristocratic, has assumed a narrow national character. Here, indeed, it is to be regarded as standing quite by itself. Its central convent is in Fez. *Tijāniyyah* resident in Tafilalt, Gūrara, Tuāt, the French Western Sūdān, and Senegal are under its control, and apparently

¹ ZF xviii. [1886].

¹ On the law of protection of. the Treaty of Madrid, art. 16.

acknowledge its spiritual authority. In Morocco it recruits its ranks from the Arab (i.e. the Andalusian-Moorish) element, which forms the best educated and most intelligent, though the most fanatical, stratum of the population; and it has adherents also in the higher commercial class and even in court circles. It manifests considerably more internal cohesion than the other Moroccan orders, and, in virtue of its aristocratic character and its wealth, exercises a considerable social influence—an influence which, as the present writer can testify, is hostile to European civilization.

The Tijāniyyah of Adrār seem to have made notable progress, and their *zāwiyah* at Shingeti is said to have established branches at Walata and Kaarta, as also farther West, among the Moors of the right bank of the Senegal and in Toro. The founder of the order was a man of liberal mind. While taking his stand upon the rule of the Khal-wātiyyah (below, § 34)—a ceremonial and ascetic mysticism—he drew his inspiration chiefly from the Shādhiliyyah (below, § 21). His teachings and principles are set forth in a work which he composed at Fez between 1798 and 1800, and which is commonly called *Kunash*, a corruption of its real title *Min kulli nashin*, 'Gathered from Everything,' i.e. a chrestomathy. The prevailing spirit of the book is a liberalism seldom met with in other orders; it counsels no macerations, no harsh penances, no prolonged retreats, and favours a simple ritual; and it presents generally a synthesis of temporal and spiritual interests that is conducive to broad-mindedness. We quote two characteristic sayings from the work.

'The law follows the law: all that comes from God is to be held in respect,' i.e. the law before all things, and tolerance. 'All that exists is loved by God, and in that love the unbeliever (*kāfir*) has a place as well as the believer.'

13. Derqāwā.—This is a Moroccan order of great importance. It was founded by Mūlāi l-'Arbī al-Derqāwī, who died in 1823 in his own *zāwiyah* of Bū Bariḥ (territory of the Banū Zarwāl, north of Fez, in the Jibāl). The chief convent of the order is situated there. The Derqāwā, who adhere to the traditions of the Shādhiliyyah, are found in great numbers throughout Morocco. The Sekhaliyyin, a Sharifian gild at Fez, are connected with the order, which is largely represented also in Algeria (about 9500 members, with 10 *zāwiyahs*, nearly all in Oran), in Tuāt, in Gūrarā, and in the Sahāra as far south as Timbuctu, while adherents are met with in Tunis, Tripoli (cf. Madaniyyah, below, § 14), Egypt, and Arabia. The Derqāwā are a mendicant order, and are noted for their ascetic practices and for the absolute submission which by oath they yield to their *shaiḫh*. Of all the Muslim fraternities the Derqāwā perhaps come nearest to the monastic orders of Roman Catholicism. The founder's final counsels to his disciples are as follows:

'The duties of my brothers shall consist in overcoming their passions, and, in performing these duties, they shall seek to imitate—

Our Lord Mūsa (Moses), in always travelling with a staff;
Our Lord Abū Bakr, and our Lord 'Umar b. al-Khaṭṭāb, in wearing patched clothes;
J'afar b. 'Abī Ṭalīb, in celebrating God's praises by dances (*raqs*);

Bū Harīro (Abū Huraira), the Prophet's secretary, in wearing a rosary round the neck;

Our Lord 'Isā (Jesus), in living in solitude and in the desert. They shall travel with bare feet, endure hunger, and associate only with holy men. They shall avoid the society of men occupying places of power. They shall keep themselves from falsehood. They shall sleep little, spend their nights in prayer, and give alms. They shall tell their *shaiḫh* of their more serious as well as of their more trivial thoughts, of their important actions as well as of the most insignificant. To their *shaiḫh* they shall tender unresisting submission, and shall at all times be in his hands as the corpse is in the hands of those who wash the dead.¹

This final exhortation has been aptly compared with Loyola's 'perinde ac cadaver.' In Algeria and Morocco the Derqāwā have on the whole remained loyal to the spirit of their founder, renouncing all earthly ambition, and maintaining an absolute detachment from the goods of this world. Still, this attitude has at times shown itself capable of developing into fanaticism, and in both Morocco and Algeria they have now and again taken an active part in revolts against governmental authority.

The outward appearance of the Derqāwā is most characteristic: a stick or rod in the hand, chaplets of huge beads round the neck, the body covered with rags, and frequently—as a mark of pre-eminent devotion—the green turban upon the head. The tattered and offensively foul garb which they affect has in Morocco earned them the nickname of Derbaliyyah ('wearers of rags'), and explains the sarcastic saying of the *ṭalabāh* (students) of the Jibāl—'The dog and the Derqāwī are one and the same.' In Morocco the order seems to have lost ground because of its divisions; it has three distinct branches there.

Its adherents are regarded as extreme devotees of monotheism. Their founder is said to have been so convinced of the divine unity and of the unconditional duty of giving glory to God alone that he commanded his followers to repeat aloud only the first part of the creed ('No god but Allāh') and to rest satisfied with a merely mental affirmation of the second ('Muḥammad is His Prophet').

14. Madaniyyah.—This is a Tripolitan order which, though an off-shoot from the Derqāwā, has come to exhibit a spirit diametrically opposed to the teachings of al-'Arbī. It was instituted by a Derqāwī named Muḥammad b. Hamzah Zāfir al-Madani, who began to preach c. 1820; about that time, too, he founded the *zāwiyah* of Mezrata, which is still the central convent of the new order. The development of Sanūsism (cf. below, § 38) about the beginning of the latter half of the 19th cent. arrested that of the Madaniyyah, which would have remained stationary but for the fact that in 1875 the turn of events brought the head of the order, Muḥammad Zāfir, son and successor of b. Hamzah, into touch with 'Abd al-Ḥamid, the future sultan of Turkey. From that point the order became one of the most vigorous in the East, and one of the most hostile to European influence. With the support of Turkey, it has intermeddled on a vast scale with questions of Muslim politics. Its sphere of activity has gravitated towards the East, and it is now represented mainly in Turkey (Constantinople), Syria, and the Hedjāz, while, as regards Africa, its members are found in Egypt, Tripoli, and Algeria (where it has 1700 adherents and two *zāwiyahs*).

The doctrine of the order, as formulated by Muḥammad Zāfir, classes its members with the ecstatic mystics; they manifest an unusual intensity of religious exaltation. In the statement of their regulations¹ drawn up by Muḥammad Zāfir for his disciples he asserts that war upon the infidel is a no less imperative duty than the ordinary practice of religion.

15. Qādiriyyah.—This order is the most widely spread and most popular in all Islām; its domain extends from Morocco to Malaysia; or, to speak more precisely, the order has found its way into every region into which Islām itself has penetrated. It was founded by 'Abd al-Qādir al-Jilāni ([q.v.] † 1166), born in Persia, and buried at Baghdad, where also is situated the central convent of the order. The Qādiriyyah are noted alike for their philanthropic principles and their mystical exalta-

¹ *Nūr al-Saṭā* ('The Sparkling Light'), Constantinople, 1886.

¹ From a text published by L. Rinn, *Marabouts et Khouan*.

tion. 'Abd al-Qādir practised a boundless charity; he accorded a peculiar veneration to Sidna 'Isā ('our Lord Jesus'), and admired his measureless benevolence, though at the same time he preached and practised a doctrine of mystical ecstasy and the extinction of the human personality by absorption in God.

In Africa, except as regards Egypt, the order shows little homogeneity. In general, its members have remained faithful to the benevolent and tolerant spirit of the founder, but fanatics and irreconcilable enemies of European civilization are found among them. As regards the Egyptian Sūdān, the Mahdi of Khartum and his troops belonged to the Qādiriyyah, while in the immense region of the Western Sūdān the supreme head of the order there, the famous Shaikh Ma-al-'Ainīn-al-Shingeti—a spiritual potentate of most extensive sway—who sometimes resides at Shingeti in Adrār, and sometimes to the south of Sagiat al-Hamrā, and has at present great influence in Morocco, is a determined antagonist of French activity in these various countries. The Qādiriyyah are specially numerous in Tunis and Morocco; in the whole of Africa, according to a recent return, they numbered 24,000 (of whom 2600 were women), with 33 *zāwiyahs*.

16. Bū 'Aliyyah.—This Tunisian order, an offshoot from the Qādiriyyah, and found only in Tunis and the province of Constantine (Alg.), was instituted by Bū 'Alī, whose tomb, as also the chief monastery of the order, is at Nefta (Tunis). The members engage in practices similar to those of the 'Isāwiyyah.

17. Bakkāiyyah.—This order, belonging to the Western Sūdān, and related to the Qādiriyyah, was founded by 'Umar b. Sidi Aḥmad al-Bakkāi, c. 1552-53. Its central monastery is in Timbuctu, and it is represented also in Tuāt, in Adrār, and among the Tuāregs.

18. 'Arūsiyyah, or Salāmiyyah.—This is a Tunisian order, founded by Abū 'l-'Abbās Aḥmad b. al-'Arūs, who died in Tunis in 1460. The name Salāmiyyah comes from the celebrated 'Abd al-Salām al-Asmar, who reorganized the order c. 1796, and gave it the thaumaturgic character that it bears to-day. It is connected with the Qādiriyyah, and its typical features are a highly emotional mysticism and performances similar to those of the 'Isāwiyyah—frantic dancing, walking through flames, swallowing fire, etc. The order is well represented in Tunis, and especially in Tripoli, while in Algeria it can hardly claim 100 members (all in the extreme east of Constantine); a few are found also in Mecca and Medina.

19. Sa'adiyyah.—This is an Asiatic order, founded in the 13th cent. by Sa'ad al-Dīn al-Jabānī of Damascus, and now represented both in Asia and in Africa. Its Egyptian branch was at the zenith of its prestige in the 17th cent., and at the present day that group, together with a body of adherents in the Sūdān, forms the leading ramification of the order. Another section is found in Syria, while members are also met with in the Hedjāz. The Sa'adiyyah are an ecstatic order; they are allied with the Rifā'iyyah, which have a regular, as well as a dissident, branch in Egypt, and which sprang from the Qādiriyyah in the 12th century.

20. Badawiyyah Ahmadiyyah.—This Egyptian order is connected both with the Qādiriyyah and with the Rifā'iyyah, and was founded by Aḥmad al-Badawī, who died in 1276 at Tantaḥ in Egypt. He was a scion of a Sharīfian family belonging originally to the Hedjāz, but afterwards resident at Fez. Aḥmad had gone from Morocco to Egypt, and settled at Tantaḥ, where the chief convent of the order still is. The order is now split into

three independent branches, found chiefly in Egypt and the Sūdān, while it has also members in the Hedjāz and in Syria. Legend ascribes to its founder the gift of working miracles, and in particular the power of making barren women bear children—hence the licentious orgies which take place round the saint's tomb on his festival day.

21. Shādhiliyyah.—This African order—or theological school, rather—was founded by Abū 'l-Ḥasan b. 'Abd al-Jabbār al-Shādhilī, who was born, as some report, in Morocco, or, according to others, in Tunis, in 1196-97. He was a pupil of the renowned 'Abd al-Salām b. Mashīsh († 1227-28), a Moroccan disciple of Sha'ib Abū Madiān al-Andalusī, a native of Seville, who died at Tlemsen in 1197-98. This Abū Madiān had travelled in the East, where he had become one of the personal followers of the famous 'Abd al-Qādir al-Jilānī (cf. above, § 15). Al-Shādhilī settled at length in Egypt. At the outset he engaged in ascetic practices, but afterwards devoted himself entirely to teaching. He gained an extraordinary reputation and was highly venerated. The university of al-Azhar drew its inspiration exclusively from his teaching, which it disseminated throughout the Muslim world.

Al-Shādhilī imposed no distinctive rule or ritual upon his disciples, so that, having had no other bond of union than the dominating influence of his teaching, they found themselves at his death (1258) without a leader. This resulted in the formation of various groups among his disciples, and of a considerable number of orders animated by his spirit. Of a proper organization there is but little in the order, which is above all a mystical fellowship, its main characteristics being a pure spiritualism, an ideal elevation of thought and feeling, absolute consecration to God, the voluntary merging of one's being in God, moral purification, prayer at all times, in all places, and under all conditions, and an ecstatic mysticism springing out of fervid love to God. This high-wrought mysticism, impelling the disciple to lose himself in the divine, was regarded by al-Shādhilī as inconsistent with all fanaticism and intolerance, and it certainly bears the stamp of a genuine spiritual catholicity.

At the present day the Shādhiliyyah form not so much an organized order as a school of doctrine maintained by numerous orders and taught in numerous *zāwiyahs*. The most genuine representatives of al-Shādhilī's teaching are now those religious associations which, while untrammelled by any proper constitution, make a watchword of the master's name, and it is these—independent *zāwiyahs*—which most faithfully reflect the primitive community. We find them scattered throughout the whole of N. Africa, more particularly in Algeria (where there are over 14,000 adherents), Tunis, and Tripoli; also in the Hedjāz, Syria, and Turkey—countries in which they play an important rôle.

The following twelve orders (22-33) are of Shādhiliyyan origin.

22. Habibiyyah.—This Moroccan order, mentioned by L. Rinn, was founded by Aḥmad b. al-Ḥabīb al-Lamīt († 1752-53), a native of Tafilaḥ. We have little definite information regarding it. Its membership, confined to Tafilaḥ (in which stands the chief monastery) and the province of Oran (Alg.), is very small, and the order is said to be animated by a tolerant and unworldly spirit.

23. Wafaiyyah (Ufaiyyah).—The Wafaiyyah, an Egyptian order, was founded in the 14th cent. by the Wafa, a Sharīfian family belonging to Egypt; its first chief was Muḥammad Wafa, and it has survived to the present day under the control of the same family.

24. Nāṣiriyyah.—This Moroccan order, now of diminished importance, was founded in the 17th cent. by Muḥammad b. Nāṣir al-Draʿī († 1669), who claimed Aḥmad b. Yūsuf († 1524–25) as his spiritual master. The chief convent of the order and the founder's tomb are at Tamagrut (Wādī Draʿa), the headquarters of the brotherhood. The members are found mainly in the south of Morocco; outside that country a very few are met with in Algeria and Tunis.

25. Shaikhiyyah.—The Shaikhiyyah, or Ulād Sīdī al-Shaikh, belonging to the Sahāra, and holding to the doctrinal standpoint of the Shādhiliyyah, are not so much a religious order as an aristocratic caste of a political and religious character. Their founder was 'Abd al-Qādir b. Muḥammad, afterwards styled Sīdī Shaikh († 1615), a great feudal lord who had once been a *muqaddam* among the Shādhiliyyah. He erected at al-Abiod the first of the *qṣūr* (citadels) now found in the Sahāra, and exercised a strong moral and religious authority in that region.

The Shaikhiyyah are located principally in the south of Oran, in Tuāt, Tidikalt, and Gūrara. In Morocco, where a few are met with at Tafilaṭ and round the oasis of Figig, their influence is inconsiderable; they are here regarded as hostile to Europeans. In the main, feudal, family, and marabout influences prevail so largely among them that the bond of connexion between them and the Shādhiliyyah is now very loose.

26. Karzāziyyah.—This Saharan order, found in S. Morocco and S. Oran, was instituted by Sharīf Aḥmad b. Nusa († 1608), who belonged to Karzāz, an oasis to the south-east of the Figig, and taught the doctrines of the Shādhiliyyah. The members are noted for works of benevolence, and the *zāwiyyah* of the founder at Karzāz is still a refuge for the poor, and, in times of adversity or oppression, for residents of the neighbouring *qṣūr*.

27. Ziyāniyyah.—This also is a Saharan order noted for philanthropy; it was founded by Mūlai b. Bū Ziyān († 1733), who belonged to a Sharīfian family resident in the Wādī Draʿa. The saint's tomb is at Kenatsa, between Tafilaṭ and the oasis of Figig, and there too is situated the central convent of the order. The Ziyāniyyah are found mainly in S. Morocco, Tafilaṭ, Figig, Tuāt, Gūrara, and the province of Oran; in Algeria, according to a recent computation, they numbered over 3000. They adhere to the doctrines of the Shādhiliyyah. They act as conductors of caravans, and in the Sahāra protect them against robbers and brigands. The order has always shown itself well-disposed towards French people and the colonial administration.

28. Hansaliyyah.—This Moroccan order was founded by b. Yūsuf al-Hansali († 1702), who, as his name indicates, belonged to the Hansala, a section of the Bani Mṭir, a tribe living in a district to the south of Fez. Formerly the order held a position of great influence in Morocco, but it is now almost extinct there; in Algeria it numbers more than 4000 members, belonging to the province of Constantine (the *zāwiyyah* of Shettaba); and it is represented also in Tunis. Its adherents are noted for works of charity.

29. Zarrūqiyyah.—The Zarrūqiyyah, a Moroccan order, was founded by Abū'l-'Abbās Aḥmad al-Zarrūqī († 1494), who belonged to the Beranes, a tribe settled near Fez. In Morocco the order is dying out, but in Algeria it has about 2700 members, with a *zāwiyyah* at Berruaghia.

30. Jazūliyyah.—This Moroccan order has almost ceased to exist as an organized community in Morocco, although the doctrines of its founder are still taught at Fez. Its founder was Abū 'Abd-

allāh Muḥammad al-Jazūlī († c. 1465), a native of Jazūla in Sūs, and the author of a famous work entitled *Dala'il al-Hairat* ('The Best Arguments'), on which are based the teachings of the Jazūliyyah.

31. Yūsufiyyah.—This is an Algerian order, founded by Aḥmad b. Yūsuf, a native of Morocco or—more probably, as some hold—of Oran. This celebrated visionary (*majzūb*), to whom are ascribed numerous proverbs and epigrams, died in 1524–25 and was buried in Miliana (Algiers). There are few traces of the order in Morocco, but in Algeria there is at Tiūt, in the extreme south of Oran, a *zāwiyyah* founded by Muḥammad b. Milūd († 1877), a descendant of b. Yūsuf, which can still claim some 1500 members. The order has little influence in Algeria, but has all along maintained excellent relations with the French authorities.

32. Ghāziyyah.—The Ghāziyyah, a Moroccan order, founded c. 1526 by Abū'l-Ḥasan al-Qāsim al-Ghāzī, is of feeble growth, has a very limited expansion in the Wādī Draʿa, and possesses a *zāwiyyah* at Fez.

33. Shabbiyyah.—The Shabbiyyah is a Tunisian order, founded in the 17th cent. by Aḥmad b. Makhluf, a descendant of Muḥammad b. Nāṣir al-Draʿī, the founder of the Nāṣiriyyah (above, § 24). This b. Makhluf had been sent to Tunis to direct the operations of the latter order, and had settled at Shabba, between Sfax and Sūs; hence the name borne by his followers. The actual organizer of the order was Muḥammad b. 'Abd al-Hatīf. It is found in Tunis, and also in Algiers (Aurès), where it has about 1500 members.

34. Khalwātiyyah.—This Asiatic group, the name of which is ultimately derived from the term *khalwa*, 'retreat,' 'solitude,' is a school rather than an order, and goes back to the philosophical school founded by the Persian thinker Abū'l-Qāsim 'al-Junaidī († 910–11), but its actual (or at least its eponymous) founder was 'Umar al-Khalwātī († 1397–98), also a Persian. At the outset the order had no graded organization, and in Asia, where its expansion was on a great scale, it soon broke up into various groups—independent and local branches. In Africa, about the end of the 17th cent., they formed for a time a religious association in the true sense; but there too, though the order made less rapid progress, it soon fell apart into divergent and independent branches or groups. The teaching of the Khalwātiyyah began to take root in Egypt as early as the 15th century. At the end of the 17th a Syrian Khalwātī called Mustafa al-Baqri, a professor in the university of al-Azhar in Cairo, endeavoured to incorporate the members of the order in Egypt, and the united body, having grown considerably in numbers, assumed the name Baqriyyah, to distinguish them from other Khalwātiyyah. This new organization, however, did not last long, for at the death of al-Baqri (1709) three fresh groups detached themselves from it, viz. the Khafnawiyyah, the Sharqawiyyah, and the Sammaniyyah. Further disruptions took place, giving rise to other independent branches and *zāwiyyahs*, so that, as indicated above, the Khalwātiyyah do not so much form an order as represent a type of doctrine. They nevertheless exercise great influence in social life. They are ascetics, and mystics of a most fervid stamp; they have recourse to the retreat and the austerities which it involves; they engage in iterative prayers—repetitions of formulae, names of God, etc.—sometimes continued for five or six consecutive hours. This intense religious fervour has often excited the members to fanatical outbreaks and, as in Egypt, the Egyptian Sūdān, etc.,

brought them into conflict with the authorities, both Muslim and Christian. Like some other orders (cf. §§ 15, 35, and 39), they admit women as members.

35. Rahmāniyyah.—The Rahmāniyyah is an Algerian order, found chiefly in Constantine, and elsewhere only in Tunis. It sprang from the Khalwātiyyah, and resembles them in doctrine, practice, and lack of cohesion. It was instituted by Muḥammad b. 'Abdarrahmān Bū Qubrain († 1793-94), who belonged to the Kabyle tribe of the Ait Smail; his surname, Bū Qubrain ('with the two tombs'), goes back to the legend according to which his body was divided into two parts, buried respectively in Kabylia and at Hamma near Algiers. It is a most popular and influential order in Algeria, where it played the leading part in the great insurrection of 1871; its membership here is 156,000 (including 13,000 women), with 177 *zāwiya*s, and comprises several independent groups. Like all other offshoots of the Khalwātiyyah, it is marked by a want of cohesion, of discipline, and of centralized control.

36. Emirghaniyyah.—This is an Oriental order, known also as the Mirghaniyyah or Marghanīa, founded by Muḥammad 'Uthmān al-Emir Ghani, who was born in 1793 at Salamat near Taif in the Hedjaz, and died at Taif in 1853. He joined the then brilliant school of Aḥmad b. Idris, a native of Fez, who taught at Mecca from 1797 till 1833. At the death of the latter, in 1837, Emir Ghani's standing among the Idrisiyyah enabled him to compete successfully with Shaikh Sanūsī for the leadership of that body. Presently, however, he began to modify the rule of Aḥmad, and then founded the order that bears his own name. When he died, dissensions and rivalries divided his followers into isolated sections and local branches. The order has a considerable expansion in Arabia, throughout the basin of the Red Sea, and in the Egyptian Sūdān.

By the founder himself the order was named al-Khatemia, 'the sealing'; hence the title Serr al-Khāttem, 'the secret of the seal,' given to his son Muḥammad, who became the head of the confraternity. It is a mystical and ecstatic order, and from the first—even in its very origin—it assumed a political attitude hostile to the Sanūsīyyah (§ 38). It was closely involved in the Mahdist movement. In the Sūdān it has shown itself distinctly favourable to the Anglo-Egyptian government. The French traveller Bonnel de Mézières, when on a mission to the Sūdān in 1905-06, spoke of the order as entirely in the hands of the English, and this connexion has lowered its prestige both in the Sūdān and in the Hedjaz. A religious order that allies itself too openly with Europeans inevitably diminishes its influence among Muslims (cf. above, §§ 11 and 12).

37. Naqshbandiyyah.—An Oriental order, one of the most important in Islām, the Naqshbandiyyah has the largest membership of any in Central Asia. Its characteristics are contemplative mysticism and ecstatic ritualism; and, by reason of the varied and flexible forms of the mysticism which it inculcates, the purity of life for which its votaries are noted, and the supernatural powers ascribed to them, its influence is indeed great. It was founded at Bukhārā by al-Khwājah Muḥammad Bahā al-Dīn¹ († 1390), an eclectic reformer (combining Sunnite orthodoxy, Shī'ism, and Ismā'īlian teachings). Etymologically the name Naqshband refers to the mystical delineations of the celestial life taken by Bahā al-Dīn from the philosophical theories of the Ismā'īliyyah Batheniyyah ('interior Ismā'īlians,' i.e. those practising internal meditation both ecstatic and contemplative). In Africa

the order has only one *zāwiya*, which draws its members exclusively from the Turkish element of the population.

38. Sanūsīyyah.—The Sanūsīyyah, an Algerian order, was founded in 1835 by Shaikh Si Muḥammad b. Si 'Alī l-Sanūsī († 1859), who belonged to the vicinity of Mostaganem, and claimed to be the Mahdī. The chief monastery was for a long time at Jarabūb (Jaghbūb) in Tripoli, but has been removed to the oasis of Kufra in the Libyan Desert. The order has a great influence in Tripoli and in part of the Eastern Sūdān; it has a firm footing also in Egypt and especially in Arabia; but its following is very small in Algeria (under 1000 members), Morocco, and the districts to the south of these countries. The founder claimed to be a reformer of Islām, one who would restore the primitive purity of morals according to the Qur'an; he also maintained that he formed the synthesis of all the other orders, especially in their mystical aspects. The order of the Sanūsīyyah has nothing like the vast influence and the fanatically anti-Christian and anti-European character that have been ascribed to it. Its attitude to Europeans is friendly or hostile according to locality and circumstances; but it should be noted that al-Mahdī, the eldest son of Sanūsī, and his successor as head of the order, took up a position of direct antagonism as the Mahdī of Khartum.

39. Heddāwa.—This Moroccan order was first made known to Europeans by Auguste Moulières.¹ Its founder was Sidi Heddi, who lived in the 13th cent., and was a contemporary and an admirer of Mūlāi 'Abd al-Salam b. Meshish, the great saint of the Jibāl; his tomb is at Tagzirth, among the Beni 'Arūs in the Jibāl, and there too stands the chief monastery of the order. The district in which he settled and had a *zāwiya* built is now called Uḡa ('plain') Sidi Heddi, and the fish of the stream that traverses the district have since ranked as sacred. The Heddāwa (pl. of Heddāwī) are a mendicant order of the lowest type, and have a most repulsive appearance. They are clothed in rags and go bare-headed, with the staff in their hand and the chaplet round their neck; they are a byword for filthiness, and are said to live in promiscuity; they admit women into their membership. They like to have animals, especially cats, about them; and they are great smokers of *kif* (shredded hemp). Though few in number, they are spread over an extensive district. All our information regarding them tends to show that they form an antinomian order.

40. Mbuoniin.—The Mbuoniin, a little known Moroccan order, first noted by Jules Erckmann,² was founded by a devout man named 'Abdallah 'Alī, also called Mbuono (Bū Nūh), a native of the Wādī Drā'a, in which (at Tamagrut) his tomb is also situated. The central convent of the order is in Tafilalet, and there was recently at Marrakesh a community of Mbuoniin numbering about 200. The members—they seem to be relatively few—wear as a badge a white cap of knitted wool.

LITERATURE.—Of works dealing with the subject as a whole there are few, but monographs devoted to particular orders are constantly appearing. Of the former class we cite here only those that may claim to be of scientific or documentary value: L. Rinn, *Marabouts et Khouan: Étude sur l'Islam en Algérie* (with a chart indicating the boundaries, the locality, and the importance of the orders), Algiers, 1886; O. Depont and X. Coppolani, *Les Confréries religieuses musulmanes* (with a map showing the geographical sphere of the orders—Algeria, Africa, Asia, and European Turkey), do. 1897; A. Le Chatelier, *L'Islam dans l'Afrique occidentale*, Paris, 1899; E. Doutté, *L'Islam algérien en l'an 1900*, Algiers, 1900; valuable information is supplied by A. Le Chatelier, *Les Confréries musulmanes du Hedjaz*, Paris, 1887, which gives a detailed bibliography of the subject down to 1887.

REMORSE.—In its most general sense remorse denotes poignant sorrow for the miserable condition of oneself or of another, whether that involves personal responsibility or is merely due to circumstances. Writers of the 16th and 17th centuries often use it for 'pity' or 'compassion,' and this meaning survives in the negative form 'remorseless.' But in modern usage remorse means exclusively the intense feeling of grief or compunction for one's own acts and their consequences, as they affect oneself and others. It therefore implies responsibility and guilt and culminates in despair over acts that are irretrievable and a condition that is irremediable.

1. As a psychological phenomenon.—Remorse is an emotion. Although predominantly a very acute feeling of pain, it is also a complex mental state that can emerge only at the conceptual and self-conscious stage of mental development.

William James propounded a theory that, if we abstract from any emotion 'all feelings of its bodily symptoms,' nothing would be left, which is an exaggeration of the fact that bodily states are a necessary element in all emotion, though not the whole of any emotion. Moreover, they do not enter so largely into remorse as into emotions like anger and fear, which James analyzed, and that because it is a calm and deep, but none the less intense, rather than a violent, emotion.

It is described as having 'a certain positive colouring, in which organic sensations, notably in the throat and digestive tracts, are prominent. There is also a certain setting of the muscles of throat and brow. The "gnawing" of remorse, by which it occupies consciousness and torments, seems to arise from these sensations.'¹

As a persistent mood it would undoubtedly change the entire tone of the visceral organs as well as the facial expression.

Remorse is to be distinguished from a general emotional mood, because it has a unique character of its own and involves some idea of the self and a judgment upon the self. It is a feeling of strife within the self, or of an irreparable breach between the ideal self that might have been and the actual self whose act has produced the conflict. But the feeling arises partly from a judgment of the difference between the two and of the inferiority of the actual self, but still more from a repression and a paralysis of the active side of consciousness. G. F. Stout traces the feeling quality in all emotions to 'occurrences which powerfully thwart or further pre-existing conative tendencies.'² Remorse is an apt illustration of this principle, because, while it is 'perhaps the very worst quality that can belong to suffering,'³ it is the emotion that exercises the most deadening influence upon life.

'In it there is a collision between what we have actually done and what we now desire that we should have done. Thus in reflection on our past self, the free course of our present ideal activity is crushed and repressed by the memory of our actual behaviour.'⁴

But, as the developed self is conditioned by other selves, so are its emotions. There may be remorse for wrong done which apparently affects only ourselves, but it is more general and intense in respect of wrongs done to others, because the free intercourse of ourselves with other selves, whether God or men, is thereby restricted or stopped. Yet it always includes the utter misery and hopelessness of our own condition. Despair is always an element in it.

2. As an ethical quality.—It is obvious therefore that remorse is a moral feeling. It involves free agency and responsibility. One feels grief for misfortunes, regret for mistakes, remorse for sins, for acts which one has freely caused and ought to

have prevented. It is a painful conflict between the ideal and the actual self, and it has been held to be the most original element of our moral nature. It is the most elementary form of that which differentiates between moral and non-moral nature. It is the root and beginning of the moral faculty.

Darwin, in his account of the rise of morality, almost identifies remorse with conscience.

'When past and weaker impressions are judged by the ever-enduring social instincts . . . [man] will then feel remorse, repentance, regret or shame. . . . He will consequently resolve more or less firmly to act differently for the future; and this is conscience.'¹

This is not a very accurate use of terms, and Darwin has omitted the peculiar, unanalyzable, moral quality which pertains both to remorse and to conscience. But our view of the ultimate nature and source of remorse, whether it be the reproach of neglected self-interest, or of injured society, or of some transcendental authority insulted, will depend upon our theory of the moral criterion, whether that be self-interest, or social welfare, or some transcendental ideal.

Yet it is not strictly accurate to identify remorse with conscience. It is rather the result of conscience judging and condemning. While it is inseparable from moral judgment, it is peculiarly the feeling element that accompanies the reproach of conscience. On the other hand, it cannot be reckoned among the virtues or the vices, for it is too intimately bound up with the essence of moral nature, and with that which constitutes and defines right and wrong, virtue and vice. Its value therefore as a factor in moral life and in relation to the absolute moral ideal depends entirely upon the degree of enlightenment in conscience. One man may feel remorse for that which would afford the happiness of an approving conscience to another.

Darwin quotes the case of a savage who felt prolonged remorse until he went 'to a distant tribe to spear a woman to satisfy his sense of duty to his wife' who had died of disease.²

3. Theological significance.—Remorse assumes its acutest form and acquires religious significance when it is a sense of having violated the laws of God or of having outraged His love, thus in either case incurring His wrath. Its specific nature is then relative to the idea of God involved. Remorse was a frequent theme of the Greek drama, and the element of despair is here especially prominent because the Greek mind was apt to identify the divine in the last resort with inexorable fate. In the OT Cain and Saul are two notable examples of unavailing sorrow for sin. In each case there is a sense of guilt, a burden of penalty, a consciousness of complete and final alienation from God, and a paralysis of the spiritual life (Gn 4⁸⁻¹⁰, 1 S 28¹⁵⁻²⁵). A NT writer also represents Esau as 'rejected (for he found no place of repentance) though he sought it diligently with tears' (He 12¹⁷); and the first evangelist represents Judas Iscariot as having 'repented himself,' and, when he found repentance useless, 'he went away and hanged himself' (Mt 27^{3, 5}).

But in the OT and NT sorrow for sin more usually appears as repentance (*g.v.*), because God is merciful and forgiving, able and willing to reconcile the sinner to Himself, to blot out his guilt, and to open before him a new door of hope. Remorse differs from repentance in that, while both are sorrow for sin, the former is unavailing and irremediable, but the latter is a first step to a new life wherein the mistakes and failures of the old may be retrieved. In Protestant theology remorse may be either (1) the first stage of conviction for sin, a work of the law unrelieved by the

hope of the gospel, but followed at length by repentance, faith, and justification—

'But the law doth rather shew sin, accuse and terrify the conscience, declare the wrath of God, and drive to desperation';¹ or (2) a legal conviction of sin associated with permanent unbelief.

'Remorse for sin does certainly prove that the soul is not dead. . . . But remorse is not a sanctifying principle; on the contrary, it is an exceedingly dangerous one; and the soul may die of it, as truly as the body of acute pain. It often drives men to despair, to frenzied iniquity, and thus to final hardness of heart.'²

Such would be the condition of one who felt that he had committed the sin against the Holy Ghost or who had fallen from grace beyond recovery (He 64-8).

Almost parallel to the difference between remorse and repentance is the better-defined distinction in Roman Catholic theology between attrition and contrition.

Contrition, the first act in the sacrament of penance, is 'a sorrow of the soul and a detestation of sin committed, with the determination not to sin again.' When it is motivated by love, and when it reconciles man to God, it is perfect contrition, and is to be distinguished from attrition or imperfect contrition, 'which arises from the consideration of the heinousness of sin or from the fear of hell or of punishment.' This also is 'a gift of God and an impulse of the Holy Ghost, who does not as yet dwell in the penitent, but only moves him, whereby the penitent being aided, prepares his way unto righteousness.'³

Attrition is not quite the same as remorse, but it seems to occupy the same position in the progress of the soul from sin to salvation as remorse may do when the fear of God and the condemnation of the law hold a man under the conviction of sin and still in its bondage for a season, though at last he may emerge into repentance and faith. But Protestant theology would not ascribe to remorse such independent efficacy for salvation as Catholic theology does to attrition. Yet remorse does in many cases lead to conviction when the revelation of the grace of God supervenes.⁴

T. REES.

RENUNCIATION.—In a sense the entire history of ethics might be said to turn on the question of renunciation. Every system has been forced to admit it as an element; it is the amount admitted that varies, and this varies enormously. Some reduce it to a minimum; there are others that have made it cover the whole ground. At the one extreme we have the thoroughgoing forms of Hedonism, such as Cyrenaicism and Epicureanism, which, taking the maximum of pleasure for the mere individual as the goal, are yet compelled to recognize that some pleasures must be renounced. And this because not only do desires conflict in the individual himself, but even those that are harmonious cannot be satisfied to the full in this world. At the other end we have the systems of self-denial, of which perhaps Buddhism might be taken as the type. Here renunciation seems pushed to its utmost limits, since the annihilation of all passion and desire is the supreme aim.

It may be a question as to whether this *nirvāṇa* of calm goes so far as to imply the death of all consciousness. If so, it would raise in an acute form the problem as to how it can be good for man to renounce everything, since by the very terms of the renunciation there is no longer anything living to possess

a good. This might perhaps be answered by holding that conscious existence was intrinsically so miserable that the only 'good' that could be hoped for was the absence of 'bad.' And this, it would appear, would be the answer of Schopenhauer and of von Hartmann, the modern preachers of asceticism based on pessimism.

Between these two extremes lie the systems of the world. Greek ethics kept always in view the conception of a fundamental harmony as at least conceivable. Socrates and Plato demanded renunciation only of those illusory pleasures which an enlightened man would recognize as not what he really wanted. Aristotle, in admitting the possibility of utter self-sacrifice—say, death in battle without the hope of immortality—practically admits that a man may willingly give up what is most worth having from a purely individual point of view for the sake of serving others. This clash between the happiness of self and the happiness of others was to be felt more keenly as time went on. Meanwhile Aristotle was at one with Plato and Socrates in conceiving that the vast majority of our desires were reasonable, and in part at least to be satisfied. The work of renunciation lay not in killing them out, but in taming them and putting them to use, since use could be found for them in no way at variance with the highest good.

In Stoicism—developed under combined Greek, Roman, and Hebrew influences—renunciation becomes far more prominent. The mere consciousness of duty done was held to be enough to support man and give him happiness. What came to him from without was to be neither desired nor shunned; he must surrender once for all every clinging to the goods of circumstance. A modern parallel may be found in the view of Kant that there is nothing 'in the world or out of it' absolutely good 'except a Good Will' (*Grundlegung zur Metaphysik der Sitten*, sect. 1, *init.*), and that moral action consists in following the Imperative of Duty without regard to personal wishes.

With Christianity and Christian ethics the question enters on a new phase, and becomes extremely intricate. The definite recognition of the principle of love foreshadowed in Stoicism makes it impossible ever again to dissociate entirely an individual's highest good from that of his fellows; on the other hand, the hope of belief in an ultimate heaven of individual blessedness prevents renunciation from being the final word. Merely selfish pleasures have doubtless to be surrendered, but the compensation will be abundant. It is a further question, and one keenly debated, what these selfish pleasures include. Some have banished all the pleasures of the body and many of the mind. This was undoubtedly the view of the mediæval ascetics (see the writings of Bonaventura, published by the Fathers of Quaracchi), and it was to a certain extent repeated by Tolstoi in modern times, though it was the doctrine of non-resistance rather than of renunciation pure and simple that he made the keynote. All asceticism, however, seems at variance with the childlike spirit beloved of Christ—for no child is ever an ascetic—and indeed with the general impression which He made on His contemporaries as a man who 'came eating and drinking' (Mt 11¹⁹).

The pressure and complexity of modern life have brought out further aspects in the problem. Many a philanthropist, *e.g.*, must give up pleasures which in themselves he admits to be high and desirable. Is this from his point of view reasonable? The difficulty of this question does not seem to have been fully realized by the older utilitarians, such as Bentham and Mill, but the sense of it has led the latest exponent of the system in England, Henry Sidgwick, to suggest that a heaven where such sacrifices will be compensated supplies the only means of reconciling

the divergences between the good of the one and the good of the many, and so completely rationalizing ethics (see *The Methods of Ethics*, bk. iv. ch. vi.). Others—e.g., the followers of Auguste Comte and Herbert Spencer—are content to renounce the hope of permanent individual happiness altogether, if only the perfection of the race can be attained. Others, again, have developed what may be called a kind of Neo-Stoicism. Unalloyed good is impossible both for race and for individual, but sufficient compensation is to be found in the glory of an heroic struggle. This view has been common in England, finding distinct expression, for instance, in the writings of Huxley (e.g., *Evolution and Ethics*). But the German Nietzsche, by virtue of his genius, might be regarded as the leader of the school. He is, however, distinguished not only by the exultant turn he gives to the creed, but by the intense hatred he feels for any subordination of the one to the many. The best good of life as yet known to him lies in the free development of the most splendid and forceful individuals, at whatever cost to the masses. In general it may be said that the modern attitude is one of ferment over the questions: How much is man bound to renounce for himself and for the race? How much should he insist on claiming for himself or for the race, as a worthy prize for life? See also artt. HEDONISM, CYRENAICS, EPIUREANS, ETHICS AND MORALITY (Buddhist), (Christian), and (Greek), STOICS, UTILITARIANISM, POSITIVISM.

F. MELIAN STAWELL.

RENUNCIATION (Hindu).—1. The ideal and the motive.—To the Hindu the term 'renunciation' (Skr. *sannyāsa*, *sannyas*, 'lay down,' 'resign,' esp. to resign the world, become a *sannyāsin*, or ascetic)¹ conveys a meaning and carries with it an obligation very different from the Western idea. To the latter renunciation admits of degrees, and consists essentially in the surrender of a coveted aim or object, the abandonment of a cherished wish, or the suppression of a more or less definitely formed ideal of life. It is virtually equivalent to self-renunciation, and is conceived in terms of selfish purposes or desires which are to be set aside; it is the opposite of altruism, and implies no cessation of activities, but their diversion into new channels. Seldom if ever does it connote to the Western mind the abandonment of all for a life reduced to its simplest terms. The Hindu conception of renunciation is in almost every respect contrasted with this. *Sannyāsa* is the casting off, the abandonment, not of self but of all that is other than self; and the *sannyāsin* renounces home and friends together with all that to Western thought makes existence desirable, and engages himself to a life of absolute destitution of all possessions, that, undisturbed by worldly conditions or claims, he may cultivate communion with God. To break all the ties that bind to this world, to withdraw as far as possible from all worldly association and intercourse, to be dependent for daily support upon the charity of others—a charity in India never withheld—that no interruption may be offered by worldly cares or interests to meditation and the concentration of all thought and desire upon God, is the avowed

ideal and purpose of the Hindu who adopts the life of renunciation and poverty.

To a greater degree also than in the West this renunciation is dictated by religious motives. The mixed motives which among Western peoples lead to the renouncing more or less completely of cherished aims or convictions, often on trivial or even selfish grounds, have no place among the forces which in this particular urge the Hindu to action. Theoretically his sole purpose is to secure freedom for himself so that, untrammelled by worldly ties, he may pursue the one aim of union with God. The world with its attractions and its cares is an obstacle in the way which must be cast aside (*sannyas*). This duty is laid upon him by his religious faith and profession. Renunciation of the world is not a matter of choice, but a religious obligation and command incumbent upon all. It would appear, however, so obviously impracticable for an entire community to render literal obedience to an injunction of this nature that probably the author or authors of the codes of law did not conceive or intend that the rule should be universally observed.

2. Renunciation in practice.—This ideal of the renunciation of the world as a supreme religious obligation is of very ancient date and origin in India. In the oldest literature the figure of the hermit or ascetic who has broken through the fetters that bind to this world and has adopted a solitary and contemplative life is familiar. The motives that prompted the withdrawal from ordinary life were no doubt various, and in many instances not unmixed. The mere desire for a life of ease and irresponsibility actuated many, as it does at the present day, to seek release from burdens and duties that were rightly or wrongly felt to be intolerable. In ancient times probably the religious motive was for the most part at least predominant, and the longing for undisturbed communion with the divine; but it is perhaps more than doubtful whether so much can be claimed to-day for the great host of devotees and ascetics who cross the traveller's path in every part of India. A craving for notoriety and for the influence which a reputation for self-denial and the practice of the ascetic life gives in India prompts some; with many others it is sheer idleness and a disinclination to take the trouble involved in self-support or the support of kindred and relatives. The hardships and sufferings, however, that are voluntarily undergone, the laborious and dangerous journeyings to distant shrines, and the self-denial involved in the assignment of wealth and property to others often prove how sincerely, if mistakenly, truth and holiness are sought in a life of renunciation of all worldly ties and claims. In India such a life is and always has been facilitated by the generous fertility of the soil and the kindly climate, conditions under which bodily needs are few, and the simple requirements of a contemplative and unemployed mode of existence are easily met and satisfied. Moreover, the religious obligation to give alms to the wandering ascetic is never disowned by the Hindu housekeeper; and the *sannyāsin* is always sure of his daily food in whatever village he may present himself in the course of his wide and varied wanderings.

The numerous descendants and offshoots of Hinduism in later times adopted the ascetic motive and ideal. Buddhism in particular enforced the duty of renunciation, and extended the practice, carrying its doctrine and the enthusiasm for its ideal to Egypt and Western lands, where, according to some authorities, it was taken over into Christian usage and became a recognized feature of the Christian ecclesiastical order. If so, the genealogical descent that traces Western monastic

¹ E.g., *Laws of Manu*, vi. 94.

observance to an Eastern origin is of great interest. Too little, however, is known of the details of the history for a secure verdict to be pronounced on the extent of the indebtedness of the West to the East for teaching and example in this respect. Room must certainly be left for a not inconsiderable measure of spontaneity and initiative.

3. Conditions and obligations.—Accordingly, in theory at least, there is in the Hindu conception and practice no middle term or way between an unrestricted use and enjoyment of the things of the world and complete abstinence. Renunciation is of all or of none. Nor is the theory modified to any considerable extent in practice, as in many Christian monasteries of the Middle Ages, and as in a few instances in some Buddhist countries at the present day. Resignation of this or that pleasure or distraction, or severance of the one connexion with retention of others, has presented no attraction to the religious-minded Hindu; while, on the other hand, the ease with which a minimum of bodily wants was satisfied has always, and perhaps increasingly, drawn to the ranks of the ascetics many who were actuated by no higher motive than the craving for an indolent life free from anxiety and care. Of such there are not a few in India, of whom the better-class Hindus themselves are ashamed.

The Indian theory of renunciation, moreover, is closely connected with the doctrine and obligation of the four *āśramas* (q.v.; see also art. ASCETICISM [Hindu], vol. ii. p. 91 f.), the successive stages or periods of life through which, theoretically at least, every Hindu must pass from his early years to death. Here again the theoretical conditions and demands were greatly modified in practice; and in particular no restriction was placed upon the adoption of a life of abstinence and renunciation at any age, even the most youthful. The order of the *āśramas* was essential and invariable, that of the *sannyāsīn* closing the series as the most exalted and refined. It was not necessary, however, to have reached an advanced age before renouncing the world. At any period it was admissible at will to withdraw from worldly pursuits, abbreviating or omitting altogether the preceding stages, and assuming even in early youth vows of unworldliness and poverty. Instances of return to a worldly life appear always to have been rare. On the other hand, recent history affords many examples of men of eminent piety and sincerity, who at the close of an honourable career have renounced the world, and, abandoning house and home, have given over their remaining years to a life of severe and self-imposed restrictions, to meditation and solitary communion with God. To a high-minded and devoted Indian gentleman of this class, Swāmi Śrī Saccidānanda-Sarasvatī, formerly prime minister of the Native State of Bhaunagar, Monier-Williams makes reference in the preface to his *Brāhmanism and Hindūism* (p. xxi; see also frontispiece); and the late Debendra Nāth Tagore might be cited as an example of the same gentle and self-denying spirit. Those, however, who adopt the ascetic life from mere idleness and a shrinking from responsibility and work are an undoubted loss and burden and even a source of danger to their country.

4. Effect of European teaching and example.—In this respect as in so many others the Hindu conception has been profoundly modified by the impact of Western and European teaching and example. It is perhaps not true that to any important extent the ancient ideal has been lowered or changed. In theory at least it is still recognized as best that a man should abandon the world, and seek his own salvation and the satisfaction of his spiritual cravings in a life of meditation, severed from his people and the pursuits of the

busy crowd. An increasing number, however, endeavour to find that satisfaction in altruistic service in the world rather than in selfish aloofness. More or less consciously they have been influenced by Christian example and propaganda, by scientific and medical doctrines taught in the schools of the importance and interests of the body, by the emphasis laid upon hygiene and the obligations of social service. The example and initiative also of British officers and civil servants, and of professors in the colleges and schools, have counted for much. For the most part it is the members of the higher classes and castes whose conceptions of duty and of life have been thus transformed. The modes of living and the ideals of good of the middle and lower classes have undergone little change, and the convictions of the great majority of the Indian peoples with regard to the duty and efficacy of entire renunciation of the world remain the same; these, however, have neither time nor inclination to put into practice what is for the most part a dimly realized obligation of their religious faith. It is among the leaders of the people, present and future, the intellectual and leisured classes, that a new ideal has been created, and to many of them renunciation has come to mean renunciation of self and evil, that the good may be pursued not out of but in the world and for its benefit.

The motives that under these changed circumstances urge to a new renunciation and to real altruistic service are not always unmixed. In some instances at least, perhaps in many, rivalry with Christian methods and institutions, distrust of the intentions or disinterestedness of Christian activities, or emulation of British achievements and success in the amelioration of the lot of the common people has aroused a spirit of antagonism which has found expression in opposition. Moreover, it is by no means Christian converts alone or those who have avowedly submitted themselves to Christian influence that have proved thus capable of the highest forms of self-renunciation. It may be that in all instances there has been the inspiration, indirect and unacknowledged, of Christian example. Notably, however, the members of the Brāhma Samāj, of the Ārya Samāj, and of other native sects and Churches have not confined themselves to mere doctrinal propaganda, but frequently with a self-sacrifice and devotion worthy of all praise have turned aside from positions of worldly ease and emolument to serve their fellow-men, and that for the sake of definite religious and communistic aims which were not selfish. In the future, therefore, there can be little doubt that the ancient Hindu ideal of renunciation will give place slowly to one which appears thus to be more practical and in its present and general issues more helpful and beneficent. The earlier conception, however, is far from having lost its hold upon the imagination and affection of the people in general, nor, as far as judgment and comparison are possible, is the number of those who take upon themselves the vows of abandonment of the world less than in former years. But the practical spirit of the age is against them; and that will ultimately prevail, even in India, not without regret at the loss of an ideal which, self-seeking and unutilitarian as it might be, was not seldom productive of saintly character, and at least set the example of disregard of mere worldly good.

RENUNCIATION AT BAPTISM.—See
ABRENUENTIO.

REPENTANCE.—In its broadest sense repentance describes the act of the soul in breaking away from its past as a preliminary step to the work of ethical reform. In this wide signification it is not peculiar to the Jewish or the Christian religion; on the contrary, it is implied in all the higher religions and in all systems of morality. Man's capacity for repentance is grounded in his nature as a moral being.

'We have a capacity,' says Bishop Butler, 'of reflecting upon actions and characters, and making them an object to our thought: and on doing this, we naturally and unavoidably approve some actions, under the peculiar view of their being virtuous and of good desert; and disapprove others, as vicious and of ill desert.'¹

It is because man has this power of self-judgment that he is also capable of the act of repenting. All moral advance takes the form of a breach with the past. Hence Socrates, in identifying virtue and knowledge, vice and ignorance, taught that only by a preceding conviction of ignorance could a man attain to knowledge. Plato held that in every man there is a potential faculty by which he can distinguish the lesser from the higher good, and renounce the former for the sake of the latter. He compares this change in the attitude of the soul to the turning of the eye from darkness to light. Just as the light of the sun evokes and strengthens the power of bodily vision, so spiritual truth has the power to educate man's faculty of knowledge. This is the meaning of the famous allegory of the cave.² A similar line of thought is also found in Buddhism as well as in pre-Buddhist systems.

1. The idea and the term.—It is only in Judaism and in Christianity that the idea of repentance is developed, and is treated not as a merely preliminary step to the higher life but as a permanent condition of all spiritual achievement. Only within these religions, too, are the presuppositions of repentance in the deepest sense of the term made possible. Belief in a personal God, in the reality of sin, and in the freedom of the will—in the light of such principles repentance becomes a fundamental virtue and is seen to be at once ethical and religious. It has been recently stated that 'the idea is peculiarly Jewish, so much so that its ethical force is lost in the dogma of the atoning Christ.'³ To this it may be replied that, as a matter of historical fact, one of the great motives to repentance has been and is a realization of the righteousness and the love of God revealed in the death of Christ. That death has proved itself to be a means of atonement by the very fact that it works repentance in him who understands its meaning and feels its power; and thus it removes the subjective hindrance to peace and forgiveness.

The noun *tēshūbāh* ('repentance') occurs only in post-Biblical Hebrew, but the verbal form *shūb* is common in the OT. The latter word means literally 'to turn' or 'to return' in a physical sense. Running parallel with this use is the use of the word in a spiritual or ethical sense, 'to return from sin and evil to God or to righteousness.' In this usage the word means not merely to change the direction, but to turn right round and face in the opposite way (cf. the refrain in Am 4⁶⁸—'yet have ye not returned unto me, saith Jehovah'; for other examples cf. Hos 6¹, Is 1¹⁷ 55⁷, Jer 3¹²⁻²³ 36⁷, Ezk 13²²; the LXX translates *nīhām* by *μετανοεῖν*; cf. Jer 18³, which should be rendered 'I will change my mind or my purpose' rather than 'I will repent').

The Syr. Bible has for *μετανοεῖτε* (Vulg. *pœnitentiam agite*) in Mt 3² *tūbū*=Heb. *shūbū*. For the noun *μετάνοια* (Mt 3¹¹) the Syr. Bible used *tēyabūtā*=*tēshūbāh*. In the NT 'repent' translates *μετανοεῖν*, and 'repentance' translates *μετάνοια*, but, as will be shown below, these renderings are far from adequate. The RV seeks to differentiate between *μετανοεῖν*, 'to repent,' and *μεταμέλῃσθαι*, 'to regret,' by rendering the latter as a reflexive—e.g., 'Judas repented himself' (Mt 27³), which should rather be rendered, 'Judas was smitten with remorse.' The RV makes an exception to this rule in 2 Co 7⁸, where *μεταμέλομαι* is translated by 'regret.' Cf. Ro 11²⁸, where *ἀμεταμέλητος* is translated 'without repentance.' The Amer. RV translates it by 'not repented of.' The RV would have done well to call attention in a marginal note to the difference in meaning between the word 'repentance' as commonly used and the Greek word *μετάνοια*. A satisfactory version of the NT must include a new translation of a word that expresses the initial and prevailing idea of Christianity.¹

2. Repentance in the OT.—Two strains of thought run throughout the OT religion—the one priestly and legalistic, the other prophetic and ethical. Modern Judaism inherits the double tendency. The priestly conception of the relations between God and man is embodied in a Levitical sacrificial system which, in germ, existed from the earliest times in Israel. The expiatory element in sacrifice was developed into an elaborate system, but it laboured under one serious defect—the ritualistic and the ethical were not clearly distinguished. Unintentional transgressions and various impurities of a ceremonial character, such as leprosy or the touching of a dead body, needed an expression of repentance in the prescribed sacrifices. The main function subserved by the sacrificial system was to gain for the sufferer the divine favour or to avert from him the divine wrath (cf. Lv 4²⁵ 21. 35, 2 S 14²⁵). Hence the notion of repentance suffered through the defects of the prevailing notion of sin. Much that later Judaism, as well as Christianity, condemned as sin was not deemed to be sin in early Israel; and *vice versa*, a deeper spiritual view disregards as without moral significance many acts which were deemed to be offences against the holiness of God—i.e. against His character as One infinitely remote from contact with the human and the physical. On the other hand, it must be allowed that the systematizers of the post-Exilic worship believed it to be 'a very important means towards the great end of keeping the people of Israel faithful in heart and life to God.'²

The prophetic preaching marks a great advance in the conception of sin with a corresponding advance in the conception of repentance. For the prophets sacrifices were secondary to moral obedience. They cared little about the details of ritual, and insisted on the paramount claims of justice, truth, and social righteousness (Jer 7²²). In a word, they were the preachers of ethical and social reform, and they proclaimed the necessity of repentance as a necessary prerequisite to a new order of things. Still further, the call to repentance was made in close connexion with the idea of judgment. One of their most passionate convictions was belief in the day of Jahweh, on which an overwhelming retribution should strike a sinful people (Am 5²⁰⁻²⁷ 9⁸⁻¹⁰, Is 21²¹ 13⁹). The call to repentance was addressed primarily not to the individual but to the nation as a whole. The covenant of Jahweh was with Israel conceived as a personality with a continuous moral life, and therefore responsible alike for its sin and for its amendment. The sins charged against Israel were in the main social—cruelty to the poor, bribery of judges, immorality connected with idolatrous worship. On these the prophet invoked divine judgment, but the judgment can be turned aside by repentance, i.e. by a change of mind leading to a

¹ For a valuable note on the Classical, LXX, and NT usage of these words see *Hist. and Linguistic Studies*, 2nd ser., Chicago, 1908.

change of conduct. 'Seek good, and not evil,' cries Amos, 'that ye may live: and so the Lord, the God of hosts, shall be with you, as ye say. Hate the evil, and love the good, and establish judgment in the gate: it may be that the Lord, the God of hosts, will be gracious unto the remnant of Joseph' (5^{44c}). Hosea through a bitter domestic experience had learned the need of repentance on the part of Israel. The root sin of Israel was disloyalty to God. She had gone after other gods and had broken the marriage covenant with Jahweh. But, just as the prophet would not let go the woman that he loved, but cared for her and through sorrow redeemed her, so he felt that Jahweh, who had chosen Israel as His bride, would not give her up, but would win her back by the greatness of His grief and His compassion (2¹⁹). Repentance will lead to restoration, and repentance comes through a deeper knowledge of God.

'It is because Hosea's doctrine of God is so rich, so fair and so tender, that his doctrine of repentance is so full and gracious. Here we see the difference between him and Amos. Amos had also used the phrase with frequency; again and again he had appealed to the people to seek God and to return to God. But from Amos it went forth only as a pursuing voice, a voice crying in the wilderness. Hosea lets loose behind it a heart, plies the people with gracious thoughts of God, and brings about them, not the voices only, but the atmosphere, of love. "I will be as the dew unto Israel," promises the Most High; but He is before His promise. The chapters of Hosea are drenched with the dew of God's mercy, of which no drop falls on those of Amos, but there God is rather the roar as of a lion, the flash as of lightning.'¹

Jeremiah and Ezekiel repeat to their contemporaries the warnings of judgment and the call to repentance. Idolatry, unbelief, and formalism in religion are the evils that they most frequently denounce. They threaten the people with exile, but the impending doom may be turned aside if they repent: 'Amend your ways and your doings, and I will cause you to dwell in this place' (Jer 7³). Moved by a profound intuition Jeremiah breaks through the bonds of the moral solidarity of the nation, and glimpses the truth of individualism (31^{29c}). But the realization of this truth belongs to the future age. Ezekiel takes up the message of personal responsibility from his earlier contemporary, yet his message is addressed to the nation: 'Turn ye, turn ye from your evil ways; for why will ye die, O house of Israel?' (33¹¹). He makes an advance upon earlier teachings by announcing that God Himself will take the initiative and give repentance to Israel (36²⁵⁻²⁷); but this is an idea alien to the genius of Judaism, which emphasizes the thought that in repentance man takes the initiative and God grants forgiveness because of man's changed attitude towards Him.

In Psalms and Job the feeling about sin is deepened. It is something in itself evil, breaking the bonds that bind the soul to God. Moreover, sin is now seen to be a universal experience of man. In such Psalms as the 32nd and 51st this deepened consciousness finds expression, even though we should accept the view of some critics that the primary reference is to the sin and repentance of the Church-nation. Still it is impossible to avoid the conviction that the Psalmists were thinking of themselves as sharers by personal experience in the spiritual acts described.

3. Later Jewish teaching.—The idea and practice of repentance receive a rich development in later Jewish thought. Repentance now becomes the fundamental feature of Jewish piety, and the penitential prayer is frequent in the literature of the time. The high value set upon this virtue is illustrated in the Prayer of Manasses. Even for the most wicked of Jewish kings the gateway to life is opened by penitence. Other examples of penitential prayers are found in Dn 9, To 3¹⁻⁶,

3 Mac 2¹⁻²⁹ 6³⁻¹⁸. In the book of Wisdom, which was written under the influence of Greek philosophy, we have the thought brought out that the forbearance of God is meant to give the sinner opportunity to repent. 'Thou overlookest the sins of men to the end that they may repent' (11²⁹). We get a prelude to the teaching of Paul (Ro 2⁴) in another passage: 'Thou hast made thy children to be of good hope that thou givest repentance for sins' (12¹⁹). Throughout later Judaism the idea of suffering played an important rôle in developing penitential feeling. The old idea that suffering was a sign of divine displeasure still held its ground, and, the more keenly men felt suffering, the deeper was their consciousness of sin and their desire for reconciliation. Distress and pain were proofs that sin had been committed, whether it was possible or not to say what the sin actually was.

In the later rabbis the word *tëshübäh* ('repentance') has become a technical theological term. Sin, it is taught, is removed by good works, repentance, and confession. A consistent doctrine of repentance from a purely ethical standpoint is not to be looked for in the rabbis. A deep spiritual conception is found side by side with external legalistic views. As an example of the latter may be cited the Talmudic teaching that three books are opened on New Year's Day; the righteous are inscribed for life, the wicked for death, while the 'intermediate' remain in suspense till the Day of Atonement. By good works and repentance they can make the swaying balance incline in their favour. Of similar character is the interpretation of the words, 'Seek ye the Lord while he may be found, call ye upon him while he is near' (Is 55⁶), which are taken to mean 'Seek him especially between the New Year and the Day of Atonement when he dwells among you.' On the other hand, it is to the rabbis that we owe some of the most beautiful sayings about repentance to be found outside the Bible. C. G. Montefiore has collected much material of this kind in his article 'Rabbinic Conceptions of Repentance.'¹ The following are quoted:

"God's hand is stretched out under the wings of the heavenly chariot to snatch the penitent from the grasp of justice." "Open for me," says God, "a gateway of repentance as big as a needle's eye, and I will open for you gates wide enough for horses and chariots." "If your sins are as high as heaven, even unto the seventh heaven and even to the throne of glory, and you repent, I will receive you."²

The main differences between the rabbinical and the modern teaching about repentance are, according to this writer: (1) the rabbinical doctrine is on the whole particularist, while the modern teaching is pronouncedly universalist; (2) the rabbis are more stern towards the sinner, especially the religious sinner, the heretic, the apostate, the unbeliever; (3) whereas, according to the modern teaching, punishment after death can be only remedial and temporary, the rabbis held that for some sinners there was no share whatever in the blessedness of the world to come.

4. Repentance in Christianity.—Jesus, though opposed to the prevailing tendencies of the Judaism of His time, took over and developed the deeper motives of the OT prophetic teaching. Among these was the demand for righteousness which can be satisfied only by repentance. The Baptist had already echoed the cry of an Isaiah or a Jeremiah, 'Repent ye; for the kingdom of heaven is at hand' (Mt 3²). He was a preacher of the judgment to come and of repentance unto the remission of sins in view of this judgment. Thus the eschatological movement, which was destined to affect powerfully the history of Christianity, was begun by the Baptist's summons to amendment of life. Because

¹ JQR xvi. [1904] 209-257.

¹ G. A. Smith, *The Book of the Twelve Prophets*, London, 1896, 1. 338 f.

of the approaching end of the age, which was to be signalized by the appearance of the Messiah, John called on men to renounce their worldly every-day life in order to fit themselves for entrance into the Kingdom. They were to bring forth fruits worthy of repentance. Jesus, on His first public appearance in Galilee after John's imprisonment, takes up the same message: 'The time is fulfilled, and the kingdom of God is at hand: repent ye, and believe in the gospel' (Mk 1¹⁵). The whole ministry of Jesus may be described as a ministry of repentance. With grave irony He sums up the purport of His mission: 'I am not come to call the righteous, but sinners to repentance' (Lk 5³²; cf. Mk 2¹⁷, Mt 9¹³). What Jonah was to the Ninevites that Jesus was to His generation—a preacher of repentance (Mt 12⁴¹, Lk 11³²).

More specifically it is clear that His preaching of repentance stands in closest connexion with His preaching of the Kingdom and with His healing ministry. The ethical requirements for admission to the Kingdom as expounded in the Sermon on the Mount imply the profound change in mind and life which we try to express by the term 'repentance.' The mission of the Twelve had for one of its main purposes that of proclaiming the duty of repentance (Mk 6¹²). The parables of the lost sheep, the lost coin, and the lost son are motivated by the thought that there is 'joy in heaven over one sinner that repenteth' (Lk 15^{7, 10}). The events of contemporary life, the calamities and tragedies that befell the world, bore a spiritual message and a solemn warning: 'Except ye repent, ye shall all likewise perish' (Lk 13⁵; cf. 13³).

Now, with this emphasis on the repentant attitude of mind, Jesus is in line with what we have already seen to be the prophetic doctrine. Like that of the prophets, His moral teaching is conditioned as a whole by the coming Kingdom; like them He sees that repentance is necessary as a preparation for the Judgment that in turn ushers in the Kingdom. Hence many NT students argue that the ethics of Jesus is conditional, an *Interimsethik*, and was proclaimed in indissoluble connexion with the eschatological expectation of a state of perfect blessedness to be supernaturally brought about. But, while the call to repentance was clothed with a terrible impressiveness and intensity, from the fact that the Kingdom was believed to be at the door, that call is permanently valid for man's life throughout all time. Instead of the idea of the Kingdom to be achieved by a cosmic catastrophe, Christians have been led to cherish the hope of immortal blessedness. With a view to the realization of that hope, repentance is as much as ever a demand of the spiritual life. Not only our Lord's preaching but also His healing ministry—itsself the evidence that the Kingdom was in a sense already present—was designed to awaken in the hearts of men desires for a better life. It was the tragedy of His life that this design was frustrated by the dullness and indifference of those who witnessed His gracious activity in lifting the burdens of disease from body and soul: 'Then began he to upbraid the cities wherein most of his mighty works were done, because they repented not' (Mt 11²⁰). But behind His preaching and His healing activity was His personality. Wherever He went, He awakened a consciousness of sin and a longing after a better life. It is to the third evangelist that we are especially indebted for the record of the effect which Christ's personal presence had upon the individuals by way of arousing in them a feeling of guilt and a desire for amendment. It is he who tells us of the saying of Simon Peter, 'Depart from me; for I am a sinful man, O Lord' (Lk 5⁸), of the 'woman that was a sinner,' of Zacchæus, and of the dying thief.

If the substance of Christ's message and mission may be described therefore as a gospel of repentance, it is obvious that the word 'repentance' is not used here in its etymological and popular sense. The truth is that the term needs to be transfigured before it can render the meaning of Christ's idea which the evangelists express by the word *μετάνοια*. Owing to its Latin origin and its ecclesiastical associations through the Old Latin and Vulgate versions, it is totally inadequate to carry the wealth of meaning implied in the Greek word. 'Repentance' has an emotional tone; *μετάνοια* is ethical and intellectual; the former is negative—a turning away from sin; the latter is positive—an enthusiasm for righteousness. But above all, the Latin word is retrospective—it looks back in revulsion of feeling to past sinful acts; whereas the Greek word is prospective—it speaks of a moral renewal with a view to the transformation of the entire man. As Matthew Arnold says,

'We translate it (*metanoia*) "repentance," the mourning and lamenting for our sins; and we translate it wrong. Of *metanoia*, as Jesus used the word, the lamenting one's sins was a small part; the main part was something far more active and fruitful, the setting up an immense new inward movement for obtaining the rule of life. And *metanoia* accordingly is a change of the inner man.'¹

Jesus regards the piety of this age as fundamentally perverted and moving on false lines. A far-reaching reconstruction of the spiritual life is imperative. His word, 'Repent ye,' is a summons to build on new foundations, to develop a new consciousness out of which would come a new nature. In truth what Christ demands is what Paul describes in mystical language as a crucifixion and a coming to life again (Gal 2²⁰), as the putting off of the old man as one would put off a soiled garment, and the putting on of the new man (Col 3⁹). Nothing less than this will satisfy the NT concept of repentance.²

The primitive apostolic preaching once more proclaims the call to repentance sent forth by the Baptist and by Christ. 'Repent, therefore, and be converted, that your sins may be blotted out' (Ac 3¹⁹). This announcement received new emphasis and urgency from the fact that the Messiah had been crucified (Ac 2²⁴); He would come again, if only Israel would repent of this the greatest of all crimes in history. In the Pauline Epistles the idea of repentance is merged in that of faith as a renouncement of one's merit and as surrender to Christ, or to God in Christ, which ends in mystical union with Him. Yet repentance occupied a conspicuous place in Paul's missionary preaching, as we may infer from his speech at Miletus in which he reminds his hearers that he testified 'both to Jews and to Greeks repentance toward God, and faith toward our Lord Jesus Christ' (Ac 20²¹). In the Fourth Gospel there is no mention of repentance, but the thought is expressed under the profound metaphor of a new or a second birth. 'Except a man be born again [or from above], he cannot see the kingdom of God' (Jn 3³). But generally throughout the Gospel the emphasis is laid on faith (3^{15, 18} 6⁴⁷ 14¹). Faith and repentance are two sides of one and the same spiritual process. If faith be the act of the soul in turning to God in Christ, repentance is the same act viewed as the soul turning away from sin. But the process is one and indissoluble, and may be described in terms of the one act or the other.

'Without faith,' says Coleridge, 'there is no power of repentance: without a commencing repentance no power to faith.'³

5. Theological signification.—Latin theology was incapable of rising to the full compass of the NT idea. It made the emotional element

¹ *Literature and Dogma*, ch. vii. sect. 3.

² See T. Walden, *The Great Meaning of the Word Metanoia*.

³ *Aids to Reflection*, aphorism cxviii.

in repentance primary, whereas in reality it is secondary. Tertullian marks the beginning of the process. He defines repentance as an 'emotion of disgust' at some previously cherished offence.¹ In the course of time it became involved with questions of Church discipline and with the ecclesiastical doctrine of penance. This doctrine is that repentance is only part of the sacrament of penance, the two other elements being confession and satisfaction.² The Reformers went back to the NT idea. Luther's doctrine was that repentance consisted in sorrow for sin and faith in Christ. He maintained that the whole life should be a penitential act. The Reformation started as a protest against false or inadequate conceptions of repentance.

Luther, it will be remembered, first saw the practical value of philological study, when he was puzzling over the expression *poenitentiam agite*, "do penance," which the Vulgate uses for the Greek word that in the English translation is rendered "repent." Was it possible, he said to himself, that Christ and the Apostles could really bid men do penance? Did the New Testament really stand on the side of its opponents, and of all the gross corruptions which the doctrine of penance had introduced? Melancthon solved this difficulty by showing to Luther that the Greek word *metanoiein*, which Jerome had translated "do penance," really and etymologically meant "change your mind." From that moment the Reformation entered into a conscious alliance with the new learning, to which it was already akin in its independent love of truth, its rebellion against human authority, and its interest in the Bible as a real living book.³

The Evangelical revival of the 18th cent. emphasized the need of repentance, sometimes with undue stress on the emotional side of the experience, and with consequent injury to the interests of the spiritual life. On the other hand, philosophical moralists like Spinoza, Kant, and Fichte maintain that all emotion of sorrow for the past is wasted energy. And Oliver Lodge has recently remarked:

'The higher man of to-day is not worrying about his sins at all, still less about their punishment.'⁴ Instead of brooding over past sins, he recommends 'the safer and more efficacious and altogether more profitable way, of putting in so many hours' work per day, and of excluding weeds from the garden by energetic cultivation of healthy plants.'⁵

This view is also advocated by the 'healthy-minded' schools of thought as represented by such cults as Theosophy, Christian Science, and New or Higher Thought. The words of Virgil to Dante are held to express the true attitude of the sinner to his sins. 'One glance at them and then pass on.'⁶ Begin to think what is good and do what is good, and thereby change yourselves. Do not waste time in futile regrets, but employ it in the performance of right actions.

There is an element of truth in this contention, and a true conception of repentance will do justice to this modern feeling as well as to the testimony of the normal Christian consciousness. Sin, as interpreted in the teaching of Christ, is not only a blow at the moral order of the universe; it is also an offence against love. It is a wrong done to the Father of our spirits, who is ever pouring forth upon us the steady stream of His unbounded goodness and mercy. When we awake to the shame of our ingratitude, of our failure to live in harmony with His will, a feeling of sorrow must seize the soul analogous to the keen regret with which we contemplate the wrong that we may have done a kind and loyal friend. But this natural distress of mind may darken down into excessive remorse, which is barren pain robbed of all moral value, and which plunges the sufferer into the darkness of phantasmal fears and morbid imaginings. The sorrow of repentance reacts on the soul, strengthening it to meet the new task of moral reformation; the sorrow of despair paralyzes the moral energies, and hurries its victim, as in the case of a Lady Macbeth or a Richard III., into

irreparable disaster. Paul, in his fine analysis in 2 Co 7⁸⁻¹⁰, distinguishes carefully between a sorrow of the world that ends in death and a godly sorrow that issues in a repentance never to be regretted.

A few words may be added on the relation of repentance to forgiveness. Sin is opposition to the divine will. This opposition inhibits the action of divine grace in the soul of the sinner and prevents that communion with God which is the source of spiritual life. In repenting the sinner tears down the barriers which his sin erects between him and the inflow of divine life and power. Thus the divine forgiveness, which is never a mere remission of penalty but always and essentially the restoration to the normal and filial relation of man to God, follows naturally and spontaneously on repentance. And, if it be asked what is the proof of forgiveness in any given case, the answer is: the fact of repentance itself is the proof. It is the 'goodness of God that leads us to repentance' (Ro 11⁴), but this very goodness implies that already God has forgiven us. Without repentance forgiveness would be immoral, and without the possibility of forgiveness the burden of sin would become intolerable, sinking the soul into a hell of despair and madness. It is not that repentance wins or merits forgiveness; such a thought is repugnant to a truly spiritual view. It is that repentance affords the necessary and natural condition on which the will to pardon can energize.

6. The ethical value of repentance.—From the point of view of ethics, it has been objected: Of what avail is repentance, seeing that the law of continuity holds good in all worlds, the spiritual as well as the physical? How can a man be freed from the burden of his past sins, since this burden is itself the creation of his own free spiritual activity? Must not a man reap as he has sown? Is not the consequence of an act really a part of the act and indissolubly bound up with it? The answer is that the law of continuity is not the only law that obtains in the spiritual realm. There is also a law of recovery or redemption. If the law of moral sequence alone held good, the very purpose of its existence would be frustrated, for it would paralyze all efforts to achieve a life of virtue and righteousness. Moreover, the very fact that man is capable of self-condemnation is proof that evil-doing is not an adequate expression of his personality. How could he condemn himself, if there was not in him the consciousness of an ideal to which he owes allegiance? In the very constitution of the soul it would seem that room is made for fresh starts, new beginnings. In condemning himself the penitent has already risen above the self that he condemns. The publican who said, 'God be merciful to me a sinner,' was already on his way to sainthood. For in repentance what does the penitent man really do? By an inward act he dissociates himself from his sin; he takes the side of God and of all good men in judging it unworthy of his nature and at war with the real order of life. He finds in his sin no expression of his real self—only a false show which he repudiates in language that sounds paradoxical but that in reality shadows forth a profound truth: 'It is no more I that do it, but sin that dwelleth in me.'

'Our chief concern with the past, that which truly remains and forms part of us, is not what we have done, or the adventures that we have met with, but the moral reactions bygone events are producing within us at this very moment, the inward being they have helped to form; and these reactions, that give birth to our sovereign, intimate being, are wholly governed by the manner in which we regard past events, and vary as the moral substance varies that they encounter within us.'

Thus repentance, or revulsion against the past and a longing desire for a higher ethical experience,

⁶ *Inferno*, iii 51.

¹ M. Maeterlinck, *The Buried Temple*, Eng. tr., London, 1903, p. 202.

may be originated by impressions received from contact with more highly developed personalities or through a bitter experience of pain and disillusionment. A new conception of duty, a revelation of the real meaning of evil as reflected in the pain of those who have suffered through our actions, the impress of a noble spirit that rebukes our weakness and that acts as a spur to all that is not dead within us, above all, the vision of the love of God incarnate in the life and work of Jesus Christ—any or all of these may enter as new factors into the stream of our experience and may set up there new causal connexions involving far-reaching consequences. The law of continuity still holds good, for these factors, once they have entered into experience, bring about their results in accordance with the laws that govern the psychic world.

There is in repentance a certain quality of infinitude. With the penitent mood comes new insight, fresh illumination leading to an almost painful anxiety to make atonement to the person or persons wronged, to society, to the spiritual order which has been violated. The repentant man stands ready for any task however great, for any service however distasteful. Repentance is thus transformed into a moral dynamic. It reinforces the will with boundless energy; its eye is ever uplifted to new visions and greater ethical achievement. Hence the marks of genuine, as distinguished from spurious, repentance are the presence of ever new and deeper insight into duty and of a passion for atonement, which is itself part of the redemptive process. Thus the virtue of repentance is at once a gift and a task, an inspiration and a deliberate movement of the will, a present possession and a future attainment.

SAMUEL MCCOMB.

REPENTANCE (Muhammadan).—There are two words used to denote repentance in the theological vocabulary of Islām—*nadam* and *tawbah*. The former denotes merely remorse, regret, or vexation at having done something or at having left something undone. It is used especially in the poets. The 'repentance' of the satirical poet Farazdaq (A.D. 659-729), after he had divorced his wife Nawār, is proverbial.¹ The word is used also in the Qur'ān. After Cain had killed his brother, and a raven had showed him how to hide his crime, he became 'of those who repent' (v. 34; so frequently), i.e. he felt remorse (*nadam*), but it would not be said of him that he showed repentance (*tawbah*) in the religious sense. The latter word, which etymologically means 'returning'—it is, in fact, the Heb. *tēshūbah*, Aram. *tethūbah*—in point of law and religion is explained as synonymous with *nadam*.

It is defined as 'remorse for an act of disobedience (in respect of its being an act of disobedience), accompanied by a determination not to return to it, even if one has the power.'² It must be for 'an act of disobedience,' because

regret felt for doing something that is right or, at least, not wrong is not repentance. The phrase 'in respect of its being an act of disobedience' is added because regret for having drunk wine on account of its causing headache or loss of money or self-respect is not repentance. Mention of the 'determination not to return to it' is by some regarded as superfluous, seeing that that is always an element in remorse—whence they explain the traditional saying of Muhammad, 'Remorse (*nadam*) is repentance (*tawbah*).'³ The majority of the most ancient authorities do not admit the condition that ability to commit the sin again must be there. They think, e.g., that the remorse of the sinner at the point of death may be repentance. In this they are in conflict with the Qur'ān.

In accordance with its etymology, *tawbah* means in the first instance 'turning' to God. Hence the complete phrase is 'repentance unto God.' Moses regretted his request to be allowed to look upon God and said, 'I repent unto Thee' (Qur'ān, vii. 141, and frequently). In the case of those who have been brought up in idolatry or polytheism this turning to God is synonymous with 'conversion' to Islām. The convert is represented as saying, 'I repent unto Thee and am of the Muslims' (xlv. 14; cf. xi. 3, 114, and elsewhere). In this connexion, holding the doctrine of the Trinity—or, as the Qur'ān puts it, saying that 'God is the third of three'—is a form of polytheism (v. 77 f.). But, as perfection is unattainable by a mortal, penitence is a mark of the pious Muslim, not only at the beginning of his religious career, but all his life long (ix. 113, lxi. 5). Repentance is necessary and will be accepted from all Muslims who have sinned in such ways as the following: hypocrisy, i.e. strictly the hypocrisy of the citizens of Medina who pretended to acquiesce in Muhammad's authority there, whilst secretly working to undermine it (iv. 145); opposing Islām by force of arms, provided that repentance is made of free will, and not as a result of defeat in battle (v. 38); scepticism (ix. 127); idolatry (ix. 3, ii. 51); perverting or persecuting Muslims (lxxxv. 10); slandering honest women (xxiv. 5); taking interest (ii. 279); and other offences (vii. 153, iv. 20). The one sin after which there is no repentance (cf. He 6th) is that of apostasy (iii. 83), but this verse the commentators refer to the Jews,¹ and in any case the preceding verse appears to leave a loophole of escape even here. In the latest chapter of the Qur'ān, composed at a time when Muhammad could afford to be lenient, a door is opened even to the apostate (ix. 75). Apostasy is, of course, allowed under persecution. But those who die in unbelief, i.e. all non-Muslims, are lost.

'The world full of gold shall in no wise be accepted of any of them, even though he should give it for his ransom' (lii. 84).

Repentance must be sincere for sins committed through ignorance (vi. 54, xvi. 120). It should be preceded by intercession. 'Ask forgiveness, thereafter repent' (xi. 3, 54, 64, 92). The converse order, which one would expect, is also found (v. 78). True repentance is followed by faith and good works.

'Those who repent and believe and do good works (xix. 61, xx. 84, xxv. 70, xxviii. 67) repent unto God with (true) repentance' (xxv. 71).

Repentance has its counterpart in the forgiving nature of God. Man's repentance is always met by repentance on the part of God.

'Whoever repents after wrongdoing and does right, God repents over him. Truly God is forgiving and compassionate' (v. 43, and so regularly).

Man repents unto God; God repents over man. The latter phrase is equivalent to 'is sorry for

² Muhammad Tahānawī, *Kitāb Kashshaf Istīlāḥāt Funūn*, Calcutta, 1862, s.v.

him' (lviii. 14, lxxiii. 20). Al-Tawwāb ('the much-repenting') is one of the ninety-nine 'beautiful names' of God (ii. 35, and frequently; cf. J1 2¹³, etc.), though it is also used of men (ii. 222). It is also explained, however, as merely denoting 'much inclined to forgive,' or, transitively, as 'turning man to repentance'; but it is no doubt used in the same sense in both references. If God did not feel sorry for man in this way, He would always punish him. Hence the opposite of to repent (on God's part) is to punish.

'It is no business of thine whether God repent over or punish them' (iii. 123, and so elsewhere).

Fortunately God wishes to repent over men (iv. 32), but His repentance is voluntary. He repents over whom He will (ix. 15), so that it is folly in man to count upon His repenting (ix. 103).

The chief advantage following upon sincere and timely repentance is forgiveness—not as a matter of course, but as a result of the divine repentance or sorrow (ii. 51, etc.). The angels intercede with God on behalf of those who repent (xl. 7), and the Muslims are bound to treat them as brothers (ix. 11). The whole teaching of the Qur'an on this matter is well summed up in the following verses:

'Repentance is incumbent upon God only towards those who do evil in ignorance and then repent without delay. Over such God repents, and God is knowing and wise. And repentance (on God's part) is not due to those who do evil until, when death comes to one of them, he says "Now I repent," nor to those who die in unbelief. For such we have prepared a painful punishment' (iv. 21 f.).

It is worth noting that it is never said in the Qur'an of any one that he actually did 'repent unto God.'

The orthodox Muslim tradition takes little or no account of repentance. The more liberal Mu'tazilites and the Sūfis, or mystics, have more to say about it. The Mu'tazilites distinguish three elements in repentance: (1) making restitution, (2) not returning to the offence, and (3) continuance of the feeling of remorse. The orthodox (Sunnis) do not regard these as essential. They say that repentance consists of three things: (1) leaving off disobedience in the present, (2) intending to leave it off in the future, and (3) regret at having done it in the past. They hold that a Muslim may go on repenting and sinning, that (and in this the Sūfis agree with them) he may repent of one sin and go on doing others, and that his repentance of the one will count. The Mu'tazilites, on the other hand, hold that the penitent must keep himself aloof from *all* deadly sins. The Muslim who does not do so is neither a believer nor an unbeliever, but simply a reprobate, and, if he does not change, he will suffer eternal punishment.¹

With the mystics repentance occupies an important place. It is the first 'station' on the 'mystic path.' They recognize three degrees of repentance. The first is called simply repentance (*tawbah*). It is an attribute of all Muslims (Qur'an, lxvi. 8). It consists in turning from sins actually committed. Its motive is fear of divine punishment. The second degree of repentance is called *inābah* ('returning'). It is an attribute of the saints and 'those brought near' to God (l. 32). Its motive is the desire for the reward. The third and highest form of repentance is *awbah* (which also means 'returning'). It is an attribute of the apostles and 'sent ones' (xxxviii. 44). Its motive is neither fear of punishment nor desire for the reward, but the love of obedience. In it, for the mystic, everything ceases to exist except God. Otherwise repentance is said to be that of the many, that of the few, and that of the very few

(*amm*, *khāss*, and *khāss khāss*). The mystics, however, are very loose in their use of terms.

Inābah is elsewhere defined to be 'turning from the *all* to Him whose is the *all*,' or 'turning from negligence of God to its opposite and from estrangement to friendship.'²

In regard to its quality, repentance is either (1) sound, when one sins, repents sincerely, and yet falls again into sin; (2) clear or sincere (*nasūh*), when the heart becomes estranged from sin and finds it hateful, so as to be no further attracted by it (Qur'an, lxvi. 8); and (3) corrupt, when one repents with the tongue and all the while the love of sin is in the mind.

Muhammad's cousin Ibn 'Abbās defined 'sincere' repentance as 'remorse in the heart, asking forgiveness with the tongue, leaving off with the body, and resolve not to sin again.'³

Repentance is a favourite subject of homilies and theme of religious poems, such as those of Ghazālī, Bahā al-Dīn al-Āmilī, Zamakhsharī, and others. Stories in which repentance is inculcated are frequently told in connexion with Jesus.⁴ The idea of repentance bringing its reward in the present life does not seem to have occurred to the pious Muslim.

RESISTANCE AND NON-RESISTANCE.

—I. The teaching of the NT.—The term 'non-resistance' is applied to the refusal to use force sometimes only in war, sometimes under any circumstances. As we shall see, the two positions, though often confused, are by no means identical. The origin both of the term and of the idea is to be found in Christ's command not to resist evil, and the main object of this article will be to examine the teaching of the NT on the subject, together with the ethical principles involved.⁴

The chief arguments in favour of the view that it is wrong to appeal to force under any circumstances are derived (a) from the recorded teaching of Christ, (b) from the general principle of the supremacy of love involved in Christianity. Though in many cases, particularly in recent times, it is argued that the position does not depend so much on the interpretation of isolated texts as on the general tenor of Christ's teaching, there is no doubt that His actual words have in fact been the starting point. In any case we need the reminder, which is useful in many connexions, that it is impossible to arrive at the true meaning of any passage in the Bible so long as it is taken in isolation. The Sermon on the Mount itself is not the whole of Christianity, and it can be rightly understood only if interpreted in the light of the practice and teaching of Christ and His immediate followers, taken as a whole. A primary fault of Tolstoi and many of his followers is to confine themselves to a handful of arbitrarily selected sayings. Such a limitation involves not merely a lack of proportion, but also a failure to understand rightly even the passages to which attention is directed.

The central passage is:

'Resist not him that is evil [or 'evil']: but whosoever smiteth thee on thy right cheek, turn to him the other also. And if any man would go to law with thee, and take away thy coat, let him have thy cloak also. And whosoever shall compel thee to go one mile, go with him twain. Give to him that asketh thee, and from him that would borrow of thee turn not

² *Ib.* p. 74.

³ *Kitāb al-Farid*, Cairo, A.H. 1305 (A.D. 1887), pt. i. p. 299.

⁴ An interesting example of non-resistance on quite different grounds is to be found in the refusal of the Jews to fight on the Sabbath (1 Mac 2:28-29, 2 Mac 6:1). The logic of facts compelled the abrogation of the scruple (1 Mac 2:41-43).

¹ Shahrastāni, *Kitāb al-Milāl wa-n-Niḥāl*, 2 vols., ed. W. Cureton, London, 1846, i. 55; Germ. tr. T. Haarbrücker, Halle, 1860-51, i. 82.

thou away. Ye have heard that it was said, Thou shalt love thy neighbour, and hate thine enemy: but I say unto you, Love your enemies, and pray for them that persecute you, etc. (Mt 5^{39ff.}; cf. Lk 6²⁹ and the Beatitudes).

With this may be compared the recurring stress on forgiveness, in the Lord's Prayer and elsewhere, even 'unto seventy times seven.' Similar teaching, though in a milder form, meets us in the Epistles—e.g., Ro 12^{14ff.} ('Render to no man evil for evil . . . Avenge not yourselves,' etc.), Eph 4^{26, 32}, Col 3¹³, 1 Th 5¹⁵, 1 P 2^{20ff.}. These passages, taken in combination with Christ's own example of meekness and non-resistance, and the general insistence on the principles of love and brotherhood, do constitute a *prima facie* case against the appeal to force, and pre-eminently against war. We should note, however, that among the passages of this type that from the Sermon on the Mount stands alone as the most extreme and uncompromising.

We ask what indications are afforded by the rest of the NT as to a different and complementary type of teaching. Too much stress need not be laid on Christ's employment of the scourge to cleanse the Temple. It is recorded in St. John alone (Jn 2¹⁵), and the force was apparently used only against the animals. But the whole incident shows that, when Christ found Himself confronted with an abuse, He was prepared to take active measures to remedy it. More important is His attitude and that of the NT in general towards soldiers (Mt 8^{3ff.}, Ac 10, etc.). As is well known, they nearly always appear in a favourable light; there is no hint that when converted they are expected to abandon their profession, or that that profession is regarded as in itself wrong and un-Christian. Once more, the general attitude towards life adopted in the parables is significant as interpreting the hard sayings of the Sermon on the Mount. There is in fact no parable which turns on the virtue of non-resistance; the ordinary discipline and penalties of life are assumed throughout. The slothful servant or dishonest steward is dismissed; even forgiveness is not unlimited to the slave who cannot forgive others.

Finally, it is clear from the NT that force or coercion of some kind forms an important element in God's dealings with men. Without adopting the belief in a hopeless and never-ending 'hell,' penalties and discipline after death are undoubtedly contemplated for the sinner. We may believe that these will be remedial; if so, they become part of the armoury of love and forgiveness themselves. They further follow from the very gift of independence and free will. God respects man's personality and does not compel him to do right. This implies that, when he obstinately refuses to yield to the promptings of love and higher motives, force must step in, at least for the time, in order to prevent him from using his independence indefinitely to the injury of his fellow-man. And, if man is made in the image of God and is called to imitate his Father's perfection (Mt 5⁴⁸), what is right and consistent with love in God must also, with due qualifications, be right for man. If God under any circumstances can use force and compulsion, so may man; when he may do it, and whether he does not appeal to it too readily and lightly, are questions which do not affect the main principle.

It is therefore clear on the evidence of the NT itself, without appeal to any difficulties of interpretation or application, that the more extreme sayings about forgiveness and non-resistance cannot be understood quite literally as forbidding recourse to any form of force or penalty under any circumstances. We are free to ask what these sayings mean in the light of the general teaching of the NT, and are justified in applying to them

those canons of interpretation which are recognized as valid in the case of other 'hard sayings.' Orientals are wont to speak in proverbs which isolate one side of a truth. Christ constantly used the method of startling sayings worded in such a way as to force men to think. His teaching had not the precision of legal formularies; it was never His purpose to lay down a new code of fixed law or external rules. We recall sayings such as 'If any man cometh unto me, and hateth not his own father, and mother, and wife . . . he cannot be my disciple'; 'When thou makest a dinner or a supper, call not thy friends, nor thy brethren, nor thy kinsmen'; 'Call no man your father upon the earth.' None of these sayings can be, nor were they meant to be, applied literally; and the same principle holds good of the non-resistance sayings. We may note that in the quotation given above from Mt 5 the apparent absolute prohibition of force occurs in the same context as equally absolute commands to unlimited giving of goods and service which have never been consistently applied *au pied de la lettre*, even by those who have attempted to follow out the one saying about non-resistance quite literally.

These considerations hold good even of the sphere of private relationships, which our Lord evidently had primarily in mind.¹ Much more are they true of those international relationships which He did not and could not have directly before Him. (a) Without adopting the extreme eschatological view, according to which Christ's whole teaching and career were dominated by the belief in an immediate end of the world's history, it is clear that He did not deliberately contemplate or provide for a long period of historical development, nor did He legislate with a view to the relationships of independent Christian or semi-Christian communities. (b) The historical conditions of the day excluded international problems and the claims of patriotism in our modern sense. The Jews had no independent existence as a nation, and the last thing that Christ or His followers desired was rebellion in order to regain it. The Gentile was a member of the Roman Empire, and war between its constituent elements did not come into purview. It is idle to seek for a direct answer to the modern difficulties connected with war from a period in which the conditions were so completely different.

2. Ethical application.—We may hold, then, that, in spite of the *prima facie* impression made by single texts of the NT, the question of the legitimacy of the use of force, whether in war or in other forms, is really an open one, and must be decided on the general principles of Christian ethics. It will be useful to distinguish three stages:

(1) The degree to which non-resistance may rightly be carried when one's own personal interests and safety alone are directly involved must be a matter for the individual conscience to decide according to the circumstances of each case. The moral effect of a refusal to resent a blow or to resist injustice is often very great, both in dealing with those who may be treated as Christians and therefore as immediately open to the appeal of higher motives and also in dealing with the out-cast or criminal, on whom the very strangeness and unexpectedness of the attitude adopted may have a startling effect. There are, however, two caveats to be borne in mind: (a) it must be clear that the meekness is really due to the higher motive of love and not to cowardice or cynical

¹ That He was not, as is sometimes maintained, thinking only of the relation of Christian to Christian is shown by the command to go two miles with the representative of the heathen government.

indifference; in other words, it must be in keeping with the general character; (b) it must be remembered that ultimately nothing that we do has a purely private bearing, since every action has its indirect effect upon society as a whole. If an act of non-resistance, instead of converting, merely encourages the wrong-doer, obvious harm is done. To yield to blackmail in any form or, it may be, to refuse to prosecute a criminal will involve a mischief to society at large which will outweigh the good done.

(2) A further set of considerations arises when the interests of others are directly involved. It may be right in this connexion that a man should require some degree of sacrifice from his wife and family, but he is not justified in carrying it to the point where their whole welfare or even their lives are involved. Still less can he impose such sacrifice upon others on whom his claim is more remote. What would have been the duty of the Samaritan in the parable if he had come upon the scene at the moment when the robbers were about to attack their victim? It is hard to believe that Christ intended the principle of non-resistance to be applied in such a case as this. He certainly cannot have intended that a man should not use force to save his wife or family, or women and children in general, from gross outrage. And, with regard to questions of property and rights, while a man may do what he will with his own, he cannot practise an unlimited generosity when he acts as a trustee for others.

(3) The case of war, where national interests are involved, follows naturally on this principle. The responsible rulers of the State are trustees, not only for the nation as a whole, but also for future generations. If, as we have argued, the use of force is sometimes legitimate, the community cannot be debarred from using it to protect its own members, to secure their fair interests, and to defend weaker nations. Primarily this principle covers the operations of the police and criminal law, but it also extends to war. The fundamental difficulties with regard to war do not really lie in its being an appeal to force, but are due to the facts that there is no guarantee that force will be always used to uphold the right, or that it will succeed in doing so, and that the coercion is applied not merely to the actual offenders and transgressors, but to comparatively innocent members of the nation drawn into the net of war.

3. The case of war.—It is considerations such as these that have driven some who do not adopt the extreme Tolstoian attitude of refusing to use force under any circumstances to regard its use in war as always wrong. And it will be generally agreed that the efforts of Christianity and of civilized society in general must be far more definitely directed in the future than they have been in the past to the elimination of this method of settling disputes. The various suggestions for a League of Nations are really attempts to apply to the relations between peoples the principles which civilization has developed within the State as controlling the relations between individuals. In other words, the object is to substitute for the appeal to the might of the stronger the appeal to impartial justice, ascertained as completely as may be among fallible men. But it must be clearly realized, in connexion with the particular problem before us, that such schemes do not adopt the principle of non-resistance in place of force. The ultimate sanction of a League of Nations against a recalcitrant member or outsider would still be force, whether applied by economic boycott or by war, but it would be force directed as nearly as possible by the principles of law and justice. Nations will not be applying the principles of the

Sermon on the Mount in any literal sense any more than does the private individual who invokes the aid of the policeman or magistrate instead of attempting to defend or avenge himself by his own physical strength.

Meanwhile wars fought under ordinary conditions are still a fact of life, and the conscientious citizen has to decide on the attitude which he will adopt. War is admittedly at best a very rough and unsatisfactory method of securing justice between nation and nation, but from the beginning of history to the present day it has been in the last resort the only method. The appeal to war, like our existing competitive social system, has its roots deep in a past which the individual inherits and for which he is only very partially responsible. He can and should modify the future, but at any given moment he has to do his best under the actual circumstances in which he finds himself. The case is analogous to that of one who, in a country where law and police do not exist, is compelled to take into his own hands the defence of the life and property of himself and his dependents. It is quite true that the assailant may be too strong for him, but he is bound to do his best. So the citizen, when his country is involved in a war, which we must assume is regarded as a just war, must either choose the course of non-resistance and stand aloof or play his part in whatever way his capacities allow; there is no third course. One difficulty with regard to non-resistance is that the man who stands aside seldom envisages his example as followed by the majority of his fellow-countrymen, or thinks out logically the consequences which would ensue if this were to happen. He is salving his own conscience and saving his own soul, while allowing others to take what he regards as the lower course—a course which actually protects him from the result of his own action.¹ A distinction is drawn by the adherents of pacificism 'between the duty of the State and that of a pacifist individual.'² And in fact we note historically that the examples of anything like combined non-resistance have come from communities such as the early Christians, the Waldenses, and the Doukhobors, who have not felt themselves responsible for the preservation of the State under which they lived. There is, indeed, some reason in the reproach of Celsus that, if all were to follow the example of the Christians, the control of worldly affairs would pass into the hand of the barbarian and Christianity would be unable to exist; it owed its peace to the Roman Empire. Such a position cannot be final or satisfactory. The Christian is also a citizen; if it is right for a State to engage in war, it is not only right but also a duty for its citizens to support it. The State in the end consists of the citizens who compose it; it is not ethically permissible for one section to contract itself out of its obligations in obedience to a supposed higher law and at the same time to reap all the advantages gained by the rest who are following the 'lower course.' In other words, if non-resistance in war is right, it must be thought of as the attitude of the whole nation and not of a negligible minority, and the results of such an attitude must be definitely faced. If it be decided that these results would be disastrous for the nation and the world as a whole, if they would involve grave evils and sacrifices for others and for future generations, together with the triumph of injustice and the oppression of the weak, active participation in war becomes the

¹ It is admitted that the apparent success of the Quaker experiment in Pennsylvania is not decisive, since all the time the Friends were in fact protected by the British forces in the background (J. W. Graham, *War from a Quaker Point of View*, p. 46).

² J. W. Graham, *HJ* xiv. [1916] 814.

only alternative. And, if so, it should be clearly recognized that from the point of view of ethics this is not, as is often supposed, the choice of the 'second best.' The problems of ethics consist in choosing the best course which is open under given circumstances; if it is really the best, it is in the absolute sense 'right.' To say that war, or indeed any appeal to force, would be unnecessary if all men acted up to the principles of Christianity is true, but irrelevant; this is only to say that evil will not exist when the Kingdom of Heaven is fully come. We are concerned here and now with the right course to take in a world where evil does exist and where men do in fact do wrong. It takes only one to make an attack; if, as is the case under existing conditions, war is the only means of resisting such an attack, it becomes right in the fullest sense, however unsatisfactory it may be as a method of establishing justice. The mistake arises when the admission of this principle is held to absolve men from the duty of trying to work out some better method for the future, or when, with regard to the use of force in any form, it is regarded as the final solution of the problem. As against the evil-doer who refuses to obey the voice of love, force is necessary and therefore right, no less for his own sake than for that of others. But the ultimate purpose is not that he should be prevented from doing wrong, but that he should cease to desire to do so. In all cases this should be kept before the mind as the goal, and the conscience should not rest content till it is reached.

4. **Historical examples.**—For examples of attempts to apply the principles of non-resistance reference must be made to the relevant artt., esp. ANABAPTISM; DOUKHOBORS; FRIENDS, SOCIETY OF; TOLSTOI. Some account of the mediaeval sects will be found in H. C. Lea, *History of the Inquisition of the Middle Ages* (London, 1888). The Waldenses held homicide to be unlawful under any conditions;¹ though sometimes provoked by persecution to break this rule, they generally fell an easy prey to their enemies.² The Bohemian Brethren were in line with the Waldenses.³ In the case of the Cathari such tenets were connected with theories of transmigration; they refused to take the life even of animals.⁴

On the early Christians and their attitude to service in the army see especially Harnack, *The Expansion of Christianity in the First Three Centuries*.⁵ It should be noted that the refusal to serve was by no means universal, and that where it existed it was due as much to the various compliances with heathen rites and unlawful practices required of soldiers as to a belief in the unlawfulness of war *per se*. Objections were felt to the holding of civil office no less than to service in the army. With regard to the whole question, what has been said above as to the historical conditions and the absence of national wars must be borne in mind.

LITERATURE.—Reference may be made to the lists of books given in the artt. just quoted, esp. FRIENDS, SOCIETY OF; the subject is treated with more or less fullness in most works on ethics; see esp. W. E. H. Lecky, *Hist. of European Morals*⁸, London, 1888, ii. 248 ff.; H. Rashdall, *Theory of Good and Evil*, Oxford, 1907, i. ch. ix.; D. G. Ritchie, *Natural Rights*⁹, London, 1916, p. 238 ff.; J. Keating, 'The Ethics of Resistance to Law,' in *British Review*, i. [1913], no. 2, p. 31 ff. War from the Christian point of view is discussed by J. Martineau, 'Right of War,' in *National Duties and Other Sermons and Addresses*, London, 1903, p. 72 ff., and J. B. Mozley, *University Sermons*, do. 1876, p. 110 ff. Discussions in recent years (1914-17) have been abundant, chiefly in the form of magazine articles. Reference may be made to C. W. Emmet, 'War and the Ethics of the New Testament,' and W. M. Glazebrook, 'What is a Christian Nation?' both in *The Faith and the War*, London, 1915; W. E. Wilson, *Christ and War*, do. 1913, *Atonement*

and Non-Resistance, do. 1914; J. W. Graham, *War from a Quaker Point of View*, do. 1915; W. L. Walker, *The War, God and our Duty*, do. 1917, p. 101 ff.; H. L. Goudge, in *The War and the Kingdom of God*, do. 1915, p. 26 ff.; L. S. Thornton, *Conduct and the Supernatural*, do. 1915, p. 199 ff.; R. B. Gavan Duffy, 'War and the Christian Ethic,' *ib.* p. 213 ff.; R. K. Richardson, 'Resist not Evil,' *ib.* p. 225 ff. C. W. EMMET.

RESPONSIBILITY.—Responsibility is the human sense of answerableness for all acts of thought and conduct. Christian responsibility is answerable to the ideal set up by Jesus. About responsibility two things have to be considered: its relation to freedom of choice, and the object to which it is answerable; and of Christian responsibility two further matters require elucidation: the extended sphere of answerableness in the light of Christ's teaching, and the unique attitude of Jesus to the human conscience.

i. *Responsibility and freedom of choice.*—With the various theories invented to explain or account for freedom (see art. FREE WILL) the religious consciousness has little to do. Any theory which leaves free choice a real function of man is consistent with the Christian view, as any explanation which would destroy its reality is out of harmony with Christian experience. The pleas urged, the sanctions offered, and the rewards promised by Jesus have no force unless men are able to accept or to refuse higher duties. 'Without real freedom of choice there could be no real moral responsibility; and the sense of it, if it were still felt, would have, like the sense of freedom, to be classed as an illusion' (Shadworth H. Hodgson, *The Metaphysic of Experience*, London, 1898, iv. 120). In His dealing with men as free agents Jesus acknowledged and endorsed the ordinary sense of responsibility.

To the religious mind this is never, however, an absolute freedom; for over, around, and within the religious state is the immanent presence of God. It is a freedom within gracious boundaries, within the full tide of Divine love and mercy. As the founder of a new religion, Jesus was conscious of the Divine power working in His favour; if men believed in Him, it was the result of the Father's drawing (Jn 6⁴⁴); if He can count on the devout discipleship of some of His followers, it is because God has given Him these sheep (10²⁹); and, if humble Christians credit their faith in Jesus, without peril to human responsibility, to the election of God, they are of the same mind with their Master (Ro 8²⁸⁻²⁹). How human freedom and the kindly control of God can comport together in any philosophical theory has not concerned the religious, who have with extraordinary persistency declared both, and held them somehow reconcilable.

Jesus further acknowledged the impoverishment of personal freedom by continued moral indifference. To the Jews who boasted of Abraham as their father Jesus replied that their inability to recognize His message as a deliverance from God was due to their kinship with the devil (Jn 8⁴⁴). There is here no reference to any original difference in the natures of men, but an assertion of the obvious moral fact that minds debauched by low motives may become insensible to the attractions of the heavenly offer. This fatal obstacle was one of their own making, and was not their misfortune but their fault. Moral insensibility may not absolve from responsibility.

ii. *The object to whom or to which responsibility is owing.*—Modern teachers have described the object to whom answerableness is due as either oneself or one's neighbour or one's God; but, as the enforcement of each of these spheres of duty lies with the conscience, the subject is really

¹ Lea, i. 80.

² *ib.* ii. 150.

³ *ib.* ii. 562.

⁴ *ib.* i. 99.

⁵ Eng. tr., London, 1904-05, ii. 204 ff.

responsible to conscience as the authority which imposes commands. For the most part Jesus accepted the popular Jewish sense of responsibility, which was essentially answerableness to God. For every idle word men shall give account in the day of judgment (Mt 12³⁶); the obligation to seek perfection rests upon men because they should be as their Father in heaven (5⁴⁸); and, though our Lord lays down strict duties to our neighbour, love to enemies, almsgiving to the poor, and feasts for the hungry, these duties are substantially obligations to God, for so men will be 'the children of the Father which is in heaven.' All duties to neighbours clothe themselves in our Lord's mind with the august authority of duties towards God.

After the same manner He conceives obligations for which a man is responsible to himself—these are indeed duties towards God. Men owe it to themselves to accept the higher ideal when they see it. So Jesus went preaching the Kingdom of Heaven and summoning men to repent. Blessedness, the chief aim of ordinary life and the perennial cry of self-preservation, was to be sought, according to Jesus, in such states as meekness, poverty of spirit, and peace-making—all these, however, that they 'may be called the children of God.' Responsibility to self may imply the subordination of every interest to that of the Kingdom of Heaven; and the reason offered is, 'Thou shalt have treasure in heaven,' *i.e.* with God. (Here again the religious consciousness is pre-eminent, and responsibility for self-culture is obligation to God, who provides men with opportunities rich in moral possibility.)

In one word, duty to God absorbs duty to self and to neighbours; for self is conceived as always and only properly a child of God; and neighbours, whether good or bad, desirable or otherwise, are conceived as deserving of our benefaction because they are all the recipients of God's loving-kindness (Mt 5⁴⁵).

iii. *Extended sphere of answerableness in the light of Christ's teaching.*—It is the unique distinction of Jesus to have at once enlarged the sphere of responsibility and intensified the feeling of it. Our Lord expanded the idea of one's neighbour, who is not only the man of one's own nation, but any person whom circumstance gives one an opportunity of helping (Lk 10²⁵⁻²⁷). With the parable of the Good Samaritan vanish all the artificial boundaries by which men have sought to confine their neighbourly obligations. Among friends, again, the Master has included the poor, whom He obliges us to ask to our feasts, though they cannot ask us in return (Lk 14¹⁴). A new set of obligations to hospitality are thus laid upon the disciples of Jesus. Still more wide does the horizon of responsibility become when He obliges us to include in our friendship all men, friend and foe alike, those who persecute us and those who spitefully use us (Mt 5⁴⁴). No man may be treated by us otherwise than in love. The last acre of foreign territory is brought within the sphere of human obligation when Jesus, who expects to be taken as an example, announces that He came to call not the righteous, but sinners (Mt 9¹³). Among those to whom we owe duties for which we are answerable to God must be included the outcast and the degraded. So extensive a field of responsibility may be the despair of a moralist, but it is the free-chosen territory of the disciple of Jesus.

Having annexed all mankind under the obligation of love, Christ proceeds to enhance the sense of responsibility. Not only the outward act, but the inner thought has to be answered for. As well as for murder, so also for the angry thought from which murder issues, a man must hold himself answerable (Mt 5²²). Not only for licentious deed,

but also for unholy imagination is there responsibility (v. ²⁸). To offer prayer is good; but, if popularity has been the motive, only punishment can follow (6²). High and insolent deeds will provoke a just reward; but high thoughts are in no better state, for humility is a duty (18⁴). As a matter of fact, the obligation to be moral is an obligation to preserve the heart in purity and love, 'for out of the heart are the issues of life' (15¹⁹). The culture of morality is the culture of the heart.

Besides extending the sphere, Jesus adds a higher quality to moral responsibility. The idea of self-preservation is enhanced when the things which are worthy of our search are meekness, mercifulness, purity, and peacemaking. Indeed, the duty of self-culture is so described by Jesus as to include the lofty conception of a sacrifice of the lower nature—a sacrifice not only desirable but necessary (Mk 8³⁵). In the same way the obligation to forgive enemies is enhanced. An enemy is to be forgiven not only seven times, but 'until seventy times seven' (Mt 18²²). To an unstinted and uncalculating forgiveness the disciples of the Master are bound. And, with the demand for love towards all men, human duty is raised to the height of Divine perfection. The kind of affection which Christians are to entertain towards each other and, by inference, to all men is a love such as existed between the Father and the Son (Jn 15⁹). In this way Jesus has both extended and intensified moral responsibility.

The secret of this new moral content and new moral intensity must be sought in Christ's high conception of God's fatherly relation to men. It is God's loving-kindness that obliges men to seek first the Kingdom of Heaven (Mt 6³³); the same reason is given for the duty of unstinted forgiveness (18³⁶); a similar ground provides the obligation to a cheerful acceptance of God's will (7¹⁴); and the same tender mercy calls men to the exercise of a gracious and thoughtful love (Lk 7⁴⁷). God loves His creatures, desiring above all that they should become His children; and in that tender, holy desire lies the secret of that sense of responsibility which Jesus has at once extended and intensified.

With the sense of childhood in God's family and in enjoyment of the Divine favour, the burden of responsibility, felt so heavily under all merely moral systems, is greatly eased. Love makes obligation light; the love of God turns duty into pleasure. In that relation the yoke of sonship becomes light, and the strictest obligation easy. Whom Jesus makes free are free indeed (Jn 8³⁶). By turning the hearts of men to the love of God, Jesus at once increased the sense of responsibility and relieved its burden. How easily a child of God carries this enhanced moral obligation may be gathered from St. Paul's magnificent claim of perfect freedom in Ro 8.

iv. *The unique attitude of Jesus to the sense of human responsibility.*—Jesus has somehow contrived to thrust Himself in between a man and his conscience, or—for it is the same thing—between a man and his God. At the outset of His public career every hearer recognized the moral superiority of our Lord, and felt a weighty pressure in His commands (Mt 7²⁹). Nor was this authority denied by Jesus; on the contrary, He emphasized His right to impose new commandments. The fathers of Israel had given certain orders, but Jesus gave new ones, introducing the opposite duty with these words, 'But I say unto you' (5²²). Passing through the gamut of accepted commandments, Jesus quietly enforced new and, in some cases, opposing responsibilities. As His public career advances, Christ identifies Himself more completely with the moral law, demanding of men an obedience such as was due only to the supreme moral Governor of the

world. Confession of His name He describes as a moral obligation, for such He will confess before God (Lk 12⁸). Responsibility to Himself Jesus accepts as superior to any other moral obligation; indeed, His word has the right of a moral imperative; so children are, if need be, to renounce duty to father and mother (14²⁶). The right to become a conscience to every man is fully claimed by Jesus, and men are invited to take upon themselves His yoke (Mt 11²⁹). Indeed, Jesus may say that the only true good can be found in life by that man who yields Him such unflinching obedience as is due only to the moral law (Lk 14³⁷). Not to obey Jesus, at whatever cost, is to miss being His disciple, and that is, in Christ's judgment, equivalent to moral suicide. Finally, Jesus wholly identifies Himself with the moral law, for He makes fidelity to His person the supreme test of men. Describing the last judgment, always considered the dread function of God alone, Christ speaks of Himself as returning in glory to judge the world, when the sole criterion of blessing or condemnation will be, 'Ye did it unto me,' or 'Ye did it not unto me' (Mt 25^{40, 45}). In the whole history of the study of human responsibility this is a unique claim—a claim which was not only not resented, but openly and frankly recognized by men and women who found His authority the exact equivalent of God's. In this lonely isolation Jesus stands pre-eminent in the record of morals.

The Fourth Gospel presents this extraordinary claim in a different and more winsome light. Here Christ's sonship with God is the basis of the gospel message; and the moral obligation to Jesus takes on the familiarity and the sweetness of brotherly affection. Jesus does not in this Gospel so much demand obedience as the representative of the moral Governor of the world as He asks for love and trust in Himself as the complete manifestation of the heavenly Father. For obedience the warmer attitude of trust or faith is demanded. The story of the Samaritan woman is evidently told to show how this love to Jesus may come to birth (ch. 4). Honour to the person of Jesus is honour done to the Father (5²³). The will of God is conceived by Jesus as an obligation to believe on the Divine Son (6²⁹). Judgment was passed on the unbeliever by the very words which Jesus spoke, for He spoke the words of the Father (12⁴⁶⁻⁴⁸). The final appreciation of any man's life is decided by his attitude to the Person of the Redeemer. 'He that believeth not is condemned already' (3¹⁸). The crown of this high claim is the assurance that a friendly knowledge of Jesus is necessary to eternal life, i.e. to the sum of human blessing: 'This is life eternal, that they might know thee the only true God, and Jesus Christ, whom thou hast sent' (17³). This claim for loving trust, and this identification of Himself with the Father God in the Fourth Gospel, are clearly the brighter and more attractive equivalents for the unhesitating obedience and the identification of Himself with the Supreme moral Ruler of the world in the Synoptics. Towards Jesus every man has a duty, and on the correct sense of responsibility to Him depends the final prize of life.

LITERATURE.—The subject is not treated by itself in any book of Christian ethics. The only books, besides Commentaries on the various NT passages, are Newman Smyth, *Christian Ethics*², Edinburgh, 1893, pt. ii. ch. i., 'The Christian Conscience,' and H. H. Wendt, *The Teaching of Jesus*, Eng. tr., do. 1892, sect. iii. ch. iv., 'Righteousness of the Members of the Kingdom of God'; but even these are only indirectly useful for the subject.

DAVID FYFFE.

REST-DAYS.—See SABBATH (Primitive).

RESURRECTION. — See ESCHATOLOGY, STATE OF THE DEAD.

RETALIATION.—The term 'retaliation,' as its etymology indicates, means paying back in kind, like for like, whether benefits or injuries—though very significantly for human nature it has come to be used almost exclusively in the worse sense of returning evil for evil, blow for blow. The term 'requital' may be regarded as almost equivalent in connotation to 'retaliation'; it, however, rather emphasizes the more friendly aspect of reciprocity, the returning good for good, and it may even be employed to convey the notion of the return of good for evil, though in 1 S 1²⁵ it is used in the worse sense: 'He hath requited me evil for good,' and in Gn 50¹⁸ Joseph's brethren contemplate that he will requite them the evil they have done him.

1. Ethical signification.—From the ethical point of view, retaliation seems to interpret punishment as retribution; a man's evil-doing is to be returned upon his own head; he is to receive the just reward of his deeds from the injured society or individual as a *quid pro quo*. There is in this view an apparent appeal to that primitive idea of justice which contained an element of vengeance. The modern common theory of punishment does regard the infliction of punishment as a penalty upon wrong-doing of this nature, but judicially imposed, and without any element of personal resentment. Retaliation, however, implies the existence of some personal feeling, and a desire to balance the account with an amount of loss or suffering equivalent to that inflicted. In warfare the principle of retaliation takes the form of meting out to an enemy like treatment to that which he has practised—plunder, outrage, burning and destroying, etc. In this connexion its usage conveys only an evil import; the ruling maxim is injury for injury, 'an eye for an eye and a tooth for a tooth': whatever methods of a hostile kind are adopted by one party call forth reprisals, and *en revanche* the principle of retaliation justifies the infliction of injuries like in kind and degree to those which were committed. A similar connotation is implied in its application to all cases of rivalry, struggle, and competition; whenever the action of one party exceeds the bounds of reasonableness, fairplay, or good taste, it may, by creating resentment, provoke retaliation, i.e. a like departure from the methods of fair and honourable competition.

The problem involved in this aspect of retaliation has been raised in an acute form by the conduct of Germany in the European War—by her brutalities, murders of citizens, ruthless cruelties, starvation of prisoners, raiding of villages, diffusion of disease-germs. Are these methods of warfare to be copied and adopted by her opponents for self-defence on the plea that it gives an enormous advantage to the enemy if there be no reprisal in kind? On ethical grounds the answer is that practices cruel, brutal, and abhorrent to human sentiment cannot be met by retaliation in kind. We may not adopt methods of warfare which are condemned by the moral sense of the nation as inhuman; such proceedings can be countered only by the sternest and most determined efforts to vanquish the enemy through the employment of every legitimate mode of warfare, to destroy his powers, and so render such barbarities impossible in the future. We could not hope to be finally successful by measures which destroyed our own self-respect and reduced us to the same level of savagery; such a victory would be worse than a defeat. Our real aim in the conflict should be to establish such conditions as will render it impossible for such a war ever to recur.

2. As a fiscal policy.—The operation of the principles of retaliation, however, finds its strongest

illustrations and its most significant application in the domain of international commerce. Here it is apt to arise whenever a nation sets up tariff barriers which obstruct international trade, with the avowed object of promoting certain home industries by the exclusion of foreign competition.

The direct economic result of this fiscal policy is to diminish foreign trade, to stimulate the production at home of certain kinds of goods previously imported, and thus to check their production for exportation by their foreign commercial rivals. Naturally this proceeding rouses a feeling of resentment and wrong in the countries whose trade is injured, which often finds vent by calling into existence retaliatory tariffs.

The retaliatory spirit is favoured by the apparently militant attitude of the protective country, and the cry is raised, 'They strike us with their tariffs; let us strike them back again.' The movement gains support from some who, while professedly believers in free trade, yet entertain doubts as to the advantage of what is described as 'one-sided' free trade. Retaliation is then adopted either for the purpose of punishment, and to gratify the feeling of resentment, or with the deliberate aim of placing the offending nation in a position deemed favourable for compelling it to reduce the objectionable tariff. In either case the real object of trading, which is the satisfaction of wants by means of imports, is lost sight of, and the attention is riveted on exporting. The tariff of A checks the exports of B to A; this is regarded by B as a hostile act, and one to be met with a retaliatory tariff, which will hit A back; perhaps it may become a basis for bargaining with A and for inducing A to lower the tariff in some degree. Both countries alike in this conflict overlook the fundamental fact that the whole object of trading is to increase the power of consumption and the amount of enjoyment by obtaining commodities on the best terms; also that exchange (whether home or foreign) increases this power by adding to the productivity of labour, and eases life by enabling individuals to use their own skill and natural gifts to the fullest advantage. They further ignore the fact that their own products are the means by which alone they can purchase the products of others, and that the highest efficiency for both parties is attained by specialization of labour and the free exchange of the results of their own industry. The deeper analysis of the advantages of trading places the emphasis upon *imports* of desirable things, for the obtaining of which *exports* must be offered in exchange. Trading is seen to be thus a mutual benefit; the relative superfluities of each country are given in exchange for the cheaper or more desirable products of other countries; and, as the exchange is voluntary, it will not take place unless both countries find their benefit therein. Protective tariffs, by limiting this power, lower efficiency and injure the country which imposes them; they administer a blow to its own powers of consumption. Retaliation, whether as a penalty or for gaining concessions, means the adoption of the same tariff policy as is resented in the foreign country, which has had the effect of contracting mutual trade. It is an illogical proceeding and a delusion. For, if tariffs are beneficial to the nations that impose them, why should they ever remove them? If they are not beneficial, but are admitted to be an economic blunder, why should other nations copy them? And in what sense can it be profitable to put up barriers that are mischievous, merely in order to lower them under a compact with other nations to do the same? The defence is usually on political grounds, but experience has fully demonstrated two invariable results of this tariff

policy: (1) that, when tariffs have once been adopted, it is extremely difficult to remove them, since interests are created that are always opposed to their reduction; that tariffs beget tariffs is the lesson from every country; (2) since tariff legislation is deemed an unfriendly proceeding on the part of those who thus exclude the goods of other countries, it creates ill-feeling, provokes resentment, and leads to retaliation and tariff wars, which destroy trade, create discord, and may incite to other forms of strife. Notwithstanding the fact that retaliation is a double-edged weapon, recoiling upon those who use it, it has been employed very frequently, and by most civilized nations.

3. An economic fallacy.—One of the most cogent arguments for the imposition of tariffs is the erroneous belief that taxes may be extracted from foreigners by means of duties on imports. Even were it the fact that the exporter paid the duty by a reduction of price (which can, however, occur only in the very exceptional circumstance that the importing country possesses a market monopoly), a system by which two nations levy taxation upon each other can be only a very expensive and clumsy system of raising revenue, and one that inevitably offends every canon of taxation.

Much of the prevalent fallacy respecting international trading rests on the mistaken supposition that trade is a species of gambling, in which the gains of one nation are invariably made at the expense of another. When it is fully realized that all trade is but exchange, entered into voluntarily on both sides because it is profitable, and further that different countries can secure a larger amount of enjoyment from their industrial efforts by devoting themselves more exclusively to those tasks in which they respectively excel, then only will the belief in retaliation as an instrument for regulating foreign trade disappear.

4. Evils of protective tariffs.—It should be noticed that all tariffs of a protective character are a cause of great and unproductive expense: they involve elaborate machinery for the collection of duties that realize little as revenue; and, since they tend to call forth evasion and smuggling, they also call into existence other modes of expenditure which are necessarily incurred to check and punish those offences. Further, nothing is more convincingly proved in connexion with protective tariffs than their demoralizing influence upon the public; they tend to become the instruments of persons unscrupulous in the pursuit of gain, who seek to employ them as means for securing monopolies.

It is admitted that retaliatory methods do often lead to the adoption of commercial treaties between nations, which by special mutual concessions reduce in some degree the mischief created by the tariffs; but, inasmuch as the operation of these treaties is limited to certain countries, they generally give offence to countries excluded from them, and thereby give rise to other retaliatory tariffs by those nations; the favoured nation system thus tends to produce different results in the two directions. But retaliation is by no means a necessary antecedent to commercial treaties; most countries raise some part of their public revenue from duties upon luxuries, imported or home-produced; e.g., Britain raises revenue upon imported wines and spirits. There is scope for arrangements under commercial treaties to modify such of these duties as may be found to act in a peculiarly onerous manner, without entering upon the unprofitable field of protective duties. Thus retaliation or reciprocity is possible even through the agency of revenue duties, though it is much

more difficult in application, limited in scope, and less effective, since the objects of taxation in such cases are generally either luxuries or monopoly products.

5. **After-war relations.**—The fierce conflict in which Germany has involved Europe by her violent and unprovoked attempt at conquest has for a time destroyed all possibility of trade relations between her and those whom she has made enemies.

The question has been raised, Will trade relations be renewed after peace? Does not this war demonstrate the dangers of international trading and dependence upon other countries for products? Is it not wiser and more economic to be self-contained and independent, especially for a great nation with colonies which produce many necessities and are capable of constituting a large market for her manufactures? Shall we not retaliate upon Germany by refusing trade relations after peace has been proclaimed and rather develop our own resources and independence?

Anti-Free Traders have seized the opportunity to advocate this exclusiveness on the ground that it will be economic by developing our own resources, and will enrich the country by the growth of many industries for whose products we have hitherto depended upon Germany.

To discuss this project is to repeat the whole argument for free exchange, the economic advantages of which have been demonstrated.

War is by its nature destructive, abnormal, wasteful; it admits of no economic justification; it is based upon hostility, and its aim is utterly uneconomic. If enmity and hostility between nations were to become the chronic relation, there would be no object in discussing the advantages of trade, for such trade could not exist. But a different set of conditions is created by peace. Well-being, progress, and development are then the aim. Progress demands specialization of faculty and resources, and implies exchange and mutual dependence; and it can be shown that the wider the area of economic relations the greater the economic gain. Therefore no argument against free trading can be deduced from a state of war.

The only problem is how intercourse can be renewed after the war with a nation which has committed such gross offences against civilization and morality. It is conceivable that Britons might decline trade relations with a nation guilty of such depravity on moral grounds and from a feeling of resentment. This is a different motive from that which demands that trade with Germany should be checked in the economic interests of Great Britain. Any limitations of free exchange must be a reduction of economic advantage and a loss; but individuals and nations may be willing to suffer loss for conscience' sake. Increase of trade is not the only aspiration of nations, or indeed the highest; its benefits stand after those of morality. Economic advantages, however, tend on the whole to peaceful relations among nations who wish for mutual peace and prosperity. While, therefore, the bitter feelings created by German methods of war remain, they will be an impediment to renewed trade relations, and thus may favour the views of protectionists; this does not demonstrate the economic desirability of fiscal retaliation; it illustrates the bitterness and distrust created by German aims and methods. When peace is assured and time shall have modified these bitter feelings, the advantages of inter-trading will assert themselves. Free trading is both a result and a cause of friendly relations; it postulates peace and makes for peace. But men will often sacrifice profit rather than deal with those whom they distrust.

6. It is almost superfluous to add that retaliation

in the rarer and nobler form of reciprocity in good works can result only in mutual benefit and esteem, whether between individuals or between nations; it tends to the creation of an *entente cordiale*, which is a source of confidence, goodwill, and happiness, and is a state productive of moral and material well-being to all whom it embraces.

G. ARMITAGE-SMITH.

RETREATS.—The object of a retreat is that a soul in solitude with God may learn more of His being and truth and will, and may become more completely dedicated to Him and His service. Some effect has been given to the underlying principle in many forms of religion. There are instances both in the OT and in the NT. Retirement, with its opportunities for prayer to God, was used by Moses, Elijah, St. John the Baptist, our Lord Himself, and probably by St. Paul in Arabia. In the early Church and in the Middle Ages the advantages of solitude for communing with God were abundantly recognized. But the systematization of retreats and the organization of them as carefully arranged aids to spiritual life are among the religious practices which are due to the Counter-Reformation. The beginning was in the method described in the *Spiritual Exercises* of St. Ignatius Loyola (*q.v.*).

The plan of the *Exercises* contemplates a period of four weeks, the word 'week' indicating not necessarily seven days but such a time as may be needed for the course of meditations in consideration of the spiritual faculties and condition of the person making the retreat. The plan contains a scheme for the disposal of time and rules for occupations and prayer. The meditations for the first week, after defining the end of man to be the service of God and the attainment of salvation in this service, are on sin as seen in the sin of the angels, of Adam and Eve, of the retreatant himself; on hell; on death; on the last judgment. The meditations for the second week are on the Incarnation and the events of our Lord's earthly life as far as Palm Sunday and the preaching in the Temple. Those for the third week are on the Last Supper, the Agony in the Garden, the Arrest, the Trial and Condemnation, the Crucifixion and Death, the Burial. Those for the fourth week are on the Resurrection, the Appearances after the Resurrection, and the Ascension. The series for the first week concerns the Purgative Way, the object of which is to increase hatred of sin and to deepen penitence. Those for the second and third weeks concern the Illuminative Way, and the object is to set before the soul the example of Christ and to lead it to closer imitation of Him. That for the fourth week concerns the Unitive Way, which has as its aim to bring the soul into closer union with God. An important place is filled in the second week by the consideration of the two standards under which man has the choice of enlisting—the first that of Christ, the other that of the devil—and of the three classes of (1) those who are reluctant to bear the consequences of following Christ and desire to postpone the sacrifices which are involved, (2) those in whose desire to follow there still are reserves, and (3) those who are prepared at once to make all the surrenders which the following of Him may require. The director is instructed to vary the details and the proportion in the use of the *Exercises* according to the capacities and the needs of the person using them.

In the system founded by St. Ignatius Loyola a retreat of thirty days spent in silence and prayer with meditations on the *Exercises* was a preliminary to entrance into the Society of Jesus; a retreat of eight days similarly based on the *Exercises* became a yearly custom in the Society; and retreats were conducted in houses of the Society for others than its members. Following the example of St. Ignatius, many leaders in religious life promoted retreats for clergy and the laity, men and women. Notable among these were St. Charles Borromeo,

St. Francis de Sales, St. Vincent de Paul, Pierre de Bérulle, and Jean Jacques Olier. During the 17th cent. the use of retreats spread rapidly throughout the Roman Catholic Church. In the closing years of the 19th cent. and the early years of the 20th a great development took place, beginning in France and extending thence to Belgium, Holland, England, and elsewhere, by which retreats, from having been for the most part confined to clergy or lay people of special devotion or passing through some special crisis in life, came to be extended to large multitudes and especially to men and boys, women and girls, of the working classes. These have naturally been of a less severe character than the earlier retreats, lasting for a shorter time, such as three days or one day, with times for conversation and recreation allowed.

Retreats of a definite character were introduced into the Church of England soon after the middle of the 19th century. In Feb. 1856 a retreat for clergy, lasting from Monday to Saturday in one week, was held at Chislehurst under the auspices of the Society of the Holy Cross. In July 1856 a retreat for clergy, lasting for the same time, was held in E. B. Pusey's house at Oxford. An element in both these retreats was that, in addition to their devotional setting and practices, there were conferences on theological and spiritual subjects. One result of the Oxford Movement (*q.v.*) was that many clergy and some devout laymen and women formed the practice of making a retreat from time to time. The general features of these retreats were taken from those customary in the Church of Rome. In many cases they have lasted for three or four days; there have been two or three or four addresses on each day; silence has been preserved throughout; the time has been devoted to prayer and communion with God. Much work in promoting such retreats was due to the Society of St. John the Evangelist at Cowley and its first superior, R. M. Benson, and to the English sisterhoods. Retreats for business men from Saturday night to Monday morning have long been a prominent part of the work of the St. Paul's Lecture Society at St. Paul's Cathedral. In the 20th cent. many retreats and devotional gatherings or conventions bearing some resemblance to retreats have been organized on a wider scale.

In the last few years the meetings for spiritual help and edification which have long been customary among Nonconformists have in some cases assumed a form more like that of a retreat, though usually without the continuous silence and with discussions or conferences forming part. There have been instances of these among the Wesleys, the Baptists, and the Congregationalists.

Experience has shown the high practical value of retreats in their influence on spiritual life. The present tendency is largely to extend their sphere and to lessen their intensity. Obviously there is need of great differences as to their length and as to the degree of completeness which is to be observed in the withdrawal from the world and its ordinary occupations which is their most distinctive feature. The severity which may be most valuable for those called to special kinds of life, and for those far advanced in the use of prayer, would only be crippling to many of those living an ordinary life in the world or to the young. But it is essential that the more complete and severe retreats should be maintained for those for whom they are suitable; and the special point of a retreat is lost unless the devotion in it is sustained and empowered by continued solitude of the soul with God.

DARWELL STONE.

RETRIBUTION.—See REWARDS AND PUNISHMENTS, ESCHATOLOGY.

REUCHLIN.—Johannes Reuchlin (Capnio)¹ was a pioneer and a leader of the humanist movement in the early stages of the Renaissance, especially as regards the study of Hebrew. He was a man of varied gifts, interests, and activities—a striking and attractive personality. He was an accomplished scholar and teacher of Classics and Hebrew, and wrote important works on these subjects; he was a professional lawyer and held appointments as a judge; he was a man of affairs and acted as confidential adviser and agent of some of the leading German princes.

1. Scholar and legalist.—Reuchlin's career may be briefly sketched as follows:

He was born at Pforzheim in Baden, 22nd Feb. 1455; his father was an official of the Dominican monastery there; his Latin studies in the monastery school laid the foundation of his classical scholarship. After a brief stay at the University of Freiburg, he was appointed in 1470 companion and tutor to Frederick, son of the Markgraf Charles I., of Baden, and accompanied his pupil to the University of Paris. Here he began Greek, was a pupil of John à Lapide, and made the acquaintance of Rudolf Agricola. In 1474 he went to the University of Basel, where he took his B.A. in 1475 and his M.A. in 1477. He studied Greek under Andronikos Kontoblakas, had relations with Sebastian Brant and John Wessel, and began his career as a public teacher by lecturing on the Greek language and on Aristotle in the original. He then returned to Paris for a while, and read Greek with George Hieronymus. Next he adopted law as a profession, and studied at the University of Orleans in 1478-79, taking his LL.B. in the latter year, and maintaining himself by teaching Greek and Latin. In 1481 he was made licentiate of laws at the University of Poitiers.

He now went to Tübingen, intending to become a lecturer there, but, on the invitation of Count Eberhard of Württemberg, he became confidential secretary and agent to that prince. From this point till 1520—*i.e.* till towards the close of his life—he continued in such employment and in the pursuit of the legal profession as advocate or judge. In 1484 he became doctor of laws. He remained with Eberhard at Stuttgart till the death of the latter in 1496. Reuchlin's marriage may probably be placed early in this period; he had no children, but was greatly attached to his sister's grandson, Melanchthon. In 1518 he recommended Melanchthon to a post at Wittenberg, and so brought him into connexion with Luther. Later, however, Reuchlin's attitude towards Luther was unsympathetic.

His political and legal duties did not prevent Reuchlin from continuing his work as a scholar. Indeed, his journeys in the service of his patrons gave him fresh opportunities of study and brought him into contact with many of the most distinguished leaders of literature and learning. In company, first with Eberhard in 1481-82, then with a son of that prince in 1490, he twice visited both Florence and Rome, came under the influence of the brilliant scholars of the Medicean Academy and especially of Pico della Mirandola, and profited by the learning of the Greeks, John Argyropoulos and Demetrius Chalkondylas. From about 1485 he was busy studying Hebrew; in 1492 he went on a mission to the Emperor Frederick at Linz, who conferred on him a patent of nobility. On this and on a later visit to the imperial court he studied Hebrew with a court physician, a learned Jew, Jacob ben Jehiel Loans, and utilized his newly-acquired knowledge to study the Kabbala; later, while visiting Rome in 1498, he was indebted for further instruction in Hebrew to the Jew, Obadiah Sorno.

On the death of his patron in 1496 Reuchlin lost the favour of the court of Württemberg. He removed to Heidelberg, and eventually entered the service of the Elector Philip. A revolution in 1498 brought him back to Württemberg, where he held an important judgeship till 1512, when he gave up this office, and devoted himself to scholarship for the remainder of his life, having his home in the neighbourhood of Stuttgart—except that in 1520 he was Professor of Greek and Hebrew at Ingolstadt.

¹ 'Capnio,' as an alternative name, was Græcized from 'Reuchlin,' after the fashion of the times; it did not, however, supersede the original, as 'Melanchthon' did 'Schwartzzerd.'

under the auspices of William, Duke of Bavaria, and in the winter of 1521-22 he lectured at Tübingen. In the early summer of 1522 he died at Bad Liebenzell, whither he had gone for his health.

2. The Reuchlin controversy.—Unfortunately the last years of Reuchlin's life, from 1509, were harassed by the famous controversy which is named after him, but in which he was involved without any fault or desire of his own. A converted Jew, Johann Pfefferkorn of Cologne, anxious for the conversion of his fellow-countrymen, initiated a movement to deprive the Jews of all their books except the OT. He asked Reuchlin for his support, but was refused; a little later the emperor Maximilian instructed the archbishop of Mainz to form a commission of scholars, including Reuchlin, to report upon the matter.

Eventually the archbishop obtained written opinions from the members of the commission; most of them were favourable to Pfefferkorn, but Reuchlin was adverse. A bitter controversy arose, adorned with the usual personalities. The two antagonists mutually accused each other of heresy and appealed to the emperor, the pope, the universities, and other authorities. The universities condemned Reuchlin; the emperor and the pope sought to mediate; Reuchlin was warmly supported by the humanists in the *Epistolæ Obscurorum Virorum* (Tübingen, 1514-17) and in other writings. He had also the enthusiastic support of Luther and Karlstadt. The dispute took the shape of formal litigation, which continued with varying fortunes till 1520. Decisions were given in favour of Reuchlin at Rome in 1516 and at Frankfurt in 1520; the former finding was quashed, the latter reversed by the pope. In 1517 Luther had published his theses, and thus his support was disastrous for Reuchlin. In the rising storm caused by Luther's agitation, however, the minor controversy was lost sight of, and the veteran scholar was left in peace for his few remaining days.

3. Chief works.—Reuchlin's more important works may be classified as follows:

(a) *Linguistic.*—A Latin dictionary, *Vocabularius Breviloquus*, 25 editions between 1475 and 1504; *de Rudimentis Hebraicis*, a Hebrew lexicon and grammar, first published in 1506.

(b) *Mystic.*—*De Verbo Mirifico* (1494), *de Arte Cabbalistica* (1517), which attempt to extend the Jewish theosophy of the Kabbala to Christianity and to apply it in the interests of apologetics.¹ These works are mere literary curiosities, and have no permanent value. Waite believes that Reuchlin 'was the first to point out that the Hebrew name of Jesus was formed of the consonants of Jehovah יהוה with the addition of the third letter Shin יֵשׁוּעַ—i.e. Jehoshuah. He quotes a large number of post-Zoharic writers on Kabbalism.'²

(c) *Controversial.*—Mainly in connexion with the polemic against Pfefferkorn and the Dominicans, especially *Judenspiegel* (1511), which includes his report to the archbishop of Cologne on the question of the confiscation of Jewish literature. Pfefferkorn had previously written *Judenspiegel* (1507), a fairly moderate discussion of the Jews, and *Handspiegel wider und gegen die Juden* (1511), an attack on Reuchlin.

(d) *Various.*—A pamphlet, *Liber Congestorum de Arte Predicandi*, mentioned by E. O. Achelis³ as a pioneer work in modern homiletics; two Latin comedies, *Sergius* and *Henno*, in the style of Terence.

4. Services to Hebrew and Greek learning.—The chief importance of Reuchlin for the history of religion lies in the services that he rendered to the study of Hebrew and in the fact that he bore the brunt of the first great controversy between the humanists and the obscurantists; these two features of his work were closely connected, but it is convenient to treat them separately.

Since the time of Jerome Hebrew learning had been rare among Western Christians, though it flourished among the Jews, but there occasionally appeared Christian scholars, especially converts from Judaism, who were proficient in Hebrew.

¹ R. C. Jebb, in *Cambridge Modern History*, i. 572.

² A. E. Waite, *The Secret Doctrine in Israel*, London, 1913, p. 6.

³ *Lehrb. der prakt. Theologie*, Leipzig, 1898, ii. 101.

The most distinguished among the immediate predecessors of Reuchlin were John Wessel (1420-89) and Pico della Mirandola (1463-94). Reuchlin owed much to their influence. But he himself was the 'Father of Hebrew philology amongst Christians.'¹ His *de Rudimentis Hebraicis* was rightly characterized by Melancthon as entitling its author to the highest praise from the Church and from all posterity, i.e. as an epoch-making book.

But Reuchlin's zeal for Hebrew learning had effects far wider than its immediate objects; nor was his influence confined to such studies. He did much to promote the study of Greek, and even in his early days at Basel his activity provoked the hostility of obscurantists, who objected to the language as impious and schismatic—i.e. that of the Eastern Church. The controversy as to Hebrew literature involved questions that are permanently crucial for religion. Here, as often since, matters that primarily concerned the OT provided a field of battle on which larger issues were fought out. In supporting Reuchlin, the humanists were maintaining the freedom of thought and learning against the obscurantist demand that nothing should be taught or published that they chose to consider at variance with traditional orthodoxy—that the ignorance of the dark ages and of the uneducated multitude should determine how far scholarship should be tolerated. As A. Duff says,

'Graetz is not wrong when he counts his fellow Jews as largely responsible for the Reformation. He writes (*Hist. of the Jews*, Eng. tr., London, 1891-92, iv. 452): "The Talmud indirectly had a great share in the awakening of these slumbering forces [in Germany]. We can boldly assert that the war for and against the Talmud [wherein Reuchlin was its champion] aroused German consciousness, and created a public opinion, without which the Reformation, as well as other efforts, would have died in the hour of their birth, or perhaps would never have been born at all."²

REVELATION.—1. What is the meaning of revelation?—The word stands either (a) for the process by which God makes known to man the truth which he requires, or (b) for the body of truth which God has made known. Revelation presupposes the existence both of a living God, able and willing to bestow it, and of intelligent beings, able to receive and to make use of it. Thus, though revelation, as will presently be seen, is God's gift to the world, to know it as revelation belongs to theists alone.

2. How does man's need of revelation come to be felt?—It is felt in face of the practical problems which life presents to him. Man is essentially a religious being, but his desire for union and communion with his god is in close connexion with his practical needs. Just as he desires to make use of a power greater than his own, so he desires to make use of a knowledge greater than his own. Much that he desires to know he finds himself unable to discover, and he turns to his god to seek from him the knowledge which he requires. So it was in the early days of Hebrew history. Saul, seeking his father's asses, David, uncertain as to the intentions of the men of Keilah, Ahab, anxious as to the issue of the coming campaign, alike turned to the seer or the diviner to learn that which they could not themselves discover (1 S 9⁶ 23¹, 1 K 22⁶). Moreover, even when the knowledge which man desires is the knowledge of the

¹ Bleek, *Introd. to the OT*, i. 125; W. Gesenius, *Hebrew Grammar*, ed. E. Kautzsch, Leipzig, 1889, Eng. tr., Oxford, 1898, p. 20.

² *Hist. of OT Criticism*, London, 1910, p. 99.

will of his god, his purpose in seeking for it is at first equally practical. Believing that such material blessings as an abundant harvest and victory in war are dependent upon good relations with his god, he desires to know what his god requires of him in order that those good relations may continue, if they exist, or be restored, if they have been interrupted (cf., e.g., 2 S 21⁷). Primitive man desires neither truth for the sake of truth nor righteousness for the sake of righteousness; he desires both because, for practical ends, he desires the favour of his god. Now it is important to observe the practical character of the desire for revelation, because it continues almost unaltered throughout human history. Men are made to 'seek God,' and 'feel after him,' like children feeling for their parents in the night (Ac 17²⁷), because they are made dependent upon God and unable to do without Him. As, in the long course of history, men have risen to higher things, far deeper needs than those of which the savage is conscious have come into view. Though the old selfish desire for supernatural information still remains to-day, and is ministered to by the palmist and the crystal-gazer, it is for nobler ends that the best men now desire revelation. What they feel is the mystery of the world and the contradictions of their own nature, the mysteries of sin and sorrow and pain and death. They desire to know God and His purpose, that they may understand their life and the use which they should make of it. But even here the desire for revelation is still mainly practical. Truth for truth's sake may be the watchword of the scholar, but truth for life's sake is the watchword of the ordinary man. He cannot say, with Browning's Grammarian, 'Actual life comes next.' His actual life is being lived now, and he needs revelation that he may know how to live it.

3. Is such revelation possible or verifiable?—This is a question which haunts the minds of many who desire it. How can the secret of the universe—so vast in space and time—be made known to the minds of men? The eye can see only what it brings with it the power of seeing. Is it possible that any conception of God and His ways which our minds can grasp can correspond to the reality? To this difficulty there are two answers to be made. (a) To deny that God can be known is not merely to take a low view of our own nature; it is, in fact, also to take a low view of His. It is to deny to Him the power of self-revelation, and with it the power of influence which self-revelation brings. No one claims to know God perfectly; indeed, it is in the unfathomability of His nature that we find one great source of our reverence for Him. Our knowledge of God is at best a *theologia viatorum*, not a *theologia beatorum*. But our knowledge of God may none the less be true, as far as it goes, and be capable of a growth to which no limit can be set. Our instinctive longing after God is itself a prophecy of its satisfaction; God 'creates the love to reward the love'; we can hardly believe that the instinct would have survived, had it not been in touch with reality. (b) The question whether anything can be known must be decided, as Bacon says, not by arguing, but by trying. Religion starts with the assumption that God is to be known, as science starts with the assumption that the world is to be known, and both are ultimately justified by the fruitfulness of the results obtained. Of course it is always possible to suggest that our apparent knowledge may not be real knowledge, since it is necessarily relative to the mind which claims it. But, if we reject such scepticism in the sphere of physics, we ought also to reject it in the sphere of religion. The instinct of the mind is to believe

itself in touch with reality, and there is no reason for setting this instinct aside. The true verification of knowledge lies in the practical use which we are able to make of it. The claim to know God is made now, as of old, by a multitude of the sanest and best of mankind, and they ascribe to this knowledge all that is best in their life and activity. If the knowledge of God is increasingly fruitful in power and joy and goodness, we need no other proof of its reality. Though we see God but 'in a mirror,' the mirror does not obscure the outlines of His features; though we know Him but 'in a riddle,' the riddle is one that His Spirit enables us to interpret (cf. 1 Co 2⁹, 13¹²).

4. How can revelation be given to us?—No *a priori* answer should be given to this question. Rather it should be asked, How has revelation actually been given? All knowledge rests upon experience—our own or the garnered experience of other men. But no limit can be set to the possibilities of experience, nor can we know in advance of what methods God may make use. The dream, the vision, the oracle, the beauty and order of the world, the course of human history, the highest types of human character, the voice of reason and of conscience, the dialectics of the philosopher, and the intuition of the saint—all may be 'alike good' in varying stages of human development. 'There is one river of truth, which receives tributaries from every side.' Serious loss may arise from drawing too strong a contrast between one kind of experience and another, and attaching importance to one to the exclusion of another.

Thus (a) no valid distinction can be drawn between subjective and objective experience, since all experience contains both subjective and objective elements. On the one hand, the mind can discover nothing by its own activity; indeed, apart from the material given to it, there could be no activity of the mind at all. The effort of the mystic to empty his mind of all its existing content is but an effort to make room for a new content, which he looks to God directly to bestow. The pageant of nature and of history, on the other hand, objective as it is, derives all its meaning from the interpretation which the mind gives to it. Though 'the heavens declare the glory of God' (Ps 19¹), they declare it only to the mind of man; the cow in her pasture sees the same spectacle, and makes nothing of it.

Nor (b) can any valid distinction be drawn between discovery and revelation. Experience may indeed come sought or unsought. But no revelation can be received without attention being paid to it, nor would the effort to attain truth be successful, unless the one Source of truth were willing to reward it. Indeed, as we have already seen, our impulse to seek itself presupposes God's willingness to be found.

Once more, (c) there is no valid distinction to be drawn between natural and revealed religion. Strictly speaking, what is revealed is not religion but truth. But this contrast is besides doubly misleading, since it suggests both that there is a religion possible which does not rest upon revelation and that the higher means of revelation are in some way less natural than the lower. Both these suggestions are false. The witness borne to God by the world, by human history, and by the nature of man is none the less God-given because it is in large measure common to all (cf. Ac 14¹⁷, Ro 1¹⁸⁻²⁰), while the highest revelation which the Bible records is in the best sense natural. If it is natural for God to be revealed in human history as a whole, so is it for Him to be specially revealed in the history of the people brought nearest to Him, and, above all, in the history and experience of His Son. If it is natural that the

consciousness of all should witness to God, so is it that a more abundant witness should be borne by the consciousness of the Soul that knew no sin. Indeed, the supposed 'natural' basis of religion is inseparable from the basis which, in distinction from it, is described as 'revealed.' The world of nature and of history is a world in which the Lord, and the Church both before and after His coming, have been prominent actors, and human consciousness is only seen at its highest in the consciousness of the Lord. Thus it is that 'natural religion' ever maintains but a precarious existence when 'revealed religion' is repudiated. The Hebrews had come to know God through their national experience long before they recognized that the heavens declared His glory, and it is ever those to-day who have seen 'the glory of God in the face of Jesus Christ' (2 Co 4⁸) that most easily recognize and interpret His action in nature and in history.

Are there, then, any real distinctions to be borne in mind, as we consider the subject before us? There is one of the greatest importance—the distinction between the divine revelation itself and the human recognition and acceptance of it. All revelation ultimately depends upon the will of God. But its effectiveness does not depend upon God's will alone; man has his part to play in seeking after it, in preparing himself for it, in welcoming it, in yielding himself to it. It is on the reality and interplay of these two elements that the acquisition of truth depends both for the race and for the individual. Neither can be ignored without misunderstanding the whole. Thus (a) the initiative is always God's. It belongs to God to reveal Himself when and how He will. If He reveals Himself to one nation more fully than to another, and to one person more fully than to another, that belongs to God's 'management of His household' (Eph 1¹⁰); we cannot, in view of the facts of history, ascribe it altogether to a special responsiveness in those for the time specially favoured. It was not for lack of trying that 'in the wisdom of God the world through its wisdom knew not God' (1 Co 12¹), nor was it as the reward of a great spiritual effort on the part of Israel as a nation that God was specially revealed to it. So the prophets and the Lord of the prophets ever declare: 'I thank thee, O Father, Lord of heaven and earth, that thou didst hide these things from the wise and understanding, and didst reveal them unto babes: yea, Father, for so it was well-pleasing in thy sight' (Mt 11²⁵⁻²⁶). This is not to say that God's action is arbitrary, or that we may not seek to understand it, so far as we may. It is only to say that God's action depends upon God's will, not in contrast with His wisdom (for there can be no such contrast), but in contrast with human effort and desert. But (b) to say this is in no wise to deny the importance of human effort and response. Though it is for God to bestow the light, it is for man to open his eyes and ears to that measure of revelation which by the divine good pleasure is vouchsafed to him. It is 'he that hath ears to hear' that will hear, and to him that hath that more will be given (Mt 13⁹⁻¹²). It is not merely that effort and attention are required for the attainment of any knowledge; there is more than this. 'Things human must be known to be loved,' says Pascal; 'things divine must be loved to be known.' All revelation of character demands a certain power of appreciation in those to whom the revelation is made. 'The secret of the Lord is with them that fear him' (Ps 25¹⁴), and 'every one that doeth ill hateth the light, and cometh not to the light, lest his works should be reproved' (Jn 3²⁰). Moreover, there is another fact, which is here important. As we shall presently see,

divine revelation without needs ever to be supplemented by divine inspiration within; and, though revelation may fall, like the rain, upon the evil and the good, with inspiration it is not so. Now it is upon these two facts taken together—the good pleasure of God and the response of man—that the course of revelation has depended. God has spoken as He has seen well to speak, but also 'as men were able to hear it' (Mk 4³³). He has spoken 'by divers portions and in divers manners' (He 1¹), not only because it is His way to proceed step by step, but also because different portions of the one truth were needed, or could alone be received, by those to whom the revelation was given. Israel in the days of Amos needed the revelation of the divine justice, and in the days of Hosea the revelation of the divine love; and God sent each revelation at its appropriate time. But it is surely also true that Amos was incapable of receiving the message entrusted to Hosea, and Hosea incapable of receiving the message entrusted to Amos. The knowledge of God, like all knowledge, is at first confined to the few, and bestowed by methods by which only the few can be reached. But each element of truth, though it may at first be received in isolation, is consistent with each other element; and, when the fuller revelation is given, the fragments fall, each into its true place, and throw light upon one another.

Accommodation in revelation.—It is precisely the fact that revelation is bestowed according to our capacity for receiving it that should give us confidence in its reality. All communication between a higher and a lower mind demands a certain accommodation. The teaching which a parent gives to a child must be expressed in the child's language, and must attach itself to the child's thought and experience. A wise parent will not attempt to tell his child all that he knows, nor will he try at once to correct all the child's errors, or hinder the exercise of his imagination. But such accommodation does not in any way mislead the child. Its whole purpose is to convey as clearly as possible such truth as he immediately needs, without confusing his mind with extraneous matter. When, e.g., after a birth in the family, a child is told that God has sent him a new little brother, he is told both what is entirely true and exactly what he needs to know for the guidance of his own thought and conduct. No doubt the child will picture the arrival of the gift in his own way; he may even, in passing on to another what he has been told, fail to distinguish between what he has been told and the way in which he has pictured it. But all this is quite unimportant. What he has been told is the truth, and no subsequent enlargement of his knowledge will at all affect it; rather, it will lead the child to admire the more the wisdom and the love which told him just so much and no more. Now so it is with divine revelation. It is wisely accommodated to human capacity; it does not correct all errors at once or check the action of the imagination. The prophets, e.g., conceive of the divine kingdom of the future according to their hearts' desire, and think of it as far nearer than it has proved to be. But fuller revelation would have confused rather than enlightened them; it would have deprived the truth conveyed of its practical power. What we see is the wise Father at work, and our recognition of His method gives us but the greater confidence in the reality of His desire to reveal.

Now it is here that we find the solution of a difficulty which is found by some in the Gospel story. Our Lord always speaks as if He shared the beliefs of His contemporaries on such matters as the facts of the physical world and the authorship of the OT literature (cf., e.g., Mt 22⁴¹⁻⁴⁵ 24¹⁵). Sometimes He speaks in a way which suggests that He expected the Kingdom of God immediately to appear (e.g., Mt 10²³). Now the question of our Lord's human knowledge cannot here be discussed, but it matters little for our immediate purpose how we regard it. What we see in any case is God's method of accommodation. Our Lord's teaching had an immediate practical purpose, and it would plainly have hindered the accomplishment of that purpose had He turned aside from it to make premature revelations in physical science and historical criticism. The only question is at what point the accommodation took place. If, as Christians in the past have generally supposed, our Lord knew the facts, the accommodation took place when He spoke to His contemporaries. If, as modern scholars generally suppose, He did not know them, the accommodation took place when the divine message was conveyed to the human mind of the Lord. In any case the accommodation was necessary, if the minds of men were to receive the truth. The revelation itself is an abiding possession, and each generation may clothe it in its own forms of thought.

5. How has revelation actually come to us?—It is actual revelation that best shows us both its meaning and its possibility. What has been done

it was possible to do, while much that may seem possible to us may not actually be so. Three points are of special importance. (a) Revelation is primarily of God's reality, character, and purpose. All other revelation is subordinate to this, and to a large extent included within it. (b) Revelation is made in act rather than in word. God reveals Himself by what He does, and the trend of His purpose by His partial fulfilment of it. But the word of God is important in its own place. Inspiration (*q.v.*) goes hand in hand with revelation. The word of God, spoken by the prophets, points to the facts and declares their significance. (c) Revelation culminates in Christ and the Spirit-bearing Church, who at once reveal in act God's reality, character, and purpose, and declare it in word. In them God's purpose is partially fulfilled and also moves forward to complete fulfilment.

(a) Revelation centres from the first in God's abiding Name, or revealed character, and that Kingdom of God which it is His purpose to establish. It has not primarily consisted in the promulgation of a code of laws to be obeyed without understanding their purpose, or in the conveyance of information, guaranteed by miracles, as to the facts of the unseen world. What God has primarily revealed has been Himself and the purpose for which He is working, though, in revealing these, He has necessarily revealed what we must be and do in order to co-operate with Him, and the future which union with Him necessarily assures to us. When St. Paul maintained that the promise was primary and the law secondary (Gal 3¹²⁻²⁴), he was profoundly true to the highest teaching of the OT. All that is highest in the moral appeals of law-giver and prophet witnesses to this. The children of Israel are to be holy because their God is holy (Lv 19²), and merciful because their God is merciful (Dt 10^{18c}); the claim of God upon the obedience of His people ever rests upon the great things that He has done for them, and the great things that He still will do (1 S 12²⁴, Hos 14¹⁻⁸). So it was when the confident expectation of the Resurrection and the future life of bliss arose among the people of God. It did not rest upon any detailed picture of the future drawn by an infallible hand; it rested upon the knowledge that had been acquired of the justice and faithfulness of God, and of all that was involved in union with Him. He was the God not of the dead, but of the living, and the bond that had been formed with Him was one which time and death had no power to break (Ps 49^{14c}, 73²³⁻²⁶, Is 25⁸ 26¹⁹). The same characteristic of revelation appears in that given by the Lord and continued in the Church. The Lord by word and act is essentially the Revealer of the Father (Jn 14⁹), the Declarer of the Name of God (17⁶), and the Preacher of the Kingdom of God. His moral teaching is no legal code, but, like the highest teaching of the OT, rests upon the character of God and the hope of the future (Mt 5⁴³⁻⁴⁸, Lk 12³²⁻³⁴), while the fulfilment of the hope for the individual is bound up with union with God through the Lord Himself (Jn 6^{37c}, 16^{26c}).

(b) Existence and character are made known by action; and purpose comes to be understood by the partial and promissory fulfilment of the purpose itself. To the Hebrews God was revealed in the facts of their history and experience. Though at first they may have thought of their God much as other Semitic peoples thought of their own, the facts convinced them that He was far other than the gods of the heathen. He had a purpose, and in the working out of His purpose there was nothing that could say Him nay. He had brought them out of Egypt with a mighty hand and a stretched-out arm; He had planted them in their own land. He had revealed His will, and showed

Himself able to vindicate it when they set it aside. And all through their history this revelation of God by the facts of His action went on. Chasten His people He might with awful severity, but He would never destroy them. That would be to abandon His purpose. Always 'the remnant' was left to 'take root downward, and bear fruit upward' (Is 37³¹). So by the witness of facts the Hebrews came to know the Name of their God—'Jahweh, Jahweh, a God full of compassion and gracious, slow to anger, and plenteous in mercy and truth; keeping mercy for thousands, forgiving iniquity and transgression and sin: and that will by no means clear the guilty; visiting the iniquity of the fathers upon the children, and upon the children's children, upon the third and upon the fourth generation' (Ex 34^{6c}). So it was with the divine purpose of establishing the divine kingdom. God revealed His purpose to establish it by actually establishing it in Israel, so far as the obstinacy of His people allowed, and extending it through Israel over others, so far as Israel was ready to be the instrument of its extension both by doing and by suffering. But to say this is not to say that the facts were left to speak for themselves. Though words without acts are vain, acts without words are misunderstood. In Israel's history revelation went hand in hand with inspiration, the act of God with the word of God. At each crisis of Israel's history the prophet was raised up and inspired to declare the Name of God that was being manifested, and to interpret His action. So in the manifestation of God's ripening purpose. To the inspired vision of the prophets the divine purpose ever shines through the darkest facts of the present. What God has done and is doing reveals what He still must do, and the very disasters which human wilfulness occasions reveal what God must one day make of men, if they are to be the instruments of His unflinching purpose. Nowhere do we see this more plainly than in the promise of the Christ. It is the Kingdom, not the Christ, that the prophets primarily proclaim; but, as the facts of Israel's history make clear the divine method of working through great personalities for the benefit of the community, the great personalities whom God raises up to act and to suffer for His people become the prophecy of the great Actor, the great Sufferer, whom God must yet raise up.

Nor (c) is there any change in God's method when the Christ appears, lives and acts, suffers and is glorified. In one aspect the Christ is the greatest of the prophets, and the Church, as the Spirit-bearing body, is the abiding witness to the Name and purpose of God. But in another both the Christ and the Church are God-revealing facts. The mighty works of the Lord's earthly life are not so much external proofs of a revelation which is distinct from them as themselves the revelation. The Lord reveals the Father, because in His activity the Father is seen actually at work (Jn 14^{9c}, 15^{26c}). If a Kingdom is proclaimed in which all evil is to pass away, its reality is certified by the present operation of the powers of the Kingdom in the Lord Himself (Lk 11³⁰; cf. 7¹⁸⁻²³). Moreover, when the Lord's life is crowned by His death and glorification, by the gift of the Spirit and the transformation of the Church, both the Name and the Kingdom of God are revealed far more perfectly. It is still the facts that are eloquent. God Himself is seen 'in Christ reconciling the world unto himself' (2 Co 5¹⁹). He is seen to be One who saves by taking and removing the burden of human sin, lifting men up by the communication of Himself. Sin is found to be actually removed and the Spirit given. The Kingdom is assured in the future, because in the Church it is found

already existing, and He who has begun 'a good work . . . will perfect it until the day of Jesus Christ' (Ph 1⁹). When, in one of the latest of the books of the NT, we read that 'God is love,' the words are no mysterious oracle resting upon St. John's authority; they are the summary expression of all that, in the experience of the Church, God has been found to be (1 Jn 4⁷⁻¹⁰). It is this revelation in fact that the gift of the Spirit of God inspires the Church in word to declare. The whole purpose of the gift of the Spirit, as the Fourth Gospel describes it, is not to make a new revelation, but to light up, and enable the Church to declare, the revelation already made in the Christ Himself and the facts of His experience. The Spirit is to take of the things of Christ, to declare the meaning of the great redeeming acts, which, when the Lord spoke, were still 'to come' (Jn 16¹²), and through them all to tell men 'plainly of the Father' (16²⁵). That conviction of the world which the Spirit is to bring about is a conviction that will rest upon an inspired witness to revealing facts (16⁸⁻¹¹). It is here that the culmination of divine revelation lies. The revelation contained in the person and work of the Lord and the present experience of the Church is through the Spirit's inspiration declared to the world. 'That which was from the beginning, that which we have heard, that which we have seen with our eyes, that which we beheld, and our hands handled, concerning the Word of life . . . declare we unto you also, that ye also may have fellowship with us: yea, and our fellowship is with the Father, and with his Son Jesus Christ' (1 Jn 1¹⁻³).

6. What is the relation of this historical revelation to and by and through the people of God to other means by which men may come to the knowledge of God?—To assert the reality and perfection of the higher is in no way to deny the reality or the value of the lower. If the Greek philosopher or the Indian sage has indeed attained by his own methods to a knowledge of God fruitful in power and holiness, it is by divine revelation that he has done so, and, we doubt not, by divine inspiration also. So the wisest Christian thinkers have held from the first. To the Christian indeed it may seem that even the highest teaching of all who went before his Master is 'lost, like the light of a star, in the spreading dawn of day.' In 'the mystery of God, even Christ, . . . are all the treasures of wisdom and knowledge hidden' (Col 2²). But the teaching of other masters, whether of ancient or of modern days, is not necessarily valueless to the Christian. Not only may it give to him much that the higher revelation has not in fact given to him, though it might have done so; he has no *a priori* reason for denying that it may add to his knowledge. In the traditional theology of the Church there are real elements which have come to it from Greek philosophy, and not from the revelation recorded in the Bible. If to-day we desire to get rid of them, it is because we think them baseless and unfruitful, and not because of the source from which they have come. Equally generous should be our appreciation of all the light which modern investigation has thrown upon the past history of the world and of man, and upon the record of the revelation, which God has made to us. Physical science, historical criticism, comparative religion, have all played their part, and have it still to play, in widening and deepening our appreciation of the 'increasing purpose' which runs through the ages, and in correcting and uplifting our thoughts of God and His ways. Here too there is revelation, and, we doubt not, inspiration also to recognize and make use of it. If there has been seeming loss, there has also been real and abundant gain.

'Let knowledge grow from more to more,
But more of reverence in us dwell;
That mind and soul, according well,
May make one music as before,
But vaster.'¹

7. How does the historic revelation reach the individual to-day?—The Church comes before the world, not primarily to lecture upon revelation as a process, but to proclaim the name and purpose of God, as the Lord proclaimed it, and to be like the Lord, in her life of service and sacrifice and spiritual glory won through sacrifice, herself the revelation of God and of His power to fulfil His purpose. Divine knowledge and life are hers, that she may fail neither in the one nor in the other. Thus (a) through the presence of the Spirit the Church is in the divine intention both the witness to the truth and the interpreter of the truth. The gospel is contained in facts, interpreted as the Church is inspired to interpret them. But the interpretation, though essentially invariable, must be given in the language and forms of thought of different peoples and ages of the world; and, as new questions have arisen, and new errors have required to be excluded, the Church in the power of the Spirit has drawn out of the facts and their interpretation much that does not lie immediately upon their surface, and must continue to draw it out in the days to come. Christian theology, like the Christian gospel itself, is to be accepted because of the appeal which it makes, not only to the mind, but to the personality as a whole. The Church speaks with authority, as those always speak who know. 'Verily, verily, I say unto you.' 'We speak that we do know, and bear witness of that we have seen' (Jn 3¹¹). But this authority is not an authority which overbears reason and conscience; it appeals to both, and is accepted because of the response which they make to it. The revelation which the Church offers to the world no more affords a substitute for thought and effort and divine inspiration than the first dawn of revelation in the days of old. Deep must answer to deep, the Spirit within us to the Spirit without us. (b) The Church, as the Body of the Christ and the Temple of the Holy Spirit, is, in the divine intention, sent to reveal the Name and purpose of God, not in word only, but in act also. Though she witnesses to Another, that Other is One who dwells in her, and acts through her, and so reveals His reality and character and purpose. As he that saw the Christ saw the Father, so he that saw the Church should see the Christ, and the Father also. In the life of the Church given for men, and ever renewed by being given, the revelation of God's method and purpose made once for all in the Lord's Death and Resurrection should be continually made present to the world; in the Kingdom of God here should be seen the promise of the eternal kingdom.

REVENGE.—Revenge is the expression and continuation of resentment. Resentment is the

¹ Tennyson, *In Memoriam*, Introduction.

feeling of anger aroused by a hurt or injury inflicted. But the anger aroused may be, as has been pointed out by Bishop Butler and many moralists after him, of two kinds—sudden anger and settled or deliberate resentment. The first prompts a man to defend himself when hurt or attacked; the second continues and often grows more intense when the immediate attack is over and the smart of the hurt is no longer felt. The first is presupposed in, and grows into, the second; so it is often hard to fix the exact point where the one ends and the other begins. A hurt which gives occasion to, and is warded off by, an outbreak of sudden anger does not necessarily lead to, nor is it always followed by, a fit of settled resentment, still less of revenge. After a fight, though one of the two combatants must have been the aggressor, we constantly see men make it up and shake hands; it is when resentment, once aroused, is nursed and cherished that it is sure in most natures to give rise to revenge. Butler further maintains that the settled anger or resentment which gives rise to revenge has for its proper object injury or intentional harm, as distinguished from mere hurt which, at any rate in reasonable men, may cause momentary anger, but should not, and ordinarily does not, arouse the deeper feeling. But the distinction is by no means always true. There are many natures so wrathful and resentful that a hurt inflicted, though quite innocently and even unintentionally, does give rise to settled anger, and sets going plans for the infliction of revenge; this is apt to be especially the case when the hurt inflicted is of a kind that seems to indicate contempt on the part of the injurer, or when it wounds in some marked way the self-esteem of the injured party.

This feeling of settled resentment and consequent love of, or lust for, revenge is a feeling deep-rooted in human nature and, as we shall see, hard to eradicate. It is found to some extent in some of the higher animals, which have been known to devise and execute apparently carefully thought out plans of revenge; yet revenge is not very common in animals—it seems to involve a more sustained course of reflexion than most of them are able to carry out, and also a clearer apprehension of the distinction between intended and unintentional wrong than most of them can attain. What generally seems to happen among animals is that an animal fiercely resents any attack made upon its person, and in some cases even upon what it considers its rights, and does its best to defend itself against such attack; but, if the animal which is the aggressor proves itself too strong, the defeated animal takes refuge in flight; and, for the future, fear takes the place of vengeance; an animal once thoroughly worsted avoids a renewal of the fight rather than seeks to avenge itself upon its more powerful foe.

But with man this is by no means equally the case. Worst in one direction, man constantly seeks revenge in another; he may indeed cower before his adversary and seek safety in flight, as the animal does; but more often, though knowing himself physically the weaker, he seeks methods of avenging himself on his enemy by superior cunning or in some other way, and revenge among early races of men becomes in consequence very prevalent. The natural satisfaction of resentment and revenge is to repay tit for tat, to restore a balance of rights or position that has been upset. The securing of such a balance furnishes a primitive conception of justice:

οὐ καὶ πόδες τὰ τ' ἔφεζε, δίκην κ' ἰδοῖα γένοιο,
says Aristotle,¹ quoting, perhaps, a line of Hesiod.²

¹ *Eth. Nic.* v. 1122b.

² *Frag.* 212; see J. Burnet, *The Ethics of Aristotle*, London, 1900, p. 224.

δράσαντι παθεῖν,
τρίγερων μῦθος τάδε φωνεῖ,
says Æschylus,¹ and implies that this is just.

If the retaliation stops at this point, no great harm is done; indeed, as already remarked, some such idea of reparation or restitution as a debt due to the injured person lies at the very root of justice; but, if resentment is once nursed and allowed to take full possession of the mind and develops into plans for revenge, it seldom does stop at this point. There grows up then in the mind a passion for, and a fearful joy in, revenge. Much indulged in, such a feeling is apt to banish every higher and gentler emotion, so that the man who yields himself to it has his whole nature perverted. Savage men, men who have little else to occupy their thoughts, are specially apt to suffer in this way. It is something of this sort that St. Paul has in his mind when he says: 'Be ye angry, and sin not: let not the sun go down upon your wrath: neither give place to the devil.'² Clearly here the anger in itself is not wrong; it is the playing with it and nourishing it that bring the devil into the soul; but this is just what he who indulges in the passion for revenge does; and the passion for revenge, if yielded to and encouraged, becomes one of the most terrible of fiends. Thus it comes about that, while the original feeling of resentment may be regarded as innocent and even desirable, the lust of revenge is properly regarded by the legislator as anti-social, by the moralist as immoral, by the religious man as a sin and an offence against God—and that though this desire is very widely spread and very deep-rooted in human nature. It may be well, perhaps, to look at revenge from each of these points of view.

1. **Legislative and political.**—From the point of view of the legislator and political philosopher, the whole growth of criminal law is due to the desire of society to free itself from the disturbing force of private revenge and to substitute for this public retribution and the appeal to public law. In this change consists the great development in the protection of the weak against the strong. As long as revenge is left in private hands, the strong are apt to escape with impunity because the injured person will often be deterred by fear from taking revenge upon the aggressor; and, if the weak does take revenge himself, his revenge is apt to be powerless or inadequate; whereas it is the very essence of the law that all should be equal before it.

In the beginning, as is proved by many of the formulæ and practices of ancient law, the intervention of the State is a mere substitute for the private revenge or punishment which would be inflicted by the injured individual,³ but soon this stage is left behind, and the punishment inflicted by the State becomes the expression of the disapproval felt by the community at large towards the offence which has been committed. No doubt individuals are slow to accommodate themselves to the change, and private revenge often lingers on long after a system of criminal law has been established. But, directly such a system has come into force, an act of revenge for a wrong committed becomes itself a criminal act, and is visited by the same penalty with which a wrongful act of the same kind, not prompted by revenge, would be visited; and the craving for revenge, except in communities in which, as in Corsica, public sentiment approves of private revenge, is greatly checked. It may be, indeed, that, even when a system of law has been long in force, the feeling of resentment entertained by the injured man against the wrong-doer finds in the legally inflicted punishment a certain satisfaction; and, if the punishment

¹ *Choeph.* 314.

² *Eph.* 4:26.

³ H. S. Maine, *Ancient Law*, ed. Pollock, ch. x. pp. 379-384.

inflicted seems either inadequate or unduly deferred, dissatisfaction is sure to arise in those who have felt themselves injured and may even express itself in illegal acts of private vengeance; but this is after all an exceptional case—one which in course of time tends to disappear altogether. Still it is a consideration which cannot altogether be left out in assessing the amount of punishment to be inflicted for crime committed. Yet, while this is so, in every progressive community the security of society becomes more and more the object held in view in the infliction of punishment, and the measure according to which punishment is regulated. Moreover, in time a new motive as modifying the theory of punishment comes into prominence, which still further limits the importance of revenge as an element in it, viz. the moral improvement and cure of the offender. While no State can with safety make this its only object in the infliction of punishment, or the only rule by which its amount is to be determined, yet that it can be taken at all into account, and that it becomes in the more highly civilized nations an increasingly important element in determining its direction and the kind of penalty to be inflicted, is a proof of how far the ultimate theory has departed from the primitive cause in which it originated; and, if an element of revenge still enters, as it sometimes does, into the appeal to the law against the offender, the harm of it is greatly lessened, in that the private feeling is necessarily merged in, and largely moralized by, the wider concern for the community as a whole which has taken its place. The bringing about of this change forms one of the greatest triumphs of the prevalence of the reign of law and of advancing civilization.

2. Moral.—Looked at from a moral point of view, revenge has in more enlightened times almost universally been regarded as an evil passion and been condemned. If the effort of the legislator has been directed towards substituting for the act and temper of revenge a less objectionable form of action and a more social temper, the object of the moral philosopher has been to eradicate the temper altogether. Yet it must be confessed that it is a hard task that he has set himself; for the revengeful temper is very deep-rooted and wide-spread in human nature, and is apt to break forth again, when reason has demonstrated its ill effects and philosophy has tried to point out a better way. Still philosophers of every sort and every age have done their best to deprecate it and ban it. Confucius,¹ Plato,² Cicero,³ Seneca,⁴ Muhammad,⁵ Thomas Aquinas,⁶ and Butler⁷ have all had their say against it; each has reproached it or denounced it in turn; but each also has had to confess that it is a temper which is widely prevalent, an evil which it needed all their force to combat. But why, we may ask ourselves, is it so reprehensible? In what does the evil of it consist?

(1) Revenge is an anti-social quality; it aims not at promoting human happiness, but at increasing human misery. To inflict pain upon our enemy, to diminish his happiness or virtue, are the objects at which revenge directly and necessarily aims. This alone must make the prevalence of revenge a temper to be deprecated.

(2) As Butler points out with great force,⁸ the revengeful temper is almost necessarily an unjust temper. We constitute ourselves judges in our own cause, and take accordingly an exaggerated estimate of the injuries which are inflicted upon us. We are apt, as already remarked, to neglect the all-important distinction between intentional

and unintentional wrong; and, the more we nurse our revenge, the more prejudiced do we become, the less willing are we to listen to the dictates of fair play and reason. Every one will have noticed this in one of whom a spirit of revenge has taken possession. He is a man dominated by one idea.

(3) No temper acts more injuriously on the character of him who indulges it. For the desire for revenge is essentially a selfish desire. It keeps us occupied with ourselves, our own grievances, our own wrongs; in the concentration on them and suchlike objects a man becomes callous to the interests and happiness of others, so that the revengeful man develops not infrequently into the misanthrope.

(4) This is the more readily the case because the revengeful spirit makes us incapable of exercising the noblest and best of all spirits, a charitable and forgiving temper. To such a temper the spirit of revenge is, of course, the exact opposite; its presence makes the other impossible. But a character in which such a temper is entirely absent cannot but be a selfish, a maimed, and a distorted character, one far removed from the nobler heights to which the human character is capable of being elevated.

3. Religious.—But, seeing that the laying aside of revenge and the desire for it altogether is a virtue hard to attain and comparatively seldom reached, it is at this point that religion, if the struggle against revenge is to be made in any way effective, has to be called in. While other religions have indeed not been altogether silent on the subject, Judaism partially, Christianity entirely, have alone succeeded in extirpating it. In the OT generally vengeance is deprecated as interfering with the prerogative of God. 'Vengeance is mine, and recompense' (Dt 32³⁵), 'Thou God, to whom vengeance belongeth, shew thyself' (Ps 94¹), are verses which illustrate how completely the Jews regarded vengeance as properly belonging not to man but to God; and St. Paul quotes the first of them to enforce his teaching of forgiveness on his Roman converts (Ro 12¹⁹). In Sir 28¹⁻⁵ a higher line is taken: 'He that taketh vengeance shall find vengeance from the Lord; and he will surely make firm his sins. Forgive thy neighbour the hurt that he hath done thee; and then thy sins shall be pardoned when thou prayest. Man cherisheth anger against man; and doth he seek healing from the Lord? . . . He being himself flesh nourisheth wrath: who shall make atonement for his sins?' The principle here laid down clearly is that, if we cherish a revengeful temper, it is impossible for us really to pray for, still less to expect, forgiveness for our own sins. To do so is almost like a contradiction in terms.

This principle is of course enunciated afresh and carried further in the teaching and in the example of our Lord. Instead of the doctrine of retaliation inculcated in at least one passage of the Mosaic Law, our Lord says: 'Resist not him that is evil: but whosoever smiteth thee on thy right cheek, turn to him the other also' (Mt 5³⁹)—i.e., wrong is to be conquered, at any rate in our own case, not by meeting wrong with wrong, but by patient submission. He teaches us to pray: 'Forgive us our trespasses as we forgive them that trespass against us' (Mt 6¹²⁻¹⁴). He tells us that, if our brother trespass against us and repent, we are to forgive him not up to seven times, but unto seventy times seven (Lk 17³⁴, Mt 18²²). His example went even farther than this. No more unprovoked wrong could be imagined than was done to Him. Yet He speaks no word and entertains no thought of vengeance against His enemies. 'Father,' He prays, 'forgive them; for they know not what they do' (Lk 23³⁴).

Vengeance, then, as a personal principle is set altogether aside in Christian ethics. There is no place for it. As St. Peter says, 'If, when ye do well, and suffer for it, ye shall take it patiently, this is acceptable with God. For hereunto were ye called: because Christ also suffered for you, leaving you an example, that ye should follow his steps' (1 P 2^{30f.}). It would be absurd to maintain that all Christians attain to this height of virtue; but some go some little way towards it; the best reach near to it. In any case the teaching and example of Christ have done much to alleviate and supplant by a higher feeling and motive the thirst for vengeance which has been so common and so destructive in the world.

W. A. SPOONER.

REVERENCE.—Without attempting a formal and exhaustive definition, it is true to say with J. Martineau¹ that reverence is at bottom our recognition of 'transcendent goodness.' It is the impression that we owe to character rather than to intellectual and physical forms of greatness, and in the highest instance it 'proves to be identical with devotion to God.'

1. **Reverence and religion.**—Some theorists, in tracing the beginnings of religion, have accepted the view of Statius, 'Primus in orbe deos fecit timor,'² but this explanation misconceives the character of religion, from which reverence is inseparable.

'It is not with a vague fear of unknown powers, but with a loving reverence for known gods who are knit to their worshippers by strong bonds of kinship, that religion in the only true sense of the word begins.'³

The Hebrew expression 'the fear of the Lord,' as the equivalent of religion, indicated that reverence was based, not on servility, but on a foundation of fellowship and trust.⁴ In the course of development religious reverence has not kept clear of error and exaggeration. The custom of the Jews in not pronouncing or reading aloud the sacred Name in their Scriptures was the sign of excessive and superstitious zeal. Their later tendency to dwell on the transcendence of God and to fill up the gulf by the introduction of angels, as afterwards Roman Catholics filled it up by the invocation of saints, was due to abstract ideas of the divine honour which find no place in Christianity. Jesus in calling God 'Father' corrected Jewish modes of circumlocution, and made that name the natural symbol of worship and homage (Mt 6⁹).

2. **The ethical value of reverence: its authority in the Greek mind.**—In early times, when war was the chief school of virtue, and might was in danger of overbearing right, reverence appeared as the guardian of civilization and was the organ of the social conscience or of public opinion as then formed. Homer's term for reverence (*aidôs*) has many shades of meaning.

'It is essentially the virtue of a wild and ill-governed society, where there is not much effective regulation of men's action by the law.'⁵

One or two illustrations from the Homeric world will suffice. In the opening scene of the *Iliad* the Greeks demand reverence for the aged priest Chryses, who had been insulted by Agamemnon, as even an inferior had rights that should be respected. It is suggestive that, in early Greek poetry, the classes thought worthy of consideration were not kings and others of high station, but those disinherited and injured, the helpless and the dead, and special sanctity belonged to strangers, suppliants, and old people. In the name of reverence, or respect for manly and military honour, the fighters in the ranks are urged to show spirit and valour.¹ When Achilles burnt the body of Eëtion without stripping him of his armour,² he exhibited this virtue in a form prized by antiquity, but afterwards the dragging of Hector behind his chariot³ betrayed a lack of ruth and compassion, which reverence for a dead and helpless enemy should have inspired. True to this early Greek ideal of reverence, Ulysses restrained the old family nurse from shouting aloud in the hour of triumph—'for it is an unholy thing to boast over slaughtered men.'⁴ Reverence is also named as the highest religious duty—'Revere the gods, Achilles';⁵ and in the scene where the cup is first handed to Athene, in token of her age, the line occurs—'All men stand in need of the gods'⁶—which Melancthon thought the most beautiful verse in Homer. It was the sign of a later degenerate age when Hesiod feared that reverence, one of the white-robed angels, had fled from the earth.⁷

3. **Reverence as a principle in education.**—In the Hebrew moral code, which saw the necessity of implanting this virtue, respect for parents, rulers, and elders was enjoined.⁸ Indeed, according to the Talmud, parents occupied the place of God's earthly representatives, and were to be given corresponding honour. Where an elaborate social machinery did not exist, this training was invaluable for a people's order and well-being, as is seen also in the strict family life of China and its long-established ancestral worship. Among thinkers, Plato showed his practical insight by fixing on youth as the impressionable period when reverence should be stamped on the mind of the learner and freed from the admixture of unworthy teaching, so that the future guardians of the State might grow up as god-like and god-fearing as possible.⁹ Plato trusted to reverence, as a plant of native and inward growth, to check the rise of insolence in the young—'for there are two warders that will effectually interpose, namely, fear and shame.'¹⁰ In modern times Goethe introduced in his sketch of an ideal education his famous illustration of reverence (*Ehrfurcht*), expressed in three forms and with appropriate gestures—reverence for God and what is above us, for the earth and what is beneath us (the ground of the Christian religion), and towards our equals in society, with whom we should stand and act in combination.¹¹ Goethe's view that reverence is not an innate virtue, and is the one thing which no child brings into the world with him, vitiated his plan of education in the judgment of Ruskin, who held strongly that this faculty is inherent in every well-born human creature.¹² In his educational sketch, as in his moral career, Goethe regarded reverence and other virtues with too much detachment. Like Voltaire, he cultivated his intellect at the expense of deeper qualities. Reverence is not a higher form of

egoism, or the all-round development of our powers, 'for no man can venerate himself.'¹

4. *Growth and decline of reverence.*—The thesis maintained by Macaulay, in his essay on Milton, that, 'as civilization advances, poetry almost necessarily declines,'² may be thought applicable to this virtue. We should not, however, identify reverence with the spirit of superstition and submission characteristic of a time when ideas and institutions were not called in question, and when habits of deference prevailed. In the ferment of modern conditions, and as the result of the revolutionary, democratic, and levelling spirit that has intruded everywhere, old forms of reverence inevitably disappear. A type of goodness once so simple and attractive seems left behind.

'Its most beautiful displays are not in nations like the Americans or the modern French, who have thrown themselves most fully into the tendencies of the age, but rather in secluded regions like Styria or the Tyrol.'³

Recent observers have noticed the increasing part played by religion in the growth of the social organism.

'A preponderating element in the type of character which the evolutionary forces at work in human society are slowly developing, would appear to be the sense of reverence.'⁴

Science may thus take the place of superstition in upholding this virtue. How far misgovernment in Europe has destroyed this faculty in the very classes that need it most is a serious question.⁵

'Thoughtful Americans have said, that, amid all the material greatness of their country—and it is sufficiently astonishing—their gravest anxiety for her future is caused by the absence of reverence among all classes of her people.'⁶

This danger is not confined to one country. The fault of democracy, according to Lord Morley, has been that it did not always feel or show reverence.

5. *Reverence in some of its relationships.*—Some types of excellence, like certain flowers, are intolerant of others in their neighbourhood, but this virtue fosters the best qualities.

(a) *Reverence and truth.*—'It is the penalty of greatness that its form should outlive its substance: that gilding and trappings should remain when that which they were meant to deck and clothe has departed.'⁷ True reverence should cease using empty ceremonies and sounding titles, when they are out of touch with reality. Kant, in heralding the age of criticism, rightly saw that the greatest subjects, including religion and laws, could not claim respect unless they stood the test of free and thorough examination. The Arian theologians, in their contest with Athanasius, made reverence a pretext for adhering to their views of the divine unity and immutability. We should not trade upon this virtue in carrying on controversy. 'After all the greatest reverence is due to truth.'⁸

(b) *Reverence and love.*—Newman, whose ecclesiastical instinct may have exaggerated the importance of the feelings and objects of awe and veneration, says truly: 'No one really loves another, who does not feel a certain reverence towards him.'⁹ Dante saw in Beatrice not only a figure that excited his senses but also an ideal that drew forth his highest faculties. Hence his resolve to wait and write something worthy of her, and his recognition of the law that 'love intends the welfare

mainly of the thing it loves.'¹ To veil some things is to ennoble them, and in literature and life we may desecrate truth and love by too familiar handling of them.

(c) *Reverence and character.*—The worth of reverence is to be weighed by the worth of those whom we think deserving of it. It is a sure index of the moral value of any society. The Christian rule, 'Honour all men' (1 P 2⁷), is to be followed, but with discrimination. Our appreciation will vary with varying forms of excellence.

Nathaniel Hawthorne's picture of Puritan New England recalls admirably how the settler in that old day, 'while still the faculty and necessity of reverence were strong in him, bestowed it on the white hair and venerable brow of age; on long-tried integrity; on solid wisdom and sad-colored experience; on endowments of that grave and weighty order which gives the idea of permanence, and comes under the general definition of respectability.'²

A society in which the ruling types are of this sort is healthy and progressive. Character thrives best in an atmosphere of appreciation, and while, as Dr. Johnson said, we cannot pay 'civilities to a nonentity,' it always does a man good to show him respect.

REVIVALS OF RELIGION.—I. *Periodicity in religious life.*—It does not require much observation to be assured that the course of religion, in either the individual or the community, is not uniform, but has its ups and downs, its seasons of greater and less intensity. To what these variations are due may be a deep question; but that they occur is a fact lying on the surface. There are times of flood-tide in the soul, which are accompanied with great happiness and leave a deep impression on the memory, and there are seasons in the life of the Church when there are given from on high what the Scripture calls 'showers of blessing.' The psychology of the human spirit may have its own reckoning to render for such phenomena; but in the last resort they are to be traced to the Spirit of God, blowing where it listeth.

One cause of revival is to be found in personalities of original religious genius. Such were, in the OT, Moses, Samuel, Hezekiah, Ezra, and the like, with each of whom a rise in the tide is connected. But there was provision made in the economy of that period for bringing crowds together, with their minds bent on religious exercises, at the annual feasts. The Feast of Tabernacles especially, with its booths of green branches, must have resembled a camp-meeting. In the NT the public ministries of John the Baptist, Jesus, and St. Paul exhibited many features always associated with revivals. The book of Acts can hardly be understood by a reader who has never lived in a revival, but every chapter contains notices and expressions which appeal to the experience of one who has.

Many Church historians have observed a rhythm in the successive periods, like wave following on wave. Thus the elevation of the Apostolic Age

was followed by the depression of the subsequent period; the intellectual and spiritual greatness of the age of the Christological Councils formed a contrast to the dark age which followed, though the latter was illuminated also by the work of the great missionaries; the age of the Crusades and the friars was one of greatness in many directions, but it was followed by two centuries of disintegration.

2. **The Puritan awakening.**—In writing the history of Protestantism, Dörner divides the centuries into three revivals—that of the Reformation, that of Pietism, and that of Evangelicalism. Puritanism (*q.v.*) might be described as a season of wide-spread revival in England; and no better representative of its operation could be named than Richard Baxter, who, in *The Reformed Pastor* (1656) and his autobiography (*Reliquiæ Baxterianæ*, 1696), has left an incomparable record of the methods by which he made the field of labour in which he was settled to rejoice and blossom as the rose. When he went to Kidderminster, only two or three families in each street had domestic worship, but, before his work was finished, not more than two or three in a street were without it. He anticipated the methods of modern revivalists—or, rather, invented something better—by getting his people to visit him, family by family, at the manse, and confide to him the secrets of their spiritual condition, so that he could apply the best advice to every case. As he was zealous in recommending his methods to other ministers, his example created wide-spread imitation.

One of the men of the Second Reformation in Scotland, John Livingstone, was privileged to witness such an awakening under his ministry as has ever since, in his native land and beyond it, kept alive a spirit of expectancy in preachers of the gospel. When assisting at a communion season at the Kirk of Shotts, he preached at an extemporized gathering on the Monday after, and was the means of the conversion of about 500 persons, whose subsequent life made them a leaven in the neighbourhood to which they belonged. About the same time another divine of great learning and fine character, David Dickson, was the principal instrument in a movement in the west of Scotland to which was given by opponents the nickname of 'the Stewarton sickness.' This epithet was due to certain physical phenomena accompanying the spiritual impressions, of which Dickson himself, however, made nothing, being doubtful whether they might not be the work of the enemy, to discredit the movement.

The effects of Puritanism were not confined to England, and Holland especially participated in the blessing through the presence of exiled Puritans in its pulpits and university chairs. A quickening of spiritual life ensued, especially in the universities, one of the features of which was the holding of prayer-meetings among the students. The same feature appeared in the revival, bearing the name of Pietism (*q.v.*), which occurred soon after in Germany in connexion with the labours of such men as Spener, Francke, and Bengel. Spener gave the name of *collegia pietatis* to the meetings, at which laymen were encouraged to speak and take part in prayer, and these exercises he regarded as manifestations of the spiritual priesthood of all believers, which Luther had proclaimed but the Lutheran Church had forgotten. A development of revivalism in several ways unique was due to the activity of Count Zinzendorf, the founder of the Moravian Church (see art. MORAVIANS). In origin, however, it was closely connected with the movement under Spener, and it had a direct and determining influence on the origin of Methodism (*q.v.*); for not only John Wesley himself, but

his brother Charles and his friend George Whitefield, were converted under Moravian influences. Zinzendorf's piety was of a brighter type than that of Spener, and this was manifested particularly in the cultivation of hymn-singing, which has been one of the marks of all modern revivals.

3. **The Evangelical revival.**—What Puritanism gave to the Continent in the movements just described came back to England in the vaster movement of Methodism, of which the primary spring is to be sought in the thorough conversion of its leaders. These men felt themselves to be the depositories of a truth so divine and blessed that they could not keep it to themselves or confine their preaching of it within the bounds of a parish. In the spirit of Him who said that they that are whole have no need of a physician, but they that are sick, they flung themselves on the most wicked and degraded portions of the population, and, when churches were refused to them or proved too small to hold the crowds, they went to the open air. Recognizing the obligation of all to whom the joyful sound had come with power to transmit the deposit to others, they employed a ministry beyond that of the regularly educated and ordained, and demanded the witness-bearing, by word and life, of all to whom the secret of the Lord had been revealed. This is the most fruitful of all the ideas of the revival; nothing has so delayed the evangelization of the world as the notion that the work belongs only to an official class; and there is no reason to hope that the world will ever be won to Christianity on these terms. It is through the operation of the truer view that legions of Sabbath School teachers have been won for the service of the Church.

The Evangelical revival came to Wales through the ministry of Whitefield himself and the simultaneous but independent efforts of such natives as Howel Harris and Daniel Rowlands, and it found in the Welsh temperament a congenial soil. It entered Scotland through a thorough change taking place in the soul of Thomas Chalmers (*q.v.*), in whose big brain and heart it obtained the assurance of diffusion through the country. His associates in the ecclesiastical struggle which led to the Disruption were keenly interested in revival work. While Robert Murray McCheyne, *e.g.*, was absent in Palestine, in quest of a site for a Jewish mission about to be founded by the Church of Scotland, a revival broke out in his congregation at Dundee under the ministry of his *locum tenens*, William Burns, subsequently the famous China missionary, and it continued to the end of McCheyne's life. Horatius Bonar, subsequently noted as a hymn-writer, republished in 1845 a work on revivals originally issued in 1754 by John Gillies of Glasgow, under the title of *Historical Collections relating to Remarkable Periods of the Success of the Gospel*, and brought it down to date, inserting not a few letters from friends of his own about hopeful movements in their parishes at the time. Another member of the McCheyne circle, A. N. Somerville of Glasgow, developed in later life into a modern apostle, going round the world as an evangelist and succeeding in delivering his testimony even in such unlikely quarters as Berlin and Petrograd. The anticipations of revival mentioned in the work of Bonar had become more general, as time went on; and it was in answer to wide-spread prayer that, in the years 1859 and 1860, times of blessing were experienced in many different parts of the three kingdoms. Ireland was the first part visited; and a classical record of this movement will be found in the work of an Irishman, William Gibson's *Year of Grace* (Edinburgh, 1860).

4. **Work of D. L. Moody.**—Still more extensive was the work of the American evangelist, D. L.

Moody, in 1873-75, 1881-83, 1891-92. He was thirty-six years of age, a layman, without university education, practically unknown, when he appeared in Edinburgh in the end of 1873; only a few ministers interested in such work had been informed of his successful efforts in the north of England, and, having gone there to see and hear him, they extended to him an invitation to come to Edinburgh. But it was not long before Scotland became aware that it had found an evangelist whom it could take to its heart, and, before the year ended, the whole country was full of the rumour of what was going on in the capital. He had brought with him a coadjutor, Ira D. Sankey, who 'sang the gospel' to his own accompaniment on an American organ, these being novelties at the time and forming an element of attractiveness. But it was soon manifest that the centre of power was the evangelist himself. He was of stout and heavy build, yet full of activity and business capacity. He had the shrewdest perception of character, and knew how to utilize all available forces. He held three meetings a day—one at noon for prayer, testimony, and praise; a Bible-reading in the afternoon for the building up of Christians; and an evangelistic meeting at night. From the first these were well attended, and soon every meeting was crowded, wherever he went. His doctrine had a wide range, not omitting the sterner aspects of truth, but culminating in the love of God. There was not much eloquence, but unflinching freshness, the most remarkable feature being abundance of illustrations, drawn not from nature or art or literature, but from his own experience in dealing with human beings. He had the power of attracting young men and inspiring hero-worship; and, as there happened to be a theological college next door to the place where most of the meetings were held, the students not only assisted in the inquiry meetings but carried the news of what was going on to all parts of the country, and so prepared the way for the visits of the evangelist to other places. Moody angled for decisions at the close of his addresses with remarkable tenderness and skill, but he did not put undue pressure on any to make known their anxiety. There were no physical manifestations of any kind, and he exhibited promptitude and sometimes not a little humour in restraining attempts at extravagance. He was singularly free from the weaknesses sometimes imputed to men of his class, such as personal vanity and love of money. He seemed to be always sensible that he owed his opportunity to the labours of the regular ministry before him in the field, as well as that the perpetuity of his work would depend on the sympathy and fidelity of the same labourers in the field after he had left. Though ultimately a Pactolus for him and his colleague began to flow from the sale of hymn-books, his unselfishness had been fully established before he became aware of this, and he made an unselfish use of the riches flowing from this source, devoting large sums to the equipment of colleges for young men and women which he opened in his native place in later life. The classes chiefly affected by his mission were not the poor and ignorant, though these ultimately benefited largely from the labours of those in whom the desire for altruistic effort had been begotten, but those who, though connected with churches, were still undecided and living a prayerless and worldly life. Such, however, are perhaps the proper subjects of a revival; and the power of a revivalist lies in the summons to them to bring their conduct into harmony with their convictions. The remark is often quoted of some one who said that Moody was the biggest 'human' he had ever met, and this is an estimate which would commend

itself to those who were acquainted with him. But it was an afterthought; at the time the prevailing impression was the sense of a movement directed from above, in which all the human agencies concerned were swallowed up and forgotten.

Among the students of the New College who assisted Moody in Edinburgh the one destined to prove most useful was Henry Drummond, who for years accompanied the American evangelists from one great city to another, devoting himself especially to meetings for young men, in the management of which he unfolded qualities of rare distinction. When settled subsequently as professor of Natural Science in Glasgow, he became an evangelist to the universities of Scotland, working chiefly in Edinburgh, where his labours were facilitated and seconded by Principal Sir William Muir, Sir Alexander Simpson, and other members of the faculties. He succeeded in winning for religion a new place in the universities of his native land, the change being embodied in the Christian Unions established within their walls. His evangelistic labours on behalf of young men, and especially students, extended all over the world; and at one time he found a remarkable entrance for the evangelistic message among the upper classes of London society. Between him and Moody there subsisted a beautiful and lifelong friendship; and, when the younger man was charged with heretical views, the older constantly declared that he had listened to his friend far oftener than had his accusers, but had never heard from him anything with which he did not agree.

5. Welsh revival of 1904-06.—In 1904 a revival of great intensity occurred in Wales and lasted for about two years. It seemed almost to rise out of the ground, so little was it the result of definite teaching and so primitive were the forms in which emotion exhibited itself; yet it had wide-spread practical effects of the most definite kind, such as the diminution of drunkenness, the abandonment of feuds, and the restitution of property. It subsided, however, as unaccountably as it arose, and for its promoters there was not a little disillusionment. A French student of religious psychology, Henri Bois of Montauban, was so affected by the rumours reaching him that he visited the scenes of revival, thoroughly investigating everything, including certain occult physical manifestations, and the results were embodied in a large work entitled *Le Réveil au Pays de Galles* (Paris, 1906), as well as a subsequent volume entitled *Quelques Réflexions sur la psychologie des réveils* (do. 1906). In the latter much use is made of the crowd-psychology of his countryman, Gabriel Tarde; and it would be a singular fact if the best literary monument of the Welsh revival should in future have to be sought in a foreign language.

6. American revivals.—America is the land of revivals. Nowhere else have these been so frequent as in the United States; nowhere else have the Churches owed to them so much of their increase and prosperity; and nowhere else have they been subjected to so much philosophical and theological discussion. It is to the atmosphere of revival in which they live and move that American thinkers owe the position of pre-eminence in religious psychology conceded to them even by the Germans; and it is not surprising that the American book which has attained most notability throughout the world since the beginning of the century should be of this type, William James's *Varieties of Religious Experience* (London and New York, 1902).

What is known as 'the Great Awakening' began in 1734, and broke out again in 1740 at Northampton, Mass., under the preaching of Jonathan

Edwards (*q.v.*), pastor in the Congregational Church of the place, and it extended through the greater part of New England, George Whitefield, from England, being one of those who assisted in the later stages. It began with Edwards preaching a series of sermons in which attention was concentrated on sin, with the purpose of awakening the conscience; and the power of producing deep conviction of personal guilt remained one of the leading features of his ministry. But he was a man of high character and philosophical grasp, to whom his countrymen fondly look back as their deepest thinker in theology. He was the author of numerous works, most of which were connected with the revival, and one of them is a classic, *A Treatise concerning Religious Affections* (1746), being written to show which features of the prevalent excitement were healthy and ought to be encouraged, and which were morbid and needed to be restrained. He fell out with his people over the question of debarring the unworthy from the Lord's Table and had to quit the place; but he finished his course in honour as president of Princeton College.

Times unfavourable to religion followed in connexion with the War of Independence; but, about the turn of the century, chiefly through the preaching of James McGready and two brothers of the name of McGee, a remarkable awakening passed through the Cumberland country in Kentucky and Tennessee—a region which had long been notorious for irreligion and violence. Taking place in such a population, assembled in huge camp-meetings, it was attended with physical manifestations of a remarkable order, which, under the name of 'bodily exercises,' are fully described in a curious but obviously well-informed article in the *Princeton Theological Essays* (1st ser., New York, 1846, Edinburgh, 1856), under the title of 'Bodily Effects of Religious Excitement.' To these the leaders of the movement do not appear to have attached undue importance, but such experiences must have produced among the masses of the people an overpowering sense of supernatural agency. Similar phenomena have often since appeared, but they tend to diminish before the advance of education.

When Timothy Dwight, in 1795, became president of Yale College, religion among the professors and students was at a very low ebb; but, under his powerful preaching from the pulpit of the college chapel, revivals took place again and again among the students; and, it is said, no fewer than seventeen such visitations could be counted in the course of a century. Ever since, such movements in colleges have been a prominent feature of the revivalism of the country; and E. D. Starbuck, in his *Psychology of Religion* (London, 1899), has thereby been led to connect conversion with the physiological changes of puberty. Certainly there are affinities between religion and the awakening of the youthful mind to such sentiments as patriotism and altruism; but in some at least of the American revivals, such as that conducted by C. G. Finney, the average age of the converts was much more mature. The Young Men's Christian Association has obtained in American universities a position of great importance, its building being generally on the campus and forming the social centre of the place; and this has afforded opportunities of a unique description for the diffusion of religious sentiments among the student body.

The Irish revival of 1859, above referred to, was an importation from the United States, where it had been prevalent for two years previously; and of course Moody had learned his methods in his own country before coming to the British Isles. But his success in the old country gave him a standing in his own land such as no evangelist before him had enjoyed, and he was going up and

down the States evangelizing till his death. Nearly all the evangelists who have since come into prominence, such as G. F. Pentecost, B. F. Mills, R. A. Torrey, J. W. Chapman, and W. A. Sunday, may be looked upon as his disciples and imitators, though some of them have developed novel methods in certain directions, such as awakening interest before their arrival, uniting the religious forces of the place for a general effort, securing the public testimony of converts, and getting the results which have been harvested well preserved after their departure. While Moody was attended only by a single coadjutor, the more successful of these recent men move from place to place with a following of something like a dozen, ready for every kind of assistance such as secretarial work, singing, advertising, and the rest.

7. **Horace Bushnell's protest.**—This triumphant progress of revivalism in the United States did not take place without challenge. Certain denominations held aloof, especially the Episcopalian, although the 'missions' carried on in recent times not only among Episcopalians but even among Roman Catholics may be regarded as a concession to the popularity and utility of methods which these bodies have been slow to acknowledge. Almost exactly a century after the appearance of Jonathan Edwards' classical work mentioned above there was published by another minister of the same denomination, Horace Bushnell (*q.v.*), a book, *Christian Nurture* (Hartford, U.S.A., 1847), which traversed the prevailing practice in thoroughgoing fashion; and, though small in bulk, this is one of the great works of American theology. Bushnell was not opposed to revivals as such; indeed, he had taken part in them and had, at a not very tender age, passed through a marked conversion himself. But he was irritated by the disposition in multitudes to assume that nothing could be happening in religion unless a revival were going on, by the exaggerated importance ascribed to conversion, as if it were the only religious experience, and by the invasion of the sacredness of personality in certain practices of the revivalists. He charged revivalism with exaggerated individualism, no comprehension being displayed for the functions of the Church, the family, and the State, or for the significance of baptism among the experiences of life. He struck at the very heart of the system by maintaining that, normally, those who have had the advantage of Christian culture in the home should grow up Christians, without requiring such a change as is insisted on in revivals. Bushnell's strong point was never the evidence from Scripture, and he did not do full justice to the teaching of our Lord Himself on the new birth, on taking up the cross, and on making confession before men. When it is to experience that the appeal is made, opinions may differ widely as to the proportion of those receiving a Christian training who subsequently appear as undeniably Christian, but it would be a fatal mistake not to recognize that multitudes of those who have enjoyed the best of nurture grow up alienated from God and with their heart in the world; and these are the proper subjects of a revival. To regard as true Christians all who have undergone such rites as baptism and confirmation is to be content with a nominal and Pharisaic type of Christianity. The communication of religion from the outside through tradition and instruction is not enough without a reaction from within by the personality itself and a grasping of the truth by the mind's own activity. Bushnell's protest, however, enabled those to breathe who had no story of their own conversion to tell; and these have included even prominent revivalists like Zinzendorf and Drummond. The test for every one is not whether at some past

moment he passed through a spiritual crisis, capable of being related as a testimony, but whether at the present moment he is prepared to receive the Saviour and to surrender all to His love and service. There will always be minds to which catastrophic experiences in religion are congenial and others to which the methods of nurture are more acceptable; there is plenty of room within the Kingdom of God for work inspired by both of these ideals; and with the progress of time each side may be trusted to understand the other better.

LITERATURE.—In addition to the books mentioned in the art. the following are worthy of note: C. G. Finney, *Autobiography*, New York, 1876, London, 1892, and *Lectures on Revivals of Religion*, Boston, 1835, new ed., London, 1910 (cf. a severe review of the latter in *Princeton Theological Essays*, 2nd ser., New York, 1847); A. Bruckner, *Erweckungsbewegungen: ihre Gesch. und ihre Frucht für die christliche Kirche*, Hamburg, 1909; J. W. Chapman, *Present-Day Evangelism*, New York, 1908; R. A. Torrey, *How to conduct and promote a Successful Revival*, Chicago, 1906; Henry Ward Beecher, *Lectures on Preaching*, 2nd ser., New York, 1873; J. Burns, *Revivals, their Laws and Leaders*, London, 1909; W. R. Inge, *Christian Mysticism*, do. 1899; James Stephen, *Essays in Ecclesiastical Biography*, 2 vols., do. 1907; Lives of John Livingstone and David Dickson in *Select Biographies*, 2 vols., ed. W. K. Tweedie (Wodrow Society), Edinburgh, 1846; D. Macfarlan, *Revivals in the Eighteenth Century with Sermons by Whitefield*, Edinburgh, n.d.; R. Bendixen, *Bilder aus der letzten religiösen Erweckung in Deutschland*, Leipzig, 1897; H. Stephan, *Der Pietismus als Träger des Fortschritts in Kirche, Theologie und allgemeiner Geistesbildung*, Tübingen, 1903; A. Ritschl, *Gesch. des Pietismus*, 3 vols., Bonn, 1880-86; J. C. Ryle, *The Christian Leaders of the Last Century*, London, 1888; J. H. Overton, *Evangelical Revival in the Eighteenth Century*, do. 1886; W. J. Townsend, H. B. Workman, and George Bayrs, *A New Hist. of Methodism*, 2 vols., do. 1909; F. P. G. Guizot, *Méditations sur l'état actuel de la religion chrétienne*, Paris, 1866; W. R. Moody, *The Life of Dwight L. Moody*, New York and London, 1900; G. A. Smith, *The Life of Henry Drummond*, London, 1899; H. E. Lewis, *With Christ among the Miners*, no. 1907; *The Works of President Edwards*, 8 vols., do. 1817; J. Tracy, *The Great Awakening: A Hist. of the Revival of Religion in the Time of Edwards and Whitefield*, Boston, 1842; L. W. Bacon, *A Hist. of American Christianity*, New York, 1901; Williston Walker, *Ten New England Leaders*, Boston, 1901; F. H. Foster, *A Genetic Hist. of the New England Theology*, Chicago, 1906; T. T. Munger, *Horace Bushnell, Preacher and Theologian*, Boston and London, 1899.

REVOLUTION.—See **REBELLION.**

REWARDS AND PUNISHMENTS.—I. Preliminary.—In considering the attitude of the ethical or religious man, as such, towards rewards and punishments, we are met at the outset with certain questions which involve the whole nature of law. Those thinkers, e.g. (nowadays fewer than formerly), who treat law in the Austinian fashion as an authoritative command, claiming a more or less unreasoning obedience, will naturally reduce to a minimum the potential influence upon it of religion and ethics. In the famous phrase of Samuel Horsley, we shall have nothing to do with the laws but to submit to them; and the punishments and rewards assigned by them we must accept with at least an external show of accommodation. On the other hand, it is a perfectly tenable position, and has indeed been maintained by some, that the infliction of punishment is not permissible to man, and least of all to the State. Those who hold this opinion point out, with much appearance of reason, that fallible humanity is incapable of exactly measuring the guilt of the criminal or of tracing the causes and effects of the crime beyond its narrowest surroundings. For many, perhaps for all, offences society itself, or the unreachable past, may well be far more responsible than the so-called offender—not to add that, in the words of Anglo in *Measure for Measure*,¹ the jury often 'may in the sworn twelve have a thief or two guiltier than him they try.' For these and other reasons men of the most various religious views have deemed it necessary to take punishment altogether out of the hands of erring human

tribunals. Some base their conclusions on an interpretation of certain words of Jesus; of this class are Tolstoi and his followers. Others, like Kropotkin, taking an anarchistic view of the world, adapt their conception of punishment to their general idea of the illegitimacy of all ordered government. Some bid us leave penalty to the divine court that cannot err; others, rejecting all idea of the divine, see no reason on that account for subjecting the individual to the judgment of his fellows.

In the opinion of the present writer these arguments admit of no direct answer; they can only be met on the principle of *solvitur ambulando*. 'Common sense' (in the Aristotelian acceptation of the phrase as the general opinion of enlightened men) holds, and will apparently continue to hold, that one way to decrease crime is to punish it; and it is only a small minority which holds that the sole legitimate way to decrease crime is either to ignore it or to meet it by active benevolence or non-resistance. We are far from denying that the elimination of punishment may be considered a desirable ideal; but a philosophy that is to have any practical value must take account of actually existing conditions; and it is with these that the present article will mainly concern itself, leaving maxims of the kind described to play their part exclusively in the inward life.

On the other hand, the Austinian theory seems to fail chiefly through not taking account of the fact that law, as an expression of one side of humanity, is a product of evolution, and cannot be understood without a consideration of its origin and growth in and through past ages. Therefore, although this historical aspect is fully dealt with in the art. **CRIMES AND PUNISHMENTS**, we shall keep it in view throughout this article; for law, regarded as a growth, is at once seen to fall under the effective criticism of a constantly growing moral and religious feeling in the community.

2. Basal elements of punishment.—Law is the product of society, and, at least partially, of society in its religious aspect.

'Those ways of action,' says Durkheim,¹ 'to which society is strongly enough attached to impose them upon its members, are, by that very fact, marked with a distinctive sign provocative of respect.'

Authority springs from social opinion: indeed, 'it might even be asked whether all authority is not the daughter of opinion.'² But society soon finds that mere opinion will not exert sufficient authority to influence all its members; and the very earliest customary laws make us familiar with sanctions and rewards.³ Punishment, whatever shape it may assume, is clearly seen to be an evil.⁴ In the sense of penalty inflicted under the sanction of law, it has at least one of its roots in the primitive instinct of revenge, precisely as reward is partly based upon the primitive instinct of gratitude. 'Revenge,' said Bacon, 'is a kind of wild justice'; and conversely justice, in one of its most important aspects, is but a tamed and civilized revenge. Now revenge (q.v.), superficially viewed, is a pure 'evil'; it seems to be nothing but the impulse to return blow for blow. Because you have been injured, anger prompts you to ensure that whatever has injured you shall suffer in the same way and to the same extent. But it is not long before you discover a thousand circumstances that may complicate this simplicity. In your anger you may easily deal a heavier blow than the one received. You may often wish to avenge the wrong, not of yourself, but of another. You may

¹ *The Elementary Forms of the Religious Life*, p. 207.

² *Ib.* p. 208.

³ By some the word 'sanction' is made to include rewards; by others, such as Austin, it is used of penalty only.

⁴ Bentham, *Works*, i. 390.

have to call in external aid in order to accomplish your revenge. You may be unable to reach your enemy, and you may desire to attack some one else in his stead. Or, again, your injurer may retort to your reply, and an indefinite series of retaliations may be thus set up; nor is it by any means certain that the original aggressor will in the long run get the worst of it. Revenge is thus perceived to have a very awkward tendency to defeat its own end. Yet, despite all this, the claim that he who injures another should receive at least an equal injury in return is by no means negligible. It is indeed arguable that the straight hit from the shoulder is ethically more justifiable than the cold-blooded infliction of a judicial sentence. Again, the frequent necessity of calling in outside aid tends to enlarge personal revenge into that wider emotion which, in its later developments, becomes patriotism. The family, the tribe, the nation desire to inflict on a whole community a punishment for an injury done to a single member of their community; and this is one expression of that sense of solidarity which is the ultimate basis of ethics. Revenge, therefore, must by no means be treated as non-moral or even as non-religious. So soon as the mere application of the *lex talionis* is perceived to be impossible; so soon as the idea of vicarious action and of vicarious suffering enters in; so soon as injuries to intangible values (such, e.g., as honour or reputation), which cannot be assessed at a definite price, are taken into account; so soon does the apparently non-moral principle of revenge take upon itself an ethical aspect. Without entering in detail into historical or anthropological questions,¹ we may safely assert that this primal instinct of human nature demands, in society as it is, not suppression or extinction, but regulation and limitation.

We see in revenge the working of two impulses, anger and fear. Primarily, the return blow involves (a) an automatic reflex-action, (b) an attempt to clear danger out of the way. In both we have the germ of a moral feeling. In (a) we see resentment, in (b) that demand for a free unfettered existence which is the condition of a moral life. Hence neither by legal codes, even the most humane and rational, nor by some of the most religious-minded of philosophers has the element of revenge been altogether ruled out. Thus of resentment Martineau observes that it is justified if 'it retains its primary form of legitimate instinct, without added taint of artificial malignity';² and, while Sidgwick and John Grote³ wish the desire to inflict pain to be diminished, thinkers so opposite as Stephen⁴ and Rickaby⁵ see in that desire a perfectly legitimate emotion. Rickaby, indeed, representing a Roman Catholic point of view, is particularly strong on the point.

'Vengeance undoubtedly prompts to many crimes, but so does the passion of love. Both are natural impulses. It would scarcely be an exaggeration to set down one third of human transgressions to love, and another third to revenge; yet it is the abuse in each case, not the use, that leads to sin.'

Quoting Aristotle⁶ and Augustine,⁷ he points out the necessity of this retributive and retrospective element in justice. To Bentham the matter appears in a different light; but to him also that law is the best which secures that punishment and reward shall automatically follow disobedience and obedience; thus to him one of the best of all laws was Burke's famous Act regulating the payment, by the Lords of the Treasury, of their own salaries out of the public funds—an Act so drawn that the receipt or the loss of the salary automatically followed care or neglect. Resentment, similarly,

is the basis of that public opinion which is the automatic reward or punishment appropriate to the moral law.¹ In fact, as this automatism is developed, it emerges into that lofty ethical conception in which the sin is viewed as its own punishment—a conception adumbrated by Origen,² and admirably exhibited by Martensen³ and others; and one which lies at the base of the *Divina Commedia*.

Nor is the other aspect of revenge, that of fear, without its distinctly ethical side. For this instinct of self-protection is inseparably linked with the group-instinct.

'Pure anarchy or self-redress is qualified first by the sense of solidarity within the primary social unit.'⁴

Fear leads to the search for help; and without this sense of solidarity no truly ethical emotion can arise. It leads, first, to preferential group-treatment, the typical instance of which is the blood-feud. Of this examples still remain in the Corsican vendettas and in the so-called punitive expeditions against 'inferior' races, the object of which is to exact the blood of many 'inferiors' for that of one or two of the 'superior' race. This example is by itself sufficient to show that preferential group-treatment may act to depress as well as to heighten the moral standard. It makes, on the one hand, for an enlarged and enormously powerful selfishness, and, on the other, for a sense of obligation beyond oneself; it makes alike for privilege and for brotherhood. It is, of course, the root-principle of 'civilization'; but it has not always meant moral advance.

E.g., 'at lower levels of savage society, punishment has some proportion to the offence. It is at higher levels, in barbaric and despotic societies, that punishment is most cruel and disproportionate.'⁵ 'Increasing severity has been a characteristic of European legislation up to quite modern times.'⁶

The treatment of the slave as a chattel, again, is largely due to the solidarity of the free population. And, as 'civilization' advances, certain crimes develop which were unknown to earlier stages of the world.

Yet, on a larger view, these drawbacks are seen to exhibit the power of morality in a clearer light. It was the realization that a slave had no rights that led to the movement for his emancipation;⁷ and, as Maine points out,⁸ the colossal frauds of modern times merely show how the bad faith of the few is facilitated by the confidence given and deserved by the many. Ancient Roman law recognized only one form of dishonesty, namely, theft. English law punishes defaulting trustees. But it would be a great mistake to conclude that the ancient Romans practised a higher morality than ourselves.

And, indeed, the principle of discrimination which leads to these evils leads also to immense good. The bounds of the group or clan, e.g., cannot remain rigid. For all sorts of reasons they are constantly altering. Outlaws from other groups are admitted; whole clans unite for convenience or for protection. Judah admits into its ranks the Calebite or the Jerahmeelite; Rome confers its citizenship on the Gaul and the Spaniard. When once, for any reason, you have conceded privileges to your group, it is always open to you to draw an outsider within the sacred fence; and he then receives the privileges from which he was excluded. Indeed, the very fact that a group has been formed involves to some

extent the breakdown of the solely self-regarding emotions; the group may, it is true, have been formed through hate or fear of another group, but it necessarily induces self-sacrifice on the part of those who join it; and self-sacrifice, once set in motion, has a tendency to enlarge itself. From the conception of love of a neighbour and helper, the step is possible, and even likely, to love of a stranger. Opportunities of such a step constantly arise: old enmities may be forgotten under the stress of circumstances, and, once forgotten, they are not always remembered again. Normans and English, *e.g.*, were fused into one by the French wars.

This fluidity in the boundary of the group leads not only to a constantly-changing conception of political duty generally, but specially to an infinite complexity and variety in the ideas of punishment and reward. Anger and fear are subject to constant modifications under the influence of affection or love; and a new line of ethical growth is seen emerging under that influence. To take a simple example: when it is perceived that it is on the whole advantageous to the community to allow the slave, who has hitherto been a chattel, to work for a reward, the community is on the way towards a recognition of the slave's rights, and we are not surprised to find a class of manumitted slaves appearing in its midst. Similarly with the criminal. At the first moment of anger he is thought of merely as an object to be hurt or destroyed; but, when it is realized that he too may have his utilities—that in fact it may be undesirable utterly to cast him out—then we find all sorts of precautions taken to prevent his hasty destruction. Thus arise the cities of refuge, trials by ordeal, sanctuaries, advocates, 'the King's Mercy,' until ultimately we reach the whole apparatus devised by a Beccaria and worked by a Howard for the elimination of any suffering over and above what is necessary for the public safety. Love has begun to work; the criminal is recognized as a member, if an erring member, of the group; and, indeed, the principle entered fairly early into the social order. For a long time past some tribes, and almost all organized States, have reserved a prerogative of pardon, lodged in the chief magistrate, the purpose of which is to cast the ægis of protection over the criminal himself, as one who, despite his lapse, may yet be of service to the community. This gradual enlargement of the social group to include within it those who were formerly shut out is part of a general movement on the part of the group to assume responsibility over a wider and wider area; and there seems to be no limit to the growth of this tendency. Already we see the State throwing its shield over children, imbeciles, and the lower animals; it has long protected the alien; and where it will stop none can say. In the 20th century movement for penal reform the scientific and the humanitarian lines are seen to converge; and the tendency is to transform mere punishment into a converting discipline, beneficial alike to State and to individual.

To the two elements of anger and fear, then, that are involved in the primary conception of punishment we must now add a third, which tends ever to become the dominant one—that of affection or love.

3. **Manifestation of these elements in modern theories of punishment.**—Inheriting the tradition of these three emotions of anger, fear, and affection, the modern State, more or less consciously, applies them in its system of punishment. It is true that the ethical element is not always prominent in the application of law to practice; but the three aims of punishment as so far understood

(retributive, deterrent, and reformatory) nevertheless underlie our criminal law, and the tendency is for the ethical aspect gradually to assume a dominant position.

'As social order,' says Hobhouse, 'evolves an independent organ for the adjustment of disputes and the prevention of crime, the ethical idea becomes separated out from the conflicting passions which are its earlier husk.'¹

The judge has before him, at least theoretically, the accuser, the community, and the accused, each of them preferring a claim. These claims (though not always in practice separable) may be roughly defined as (a) the indignation of the accuser, (b) the fears of the community, (c) the appeal of the accused to consideration as a member of a group united by solidarity of interest and good-will. These claims correspond alike to the three primary emotions and to the three aims of punishment. But the fact that the three claimants are not left to themselves to settle the dispute brings to light a fourth element. For, although it might at first glance appear that the judge is merely the representative of the community as against accuser and accused, yet this is not really so; he is the representative, not of one party, but of all the three; and his task is to apportion the relative values of the three claims. Thus, with the calling in of an outsider as arbitrator, there is a notable development, which (despite strong arguments that might be brought forward on the other side) seems on the whole to mark an ethical advance. In the first place, to adjust the demands of the emotions reason is called in as umpire; and reason, in the fine phrase of Milton, is the law of law itself. Again, the presence of this umpire assures finality; the cause is brought to some sort of conclusion. And, thirdly, a power is brought into play of the highest ethical importance—the power of leadership in things of the mind. It was thus that Deborah, by judging Israel under her palm-tree, acquired that capacity and influence which enabled her to rescue her country from the oppressor. In a well-known passage Maine describes how, in the early days of Rome, a *vir pietate gravis* may have first come to intervene as arbitrator in disputes. Passing accidentally by, he is asked to decide the case; a sum of money is staked on the decision; and at the close the loser pays the sum, not as a penalty, but as remuneration for the arbitrator's trouble.² The judge is chosen as *pietate gravis*; and his *pietas* and *gravitas* cannot but grow with exercise.³

Yet, as we have hinted, some ethical weaknesses lurk in the procedure as now carried out. The arbitration is now compulsory, at least to one of the disputants; and the arbiter is no longer a kindly spectator, but a professional. The 'sum of money' has become a penal infliction; and the infliction is made by proxy. We have, in fact, not merely restitution, but penalty. As to the evils of professionalism, they are obvious to all. 'A profession is essentially a conspiracy.'⁴ In the weighty words of Lord Loreburn, 'Lawyers are against legal reform: it is an interested professional opposition.'⁵ Nor is the effect, upon the class that awards or inflicts punishment, by any means always beneficial. In actual fact, perhaps, the judge himself may escape these effects; but it would be difficult to find a harder-hearted class than the set of lawyers, clerks, and apparitors who surround him. It is here that public opinion must always be awake; and here too lies one of the chief merits of an unprofessional jury-system.

The judge, fallible as he is, is not without guidance; and that guidance is tradition. This tradition acts both towards width and towards limitation. The judge's principle must arway

tend to push him beyond his boundary; his tools keep him within it.¹ In place of haphazard custom, a code has appeared as a kind of standardized tool; but that standard is always subject to modification. Spontaneous modification largely ceases with the introduction of a code; but deliberate change, due to the conscious desire for improvement, never ceases.² It was thus, e.g., that Mansfield, by ingenious interpretations of the law, saved Roman Catholics from the penalties of the Test Act, which, again, was actually repealed fifty years later. We become aware, then, of another power behind the judge, corresponding to the impalpable power behind his predecessor, the primitive king. Tradition (and also the unescapable spirit of the age) compels the judge to a perpetual re-adjustment of the scales of justice. The old simple idea of equality inevitably gives way, with the growth of knowledge and imagination, to the more complicated notion of proportion.³ Behind strict law and also behind tradition we detect the regulating presence of equity⁴—a conception so rooted in human nature that it appears in the most primitive of fairy-tales. By obscure stages law herself begins to subsume equity into her realm, until at last we perceive a formal alliance between the two; and who can doubt that this alliance springs from the desire that law shall not be too visibly divorced from the developing ethical standard of the times? In a similar fashion, the old legal theology has gradually adapted itself to the ethical requirements of an ethically advancing society.

'Nothing,' says Maine,⁵ 'is more distasteful to men . . . than the admission of their moral progress as a substantive reality. . . . Hence the old doctrine that Equity flowed from the king's conscience—the improvement which had in fact taken place in the moral standard of the community being thus referred to an inherent elevation in the moral sense of the sovereign.'

But this very fiction of the king's conscience marks the existence in the mind of the community of a type or pattern to which the constitution is seen to conform only partially;⁶ and this pattern may in many minds be regarded as a divine order, which uses human society as its means of expression. Other minds may exclude the divine, yet all alike conceive this pattern as an ethical ideal.

We may now add to the emotions of anger, fear, and love, as producers of social punishment, the following elements: the conception of an umpire, who brings reason to regulate the emotions; the conception of tradition, the accumulation of human judgments, limiting the action of the judge; the conception of equity, or of a set of principles which must adjust the rulings of tradition; and the conception of an ideal, whether regarded as divine or viewed as human, to which communities of men have a tendency to conform. Of these we may observe that all involve an ethical element; that they must all be present in a righteous decision; and that they are closely bound up with the progress of mankind, admitting indeed, to a certain extent, of being arranged in historical sequence.

'Plurima est et in omni iure civili, et in pontificum libris, et in XII tabulis, antiquitatis effigies.'⁷

4. Religious aspect.—When this conception of a type or pattern takes the form of a belief in a divine order revealed to man, then the subject of punishments and rewards becomes distinctively religious. Religious, of course, in some sense it has almost always been. Even before the sense of 'order' was evolved, when religion was scarcely to be distinguished from magic, the disorder was conceived as a divine disorder: the god was cap-

ricious, but men endeavoured nevertheless to understand his caprices and to propitiate his strange anger. Step by step the god is conceived as punishing and rewarding on an intelligible system; and here we see the gradual emergence of the pattern.

'We are told,' says Bryce, 'that the sun and the wind killed Laoghaire, because he broke his oath to the men of Munster.'¹ Here the god is seen acting physically, but punishing an offence that weakens the social bond. A step in advance is taken when spiritual agencies arise who take an interest in certain moral acts as such²—when, in fact, a certain stability is seen in the divine judgments. Zeus, invariably punishing a wrong done to the guest or suppliant, is already a religious conception; and from that point we can trace the growth of the idea of a righteous God into its modern stages. A man who has attained this view of a righteous God must, when faced with the fact of punishment as an integral part of the social order, ask himself the question, Is it in accordance with the will of God that man should punish his fellow-man? He may seek enlightenment from revelation; and in this case his answer will depend on the interpretation that he gives to the sacred traditions. Or he may inquire of philosophy (supposed here to be more or less theistic); and in this case the answer will vary according to the form of philosophy which appeals to him. Should the answer be in the negative, we have already pointed out that this article will be of little utility. If, on the other hand, it be in the affirmative, the seeker will at once be led to discuss the right relation of human justice to divine. (1) Shall it consciously endeavour to follow the principles on which, so far as can be seen, God rules the world? Or (2) shall men, while duly reverencing the divine law as a norm for the individual, refuse to regard it as a model for regulations dealing with the social order? Shall the State, in other words, be theocratic or secular? There is no lack of communities of either kind; still less is there lack of communities with something of both. Of systems that have worked on theocratic lines, perhaps the most familiar and striking example is the Jewish; but many Eastern States have conformed more or less fully to the type, and the Christian Church in the Middle Ages made a determined effort to realize the ideal. Many theorists also have held this view in varying degrees. Arnold, e.g., and Gladstone in his *Church and State* propounded doctrines of this kind, while Martensen³ speaks of 'the divine authority which manifests itself in the law, . . . and is postulate and background for all earthly human authority.' To him religion is 'the inmost nerve of obligation, which knits us to responsibility.' The ideal has in fact attracted saintly minds since the Akkadian psalmist, seventeen centuries before Christ, addressed his goddess as her 'whose will makes contracts and justice to exist, establishing obligations among men.'⁴ But the verdict of experience is fatal to it. As a matter of historical fact, the deadead, the most repressive, and the least enlightened of all forms of government have been the theocratic.⁵ Islām, e.g., declares plainly that law is religion and religion law—with the result that the law of Islām is a mass of enactments, unalterable because dictated by God or His mouthpiece, instead of a living and growing body of principles. The history of our own land provides us with instances full of warning. Barebone's Parliament, endeavouring

to rule England in accordance with the Law of Moses, is not an edifying spectacle. The identification of religion and law, indeed, has been baleful to both; religion has become frigid and ceremonial; law has been treated as infallible, and has therefore been unprogressive. True, such a system is often successful in securing obedience (or at least an external conformity), but at a terrible expense; nor is there any limit to the cruelty which may be practised in the name of some god or other. It is the attempt to punish as God is supposed to punish that largely accounts for the hideous record of religious persecution.

Hence we are not surprised to find that the majority of the noblest publicists, even among men of deep religious feeling, have utterly refused to permit religion, in this sense, to intrude into the domain of punishment. The illustrious Beccaria—to take but one great name—knew too well the dangers of theological interference to permit to 'religion' the slightest visible power over civil jurisdiction. All penalties, he held, must be dictated by State utility.

Is, then, religion to be totally excluded? Far from it. There is nothing to prevent the religious man from being a good citizen; on the contrary, his religion tends to make him the best of servants to the State. Accustomed to look on the improvement of character as the highest of aims, he refuses, in his rôle of citizen, to accept as a satisfactory form of punishment one that does not further that aim. Religious men, it is true, differ widely in their views. Some hold that the retributive element should be upheld; others, looking upon punishment as a necessary evil, to be tolerated solely for the safety of society, will have none of that element, and turn their energies towards furthering the good of the criminal. But their differences are, after all, but matters of varying emphasis.

5. Attitude of the religious man to law.—No question is at once more important and more difficult than that of the due attitude of religion and morality towards punishment.

'All theories on the subject of punishment,' says Maine, 'have more or less broken down; and we are at sea as to first principles.'¹ 'The question as to the true principles on which penalties should be awarded for crime is still an unsolved one,' says Lord Russell of Killowen, and Sir Robert Anderson, a man of almost unequalled experience in criminal investigation, maintains that our whole system of punishing crime is false in principle and mischievous in practice.²

It is thus plain both that reform is necessary and that it is very difficult. The wise reformer will walk warily. Yet we are not without some fairly certain principles which may form the basis of our views as to the proper forms and methods of punishment. Putting aside all sophistical argumentation, we must recognize the necessity of a proportion between penalty and offence, and also between penalty and offender. Exact measurement of crime is of course impossible; but a healthy ethic revolts against a Draconian severity. Hanging for the theft of five shillings we will not have; and first offenders must be treated leniently.³ Most of us would also uphold the principle of the indeterminate sentence. Again, a true morality will not be satisfied to discuss punishment on the grounds of mere social convenience. There is something to be said, *e.g.*, for a plentiful use of the punishment of death. A nuisance is easily got rid of, and with the least possible expenditure of public money; the dead criminal cannot repeat his crimes, and (though experience does not say so) it is arguable that others, by the sight of so terrible

a retribution, may be deterred from imitation. But religion and ethics will be moved by no such considerations. By death the criminal (who is by no means to be treated as wholly unserviceable) is deprived of the power of further service; and to this religion, here reinforced by science, will no more agree than will the economist now agree to make no use of the so-called 'waste-products' of the coal-mine. It may, like the pope in Browning's poem, be compelled to admit the advisability of death as a punishment in certain exceptional cases, but not on the grounds above mentioned; and it is possible that it may come to reject the death-penalty altogether.

Outlawry, so common in former times, tends to lose its meaning as the world tends to become one; but in any case it is a confession of weakness and an evasion of responsibility which religion is loth to make. Imprisonment and the social boycott, to some extent, take its place; but in the application of these we must insist on the constant treatment of the criminal as a potentially valuable citizen. The imprisonment must not be such as to degrade him yet more; and, on his release, he must not be shunned like a pariah, but given a fair chance; Beccaria indeed goes almost farther than this.

'The degree of the punishment,' he says, 'and the consequences of the crime, ought to be so contrived as to have the greatest possible effect on others, with the least possible pain to the delinquent.'⁴

Law being useless without a sanction, and sanction being an evil, the religious man will desire to diminish the number of laws and the number of legal crimes. More and more he will aim at the substitution of public opinion for legal penalty; for, if experience shows anything clearly, it proves that a healthy public opinion does more in a year to prevent crime than the severest penalties in a century. Duelling, *e.g.*, has ceased in Britain, not by being treated as murder, but by being proclaimed as immoral, or even by being ridiculed as absurd; and, were the laws against it to be dropped, it would none the less remain in abeyance. Adultery, again, has not flourished least in those countries where it has been punished by the law.⁵

This attitude does not imply any insensitiveness to the evil of crime. Religion does not regard sin as a mere disease, nor does it relieve the criminal of responsibility.⁶

'One system (the Philadelphian) had approached the problem from the mental side, aiming to solve it by making men *think* right. The other (the Auburn) approached the problem from the physical side, aiming to solve it by making men *act* right. Both failed; for the problem of crime is a moral one. No man can be reformed except his conscience be quickened.'⁴

Some methods employed at present in the detection or prevention of crime the religious man will probably regard as pernicious and to be renounced. The *agent provocateur*, *e.g.*, cannot be used but at the cost of moral deterioration to himself and to the Government that employs him. He may diminish one form of villainy, but he adds to another that is probably worse. The ordinary spy is little better; and the offering of rewards to criminals who will betray an accomplice can only increase, in the society as a whole, the most loathsome of vices, that of treachery.⁵

Improvements of the kind here hinted at, and many more, may be accomplished by the ethical and religious man, acting quietly as a citizen of ordinary influence. There are, however, occasions when it may be his duty to set himself in direct opposition to what he regards as a bad law. Of these cases the classical example is Antigone; the

Biblical, Peter and John preaching the gospel in Jerusalem. Quite recent times, of course, supply famous examples. Here, by the nature of the case, no precise rules can be laid down. The conscientious rebel (or, as Westermarck¹ calls him, the 'moral dissenter') must seek all the enlightenment at his disposal, and then, after carefully balancing against his scruples the claims of the State and the evils involved in disobedience, act accordingly. For such men other moral and religious men will desire the punishment to be as light as possible; for conscience is not so common that even a mistaken conscience can be suppressed except at a heavy loss to the community. Nor is the dissenter ever acting, in a strict sense, alone. 'He feels,' says Westermarck,² 'that his conviction is shared at least by an ideal society'; in the words of Pollock, he regards his own opinion 'not as peculiar to himself, but as what public opinion ought to be.'³ An ethical judgment of such men will further take into account the fact that the great reformers of the past have in their time been moral dissenters of precisely this kind.

Finally, the religious man is, almost *ipso facto*, an optimist. He believes in the inherent power of good and in its ultimate triumph; and he looks forward therefore to a time when virtue will be so predominant that punishment will be unnecessary; the attractions of goodness will be by themselves sufficient to ensure just action on the part of societies and their members. But meanwhile the moral or religious man will give his support to all agencies for the eradication of crime, measuring that support by the degree in which those agencies involve more of the reformatory element and less of the retributive.

A word here seems desirable as to punishments in the next world. Here the religious man's views cannot help being coloured by his views as to earthly punishment. He may, it is true, be compelled by his belief in revelation to admit the existence of certain forms of future penalty which may, *per se*, seem purely retributive; and he may be compelled to answer to objections by the simple argument, 'Man cannot judge God.' Nevertheless, we trace a growing tendency to reject the merely retributive penalty as unworthy of the Deity. Men dare, like Abraham, to ask, 'Shall not the Judge of all the earth do right?', and they tend more and more to claim from divine justice the same end and character as from their own. The Roman Catholic has long had his Purgatory; the liberal theologian believes in a universal restoration; the orthodox Protestant no longer preaches the deterrent judgment sermons of a hundred years ago; and he tempers his view of eternal punishment by manifold accommodations. The flame is not a literal fire; or the sinner, even 'between the saddle and the ground,' may have sought and received mercy.

6. Rewards.—Punishments and rewards divide between them the whole field of legislation.⁴ But the division is very unequal; for, though the field of reward is far the larger, being in fact co-extensive with the whole field of service, it naturally demands far less attention from the lawgiver. As punishment is an 'evil,' so reward may be defined as 'a portion of the matter of good, which, in consideration of some service supposed or expected to be done, is bestowed on some one, in the intent that he may be benefited thereby.'⁵ By 'benefit,' as might be expected, Bentham means 'pleasure'; but, as he well points out, reward cannot ensure pleasure; it is meant, however, to enlarge the

opportunities of pleasure at the disposal of its recipient. If we prefer the word, we may substitute 'happiness' for Bentham's phrase.

As we analyze reward, we shall discover ample scope for the exertion, by religion and ethics, of influence over its distribution. It is hard, perhaps, to improve on Bentham's division, according to which it may assume one (or more) of four forms: (1) wealth, (2) honour, (3) power, (4) exemptions. Of these 'wealth,' according to Bentham's utilitarian view, 'is in general the most suitable.'¹ Thus successful warriors have often been directly rewarded by gifts of money or estate; and in modern communities the whole course of legislation has been generally conducted with a view to providing wealth as a reward for service, and to securing it, when once acquired, against violence or fraud. But 'honours,' at least as direct gifts of the State, are equally common; and in some countries civil servants of a certain rank are ennobled as a matter of course. We are all familiar with titles as a gratification for at least theoretical services. Exemptions, again, are common, whether in the form of exemption from civil burdens or in that of exemption from punishment. Thus, under the *Ancien Régime*, the nobles and clergy, in return for more or less fictitious State services, were freed from most kinds of taxation. 'Previous good conduct' is almost everywhere admitted as a plea in mitigation of punishment.² Sometimes, indeed, the exemptions have been even anticipatory: a Roman citizen, *e.g.*, knew beforehand that he was free from capital punishment, a Russian deputy from corporal. 'Benefit of clergy' secured 'clerks' from certain penalties; and in former times English noblemen were exempt from penalties for even atrocious crimes.

But it is with regard to power that religion and ethics have most to say; for there can be no doubt that of all rewards power ought to be the commonest; and it is in the direction of increasing the range of power as a reward that reform should certainly proceed. Both on religious grounds and on grounds of expediency it is eminently desirable that he who has been faithful in a few things should be made ruler over many things; and it is to be hoped that men will be diminishingly anxious for rewards of other kinds; that, in fact, men who have been useful should ask to be paid merely by being granted greater opportunities of usefulness. Here lies the true reconciliation between the view of Pericles, that 'where there are the greatest rewards of merit, there will be the best men to do the work of the State,'³ and that of Plato, that there can be no sound government while public service is done with a view to remuneration.⁴ Whether, *e.g.*, a school should give prizes may well be doubted; but it is beyond dispute that the boy who has shown capacity and merit should be made a prefect. It is true that, as Bentham observes,⁵ we do not make him who has produced the best piece of artillery the head of the Ordnance; for the capacity of invention is not necessarily the capacity of administration. But this is beside the point. That to which we desire to promote the inventor is the fuller opportunity of invention; and that to which we desire to promote the good ruler is the fuller opportunity of rule; the reward is to consist precisely in a wider field for service of the kind which a man has shown himself able to give. And here is one great and obvious advantage, from the point of view of the community, held by reward over punishment. Both alike 'belong to the automatic element of

social life';¹ but the working of reward is far more automatic than that of punishment, and is achieved with a far less wasteful expenditure of machinery. We do indeed find many a Galba, 'omnium consensu capax imperii, nisi imperasset';² we do indeed find men, with none of Galba's claims, promoted to high positions; yet, with all these unfortunate exceptions, the capable man tends, by the mere virtue of his capacity, to come to the top—granted that, in present circumstances, vastly too much influence is exerted by powers of rhetoric and 'pushfulness,' by audacity and chicanery, worst of all, by wealth. 'Slow rises worth, by poverty depressed.' But it is exactly here that religion and ethics find their chance. The moral and devout man is accustomed, as we have said, to regard character as the really important thing. Free from the distorting power of envy, he is also (as we believe) gifted with a special *flair* for the discovery of high character; and he will use his growing influence for the exaltation of the truly serviceable and the depression of the merely blatant. With the abolition of the retributive penalty and the establishment of enlarged service as the appropriate reward, religion and morals will be in the way to achieve their highest ends. 'But all things excellent are as difficult as they are rare.'

LITERATURE.—The bibliography of this subject is very large. The following works, among others, may be consulted: J. Addams, *The Spirit of Youth and the City Streets*, New York, 1912; J. E. E. KELLETT.

REYNARD THE FOX.—In the Middle Ages beast-fables and apologies were largely used by preachers—beasts symbolizing men or particular qualities or failings, and their words and actions being intended to teach a lesson. These fables were partly drawn from Eastern sources, and Buddhist literature abounds in them, though they are also used there to express the doctrine of reincarnation, and they describe the acts of Buddha in previous animal existences. Most folk-tale collections contain specimens of them, and some are still told among the peasantry. But they were not invented for the purpose of pointing a moral. They existed already as *Märchen*, and the moral was a later addition. All savage collections of folk-tales are full of stories of animals which it would take little alteration to turn into genuine beast-fables. Animal folk-tales, in which animals act and speak like men, descend from an age when it was actually believed that they could do so, and in which also men had already noted the characteristic traits of different kinds of animals—traits which had human parallels. Such savage stories are of the Brer Rabbit class, and tell how this or that animal successfully tricked the others. As a rule each people has its favourite rogue-animal—Hottentots, Bushmen, and Berbers the jackal; Bantus, Negroes, Mongols, and Koreans the rabbit or hare; Malays and Dayaks the moose-deer and tortoise; American Indians the turtle, coyote, or raven; while in the north of Europe as well as in Oriental stories the fox (or the jackal) dupes the bear or the lion.¹ The humour of these stories is obvious, but they reveal a curious pleasure in astuteness, cunning, and villainy, though often dire vengeance is depicted as overtaking the offender. The long and complicated story of Reynard the Fox is a literary example of the folk-tale of beasts which act as men, raised to an epic grandeur. It is a *Märchen* on a large scale in which a large number of animals are the *dramatis personæ*, and many incidents are brought together into a more or less complete whole. Undoubtedly its roots are in the popular tales rather than in the moral apologies current in ecclesiastical circles. See also artt. FABLE, PARABLE (Ethnic).

i. Variants of the Reynard story.—Apart from apologies and fables, the first known literary versions of the Reynard story are found in Latin poems of monastic origin, in which greater amplitude than was possible in a fable is given to the incidents recounted. One of these, which presupposes a popular original, is the *Écbasis cuysdam captivi*, the principal subject of which is the healing of the lion by the fox, found in the later versions. It contains over 1200 verses and was written by a monk of the abbey of St. Evre à Toul in the 10th century.² Another short Latin poem is the 11th cent. *Sacerdos et Lupus*, corresponding to the twelfth branch of the French *Renart*.³ A third is the *Luparius*—the wolf as monk, an episode found again in the *Renart*, and dating from the late 11th or early 12th century.⁴ Better known than these is the *Fabula Lupina* or *Isengrimus* or *Reinardus Vulpes* (c. 1150), a poem of over 6000 lines, divided into four books, with a certain unity and sequence of episodes, in which for the first time the animals appear with the

¹ See *CF*, p. 39 and *reft.* there, and cf. W. H. I. Bleek, *Reynard the Fox in S. Africa*, London, 1864; K. Krohn, *Bär und Fuchs*, Helsingfors, 1888, *Mann und Fuchs*, do. 1891.

characteristic names of the Reynard epos.¹ Of this poem there is a short abridgment, the *Isengrimus*, containing the incidents of the lion's sickness and his healing by the advice of Reynard, and the pilgrimage of Bertiliana the goat.² The *Fabellæ Lupinæ* is probably of Flemish origin, but from French originals or traditions, and its authorship is attributed to Magister Nivardus in a 14th cent. MS of the poem. He is a pious monk, who nevertheless satirizes the pope, priests, and religious orders, and is bitterly opposed to St. Bernard. Its subject is the adventures of Isengrimus and Reinardus, the lion's sickness and healing by Reinardus, and the outwitting and death of Isengrimus through the craft of Reinardus. The poem is charged with irony and is full of humour as well as moral allusions.

The earliest (Middle) High German version is the *Reinhart Fuchs* of Heinrich der Glîchesære (c. 1180).³ This work forms a complete whole without lapses or lack of order and connexion in the parts of the narrative, and with every evidence of having been clearly planned and executed.

The fox is here brought into relation with several inferior animals, then with the wolf, until the last, disgusted with Reynard's successes over him, seeks justice along with the other animals from the lion, who is ill. Reynard heals him, and turns the tables on his accusers. His healing potion, however, is a poison, and kills the king. In O.F. *poison = médecine, breuvage*. Possibly Glîchesære misunderstood the word, unless this treatment of the episode of the healing is his own conception. Unknown to other versions is the cause of the king's illness, viz. revenge on the part of the king of the ants when these have been destroyed by King Lion because they would not acknowledge his supremacy.

It can be proved that Glîchesære's work is due to French originals, and he himself alludes to French poems on the subject. Of his twenty-one adventures, five only are not paralleled in the French *Roman de Renart*. The *Roman*, however, has nothing of the completeness or unity which is a chief characteristic of Glîchesære's version, and a French poem of similar scope and harmony, now lost, has been postulated as his source, or a MS containing various 'branches' in the order of his episodes, or, more probably, a traditional arrangement of separate narratives. Such a grouping is already found in the *Reinardus Vulpes* (c. 1150).

Meanwhile in Flanders a poet, Willem van Utenhove, or Willem die Matoc, basing his work probably on a French poem in which the scene of the judgment of Reynard at the court of the lion had received original treatment, composed a work in Flemish, *Reinaert de Vos*, some time in the 13th century. A continuation, *Reinaert's Historie*, by a later unknown writer, supplied large additions and an element of satire, and the whole was now regarded as one complete work.⁴ Willem's expanded work is the source of the many translations and prose versions which have been so popular in various lands since the invention of printing. A popular prose version appeared in print at Gouda, by Gheraert Leeuw, in 1479, *Die Hystorie van Reynaert die Vos*, and its popularity caused Willem's poem to be forgotten. In 1481 Caxton's English rendering of this version with omissions and abridgments was published at Westminster. But the story of Reynard must have been known

already in England, as is shown by references in Chaucer's *Nonnes Prestes Tale* and in earlier Anglo-Norman poets, and by the existence of actual stories of the Reynard group in Latin and English verses of the 13th-14th centuries.¹

A Saxon or Low German version of the *Reinaert*, written in verse, appeared in 1498, and has been variously attributed to Heinrich van Alknar or to Nicolaus Baumann. This work, called *Reynke de Voss*,² was the source of the High German versions of *Keineke Fuchs*, the first of which was published at Frankfurt in 1545, and also of Danish, Swedish, and other translations. Goethe's well-known poem, based on J. C. Gottsched's version (1752), appeared in 1794.

The surviving French versions of the Reynard story are the poems of the *Roman du Renart*. These date from the 12th-13th cent., and are the work of different *trouvères*, though undoubtedly based on existing compositions or traditional versions. The separate poems, or 'branches,' of the *Roman* consist of numerous episodes which do not form a complete whole and have often little connexion with each other. One adventure follows another without transition—so much so that the number of the 'branches,' their order, and their contents vary in different MSS. In spite of the lack of order, it is fairly evident that the basis of the episodes of the *Roman* is the complaint laid before King Noble (the lion) against Reynard by Isengrim, the wolf, regarding the fox's villainies, and especially his violence to Hersent, Isengrim's wife. The fox is always the chief actor. The authors of some of these *Renart* poems were the early 13th cent. *trouvères*, Pierre de St. Cloud, Richard de Lison, and an unnamed 'Prestre de la Croix en Brie.' Of the other authors the MSS say nothing, but the provenance of the poems seems to have been Normandy, Champagne, Picardy, and Flanders.³ The complexity of the *Roman* is in striking contrast with the unity of the poem of Heinrich der Glîchesære, who nevertheless worked upon French sources. The *Roman* contains some 30,000 verses, and undoubtedly several 'branches' have been lost.

While the bulk of the 'branches' make the animals act and speak in character, others are full of the manners of the age of chivalry, and the animals act and speak as knights, with little regard to their own characters.

Another *Renart* romance is the independent *Le Couronnement de Renart*, dating from the second half of the 13th cent., which departs further from the Reynard tradition, and which has been attributed to Marie de France, though this is a matter of considerable doubt.⁴ To the same romance cycle belongs the *Renart le Nouvel* by Jacquemart Gîlée de Lille, 1288.⁵

Its subject is the strife of Reynard against King Noble, represented as a strife of evil against good. The work shows traces of scholastic learning and classical knowledge; its tendency is to allegory, and it satirizes the clergy as does also *Le Couronnement*, for their corruption, while its author strives to exhort to a purer faith.

Still another poem is the long *Renart le Contrefait*, an imitation or reproduction of the older tales,

¹ Ed. F. J. Mone, *Reinardus Vulpes*, Stuttgart and Tübingen, 1832; summarized in A. Rothe, *Les Romans du Renard, examinés, analysés et comparés*, Paris, 1845, p. 40 ff.

² Grimm, *Reinhart Fuchs*, p. 1 ff.; summarized in Thoms, p. xxix ff. This poem was formerly supposed to be earlier than the longer *Reinardus Vulpes*. See Thoms, pp. xxix, xxxv.

³ Published by Grimm in his *Reinhart Fuchs*, p. 25 ff. Later he published fragments of an earlier and original recension in *Sendschreiben an Karl Lachmann*, Leipzig, 1840. See also K. Reissenberger's ed., *Reinhart Fuchs*, Halle, 1886.

⁴ Willem's work is given in Grimm, p. 115 ff. For the continuation see J. F. Willem, *Reinaert de Vos*, Ghent, 1836. See also E. Martin, *Willems Gedicht 'Van den Vos Reinaerde' und die Umarbeitung und Fortsetzung 'Reinaert's Historie'*, Paderborn, 1874.

by a clerk of Troyes, writing in the 14th cent., which satirizes the monastic and chivalric orders and displays a vast encyclopædic knowledge of the learning of the age.¹

2. **Characteristics of the Reynard cycle.**—While the different versions of the Reynard story differ in literary worth, and while some have an obviously moral purpose or exhibit satire directed against some particular abuse, the work as a whole is one of the great monuments of literature. The picture of the age, its manners, its ideals, is a vivid one. A satiric criticism of life—life as a whole, as well as of particular aspects of life—is always present; but the telling of a story, the desire of literary expression, was probably the first purpose of the authors, and the humorous element—‘broad rustic mirth,’ to quote Carlyle—coarse, brutal, and cynical as it often is, pervades the whole work. The fox is the clever villain all through, astute, evil, both as an animal and as a representative of man, yet he tends to be sympathetically regarded by the reader, like many of Dickens’s villains. The other animals usually act in keeping with their nature, and are more than men disguised. While styled a romance, the poems and, later, the prose version have little of the romantic element, although fancy plays round all the episodes, coarse, hard, and cynical as they often are. The element of parody enters into the whole cycle, parody even of the most sacred things, and Carlyle truly calls it a ‘wild parody of human life.’ His characteristic summing-up of the whole epos can never be bettered.²

Caxton’s version avows its moral purpose: ‘This booke is made for nede and prouffyte of alle god folke, as fer as they in redyng or heeryng of it shal mowe understand and fele the forsayd subtyl deceytes that dayly ben used in the worlde, not to tentente that men shold use them, but that every man shold eschewe and kepe hym from the subtyl false shrewis that they be not deceyvyd.’ But humour is none the less the main characteristic of his version.

3. **Sources.**—Grimm and others believed that the Reynard story was of Germanic origin, based on an old German animal epos. But no trace of this exists, and it is certain that the existing German versions are based on French originals. The provenance of the cycle is probably those regions of France and Flanders bordering on Germany, or the region between the Seine and the Rhine³—a supposition which would account for the Germanic form of such names as Ragenhard (Reynard), Isengrim, Richild, etc., of which Grimm made so much.⁴ While Reynard has been for four centuries one of the most popular heroes in Germany, the soil in which during the 12th-13th cent. the romance flourished most was undoubtedly France, and especially its northern part. The oldest text is a Latin one; then follow the older French branches of the *Renart*. These are followed again by the version of Heinrich der Glîchesære, a Middle High German version translated from or based on French originals, and that again by the Flemish and Low German versions. The sources of the Reynard stories are probably much less the apologues so much beloved in the Middle Ages than oral and folk tradition. Sudre has devoted a work of great research to an investigation of the sources, and has made this conclusion practically certain. In spite of certain resemblances of some ‘branches’ of the *Renart* and of the early Latin versions to the apologues, beast-fables, and the

stories of the long popular *Physiologus*, all of which had a great vogue in the cloisters and schools, the affinities between them are rare, distant, and indirect. The allegorical, symbolical, and didactic aspects of the apologue are lacking in *Renart*, and the circumstances of the age were such that these would hardly have been omitted by authors working directly upon existing fables. The Reynard stories have been mainly derived from the folk, and only indirectly from literary sources. Thus they stand parallel to the *Jātakas*, the *Pañchatantra*, the fables of Æsop and Phædrus, all of them also rooted in current folk-tales in their respective ages and places of origin. The link with apologue and fable is slight; the link with the vast edifice of folk-tales of animals, intended to amuse rather than instruct, is strong. From both, but mainly from the latter, the authors of the *Renart* stories with great art produced a work which in its different forms has had an extraordinary popularity.

LITERATURE.—The various edd. of the stories of the Reynard cycle and various works dealing with it have been sufficiently indicated in the notes. See also W. J. A. Jonckbloet, *Étude sur le roman de Renart*, Groningen, 1863; E. Martin, *Examen critique des manuscrits du Roman de Renart*, Basel, 1872. E. Arber’s reprint of Caxton’s *Hist. of Reynard the Fox*, London, 1895, is a useful ed. of the tale (English Scholar’s Library of Old and Modern Works).

J. A. MACCULLOCH.

RIDDLE.—1. **Definition.**—‘Riddle’ is a comprehensive term for a puzzling question or an ambiguous proposition which is intended to be solved by conjecture. Obscure terms are employed on purpose, in order to conceal the meaning, and thereby to stimulate the intellect and imagination of the reader or listener. Rhetorically the riddle is closely related to the metaphor, and in fact it may be defined as a metaphor or a group of metaphors which have not passed into common usage and whose significance is not evident. Aristotle¹ insisted on the close connexion between the riddle and the metaphor, maintaining that, when the metaphor is employed continuously in the discourse, a riddle is the result. This conception of the riddle closely associates it with the allegory and fable, and was the Greek view; for the term *αἰνίγμα*, from which *αἰνίγμαι* (‘riddle’) is derived, was applied to Æsop’s fables. As a symbolical mode of expression, in which the real sense is obscured, it becomes an important instrument for the cultivation not only of wit, but also of man’s intellectual capacities.

From one point of view the riddle is a product of humour, from another it is the result of man’s ability to perceive analogies in nature; its capacity to puzzle is due very largely to analogies which are unconsciously stored up in metaphorical speech. While a genuine riddle possesses the quality of obscurity—the more obscure the better—yet at the same time it must be a perfectly true description. Every term ought to be as accurate and exact as in a logical definition, but put in a form to baffle and puzzle. All these characteristics of a genuine enigma are well exemplified in the riddle of the Sphinx, which is worthy of being quoted, not only as a normal example, but because of the large part which it played in Greek legend and literature:

‘What walks on four legs in the morning, on two at noon, and on three in the evening?’²

In this question the Sphinx takes the day metaphorically for the span of human life.

The power of a riddle to arrest the attention and make truth impressive is largely due to an element

¹ *Poet.* 22.

² τί ἐστιν, ὃ μίαν ἔχον ποδῶν τετράπους καὶ δίπους καὶ τρίπους γίγνεται. The poet Pindar is the first Greek writer to employ the term *αἰνίγμα* in the sense of ‘riddle,’ and uses it to designate this saying.

of incongruity which is usually present, the irreconcilable and incompatible being associated together. Aristotle has brought this feature out in one of his statements in regard to riddles:

αἰνίγματός τε γὰρ ἰδέα αὐτῇ ἐστὶ, τὸ λέγοντα ὑπάρχοντα ἀδύνατα συνάψαι.¹

Samson's enigma, the one folk-riddle preserved in Scripture, distinctly embodies this characteristic of incongruity:

'Out of the eater came forth meat,
And out of the strong came forth sweetness' (Jg 14¹⁴).

2. **Types.**—The general term 'riddle' covers several different types of enigmatical questions and sayings.

(a) **Logograph.**—The difficulty may be concentrated in a single word, when the puzzle lies in the double sense which the word bears. For this kind of riddle the French employ the term *calembour*, the Germans *Worträtsel*; a favourite designation for it is 'logograph.' A modern example may be cited:

When Victor Hugo was elected to membership in the French Academy, Salvandy bitterly remarked to the distinguished author: 'Monsieur, vous avez introduit en France l'art scénique (l'arsenic).'

The Greeks also employed this type of riddle, and a well-known instance of it is found in the *Wasps* of Aristophanes, where the word *δωρίς* occurs in the double sense of 'shield' and 'asp.'²

This type of riddle may be spontaneous and natural, or, with the development of the literary art, it may be worked out artificially until the logograph proper is developed. Strictly speaking, the logograph covers a class of riddles in which the puzzle is based upon the addition, subtraction, or transposition of letters. A more familiar term for the case when the letters are transposed is 'anagram.' An example of a Latin logograph is:

'Tolle caput, simile ætati tum tempus habebis.'—*Puer*; *Uer* (J. C. Scaliger).

A simple one in English runs:

'There is a word in the English language the first two letters of which signify a male, the first three a female, the first four a great man, the whole a great woman.'—*He-ro-ine*.

The ancient Hebrews, in disguising a word or name by substituting the last letter of the alphabet for the first, the next last for the second, and so forth, formed what may not inaptly be termed an anagram. By this method *שׁוּשׁ* stands for *שׁוּשׁ* (Jer 25²⁶), and *שׁוּשׁ* for *שׁוּשׁ* (25¹). With these may be grouped the famous handwriting on the wall (Dn 5²⁸).

(b) **Enigma.**—Less mechanical and more important is the enigma proper, Aristotle's *αἰνίγμα*, in which the obscure intimation runs through an entire passage, sometimes of considerable length. This type of riddle is very closely allied to both the allegory and the parable.³ The Greeks would have regarded Nathan's famous parable (2 S 12) and Isaiah's song of the vineyard (Is 5) as riddles. The prophet Ezekiel (ch. 17) works out an allegory in which the monarchs of Babylon and Egypt are described as eagles. The prophet himself designates his allegory a riddle as well as a parable,⁴ and the art revealed in his working out of the imagery indicates that Hebrew writers were masters of the symbolical riddle. The conversation of Jesus

¹ Poet. 22.

² Line 15 ff.:

οὐδὲν ἄρα γρίφου διαφέρει Κλεώνυμος,
πῶς δὲ; προερεῖ τις τοῖσι συμπόταις λέγων
'ὅτι ταυτὸν ἐν γῇ τ' ἀπέβαλεν κἄν οὐρανῷ
κἄν τῇ θαλάττῃ θῆριον τὴν ἀσπίδα.'

³ Gerber (*Die Sprache als Kunst*, II. 485) terms it 'das allegorische Rätsel.'

⁴ The Hebrew word for riddle is *חֵידָה*, and for parable *מֵשָׁל*. Both of these occur in Ezek 17², and may be regarded as descriptive of the passage which follows. Among the Greeks *αἶνος* was a designation for a fable like those current under the name of *ἄπορ*. *αἰνίγματα* is derived from *αἶνος*; in like manner all obscure proverbs were designated *αἰνίγματα*.

with Nicodemus is an example of an enigmatical discourse employed for the purpose of making profound religious truth impressive (Jn 3).

(c) **Rebus.**—The rebus is a third type. Originally it was a riddle put in the form of a picture of things in words or syllables.

According to Plutarch, Alexander the Great, during the siege of Tyre, saw in a dream a satyr (*Σάτυρος*) who could be caught only with difficulty. The wise men interpreted the dream for him very quickly: *Σάτυρος* = *Σά Τύρος*.

Another type of the rebus was put in the form of an object-lesson. Let us note an example of it in the political sphere:

The Emperor Marcus Aurelius finds that his revenues are steadily decreasing and sends messengers to Judah, the patriarch, for counsel. Instead of giving a verbal reply, the latter takes the imperial emissaries out to his garden, where he uproots the larger plants and replaces them with smaller. The royal ambassadors return without any message, but report the strange actions of the rabbi to their royal master, who fully comprehends the symbolism of the act and follows the advice given to him in this strange manner.

A notable rebus in the historical sphere revolves about the person of Cyrus.

The Scythians, attacked by Cyrus, sent the Persian monarch a messenger with arrows, a rat, and a frog. By these gifts they meant to tell Cyrus that, unless he could hide in a hole like a rat, or like a frog in water, he could not escape their arrows.

(d) **Charade.**—The charade¹ is a later development of riddle-making, a product of literary activity rather than of primitive efforts at poetry or rhetoric, and thus is essentially artificial. The charade usually turns upon letters or syllables composing a word, sometimes on words composing a phrase. It has not inaptly been termed a 'syllable-riddle' (*Silbenrätsel*). Examples will indicate its character better than a formal definition. Here is one taken from Greek sources:

νῆσος ἅλη, μύκημα βοδὸς, φωνή τε δαυειστοῦ, 'the whole an island, the lowing of an ox, and the voice of an usurer.' The interpretation is *ῥο-σός*, the island of Rhodes.²

We owe a beautiful ancient Latin charade to Aulus Gellius:

'Semel minusne, an bis minus, non sat scio,
At utrumque eorum, ut quondam audivi dicier,
Iovi ipsi regi noluit concedere.'³

Its solution lies in the equation: *Semel minus + bis minus = ter minus* = god Terminus, whose symbol, a boundary-stone, remained in the temple of Jupiter erected by Tarquinius Superbus.

A famous charade on 'cod,' which, according to most authorities, has been incorrectly ascribed to Macaulay, runs as follows:

'Cut off my head, and singular I act;
Cut off my tail and plural I appear;
Cut off my head and tail, and, wondrous fact,
Although my middle's left, there's nothing there.
What is my head? A sounding sea.
What is my tail? A flowing river.
Mid ocean's depths I fearless stray,
Parent of softest sounds, yet mute forever.'

A. Führer has called attention to the existence of charades in Sanskrit poetry; and, singularly enough, many of these have a religious significance.⁴

(e) **Epigram.**—According to the Greek view, the epigram, in its original sense of a poetical inscription on votive offerings or grave-stones, was closely related to the riddle. In many instances the resemblance would have been complete if the epigram had suggested a challenge to solution.⁵ An

¹ 'Charade' is a word of French origin. In his *Diet. de la littérature* (1770) Sébastien gives the following definition: 'Ce mot vient de l'idiome languedocien et signifie, dans son origine, un discours propre à tuer le temps; on dit en Languedoc: allons faire des charades, pour allons passer l'après-soupe, ou allons veiller chez un tel, parce que, dans les assemblées de l'après-soupe, le peuple de cette province s'amuse à dire des riens pour passe-temps' (quoted from Littré).

² Quoted from Ohlert, *Rätsel und Gesellschaftsspiele der alten Griechen*, p. 167.

³ *Noctes Atticæ*, xii. 6.

⁴ See ZDMG xxxix. [1885] 99 ff.
⁵ Ohlert, p. 108: 'Zahlreiche Epigramme könnten als Rätsel gelten, wenn man ihnen die Überschrift nimmt; zahlreiche Rätsel als Epigramme, wenn man die Anforderung zum Raten entfernt.' This statement is made especially of the Greek field.

illustration taken from a grave-stone is interesting :

τοῦτομα θῆτα ρῶ ἀλφα σάν θ μὴ ἄλφα χι οὐ σάν
πατρὶς Καλχρήδων, ἡ δὲ τέχνη σοφίη,

'My name is theta rho alpha sigma u mu alpha chi u sigma ;
Chalcedon was my native land ; to be wise is art.'

This Thrasymachus was a sophist mentioned by Plato.

(f) *Arithmetical riddle*.—The arithmetical or numerical riddle is next to be noted. Many of these are very trivial and are based upon the form of the numeral.

E.g., 'How does twenty remain when one is subtracted from nineteen?' The solution depends upon the form of the Roman numerals XIX and XX.

A serious form of arithmetical riddle was developed, especially by the Jews, through the numerical value of the letters of the alphabet. Many Jewish commentators made שרפ (= 'serpent') one of the names of the Messiah because the numerical value of the letters is the equivalent of שפפ. In Gn 14¹⁴ the reader is supposed to find the name of Abraham's steward because the numerical value of the Hebrew consonants making up the word Eliezer equals 318, the number of the patriarch's attendants. Jewish writers developed this method of writing and interpretation into a system and termed it 'Gematria.'¹ Instead of the intended word, its numerical value was produced by permutation of the letters ; in course of time this developed into the kabbalistic method of interpreting OT Scripture. One numerical riddle appears in the pages of the NT ; it is the number of the beast, 666 (Rev 13¹⁸). The custom of taking the letters of a word in a numerical sense was a part of every Gnostic system. As a prominent example we may take the word *Abrazas*, used by the Gnostics as an amulet because the numerical value of the Greek letters totalled 365, the number of days in a year.²

Another form of the arithmetical riddle is found in the OT, and was much cultivated by the Jews of post-Biblical days and termed by them the *middah* (מִדָּה). A typical example occurs in Pr 30^{15b, 16} :

'There are three things that are never satisfied,
Yea, four that say not, Enough.'

These two lines contain the riddle proper ; the answer is given in the following verse :

'Sheol ; and the barren womb ;
The earth that is not satisfied with water ;
And the fire that saith not, Enough.'

The numerical riddle in this form is the favourite type among the Arabs, and instances of it have also been found in Sanskrit literature.³ It was also much affected by the Jews of Talmudic times. The Jewish scholar A. Wünsche has published a collection of the *middah* type of numerical riddles under the title, 'Die Zahlensprüche in Talmud und Midrasch.'⁴

3. *Origin and development*.—The riddle originated in the infancy of the human race. J. G. Herder, in his *Vom Geist der hebräischen Poesie*,⁵ remarks that 'all peoples in the first stages of culture are lovers of riddles.' The same spirit which gave birth to the folk-song and folk-proverb likewise produced the riddle. A genuine folk-

riddle is a spontaneous expression, coming from the depths of the soul of a people or race, not from the mind of an individual, and consequently is anonymous (cf. art. PROVERBS). Riddles are therefore in a real sense the *vox populi*. Many profound mysterious truths were expressed in the form of riddles by primitive man, who also frequently used the same literary device in his description of an occasional accidental occurrence, when it constituted a mystery for him. That Greek writers had occasion to discuss the relation between *ἀνιγγμα* and *γρίφος*, two common designations for riddles, and the two terms *μῦθος* and *λόγος* is a clear indication that Greek enigmas touched the domain of mythology. These two spheres would of necessity come together when the mystery of a natural phenomenon furnished the puzzle for the riddle-maker. Mythological speculation actually forms a part of the riddle-hymn of the *Rigveda* (see below).

A sharp distinction ought to be made between the original folk-riddle and those more or less artificial ones which have come down to us through the channels of literature. Rolland¹ lays stress upon this distinction by dividing riddles into two classes : (1) *l'énigme vraiment populaire* ; (2) *l'énigme savante ou littéraire*. It is, however, doubtful whether any of the folk-riddles of remote antiquity have come down to us in their original form. We possess them, if at all, in the polished (and in a sense artificial) form resulting from the labours of literary men. The writings of the great literary geniuses of Greece are liberally sprinkled with such riddles ; many involving subtle metaphysical discussions are found in the *Rigveda*. Modern investigators have made collections of riddles current among people of primitive culture. In a recent edition of Rolland² the editor has added an appendix giving a number of riddles current among the Wolofs of Senegambia, and similar collections are to be found in the journals of learned societies and missionary periodicals.

Chronologically the riddle may be followed to a remote antiquity. A very ancient Semitic riddle is preserved in a Babylonian tablet :

'Who becomes pregnant without conceiving?
Who becomes fat without eating?'

The answer is 'Clouds.'³

The oldest recorded Greek riddle is associated with Minos, king of Crete.⁴ When his son, Glaucus, disappeared, the monarch consulted an oracle ; the reply was in the form of an enigma which was solved by the seer, Polydus. There are many allusions to this riddle in Greek literature, especially in the great tragedians.

Pre-eminent among *énigmes littéraires* are the riddles of the Vedic writings. The spontaneity and *naïveté* of the folk type have entirely disappeared, and instead of these characteristics they distinctly reflect metaphysical speculation of an abstruse order (see below). The same qualities characterize the enigmas with which the Greek philosophers were accustomed to enliven their banquets. At certain periods of literary activity there have been revivals of the art of riddle-making ; writers distinguished for their efforts at serious literature have amused themselves by producing riddles usually trivial in subject-matter, yet frequently beautiful in form. Riddle-making was an affectation with the Greeks of the Byzantine period, and their production of *ἀνιγμاتا* and *γρίφοι* was reduced to rules. Ohlert mentions three poets of the 11th cent.—Psellus, Basilus Megalomitris, and Aulikalamus—who devoted themselves almost exclusively to the writing of riddles. The

¹ Cf. JE, s.v. 'Gematria.'

² In the Sibylline verses we have a numerical enigma. The answer is the word ἱησοῦς=888 :

$I=10+\eta=8+\sigma=200+o=70+v=400+\sigma=200.$
ἦτοι σαρκοφόρος θνητοῖς ὁμοιούμενος ἐν γῇ
τίσσερα φωνήεντα φέροι, τὰ δ' ἀφωνα δὺ αὐτῶ.
δίσσων ἀστραγάλων ἀριθμὸν δ' ὅλον ἐξονομήτω
ὅκτω γὰρ μονάδας ὅσας δεκάδας ἐπὶ τοῖσι
ἢ δ' ἑκατοντάδας ὅκτω ἀπιοττοεῖς ἀνθρώποις
ὄνομα δηλώσει.

⁴ Apollodorus, iii. iii. 14.

Anglo-Latin poets of the 6th cent. and their Anglo-Saxon successors collected and wrote riddles extensively. In France of the 17th cent. men like Boileau delighted in penning riddles—Boileau's riddle on the flea is famous—while Voltaire and Rousseau did not disdain to try their skill in making them. Fénelon tests the sagacity of Télémaque by propounding riddles to him. The popularity of this form of literary expression in France, during the period covered by the name just mentioned, may be judged by the publication of the *Recueil des énigmes de ce temps*,¹ under the editorship of C. Cotin. The *Mercure de France* was a vehicle for the publication of riddles, and Duchesne edited a *Magasin énigmatique*.

In England riddles were much affected by literary men in the age of Swift, who produced many of them. The trivial subject-matter of Swift's riddles—'On Ink,' 'On a Pen,' 'On a Fan'—indicates that they were merely the by-products of literary activity and employed for the purpose of whiling away idle hours. But it was left to Schiller, after going back to the age of the Sibyls and learning the art of riddle-making from them, to develop the riddle into a beautiful poem, a work of literary art. One may be quoted to show that, while the subject-matter is trivial, the verse bears all the marks of the genius of the German poet.

'Auf einer grossen Weide gehen
Viel tausend Schafe silberweiss:
Wie wir sie heute wandeln sehen,
Sah sie der allerälteste Greis.

Sie altern nie und trinken Leben
Aus einem unerschöpften Born,
Ein Hirt ist ihnen zugegeben
Mit schön gebog'nem Silberhorn.

Er treibt sie aus zu goldenen Thoren,
Er überzählt sie jede Nacht,
Und hat der Lämmer keins verloren,
So oft er auch den Weg vollbracht.

Ein treuer Hund hilft sie ihm leiten,
Ein munt'rer Widder geht voran.
Die Heerde, kannst du sie mir deuten?
Und auch den Hirten zeig' mir an!'²

Triviality as to subject-matter is the outstanding characteristic of modern literary riddles, and in this particular they are wholly unlike those of antiquity. With the ancients, as is noticed below (§ 6), riddles touched the serious issues of life. Life and death were involved in unravelling them; weighty policies of State depended on their solution; and even the sacred rites of religion were enlivened by the proposing and guessing of riddles.

4. Form.—Riddles are usually expressed in rhyme or verse. Goethe sets forth this characteristic:

'So legt der Dichter ein Räthsel,
Künstlich mit Worten verschränkt, oft der Versammlung ins Ohr.'³

Samson's enigma, the only popular riddle preserved in the OT, bears all the marks of ancient Hebrew poetry (Jg 14¹⁴). The Greek riddles scattered through the works of the poets and philosophers are usually in metre. The Anglo-Latin poets of the Middle Ages put their enigmas into hexameter verse, and the riddles of the Anglo-Saxon period are in metrical form. Many Jewish poets of the Middle Ages exercised their muse by putting riddles into poetic form. The length and character of these may be judged by a production of the poet al-Harizi (13th cent.), in which he takes 46 lines to describe the ant in enigmatical form. It was a favourite custom of the native Arabic grammarians to put their rules in poetical riddles. Many examples of these have been collected by G. Rosen.⁴ Schiller's riddle quoted above shows

¹ Paris, 1646.

how this poet invested it with the peculiar charm of rhythmical expression. It is the poetical form in which it is couched that lends the riddle much of its impressiveness and stimulates the intellect to solution.

5. Occurrence.—As riddles are rooted in metaphors, it is not surprising to find that they are of universal occurrence. They have been discovered among the peoples of primitive culture the world over. Abbé Boilet, in writing of the Wolofs of Senegambia, says that these savages at the evening time in the hut or by the camp-fire ask each other riddles. The Bedawi, as he sits by his tent door, while away the evening hours by proposing them, and the Russian peasant enlivens the long hours of a winter's evening by attempting their solution. The Vedic writings abound in them, and they occur in the remains of the literature of ancient Persia. A race like the Greeks, specially gifted with literary genius, delighted in them. Greek literature furnishes abundant material for estimating the influence and popularity of riddles among a race whose achievements in literature have been unsurpassed. Greek poetry is especially rich in them; they are found frequently in Homer and were popular because of the high place which the Homeric poems had in the esteem of the Hellenic race. Riddles naturally played a large part in Greek tragedy, because the solution of the riddle influenced the course of events. Every poet who in any way touched the Theban cycle of myths was compelled to bring in the riddle of the Sphinx. The comic poets delighted in entertaining their audiences by formulating riddles in which they castigated the follies of society. The titles of some of the comedies suggest that they were written in mockery of an affectation for enunciating enigmas; e.g., Eubulus gave one of his comedies the title *Sphingokarion*, i.e. a slave who, like the Sphinx, is full of riddles. Theocritus puts enigmatical sayings into the mouths of his shepherds, and Virgil imitates him. The Jews of mediæval times cultivated them with zest as a means of intellectual gymnastics and made them an important part of social entertainment.

An interesting scientific problem is the occurrence of the same riddle among peoples far removed geographically, and belonging to distinct ethnological groups. Gaston Paris, in his preface to Rolland's *Devinettes ou énigmes*, calls attention to this striking phenomenon. One of his examples is a folk-riddle. Its French form is:

'Je vais, je viens dans ma maison,
On vient pour me prendre;
Ma maison se sauve par les fenêtres
Et moi je reste en prison.'

Answer: Le poisson et le filet.

The Scotch form is:

'The robbers cam tae oor hoose
When we were a' in;
The hoose lap out at the windows
And we were a' ta'en.'

Answer: Fishes caught in a net.

Gaston Paris states that this riddle circulates in Russia and among the Lapps; that it has been found among the Chinese and the Negroes of W. Africa; that it is also current among the Basques. Three hypotheses have been propounded to explain the occurrence of a riddle like that just quoted among peoples far removed from each other. (1) A common origin has been postulated. (2) The transmission of the riddle from one race to another has been suggested. Both theories are inadequate to explain the occurrence of the same riddle among two races as far separated as the Scottish and Chinese. (3) The hypothesis which attributes the similarity to the identity of the constitution of the human mind is now very generally accepted.

This view does not entirely exclude the possi-

bility of literary borrowing, which is quite probable in the case of riddles with a prominent place in literature. Writers have undoubtedly helped themselves to what tradition furnished and have not hesitated to refurbish an older enigma. A notable example of this is the riddle which, according to tradition, Homer failed to solve (see next col.).

ἴσα' ἔλομεν λιπόμεθα, ὅσ' οὐκ ἔλομεν φερόμεθα,

'What we had we lost, what we did not have we kept.'

The same riddle circulated in the Middle Ages in Latin and the popular vernacular;¹ for these versions the hypothesis of literary transmission is more reasonable than that of the identity of the human mind. K. Simrock² calls attention to the fact that many Greek riddles also circulate in German and Scandinavian versions. The resemblances may usually be traced to literary influences, but great caution should be used in accounting for these similarities especially in the case of the spontaneous folk-riddle.

6. Uses.—The riddle played an important part in the intellectual and social life of antiquity as well as in the Middle Ages. With the ancients it was a literary form employed for serious purposes in the spheres of politics, philosophy, and religion. Many of the most prominent figures of history are renowned because of their ability either to formulate riddles or to interpret them. Of Biblical characters Solomon and Daniel live in history as skilful in the solution of dark sayings and enigmas.³ The esteem in which such skill was held among Jews of a later time may be judged by the ascription of similar gifts to hypostatized Wisdom.⁴ Monarchs of renown are represented as engaged in contests with one another in the solution of riddles. Solomon and Hiram of Tyre engaged in such competition; the former was continuously successful until his rival called in the assistance of a famous magician Abdemon.⁵ A Greek legend tells how Amasis, king of Egypt, engaged in a similar contest with the king of the Ethiopians.⁶ The Egyptian monarch sent for aid to Bias, the wisest of the Greeks. In the life of Æsop we read of a riddle contest between a Babylonian king Lycurgus and Nectanebo of Egypt; the former is continuously victorious through the assistance of Æsop. Alexander the Great, during his campaign in India, summons Hindu sages before his throne and challenges them to solve riddles of his own propounding. Even the gods are represented as indulging in this pastime; Jupiter proposes a riddle to King Numa.⁷ The Longobards had a custom of propounding riddles to their deity Gwodon which they expected him to solve—a custom suggesting the seeking of oracles.

Frequently the contest by riddle was serious enough to involve life and death. The contestant who was vanquished lost his life. Competitions of this kind occurred among the rhapsodists, both Indian and Greek. The epic poem, *Melampodie*, attributed to Theognis, contains an account of a

riddle contest between the two famous seers, Calchas and Mopsus. According to one tradition, the former is victorious; according to another, the latter; but in either case the vanquished loses his life. The authority of Plutarch supports the legend of a struggle of this type between Theognis and Homer, in which the latter is worsted and dies of mortification. In the Theban legend the Sphinx destroys those who fail to solve her riddle, and, when Œdipus is successful, the monster hurls herself over a precipice. There are modern Greek legends in which the failure to solve a riddle costs a man his life. A monster living in a castle propounds a riddle and gives forty days for its solution. Unfortunate is the person who fails, for the monster devours him. The resemblance to the story of the Sphinx is evident. In the *Mahā-bharata* the legend takes another form: the hero Yudhishtira frees two brothers from the fetters of a monster by the solution of a riddle. Teutonic legends are of similar import: in the so-called *Wartburg-Krieg* there is a deadly riddle contest between Odin and the giant Wafthrudhnir, and another instance has been immortalized by Schiller.¹ In certain parts of Germany the boy who fails to solve a riddle is greeted with such expressions as: 'Er ist des Henkers,' 'Muss sich zum Henker scheeren,' 'Kommt in die Hölle,' 'Ist todt.'² These expressions may be relics from the times when the unsuccessful competitor actually lost his life.

In other legends the winning of a bride is made to depend on the solution of a riddle by the suitor. This custom was known in the India of Vedic times, and also appears in the Norse legend which represents Thor as promising his daughter to the dwarf Alvis on condition that the latter answers a long list of perplexing questions. This feature is present in the Theban Sphinx legend, for the hand of Queen Jocasta was promised to the man who would be successful in solving the famous riddle and thereby freeing the land from the ravages of the monster. On the other hand, failure to solve the riddle often cost the suitor his life.³

7. Riddles in social life.—The propounding and solution of riddles was included in the merry-making that formed a part of wedding festivities. Samson's riddle, already quoted, is not the only instance of such a use preserved in literature; Samson's Greek compeer Hercules, although uninvited, goes to the wedding of Keyx and joins the rhapsodists in the solution of riddles.

Plato is responsible for the statement that riddle-making was a favourite pastime with lads in his day;⁴ when the Romans came under Greek influence, the boys were instructed in the forming of enigmas.⁵ In the best days of their history the banquets of the Greeks were something more than drinking-bouts; intellectual pleasures were cultivated, and prominent among these was the riddle, which was the delight not only of poets and philosophers, but also of the masses. The banquet was under the control of a symposiarch, under whose direction the riddle passed from person to person. The successful guesser won a prize; those who failed paid a penalty. Usually the prize was the laurel-wreath, and the penalty consisted in drinking unmixed wine or wine mingled with salt water.⁶ Aulus Gellius⁷ describes an Athenian dinner-party of his day (A.D. 2nd cent.): the host propounds a riddle to each of his guests; the winner receives the laurel-wreath or the copy of a

¹ Symposiast (6th cent.) gives it in Latin:

'Est nova notarum cunctis captura ferarum
Ut si quid capias, id tecum ferre recuses,
At si nil capias, id tu tamen ipse reportes.'

Pierre Grognet gives it in Latin and French as it circulated in the Middle Ages:

'Ad silvam vado venatum cum cane quino:
Quod capio perdo, quid fugit hoc habeo.'

The French version runs:

'A la forest m'en voys chasser
Aveques cinq chiens a trasser.
Ce que je prens, je pers et tiens,
Ce qui s'enfuit ay et retiens.'

rare book. Sometimes a money prize was offered. With the Jews of the Middle Ages, according to Abrahams,¹ riddles were a regular table game, and all the great Jewish poets of this period composed acrostics and enigmas of considerable merit.

8. Riddles in religious ceremonies. — The strangest use of riddles to the modern mind is in connexion with religious rites and ceremonies. Among peoples of primitive culture enigmas are asked and answered in the proximity of a corpse or at harvest time. Among the Bolang Mongondo (Celebes) riddles are never asked except when there is a corpse in the village. In the Aru archipelago, while a corpse is uncoffined, watchers propound riddles to each other or think of things which others are to guess. This practice is evidently rooted in animism, and enigmatical language may be used to puzzle the spirit of the departed. A reminiscence of this custom seems to linger in Brittany, where old men are accustomed to seat themselves on grave-stones and ask each other riddles after the friends of the deceased and the mourners have gone home. Among the Akamba of British E. Africa boys and girls at the time of circumcision interpret pictographs which are termed riddles. At harvest time the riddle is looked upon as a charm which may make or mar the crops. The Alfoors of the Central Celebes engage in riddle-guessing during the season when the crops are tilled and are growing. On the solution of a riddle they exclaim: 'Make our rice to grow, make fat ears to grow both in the valley and on the heights!' Animistic conceptions probably underlie this custom, and the prayer is to be regarded as addressed to the spirits of the ancestors.

(a) Oracles. — The answers of the Greek oracles were usually couched in a riddle or enigmatical statement. In this connexion it is exceedingly suggestive to note that Aristophanes² terms the answers of oracles *γρίφοι*, a word commonly used for riddles. The oldest Greek riddle is the answer of the oracle to Minos, king of Crete. As oracles were consulted before important political undertakings and military campaigns, the significance of the enigma in Greek life cannot be over-estimated.

E.g., immediately before entering upon the disastrous Sicilian expedition, the Athenians consulted the Delphic oracle; as a reply the Pythia commanded the Athenians to bring the priestess of Athene from Erythraea. This enigmatical reply turns about the name of the priestess *Ἡρύκλεια* ('Rest').³ The riddle was specially adapted for oracles because it was puzzling and consequently impressive, and at the same time concealed ignorance of the future.

(b) At festivals. — Riddles formed a part of the ritual at the festival of Agrionia, sacred to Dionysus. In the rites of this festival women first sought for the god as if he had been lost. When they had ceased their quest, they exclaimed: 'Dionysus has betaken himself to the Muses.' Then there followed a sacred meal at which these worshippers propounded and answered riddles (*ἀντιγράφα καὶ γρίφους*).⁴ It is probable that a similar custom prevailed at other religious festivals; at least an allusion has been discovered to it in a fragment of the poet Diphilus. A riddle contest between three maidens in connexion with a feast of Adonis on the island of Samos is referred to in his comedy entitled *Thesurus*. The *Laws of Manu* enacted that riddles were to be asked at the *śrāddha* feasts. One of the enactments may be quoted:

'Whatever may please the Brāhmanas, let him give without grudging it; let him give riddles from the Vedas, for that is agreeable to the manes.'⁵

(c) In Vedic hymns. — Vedic literature reveals a unique use of riddles in religious ceremonies and in metaphysical speculation. It is most suggestive that the Vedic word *brahmodya*, or *brahmavadya*, is a designation for a poetic religious riddle, as well as a term descriptive of speculative discussion. Etymologically the word denotes 'analysis of the Brahma.' In one of the Vedic hymns¹ the description of Agni is put in the form of a riddle:

'Who among you has understood this hidden (god)? The calf has by itself given birth to its mothers. The germ of many (mothers), the great seer, moving by his own strength, comes forward from the lap of the active ones.' (The mothers are waters.)

The famous riddle hymn of Dirghatamas is a part of the *Rigveda*.² It contains 52 verses, of which all except one are riddles. The theme of this hymn is theosophy and theosophical speculation which revolves about cosmic phenomena, mythology, and human organs. The hymn may be characterized as a poetical expression of primitive Hindu philosophy in enigmatical language. It was intended to be used by priests as they offered sacrifices. The most striking use of poetic riddles or charades, to 'enliven the mechanical and technical progress of sacrifice by impressive intellectual pyrotechnics,' was in connexion with the famous horse-sacrifice, or *āsvamedha*. This part of the ritual was conducted by two priests, one asking the riddle and the other giving the answer.³ These riddles are so unique in the history of religion that they are worthy of special notice.

At the horse-sacrifice one priest asks: 'Who, verily, moveth quite alone; who, verily, is born again and again; what, forsooth, is the remedy for cold; and what is the great (greatest) pile?'

The answer is: 'The sun moveth quite alone; the moon is born again and again; Agni (fire) is the remedy for cold; the earth is the great (greatest) pile.'

The priest called *hotar* asks the priest called *adhvaryu*, 'What, forsooth, is the sun-like light; what sea is there like unto the ocean; what, verily, is higher than the earth; what is the thing whose measure is not known?'

The answer is: 'Brahma is the sun-like light; heaven is the sea like unto the ocean; (the god) Indra is higher than the earth; the measure of the cow is (quite) unknown.'

Again, the following questions and answers: 'I ask thee for the highest summit of the earth; I ask thee for the navel of the universe; I ask thee for the seed of the lusty steed; I ask thee for the highest heaven of speech.'

'This altar is the highest summit of the earth; this sacrifice is the navel of the universe; this *soma* [the intoxicating sacrificial drink] is the seed of the lusty steed [god Indra?]; this Brahman priest is the highest heaven [i.e. the highest exponent] of speech.'

(The translation is that of Bloomfield.)

RIGHTS. — T. E. Holland, as a preliminary to his account of rights in the legal sense of the term, has defined 'a right generally' as 'one man's capacity of influencing the acts of another, by means, not of his own strength, but of opinion or the force of society.'¹ The definition is useful as bringing out the complex character of the idea of

⁵ iii. 230.

right. It implies, as he goes on with excellent lucidity to indicate, the fourfold relation between (1) the subject or person who has the right, or the 'person entitled'; (2) the person who has the corresponding duty, or 'the person obliged'; (3) the object over which the right is exercised; and (4) the act of forbearance which is exacted. The definition further emphasizes the important fact that for the existence of a right in the full sense of the word recognition is necessary, and it properly distinguishes between those rights which rest merely on the approval of public opinion (subsequently by an unfortunate choice called 'moral rights') and those which are protected by legal enactment, or 'legal rights.' On the other hand, the definition fails in so far as it uses 'society' in a sense either too wide or too narrow—too wide in so far as it ignores the different forms of social organization, each with its own system of rights and duties, of which society in general consists (family, school, church, etc.), too narrow if it is intended to exclude reference to the rights of nations. And this criticism leads to another. The definition contains an implicit denial not only that, besides the rights actually recognized by society, whether by its law or by its public opinion, there are rights founded on the requirements of human nature itself—things that are rights simply because they are 'right'—but also that there is any essential relation at all between the adjectival and the substantival meaning of the word.¹ A science like jurisprudence has of course a right to define its terms in the way most convenient for its own special purpose. But that is a different thing from claiming that its use expresses the only legitimate or the most fundamental use of the term. In opposition to this it may be claimed that any definition of right generally must be defective which fails to indicate what this relation is. In the present article, written from the point of view of ethics and religion, the main object will be to supply this omission. In the attempt to do so it will be convenient to preface the main subject with a short statement (1) of the origin and development of the idea of individual rights, and (2) of the chief theories that have been held as to the ground of rights, with the view of leading up to (3) a more inclusive definition, and suggesting some deductions and applications to current problems of the rights of individuals and nations which may serve as a verification of its conclusions.

I. DEVELOPMENT OF THE IDEA OF INDIVIDUAL RIGHTS.—It is by this time a commonplace of sociology that in early forms of society, so far from finding a stage at which individual thought and action are free from the pressure of the social environment, we have one in which the mind and will of individuals are dominated by the collective mind as expressed in the customs of the group. This subordination is nowhere better illustrated than in the history of the idea of right. If we turn to the early use of *δικαίος* in Greek literature, we find it in Homer² simply in the sense of possessing rules or customs, and as in this sense the mark of civilized life, in contrast to the mannerless Cyclops. Between this and the use in Thucydides and Xenophon in such phrases as *δίκαια ποιεῖν* and *δίκαια ἔχειν* there is a wide gap. In these a moral reference to things that not only is it the rule to

do, but that may be claimed by the individual as by right, has emerged, and we might think (particularly in the latter phrase) that we have reached an explicit acknowledgment of the idea of the 'rights' which the individual in turn 'possesses.' But the student of Greek ethics knows that in its classical exponents there is as yet no word corresponding to either 'rights' or 'duties' in the modern sense. We have to wait another generation before, in the Stoic *τὰ καθήκοντα*, we have the definite specification of things that are right to be done as definitely 'belonging' to the individual. Even here we are still far from the idea of these as implying corresponding 'rights.' In early Roman law itself, which did so much to develop the idea of personality, the idea of duty, as Maine has pointed out, is far more prominent than that of rights.³ What Roman law effected was to translate the Stoic idea of personality and the 'law of nature,' which personality embodied, into terms of civic relationships and so, by conceiving of a universal justice or right of nations,⁴ to pave the way for the recognition of the further idea of rights that belonged to an individual independently of his membership in a particular society. Thenceforth one might say that the development of the two ideas, the legal and the moral, proceeds *pari passu*, seeing that the idea of the individual as a personality with rights as *against* society is at once the creation of the recognition of him as endowed with rights *in* society and an important factor in the development of the claim for this recognition itself.

The story of the spectral analysis of the law of nature into the prismatic colours of 'natural rights' is a long one.⁵ The chief influence was undoubtedly the Christian religion, appealing on the one hand to a primitive state of freedom and equality, on the other hand to a relation of man to God which was essentially a personal one. But these seeds of the idea of the rights of man had to await a soil congenial to them, which was first found when English tradition and temperament led to a revolt against social and political despotism in the time of Wyclif.⁶ By the middle of the 17th cent., and still more by the 18th, the claims of rights, in both Old and New England, were already deeply tinged with individualistic theory as to the nature of government. It was under this influence that Milton declared that 'all men were naturally born free . . . born to command and not to obey';⁷ that a century later Blackstone wrote:

'The principal aim of society is to protect individuals in the enjoyment of those absolute rights which were vested in them by the immutable laws of nature';⁸

and that even Burke, in the midst of his violent protest against the doctrine of absolute rights, formulates a doctrine of society laying stress on the idea of rights rather than duties:

'Civil Society is an institution of beneficence, and law itself is only beneficence acting by a rule. Men have a right to justice; they have a right to the fruits of their industry, and to the means of making industry fruitful. They have a right to the acquisitions of their parents; to the nourishment and improvement of their offspring; to instruction in life and consolation in death. Whatever each man can separately do without

¹ Holland, who quotes this view, refers to the interesting illustration of the same priority in Japanese law, which had no word for 'right' until the suggestive phrase 'power-interest' was coined by a Japanese writer on Western public law in 1868. It is important to realize that the Roman *ius gentium* is the right common to all nations, not *international* right.

² Reference should be made to artt. INDIVIDUALISM and INDIVIDUALITY.

³ See art. INDIVIDUALISM, vol. vii, p. 221b. On the influence of Scriptural ideas on the Peasant Revolt see D. G. Ritchie, *Natural Rights*, p. 8, and on the men of the Commonwealth, *The Clarke Papers*, ed. C. H. Firth, 4 vols., London, 1891-1901, *passim*.

⁴ Quoted in W. Wallace, *Lectures and Essays on Natural Theology and Ethics*, p. 216.

⁵ Quoted *ib.*

¹ On p. 84 the writer congratulates the English language on having two words, 'law' and 'right,' which enables it to keep those meanings apart, and commiserates other languages which, like German, have only one, and have thus involved writers in endless disputes as to their relation to each other. The reader, however, may compare this contrast with Bentham's even more pungent strictures on the ambiguity of English as compared with French usage, enabling it to slip from the moral to the political use of 'right,' as Don Quixote from one saddle to another without changing horses (*Works*, II.).

² Liddell and Scott, *s.v.*

trespassing upon others, he has a right to do for himself; and he has a right to a fair portion of all which society with all its combinations of skill and force can do in his favour.¹

These passages are sufficient to show the close connexion between the development of the idea of right in its later phases and the development of theory.

But, before turning to this, we may notice how the circumstances which made religion the main influence in the development of the idea of rights in the middle period explain also (what otherwise might seem an inversion of the natural order) why, looked at from the side of the nature of the rights themselves, the claim to spiritual rights should have preceded the claim to political rights and the claim to economic rights should have lagged behind both. While it may appear that the movement here is from the more inward to the more outward and material, in reality it was in the first place from condition to the conditioned, and in the second from the more formal and abstract to the more substantial and concrete. Doubtless the instinctive sense of human capacities in the individual, as dependent for their development on the active assistance of society 'in the removal of all removable obstructions,' was operative from the first. But it was only through freedom of thought and speech and some measure of political power that this sense could make itself articulate and the way could be prepared for the establishment of the conditions of substantive freedom. Add to this once more the influence exercised upon the development of men's ideas as to their rights by powerful forms of abstract theory as to the ground of rights in general and as to the sphere of law, and it is not difficult to understand why, from the side of the content, the fuller idea of the rights of the individual, and of his claim to the active assistance of society in the recovery of the 'lost title deeds of humanity' in the sphere of material well-being, has been so late in developing.

II. THEORIES OF THE GROUND OF RIGHTS.—1. Theory of the Social Compact.—If what has been said as to the history of the idea of rights is sound, we may expect to find that, while ancient theories of the nature of justice as we find them from the time of the Sophists downwards are susceptible of translation into terms of rights, the problem of the ground of rights in explicit form is essentially a modern one. It was not till the question of the rights of the subject was definitely raised in 16th cent. England that theories as to their origin and ground came to be central in political thought. It must be sufficient here to select the more typical. From the outset responsible thinkers have worked under a profound sense of the moral or inward reference contained in the conception of rights. It was in this spirit that modern theory at its outset sought for the source of legal rights, not primarily in the will of another, but in the will of the members of society themselves expressed in a compact.

The theory of rights as founded on compact has taken two forms according to the view of human nature from which it starts.

(a) *'Might is right.'*—Starting from the conception of a state of nature (as in Hobbes's well-known account of it) as a war of all against all, not only law and government but society itself is conceived of as resting on a compact whereby individuals agree to resign their natural but barren right to all things in order to secure a limited portion guaranteed by the overruling might of the sovereign. The ground of a man's rights on this view may be said to be his own will to peace and security; but, as he has renounced all right to control of the actual conditions of peace, it is only by a fiction

that he can be said to will the rights that are actually assigned to him. These depend on the will of another. But, as on the side both of sovereign and of subject there exists no other reason for loyalty to the contract but fear, the logical outcome would seem to be that rights resolve themselves into mights. This was concealed from Hobbes by his ambiguous use of 'natural rights.' Spinoza perceived the ambiguity and, by purging the theory of this inconsistency, claimed to have 'preserved natural right safe and sound in the civil state'—robbed it, in other words, of its saving grace.¹

The view that right rests on no other basis than might, however contrary to men's instinctive judgments, once suggested, has much to support it in the violent origin of many forms of society and in the imposition of conditions of life that depend on the will of the stronger; and, under the influence of some modern ideas of the meaning of the struggle for existence, it has recently assumed a new importance as applied to the rights of nations. It must be sufficient here to notice the objection to it that is at once the most obvious and the most fatal.

If we look at society as it actually is at any stage of its development, instead of a community of crouching slaves it presents the appearance of a willing and orderly interchange of services involving mutual rights and duties, however little consciously recognized in this form. In all societies at some stage of their development there are conditions so remote from the ordinary interests of individuals that their place in this order of mutual service is obscured and they are resented as 'interferences' with them. But, if the mass of the conditions of life were of this kind, no society would hold together for a day. Custom in society, like habit in the individual, which has been called 'the great fly-wheel of life,' may reconcile to isolated inconveniences, but customs as a whole (as sociologists are now agreed) represent ways of action that have been more or less consciously selected as the best adapted to secure, under the circumstances and beliefs of the time in which they arise, the satisfaction of fundamental instincts and to further common interests. Impotent to mould customs, the power of the stronger is more likely to be broken by than to break them if it measures itself against them, and it remains true that the system of rights and duties under which men live is supported in the last resort not by might but by the general sense that it is in harmony with their ideas of the kind of life which they desire to live.

(b) *Natural rights.*—It was the perception of this fact that led to the second form of the social contract theory as it was held by Locke and profoundly influenced political thought for a century and a half after him. According to this theory, society is natural. Law and government are instituted, not to hold it together, but to guarantee certain fundamental rights which are endangered by the weakness of the social element in its members—chiefly those of life, liberty, and property. The contract here is not of the citizens with one another, but between the citizens as a body and the sovereign for the time. The substance of it is that law and government shall concern themselves with the maintenance of the conditions which may preserve these rights to the individual. A theory of this kind would appear to involve a purely utilitarian idea of the basis of the rights which society recognizes, but the idea of a law of nature which had fixed these fundamental rights as some-

¹ Ep. I. For the clearer statement of his view see the posthumous *Traactatus Politicus*, ch. II. There are of course other elements in Spinoza's philosophy which lead to a totally different conclusion.

¹ Quoted in Wallace, p. 215.

thing absolute and imprescriptible in the individual was by this time too strong and was for the present sufficient to overpower the appeal to general happiness, which in England was more congenial to the temper of the succeeding age.

On this view an antithesis is set up between the quite definite standard of social enactment and the quite indefinite idea of rights inalienable from the individual. It was vain to try to define these rights as life, liberty, property. Such words are only the names of things entirely indefinite in meaning and scope until we know what is the kind of life, what use is to be made of liberty, wherein the 'right' to property precisely consists. In the result the claim to natural rights was merely the removal from the meaning of right of any reference to a standard other than what Iretton had long ago called 'that wild and vast notion of what in every man's conception is just or unjust.'¹ Any attempt to translate such a view into practice could only end in despotic forms of government—Cromwellian or Napoleonic, as the case might be. When pressed in theory, it was no less bound to issue in reaction in favour of the claim of the State to assign the limits of individual right on its own principles and so lead back by another route to might as the one standard of right.

2. Utilitarian theory.—The way to this reaction was prepared by the appeal to utility in such writers as Jeremy Bentham, who could see nothing in the doctrine of natural rights but 'anarchical fallacy.' It was metaphysics, and that worst form of metaphysics, 'metaphysics upon stilts.'

'Rights are the fruits of the law, and of the law alone. There are no rights without law—no rights contrary to the law—no rights anterior to the law.'²

Law doubtless is the declaration of a will on the part of individuals to whom other individuals are generally disposed to render obedience; but this disposition to obedience is the result, not of any harmony of the law with natural rights, but chiefly of habit supported by a sense or 'calculation' which each individual makes for himself as to what he stands to gain or lose by breaking away from it.³

The theory thus stated has the advantage over natural right in perceiving that rights must be relative on the one hand to actual concrete interests, and on the other to the good of society. But, in conceiving of the one concrete interest as consisting in the sum of satisfactions of desires that are qualitatively identical, and of the control of society as concerned merely with the arrangements that will give each individual the maximum of freedom in the pursuit of such satisfactions with a minimum of the inconvenience which any interference involves, this advantage is counterbalanced by the disappearance of all distinction between interest and right. From the side of ethics, this means that duty becomes an empty word; from the side of politics, that there can be no appeal to a 'right' in contradistinction to convenience. True, the convenience is that of society. But this convenience is merely what is required to produce an average of satisfaction among the individuals and is without claim on any one of these except in so far as it coincides with his own. It is not to be wondered at that such a view should be employed to justify alternately the purest anarchy, as in the once popular doctrine of *laissez-faire* (q.v.), and the purest tyranny, as in the exaltation of the State as the creator of all right. Utilitarianism does not of course escape the necessity of appealing to an 'ought' or a 'to be' as opposed to what is.

¹ *Clarke Papers*, i. 284. In this sense it merges in what is sometimes called the 'intuitionist theory' of rights, but is only a tame expression of the other.

² Jeremy Bentham, *Works*, iii. 221.

³ *Ib.* p. 219.

There is to be 'the greatest happiness of the greatest number'; with a view to it, 'everybody is to count as one, nobody as more than one.' But for whom is this a 'to be'? Not for the individual, to whom 'the greatest happiness of the greatest number' is nothing. Not for society, which, apart from the individuals who compose it, is nobody at all. If 'natural rights' are metaphysics upon stilts, 'utility' is metaphysics in the air.

3. Idealistic theory of rights.—The development of what for want of a better name may be called the idealistic theory of rights is the history of the attempt to do justice to the partial truths which these one-sided theories represent. We know from Plato's dialogues how far current theory had gone in the assertion of the doctrine that might is right and of the contractual theory which we have seen is required to supplement it.¹ His own theory of justice he develops as a direct answer to it. But his treatment of justice as a general feature of the good life rather than a particular phase of it obscures its application to the question of rights. What emerges is that the aim of civic society is to do the fullest justice to the capacities of individuals by assigning each his place in an organized system of social purposes. Aristotle's treatment of the same subject enables him in a well-known passage² to face more directly the issue raised by the Sophists as to the existence of a natural or, as it would be better expressed, an essential right. His conclusion amounts to the denial of any hard and fast line between the natural and the conventional. Law is partly natural, partly conventional. In all laws there is an element that is universal and one that is particular to the circumstances: they all, e.g., condemn theft, but the penalty will be different. In the same spirit a distinction is made elsewhere³ between universal, or common, law and the *idios vóμος* of the particular community. Some have seen in this an anticipation of the 'law of nature' as understood by 18th cent. writers. Aristotle's treatment of law and government elsewhere, as having for its aim the realization of what is best in man,⁴ must exonerate him from all responsibility for what D. G. Ritchie has called the 'turgid river of rhetoric' on this subject that has flowed through modern politics.

While the Epicureans reverted to the Sophistic theory of right as founded on convention, the Stoics rose to the conception of human law as an imperfect embodiment of a law of nature identical with the Divine Reason. We have already seen how this conception was more fertile on the negative than on the positive side—in the condemnation of artificial distinctions between races and castes than in the assertion of the rights of individuals as souls of infinite possibilities. To the Roman lawyers the appeal to a *ius naturale* meant merely the appeal, as in Gaius, to laws that were common to all nations.⁵

In Aquinas the law of nature appears, not only side by side with civil law, but as the foundation of it. As something deeper than human law and institution, forming a pattern on which they should be modelled, it thus receives new authority. From a mere statement of what is common to nations it becomes a precept 'to use those means by which life is preserved, to marry, educate children to know the truth about God and live in society.'⁶

¹ *Rep.* bks. i.-ii.

² *Eth. Nic.* v. 7.

³ *Rhet.* i. 13.

⁴ Particularly *Pol.* i.

⁵ Ulpian extended the *ius naturale* to all living things. This enabled him to assert that, while slavery existed 'iure gentium,' 'by the law of nature all men at the first were born free.' We have here a transition point from the idea of natural law as merely a fact and natural law as providing an ideal of human life. If we take the codification of law by Justinian as the last act of the ancient world, we may call this idea the sacred legacy of the dying civilization.

⁶ *Summa*, i. 2, qu. xciv. art. 2.

In other respects he leaves the doctrine very much as he inherited it from Aristotle.

If not, as he has been called, the discoverer of natural rights, Grotius (*q.v.*) was the first clearly to assign them a ground in man's social nature, to map them out, and more particularly to apply them to the life of nations. In opposition to Ulpian, Grotius maintained that law and right apply in the proper sense only to human beings: 'no one is properly capable of right who does not by nature use general precepts.' Animals may have rights in the wide sense that there is a right and a wrong attitude of mind towards them, but not in the sense that they can share in a common purpose involving correlative rights and duties. The natural law on which natural rights are based is defined as 'the dictum of right reason indicating that any act from its agreement or disagreement with the rational and social nature of man has in it a moral turpitude or a moral necessity, and consequently that such an act is forbidden or commanded by the law of God.'¹ From this and from his further definition of human nature, here referred to as the nature that was 'created at the beginning and restored first after the Flood, then by Christ,' he makes it abundantly clear that he has in mind an ideal right, after the pattern of which the actual body of rights has to be moulded, and to which God Himself must conform His will.² However true Rousseau's criticism³ of him may be respecting the details of his great work, it is wide of the mark as to the principle from which he starts. His weakness rather is one that is shared by Rousseau himself—his inability to free himself from the current ideas of a state of nature and of the State as 'an artificial body' founded on a 'treaty of subjection' which modifies natural rights. To this we must add a certain ambiguity in his treatment of society itself, which sometimes is conceived of as possessing a continuous life of its own 'like a waterfall,' at other times as a mere aggregate of individual wills. What was of enduring value in his work was the first clear assertion in modern philosophy of social good as the basis of all law and justice, and the application of this principle to the life of nations at a time when Europe was aghast at the horrors of the Thirty Years' War. As Plato asks us to look at justice writ large in the State before looking at it in the individual, Grotius writes his claim for natural or essential rights in the large letters of international law.

Rousseau (*q.v.*) has frequently been treated as the chief modern representative of the theory of the social contract. Carlyle disposes of him with the satirical remark that he unfortunately omits to tell us of the date of the contract. As a matter of fact, Rousseau's idea of the social contract is entirely different from Locke's, involving as it does a 'total surrender' of the individual to the general will. Moreover, it seems doubtful whether he conceives of it as an historical event at all. It forms, indeed, his starting-point, and is the title of his great book, but it becomes more and more obvious that it is merely 'an idea in the form of history.' Similarly the state of nature from which it is the release is little more than a name for the natural passions which have to be transformed in the civil state which first reveals man's true nature and puts him in possession of himself as a moral being. Finally, natural law as it appears in Rousseau is more properly called the law of reason,⁴ seeing that the rights to which it gives rise are the dictates, not of a state of man antecedent to society, but of the moral nature to which

civil society has raised him. It is this transformation that allies Rousseau with Plato rather than with Hobbes and Locke and entitles him to be considered the founder of modern idealistic politics. It only remained to clear away the last adhesions of these cruder theories and to bring into decisive prominence the relation between the ethical ideal of a completely human life and the system of rights as actually recognized whether by public opinion or by legal enactment.

III. *MODERN THEORY.*—In taking this step modern theory has been aided by the growth of the historic spirit enabling it to see that, while we must reject the idea of a voluntary engagement laying down conditions of acquiescence in social control, there has yet been operative from the first something more than power to enforce the particular will of individuals or classes upon society, something more also than the mere habit of acquiescence in forms of control that accident has created. By whatever name this is called, whether an imperative of the practical reason and personality (Kant and Fichte), the Idea (Hegel), the will to self-perfection (T. H. Green), it is their conformity to this and the scope that is given by them to its operation that are the ultimate ground and standard of rights. While the system required by it is an ideal, it must be conceived of, not (as it was apt to be by the first of these writers) as belonging to another order than actual political society and unrealizable in it, but as the very spirit and substance of the existing order. From this point of view, right presents two aspects. It may be defined, on the one hand, as 'that which is really necessary to the maintenance of the material conditions essential to the existence and perfection of human personality'; on the other, as 'the universal condition of action through which the ethical whole as a differentiated structure is enabled to preserve and develop itself.'¹ But these two definitions are only different ways of expressing the same thing, seeing that the personality to which all rights are relative is not something merely individual, but is actualizable only in the medium and through the opportunities that the organized whole of society provides, while, on the other hand, this whole, as an 'ethical' one, can attain its full differentiation and perfection only through the fullest development of the personality of its members.

The theory thus shortly stated has the advantage of combining the elements of truth which other more one-sided theories contain. With the theory of might it recognizes *on behalf of the State* that there must always be a reserve of force to guarantee rights in general against the invasion of force, *on behalf of individuals and classes within the State* that under particular circumstances the use of force may be necessary in order to procure the recognition of moral rights not otherwise procurable. It insists, however, that the use of force requires justification and that the justification can come only from the nature of the ends for which force is used. It recognizes with the contract theory that all rights are the expression of a will. But it adds that this cannot clothe them with any moral significance if it is only the 'scattered will' of individuals bent on their own ends with no really common interest in the form of life that civil society makes possible. What gives actual rights moral significance is that they are the conditions which each, when he understands the meaning of his own life, must will for the full realization of what he seeks to be. Similarly the element of truth represented by utilitarianism is recognized in so far as the validity of any claim of right is denied which is not founded on some concrete requirement of a social well-being. Where

¹ See T. H. Green, *Works* 5, ii. 341.

this theory parts company with it is in rejecting the conception of social well-being as consisting merely in the possession by the members of equal security in the pursuit of ends essentially individual. The idea which it substitutes will best be illustrated if we proceed to notice some corollaries which follow from the above statement.

The principles underlying the conception of rights, to repeat, are (1) that rights in the full sense of the word are relative to human personality as it may be at its best; (2) that personality expresses itself in activities that are in essence social. From these it follows (i.) that there is no 'level rate' of rights. Rights vary according to the power of performing social functions and to the character of the function that is performed. The rights of the child differ from the rights of the adult as possibility differs from actuality; the rights of a doctor from the rights of a layman; of a member of Parliament from those of an ordinary citizen, and so on. From this point of view, we can see that *rights imply duties in a deeper than the legal sense. They are correlative not only to the duties of another, but to the duties of the subject of right himself.*¹ (ii.) What holds of the occupants of different stations in society holds also of the individual in so far as he performs different functions in the different relations in which he stands to his fellow-citizens in different spheres of activity. His rights as a parent differ from his rights as a member of a trade; his rights as a trade unionist from his rights as a member of the State; his rights as a citizen from his rights as a member of the brotherhood of humanity. (iii.) From this again it follows that *conflict of rights arises not so much (as in the older view) between an abstraction known as the individual on the one hand and an abstraction called society on the other, as between the rights and duties that attach to an individual in virtue of his membership of different social groups.* This, it may be claimed, corresponds to what has actually taken place in modern times when the chief problems arise from the adjustment of conflicting claims of organized societies rather than of individuals with the State. But it may also be said that, by interpreting all rights as alike concerned with the conditions of human perfection, the above theory raises new problems peculiar to itself which call for particular treatment in an article like the present.

1. The rights of conscience.—The principle is that the ground of all rights is the opportunity that they afford for the betterment of human life. So regarded, they are seen to constitute a system or hierarchy corresponding to the system of interests which constitute the contents of human life and stand to one another in the relation of importance according to their comprehensiveness. It is this that justifies a man in sacrificing his duty and his right to support his family by the labour of his hands to his duty and rights as a trade unionist in a strike, or, again, his rights as a trade unionist to the State. The latter has priority over the former as the more inclusive. The principle here seems clear, however difficult the application to practice may on occasions be. But a difficulty remains which seems to be one of principle rather than of application in the case of rights that appear to fall outside of the hierarchy of social functions altogether and concern a man as interested in objects—truth, beauty, and goodness—that may be called supra-social. On any one of the other theories it is possible to cut the knot, whether by the frank subjection of the individual

to the State, or of the State to the individual, or by a distinction between the temporal and the spiritual whereby the spiritual is assigned to conscience and religion, the temporal to civil law. But on a theory like the present, which sees in all rights, civic or other, the conditions of a spiritual perfection, no such resource is available. Such a solution must end either in irreconcilable antagonism or in a new form of subjection of conscience and religion to the State founded on some arbitrary or speculative consideration of superior right.¹ For the fuller discussion of the rights of conscience and the age-long controversy between Church and State see artt. EMANCIPATION, CONSCIENCE, CHURCH. But two points here call for mention as further implied in the conclusions of this one. (1) With regard to the rights of conscience, we must be prepared to insist that no solution is possible which fails to recognize from the point of view of the individual the claim of the modern State to be the trustee, not only of law and order in the ordinary sense, but also of all that man has already willed of the good within its own borders and therewith of the conditions under which both individuals and Churches can realize their aims. On the other hand, it is equally essential for the State to realize its own profound interest in the improvement of the system of rights already established so as to make it a fuller expression of the personality of its members, and particularly its interest in the widest possible extension of a liberty of thought and speech and action as the primary condition of the development of the best in its members.

'What policy,' asks Spinoza, 'more self-destructive can any nation follow than to regard as public enemies men who have committed no crime or wickedness save that of freely exercising their intelligence?'²

(2) From the side more particularly of religion and the Church, we have to note that theory here only justifies what as an actual fact has taken place in the transference to State and municipality of functions that previously belonged to the Church, and that this fact contains the promise of reconciliation. For may it not be asked whether the claim of the modern State to interest itself in the active promotion of the good life through education and the encouragement of activities and institutions that have the spiritual welfare of its members at heart, is not one of the most valuable fruits of the awakening of conscience and religion in recent times? And, if this is so, whether there is not a certain perversity in the view that the recognition of State and Church as engaged in a common enterprise of redemption is a source of rivalry and conflict rather than of sympathy and friendship? A more reasonable view surely is that it has removed the ground for antagonism of aims and laid the basis of a more fruitful co-operation. In view of this change there is doubtless all the more pressing need for agreement as to the particular nature of the services which each can best perform, and much remains here for the statesmanship of the future, particularly in the spheres of education and charitable administration. But agreement will be helped and not hindered by a theory such as the above which interprets the rivalry as one, not for the possession of abstract rights, but for opportunities of service in a common cause. As in any other attempt at the assignment of spheres of co-operation in the achievement of a corporate end, the chief condition of success is good will, the desire to see the Kingdom of Right extended in the way and by the agency best fitted to that end.

¹ Since the general and the particular will are identical, right and duty coincide. By virtue of the ethical fabric man has rights so far as he has duties and duties so far as he has rights (Hegel, *Philosophy of Right*, § 155).

¹ See Hegel's claim for the State against *Moralität* on the one hand and religion on the other (§ 270, note).

² *Tractatus Theologico-Politicus*, ch. xx., the first and still perhaps the best philosophical statement of this interest.

2. The rights of nations.—We have already seen how the idea of the 'right of nations' was launched by Grotius and his successors as a challenge to the barbarities of the Thirty Years' War. In the centuries which followed its wide acceptance may be said to have been the greatest triumph of civilization since the establishment of the general idea of law in the Roman world. But the term itself, along with the phrase 'international law,' invented by Bentham, was in reality a misnomer, not only in the sense already noticed (that it was a mistranslation of the Roman *ius gentium*), but in the sense that it referred primarily to societies as political units and not to nations in the modern sense of the word. So interpreted, idealistic theory, with its conception of the body politic as the trustee of the conditions under which individuals and subordinate societies are free to exercise their capacities of contributing to the fulfilment of human destiny, has had no difficulty in accepting it, and, in spite of apparent exaggerations of State right, may be said to have only set its seal to this advance. But the question does not end there. Since the rise in the second part of the 19th cent. of the idea of nationality, in the strict sense of the word, a new problem has emerged and in recent years has become acute. Granted that States are personalities in the sense explained and share the rights of personality, many of them may be said to be multiple personalities, inasmuch as they include a variety of groups whose members are united by the deeper ties of community of blood, language and literature, religion and historical tradition.¹ When these suppressed personalities rise to consciousness of themselves, does not the claim, it may be asked, to be the guardian of a particular form of civilization entitle them to that political independence which alone enables them to realize their own particular destiny?

¹ 'What form of human life,' asks J. C. Bluntschli,² 'could have a better natural right to existence than the common spirit of a nation?'

What guarantee, we may add, of purposeful existence can there be short of a self-chosen political constitution corresponding to its own peculiar genius? Other things being equal, it would seem that a nation-State will be stronger and happier, not only, as Lawrence puts it,³ than a State which is not a nation, but than a nation which is not a State. And, if for strength and happiness we substitute, in accordance with our principle, the test of contribution to human good, the plea would appear to be indisputable, and we are face to face with the problem of rights in its most recent and acute form. No detailed discussion of so large a question is here possible; it must be sufficient to notice one or two of the chief difficulties in the recognition of the rights of nations, and to indicate the line of solution that is most in harmony with our theory.

Not only do language and nationality in themselves, apart from territorial unity, appear to be a principle far too shifting to afford the coherence necessary to constitute a corporate personality, but in themselves they fail to give any guarantee of the political capacity necessary to give effect to it. Even if territorial unity and a true political sense exist in a subject nation, there remains the difficulty that its history and ideals may be such as to provide no guarantee that, in case of its obtaining political independence, it will continue to contribute to the strength of the State from which it has been separated. While constituting the most serious problem that the statesmanship of the future has to face, these difficulties seem to offer no insurmountable obstacle to the application

of the principle. On the contrary, the only fear of failure to solve them comes from the side of the denial or half-hearted acceptance of it. With reference to the first of them, admixture of population is undoubtedly an obstacle to any complete adoption of the principle of nationality as the basis of the State of the future. But it must be remembered that, powerful as is the case for the nation-State, there is no reason to hold, apart from obsolete theories of natural right, that nationality is the only ground of citizenship. The cases of France, Great Britain, and Canada, to go no farther, are sufficient to show not only that it is possible to leave large room for national ideals under a sovereign State, but that the State itself may be the gainer from the diversity of nationalities which it holds in solution.

The other difficulties which we have mentioned bring us again to the question of the whole conception of the State. It was the grave defect of older theories, resting as they did on the assumption of a limited fund of rights, in the sharing of which the gain of one was the loss of another, that they were bound to bring the State into conflict with the idea of nationality, when this should rise to consciousness, as they were bound to bring it into conflict with other forms of individuality. The conflict is reconciled in the case of the latter when this assumption is seen to be false, and the function of the State is conceived of as the development in its parts of a personality in its members, which adds to its inherent life and strength. It only remains to apply the same principle to nationalities. Nations not less than individuals are the children of the State. It is under its wing that they grow up and reach maturity. Whatever the independence they claim when they reach majority, it is with the parent State that an alliance is most natural and is most likely to result in some new form of political union, which shall at once protect them against aggression from other nationalities and open out means of contact with them to the furtherance of the organic unity of mankind.¹

From this standpoint there is no more inherent difficulty in recognizing the political majority of nations than in recognizing the civil majority of individuals. True, there can be no conventional limit to the minority of nations and it will always be difficult to assign one. In the past the question has too often been left to be decided by 'the judgment of God'—in other words, by war. But modern precedents have made us familiar with all degrees of personality in communities,² and it may be hoped that, with the development of international law and the diminishing risk of experiments in self-government, other tests than that of the sword may be discoverable. Here, too, it should be noted that, apart from disputable theory, there is no reason to deny the possibility of circumstances arising under which the claim of nationality may have to give way to the general interests of humanity, on which it is itself in the last instance founded. In such a case the readiness of a nation to recognize this limit and to exercise the required degree of patience and self-control would itself be the surest proof that it was ripe for independence, when these circumstances change.

Under the same supposition, finally, the fear of danger to the parent State from the grant of independence would largely disappear. Even as things are, we pay far too little regard to the power of ties other than force, and of the additional affection between peoples likely to be born of a franker confidence in one another's loyalty to the elementary con-

ditions of human good, to guarantee the desire for the maintenance of some form of political union.

It is considerations such as these that provide a solid basis for the hope that, just as the horrors of the Thirty Years' War prepared the way for the general acceptance of Grotius's idea of international right in the old sense of the word, so the horrors of the Great War may result in the general recognition of it in the new sense. Given such a recognition, it will be impossible to stop short of the attempt to provide the necessary sanctions to the new order, and so, in the words of a great statesman of the time, 'to translate the idea of public right from abstract into concrete terms' by substituting 'for force, for the clash of conflicting ambitions, for groupings and alliances and a precarious equipoise, a real European partnership based on the recognition of equal rights established and enforced by a common will.'¹

RIGHTEOUSNESS (Babylonian).—In a new study, such as that of Assyriology, in which the meanings of the words have to be determined, there is naturally a certain amount of doubt as to their precise force; and it may even be that words which the Assyro-Babylonians would have regarded as of the utmost importance remain unrecorded in our lexicons, because they have not been found in the inscriptions, do not occur often enough, or have been incorrectly transcribed.

1. The words generally rendered 'righteousness'.—These are *kittu* (*kēttu*) and *mišaru* (*mēšaru*), 'righteousness' and 'justice', which are, in a measure, interchangeable terms, the former being from *kānu*, 'to be firm, fixed,' and the latter from *šēru*, 'to be straight, right,' the Heb. *yāšar*, the root of such names as Jasher (2 S 1¹⁸), Jesher (1 Ch 2¹⁸), 'uprightness,' etc. Both *kēttu* and *mišaru* are common attributes of gods and men, the deities more especially connected with the idea being Šamaš, the sun-god (who, as his light penetrates everywhere, was regarded as knowing best all that took place on the earth, and who became the impartial judge of men), and Rammānu (Rimmon) or Addu, in Assyrian Adad (Hadad), the storm-god, whose air, pervading all things, had the same property, and perhaps to a more satisfactory degree.

2. What the Babylonians understood by righteousness.—One of the most interesting, though probably not one of the most important, inscriptions dealing with this question is that formerly called 'Warnings to Kings against Injustice.' This inscription, which is published in *WAI* iv.² pl. 48 [55], shows what righteousness on the part of the ruler was expected to be. He was to favour justice and to be well-disposed towards his people, his princes, and the intelligent ones of his land.

¹ Henry Asquith, Speech in the House of Commons, 20th Dec. 1917.

He was not to favour roguery. When the king was favourable to the work of Ea (the god of wisdom), the great god would set him in the knowledge and understanding of righteousness (*šitultu u tudat mišari*). If he rejected the Šipparite, and decided in favour of a stranger, Šamaš (patron-god of Sippar), judge of heaven and earth, would set up a foreign law in his country, and princes (counsellors) and judges who did not decide against the law.

Much in this inscription is still obscure, mainly on account of the damage which it has sustained; but it seems that, among the Babylonians, as with the Hebrews, failure to fulfil the righteous requirements of the deity might, and sometimes did, entail that the rule of the land fell into the hands of foreigners, a noteworthy example being the rule of the dynasty of Babylon, to which Hammurabi belonged. This great king, as is now well known, collected and greatly improved (to all appearance) the laws of Babylonia, and he calls himself, in the concluding paragraphs of the great stele on which his laws are inscribed, the 'king of righteousness' (*šar mišarim*). Minor rulers, and even states, could come under the displeasure of the deity on account of unrighteous acts.

3. The importance of righteousness in the State.—Naturally in the remote ages of the Babylonian and Assyrian empires, when good government was less common than now, corruption and injustice were often rife, and it was needful, in cases where the angered populace might get the upper hand, for the king and all others in authority to have at least a reputation for righteousness, justice, and all the virtues which might at the time be regarded as connected therewith. This, with the Assyro-Babylonian ideal of their gods, caused the people to attach great importance not only to justice in the legal sense of the word, but also to everything that made the person of the king sacred in their eyes—uprightness, integrity, love for his people, and fair and benign conduct with regard to them. Divine beings, in the minds of the Babylonians and Assyrians, were perfect in righteousness by nature, and (with the exception, perhaps, of Nergal, the god of war, plague, and disease, and

others similar) probably could not do anything which might be regarded as unrighteous, though capable of acts of which the righteousness could not be understood. Whatever they did, they were just in all their dealings, and the king generally shared, though in a smaller degree, this immunity from unrighteousness. Indeed, it is probable that the deification of the earlier Babylonian kings was due to the reputation which they had for righteousness rather than to any divine nature that they might have inherited independently thereof.

4. **Gods of righteousness.**—As has already been noted (above, § 1), the gods of righteousness and justice in the highest sense were Sams, the sun-god, and Hadad. The two children and constant attendants of Sams were Kettu and Misaru, perhaps best translated here 'Truth' and 'Righteousness.' Another form of the sun-god was Tammuz, the Sumerian Dumu-zi, for Dumu-zida, 'the righteous son,' or the like—a name which may be connected with the legend that he passed the summer months of his year on earth with his spouse Ištar and the remainder in the under world with Ereš-ki-gal (Persephone), righteous in the fulfilment of what the Semites of old must have regarded as at least an irksome obligation. It was probably this that appealed to the women who lamented for him, whether Hebrews (Ezk 8¹⁴) or Babylonians.

5. **Righteous kings.**—One of the earliest kings renowned for his righteousness seems to have been Sargon (Sarru-kên) of Agade. It is this ruler who is apparently intended in *WAI* ii. pl. 48, l. 40ab, where the archaic sign for 'king,' written twice, one over the other, and glossed *Dadrum*, is explained as *Sarru-kên, šar kētti, dabib kētti, dabib damgāti*, 'Sargon, king of righteousness (justice), speaker of righteousness (justice), speaker of good.' Eight hundred years later (c. 2000 B.C.) ruled Hammurabi, and fourth in descent from him came Ammi-šaduga (Ammi-šadoqa), whose name is translated, in the explanatory list of royal names, as *Kimtu-kēttu*, 'the righteous family,' or the like (the Babylonians did not recognize the name of the Arab god 'Amm in the element ammi). In Assyria one of the kings claiming the virtue of righteousness was Sennacherib, and his grandson, Aššur-bani-āpli, 'the great and noble Asnapper,' it may be noted, calls himself *šar mšaru, raīm kētti*, 'the king of righteousness,' 'the lover of uprightness,' or the like.

6. **Other references showing the estimation in which righteousness was held.**—Among these are the final words of the record of Bel-nadin-āpli: ¹ *Limutta zēr-ma kētta raam*, 'Hate evil and love right (or righteousness)'; such names as Nabū-kēttu - usur, 'Nebo, protect righteousness (or justice)'; *Itti šalme u kēni kasap-šu ilagqi*, 'He will receive his money from the honourable and the righteous.' ² 'The star of justice and righteousness' (*kakkab kēttu u mšaru*) seems to have been the slow-moving planet Saturn (*d. Sag-us*), identified, seemingly, with the sun, and called, in Sumerian, *mul Gi-gi* (for *Gin-gin*)—a reduplication capable, apparently, of being translated by *kānu* and *ššuru* (see § 1), and illustrating, therefore, the likeness in meaning which *kēttu* and *mšaru* to all appearance have.

T. G. PINCHES.

RIGHTEOUSNESS (Buddhist).—There are several words in the Buddhist writings which coincide more or less completely with the idea of righteousness; but the principles in which they are embedded are so fundamentally distinct from

the Jewish and Christian background of Western ethics and religion that a mere comparison of terms would do little to elucidate the significance of righteousness in the Buddhist system. The term 'righteousness' (*δίκαιοσύνη*), as descriptive of conduct in human relations, coincides with morality. For this purely ethical sense see art. ETHICS (Buddhist). The term is generally used, however, with a religious implication. In Christian thought it is the notion, not of ideal human inter-relations, but of the conformity of the individual to a divine standard. God as absolute moral perfection is the ideal of righteousness.

¹ The NT presents the idea of righteousness mainly in two ways: (1) as a quality of God's nature and action, and (2) as the character which God requires of man.²

Buddhism differs from this in two ways: (1) it recognizes no God in the sense of an ultimate reality of ontology or morals; (2) it makes salvation consist not in the attainment of a moral ideal, but in escape from existence. The rejection of works in both systems is merely a superficial resemblance. Christianity rejects works because of the inability of unaided human effort to reach the standard of ideal goodness. Hence the need of justification, the bringing of the individual into a state of righteousness by a higher agency. Buddhism rejects them because no amount of merit attained by good works will lead to the goal.

But in the conception of righteousness as a law of the universe, a divine standard to which all beings should conform, there is a close parallel in the Buddhist teaching as to *karma*.

² In the organic universe, right and wrong, and those consequences of actions which we call justice, retribution, compensation, are as truly and inevitably a part of the eternal natural or cosmic order as the flow of a river, the process of the seasons.²

The ideal of the Christian consists in attaining the character required by God and thus winning 'the chief end of man'—the being made 'perfectly blessed in the full enjoying of God to all eternity.' Buddhism is quite as definite in teaching that the order of the universe is such that wrong-doing leads to punishment and right-doing to reward. Good actions done according to this conception are as much a form of righteousness as when done according to the will of God. Such teaching, however, so far as it exists in Buddhism, is intended merely for the unconverted man. The universe is not of such a nature as to make future existence, with even the highest rewards that it can offer, a desirable goal. A much more prominent fact is the existence of pain, and this to the Buddhist is a truth of such significance that, when it is realized, it inevitably results in renunciation of the world—not of this world as contrasted with heaven, but of any form of existence in the universe. Moral actions then cease to have the meaning that they had for the unconverted man. He who has renounced the world no longer makes conformity to the law of the universe his end. He seeks to cut himself off from it absolutely. He has another ideal of attainment, which is the true Buddhist ideal of righteousness—the state of the saint, or *arhat*, who has become independent of the universe and free from any desire for it. This is the ideal of the Hinayāna schools, and it will be necessary to discuss the later Mahāyānist developments separately.

1. **The Hinayāna ideal.**—It is not in particular terms that we find righteousness expressed in the Buddhist writings. The term 'righteousness' is often used in translations, where the force is purely ethical. We are told of the virtuous king who ruled 'in righteousness' (*dhammena*), but nothing more is meant than that he ruled according to his

dhamma—the principles of morals that he professed to follow.¹ He is also called *dhammika*, 'righteous,' in the same sense. Similar terms are *dhammattha*, *sīlavat*, 'virtuous,' 'obeying the commandments' (*sīla*), and *charāṇa*, 'righteousness,' also translated more exactly as 'conduct.' The blessings of the virtuous man are that he becomes wealthy, famous, has self-confidence in any assembly, dies without bewilderment, and is reborn in heaven.² All this is part of the popular teaching to the laity, to those who have not grasped the first truth of Buddhism. But, except in the high ethical level of the teaching due to the founder, there is nothing distinctively Buddhist in it.

The Buddhist ideal of righteousness is the ideal aimed at by the monk, the man who has realized at least the first Truth, the existence of pain. To realize the other three Truths involves a course of training, whereby he attains to the perfect state of the saint. He aims no longer at meritorious actions, but at developing in his character the qualities that lead to salvation and abandoning those that hinder it. The latter are seen most clearly in the list of the ten fetters (*samyojana*).³ Not merely must vicious acts be avoided, but sensuality itself (*kāma*), ill-will (*paṭigha*), pride (*māna*), and arrogance (*uddhachcha*) must be uprooted. And so among the positive qualities to be acquired we find friendliness, compassion, sympathy, equanimity. Here is a process which, if carried out, would lead to righteousness in the sense of the attainment of moral perfection, but it is not the final goal. These qualities are important because they lead to it—i.e., to absolute cutting off from existence and craving for existence in the world of birth and death. Besides the desire for existence here or in the sensual heavens there are other fetters which must be destroyed—desire even for all supersensual existence (*rūparāga*, *arūparāga*), belief in the efficacy of good works and ceremonies, as well as the intellectual errors, belief in a permanent self, doubt, and, last of all, as the ultimate fetter, ignorance. So, too, the chief positive quality to be attained is knowledge—knowledge, not of an ideally pure being, but of the true nature of compound things, that they are painful, impermanent, and soulless; and the truth of their soullessness (*anattatā*) is the Buddhist way of asserting that there is no higher reality behind them.

Earlier than these schematized lists of the fetters, or bonds (*nivāraṇa*, *āvaraṇa*),⁴ is the picture of the monk given in the *Sutta Nipāta*. Intent on the extinction of craving, he wanders alone like a rhinoceros (35), free from affection for wife and children, without even a companion, unless he finds one who keeps the *Dhamma* (46). He practises absolute continence (*brahmachariya*), avoids all theories and disputations (780), abandons doubt and heresies, aims at purity (*visuddhi*)—not at mere moral purity, but, as the other terms show, at being independent (*anūpaya*, *anissāya*) and undefiled (*anupalitta*) by contact with mundane things—and he is purified by knowledge or wisdom (*paññā*, 184).

2. *Mahāyāna developments*.—The chief ethical change in Mahāyāna was due to the growth of the view that it is possible to attain, besides the knowledge of the Path, also the omniscience of a Buddha. Every one is potentially a Buddha, and by the thought of enlightenment (*chittotpāda*) he may begin to become one by passing through numberless existences in which his aim is not merely to become a Buddha in order to teach, but also to

acquire merit, which may be transferred to others. He is then a *bodhisattva* (*q.v.*), and is thus described:

'He has for numberless aeons practised the good conduct of well done *karma*, alms, morality, patience, fortitude, meditation, wisdom, resource, learning, conduct, vows, and penance; he is endowed with great friendliness, compassion, and sympathy; in his mind has arisen equanimity, and he strives for the weal and happiness of all beings.'¹

This, although it reintroduces the doctrine of works, at least as a temporary resource, is a much fuller and loftier conception than that which makes the practice of friendliness and compassion merely a means to one's own release. But the practical result was not to make this the ideal for all. It opened at the same time an attractive way for the ordinary man to obtain happiness, not by effort of his own, but in reliance on the *bodhisattvas*, who have accumulated merit for his benefit. Rebirth in Sukhāvati ('the Happy Land,' the heaven of the Buddha Amitābha) is the reward of those who call upon the name of Avalokiteśvara (see art. BLEST, ABODE OF THE [Buddhist]).

The prayer of a *bodhisattva* in the *Bodhicaryāvatāra*,² x., is:

'May all those in every quarter, who are afflicted with pain of body and mind, win through my merits oceans of delight and happiness. Throughout worldly existence may loss of happiness never be theirs. . . . In whatever hells there are in the world-regions may there be the bodies of beings rejoicing in the happiness and delights of Sukhāvati, those who suffer in the cold hells obtaining heat, and those pained with heat becoming cool.'

This is the ideal of self-sacrifice aimed at by a *bodhisattva*, but the centre of the teaching comes to be devotion to such saviours of men. They become more and more raised above the level of common human beings, till they are even identified with the popular gods of Hinduism,³ and are worshipped with gratitude and adoration as great beings, through whose merits all may reach Sukhāvati.

'Those beings become happy in the world who keep in their minds the name of Avalokiteśvara. They become released from old age, death, sickness, sorrow, lamentation, pain, dejection. They suffer not the extreme pain of *samsāra*. Robed in pure white, like royal swans flying with the speed of the wind, they go to the region of Sukhāvati to hear face to face the Doctrine of the Buddha Amitābha. And having heard the Doctrine, the pain of *samsāra* no longer torments their bodies; nor does old age and death with lust, hate, and delusion, nor the pain of hunger and thirst torment them. . . . They abide in that region as long as the firm promise of Avalokiteśvara is not fulfilled to release all beings from all pains, as long as they are not set in the highest perfect enlightenment.'⁴

The latent Antinomianism goes on increasing. In the larger *Sukhāvativyūha* rebirth in Sukhāvati is ensured by ten times repeating the name of that country, but those who have committed the five sins that bring retribution in this life, or who have obstructed or abused the Good Doctrine, are excluded. In the smaller *Sukhāvativyūha*, however, we are told:

'Beings are not born in that Buddha country of the Tathāgata Amitāyus as a reward and result of good works performed in this present life,' but all shall attain it who 'shall hear the name of the blessed Amitāyus, the Tathāgata, and having heard it, shall keep it in mind, and with thoughts undisturbed shall keep it in mind for one, two, three, four, five, six, or seven nights.'⁵

The ideal of the *arhat*, though it suffered from the abuses common to all organized forms of asceticism, did maintain for long a noble ethical standard. In the legends of the Buddha given by the commentaries on the *Dhammapada* and *Jātaka* we find a series of examples, which, if they are without historical basis, are all the more important in

¹ *Lalitā Vistara*, Calcutta, 1877, vii. 128.

⁴ *Digha Nikāya*, iii. 216, 234, 254; *Dhammasaṅgraha*, xcv., lxvii.

showing how the Buddhist church interpreted the ideal of its founder. There is the story of the monk abandoned by his fellows because of his loathsome illness, but visited by Buddha, who heated water, washed and dressed him, in order that by caring for his body he might fit his mind for instruction; of the weaver's daughter for whose sake the Master made a journey of thirty leagues, so that she should not die without enlightenment; of the poor man whose one cake Buddha accepted before the hospitality of the whole city.

The Mahāyāna developments were not an explicit contradiction of the Hinayāna teaching. The *arhat* ideal was recognized, but disparaged as being merely a temporary stage to be succeeded by the ideal of becoming a Buddha, the perfect enlightenment of whom, indeed, includes the enlightenment of the *arhat*. But the change destroyed the older ideal, so far as it opened a way to happiness through the merits of others. The conception of merit is also unethical. The *bodhisattvas* do not give aid to becoming good, but confer upon others the enjoyment of the results of goodness. Merit is an external source of good, the accumulation of the beneficent result of so much good action, which can be imputed to others who have not, and are not required to have, the moral ability to perform it themselves.

LITERATURE. — The main sources are given throughout. Modern studies on the subject are: T. W. Rhys Davids, *Origin and Growth of Religion as illustrated by Indian Buddhism* (HL), London, 1881, pp. 205-214; H. Kern, *Geschiedenis van het Buddhisme in Indië*, Haarlem, 1882-84, vol. i, bk. ii, ch. 4 (unsympathetic and based on inadequate material), French tr., 2 vols., Paris, 1901; C. A. F. Rhys Davids, *Buddhism*, London, 1912, ch. v., 'The Norm as Moral Law'; P. Dahlke, *Buddhist Essays*, Eng. tr., do. 1908, ch. viii.; N. Macnicol, *Indian Theism*, do. 1915, pt. i, ch. 4; L. de la Vallée Poussin, *The Way to Nirvāna*, Cambridge, 1917.

EDWARD J. THOMAS.

RIGHTEOUSNESS (in the Old Testament).

—1. Terms.—The technical term for 'righteousness', *צדק*, *sēdek*, or fem. *צדקה*, *sēdāqah*, is connected with the Arabic *ṣidk*, 'truth', 'sincerity', 'firmness',¹ and denotes generally what is true, right, fitting, or conducive to the end in view. The corresponding adj. *צדיק*, *saddik*, 'righteous', is applied only to persons, except in Dt 4⁸, where the 'statutes and judgments' of God are described as *saddikim*. The denom. vb. *צדק* is used mainly in the forensic sense of being 'in the right', the Hiphil *צדק*, 'justify', conveying the several ideas of declaring the just man in the right (Dt 25¹, 2 S 15⁴ etc.), helping the innocent to the vindication of his cause (Is 50⁹), and bringing the sinner into right relations with God (Is 53¹¹, Dn 12⁹). In AV *יָשָׁר*, *yāshār*, 'straight', 'upright' (*יָשָׁר*, 'be even or smooth'), is frequently translated 'righteous', RV following this looser practice only in Nu 23¹⁰. Nearly related terms are *מִשְׁפָּט*, *mishpāt*, originally in the sense of 'custom', afterwards specifically of judgment or justice; *תָּמִים*, *tāmim*, 'spotless' (in the ceremonial sense), hence also 'perfect' (from the moral point of view); *נָקִי*, *nāqī*, 'innocent'; *נָכוֹן*, *nākhōn*, 'straight', 'honest', 'right'; and *כֵּן*, *kēn*, 'firm', 'true', 'just', 'fair.'

2. The consuetudinary conception of righteousness.—As among other ancient nations, in Israel righteousness is primarily interpreted in terms of

¹ The word *ṣidk* and its cognates are applied not merely to words and actions that are honest and true, but likewise to eyes that see clearly, ears that are quick to hear, lances that are trusty in battle, and even knots that hold firmly. From the last instance Skinner is disposed to find in the idea of hardness the point of transition to 'the higher developments of the idea both in Arabic and in Hebrew' (HDB iv, 274). But the different shades of meaning can most easily be comprehended under the general notion of trustworthiness, or fitness to purpose. The hard knot and the strong, unerring lance are as true to their function in battle as the seeing eye and the hearing ear to their place in the bodily structure, or the honest man and his deeds to their office in furthering the social welfare.

social usage. The righteous man is he who adheres loyally to the moral and religious customs of his people, while the 'wicked' sets them at naught. Thus Abraham's righteousness consists in a scrupulous regard for Jahweh and His commands (Gn 12^{1a}), combined with signal manifestations of that lavish generosity towards one's kindred (13^{8a}) and hospitality to passing strangers (18^{1a}) which have always been reckoned among the most sacred obligations of the dutiful tribesman. David also identifies 'righteousness' with the magnanimity which he has shown towards Saul, in refusing to 'stretch forth his hand against the Lord's anointed,' even when the Lord has 'delivered him into his hand' (1 S 26²³). In both cases righteousness is perfectly consistent with prevarication or deceit (Gn 12^{10a}) and deeds of fiendish cruelty (2 S 8¹¹, 12³¹) towards the foreigner.¹ On the other hand, the wicked do violence to the just prerogatives of God and their fellows (Gn 6⁹, 18^{30a}), working 'folly [i.e. godlessness] in Israel' (Gn 34⁷, Jos 7¹, Jg 20^{6, 10}, 2 S 13¹²), and staining their hands by deeds such as have neither been 'done nor seen from the day that the children of Israel came up out of the land of Egypt unto this day' (Jg 19³⁰).

As social life became more complex, it was needful that judges—'able men, such as fear God, men of truth, hating unjust gain' (Ex 18²¹ [E])—should be appointed to determine the rightful customs and apply them to changing conditions. The decrees of these judges (*shōphētim*) were in due course collected as a body of written 'judgments' (*mishpātim*) in the Book of the Covenant (Ex 20²²⁻²³). At the same time righteousness was invested with an increasingly forensic significance. The righteous man was no longer the loyal tribesman, who held fast to the ways of his fathers, but the successful litigant, who won his case in court, and thus acquired the legal status of the 'innocent' (Ex 23⁷), or he who found approval at the bar of impartial human judgment (Gn 38²⁶, 1 S 24¹⁷), or passed the supreme test of Divine justice (Gn 7¹, 20⁴ etc.), or enjoyed a right standing before God through faith (15⁶).

3. The prophetic ideal of righteousness.—The 8th cent. B.C. saw a violent breaking down of the old landmarks. Through the increase of wealth and luxury which followed in the wake of military success, rich and poor were parted by an ever-widening gulf. Forgetful of the Covenant, rich men used their wealth to 'trample the face' of the poor, refusing him an honest wage, ousting him from field and home, and for the debt even of a pair of shoes selling him into slavery (Is 31⁴, 58⁶, Am 2⁶, Mic 2^{2, 9}, 3^{1a}). The merchants in the market-place robbed him equally of the just return of his wages, 'making the ephah small, and the shekel great, and forging scales of deceit' (Am 8⁵). Against such oppression in high places there was neither security nor redress. The judges at the gates openly accepted bribes and perverted justice (Is 1²³, Am 6¹², Mic 3¹¹), while religion itself was made a cloak to cover wrong-doing and cruelty (Is 1^{12a}, Am 2^{7a}).

In the moral chaos that ensued Amos raised a stern call to righteousness. Jahweh had no desire for sacrifice or offerings. To Him the very profusion of their gifts was but multiplied transgression (Am 4⁴). Away then with the din of their songs and the strumming of viols! 'But let justice (*mishpāt*) roll down as waters, and righteous-

¹ It is interesting to observe that the more sensitive conscience of the Elohist writer regards Abraham's act of deceit as one of those deeds 'that ought not to be done,' bringing 'great sin' upon Abimelech and his innocent people (Gn 20⁹).

² *עֵדָה מִיִּי*, *ēdāh miyī*, 'she is more in the right than I,' the only instance where either vb. or adj. is found in the fem., a woman not being considered a 'person' in the eyes of the law.

ness (*š'dāḳāh*) as an everflowing stream' (5²⁴). In this great statement of principle Amos has advanced far beyond earlier conceptions of morality. With him righteousness is no mere body of customs, still less a legal status conferred by fallible authority; it is the living essence of social ethics, embracing alike honesty in business—fair weights and balances, standard wages and prices—and impartial justice in the law-courts. It may be defined, in a word, as 'the straight thing' (*n'khōhāh*), by which alone the nation can be saved (3¹⁰ 5^{14c}). Around this hard, cold imperative of duty Hosea throws a warmer atmosphere of emotion. As Jahweh has betrothed Israel to Himself 'in righteousness, justice, love and compassion' (Hos 2¹⁹). He expects them to be actuated by the same spirit towards one another. What He demands above all is love (*ḥesed*, brotherly love and kindness), which is the fulfilment of righteousness (6⁶), the ripe fruit of righteousness (10¹²). In Isaiah's keynote of holiness also justice is blended with mercy. The man holy in God's sight must 'put away the evil of his doings' from before His eyes, 'cease to do evil: learn to do well' (Is 1¹⁷). If a judge or counsellor, he must keep his hands clear of bribes—which lead men to 'justify the wicked,' and deprive the innocent of their right standing in court (5²³)—and not merely seek to judge honestly, but take an active, energetic part in furthering the cause of the widow and fatherless (1²³).¹ The prophet's ideal for Zion is that of a 'city of righteousness,' whose king and princes exalt justice as the lodestar of government, and whose people dwell together in mutual confidence and security (1^{26f}. 9⁷ 11^{3c}. 16³ 32^{15c}). Micah holds before the rulers and judges of Israel the same pure standard of judgment (Mic 3¹), and inculcates on all men respect for the threefold principle of a righteous life—'to do justice, and to delight in love, and to walk humbly with thy God' (6⁸). These notes are repeated in Jeremiah and later prophets. The good man is he who 'doeth justly, and seeketh truth' (Jer 5¹), who 'thoroughly executeth judgment between a man and his neighbour, oppresseth not the stranger, the fatherless, and the widow, and sheddeth not innocent blood' (7^{6c}), who 'delivereth the spoiled out of the hand of the oppressor' (21¹² 22⁹), who 'speaketh the truth with his neighbour, executeth wholesome judgment in the gates,'² deviseth no evil in his heart against his neighbour, and loveth no false oath' (Zec 8^{16c}), who 'walketh with God in honesty and integrity, and turneth many away from iniquity' (Mal 2⁶). II Isaiah uses 'judgment' (*mishpāt*) as the virtual equivalent of religion in its practical aspect (Is 42¹⁻⁴). In Ezekiel's more atomistic conception of righteousness there is a characteristic recrudescence of the ritual element; but the prophet has a true feeling for justice and humanity as the test of righteousness with God. The righteous man, who 'doeth judgment and righteousness,' has not merely kept himself free from idolatry and uncleanness, but 'hath restored to the debtor his pledge, hath spoiled none by violence, hath given his bread to the hungry, and hath covered the naked with a garment; hath not given forth [sc. his money] upon usury, neither hath taken any increase, hath withdrawn his hand from iniquity, hath executed true judgment between man and man, hath walked in my statutes, and hath kept my judgments, to do truly . . . saith Jahweh' (18⁵⁻⁹). And on the princes, who are to uphold the banner of righteousness in the

¹ This positive conception of judicial righteousness, which throws the stress on the vindication of the innocent but defenceless poor, acquires an increasing importance in the later literature. Cf. Dt 24¹⁷ 27¹⁹, Jer 5²⁸ 22^{16c}, Ps 101⁸ 82⁸ etc.

² The simple force of this phrase has suffered from the intrusion of a second *māṣ* in MT.

better Jerusalem that is to come, the injunction is laid: 'Put away violence and spoil, and execute judgment and righteousness; lift off your exactions from my people, saith Jahweh. Ye shall have just scales, and a just ephah, and a just bath. The ephah and the bath shall be of one measure,' etc. (45⁹⁻¹¹).¹

4. Righteousness by the Law.—With Ezekiel we find prophecy passing into legalism. But the definite step in this direction had already been taken when Deuteronomy was accepted as the canon of faith and morals (621 B.C.). The book itself is steeped in the spirit of the greater prophets. Like them, it insists on justice, humanity, and love—especially towards the widow, the fatherless, and the stranger—as the vital expression of religion, which is identified with love to Jahweh (6⁵). But, in exalting the duties of humanity into 'commandments, statutes, and judgments, which Jahweh your God commanded to teach you' (6¹ 10^{12c} etc.), it shifts the emphasis from willing, cheerful pursuit of moral goodness to the painstaking effort to obey an external Law as the only ground of acceptance with God. The tendency towards nomistic righteousness received a still more powerful impetus from the Law of Holiness (Lv 19-26) and the full-blown Priestly legislation (P), in spite of the former code's sympathy with the poor and needy, and its summing up of the whole Law in the Golden Rule, 'Thou shalt love thy neighbour as thyself' (Lv 19¹⁸. 24). Life now became a rule, a yoke of obedience, which pressed ever more heavily on burdened consciences. The pathway to righteousness lay in the keeping of 'all these commandments' (Dt 6²⁵ 24¹³). To this end the study of the Law was enjoined as the first principle of success in life (Jos 1⁸). Kings were judged good or evil according to the measure in which they kept 'the statutes and judgments' of the Law (1 K 11³. 33^c, 2 Ch 7^{17c} etc.). And men claimed 'good' at God's hand for the 'good deeds' which they had done in observing the Law themselves, and imposing it on others (Neh 5¹⁹ 13¹⁴. 22. 31).

This nomistic ideal of righteousness more and more pervades the literature of the age. The piety of the Psalms is, no doubt, strongly influenced by the preaching of the prophets. Thus the perfect man of the Psalmists 'walketh uprightly, and worketh righteousness, and speaketh truth in his heart' (Ps 15²), 'hath clean hands, and a pure heart; hath not lifted up his soul unto vanity, and hath not sworn deceitfully' (24¹), 'keepeth his tongue from evil, and his lips from speaking guile; departeth from evil, and doeth good; seeketh peace, and pursueth it' (34^{13c}), 'is gracious, and giveth' (37²¹), 'disperseth, and giveth to the poor' (112⁹).² Even so the thought is near at hand that only by such conduct can one become a guest in Jahweh's tent, and dwell in His holy hill (15¹), secure the Divine blessing of 'righteousness,' i.e. the right standing before Jahweh (24⁵), win many days of good (34¹²), even 'inherit the earth' (37⁹. 11. 23), and have his righteousness 'endure for ever' (112⁹). The nomistic ideal finds still clearer expression in Ps 1, 19, 119, where the Law is celebrated as the subject of the good man's meditation by day and night, his joy and crown, the fountain of light and purity, peace, freedom, and defence against evil, and the standard of judgment in the end of the days. In Job, too, the perfect man 'feareth God, and escheweth evil' (1¹. 5), and rests his claim to appear before God, and be justified, on the ground that he has refrained from all vanity, deceit, and idolatry, and been the constant

¹ With Ezekiel's demand for just scales and measures cf. Lv 19^{35f}, Dt 25¹³⁻¹⁶, Pr 11¹ 16¹¹ 20¹⁰. 28.

² In the last citation there is a distinct approach to the Judaistic identification of righteousness with almsgiving (see art. RIGHTEOUSNESS [Jewish]).

friend and upholder of the stranger, the fatherless, and the widow (31¹⁵). The same idea prevails in Proverbs, though more ethical conceptions are frequent. Righteousness is primarily intellectual, 'to know wisdom and instruction; to discern the words of understanding; to receive instruction in wise dealing [conduct], in justice, probity, and equity' (1²). The beginning of such knowledge is 'the fear of the Lord' (17⁹), and this is learned through obedience to the revelation of Wisdom, the foster-child and deputy of God (7¹², 8¹²), who rewards all those who love her with riches and honour, 'yea, durable riches and righteousness' (here equivalent to prosperity, or good fortune, the result of a right standing before God), but the wicked with calamity, which sweeps over them like a whirlwind (1²⁴, 3¹⁸, 8¹⁷).

In books like the above righteousness is not identical with sinlessness. Even the best men are guilty in God's sight. If He were quick to mark iniquities, none could stand in His presence; but with Him there is forgiveness, that He may be feared (Ps 130³). Thus Job can maintain his 'righteousness' (6²⁹, 10⁷, 13¹⁵ etc.) in spite of the fact that 'mortal man cannot be in the right before God' (4¹⁷, 9², 20⁷, 19⁶ etc.). In Proverbs, too, righteousness is used in the sense of general rectitude. The righteous man is he who fears God and follows truth and uprightness, even though some measure of sinfulness may cling to him, while the wicked man despises both God and wisdom. Ecclesiastes, on the other hand, seems to identify righteousness with the perfect keeping of the Law, though he warns his readers against being 'righteous overmuch,' lest the spring of life be lost in the endeavour, for 'there is not a righteous man upon earth, that doeth good, and sinneth not' (Ec 7¹⁶, 20⁷). His ideal is the *via media* of moderate well-doing, which avoids extremes on either side (2²⁴, 3¹², 7¹⁶, 9⁷). The editor of the book, however, insists on the full nomistic rule of life: 'Fear God, and keep his commandments; for this is the whole duty of man. For God shall bring every work into judgment, with every hidden thing, whether it be good or whether it be evil' (12¹³).

5. The righteousness of God. — Primitive morality is never merely human. Society includes gods as well as men, and the gods are conceived as the upholders of social order, the source and sanction of public justice. Thus righteousness rests fundamentally on the Divine character and will. This idea runs through the whole OT. Jahweh is the fountain-head alike of the rightful customs of His people and of the later 'statutes and judgments' imposed by the authority of judges and lawgivers. In interpreting these customs and statutes, the judge is His mouth-piece (Ex 18¹², [E], Dt 17⁸). The moral codes likewise are His 'words,' which reflect His character and express His will (Ex 20¹, Lv 18¹², Dt 8¹, 7² etc.). The prophetic expositions of righteousness are equally the oracles of Jahweh and spring from the righteousness which is His by nature. Jahweh demands 'justice and righteousness' because He is faithful and righteous (Is 5⁷, Am 5²⁴, Zeph 3⁵), love because His righteousness is seasoned with love (Hos 2¹⁴, 11¹², 14¹²), tenderness and compassion because the devouring fire of His holiness is a spirit of redeeming grace as well as judgment (Is 1¹⁸, 4², 6²). The plummet by which Jahweh is to rebuild Jerusalem is a plummet of righteousness (1¹⁷, 28¹⁷), and the line of peace and abiding prosperity for her and all the world is the line of 'judgment and righteousness' (11⁶, 32¹⁶, 33⁵). But nowhere is righteousness divorced from love and mercy. Jahweh will be gracious unto His people and will have mercy upon them; 'for Jahweh is a God of judgment'

(30¹⁸). He is a God that 'exerciseth love, justice, and righteousness in the earth' (Jer 9²⁴) and correcteth His people 'with judgment, not in anger' (10²⁴). Love and justice are, as it were, the two poles of the Divine character, each essential to the full harmony of His nature. In various passages of the Psalms they appear in poetic parallelism, as though love were the twin-sister of justice (Ps 33⁵, 36⁵, 89¹⁴, 101¹, 103¹⁷, 111³, 116⁵, 119¹⁴⁹).

With the prevalence of the forensic conception of righteousness, Jahweh came to be regarded as the Supreme Judge of men and nations. And it was felt from the first that 'the Judge of all the earth' must do right (lit. 'act according to *mish-pāt*') in distinguishing sharply between the righteous and the wicked (Gn 18²⁵). This thought of an impartial Judge, putting the just man in the right and condemning the wicked, appears in many different contexts. Thus He wipes out the sinful world, but saves 'righteous' Noah (8⁹). He overwhelms Sodom and Gomorrah, but rescues Lot (19¹²). He smites Pharaoh and the Egyptians with all manner of wonders, but lets His afflicted people go free (Ex 3²⁰). He blesses them so long as they keep the Covenant, but takes vengeance upon them when they depart from it, even to the extent of driving them from the land which He has given them to inherit (Dt 7¹², 11¹² etc.). He is a jealous God, who visits the iniquity of the fathers upon the children unto the third and fourth generation of such as hate Him, but sheweth mercy unto thousands of them that love Him, and keep His commandments (Ex 20⁵, 34⁶, Nu 14¹⁸, Dt 7⁹). He 'judges' between David and Saul, requiting David for his 'righteousness and faithfulness,' but bringing the kingdom of Saul to an end (1 S 24¹⁵, 19⁷, 26²³). He 'enters into judgment with the elders and princes of his people,' because they have 'devoured the vineyard,' and 'grind the faces of the poor' (Is 3⁴). He visits His people for their deceit and treachery (Jer 9³, 12¹). He 'executeth judgment' in their midst for the abominations they had done before Him (Ezk 5¹⁰, 9¹² etc.). On the wicked He 'raineth down coals of fire,' making their portion 'brimstone and burning wind,' while the 'upright behold his face' (Ps 11⁶). He even makes Himself good [godly] to the good [godly], perfect to the perfect, pure to the pure, perverse to the crooked (18²⁴). In the punishment which He thus metes out for unrighteousness the guilty themselves must admit that He is 'in the right' (Ex 9²⁷, Ps 51⁴). But, as the good judge showed his righteousness in actively promoting the cause of the defenceless, so Jahweh puts forth His righteous arm to help the poor and down-trodden (Dt 10¹⁸, Mic 7², Ps 37⁶, 32² etc.). As Israel itself is the supreme type of the 'righteous' oppressed by its enemies, His righteousness is manifested chiefly in its vindication. The 'righteous acts of Jahweh,' which the joy-makers celebrate 'around the water-troughs' in the days of Deborah (Jg 5¹¹), are His saving acts on the battle-field of Megiddo. So also in Samuel's farewell address (1 S 12⁷) the 'righteous acts of Jahweh' are His acts of deliverance from the day when He brought their fathers out of Egypt. Thus 'righteousness' is frequently equated with 'salvation' (Is 56¹, Jer 51¹⁰, Dn 9²⁴, Ps 4¹, 37⁶, 51¹⁴ etc.).¹ The 'sun of righteousness' (Mal 4²) is a striking figure for Jahweh's saving grace soon to shine forth upon His people. The Messianic title, *Jahweh Sidkenu*, 'Jahweh is our righteousness' (Jer 23⁵), is to be interpreted in the same sense. The sprouting of the righteous Branch is the

¹ Of course, we must not identify righteousness with salvation. . . . Salvation is, so to speak, the clothing, the manifestation of Jehovah's righteousness' (A. B. Davidson, *Theology of the OT*, p. 396 f.).

spring-like promise of Israel's redemption (*ib.*). In like manner the judgment in the valley of Jehoshaphat, 'Jahweh judgeth' (Jl 3¹²), means salvation for Israel.

This connotation of the term, however, is peculiarly associated with the great prophecy of restoration in Is 40-55, where Jahweh's whole dealings with His people are viewed in the light of His and their 'righteousness.' The people Israel have sinned and paid the penalty of their sin. The verdict of history has proved them absolutely 'in the wrong.' Nevertheless, they feel that they have a 'case' (*mishpat*), which cannot for ever be 'passed over' by their God (Is 40²⁷). Israel is Jahweh's people, bound to Him by the everlasting Covenant—His Servant, chosen by Him to 'send forth judgment to the nations' (42^{1a}). Though too often 'far from righteousness' (the conduct which befits Jahweh's people), and blind and deaf to its high calling as His Servant, Israel is yet more completely 'in the right' than the peoples that have 'robbed and spoiled' it. From the ideal point of view, the Israelites may even be regarded as the innocent victims of oppression, who may therefore boldly claim 'justification,' or recognition of their just rights, from Jahweh (50⁶⁻²). In answer to the claim, Jahweh is pleased 'for his righteousness' sake—His loyalty to the covenant of grace—to bring them deliverance, and so to 'magnify the revelation' of His righteousness through them (42^{1a}). Throughout the past He has been righteous (true to His word) in all that He has promised to do (41²⁶ 45¹⁹); and His righteous word will not fail Him now (45²³). Already He has raised up Cyrus, 'whom righteousness [here in the sense of victory]¹ followeth at every step' (41²); and He will continue to uphold him until Jerusalem and its temple have been rebuilt, and the waste places of Judah raised up (44²⁶⁻²⁸). For He is 'a just God and a saviour' (45²¹)—a righteous God, whose righteousness is made manifest in salvation (46¹³ 51^{5a} 54¹⁷). With salvation will come 'righteousness [the power that makes for victory] and strength' (45²⁴), peace [prosperity] flowing 'as a river' (48¹⁸), and abounding joy and gladness (56^{1a}) welling up from hearts that know and follow after righteousness [in the prophetic sense of right-doing], because the law [revelation] of Jahweh is within them (51¹⁻⁷). And this blessing will be shed over all the earth. For it is too light a thing for Jahweh merely to restore the exiles of Jacob. He has sworn by Himself, 'Unto me every knee shall bow, every tongue shall swear' (45²³), and for the accomplishment of His oath He has given His Servant Israel for a light to the nations, 'that my salvation may reach to the end of the earth' (49⁶). The sufferings that caused the Servant such perplexity and despair are to be the means of this salvation. 'By his knowledge shall my righteous servant justify many [bring many to a right standing with God]: for he shall bear their iniquities' (53¹¹). Thus the redemptive righteousness of Jahweh reaches the fulfilment of its purpose in the conversion of the world to Him.

6. The challenge of Divine righteousness.—In the heyday of national prosperity it was easy to believe in Divine righteousness. But amid the general disorder which accompanied the downfall of the nation keen questions arose. If the Judge of all the earth did right, why must the righteous suffer, while the wicked enjoyed such long and prosperous days? These questions first become vocal in Jeremiah, whose ministry for righteousness was one continuous martyrdom. 'Too righteous [too completely in the right] art thou, O Lord,

that I should contend with thee [*sc.* at the bar of justice], yet would I lay my case before thee: Why doth the way of the wicked prosper? Why are they all at ease that deal very treacherously?' (12¹). When Jahweh answers only with the promise of yet graver trials, the prophet breaks into bitter expostulations, even charging Jahweh with deceiving him: 'Why is my pain perpetual, and my wound incurable? . . . Truly thou hast been to me a deceitful brook, as waters that are not sure' (15¹⁸). 'Thou hast fooled me, O Lord, and I let myself be fooled; thou art stronger than I, and hast prevailed. I am turned to a laughing-stock all day long, every one doth mock me' (20⁷). The same poignant cry bursts from the lips of Habakkuk in the agony of the Chaldean oppression: 'Thou that art too pure of eyes to look upon evil, who canst not behold iniquity, why dost thou look on the work of wrong-doers, why be silent when the wicked man [the Chaldeans] swalloweth up the righteous [Israel]?' (1¹³). From prophets the challenge is caught up and re-echoed by the people under the bondage of exile and in the barren days that succeeded the restoration: 'My way is hid from Jahweh, and my cause doth pass unheeded by my God' (Is 40²⁷); 'Every one that doeth evil is good [acceptable] in the eyes of Jahweh, and he delighteth in them. Where then is the God of judgment?' (Mal 2¹⁷); 'It is vain to serve God: and what profit is it that we have kept his ordinances, and walked in mourning before him? For behold now! the arrogant are blessed [happy],¹ and the doers of wickedness are built up; yea, they tempt God, yet escape' (31^{4a}).

To these heart-breaking appeals of earnest souls there came no direct answer, but only the exhortation to stand fast by the line of duty (Jer 15¹⁹⁻²¹), or wait with patience till the 'vision' should reach its appointed end (Hab 2^{2a}), and the 'sun of righteousness' should rise 'with healing in its wings,' when the righteous should 'skip as calves of the stall,' and 'trample down the wicked' under their feet (Mal 4²⁻³). But bolder spirits fought out the fight and lifted the problem to a region where the troubles of the righteous melted away in the eternal sunshine of God's face.

The most heroic of these conflicts is reflected in the book of Job. A perfect pattern of righteousness, Job is suddenly plunged into overwhelming suffering and misery. Trained in the ancient dogma that suffering is the penalty of sin, yet firmly convinced that he has done nothing to merit these calamities, and goaded to despair by the orthodox 'consolations' of his friends, he fiercely arraigns God's rule. 'I am innocent, but it is all one. God destroyeth the innocent and the wicked alike.' There is no justice in His reign. 'The earth is given over to the power of the wicked; and God blindeth the eyes of its judges,' so that they can no longer distinguish between right and wrong. And God cannot deny the charge. 'If it be not he, who then is it?' (9²¹⁻²⁴). The poet reaches no intellectual solution of the problem thus raised. Salvation is found only in a dazzling vision of Jahweh's majesty, wisdom, and goodness in nature, before which Job and all his sorrows are swallowed up (42^{2a}). He does, however, rise to the thought that, after he is dead, God will appear upon his dust, as Goel, or Champion, to bear witness to his innocence, and that he will rise from Sheol, if but for a moment, to see the vindication of his cause (19²³⁻²⁷). The door which he has thus unlocked behind the veil is pushed wide open by later psalmists, apocalypticists, and sages. By the time of Jesus immortality had become an assured hope of Judaism. And the problem of Divine

¹ With צָרָחָה, used in the sense of 'victory,' we may compare Syr. *z'kha*, which means 'conquer' as well as 'be pure or innocent,' and the opposite, *hab*, 'be conquered or guilty.'

¹ For אֲשֶׁר־נִשְׂמְּחִים, 'we count happy,' read אֲשֶׁר־נִשְׂמְּחִים 'happy are.'

righteousness was solved in a view of God's government which embraced both this age (ὅλῳ, *olam*; αἰών, *aeon*) and that which was to come.

RIGHTEOUSNESS (in Christ's teaching).—

I. Method of inquiry.—It is not unusual with writers on this subject to gather out of the Gospels all that may be thought to have any relation to that term in any and every sense in which it can be used. This results in an article on 'righteousness' becoming a more or less complete theology of the Gospels. In the present article it is proposed to limit the inquiry to the few passages in which the term actually occurs. This will have the advantage of bringing into clear relief the very small part which the actual term plays in Christ's teaching. It occurs seven times in the First Gospel, twice in the Fourth, and no more.

2. Data.—Mt 3¹⁸, 'to fulfil all righteousness.'—The words are very ambiguous. How could the baptism of Jesus by John be a fulfilling of 'all righteousness'? The meaning generally given is 'to fulfil every righteous ordinance,' John's baptism being regarded as a divinely sanctioned religious ordinance, which no pious Israelite could disregard; and δικαιωσύνη being interpreted as though it were δικαιοσύνη (cf. Lk 1⁶). This is perhaps supported by Mt 21³², where it is said that John came 'in the way of righteousness.' This seems to mean 'came as a representative and preacher of righteousness,' and the thought in 'righteousness' will be in particular of the 'repentance' which John preached.

Mt 5⁶, 'who hunger and thirst after righteousness.'—It seems clear that here 'righteousness' may have any or all of the senses which could be ascribed to it. There was the Divine righteousness. There was the Divine righteousness in so far as it had been revealed in Law and Prophets. There was this righteousness as appropriated by man. In the latter sense it comes to mean something like 'right conduct,' and to the Jew this right conduct was conditioned by observance of the Law,¹ and expressed itself in repentance, almsgiving, prayer, and acts of humanity. It may well be that Christ had particularly in view those who spent their lives in the endeavour to fulfil the requirements of the Law and thus to obtain the 'righteousness' which God required, and which He had revealed (cf. Ro 9³¹ Ἰσραὴλ δὲ διώκων νόμον δικαιοσύνης).

Mt 5¹⁰, 'who are persecuted for righteousness' sake,' i.e. 'who in their hunger and thirst for righteousness so act as to draw down upon themselves persecution.'

Mt 5²⁰ and 6¹.—Here we must examine the relation of these verses to the whole section 5¹⁷-6¹⁸; 5¹⁷ lays down the permanent validity of Law and

¹ For 'righteousness' as equivalent to obedience to the Law see P. Volz, *Jüdische Eschatologie*, Tübingen, 1903, p. 316; W. Bousset, *Die Religion des Judentums*, Berlin, 1903, p. 367. For 'repentance' and 'righteousness' see Bousset, p. 368. For 'almsgiving' and 'acts of humanity' in connexion with 'righteousness,' see Volz, p. 316.

Prophets as re-interpreted by Christ. [Vv. 18, 19 seem to be an interpolation giving another view of the permanence of the Law in the sense of permanent obligatoriness of the letter of the Law.] V. 30 'For I say to you, that except your righteousness surpass that of the scribes and Pharisees, you shall not enter into the kingdom of the heavens.' Now what is this 'righteousness'? It is (a) a condition of entry into the kingdom. It is (b) brought into connexion with the Law (and the Prophets). And the contrast implied seems to be this: the scribes have what they call 'righteousness,' which is dependent upon observance of the Law; they are right, but, since the understanding of the Law which I give you goes deeper than does theirs, your 'righteousness' will necessarily be in some sense more abundant than theirs.

Vv. 21-48 give a twofold series of three illustrations of the way in which Christ 'fulfilled' (i.e. gave a deeper meaning to) the Law.

I. (a) 21-26.—The Law, 'Do not murder,' implies, 'Do not have angry thoughts.' Therefore, if your brother has a matter against you, go and be reconciled to him.¹ This seems to imply that righteousness is a right condition of the heart, caused by right appreciation of the Law and taking effect in right conduct.

(b) 27-30.—The Law, 'Do not commit adultery,' implies, 'Do not have impure thoughts.' Therefore exercise moral discipline. This also seems to imply that righteousness is a right condition of the heart, caused by right appreciation of the Law, taking effect in moral control and discipline.

(c) 31-32.—The Law sanctioned divorce, but limits this to cases of πορνεία. This seems to imply that righteousness will not insist upon supposed legal rights which are not consistent with the highest morality.

II. (a) 33-37.—The Law said, 'Do not swear falsely,' but carry this farther, 'Do not swear at all.' This seems to imply that righteousness will sometimes fulfil the Law by extending its scope.

(b) 38-40.—The Law commanded retaliation. Turn this into a retaliation of love.

(c) 43-48.—The Law said, 'Hate your enemy,' but do the contrary—love him. This, again, seems to imply that righteousness will sometimes reverse the letter of a particular precept.

These illustrations are very different in kind. In I. (a) and (b) they imply an exegesis of the Law which penetrates beneath the letter and seeks to find and to carry into effect the spiritual principle which is logically involved. Murder presupposes anger; therefore avoid anger as well as murder. Adultery implies lust; therefore put away lust. We might suppose that the 'greater righteousness' of the disciples is either the moral state caused by obedience to the Law thus spiritually interpreted or the moral acts in which this morality of the heart expressed itself, viz. reconciliation to the brother, moral discipline, or both taken together. But in I. (c) the limitation given to the sanction of divorce is quite arbitrary, i.e., whilst the disciples might take the illustrations I. (a) and (b) as examples of a general method of interpretation, I. (c) would give them no principle of exegesis by which they could deal with any other law. Righteousness here therefore must be conduct based on a given interpretation. II. (a) and (b) might perhaps be regarded as illustrative of a method of interpreting the Law by arguing from the particular to the general. If false swearing is wrong, so must any kind of swearing be. If love to one's neighbour is commanded, this must be held to imply love of all men. But II. (c) is again a quite arbitrary cancelling of a law, by substituting for it its exact opposite. Here righteousness is certainly not moral condition created by obedience to the Law. It may be right moral condition which revolts against the Law and substitutes for it something different, or right conduct due to such reversal.

These facts would lead us to suppose that the idea of righteousness implied in these illustrations was that of conduct rather than of the moral condition which gives rise to conduct; that is to say, Christ is dealing with 'righteousness' as a term with a definite meaning (= 'right conduct') which He presupposes. The right conduct of His disciples was to take a far wider range than that of the scribes and Pharisees, just because the methods of interpreting the Law which He taught them would enable them to widen out almost every single command to cover a far greater area of conduct than did the Pharisaic exegesis.

But, whatever the idea of the 'greater righteousness' which these illustrations are intended to convey, it is noticeable that the term 'righteous

¹ The application does not seem quite consequent. The point would be clearer if the words ran, 'if thou hast aught against thy brother.'

ness' is not actually used to describe it. That is probably due to the fact, noticed above, that Christ seems to be dealing with the term in its Pharisaic meaning of 'right conduct.' He states that the right conduct of His disciples, just because it is based upon a more spiritual interpretation of the Law, will be far wider in range than the scribal righteousness. But He will not in formal language apply the term 'righteousness' to the results of obedience to the Law in its more spiritual interpretation. To have done so would have been contrary to His whole view of human conduct, which never was or could be 'righteousness.' 'When ye have done all that is required of you, say, We be unprofitable servants' (Lk 17¹⁰).

In ch. 8, however, we come back to the actual term 'righteousness.' Whatever be the idea of righteousness implied by contrast with the Pharisaic 'righteousness' in 5²¹⁻⁴⁸, it would seem that Christ now at least remembers that in contemporary Judaism 'righteousness' was often equivalent to 'right conduct,' especially in the sphere of the performance of acts of religion. And to this He now turns in 6¹, 'Take heed that ye do not your righteousness before men,'¹ and then proceeds to illustrate the term under the three heads of almsgiving (vv. 2-4), prayer (vv. 5-15), and fasting (vv. 16-18). This section seems to be very loosely connected with the preceding, for the connexion in thought between righteousness and the Law drops out of sight. The precepts now given about righteousness are not drawn from the Law, but are mainly confined to the command to avoid ostentation and publicity. That is an additional argument for supposing that all through the Sermon 'righteousness' is being used in a technical sense = right conduct based on the Law. Ch. 5²¹⁻⁴⁸ is concerned mainly with the right method of interpreting the Law, and only secondarily with righteousness as based on it. Ch. 6¹⁻¹⁸ is concerned primarily with the latter idea, and presupposes the insistence upon the permanence of the Law stated in 5²¹⁻⁴⁸. 'Almsgiving, fasting, and prayer' are assumed to be acts of righteousness because they are commanded in the Law.

The term 'righteousness' occurs once again in the Sermon in 6³³, 'Seek first the kingdom and his righteousness,' or, by emendation, 'Seek first the kingdom and its righteousness,' i.e. the righteousness which alone qualifies for entry into it.²

3. Results. — If we now ask what light the Sermon on the Mount as a whole throws upon the term 'righteousness' as used by Christ, one or two important results emerge.

¹ For 'doing righteousness' cf. *Test. Levit.* xiii. 5, 'Do righteousness therefore, my children, upon the earth'; *Psalm of Solomon*, ix. 9, 'He who does righteousness treasures up for himself life with the Lord.'

Since the Heb. *צדקה*, *Aram.* *ܥܡܪܬܐ*, acquired the signification 'almsgiving,' *ἀλεμωσύνη* has been substituted for *δικαιοσύνη* in some MSS in Mt 6¹. But no doubt *δικαιοσύνη* in this verse is the general term for righteousness, which is then subdivided in the following verses into alms, prayer, and fasting.

² 'The kingdom and his righteousness.' The text here is uncertain. That just given is the reading of the best MSS. It might also be translated 'His kingdom and righteousness.' With the first translation the reference to God in an indirect way by the use of a pronoun is unexpected and difficult. 'Righteousness' must then mean 'the righteousness required by God.' This meaning is not far removed from that of vv. 5. 6. 10. There is no need to introduce a so-called Pauline meaning into the word (Wellhausen). With the second translation it is possible to relate the pronoun to 'kingdom' only, and to take 'righteousness' absolutely. But it is more natural to refer the pronoun to both nouns. The meaning will then be 'Your Father . . . knoweth what you need. Therefore seek first his kingdom [cf. 'thy kingdom' in 6³⁰], and righteousness.'

The variant readings seem to be attempts to avoid a difficult phrase. Thus B transposes 'righteousness' and 'kingdom,' whilst E and other Uncials and the Curetonian Syriac add 'of God' after 'the kingdom.'

It may be conjectured that *αὐτοῦ* is a mistranslation of the original Aramaic and should be *αὐτῶν*. 'Seek the kingdom and the righteousness without which you cannot enter it' (cf. 5²⁰).

(a) The illustrations of the interpretation of the Law seem to suggest that, by way of contrast with the Pharisaic righteousness, true righteousness is a right condition of the heart, caused by a right understanding of the spiritual tenor of the Law, which issues in right conduct. But this is never called 'righteousness.'

(b) Throughout the Sermon Christ seems to be employing the term as a known conception, using it therefore, as it were, in inverted commas. The Jews sought for righteousness by the method of obedience to the Law taking effect in religious acts. All who really desired it from the bottom of their hearts would ultimately be satisfied, however misjudged the method by which they sought for it (5⁶). The righteousness of Christ's disciples (i.e. their religious conduct) was not to be less than that of the scribes (5²⁰). Obedience to the Law, almsgiving, prayer, fasting—all these were obligatory upon them (6¹⁻¹⁸). But they were to be practised in a different spirit, based upon a better understanding of the Law, and void of the ostentation which marred the Pharisaic devotion.

These results are not unimportant. All through the Sermon we are dealing with Christ's teaching about conduct as related to the Law, and this conduct is termed 'righteousness' just because that was a current usage. It is a technical term used by Him in its technical meaning. All that He is concerned with here is the relation of His disciples to righteousness as compared with the relation to it of the Pharisees. In both cases it is to be based on the Law, but in the case of His disciples it will assume a more far-reaching character due to the better method of dealing with the Law which He gave to them.

In other words, we have no real clue here as to Christ's own doctrine of righteousness, no new definition of it, no attempt to give its content and scope and range. We may, if we please, select from His words such ideas as love and purity, and say that these constitute righteousness in His doctrine. But they are never actually so termed, and His silence suggests rather the view that He would not willingly have predicated righteousness of men at all.

It will be seen that in the Sermon 'righteousness' seems to be used with reference to a meaning which it had in contemporary Judaism, that of the righteousness based on observance of the Law which good men exhibited in such exercises of religion as almsgiving, fasting, repentance, and prayer. What Christ is reported to have taught about it did not change the entire content of the word, but spiritualized and deepened it. If His disciples rightly understood the Law, they would not neglect such ordinances as almsgiving, fasting, and prayer, but would exercise them in a spirit which would make them to be real righteousness, which God would reward. In this conception of the 'reward of righteousness' we are still in the circle of current Jewish conceptions. So far as this Gospel is concerned, Christ does not sweep away the conception of reward, but purges it. The unostentatious and unseen righteousness would receive a reward from God, who sees the unseen.

It may be objected that this limitation of righteousness to the conception of concrete right conduct cannot be all that Christ meant by righteousness. But we are not dealing with 'all that Christ meant,' but with what the editor of the First Gospel records Him to have taught on the subject. This writer seems to have written for an early Palestinian or Syrian community, the members of which were Jewish Christians. He wished to assert and prove the Messiahship of Jesus, and to show that the kingdom in which that Messiahship would be exercised was imminent. He was therefore also concerned to record what Jesus had taught as to the conditions under which men would be admitted into it. Of course, recognition of the Messiah was one. But Christ had laid down a number of principles for the guidance of His disciples until His kingdom should appear. The editor is particularly interested in those principles

which deal with the relation of Christians to the older Judaism. He regards the new community as the true Judaism, and is at pains to record such teaching of Christ as showing how the representatives of the older Judaism had distorted their religion, and how the Messiah had re-interpreted for His disciples the true meaning of the Law and the ordinances. When recording, therefore, the teaching of Christ on righteousness, he has in mind chiefly such sayings as brought into contrast Christ's teaching and the most current and popular conception of contemporary Judaism. This was of righteousness as equivalent to 'the exercises of religious acts.' These still retained their obligation, but were to be void of the spirit of ostentation which characterized them as practised by the Pharisees. To find in all the qualities commended in the Sermon on the Mount 'the characteristics which constitute true righteousness,'¹ as does the writer of the art. 'Righteousness in NT' in *HDB*, is to miss the whole point of the First Gospel. These many qualities may perhaps constitute 'righteousness,' if that word be used in a sense which permits it, but they are never called 'righteousness' in the First Gospel, and indeed are carefully distinguished from it. Ch. 520 speaks of the righteousness which is to characterize the disciples, but, when next we come to the word, it is in 61, and in the rest of that chapter righteousness is illustrated as consisting in such religious devotions as almsgiving, prayer, and fasting, i.e. in concrete, not internal, righteousness.

It will perhaps be said that 521^{ff} shows how the righteousness of the disciples is to exceed that of the Pharisees, and must therefore bear on the conception. These verses show how exegesis of the Law is to be deeper, directed more to the spiritual content than to the surface meaning of its precepts. But this spiritual appreciation is not called righteousness, though it might be so termed by any one who cared to use the word in that sense. This deeper insight into the meaning of the Law is only the soil from which a more abundant righteousness, in the sense of the word as used by the editor of the Gospel, can spring.

Righteousness therefore in Christ's teaching, as recorded in the First Gospel, means conduct, in respect of religious ordinances, and of moral relation to others, which is the outcome of a right understanding of the OT. In what relation does it stand to Christ's personality? In this, that the Messiah had given a new method of interpreting the OT.

This, of course, is not the whole of Christian teaching on righteousness, but it is all that the First Gospel has given to us. That is only an additional proof that this Gospel springs from a Jewish Christian society which only partially understood Christ's teaching and His person. For them He was the Messiah, who was soon to inaugurate His kingdom. He was also the true interpreter of the Law. Those who followed His teaching would hold fast to the Law and to the ordinances of religion. They would then become the righteous who alone would enter the kingdom.

How closely the conception of righteousness in the First Gospel follows the Jewish conception of it may be seen from a study of the cognate adjective (*δίκαιος*). This means, generally speaking, a 'pious,' 'religious' person. Thus Joseph is a 'righteous' man, and this quality would have led him to put away his betrothed wife, when she was found to be with child (19). Jesus Himself is called a 'righteous' man by Pilate and his wife (27^{19, 24}). The Pharisees appear to men to be 'righteous' (23²⁹). 'The righteous' can be spoken of collectively as a class,² whether the thought is of the pious heroes of the past ('adorn the tombs of the righteous,' 23²⁹; cf. 'Abel the righteous'³ [23²⁹]), or of 'the

righteous' who will enter the Messianic kingdom' (13^{43, 49} 25^{37, 46}).

Of course there is the same vagueness here as there is about the use of the word in Jewish literature. But one prevailing characteristic of 'the righteous' in Jewish literature is piety based upon conformity to the Law, which takes effect in outward action, especially in such religious exercises as almsgiving, prayer, and fasting. To the editor of the First Gospel 'the righteous' were those who would be admitted into the kingdom. But who were 'righteous'? Not all Jews (3⁹ 8¹³), not the scribes and Pharisees with their hard and literal interpretation of the Law, but the true disciples of the Law, who received the clue to its meaning given to them by the Messiah. For them the Law was not in one jot or tittle abolished (5¹⁸). Rather it was permanently valid. But they had a clue to its meaning which would make their righteousness exceed that of the scribes and Pharisees in so far as it had a deeper soil into which to strike its roots.

Neither St. Mark nor St. Luke has recorded any saying of Christ containing the term 'righteousness.' The adjective occurs in Mk 2¹⁷, whence Mt 9¹³ has borrowed it. St. Luke places the adjective in the mouth of Christ in the following sayings: 5³²=Mk 2¹⁷=Mt 9¹³; 14¹⁴ 'the resurrection of the righteous' (here it is used, as in Mt 13^{43, 49} 25^{37, 46}, of the inheritors of ultimate blessedness); 15⁷ 18⁹ and 20²⁰ (in the same sense as in Mt 9¹³); 23⁴⁷ (applied to Christ by the centurion); 23⁵⁰ (of Joseph of Arimathea). We learn therefore nothing fresh from these Gospels as to the teaching of Christ on the subject of righteousness.

In the Fourth Gospel the term occurs in one connexion only. That is in 16^{8, 10}. The Holy Spirit is to convince the world of righteousness, 'because I go to the Father.' The meaning may be that righteousness in the widest sense of the term had been completely manifested in the life of the incarnate Son of God. When He returned to His Father, this manifestation was completed, and by that return it was proved to have been a real manifestation. And that manifestation would henceforth be the standard by which all other conceptions of righteousness would be tried and proved to be faulty. The adjective is used three times in the Gospel—once of Christ's 'judgment' (5³⁰), once of human 'judgment' (7²⁴), and once of God the Father (17²⁵).

Of course, it is not possible to discuss the bearings of Jn 16⁸ on the whole conception of Christ as to righteousness. For that would lead us into a re-statement of the whole Johannine theology. If Christ taught that He was the incarnate righteousness of God, the question is at once raised, How does this affect men? That leads to the doctrine of the relation between Christ and men in all its many bearings, including the doctrine of sin and of its removal, and of the mystical union between Christ and the believer. All that we can do is to note the fact that, whilst the First Gospel deals with righteousness from the human standpoint and regards it as closely connected with a right view of the Law, the Fourth Gospel, in the one passage concerned, deals with it from the standpoint of the divine righteousness perfectly manifested in the eternal Son of God.

LITERATURE.—To the literature quoted in the article add E. A. Abbott, 'Righteousness' in the Gospels, London, 1918.

W. C. ALLEN.

RIGHTEOUSNESS (in St. Paul's teaching).

—1. Importance of the term.—Righteousness, as a popular term in universal use, is of course sometimes employed by St. Paul in its current and popular sense. Thus, when he asks, What partnership

¹ Similarly in the Apocalyptic literature 'the righteous' are those who are to inherit the kingdom (cf. *Volz*, p. 816).

¹ G. B. Stevens, in *HDB* iv. 282.

² Peculiar to the First Gospel is the collocation 'prophets and righteous men.' So in 13¹⁷ 'Many prophets and righteous men,' and in 10⁴¹ 'He who receiveth a prophet . . . and he who receiveth a righteous man'; cf. *Test. Levi*, xvi. 2, 'You will set at nought the words of the prophets . . . and will persecute righteous men'; *Test. Dan*, ii. 8, 'Though it be a prophet . . . though it be a righteous man.'

The other passages in the Gospel in which 'righteous' is used of persons are 9¹³, 'I came not to call righteous but sinners,' where 'righteous' seems to be used in a half ironical sense (cf. 'sons of the kingdom'); 8¹², of those who asserted 'righteousness' of themselves; and 5⁴⁵ 'rains upon righteous and unrighteous' (cf. *Test. Judah*, xxi. 6, 'Just as on it [the sea] righteous ['and unrighteous,' some MSS] are tossed about').

³ Cf. 'Enoch the righteous' (*Test. Levi*, x. 5, xviii. 2, *Test. Dan*, ii. 3, v. 6); also *Test. Ben*, vii. 4, 'Abel the righteous, his brother.'

have righteousness and lawlessness with one another (2 Co 6¹⁴), or speaks of himself as equipped with the weapons of righteousness on the right hand and on the left (2 Co 6⁷), or says that the Kingdom of God is not meat and drink, but righteousness and peace and joy in the Holy Spirit (Ro 14¹⁷), it is most natural to suppose that he uses the word in the large and somewhat indefinite sense which every one understands. What it signifies is that there is a standard for conduct—a standard determined not simply by the nature of the person who is to exhibit the character or quality of righteousness, but by his relation to other persons or things—and that the requirements of this standard have been met. But two things demand special consideration of the term in St. Paul. One is the extreme frequency with which *δικαιοσύνη* and the cognate terms (*δικαιος*, *δικαιοῦν*, *δικαιωμα*, *δικαιωσις*) occur in his writings. If we discount the Pastorals, the examples of these words amount to 101. This alone would show their peculiar importance for him. Besides this, there is the undoubted fact that he uses some of them in a technical or quasi-technical sense, with the correct understanding of which is bound up the correct understanding of his gospel. Thus *δικαιοσύνη θεοῦ* is rightly spoken of by Holtzmann¹ as a 'technische Abbeviatur' for St. Paul's conception of Christianity; in the mathematical sense it is a 'symbolic' expression of his gospel.

The difficulties connected with the term are like those which in modern times are connected with the relations of religion and morality. Most people admit that religion and morality can be and must be distinguished, but most religious people would say that religion, as they understand it, is ethical through and through, and that apart from it morality has no adequate inspiration or safeguard. The peculiarity, and sometimes the perplexity, of St. Paul's writing is due to the fact that he does not distinguish religion and morality as a modern does. Morality is for him much more bound up with a right relation to God than it is for the ordinary modern, and religion is much more easily conceived as something on which the verdict of God has to be pronounced—in other words, as something of which a moral estimate has to be made in a legal or quasi-legal form. The appreciation of this difference is made the harder by the fact that St. Paul has not two vocabularies to express the different elements or aspects of reality, moral or religious, with which he is dealing. He has to represent them all in terms of *δικαιοσύνη* and *δικαιῶν*.

2. The righteousness of God. — The formal presentation of *δικαιοσύνη θεοῦ* as the sum and substance of the Christian message is made in the Epistle to the Romans. St. Paul is not ashamed of the gospel, for it is the power of God to salvation for all who believe—the explanation of this being that in it there is revealed *δικαιοσύνη θεοῦ*. The genitive case can be used to express various relations; and, so far as grammar goes, *δικαιοσύνη θεοῦ* might mean the righteousness which belongs to God (i.e. which is His character as a righteous being); or such a righteousness as God requires of men, and will acknowledge as answering to His requirements; or, again, a righteousness of which God is the source or author. Obviously also some if not all of these ideas might be combined; and, if the expression is in any sense technical or symbolical, it has probably condensed or accumulated into itself shades of meaning which would originally have taken different grammatical forms.

In modern times there have been three main lines of interpretation. In the first the genitive,

θεοῦ, is taken as a simple possessive, and the righteousness which is revealed is God's own character. The gospel shows men what God is. They may have imagined that they knew Him before, and even that they knew what was meant by His righteousness. But they misconceived the attribute which they called by this name. To them it was merely a retributive or distributive virtue—the attribute in virtue of which God renders to every man according to his work. As such it was a ground of fear rather than of hope to the sinner, and it hardly could be conceived as the content of a gospel. But, when God's righteousness was actually revealed in the gospel, it turned out to be quite different from this. It was not retributive or distributive, but self-imparting or communicative. It streamed out ceaselessly from God, and overflowed upon men and into them, becoming their righteousness also. That is why the news of it is gospel. It is glad tidings to the sinful that it is the very nature of God, in spite of their sin, in entire indifference to their sin, conceivably even on account of their sin, to beat against their sinful nature with His searching self-communicating righteousness till sin is overcome and God's own righteousness fills the once sinful nature of man. That sinners are saved by God imparting His own character to them is true, but it does not follow that this is what St. Paul means when he uses the expression *δικαιοσύνη θεοῦ*. The problem which the gospel had to solve was for him a moral problem, but here the *δικαιοσύνη θεοῦ* is conceived simply on the analogy of a physical force. It flows out as unconditionally from God towards all men as water flows from a spring, or as heat radiates from the sun. But moral problems cannot be stated, let alone solved, by merely physical categories; and, when St. Paul wrestles, intellectually, with his problem in Ro 3²⁸, it assumes quite another character. Further, while an attempt may be made, in consistency with this view of the *δικαιοσύνη θεοῦ*, to make room for Christ in the gospel—to point to Him as a conspicuous proof that divine righteousness has the self-imparting quality here claimed for it—it is quite impossible to give Him the place that He has in St. Paul. For the apostle He is not a conspicuous illustration of the nature of divine righteousness; except in Him and in His Cross there is no revelation or knowledge of the *δικαιοσύνη θεοῦ* at all.

3. OT usage. — A more impressive and suggestive interpretation of *δικαιοσύνη θεοῦ* is that which, while still treating the genitive as possessive, finds the key to the meaning in those OT passages in which God's righteousness is spoken of, not as distributive or as self-imparting, but as doing right or justice by His people. In the OT generally the functions of ruling and judging are closely connected; and, when the king judges, he is conceived as helping his people to their rights rather than as administering statutes. In books like the Psalms and Deutero-Isaiah the people of God are generally represented as wronged and oppressed by a wicked world, and God manifests His righteousness when He vindicates them and delivers them from their enemies. Hence God's righteousness is His people's hope; it is in it that they trust, and to it they appeal; by the manifestation and exercise of it they are justified and saved. In a real sense, it is one with His grace and faithfulness. It puts His wronged people in the right in the eyes of all intelligent spectators. The Lord is their righteousness, their vindication, their salvation, as against all who condemn and oppress them or put them in the wrong.

Passages like Ps 35²⁴, 51¹⁴, 71², 135²⁴, or like Is 51⁵, 54¹⁷, 56¹, illustrate this. In most of these the subject spoken of is the nation, and it is

¹ NT Theol. 2 ii. 139.

easier, of course, for a nation than for an individual to feel that it is in the right, and that, if God's righteousness were manifested, the result would be its justification and salvation. A comparison of vv. 1-2 in Ps 143 shows how this national reliance on God's righteousness as that which must vindicate the people can be combined with an individual sense of sin which cannot face the judgment of God. The just (but wronged) nation can be saved by the manifestation of God's righteousness; its justification is an 'analytical' proposition, declaring it to be what it is by putting it into the position which is its due; but, if the sinful individual, who cannot face God's judgment, is to be justified, the process must be different. His justification cannot be the declaration of what he is—the demonstration of the righteousness of the righteous; it must be a synthetic proposition, which not only declares something about the sinner, but also does something for him, securing for him a new relation to God. It is worth noticing that those who attach to these OT passages about the nation, or the faithful community at the heart of it, the explanation of St. Paul's δικαιοσύνη θεοῦ—Ritschl, e.g.—also connect justification in the NT sense with the Church rather than the individual. The writer can only confess himself baffled with this. When St. Paul preaches his gospel of δικαιοσύνη θεοῦ, it is not to an oppressed people of God who, whatever their shortcomings, are still in the right as against their pagan oppressors, and who can depend on God's righteousness to put them in the right—i.e. by one and the same divine act to justify and save them; he preaches to individual sinners, Jew and Gentile alike, who are in no community but that of guilt, and of whom it must be said, if they are eventually justified, not that God has justified His injured people and vindicated their righteous cause, but that He has justified the ungodly (Ro 4⁹). This would of itself be enough to show that δικαιοσύνη θεοῦ, as embodying the sum and substance of St. Paul's gospel, is not equivalent to God's faithfulness to His covenant obligations, or to His action regarded as the consistent carrying out of His purpose to bless and save His people. It is something more original and startling—more congruous with the idea of a new revelation—than this.

4. St. Paul's meaning.—But there are other reasons which forbid us to attach St. Paul's δικαιοσύνη θεοῦ to such OT passages as are referred to above. For one, St. Paul himself refers to none of these passages in expounding the δικαιοσύνη θεοῦ. He declares it to be witnessed to by the Law and the Prophets, and his favourite references are Gn 15⁶ and Hab 2⁴. There is not an allusion even to Ps 98². Further, as W. Bousset has pointed out,¹ this conception of the righteousness of God fell, in later Judaism, wholly or almost wholly into abeyance.

¹ In place of the merciful righteousness of God [the righteousness of God sympathetically interested in his wronged people], we find predominant the distributive, forensic, disinterested righteousness.

The last epithets not only describe the change, but convey an unsympathetic judgment of it; but the fact referred to is indubitable. St. Paul had to preach his gospel of a δικαιοσύνη θεοῦ, not to people who could lose the sense of their own demerit in the sense of membership in a community which could appeal to God as having a righteous cause, but to people who had to meet the living God standing alone, or only in a community of guilt with others. Such a righteousness of God as is exhibited in Is 54¹⁷ or Ps 98² would mean nothing for such people. If it were not unintelligible, it

would be irrelevant; and, in spite of the powerful pleas that have been made for it by many scholars, it cannot be regarded as the key to St. Paul's mind.

This key can be found only if we concentrate our attention on the passage in which St. Paul not only mentions but expounds the δικαιοσύνη θεοῦ, and if we observe the place that it holds in the connexion of his thoughts. This passage is Ro 3^{21ff.}. The δικαιοσύνη θεοῦ is preached to a world which is ὑπόδικος τῷ θεῷ, liable to God's judgment—a world, not of people who can appeal to God's righteousness to vindicate them, but of condemned and unsheltered men, who need a righteousness of God because they have none of their own. It is a righteousness bound up with and inseparable from Jesus Christ in His character as λασθήριον. It is not something that we can seize and understand, apart from Christ, and inside of which we can then, consistently, make room for Christ. It is not enough to say with W. Sanday and A. C. Headlam:

'There is one signal manifestation of righteousness, the nature of which it is difficult for us wholly to grasp, in the Death of Christ.'¹

The death of Christ is not 'one signal manifestation of righteousness'; in the sense in which St. Paul uses the term to sum up his gospel, the death of Christ is the whole and sole revelation of the δικαιοσύνη θεοῦ as the hope of sinful men. Apart from it there is no manifestation of a δικαιοσύνη θεοῦ at all. And it is so because God has set forth Christ in His blood as λασθήριον—i.e. either as a propitiatory sacrifice or in propitiatory power. There is a cautious way of declining to think out passages like this, illustrated, e.g., by J. B. Lightfoot in his *Notes on Epistles of St. Paul* (London, 1895, p. 272), and an impressionist or emotional way, illustrated conspicuously by G. A. Deissmann in ch. 6 of his *Paulus. Eine kultur- und religions-geschichtl. Skizze*, Tübingen, 1911; but nothing is more certain than that St. Paul in Ro 3²¹⁻²⁶ was exerting his whole intellectual force, consciously and deliberately, and with a daring which drew back at nothing, in an effort to comprehend and explain the way of salvation for sinners abridged as δικαιοσύνη θεοῦ. This δικαιοσύνη θεοῦ and the λασθήριον are correlative terms. There would be no δικαιοσύνη θεοῦ for sinners but for the λασθήριον. The λασθήριον has two characters. It deals with sin for its removal; that is its gracious side—the side which answers to God's will to forgive and save sinners. But it deals with sin as it is—as that terrible thing which, in St. Paul's conviction and in God's judgment, is one with death. When Christ died for sin—when God set Him forth, in His blood, a propitiatory power or sacrifice—then, and not till then (ἐν τῷ νῦν καιρῷ, Ro 3²⁶), was the δικαιοσύνη θεοῦ revealed to men. The way of salvation, as a way in which God gets sinful men right with Himself, and at the same time deals with sin as nothing less than the awful reality it is, now lies open for the world. From God's side the δικαιοσύνη θεοῦ covers the double truth that God is δίκαιος (i.e. not indifferent to the sinfulness of sin) and δίκαιων τὸν ἐκ πλεονεξίας Ἰησοῦ (i.e. a gracious sin-forgiving God).²

We may put this otherwise by saying that what is manifested at the Cross as the ultimate truth in the universe—the divinest thing in the divine—is love bearing sin. To whom does this appeal? It appeals to sinners, not to those who trust in themselves that they are righteous. For what does it

¹ *Commentary on the Epistle to the Romans* [ICC], Edinburgh, 1902, p. 85.

² There is clearly visible here, what has played so large a part in doctrines of atonement, the idea of a harmonization of the divine attributes of justice (holiness) and mercy in the work of Christ. The δικαιοσύνη θεοῦ includes both.

¹ *Religion des Judentums im NT Zeitalter*, Berlin, 1906, p. 436 f.

appeal? It appeals for faith. When a sinner is confronted with the divine love in Christ bearing in death the sin of the world, what is he invited to do? What is the right thing for him to do? The only right thing for him to do is to trust that love unreservedly, to cast himself upon it, to abandon himself to it, to stake and invest his whole being in it as the final reality in the universe. He is not to open negotiations with God, and see whether something less wonderful might not meet the requirements on both sides. He is not to make himself worthy of such love before he trusts it. He is not to offer guarantees that, unworthy as he is, he will prove worthy in the long run. He has simply, immediately, unconditionally to trust it: that is the one right thing for him to do. When he does so, then, in spite of all his sins, it brings him right with God. What he is, as a believer in Jesus, annuls what he was, as a sinner under God's condemnation. His faith in Christ the propitiation is reckoned to him for righteousness; and, in so reckoning it, God's judgment of the believing sinner is according to truth. There is no legal fiction when God justifies any more than when He condemns; for, when the propitiation has evoked faith, the sinner is another man. God justifies the ungodly when in the propitiation He puts forth a power, or makes an appeal to the ungodly, which makes his true description henceforth 'him that believeth in Jesus.' And we must not minimize faith by arbitrary definition. Faith in St. Paul's writings is what faith was in his life—not a mere assent, not the attitude of a moment, but something in virtue of which his whole being was permanently absorbed in Christ who died. It includes entering into the mind of Christ with relation to sin, accepting the divine sentence on sin as it is brought home to the conscience in this way; and it is in this character that it is the basis of God's verdict. As believers in Jesus we are *δίκαιοι παρά τῷ θεῷ* (Ro 2¹³), or *δικαιοσύνη θεοῦ ἐν αὐτῷ* (2 Co 5²¹).

5. The Pauline gospel.—The inference from this is that the true explanation of the genitive in *δικαιοσύνη θεοῦ* is that which regards it as the genitive of the author or origin. God provides the *δικαιοσύνη* which deals righteously with sin for its removal, and so appeals to men that they are brought into the right relation to Himself. This is the key to the passages in which the *δικαιοσύνη θεοῦ*—the righteousness revealed in the gospel—is contrasted with any righteousness of our own, which we might have achieved out of our own resources. Twice St. Paul formally emphasizes this contrast. In Ro 9¹⁰–10¹⁰ he speaks of the Jews as wanting to establish 'their own' righteousness—to come to God, so to speak, invested in a goodness which they had achieved by statutory obedience (*δικαιοσύνην τὴν ἐκ νόμου*, Ro 10⁵), and which rather made God their debtor than rested on a fundamental debt to God; and he formally opposes to this the *δικαιοσύνη θεοῦ* of his gospel. So also with special reference to his own case in Ph 3²⁻¹¹. Once he, like his countrymen in general, had sought to establish a righteousness of his own, and by human standards had been strikingly successful (*κατὰ δικαιοσύνην τὴν ἐν νόμῳ γενόμενος ἀμεμπτος*). But there is always a profound delusion in the idea that we can be good without God. For a sinful man to think so is indeed the sin of sins as well as the most fatal of errors. But St. Paul had been delivered from this sin and error, and as a believing Christian his one desire was to win Christ and be found in Him, renouncing every other hope—'not having a righteousness of my own,' viz. that which comes of the Law (*τὴν ἐκ νόμου*), but having that which is through faith in Christ, the righteousness which comes from God (*τὴν ἐκ θεοῦ δικαιοσύνην*) on the basis of faith. Righteousness is a

gift, not an achievement; not as though it were a material thing, which could be handed over or put to our credit apart from our consent, but because it is the love of God which has made Christ the propitiation part of our world, and through Him has made the appeal to sinners in yielding to which they enter into the right relation to God. Apart from the faith which yields to this appeal, sinners have no righteousness, they stand condemned at God's bar; but on the basis of it they are accepted by God as *δίκαιοι*; the *δικαιοσύνη θεοῦ* has taken effect for them.

It cannot be said too strongly that this is the whole of St. Paul's gospel. With Christ the propitiation on one side, and faith in Christ on the other, we have a situation which cannot and need not be supplemented. All the interests of righteousness, in whatever sense the term may be taken, are covered by the *δικαιοσύνη θεοῦ*, which becomes ours through faith in Christ. Faith in the Pauline sense makes the tree good; and, when the tree is good, there need be no anxiety about its fruits. Protestant theology has undoubtedly erred in making so much of the distinction between justification and sanctification. The connexion is even more important than the distinction. In reality, all that Protestants mean by both terms is included in the Pauline *δικαιοσύνη θεοῦ*. The sinner who has faith in Christ the propitiation not only comes into the right relation to God (and is 'justified' accordingly), but in the very same act and instant he gets the one adequate inspiration for a holy life—the love of God is shed abroad in his heart through the Holy Spirit given to him. Experimentally or psychologically, indeed, there is no difference between these two things. To have an overpowering assurance of the love of God as it is revealed in Christ the propitiation and to be filled with the Holy Spirit are the same thing; and in that one thing lie the promise and potency of all forms of Christian goodness. Such goodness is never imposed; it is always inspired. It is never a matter of statutory obedience, but always of spontaneous inner impulse. It is a mistake, in speaking of it, to contrast faith and the Spirit, as if men were 'justified' by faith and 'sanctified' by the Spirit, according to a common construction of Ro 3-5 and 6-8. In St. Paul faith and the Spirit are never contrasted; they imply each other. They are, indeed, the same thing contemplated in its human and its divine relations. Every Christian experience is at one and the same time an experience of faith and an experience in the Spirit. Faith itself is the gift of God; yet we can always say of it 'I believe.' It is this experience that has the power and virtue of all Christianity—or, if we choose to say so, of all righteousness—in it. The only contrast in St. Paul is not one between faith which justifies and the Spirit which sanctifies; still less one between faith which justifies and the sacrament of baptism which regenerates; it is the contrast between coming under obligation to God from the very beginning for all that is called righteousness (whether justification or sanctification)—an obligation which is acknowledged from different points of view when we speak of faith or the Spirit—and refusing to come under initial obligation to God, aiming rather, by the method of statutory obedience ('works of law'), at winning a righteousness of our own, for which we may then challenge God's approbation and so lay Him, as it were, under obligation to us. This is what St. Paul fought to the death in his own time as Pharisaism, and in essence it survives. It may survive even as a mode of religion—a moderate moralistic religion, emphasizing the importance of keeping the commandments—yet for sinful men it is a hopeless road. Chalmers spoke of it as 'that

independent natural religion which disowned Christ.¹ For St. Paul to disown the propitiation, to lose its inspiration, to stand boastfully on one's own feet, was (for a sinner) the negation of every possibility of becoming *δικαίος παρὰ τῷ θεῷ*. If righteousness came in this way, Christ died for nothing (Gal 2²¹). Christ Himself—Christ who fulfilled the Law, who kept the commandments of God, and who died at last bearing our sins in His own body on the tree—is the only *νόμος συνάμμενος ἰσχυροῦσθαι* (Gal 3²¹); and it is because men are quickened through faith in Him that the just demand of God's law is fulfilled in them (Ro 8⁴). To say fulfilled *in* them, not *by* them, is to speak from the religious, as contrasted with the ethical, point of view; but the end attained is at once religious and ethical. God's justification is always justification characterized by life (Ro 5¹⁸).

6. Difficulties of interpretation. — 'Righteousness' may be considered as an actual or only as a possible experience of men, as a thing of the present or the future, as realized or contingent, and then certain questions arise in the interpretation of St. Paul which are at least formally difficult. Ordinarily the apostle speaks of the blessings of the gospel as enjoyed in the present. Men believe in Christ the propitiation now, and in doing so they become right with God. Justification—God's acceptance of believers as righteous—is spoken of in the past, and exhortations are based on it. 'Having therefore been justified by faith (*δικαιωθέντες*), let us have peace with God' (Ro 5¹). But sometimes the eschatological conception of salvation imposes itself on the apostle's thoughts; he thinks of Christians as having yet to stand at the judgment-seat of God or Christ, and of their open acknowledgment or acquittal—in other words, their justification—as therefore still in suspense. There is no more characteristic sentence in his writings than Gal 5⁴: *ἡμεῖς γὰρ πνεύματι ἐκ πίστεως ἐλπίζομεν δικαιοσύνης ἀρεκδεχόμεθα*. The emphatic *ἡμεῖς* means we who are Christians, as opposed to the Pharisaic Jews. This is *our* religion, and the only true one. *Πνεῦμα*, 'in the spirit,' and *ἐκ πίστεως*, 'in virtue of faith,' indicate respectively the divine and the human basis of the standing Christian experience, each implying the other. In *ἐλπίζομεν δικαιοσύνης* we see that *δικαιοσύνη*, implying primarily God's verdict of *δικαίος* on the believer, is the care of Christianity; and in *ἐλπίζομεν ἀρεκδεχόμεθα* we see that, in spite of the pricelessness of the experiences of those who live by the Spirit and in faith, there is still a supreme blessing which keeps the soul eagerly expectant. That blessing too is God's final verdict in our favour. Perhaps there is no formal solution of the difficulty that we *are* justified by faith, and that our ultimate justification is in suspense—that we cannot be too sure of the pardoning love of God now, and yet that our final benefit from it is involved in unknown contingencies. It is an aggravation of the difficulty that the very apostle who is so insistent that righteousness is of faith apart from works of law is equally emphatic that men are judged at last according to their works (Ro 2¹³ 14¹², 1 Co 3^{13a}, 2 Co 5¹⁰). It may be said that he himself mitigates the difficulty by such arguments as we find in Ro 5⁹, and that the 'works' by which we are to be judged are not 'works of law'—acts of statutory obedience—but simply the moral fruits of our life. This is true, but does not entirely meet the case. The wider truth seems to be that the judgment at the close of the Christian life on earth, just like the propitiation at the beginning of it, is a way of making it indubitable that this religion is transacted in the world of moral reality from beginning

to end. There is a sense in which religion transcends morality. Christ is the end of the Law; believers are not under law, but under grace; their righteousness is not dictated and demanded, but evoked and inspired. But, if any one thinks on these grounds that in Christianity he comes into a non-moral region, or one in which morality can in any way be discounted, the Cross and the Judgment-Seat are there to correct him. The whole system lies within the moral order, and the Law is not only (formally) annulled; it is (really) established. We have the same problem to face in the teaching of our Lord. In the reception of the Prodigal Son we see an illustration of justification by faith without works of law—a man put right with his father simply by trusting to his father's love, and yielding to its inspiration. In the builders on the rock and the sand we see men judged according to their works, and we know that both parables are true. The difficulty is to realize that grace is inexorable, that 'all's love and all's law'; but this is the supreme lesson of Christ and His apostle. It is involved in everything that St. Paul has to say of the *δικαιοσύνη θεοῦ*, alike as related to the *λαοὶ τοῦ θεοῦ* and to the *βίβια τοῦ Χριστοῦ*.

LITERATURE.—All the books on Pauline theology, especially H. J. Holtzmann, *Lehrbuch der NT Theologie*², Tübingen, 1911, vol. ii. chs. vi. and vii.; H. Cremer, *Die paulinische Rechtfertigungslehre im Zusammenhang ihrer geschichtlichen Voraussetzungen*³, Gütersloh, 1900 (the 9th ed. of Cremer's *Wörterbuch*, Gotha, 1902, gives a very fair idea of the contents of this volume); A. Ritschl, *Die christliche Lehre von der Rechtfertigung und Verdammung*⁴, Bonn, 1895–1902, ii.; T. Häring, *Δικαιοσύνη θεοῦ bei Paulus*, Tübingen, 1896; A. JAMES DENNEY.

RIGHTEOUSNESS (in Christian theology).

—I. Term and definition. —The conception of righteousness holds a conspicuous place in Christian literature, and, though it varies in content according to the nature of the subject spoken of, the central part of the conception is generally in sight. It frequently stands for virtue generally as implied in 'conformity to the requirements of the divine or moral law.' In English we have the advantage of a separate term for that part of the conception which belongs to the sphere of law, but 'justice' is often practically a synonym for 'righteousness' in the wider sense, as may be seen in various instances in the English Bible.

The distinction between the narrower and the wider sense of the term is discussed by Aristotle.¹ In the former aspect he regards it as the highest of the ethical virtues, being 'virtue towards another,' and therefore the chief virtue of civil life (*justitia civilis*). As the principle which regulates the relationships of men to each other within a community or the State, it is both 'distributive' and 'corrective.' This is the restricted sense which the term usually bears in the language of jurisprudence—*sum cuique tribuere*, 'to give to each his own.' This sense of the word is frequent also

¹ W. Hanna, *Memoirs of the Life and Writings of Thomas Chalmers, D.D., LL.D.*, 4 vols., Edinburgh, 1850–52, li. 49.

¹ *Ethics*, bk. v.

in theology, especially when the relation of man to God and the moral order of the world is in question.

2. Righteousness in the history of Christian thought.—As to the conception as it appears in the course of Christian thought, it is, perhaps, a surprise to find that the line followed does not begin at the point reached in the Gospels and by St. Paul. The starting-point is rather to be found in the popular morality of the time as it may be seen in Cicero and among the Stoics. Christianity, though continuing to give full proof of its power as a life to renew the world, undoubtedly fell to a lower level when the manifold gifts and activities of the first age had passed away. The lofty consciousness which had been purified and exalted by the new relation to God and the sense of divine sonship which Christianity had established now became obscured, and a general drift towards a legalistic moralism set in. The tendency to regard Christianity as a new law had powerful support in many influences, both Jewish and heathen, but most of all in the common view of religion, which regards the relation to God as determined externally by the observance or non-observance of religious duties—a view which is probably the average level of religious thought generally, in which righteousness falls to be measured by external standards. Thus down to the Reformation the prevailing conceptions that come to light now and then wear the complexion of the Church system, which stood before the conscience as the supreme authority in religion.

Two aspects of the subject have been much discussed which it is important to keep in view (the connexion between them was not apparent for a while, yet it is of the closest kind and has come to the front of late): (1) the place or function of righteousness in God, i.e. as an attribute of the Divine nature, and (2) righteousness as a quality required of man in the scheme of salvation. The course of thought on each of these points has been guided largely by previous assumptions in regard to God and man, partly ethical or philosophical. These will come in sight as we proceed.

(a) *Righteousness in the ethics of the ancient Church.*—The general tendency to regard righteousness from the standpoint of law and moral or religious observance was in the ascendant all over the ancient Church. This drift was inherent in Jewish Christianity from the first; and it grew more and more predominant as the Church system was developed and claimed regulative authority over faith and conduct. The fall from the level of apostolic days is very perceptible in the early literature. Apocryphal and apocalyptic books which were widely read, the growth of the ascetic ideal, and other influences of the time led to an excessive emphasis on traditional ideals. We are safe in assuming that in the mind of the people righteousness was identified with the highest excellence according to current ideals. This had long been the common way of regarding it, and it continued to be so regarded even after philosophy set about defining the idea. The speculation of the schools had led to little positive result. The principle of a twofold morality, which was introduced by Aristotle in his classification of the virtues as intellectual and ethical, and which was taken up by the Stoics in their virtues of the wise man and those of the masses, had hindered the unity of the moral ideal. The complication was further increased when the ascetic ideal rose to dominance. If monasticism furnishes the highest type of Christian excellence, there must be a lower standard open to common people. Thus it became necessary to say either that the monks were the only righteous people or that there were different degrees or grades of righteousness.

While, however, we look in vain for any definite scientific conception in the ancient Church, there is no difficulty in ascertaining how it was commonly viewed. A few examples will suffice. It was natural that the practice of charity, so conspicuous among the Christian communities, and so great a power in winning the heathen, should be regarded as a means to, if not as righteousness itself. Chrysostom glorifies the sin-forgiving power of alms, and praises the giving of alms as an effectual intercession against a multitude of sins. This view is as old as Daniel (4²⁷). It is a commonplace in most of the early literature, Jewish and Christian. It appears as a variant on Mt 6¹, where some editors accept *δικαιοσύνην* for *ἐλεημοσύνην*.

It is in Lactantius, who has been called the Christian Cicero, that we find the fullest expression of the common view. Bk. v. of the *Divine Institutes* is devoted to 'justice':

'Although justice embraces all the virtues together, yet there are two, the chief of all, which cannot be torn asunder and separated from it—piety and equity. . . . But piety and equity are, as it were, its veins; for in these two fountains the whole of justice is contained; but its source and origin is in the first, all its force and method in the second.' 'To injure no one, to oppress no one, not to close his door against a stranger, nor his ear against a suppliant, but to be bountiful, beneficent, and liberal.' 'This truly is justice, and this is the golden age, which was first corrupted when Jupiter reigned.'¹

The influence of Cicero and the ancient way of thinking is apparent in Ambrose, who adopts the four cardinal virtues of the ancients, and maintains that the Christian fulfils the ideal of the just and wise man. He has also adopted the Stoic distinction between 'perfect' and 'middle or common duties,' identifying the former with the content of the monastic vow. In Aquinas the varying elements of the moral ideal which floated before the ancient Church are reduced to apparent system, but without internal coherence. To the moral and intellectual virtues of Aristotle he adds the three theological virtues of faith, hope, and love. Adopting the four cardinal virtues, he assigns to justice the duties of religion and neighbourly love. We have thus an ascending scale of three degrees, in which the highest is to be reached only by way of 'poverty, chastity, and obedience.'

(b) *Righteousness in doctrinal controversy.*—Turning now to the discussions which figure in the history of dogma, we strike on a path which leads towards more definite results as to the nature and place of righteousness in God and in the salvation of men. That righteousness is somehow manifest in the death of Christ and that this righteousness is a main factor in the Christian salvation has always been felt and acknowledged in Christian faith; and it is chiefly in the course of thought upon the doctrine of atonement and reconciliation that the principal aspects of righteousness in the Christian sense have slowly come to view. In the beginnings of speculative thought in this field it was perceived that there was an apparent antagonism between the love and the righteousness of God involved in the death of the Redeemer. The antagonism might be explained in Gnostic fashion by supposing that the God of justice was not the Father of Jesus Christ, or by assuming, as the Fathers of that time did, that the death of Christ was the ransom paid to the Devil in view of his supposed rights over men. In this standpoint there is latent the idea of an objective righteousness or justice whose claims were somehow met and satisfied by the Christian redemption. The next step was to define the sphere and the nature of this justice, but definite ground was not reached till Anselm. The argument in *Cur Deus Homo* is to the effect that righteousness is an immanent and necessary attribute in the being of God to which satisfaction has been made in the sufferings and

¹ Works, tr. W. Fletcher, Edinburg, 1886, i. 325, 306.

death of the Son of God, who for this purpose became incarnate. The position is thus reached that all divine action must be subject to the law of righteousness, which is the supreme ethical principle in the Godhead. This step has the greatest significance in the progress of theology, but it did not receive adequate recognition till the Reformation. In the confusion characteristic of the older ethics the true ethical ideal both for God and for man had not come fully to light, but, once it was seen that power, will, and love in God are subject to an eternal law of justice which guards the order of the universe, a principle was found, fruitful in the best results, which casts a significant light upon the righteousness required of man. So long as the theory of a double morality held the field, moral obligation rested on external authority, on the will of superiors, and as a consequence the moral ideal lacked unity and coherence. This is seen in the Roman Catholic view of an 'original righteousness' given to primitive man and in the doctrine of an 'infused righteousness' assumed as the ground of justification. Both points were long the subject of keen debate, and they came ultimately to mark the dividing-line between Roman Catholics and Protestants. The chief point in the controversy for us here lies in this, that the conception of righteousness is reduced to what is after all its essential elements, as *that by which man is accepted and justified before God*—the central problem of St. Paul's theology. This is the main conception which figures in all subsequent theology. The Catholics affirmed that man is justified in virtue of a righteous disposition produced in his heart through prevenient grace, the Protestants maintaining that justification is grounded solely in the righteousness of Christ imputed to faith, and is not procured by merit in man. We thus arrive at the point where the NT leaves the problem and discover that the righteousness required of man is after all the righteousness of God.

(c) *Righteousness in Reformation creeds.*—In general outline the Reformation doctrine has held the field in all Protestant churches down to the present. The modifications which have come in, in the course of thought, belong mostly to the harsher forms in which it has sometimes been maintained. Opinion has varied considerably about 'imputation,' about the legal and forensic aspects implied in the satisfaction theory. Modern and especially recent theology shows a notable advance upon the systems of the 17th and 18th centuries. Theory has come to follow more closely the lines of a living faith and experience. It is seen that Christianity secures not merely forgiveness and reconciliation, but righteous character and life.

3. *Modern developments.*—(a) *The Grotian view.*—The Grotian and Arminian view has significance as a protest against the harsher aspects of the Reformation theory to which we have referred. But the principle that law in God may be relaxed or set aside as His wisdom may determine, and that the Atonement is not a satisfaction to justice but a relaxing of penalty, fails to explain the necessity implied in the death of Christ. Grotius maintains that, 'so far as God is concerned, He might have forgiven men without atonement, but it would have been unsafe to do so in the interest of creation'—a view advocated in some modern theories of atonement.

(b) *The Socinian.*—The Socinian theory denies altogether that justice is a necessary attribute of God, and maintains that forgiveness is open to all on repentance and obedience.

(c) *Schleiermacher.*—Schleiermacher's view is suggestive as opening lines which recent thinking has followed. With him justice belongs exclu-

sively to the 'connexion between sin and evil.' It is known to us through the consciousness of sin, and covers the whole sphere of human experience, and thus far it is involved in the order of man's world, but, in proportion as sin is overcome, the function of justice is diminished or displaced through the redemptive agencies which radiate from Christ.

(d) *Ritschl.*—With Ritschl retributive and punitive justice has no place in the moral and religious sphere. The righteousness of God is 'simply the consistency with which His love provides for the good of men.' This view subordinates justice to love to such an extent that the former cannot have a separate function in the moral order of the world. Yet, if it is maintained that the love of God in creation and redemption always reaches wise, holy, and righteous ends, righteousness must be implied in all manifestations of love. Thus all the data of the problem, when fully considered, favour the contention that justice is an immutable quality in God and the world. See, further, art. RITSCHLIANISM.

LITERATURE.—Aristotle, *Ethics*, bk. v.; Cicero, *de Officiis*; Lactantius, *Divine Institutes*, bk. v.; Ambrose, *de Officiis Ministrorum*; Anselm, *Cur Deus Homo*; C. E. Luthardt, *Hist. of Christian Ethics before the Reformation*, Eng. tr., Edinburgh, 1889; A. Wuttke, *Christian Ethics*, 2 vols., do. 1873; I. A. Dorner, *A System of Christian Ethics*, Eng. tr., do. 1887, esp. sect. 7, pp. 69-91; H. Martensen, *Christian Ethics*, Eng. tr., do. 1881-85, i. 21-77; J. Martineau, *Types of Ethical Theory*, Oxford, 1886; *Histories of Dogma by K. R. Hagenbach* (Eng. tr., 3 vols., Edinburgh, 1880-81), W. G. T. Shedd (2 vols., Edinburgh and New York, 1889-91), and A. Harnack (Eng. tr., 7 vols., London, 1894-99); F. C. Baur, *Die Lehre von der Versöhnung*, Tübingen, 1888; A. Ritschl, *Die christl. Lehre von der Rechtfertigung und Versöhnung*, 3 vols., Bonn, 1895-1903; F. D. E. Schleiermacher, *Der christliche Glaube*, Berlin, 1884, ii. sect. 34; Dorner, *A System of Christian Doctrine*, Eng. tr., Edinburgh, 1880-82, i. 286, iv. 1-25.

For the juristic conception of righteousness specially useful are: K. Hildenbrand, *Gesch. und System der Rechts- und Staatsphilosophie*, Leipzig, 1860; A. Trendelenburg, *Naturrecht*, do. 1868; J. Lorimer, *Institutes of Law*, Edinburgh, 1880; H. Spencer, *Justice*, London, 1891.

In recent theology may be noted books on atonement where aspects of righteousness are given, especially those of R. W. Dale, *The Atonement*, London, 1878, J. McLeod Campbell, *Nature of the Atonement*, do. 1878, and R. C. Moberly, *Atonement and Personality*, do. 1907; also T. Erskine, *Letters*, 2 vols., ed. W. Hanna, Edinburgh, 1877, and W. Sanday and A. C. Headlam, *The Epistle to the Romans* (ICC), do. 1902, where the 'exegetical tradition' on St. Paul's doctrine is discussed.

A. F. SIMPSON.

RIGHTEOUSNESS (Egyptian).—1. *Introductory.*—For the three conceptions which we express in three distinct words—righteousness, truth, justice—the Egyptians had only one word, *mēt* (Copt. ME : MH). *Mēt* is apparently derived from a verb *m*, 'be straight,' 'be even.'¹

E.g., *mw mēt m' ty hr sp'k*, 'the balance is even in thy case';² *m' en*, 'straight as to the hair';³ *mh' mti m' t nt Dhwty*, 'the accurate and even balance of Thoth'.⁴

2. *The practice of righteousness, truth, and justice.*—The Egyptian was never tired of asserting that he practised these virtues.

(1) *Righteousness.*—The frequent claims to righteousness made by Egyptians of all classes and periods are well illustrated by the following quotations:

'I came forth from my city, I came down into my nome and I spake the truth therein, I did righteousness therein.'⁵ 'I am one who loves good and who hates evil. . . . There is no iniquity that has issued from my mouth, there is no evil that my hands have wrought.'⁶ 'I was a righteous man upon

earth.¹ 'Never did I any evil thing unto any people.'² 'I am a noble pleased with righteousness, conforming to the laws of the Hall of the Two Rights.'³

(2) *Truth*.⁴—Truthfulness seems to have been highly esteemed, and was particularly looked for in the great and powerful. 'Speak not falsehood, thou art great,' says the Eloquent Peasant to the high steward Renzi;⁵ indeed such an one must 'destroy lies and create truth [or 'right']'.⁶ An Old Kingdom noble asserts that he was straightforward in the royal presence and free from falsehood.⁷ Says another: 'I spake the truth which the god loves every day.'⁸ The sage Ptahhotp recommends one to act in accordance with right, free from falsehood.⁹ A well-known XVIIIth dynasty official claims to have been free from iniquity, accurate of mind, with no lie in him.¹⁰ 'Speak the truth (*mēet*), do right (*mēet*), for it is great, it is mighty, it is enduring,' was an utterance ascribed to the sun-god Rē himself.¹¹ 'I have not spoken lies knowingly,' says the deceased to Osiris.¹² 'I have not spoken lies' is one of the statements in the 'Assertion of Sinlessness'.¹³

(3) *Justice*.¹⁴—The viziers, nomarchs, and high officials who governed and administered the laws were expected to exhibit a high standard of justice. We are informed that 'men expect the exercise of justice in the procedure of the vizier'.¹⁵ The vizier must not be wroth with a man wrongfully; he should be wroth only with what one ought to be wroth with.¹⁶ He must deal with petitioners in accordance with the law and equity and help them to their rights.¹⁷ The petitioner must not be able to say when the verdict is pronounced: 'My right has not been given me.'¹⁸ Again, the vizier must not be a respecter of persons or show partiality,¹⁹ for that is what the god abhors.²⁰ He must not, however, go to the other extreme and act like the vizier Akhthoi, who discriminated against some of his own kin in favour of strangers, in fear lest it should be wrongly said of him that he favoured his kin dishonestly; 'that,' we are informed, 'is more than justice'.²¹ The ideal judge must be 'a father of the lowly (*nṃh*)',²² a husband of the widow, a brother of the forsaken, the garment of the motherless . . . one who comes forth at the voice of him who calls.²³ If such an one veil his face against the violent, who shall repress crime?²⁴ A judge must be as unerring and impartial as the balance.²⁵

Accordingly, the Eloquent Peasant, addressing the seemingly unjust Renzi, ironically asks:

'It is not wrong, I suppose, a balance that is awry, a tongue of a balance that is faulty, a righteous man that has swerved (from the right path)?'¹

An official describes himself as:

'A man of truth (or righteousness) before the Two Lands, equitable and righteous like Thoth . . . more accurate than the plummet, the likeness of the balance.'²

A frequent boast of the high official of the Old Kingdom is:

'Never did I judge two brothers in such a way that a man was deprived of his father's property.'³

An Old Kingdom noble asserts that he 'saved the weak from the hand of him that was stronger than he,' and that he 'held forth justice to the just.'⁴ Sirenpowet, a nomarch of Elephantine in the Vith dynasty, says:

'I did not deal roughly with him who made petitions. . . . I did not deprive a commoner (*nḡs*) of his property.'⁵

Another feudal lord asserts not only that he had not deprived any one of his possessions, but that he had never flogged anybody.⁶ An official who administered justice in the reign of Wap-onkh Intef thus describes his conduct:

'I did not pursue after mischief for which men are hated. I was one who loved good and hated evil, a character who is loved in the house of his lord. . . . Now as for any commission which he (the king) bade me attend to, viz. giving a petitioner his right, attending to the claim of one who has been wronged, I always did it in reality. . . . I was not passionate against violent persons. I did not take a thing (i.e. a bribe) wrongfully in order to conduct a transaction.'⁷

The famous XVIIIth dynasty vizier Rekhmiré claims that he judged the petitioner impartially and did not turn his face (lit. temples) to rewards. He also maintains that he rescued the fearful from the froward.⁸ Intef, another notable of the same period, describes himself as follows:

'Turning his face towards him who speaks truth; disregarding him who speaks lies; . . . not discriminating between him whom he knew and him whom he knew not; going about after righteousness; indulgent in hearing petitions; judging two men so that they are satisfied; . . . free from partiality; acquitting the righteous; driving away the plunderer from him whom he plunders; the servant of the oppressed.'⁹

Menthwoser would have us believe that he was one who 'did not show partiality to the possessor of rewards.'¹⁰ King Akhthoi, in his 'instruction' to his son Merikeré, gives the future king excellent advice on how to govern successfully, pointing out to him, among other things, that the under-payment or poverty of responsible officials is a fruitful source of corruption.

'He who is wealthy in his house does not deal partially, he is a possessor of property, one who does not lack.' On the other hand, 'the poor man does not speak in accordance with his (sense of) right. He who says "Would that I had!" is not fair; he is partial to the possessor of rewards.'¹¹

Judicial corruption was, of course, rampant in ancient Egypt; the constant claims to incorruptibility made by the administrative officials who acted as judges (see § 12) point only too clearly to that.

A writer of the New Kingdom speaks of the helplessness of him 'who stands alone in the court of justice, who is poor while his oppressor is rich. The court oppresses him saying: Silver and gold for the scribes! Clothing for the servants!'¹²

3. The Egyptian conception of the righteous man.—A summary of the Egyptian conception of righteousness is to be found in ch. cxxv. of the

Book of the Dead, both in the 'Introduction' and in that part of it which is sometimes called the 'Assertion of Sinlessness,' but more often, and wrongly, the 'Negative Confession.'¹ Among the sins there denied are murder, incitement to murder, robbery, theft, oppression, impiety, lying, slander, dishonesty, avarice, hasty temper, pride, loquacity, eavesdropping, impurity (adultery and masturbation), and a number of ceremonial transgressions.² A more detailed picture of a righteous man according to Egyptian standards can be obtained from the laudatory accounts of the dead inscribed upon their tombstones and upon the walls of their tomb-chapels, and also from the statements scattered about the literary compositions of the Middle and New Kingdoms. The good qualities most usually claimed by or assigned to the dead, or commended by the sages and men of letters, apart from those already fully discussed, are: (1) generosity and beneficence, (2) avoidance of slander, (3) honesty and fair dealing, (4) faithfulness to superiors, (5) hospitality, (6) piety towards the dead, (7) sexual morality, (8) regard for old age, (9) regard for parents, wife, and near relatives, (10) good temper, (11) avoidance of rancour, (12) gratitude, (13) humility and avoidance of pride, (14) discretion and avoidance of loquacity, (15) avoidance of crimes of violence.

(1) *Generosity and beneficence.*³—These qualities were admired in ancient no less than in modern Egypt. Assertions like the following formula frequently occur in inscriptions of the feudal and subsequent period: 'I gave bread to the hungry, clothing to the naked, I ferried him whom I found without a boat.'⁴ Sometimes in addition the deceased claims to have 'given sandals to him who was without them';⁵ to have buried the aged;⁶ to have given cattle to him who was without a yoke of oxen, and corn to him who asked for it.⁷ A high official of the Middle Kingdom tells us that he gave corn to the whole land and so rescued his city from hunger. 'No other,' says he, 'has done what I did.'⁸

The nomarchs of the feudal age constantly boast of their beneficence. One of them thus describes his rule:

'I gave bread to every hungry person of the Oerastes-Mountain nome (his domain). I clothed him who was naked therein. Moreover, I filled its shores with large cattle, and its water meadows (?) with small cattle. I never deprived a man of his property so that he complained of it to the god of his city. . . . Never did a man fear because of one stronger than he, so that he complained about it to the god.'⁹

Another nomarch, after making similar claims to beneficence, asserts that he gave to the widow as to her who possessed a husband, and that he did not favour the great above the little in all that he gave.¹⁰ A great official in the reign of Thutmose III. depicts himself as:

'Father of the lowly; judge of the orphan; protector of the weak; avenger of him who has been deprived of his possessions by one who is stronger than he; husband of the widow; shelter of the orphan; place of repose for the weeper; . . . praised because of his character; one whom respectable persons thank because of the greatness of his merit; one for whom health and life are besought by all people.'¹¹

(2) *Avoidance of slander.*—Harkhuf, nomarch of Elephantine, says of himself:

'Never spake I anything evil unto a powerful person against

any people, for I desired that it might be well with me in the presence of the great god.'¹²

'It was good that I was accustomed to speak to the king about people,' says a Vth dynasty notable. 'I never said anything evil against any people to the majesty of my lord.'¹³ 'I spake not lies against another,' Pahari assures us, 'for I knew the god who is in men.'¹⁴

(3) *Honesty and fair dealing.*¹⁵—'I was afraid for the surplus,' says Pahari, 'I did not turn a deaf ear [lit. 'face'] because of bribes. I did not receive bakshish from outgoings.'¹⁶ Ameni of Beni Hasan informs us that he carried all the dues for the loan-herds to the king's house, and that there were no arrears against him in any of the royal offices.¹⁷ On the tombstone of a man of the Middle Kingdom period who describes himself as a 'commoner' (*nds*) we read:

'I took not the daughter of a man, I took not his field. . . . I served my great lord and I served any plebeian (*nds*) lord, and nothing was lost therein.'¹⁸

See also the statement in the Assertion of Sinlessness:

'I have not added to or subtracted from the corn-measure, I have not subtracted from the palm. I have not falsified the cubit of the fields. I have not added to the weights of the hand-balance. I have not tampered with the plummet of the balance.'¹⁹

Honesty in the construction of a tomb was a virtue often claimed by the Old Kingdom magnates.

'I made this tomb from my rightful possessions. I did not take the property of any man for it.'²⁰

The owner of a tomb-chapel sometimes asserts that the craftsmen who constructed it were adequately remunerated.²¹ The following statement occurs on the base of a statue found at Gizeh:

'I caused these statues to be made for me by the sculptor, and he was satisfied with the payment which I assigned him.'²²

(4) *Faithfulness, obedience, and deference to superiors.*²³—'I was a hound that slept in the kennel,'²⁴ says a faithful servant, 'a dog of the couch whom his mistress loved.'²⁵

(5) *Hospitality.*²⁶—A deceased person sometimes describes himself as 'one who said "Welcome" to every comer.'²⁷

(6) *Piety towards the dead.*²⁸—Apart from making offerings to the departed or, in lieu thereof, repeating certain formulae,²⁹ piety towards the dead consisted in respecting the funerary property and endowments of preceding generations,³⁰ in not defacing the inscriptions, etc., in a tomb-chapel or injuring it in any way,³¹ in not defiling a tomb-chapel by entering it in a state of ceremonial impurity.³²

(7) *Sexual morality.*³³—Pre-nuptial morality was apparently very lightly regarded, though the

moralists warn the young against prostitutes. A Vth dynasty nomarch of Cusæ maintains that he 'never passed a night of shame.'¹ Another Old Kingdom notable asserts that he never, since he was born, caused any man to pass a night of shame, i.e. never committed sodomy.² A person named Akhthoi, who lived during the Middle Kingdom, 'did not lust after the wife of a man nor covet her whom the poor man loved.' 'Verily,' he adds, 'a man of good birth who does this—his father deserts him in the law-court.'³

(8) For the remaining qualities see art. ETHICS AND MORALITY (Egyptian), § 13.

4. The Pharaoh as the upholder of righteousness, truth, and justice.—The righteousness, truth, and justice that characterized the sun-god (see below, § 6) also formed part of those qualities which were supposed to be innate in the Pharaoh, as that god's son and representative on earth.

It is significant in this connexion that the Horus-name of Uperkhat, founder of the Vth dynasty, is 'Doer-of-righteousness' (*Ir-m'et*), for it was the kings of this dynasty who raised the sun-god to the position of State-god, and, moreover, the doctrine was then first promulgated, and henceforth accepted for all time, that every Pharaoh was the sun-god's physical offspring.

(1) The Pharaoh was said to 'live on righteousness (or truth)' like the sun-god.⁴ 'Onk-em mē et, 'living on righteousness (truth, justice),' it will be remembered, formed one of the characteristic attributes of the Aton-worshipping Ikhnaton.⁵ The courtiers of Ramesses II. assure him that, like the sun-god, he is endowed with authoritative utterance and knowledge and that the seat of his tongue is the 'shrine of right' (*mē et*).⁶

(2) The Pharaoh was expected to display these qualities in his actions. Accordingly, the sage Ipuwer, when rebuking his sovereign for his weakness and misrule, points out to him that it is true that he possesses the solar qualities of 'authoritative utterance, understanding, and righteousness,' but (and here comes the reproach) it is confusion that he puts throughout the land together with clamour and strife.⁷ A Pharaoh thus admonishes his son and successor:

'Speak thou Truth in thy house, that the officials who are upon earth may fear thee. Uprightness of heart becometh the Sovereign.'⁸

The prophetic papyrus at Petrograd predicts that with the advent of a strong ruler, who is to triumph over disorder and to restore Egypt to her former prosperity, 'right shall come to its place and Iniquity be cast (?) forth.'⁹ King Akhthoi thus instructs the prospective king, his son Merikerē:

'Do right (or justice) that thou mayest live long upon the earth. Soothe the weeper. Oppress not the widow. . . . Take heed lest thou punish wrongfully.'¹⁰

The same Akhthoi tells his son not to distinguish between the son of a noble and a man of low birth, but to choose a man because of his capacity.¹¹ It was, indeed, accepted as a truism in the XVIIIth dynasty that 'the sovereign should love the fearful rather than the arrogant.'¹² To secure the heir his inheritance especially became the Pharaoh,¹³ and Akhthoi exhorts his son not to drive out a man from the possession of his father.¹⁴ In accordance

with his solar qualities Amenemhêt I. is described as 'gloriously appearing like the sun-god' to deal out justice to his quarrelsome feudal lords and to settle their conflicting claims to one another's territories.¹

5. Development of the belief in a posthumous judgment.—According to the earliest religious writings that we possess, the so-called Pyramid Texts, the chief qualification for admittance to the realm of the sun-god was physical purity.² Magic also played a great part in furthering the welfare of the dead, the Pyramid Texts themselves being for the most part a collection of powerful spells which enabled him for whom or by whom they were recited to enter the celestial kingdom. But even in these very ancient texts more than mere physical cleanliness or magical power is sometimes demanded; the deceased must also be righteous. Thus we find that the ceremonial washing of the dead king by the four gods who preside over the Pool of Kenset, or by the Worshippers of Horus, has also an ethical significance. During or following the ablutions a spell asserting the righteousness of the deceased is recited.³ The ghostly ferryman who conveys the dead over to the Field of Earu is thus addressed:

'O thou who ferriest over the righteous who hath no boat, ferryman of the Field of Earu, this N. is righteous before the sky, before the earth, this N. is righteous before this island of the land whither he hath swum and whither he hath arrived.'⁴ The claim of the deceased to be righteous had of course to be tested, and in the imagination of the Egyptians, with their innate love of litigation, the test naturally took the form of a legal process. There are already in the Pyramid Texts allusions to the posthumous trial;⁵ but many of the inscriptions on tomb-stones and tomb-chapel walls of officials and private persons from the Vth dynasty onwards are explicit on this subject. On the one hand, the deceased threatens with judgment at the hands of 'the great god, the lord of judgment, in the place where judgment is had,'⁶ those who injure his tomb-chapel,⁷ enter it in a state of ceremonial impurity,⁸ injure its inscriptions,⁹ or violate its endowments.¹⁰ On the other hand, the deceased himself claims to have been virtuous, 'because I desired that it might be well with me in the presence of the great god,'¹¹ or 'in order that I might offer righteousness to the great god, the lord of heaven.'¹²

For the rewards of the righteous after death and the punishment of the unrighteous see below, § 9 (1) (ii.)-(v.).

6. The sun-god and righteousness.—(1) *The sun-god as the creator and champion of righteousness.*—Breasted has clearly shown that 'the great god' of the above-quoted texts, the divinity who first came to be regarded as the champion of righteousness and the judge of the dead, was not Osiris, but the Heliopolitan sun-god Rē-Atum;¹³ indeed the sun-god is said to be he 'who fashioned (ms) righteousness.'¹⁴ Accordingly we read in a Middle Kingdom Coffin Text:

'I am Rē' who came forth from Nun. . . . My detestation is wickedness, I behold it not. I am he who made righteousness.'¹⁵

(2) *The sun-god lives on righteousness.*—The sun-god not merely created righteousness, but is said to 'live' (i.e. feed) on it, just as the Nile-god, Hapi, is said to live on fish.¹ In a hymn to the sun-god we find:

'I have come unto thee, lord of gods, Atum-Rē-Harakhte, that I may present unto thee righteousness, for I know that thou livest thereon.'²

It was the business of certain gods to present, or lift up, righteousness to the sun-god (i.e. keep him supplied with his mystic sustenance?).

Thus the deceased is said to 'ascend to heaven with the gods who offer righteousness to Rē'.³ We also hear of 'these four apes who sit in the forepart of the boat of Rē', who lift up righteousness unto the Lord of All'.⁴ The goddess Sakhmet-Usabet is said to 'stand in the prow of the boat of the Father (the sun-god), overthrowing his enemies and placing righteousness in the forepart of his boat'.⁵

(3) *The sun-god loves righteousness.*—The sun-god, we are told, loves righteousness and truth,⁶ and what he abominates is wickedness.⁷ 'More acceptable' in his eyes 'is the nature of one just of heart than the ox of him that doeth iniquity'.⁸

(4) *The sun-god and the balance.*—The Middle Kingdom Coffin Texts and the *Book of the Dead* depict the sun-god, in his capacity of judge of the dead, as weighing righteousness in a balance, i.e. testing the righteousness of the dead.⁹ In the Osirianized version of the posthumous judgment the balance occupies a very prominent place.¹⁰

(5) *'The place in which judgment is had.'*—The texts of the early feudal age which speak of 'the place in which judgment [by the sun-god] is had' do not inform us where that place is, and the Pyramid Texts are equally unenlightening. According to a Middle Kingdom Coffin Text,¹¹ the posthumous trial took place in the cabin of the sun-god's celestial ship.

Perhaps it was owing to this idea that the two ships of the sun-god are named the Two Rights in the Pyramid Texts.¹² Cf. also the statement: 'The tongue of this Piopi is as that of the Righteous One who belongs to the (boat called) Right'.¹³

(6) *The sun-god as the ideally righteous king.*—The sun-god, according to the myths, was the first king of Egypt. Owing to his close association with righteousness and with the kingship, he came to be regarded as the prototype of the Egyptian sovereigns, the pattern for all would-be just and righteous Pharaohs.¹⁴

Thus Amenemhāt I. is described as coming 'that he might abolish iniquity, gloriously appearing as the sun-god (Atum) himself'.¹⁵

In a literary composition of the feudal period a sage is represented as contrasting the disastrous reign of a weak Pharaoh with that golden age when the sun-god, the ideal king, ruled over Egypt. He describes the sun-god as the 'shepherd [lit. 'herdsman'] of all men, with no evil in his heart.' 'Where is he to-day?' he asks. 'Does he sleep perchance? Behold his might is not seen.'¹⁶ Judging from these words, the sage is looking forward either to a return of the sun-god to reign once more on earth or to the advent of a king whose rule will be like that of his divine prototype.¹⁷

7. *Osiris and righteousness.*—(1) *Osiris originally the type of all dead kings.*—In the earliest religious literature Osiris appears most usually¹ in the rôle of a dead king, or rather the dead king *par excellence*,² the ethical nature and judicial functions of the sun-god not being accredited to him till the period after the VIth dynasty, when we find that, owing to the growing popularity of his cult, he has passed from the position of dead king to that of king and judge of the dead.³

(2) *Osiris as king and judge of the dead.*—The Pyramid Texts sometimes depict the dead Pharaoh as administering justice,⁴ and Osiris, as a dead king, would have acted in a similar capacity. His promotion to the kingship of the dead was naturally accompanied by a corresponding advancement of his judicial status, which also would have been further facilitated by the myth that depicts him as the prototype of all who have emerged triumphant from their posthumous trial (see below, § 10).⁵

(3) *The influence of the Osiris myth on Egyptian ethics.*—It cannot be doubted that the Osiris myth, with its account of the god's murder, of the unjust accusation brought against him, and of his final triumph before the judicial council at Heliopolis, inspired the Egyptians with the conviction that righteousness and justice, not unrighteousness and injustice, must ultimately prevail. The myth, therefore, must have played a great part in the development of those highly ethical ideas which find frequent expression, as we have already seen, in the inscriptions and literary compositions of the feudal and subsequent periods.⁶ Thus Ptahhotp could say with confidence:

'Great is righteousness, lasting, and prevailing; it has not been disturbed since the time of Osiris.'⁷

(4) *Osiris as the god of righteousness.*—Osiris, having assumed the judicial office of the sun-god, acquired likewise his ethical character. He is therefore called 'the great god, the lord of righteousness, who lives thereon';⁸ or the sole god, who lives on righteousness.⁹ 'I present righteousness before thy face,' says the deceased Hunofer, 'for I know that thou livest thereon'.¹⁰ Osiris is described as 'satisfied with righteousness . . . thou whose abomination is lies'.¹¹ A Middle Kingdom official named Akirthoi says: 'I received him who made petition to me. It is what the god (i.e. Osiris) loveth upon earth';¹² and Khentemsemti, a magnate of the same period, informs us that he 'gladdened the god (Osiris) with righteousness'.¹³

Finally Osiris appears like Rē as the creator of righteousness, for a Middle Kingdom Coffin Text represents him as saying:

'I am he who created Hu, my abomination is iniquity. . . . I am Osiris, the god who made righteousness, I live thereon'.¹⁴

8. *The solar quality of righteousness ascribed to divinities other than Rē and Osiris.*—(1) Like earthly judges,¹⁵ the judge of the dead, in the person whether of Rē or of Osiris, had a body of

¹ In *Pyr.* 1520a, b, Osiris is called the 'lord of righteousness' (see also Breasted, *Religion and Thought*, p. 175).

advisers to assist him¹—the *ḥꜥꜥꜥ*, or judicial council over which he presided.² Probably the passage, 'those who weigh with the balance on the day of reckoning,'³ refers to that body. The same ethical qualities and judicial functions were attributed to these assistant councillors as to the presiding judge.

(2) Thōth, the 'scribe of the gods,' and vizier of the sun-god,⁴ who acted as recorder to the solar and Osirian tribunal, describes himself thus:

'Pure of hands, lord of purity, who drives away evil; the scribe of righteousness, whose abomination is iniquity . . . the lord of laws . . . the lord of righteousness; who makes triumphant the weak, who protects the oppressed.'⁵

(3) The four apes in the boat of Rē, in which, according to one account,⁶ the posthumous trial took place, are thus described:

'Who judge between the oppressed and the oppressor, who live on righteousness, who swallow righteousness, who are devoid of lying, whose abomination is iniquity.'⁷

(4) The celestial ferryman 'Turn-face'⁸ loves righteousness and hates iniquity.⁹

(5) The assessors of Osiris in the Broad Hall of the Two Truths are those 'in whose bodies there is no lie, who live on righteousness in Heliopolis.'¹⁰ The same gods are addressed as 'lords of righteousness, free from evil.'¹¹

(6) The crocodile-gods, who wound the sinners that are behind Hetepeskhus, are also entitled 'lords of righteousness.'¹²

(7) The appellation 'righteous ones' is given to the inhabitants of the Osirian kingdom.¹³

(8) The local gods, who for political reasons¹⁴ were identified with the sun-god, naturally acquired his ethical qualities, which in process of time might be ascribed to any divinity.

All this would have created a general feeling that the gods were on the side of righteousness and opposed to evil.

A deceased person, e.g., speaks of his city god as 'a lord of righteousness';¹⁵ accordingly one who was oppressed would appeal to his city god to right his wrong.¹⁶ Ptah of Memphis is commonly entitled 'lord of righteousness.'¹⁷ It is said of him that 'he will not ignore the deed of any man,' and he is represented as righteously chastising sinners, smiting with blindness him who swears falsely.¹⁸ The Theban Amūn, who is said to be 'contented with righteousness,'¹⁹ likewise punishes the sinner.²⁰ 'He assigneth him that sinneth against him to the fire, and the just to the West.'²¹ Of the 'righteous man' it is said that he 'sets Amūn in his heart.'²² 'The Peak of the West,' we read, 'smites with the smiting of a savage lion; she pursues him that transgresses against her.'²³ Sirepowet of Elephantine, it should be noted, states, in an enumeration of his virtuous deeds, that he did 'what all my gods love,'²⁴ and the deceased in the presence of Osiris and his assessors claims to have 'done that wherewith the gods are pleased.'²⁵

9. Incentives to righteousness.—(1) *The posthumous judgment*.¹—Breasted rightly points out how great an incentive to the practice of virtue was the belief in a judgment after death.² 'I desired that it might be well with me in the Great God's presence,' says Harkhuf, a Vth dynasty nomarch of Elephantine, when recounting his righteous acts.³

(i.) The judge of the dead, in the person whether of Rē or of Osiris, loves righteousness and hates evil.

Dhuthotp, when stating that he has not injured anybody, informs us that 'the god loves righteousness.'⁴ Sesheemoter 'spake the truth, which the god loves every day.'⁵ 'I am one who loves good and hates evil. What the god loves is the doing of righteousness,' says Inti of Deshashen.⁶ Says Khentem-senti: 'I have not done evil, I have gladdened the god (Osiris) with righteousness.'⁷ Intef, son of Sont, 'wrought not evil against men; it is what the god hates.'⁸ A certain Akhthoi 'received him who made petition. . . . (For) it is what the god loveth upon earth.'⁹

(ii.) Bliss after death was for those who have done 'what their gods praise,'¹⁰ 'what men command and that wherewith the gods are pleased.'¹¹ When the deceased entered the judgment-hall of Osiris, he must be able to offer righteousness before the face of the god;¹² his heart must be righteous, without iniquity.¹³

'Righteousness,' says the Eloquent Peasant, 'is for eternity; it descends with him who does it into the necropolis, when he is wrapped and laid in the ground. His name is not effaced on earth, he is remembered because of the good. That is the summing-up of the god's word.'¹⁴

(iii.) The following remarkable passage gives us considerable insight into the ideas about future accountability entertained by the religiously disposed during the feudal period:

'As for the Judicial Council that judges oppressors (*stryw*), thou knowest that they are not lenient on that day of judging the wretched one, at the hour of performing (their) functions. Unhappy is he who is arraigned as one conscious (of sin). Fill not thy heart with length of years. They regard a life-time as an hour. A man remains over after death; his sins are laid beside him as wealth. Now eternal is the existence yonder. He is a fool who has made light of it. As for him who has reached it without doing unrighteousness, he shall abide yonder like a god; stepping forward boldly like the lords of Eternity.'¹⁵

No less highly ethical conceptions about rewards and punishments after death are to be found in the so-called *Second Tale of Khamuas*, a composition of the Græco-Roman age:

Setme (Khamuas) saw two funerals—that of a rich man, who, furnished with a magnificent mortuary equipment, was being carried to the necropolis amid the loud lamentations of the (hired?) mourners, and that of a poor man, who was wrapped in a mat and had none to walk after him. Setme then exclaimed: 'By Ptah, the great god, how much better it shall be in Amenti for great men, for whom they make glory with the voice of wailing, than for poor men whom they take to the desert-necropolis without glory of funeral!' However, Setme's son Si-Osiri took his father down into Amenti in order that he might see what really did befall these two men in the hereafter. And Setme saw [there, i.e. in the seventh hall of the Tēi] a great man clothed in raiment of byssus, near to the place in which Osiris was, he being of exceeding high position (?) . . . And Si-Osiri said . . . to him, 'My father Setme, dost thou not see this great man who is clothed in raiment of royal linen, standing near the place in which Osiris is? He is that poor man whom thou sawest being carried out from Memphis, with no man following him, and wrapped in a mat. He was brought to the Tēi and his evil deeds were weighed against his good deeds that he did upon earth, and it was found that his good deeds were more numerous than his evil deeds. . . . And it was commanded before Osiris that the burial outfit of that rich man, whom thou sawest carried forth from Memphis with great

6 *Ib.* p. 71.

lamentation, should be given to this same poor man, and that he should be taken among the noble spirits as a man of God that follows Sokaris Osiris, his place being near to the person of Osiris. (But) that great man whom thou didst see, he was taken to the Têi, his evil deeds were weighed against his good deeds, and his evil deeds were found more numerous than his good deeds that he did upon earth. It was commanded that he should be punished in Amenti, and he is that man whom thou didst see, in whose right eye the pivot (?) of the gate of Amenti was fixed, shutting and opening upon it, and whose mouth was open in great lamentation."¹

(iv.) Very interesting is the account that this *Tale of Khamuas* gives us of the treatment in Amenti of people whose lives have been contemptible and aimless:

'The kind of men on earth who are under the curse of God, and do work day and night for their living, while moreover their women rob them and they find not bread to eat. They came to Amenti; their evil deeds were found to be more numerous than their good deeds; and they found that what happened to them on earth happened to them in Amenti.'²

(v.) According to the *Book of the Dead*, the deceased person who was adjudged unrighteous was handed over to the 'Devourer,' *'mmt'*,³ or to a demon called Babi, 'who lives upon the entrails of the great on that day of the Great Reckoning.'⁴ In the *Second Tale of Khamuas*, side by side with the view that the unrighteous are tortured exists also the older belief in the 'Devourer.'

'He of whom it shall be found that his evil deeds are more numerous than his good deeds is delivered (?) to the "Devourer" (*'m'*) of the Lord of Amenti; they destroy his soul upon his body, she (the "Devourer") does not allow him to breathe ever again.'⁵

The unrighteous, the *Book of the Dead* likewise informs us, might fall a victim to the swords of the gods forming the judicial council.⁶ The same authority speaks of crocodile-gods 'that are in the water,' who are entitled 'lords of righteousness,' and who wound sinners,⁷ and of a god 'who binds the unrighteous to his slaughter-block, who cuts souls in pieces.' This god is Horus, according to one ancient commentator, who says:

'He has two heads, one carrying righteousness, the other iniquity. He gives iniquity to him who does it, righteousness to him who brings it.'⁸

This sentiment finds expression, though in a less theological guise, in the already thrice quoted *Tale of Khamuas*:

'Find it at thy heart, my father Setne, that he who is good (*'mkt'*) upon earth, they are good to him in Amenti, while he that is evil, they are evil to him.'⁹

But there were other motives for leading a righteous life than the dread of what might happen at the judgment after death.

(2) *Fear of God*.—A vague fear of God might in itself be a sufficient incentive to good conduct.

'I did not plier the divine endowments on the day of weighing the corn,' says Inêni, . . . 'The fear of God was in my heart.'¹⁰

(3) *Rewards or punishments during life*.—The Egyptian expected to reap a reward for his virtue during his earthly existence, and 'the good word which issued from the mouth of Rê' seems to encourage this expectation:

'Speak right, do right, because it is great, it is mighty, it is enduring. The reward (?) thereof shall find thee, it will bring thee to honour.'¹¹

Long life and material prosperity were especially regarded as rewards for righteousness.

'How happy is he who hath done right for the god therein [*i.e.* the place whence the deceased has come]; he grants old age to him who hath done it for him so that he attains honour.'¹²

¹¹ Vogelsang, B 1, 319-322, p. 215 f.

¹² *Tâb. ch. clxxxiii. line 88 f.*

An XVIIIth dynasty magnate thus admonishes visitors to his tomb-chapel: 'Have regard unto my character and do the like; it shall be profitable unto you. Your life shall be long upon earth, ye being in health; ye shall pass your years in happiness.'¹ An official of the Old Kingdom informs us that he 'held forth justice to the righteous for the sake of long life upon earth.'² His father's advice to King Merikêrê, 'Do right that thou mayest live long in the land,' has already been quoted in § 4. 'Long lived is the man whose rule is righteous,' says the sage Ptahhotp, 'who walks according to its (the rule's) way.' As a further inducement to be virtuous, this eminently practical teacher asserts that 'the righteous man is wont to make a will [or, as we should express it, make his fortune], whereas there is no house for the covetous.'³ 'Wrong-doing,' Ptahhotp tells his hearers, 'stealeth away riches. Never hath wickedness brought its venture safe to port.'⁴ The Eloquent Peasant warns Rensi that the reward of unrighteousness and injustice is death. 'Beware lest eternity draw nigh, and prefer to live, according to the saying: The doing of right is breath for the nose.'⁵

The reward for unrighteousness was also meted out during the life on earth, at the hands of the gods who 'will not ignore the deed of any person.'⁶ They bring misfortune upon the sinner,⁷ cause him to fall a victim to a crocodile in the water or to a snake on land,⁸ or smite him with disease.⁹ However, they show mercy to him that repents and restore him to health.¹⁰

(4) *Other rewards*.—(i.) The righteous man was said to be rewarded with a 'goodly burial.'¹¹ King Akhthoi says to Merikêrê:

'Make stately thy castle in the West, adorn the palace in the Necropolis; even as one who is just, as one who doeth righteousness.'¹²

Those who have regard to the character of Inêni and follow his good example will rest in their 'seat of eternity.'¹³

For the importance attached by the Egyptians to a properly conducted funeral see the oft-repeated request in the funerary formulae that the deceased may be 'buried well' or granted a 'goodly burial.'¹⁴

(ii.) The heir or heirs of the righteous man succeed to his possessions and offices,¹⁵ and his house abides for ever.¹⁶

'Make righteousness to flourish and thy children shall live,' says Ptahhotp.¹⁷

(iii.) The righteous man's name endures in the mouth of men;¹⁸ it 'is not effaced on earth, and he is remembered because of the good.'¹⁹

Dhôt prays, 'May the memory of me abide upon earth,'²⁰ and Inêni, who did 'what his city god loves,' tells us that 'he who passes years as a favoured (or praised) one—his name is good in the mouth of the living, the remembrance of him . . . is for ever';²¹ he also tells us that 'his name will abide because of his character, in accordance with what he has done on earth.'²²

(5) *The desire to stand well with the Pharaoh*.—The source of all promotion and honour was the Pharaoh. As representative of the sun-god on earth, he was the 'lord of righteousness.'²³ Men must therefore work righteousness to win his favour.

²³ *Ib.* 941.

'I did righteousness for the Lord of Righteousness,' says an XVIIIth dynasty official, 'for I knew that he is pleased with it.'¹ Another official of that period tells us that he was beloved of his lord (the king) because of his excellence.² A XIXth dynasty magnate 'did the right that the king loved';³ and of a XIXth dynasty court lady it is related that 'she was of honourable estate with the king because of her righteousness.'⁴

One of the results of winning the royal favour was the much coveted 'goodly burial.'⁵

Dhōut says: 'My heart was excellent for my lord (the king), that I might rest in the high land of the noble ones who are in the Necropolis.'⁶

(6) *The desire to stand well with the community*.—The Egyptian was intensely anxious, not only to stand well with the king, but also to have the esteem of his fellows. This was another powerful motive for displaying at least outward rectitude. 'I am one who spake good and who repeated what is loved,'⁷ and similar assertions, occur over and over again in inscriptions of the feudal period.

E.g., 'I said what the great love and what the commonality praise.'⁸ 'I am one who was beloved of all the people. . . . I am one who did that which all men praise.'⁹ 'I never did what all men hate.'¹⁰ 'There was not found one who hated me in this city.'¹¹ 'I am one beloved of his father, praised of his mother, honoured by his companions, dear to his brethren, whom his servants loved.'¹²

One man, after enumerating his virtues, declares that men when speaking of him exclaimed: 'Would that the earth were full of people like him!'¹³ An official of the Middle Kingdom openly asserts that he was beneficent in a year of scarcity 'in order that my name might be good.' 'I was a shepherd [lit. 'herdsman'] of the serf,' he adds, 'in order that my name might be good in the mouth of his [the serf's] city.'¹⁴ Khnemerdj says: 'I gave provision unto him who begged it, herbs to him whom I knew not as to him whom I knew, that my name might be good in the mouth of those who are upon earth.'¹⁵

Public esteem not merely gratified a man's pride while he was yet alive, but it was of practical value to him after death. If his name were good in the mouth of the living and the remembrance of him eternal, because of his virtues,¹⁶ visitors to his burial-place would the more readily present him with those offerings upon which his welfare after death was imagined so largely to depend, or, in lieu of material gifts, would at any rate repeat for his benefit certain prescribed formulæ. Accordingly we find:

'O ye who live and exist . . . as ye love life and hate death, ye shall offer to me that which is in your hands; if there be nothing in your hands, ye shall speak with your mouths. "A thousand of bread and beer, etc."'¹⁷ 'May my name be good unto men who come in after years,' says Dhōut, 'may they give me praises at the two seasons by the favour of the gods.'¹⁸

The desire to secure these advantages was undoubtedly one of the chief reasons for inscribing upon his tombstone, or upon the façade of his tomb-chapel, the enumeration of the deceased's virtues and the account of the esteem in which he was held by his fellow-men.

(7) *Conscience*.—On the conscience as a stimulus to virtuous living see art. ETHICS AND MORALITY (Egyptian); see also Breasted, *Religion and Thought*, pp. 297 f., 354.

10. *Justification of the dead*.—(1) *Osiris the prototype of the justified dead*.—The epithet 'justified' (*m'*), *hrw* = lit. 'righteous of voice') is a legal term,¹⁹ and was applied to Osiris when, thanks

to the skilful pleading of Thōth, he had won his case against Sēth before the tribunal of gods at Heliopolis.¹ After the Vth dynasty all dead persons were identified with Osiris and from that period onwards had the Osirian epithet 'justified' appended to their names.²

(2) *Methods of obtaining justification*.—All manner of means were adopted by the Egyptians to obtain justification at the posthumous trial, most of them utterly inconsistent, from our standpoint, with the ethical theory of the hereafter, and yet, in view of the prevailing magico-religious ideas, a natural consequence of that theory having been accepted.

The deceased, who was identified with Osiris, would inevitably have come to be regarded as righteous, though without any special claim of his own to sinlessness—his personality and acts would have tended to become merged in those of the god.

(i.) *The pilgrimage to Abydos*.—Probably with a view to ensuring this identification after death and securing the benefits resulting therefrom, it was considered advisable to associate oneself with Osiris during life. Hence the pilgrimages to Abydos and the setting up of memorial tablets at the god's supposed burial-place.³ We are definitely informed in one instance that the object of the pilgrimage was the 'fetching of justification.'⁴ If the pilgrimage were omitted during life, it might be undertaken after death with the same desirable results.⁵

(ii.) *The mysteries*.—Similar advantages accrued to him who had participated in the Osirian mysteries.⁶

(iii.) *Purifications*.—People could also be made righteous, and so obtain justification, by means of ceremonial ablutions. A person could perform them for himself during his life-time in special sacred pools,⁷ or they could be performed for him after death by divinities, human beings impersonating divinities,⁸ or even by himself. According to the *Book of Breathings*, the deceased, before he enters the Hall of the Two Rights, is cleansed from all evil, from every abomination, by the goddesses Uto and Nekhet, and receives the name 'Stone of Righteousness.'⁹

(iv.) *Magical formula, etc.*¹⁰—Spells were considered to be specially efficacious in obtaining justification for the deceased. The famous ch. xxv. of the *Book of the Dead*, as the colophon and opening words of the 'Introduction' show, was a spell that enabled the deceased to appear blameless in the eyes of Osiris and his assessors.

Similar spells are the claims of the deceased to have participated in the Osirian mysteries,¹¹ to have undergone purificatory ceremonies,¹² or the assertion that he is this or that god and therefore righteous.¹³ Again, he would be justified if, to the accompaniment of the prescribed formula, his head were crowned with the 'wreath of justification.'¹⁴ Cf. also the so-called 'heart-scarab' with the incantation inscribed upon it.¹⁵ So powerful were these formulæ that the things alleged in them, however untrue they might be, became actualities.¹⁶

11. *The triumph of evil over good*.—This aspect of the problem of good and evil is treated in art. ETHICS AND MORALITY (Egyptian), and very fully dealt with by Breasted, *Religion and Thought*, p. 188 ff.

show that one of the reasons why the author of this 'pessimistic' poem desired death was that he looked to have his wrongs righted in the hereafter.¹ This point has been passed over by Gardiner in art. ETHICS AND MORALITY (Egyptian).

12. Administration of justice.²—(1) *During the Old Kingdom*.—There was no clearly defined class of professional judges, all judicial functions being performed by the administrative officials, who were supposed to be learned in the law.³ Certain of the Upper Egyptian provincial governors bore the title 'magnate of the ten of Upper Egypt,' as if they were members of a special council of ten. The officials who acted as judges in the provinces were formed into six courts of justice, the so-called 'six great houses.'⁴ At the head of these courts, as indeed of the whole judicial administration, was the vizier in the capacity of the chief justice.⁵ Many of the judges bore the predicate 'mouth of Nekhen.'⁶ Disputes about the ownership of land seem to have been a frequent cause of litigation.⁷ It seems that, even at this early period, all cases had to be submitted to the court in writing.⁸ Special cases of a private nature were heard by the chief justice and a 'mouth of Nekhen.'⁹ When the queen of Piöpi I. was accused of treason, she was tried by a specially constituted court, consisting of two 'mouths of Nekhen,' without the chief justice.¹⁰ Under certain circumstances a litigant could appeal directly to the king.¹¹

(2) *During the Middle Kingdom*.—As in the previous age, the administrative officials acted as judges, while the vizier still held the position of chief justice.¹² There was probably a court of justice at the capital of every nome, presided over by the local prince.¹³ We learn that the 'six great houses,' with the vizier at their head, sat in Ith Tôwe.¹⁴ There existed at this period officials with the sole title of 'judge.' These possibly exercised their functions within a restricted local jurisdiction.¹⁵ There were now more than one 'ten of Upper Egypt,' and 'magnates of the tens of Upper Egypt' were entrusted with various executive and administrative commissions by the king; we do not know with any exactitude what was their connexion with the judicial administration.¹⁶

The *Story of the Eloquent Peasant* shows us how a high official dispensed justice during the feudal age. He was assisted by a council of minor officials, to whose advice, however, the great man paid little heed.¹⁷ This council, be it noted, is depicted as being thoroughly in sympathy with the defendant, the thievish Thutnakht, probably because he was a member, though quite a subordinate one, of the 'official' class.¹⁸

(3) *Under the New Empire*.—As during the Old Kingdom, there was no class of judges with exclusively legal duties, justice was still dispensed by the administrative officials.¹⁹ The vizier was, as before, the chief justice. He held a daily 'sitting' in his audience hall, the great council.²⁰ The first step in all legal proceedings was for the claimant to lay his case in writing before the vizier

in this court,¹ where also the vizier tried all crimes committed in the capital.² The 'magnates of the tens of Upper Egypt' had lost their old importance, and now formed merely an attendant council, retaining, apparently, little or no advisory functions.³ The 'six great houses' no longer existed, the ancient title 'chief of the six great houses' being retained only as a traditional title of the vizier.⁴ In addition to the vizier's hall, the great council, there were local courts composed of the 'notables' of the town—the administrative officials in each district. On occasions the great council and the local court investigated a case together. When the great council required detailed information about a case that only a local court could supply, it sent out a commissioner, who, together with the members of the local court, held a joint inquiry, hearing the evidence of both parties.⁵ The number of the local courts is uncertain. The members of the board of judges composing the local court were largely priests,⁶ and at Thebes they seem to have varied from day to day. In cases where a member of the royal house was concerned the composition of the board was in the hands of the vizier. In a case of high treason the appointments to it were made by the king himself.⁷ There seems at present to be no means of determining what was the exact relation of the local courts to the great council. We know of a case where a petitioner lost his case in the vizier's great council, but obtained satisfaction afterwards at a local court.⁸ We probably have the latest existing reference to the great council at Thebes in a Demotic papyrus of the XXVth dynasty.⁹

13. Personification of Mēet.—For full particulars about the goddess Mēet, her priests, and as to whether she possessed an organized cult or not,¹⁰ see art. ETHICS AND MORALITY (Egyptian), § 11, and PERSONIFICATION (Egyptian), §§ 4, 7, 9 (c) (2).

LITERATURE.—See the works quoted in the footnotes.

A. M. BLACKMAN.

RIGHTEOUSNESS (Greek and Roman).—'Righteousness' is the translation of *δικαιοσύνη* in the NT and in the LXX, where it corresponds to the Hebrew *sedāqah*. The word thus gets associations that differentiate it from the idea of justice, which is derived from *δικαιοσύνη* by way of Greek philosophy and Roman law.

The justice or righteousness of God in the Bible is sometimes His loving-kindness to the just and the unjust. 'Righteousness' is an apt rendering of *δικαιοσύνη* in passages of moral eloquence in Plato's *Republic* and *Laws*. It is not once used in Well-don's translation of the fifth book of Aristotle's *Ethics*, 'On Justice.' Aristotle first explicitly distinguished the special meaning of justice as one of the cardinal virtues from its vaguer use as a synonym of all virtue or righteousness. He first established the quasi-legal meaning which until recently has found general acceptance. He conceived justice as the recognition of a definable equality or proportion in respect of rights assumed to be ascertained or ascertainable. It was not the limitation of such rights by 'equity,' nor their renunciation by generosity, nor their equalization in the interests of a social ideal. Some of these concep-

¹⁰ In this connexion it might be pointed out that Na-pi-hr-n, whose *Funerary Papyrus* in the Bodleian Library will be published shortly in *Journ. of Egypt. Archaeology*, bears among other titles that of 'god's father of Mēet, daughter of Rē' (see also J. Lieblein, *Hieroglyph. Namenswörterbuch*, Leipzig, 1871–72, p. 997, 69).

tions are latent in the Stoic and Christian *χρηστότης*, and recently philosophy has used them to transcend or confound the Aristotelian distinctions. This is only in appearance a return to the broader and more spiritual treatment of 'justice' in Plato's *Republic*. Platonic justice, it is true, is not confined to Aristotelian or legal formulas, and it is in a sense 'social.' But Plato does not lose himself in generalities with modernist humanitarianism. He recognizes in anticipation the legal and Aristotelian rules of justice, and tests his own broader definition by them. But for edification and the portrayal of his ideal he prefers to define justice in terms of 'Be this' rather than 'Do this.'¹ Objectively his justice is social. But he emphasizes equality of service in the voluntary acceptance of natural inequalities, not the equalization of rights and rewards.

With these clues we shall not lose our way in the labyrinth of the historical evolution, which for sober students begins with Homer. Homer does not use the abstract *δικαιοσύνη*. But we cannot infer² that he lacks the idea. For he has the abstract *εὐδίκια*,³ and in *Aeschylus* and *Sophocles* also the metrically more convenient *δίκη* stands for *δικαιοσύνη*, which does not occur in Greek tragedy. Homer uses *δίκη* both of the administration of justice and of ethical justice. In *Od.* ix. 215 it is bracketed with *θέμμερες*, 'dooms,' in the concrete sense of judgments. In *Il.* xxiii. 542 the entire context of its use suggests the 'later' meaning of strict right as opposed to the promptings of pity or generosity in the judge. The word also means 'way,' 'manner,' 'custom'—this is the way of the gods, the way of mortals, the way of kings.⁴ The survival of this sense in fixed prepositional phrases—'dog-wise,' etc.—leads plausibly to the assumption that it was the earlier meaning, and that for Homeric or pre-Homeric man the just way was the customary way known to the elders.⁵ The systematic exaggeration of this by the followers of Henry Maine provokes rival systems. Rudolf Hirzel⁶ maintains that the legal meaning is the earlier, and that *δίκη* is by etymology the casting down or stretching out of the judge's staff to part the contestants and proclaim his decision. His collections are helpful, but his interpretations of the texts will not bear scrutiny. Jane E. Harrison is equally confident that *δίκη* is 'the way of the whole world of nature' and that in Euripides' *Medea*, 411, it is 'the circular course of the whole cosmos.'⁷ Dismissing these fancies, we find in Homer *δίκη* and the derivatives *δικάζω* and *δικαστὸς* already used of a simple primitive administration of justice by a king or a council of elders.⁸ The adjective *δίκαιος* occurs fifteen times or more as a broad term of ethical approval. We might try to elicit a definition by noting its synonyms or associates—'sensible,' 'reasonable,' etc.—and its antonyms—'insolent,' 'savage,' 'harsh.'⁹ But this would be an uncritical pressing of the texts. 'Just' and 'god-fearing' are comprehensive categories of all virtue or righteousness for the Homeric *Odysseus*,¹⁰ as they are for the writer of *Ac* 10³⁵. 'He that feareth him, and worketh righteousness (*δικαιοσύνη*), is accepted with him.'

In Hesiod's *Theogony*, 901 f., Dike appears with the Seasons, Peace, and Eunomia ('good order') as daughter of Zeus and Themis.¹¹ This seems conscious allegory. And later Greek poets freely

adapt to their purposes the parentage, the kin, and the functions of Dike.¹ The frequency of the word in the first 300 lines of the *Works and Days* arises from the constant reference to the crooked decision of the bribe-devouring judges in the lawsuit between Hesiod and his brothers, which is the text of the poet's moralizing and admonitions about justice in general. As in Homer, Dike is the antithesis of *Hybris*² and Violence, and the poet repeats the Homeric blessing on the land whose kings give just judgments.³ Dike occurs in the 'later' sense of punishment.⁴ The negative *ἄδικος*, 'unjust,' is found,⁵ and the neuter plural *τὰ δίκαια*.⁶ The opposition of justice and violence is expressed in the interesting compound *χειροδίκαι*.⁷ And there are hints of other ideas developed by later Greek reflexion. Birds and beasts may devour one another, for there is no *δίκη* among them.⁸ Here is the germ of the myth in Plato's *Protagoras*,⁹ that Zeus established civilization by sending *αἰδώς* and *δίκη* to mankind.¹⁰ Hesiod also anticipates¹¹ the complaint of Job, Theognis,¹² the Sophist Thrasymachus, Sophocles,¹³ the speaker in Plato's *Republic*,¹⁴ and Euripides,¹⁵ that the righteous man is not visibly rewarded. It is commonly said that the personification of *Δίκη* begins with the description of her banishment by wicked men.¹⁶ But no absolute line can be drawn between this and the phrasing of Homer in *Il.* xvi. 388.

The word is fairly frequent in the fragments of Greek poetry between Hesiod and the drama, but only a few passages are significant. In a fable of Archilochus¹⁷ there is an appeal to Zeus who regards both the *Hybris* and the *Dike* of beasts. This may be little more than the literary tone of Kipling's 'law of the pack' and Aristophanes' 'laws of the birds.' Pindar¹⁸ echoes Hesiod with the compound beasts 'unwitting-of-justice.' Minnervus¹⁹ says that the truth (between man and man) is the most just of all things. Later Greek ethical feeling generally made truth-telling a form of justice rather than an absolute and independent virtue.²⁰ In LXX 'truth' in a list of virtues is often merely a periphrasis for the reality or sincerity of those virtues.

The idea of justice is especially prominent in Solon, the earliest Attic poet. He speaks in almost *Aeschylean* metaphor of those who regard not the august foundation of Dike.²¹ He associates the doctrine of the late punishment of the wicked with the omniscience of silent Dike, who sees and knows all things, and surely overtakes the evil-doer at the last.²² He prays for wealth—but not unjustly gained (a Greek commonplace).²³ He boasts that he has harmonized might and right,²⁴ and amuses Plutarch by the archaic *naïveté* of his saying that the sea is the most 'just' of things when the winds do not vex it.²⁵ In such transferences of the moral

order to inanimate objects it requires the nicest discrimination to distinguish between 'survivals,' *naïveté*, and the conscious spiritual allegory of Sophocles,¹ of Platonism, and of Wordsworth's 'Thou dost preserve the stars from wrong.' 'The rivers flow into the sea, but the sea doesn't overflow, for it isn't just that it should,' says the speaker in Aristophanes, *Clouds*, 1292. 'All things that are born must die,' said Anaximander,² 'paying the penalty to one another for the injustice (of individual existence?).' 'All things are just in the sight of God,' said Heraclitus,³ 'but men conceive some things to be unjust and some just.' And again: 'The sun will not pass his bounds, else will the Erinyes, the helpers of Δίκη, find him out.'⁴ 'Wise men tell us,' says Socrates,⁵ 'that it is love and order and sobriety and justice (δικαιοσύνη) that hold together gods and men and the whole world, which is therefore a cosmos—an order, not a licentious disorder.' And the kindly earth in Virgil⁶ is *justissima tellus*, perhaps because, like the just man in Plato,⁷ she returns a deposit.⁸ These are suggestive passages. But until literary and linguistic psychology has defined their precise intentions in their context, they cannot be combined in the support of pseudo-scientific theories about the origin of the idea of justice. The abstract δικαιοσύνη seems to occur for the first time in a line of Phocylides, 'In justice is comprehended all virtue,'⁹ which Theognis repeats with the added pentameter, 'Every man is good who is just.'¹⁰ A theme of endless comment was Theognis' distich, 'The most beautiful thing is justice, the best is health, the most delightful, to win what one loves.'¹¹ The conception of the beauty of justice was developed out of the ambiguity of the Greek καλόν. Its culminating expression is Aristotle's 'Neither the evening star nor the morning star is so admirable.'¹²

Pindar, the student of Hesiod and conservative, associates Dike with Eunomia and Eirene, conservators of States, and benign Tranquillity, her daughter.¹³ The prepositional phrase, *ἐν δίκῃ*, occurs in his vision of judgment to come,¹⁴ though not in the legal and Æschylean sense 'at court.'¹⁵ Pindar emphasizes the idea of justice in his praise of commercial cities—Corinth and his beloved Ægina, that deals fairly with the stranger. Ruskin's 'Tortoise of Ægina' brings this out fantastically, but beautifully.¹⁶ Later writers find texts for the justice of the 'superman' in *Nem.* ix. 15, 'The stronger man puts down the former right,'¹⁷ and frag. 169 (151), 'Custom (law) lord of all things makes just the most violent deed.'¹⁸

We can only glance at other writers before Plato. In Æschylus Dike, the daughter of Zeus,¹⁹ the embodiment and the accomplishment of the moral law, is frequently personified with bold metaphor.²⁰ The *Prometheus* raises the theological problem of the justice of Zeus who keeps justice in his own hands.²¹ The *locus classicus* for the old

superstition that God confounds the righteous with the guilty is *Sept.* 598 ff.¹ The *Agamemnon* trilogy emphasizes the awfulness of sin, the certainty of retribution, the irremediability of spilt blood, the law that the doer must suffer.² The Furies, the ministers of the older law, claim to be strictly and straightly just (ἐδιδίκατοι).³ But already in the *Agamemnon* we hear of another law, that wisdom comes through suffering;⁴ and in the final symbolism of the *Eumenides* the Furies become the gracious goddesses, and the letter of the old law of an eye for an eye is superseded by a law of grace and atonement.

In Sophocles Dike is the avenger,⁵ the ally of the right,⁶ the assessor of the throne of Zeus by laws eternal.⁷ Her eye is as the all-seeing eye of God;⁸ her high throne is a stumbling-block to the bold transgressor.⁹ Antigone, in a famous passage,¹⁰ appeals to the unwritten law and the Justice who dwells with the gods below against Creon's unrighteous decree. This cannot be pressed, with Hirzel and Miss Harrison, to prove any special connexion of Dike with the lower world.¹¹ The interpretation that Dike equals 'custom' in frag. 247 is a characteristic error of modern ethnological philology.

Neither Æschylus nor Sophocles was apparently affected by the Sophistic 'enlightenment.' The Sophists presumably discussed the origin, nature, and validity of the idea of justice, as of other ideas. There is no evidence that any of them worked out a serious scientific theory of ethics and justice, as is sometimes affirmed by modern critics hostile to Plato.¹² But the unsettlement of traditional moral faith, in conjunction with the cynical and Machiavellian politics of the Peloponnesian War, presented to Plato his main problem—the finding of a reasoned 'sanction' for ethics, for justice and righteousness.¹³ From this point of view Thucydides and Euripides are an indispensable introduction to the study of Plato. In addition to his dramatic or personal exposition of this ethical nihilism, or the 'superman' philosophy of justice,¹⁴ Euripides' scattered *sententiae* about justice could be quoted in illustration of nearly every edifying or cynical Greek commonplace, and in anticipation of many points made by Aristotle and the Stoics.¹⁵

Plato.—We have already touched on the Platonic conception of justice and referred to other articles in this work. A more detailed exposition would involve the Platonic philosophy as a whole,¹⁶ and its first prerequisite would be the removal of the misconception that Plato commits fallacies in elementary logic, and is presumably unaware of any Aristotelian distinction which it does not suit his immediate literary purpose to labour with painful explicitness. The artistic design of the *Republic* required him to regard justice in its subjective aspect as entire righteousness, the harmony, unity, and right functioning in division of labour of all the 'parts' or 'faculties' of the soul.¹⁷ But he did this consciously and with due recognition of other popular or possible meanings of the word. And there are few valuable or

valid ideas about legal, ethical, or social justice to be found in Aristotle or in later Græco-Roman literature that are not sufficiently indicated somewhere in the *Laws* or the *Republic*. One confirmation of this, for which space is lacking here, would be furnished by the still unappreciated extent of Cicero's dependence on Platonic ideas of justice in his *de Officiis*, as well as in his *de Legibus* and *de Republica*. There are few, if any, sentences in *de Officiis*, i. 7 ff., to which the most refined ethical thought of to-day could take exception.

Plato, like the writers of the Bible, Cicero, and the English ethical philosophers of the 19th cent., was intensely interested in the ultimate 'sanction' of righteousness or justice. This problem is the framework of the main discussion in the *Gorgias* and the *Republic*.

Aristotle was indifferent or sceptical. As Gomperz puts it, 'he does not trouble himself about any eudæmonistic foundation.' Why Gomperz should deem this indifference to what Leslie Stephen calls 'the problem which is at the root of all ethical discussion' an advance beyond Plato's 'artificial reasoning' is as hard to understand as his statement that 'altruism appears for the first time in Aristotle's recognition without circumlocution that justice is not directed to the good of the agent but to another.' This is merely the formula of Thrasymachus canvassed in the first book of the *Republic*.¹ The real problem was and is how the good of another becomes the good of self, and an adequate motive. Aristotle, though not unaware of this problem, does not share Plato's passionate interest in its solution as an answer to ethical nihilism.

He is here merely, or at any rate mainly, making a logical distinction between self-regarding virtues and virtues relative to another. Burnet actually renders *πρὸς ἑαυτὸν* 'relative,' as if it were *πρὸς τι*.² There is still less justification for Gomperz's statement that Aristotle's treatment of justice as a principle of equality cuts away the ground from Plato's identification of political justice with the subordination of one class to another contrary to that principle. Equality for Plato, Aristotle, Isocrates, and all sober Greek thinkers included the 'equality of proportion,' which takes account of natural and existing inequalities.

The technical interpretation of Aristotle's book 'on Justice' requires an elaborate commentary. There are some unsettled problems which cannot be apprehended in translations or made intelligible to any student who does not bring to them an intimate knowledge of Greek idiom and of Platonic and Aristotelian terminology. But the gist of the matter is quite plain. After recognizing and dismissing the broader sense of justice as fulfilment of the entire law, Aristotle develops the more specific idea of justice as a kind of equality by the use of Plato's and Isocrates' distinction between the 'arithmetical' equality of radical democracy and the geometrical or proportional equality of more conservative thinkers. There are, he says, with his eye on the actual life of a Greek city, two kinds of justice. Distributive justice apportions honours, wealth, and other social or political 'goods' in proportion to some assumed claim and scale of merit. Contractual justice—the justice of relations of obligation whether of contract proper or of *ex delicto*—treats individuals as equal units. Whether a 'good' citizen wrongs a bad, or a bad

a good, this kind of justice aims by award of damages, fine, or punishment to reinstate the violated equality of rights, 'between man and man,' as we should phrase it. The emphasis on obligations *ex delicto* leads Aristotle to designate this kind of justice as 'corrective,' and the extension of this term to the whole domain of contractual as opposed to distributive justice has created some confusion.³ But Aristotle's central idea is sound and simple. Modern difficulties are due mainly to insufficient scholarship, or to the still persisting superstition of Aristotle's infallibility. As a matter of fact, though the idea is sound, neither the terminology, the metaphors, nor the endeavour to fit it into the schematic definition of virtue as a mean will endure analysis. The term 'distributive,' e.g., seems to refer to the distribution of spoils or grain to the citizens—where, whatever the military or Homeric practice, Greek democracy would have demanded arithmetical equality with few exceptions. But Aristotle also illustrates it by the distribution of profits in a partnership of unequal capitals, which is really a kind of contractual relationship.⁴ Further confusion arises from the reference of distributive justice to the conflicting claims of different classes for predominance of political power in the organic constitution of the State. This conception of the problem of justice Aristotle derived from Plato's *ἀξιώματα τοῦ ἀρχεῖν*.⁵ But we cannot enter into these details, or delay to interpret Aristotle's attempt to extend the mathematical analogy to the equalities and proportions of economic exchange—a speculation as obscure and presumably as fallacious as similar modern endeavours. The 'Pythagorean' or Rhadamanthine justice of retaliation or requital fails, he thinks, in not taking due account of persons and proportions. Aristotle does not anticipate the theory of the psychological origin of the idea of justice in the passion for revenge. And, though Greek poetry furnishes many illustrations of that natural feeling, and though *δικη* early and easily takes the meaning 'punishment,' Greek literature as a whole does not support the pretentious generalization that justice and punishment are nothing but revenge.⁶ Gomperz approves Herbert Spencer's not very intelligent ridicule of Aristotle's doctrine that justice, like the other virtues, is in some sense a mean. But Aristotle admits that his formula applies only in the sense that justice (i.e. especially the administration of justice)⁷ tries to hit the mean. And his endeavours to show that the 'equality' which is justice is also a mean strain language no more than any Procrustean system does.

In pure theory the post-Aristotelian systems added little to the ideas of Plato and Aristotle. The Epicurean ethics bases itself on the art of measuring pleasures set forth in the *Protagoras* and the theory of a social contract expounded by Glaucon in the *Republic*.⁸ Animals, being incapable of the social contract, were *ipso facto* excluded from justice. Man has no obligation to them.⁹ The educated Epicureans took these ideas for granted, and did not waste time on Platonic idealism or Aristotelian refinements.

'Atque ipsa utilitas, justī prope mater et æqui. . . .¹⁰ Jura inventa metu Injusti fateare necesse est.'¹¹

¹ Both Gomperz and Burnet would prefer the schoolmen's 'directive' for 'distributive.'

It was easier to reaffirm this simple dogma than to study Plato's refutation of it.

The famous third book of Chrysippus, 'On Justice,' is no longer, as in Plutarch's day, 'to be found everywhere.'¹ The fragments of the older Stoics add little to the Platonic and Aristotelian theory. Justice, the Stoics taught, is a cardinal and 'social' virtue. It is the virtue of due distribution.² It pertains neither to the accuser nor to the defendant, but to the judge.³ Among its subordinate species are kindness (*χρηστότης*), democratic sociability (*εὐκοινωνησία*), and square dealing, or the quality of being easy to deal with (*εὐσυλλαξία*).⁴ Much of Chrysippus' discussion was captiously critical of his predecessors. He repeated Aristotle's captious censure of the innocent Platonic rhetoric about injustice to one's self.⁵ He rebuked Plato for appealing to the theological sanction in the closing myth of the *Republic*,⁶ but maintained against Epicurus that justice becomes impracticable and inconceivable if pleasure is the good.⁷ He rejected the Aristotelian qualification of justice by equity for reasons that would have appealed to Selden,⁸ and which were anticipated by Aristotle himself.⁹ But he reinstated equity as a form of kindness or good-fellowship. The influence of Greek, and particularly Stoic, philosophy upon Roman law has often been pointed out, but cannot be studied here. The very first sentence of Justinian's *Institutes*, 'Justitia est constans et perpetua voluntas ius suum cuique tribuens,' reads like a sentence of Plato's *Republic* stiffened by Stoicism (*constans*).¹⁰

In later Græco-Roman literature the somewhat pedantic sage of the Stoics became, under the joint influence of Platonism and the old Roman virtue, an impressive ideal of righteousness—the just man made perfect—serving humanity (as Hercules), unterrified by the tyrant or the mob (as Socrates),¹¹ unsubduable in soul (as Cato).

The subtleties of Neo-Platonism (*q.v.*) distinguishing the cathartic and the paradigmatic virtues do not concern us. Plotinus repeats the definitions of the fourth book of the *Republic*. Justice is the minding its own business by every faculty of the soul—the willing subordination of lower to higher.

Instead of thus associating righteousness with the theory of justice, we might have studied more broadly in ancient literature and life the approved type of man—the good man, the pious man, the καλὸς ἀγαθός, the sage, the kindly or popular man.¹² 'Vir bonus est quis?' asks the citizen in Horace.¹³ 'Qui consulta patrum, qui leges iuraque servat'—that is one ideal. 'What a good kind helpful man to take pity on us in this crowd!' exclaim the two Syracusan ladies in Theocritus' realistic idyl¹⁴ (*χρηστοῦ κοκκίριμονος ἀνδρός*). It is a singular coincidence that Justin Martyr¹⁵ brings together the same two words from Lk 6³⁶. to commend the religion of service and mercy to the philosophic emperor: *Γίνεσθε δὲ χρηστοὶ καὶ οὐκ ἐκτίριμονες, ὥς καὶ ὁ Πατὴρ ὁμῶν χρηστός ἐστι καὶ οὐκ ἐκτίριμων*. A history of the words *χρηστός* and *χρηστότης* in popular and later Stoic usage, strangely neglected by Hirzel, would show that this is more than a coincidence. We are in presence of a different ideal of the good or approved man from

that implied by the Græco-Roman theory of justice or in the main by the righteousness of the OT. It is an ideal in which what Renan calls *bonté* predominates. It is true that the OT *śdāḳāh*, 'righteousness,' came to mean largesse or alms, and that it is often also a general synonym of virtue or of the qualities that find acceptance with God and so justify a man in His sight—the fulfilment of the law both moral and ceremonial. But it also bears in relation to law and social order the specific meaning of legal justice between man and man. There are even texts which warn against the perversion of legal justice by pity or sympathy for the poor (Ex 23³; cf. Lv 19¹⁵, Dt 17¹⁵). This idea is foreign to the spirit of the Gospels, and some of the chief parables are directly pointed against it. St. Paul returns to the justice of the law only to show its impracticability. It is impossible to fulfil the entire law, ceremonial or moral. In the course of justice none of us would see salvation. Only the freely bestowed grace of God through Jesus Christ can save or justify man. It does not belong to this study to examine Matthew Arnold's contention in *St. Paul and Protestantism* (London, 1870) that St. Paul's essential meanings throughout are ethical, spiritual, and symbolic. We may note only that St. Paul's word *δικαίωμα*, 'justification,' presumably came to him from the LXX, which is peculiarly rich in abstracts in *-μα* loosely and rhetorically used in vaguer meanings than those given to them by the classic poets and philosophers of Greece. Coined apparently in the age of the Sophists, the sonorous abstract *δικαίωμα*, a convenient synonym for the awkward *τὰ δίκαια c. gen.*,¹ meant at first a claim of right and only incidentally a plea of justification.² Plato and Aristotle sometimes use it more precisely for the result of just action, as *ἀδίκημα* is the result of unjust action.³ The LXX employs the word scores of times, often in lists of synonyms, such as 'my commandments, judgments, and *δικαιώματα*.' The meaning 'plea of justification' occurs, but not frequently or with much technical emphasis. Deissmann⁴ says somewhat too absolutely that the word in St. Paul means simply 'acquittal.' There appears no philological necessity for holding St. Paul to a much more definite or consistent use of the word than we find in the LXX. It would seem, then, that the more technical meaning of 'justification' must be collected from our interpretation of St. Paul's theology as a whole. However this may be, the entire development of post-classical ethical feeling and of early Christian thought made against the strict legal conception of justice worked out in Greek philosophy and Roman law, and latent in the OT ideal of rigid fulfilment of the law. The development of modern law and the renewed study of the Roman law and the theology of Calvinism in part counteracted these tendencies. But to-day the literature of widest appeal is anti-legal in sentiment. And by invocation of the phrase 'social justice' the philosophy of our time strives to abolish the distinction between justice and benevolence, or justice and equity, and indeed to suppress the idea of justice or righteousness altogether, except as edifying synonyms for the entire social or ethical ideal. Whether this is a genuine return to the spirit of Jesus or a temporary confusion of thought the future historian of philosophy may decide.

LITERATURE.—See the works mentioned in the footnotes. The topic is discussed incidentally in the literature on Aristotle's *Ethics* and Plato's *Republic*, and in the systems or histories of ethics or law in so far as they deal with the idea of justice. The subject is treated popularly in W. de Witt Hyde, *From Epicurus to Christ*, New York, 1904, *The Five Great Philosophies of Life*, do. 1911.

RIGHTEOUSNESS (Hindu).—**1. Vedic.**—The conception of righteousness in the *Rigveda* finds its expression in the term *ṛta*, the equivalent of the Avestan *aša*, which denotes primarily the cosmic order, and then the order of the moral law, on the one hand, and of the performance of the sacrifice, on the other. The conception of moral order is doubtless Indo-Iranian, and it is a fair conclusion from the occurrence of Arta- as the first element in names of princes referred to in the Tell-el-Amarna correspondence that the conception cannot be more recent than the 15th cent. B.C., and that it was developed before the Vedic Aryans entered India. Despite the predominantly sacerdotal character of the *Rigveda*, it reveals abundant evidence of the importance of the conception: the gods themselves are not merely born of the *ṛta*—a conception in which physical origin may be chiefly denoted—but they follow the *ṛta* (*ṛtasap*); they are practisers of the *ṛta* (*ṛtāyu*) and knowers of it (*ṛtājña*). The special guardian of the *ṛta* is of course Varuna, the great guardian of morality, who moves about discerning the truth and the unrighteousness of mankind (*satyāṇṛtē janānām*);¹ and in a curious phrase² Agni is declared to become Varuna when he strives for the *ṛta*. Accordance with the *ṛta*, therefore, becomes the sacrificer: the priest assures Agni that he invokes the gods without witchcraft, and offers his devotion with righteousness.³ Especially characteristic is the famous dialogue⁴ in which Yami seeks to persuade her brother Yama to commit incest with her in order to propagate the human race. Yama's reply to her pleadings is in effect that her claims of advocating the right would merely lead them into unrighteousness of action; to her assertion that their father Tvastṛ had formed them in the womb to be husband and wife he replies by an assertion of ignorance of the purpose of creation, but an assurance of the existence of the law of Mitra and Varuna, and of the current view that incest is evil. Righteousness is thus accordance with general opinion, and with this agrees its constant association with truth (*satya*) considered as correspondence with reality. This opinion demands the virtues of a simple society—consideration in domestic relations, political loyalty, truth in friendship, abstention from crimes such as theft and murder, and from women faithfulness in wedded life; not unnaturally in hymns closely associated with the sacrifice much more stress is laid on the merits of liberality than on such manly virtues as courage in war.

In Irān speculation on the cognate idea of *aša* led to the deepening of the moral force of the conception and the evolution of Zoroastrianism, but in India the period of the later *Samhitās* and the *Brāhmaṇas* reveals not an advance, but a retrogression in moral outlook. Insistence on the ordering of the sacrifice has elevated the ritual into a substitute for morality; the priest who in the *Rigveda* primarily invokes the gods as a suppliant has become possessed, through a knowledge of the details of the sacrifice, of the power to compel the gods. At the same time he is exempted from the moral duty, which is recognized freely in the *Rigveda*, of seeking by his action the good of the sacrificer. It was, indeed, still contended by some that the priest was under an obligation to aim only at securing the desires of the sacrificer by whom he was employed, but the *Āitareya Brāhmaṇa*⁵ emphatically rejects that doctrine, and instead gives minute details of the manner in which by his performance of the offering the priest may ruin, if he thinks fit, the sacrificer in whose service he is. Even the heinous crime of the

slaying of a Brāhman, which naturally ranks in the priestly mind as almost the most deadly of sins, can be expiated, not by repentance on the part of the slayer, but by the performance of the horse sacrifice with its accompaniment of the bestowal of enormous largesse on the priestly performers.¹ Truth still remains the attribute of the gods, but truth is no longer simple: the gods are *par excellence* lovers of what is obscure, and for man as opposed to the gods the duty of speaking nothing but the truth is recognized as impossible and equivalent to enjoining silence.

The *Brāhmaṇas*, textbooks of a priesthood which by total absorption in meditation on the ritual had lost touch with the realities of life, do not represent fairly the development of the conception of duty among the people generally. This is given to us far more clearly in the *Gṛhya*- and *Dharma-sūtras*, manuals of rules for religious and civil life, which reveal in full detail the elaborate structure of Indian life as it had developed from simpler conditions of the Rigvedic period. Not only are the respective rights and duties of the four great classes—priests, rulers and warriors, peasants, and serfs—clearly laid down, though with such variation in detail as is inevitable in works of varying date and representing different localities, but within the classes the plan of the different stages of life is mapped out. Among many rules of no moral value these treatises inculcate the observance of all the normal laws of simple morality—truth, abstention from injury to the persons or property of others, charity, hospitality, courage, and devotion to duty—and threaten those who disregard them with pains and penalties in the future life. This more normal outlook on morality is shared by the *Upaniṣads*. The voice of Prajāpati in the thunder is interpreted as an order to be self-restrained, charitable, and merciful;² as the fee in the great sacrifice of life are enumerated in the *Chhândogya Upaniṣad*³ asceticism, liberality, right dealing, abstention from injury (*ahimsā*), and the speaking of truth. The *Taittirīya Upaniṣad*⁴ has a list of virtues which includes self-restraint, asceticism, tranquillity, truthfulness and right dealing, hospitality, courtesy, and duties to wives, children, and grandchildren. The prince Aśvapati Kaikeya claims⁵ that in his realm there is no thief, niggard, drunkard, adulterer, or courtesan.

Not only, however, do the *Upaniṣads* recognize and adopt current conceptions of morality, but they provide for the first time a reasoned basis for moral action by the doctrine that a man's place in life is determined by his former deeds—a principle which at the same time serves as a rationale of the rigid class-divisions of Indian society. In its purest form, associated with the name of Yājñavalkya,⁶ the doctrine is rigidly one of rebirth on earth after death in a station depending exactly on a man's previous deeds, but already in the *Upaniṣads*⁷ this idea is blended with the doctrine of reward in heaven or punishment elsewhere; and in this form, with variations in detail, the conception becomes part of the general Hindu belief. But no criterion of righteousness is suggested, though among those condemned to an evil fate in the *Chhândogya* are expressly included the murderer of a Brāhman, the defiler of the teacher's wife, the drinker of spirits, the thief of gold, and the man who associates with such sinners. The reason for the omission of any inquiry into morality is the extreme intellectualism of the *Upaniṣads*, which are concerned beyond everything else with the determination of the nature of existence, and

regard as the highest aim the merger of the individual soul in the absolute spirit (*brahman*), which is to be brought about by an act of intellectual insight. The possession of moral qualities is not inconsistent with the attainment of such insight, and the later *Upaniṣads* make a determined effort to reconcile the claims of ordinary life with those of philosophy by the development of the ideal of the four *āśramas*, or stages of life through which a member of the three higher classes in the community should in theory pass—a youth of learning as a *brahmachārin*, a middle age of performance of social obligations as a householder (*gṛhastha*), a period of asceticism as a dweller in the forest (*vānaprastha*), and a final resort to the life of a wandering beggar (*sannyāsin*) who has resigned all connexion with worldly things. This scheme, however, is clearly a compromise; the necessity of passing through the first two stages, and the distinction which it is sought to draw between the second two in such texts as the *Jābala* and the *Āśrama Upaniṣads*, are not laid down in the older texts, in which there is apparent a tendency to contrast the search for the true knowledge with all earthly interests and to regard the attitude of the seeker as essentially one of renunciation of all terrestrial concerns. In the *Kauṣītaki Upaniṣad*¹ is even enunciated the non-moral doctrine that knowledge of Indra, who is declared to be truth, prevents retribution for parricide, matricide, the slaying even of an embryo, or theft; but this doctrine is isolated in the *Upaniṣads*.

2. Post-Vedic. — Though later in its records than the Vedic period, Jainism reveals to us a form of belief which was evidently widely spread in the period of the early *Upaniṣads*, though these texts do not adopt it as completely satisfactory. The doctrine of Mahāvīra in effect appears to have been little more than a definite enunciation and stereotyping of the principles which were practised by those who had concluded that the true happiness was to be found in renunciation of all earthly attachments. Of the five great vows which form the basis of the system the first four forbid the taking of life, the speaking of untruth, the taking of anything not given, and sexual enjoyment—all rules for which Brāhmanical parallels and prototypes are present; and even in the fifth, the forbidding of any attachment to any worldly object, though Mahāvīra may have adopted it in opposition to the duty of liberality preached by the *Brāhmaṇas*, there is nothing but a consistent carrying out of the principle involved in the first four rules. The rationale of the commands is clearly the doctrine that the soul is defiled by all contact with the things of the world, and that the ideal is to free it from such contagion. In essence the doctrine is purely egoistic; in practice, however, it has been found possible to convert the Jain tenets into a basis for active philanthropy, which can be reconciled with the doctrine of Mahāvīra by the argument that such philanthropy is the most sure method to secure for the soul that freedom from misery which it is its essential aim to achieve.

In Brāhmanism itself a more successful effort is made in the *Bhagavad-Gītā* to find a positive basis for the practice of virtue. In general the *Mahābhārata* in its popular philosophy leans decidedly to the school of renunciation, and inculcates that indifference to the things of the world which enables King Janaka to contemplate with calm the possibility² of the destruction of his capital Mithilā.³ But the *Gītā*, amid all the confusions of its semi-panteism and its semi-theism, remains true to the doctrine that it is essentially

man's duty to carry out without desire of reward the obligations of his station in life, which is enunciated by Kṛṣṇa when he sees Arjuna unwilling to commence the attack on the host of the Kauravas at Kurukṣetra. A positive basis for the performance of duty of a non-egoistic character is provided by the doctrine of the unity of the universe in the *Īśvara*; he who sees the *Īśvara* as pervading all things cannot be guilty of injury to them, for such action would mean injury to himself as identical with the *Īśvara*¹—a view which is not open to Jainism, in which there is no bond of unity between one soul and another. The good which one does to another, on the doctrine of the *Gītā*, is done directly to oneself through this community of existence, while Jainism cannot recognize such action as valuable without serious modification of the essential basis of its renunciation of activity.

Neither the more formal philosophy nor the doctrine of faith succeeds in providing a more satisfactory doctrine of righteousness than the *Gītā*. To Śaṅkara the ordinary world, and its virtues and vices alike, are unreal, and release from transmigration is attained not by virtue, but by insight into the fundamental unity of the soul and the *brahman*. Works cannot produce this insight, which exoterically is deemed a gift of the *Īśvara*, but which in reality cannot be ascribed to any cause whatever, as it lies beyond all causal conceptions. While, however, Śaṅkara makes it clear that works are not the cause, nor the necessary preliminary, of enlightenment, he readily finds a place for them as serving normally, though not essentially, to counteract hindrances which might otherwise impede the appearance of the saving knowledge; and in like manner the observance of the rule of the *āśramas* is a normal requisite for the seeker after truth. The essential indifference of morality, however, appears in the position of him who has attained in this life the consciousness of release (*jīvanmukta*); no acts of his after this attainment have any concern for him, for the doctrine of the fruition of action (*karman*) ceases to apply to one so enlightened. The logical consequence, that evil deeds may with impunity be performed by the enlightened man, is expressly recognized by the *Vedāntasāra* of Sadānanda, which even contemplates² the possibility of the *jīvanmukta* resorting to the use of such unclean food as a dog might eat. Even in the exoteric doctrine works have no great value; morality and worship produce only temporary rewards in heaven and favourable rebirth on earth, and no attempt is made to evolve any principle by which value can be ascribed to different classes of works. Nor is any other system more effective in inculcating righteousness: the *Pūrva-Mīmāṃsā* develops to its logical conclusions the doctrine of the *Brāhmaṇas* which sees in the sacrifice the only source of future gain; the *Sāṅkhya* proposes for its end the purely intellectual recognition of the distinction of the souls from nature; the *Yoga* aims at effecting this by processes of abstraction which are indifferent to morality; and the interests of the *Nyāya* and *Vaiśeṣika* are logical and metaphysical.

As little as the philosophies can the schools of *bhakti* find place for the development of a doctrine of morality. Among many differences in detail, Vaiṣṇavas and Śaivas alike, as well as the minor sects, place morality and good works merely among the means of cultivating *bhakti*, and rank them no higher than ceremonial observances of all kinds: good deeds are inadequate to produce *bhakti*, and similarly the possessor of *bhakti* is removed from other considerations. The logical outcome of these doctrines is the Tantric ritual,

¹ iii. 1.² Cf. O. Franke, *WZKM* xx. [1906] 852 ff.³ *Mahābhārata*, xii. clixviii. 2.¹ xlii. 27 f.² § 236.

in which, in conscious opposition to the normal standard of morality, the use of meat, involving the violation of the rule of *ahimsā*, the drinking of liquor, and promiscuous sexual intercourse are used as means of securing that unity with the deity which is the final aim of the system.

The philosophical systems and the popular religions thus set before them the ideals either of intellectual insight or of a mystic and ecstatic union with the deity, and neither could make any progress in developing a theory of morality or in distinguishing morality from ceremonial observance. Hence the development of customary law, as reflected in the numerous *Smṛtis* and *Nibandhas*, reveals no distinction between ritual and morality; the topic of penances is expanded almost without limits, but the sins to be expiated are as often ritual omissions as moral defects, and no discrimination is even attempted between them—a condition of thought natural enough in the *Brāhmaṇas*, but strangely stereotyped in India. Not only, however, had morality to suffer from competition with ritual; the rich and attractive *Nīti* literature, which is the source of books of so universal an appeal as the *Pañchatantra* and the *Hitopadeśa*, often in its rules of conduct enunciates the purest morality, but places alongside of such precepts, without consciousness of incongruity, rules of polity and practical expediency of doubtful or not rarely of positively immoral character.

LITERATURE.—For the Vedic period see J. Muir, *Original Sanskrit Texts*, v.², London, 1884; H. Zimmer, *Altindisches Leben*, Berlin, 1879; A. A. Macdonell, *Vedic Mythology* (= *GIAP* iii. 1), Strassburg, 1897; H. Oldenberg, *Die Religion des Veda*, Berlin, 1894; M. Bloomfield, *The Religion of the Veda*, New York and London, 1908; S. A. BERRIEDALE KEITH.

RIGHTEOUSNESS (Jewish). — 1. **General connotations.** — The connotation of the term 'righteousness' (צדק and צדקה) varies with the different epochs embraced in the literature of the Jews. To discuss the question of what acts, motives, intentions, ceremonies, symbols the Jew designated as falling into the category of righteousness, or as helping to bring it about, is to pass in review a host of cardinal Jewish theological teachings on all kinds of allied themes in all their developments and ramifications from the earliest days of the OT down to the latest spiritual product of the modernist Jew, viz. Liberal Judaism. In the OT alone the root צדק, counting all its inflexions, occurs over 500 times; and, over such a large space of time as the OT covers, it is impossible to assume that the term always stood for the same ideas to the various successive writers who used it. The Mishnaic, Talmudic, and Gaonic branches of Jewish literature, although admittedly dealing largely with legalistic lore, nevertheless contain a considerable element of theological matter—far more than the Christian theologian is prone to give them credit for; hence, as is inevitable, the term crops up there with great frequency and assumes a new set of meanings in accordance with the then prevalent Jewish views on life, death,

duty, religion, and God. The mediæval Jewish philosophers, as followers of either Aristotle or Plato, aimed at placing the ideal Jew and the ideal Judaism in quite a new setting unknown to the unphilosophical Jew of the earlier periods, and righteousness with them came to assume a new set of connotations. In the religious movement which arose among the Polish Jews of the 18th cent., and which has existed down to the present day under the name of 'Hasidism,' the leading ecclesiastic is invariably called the צדיק (*saddik*, 'righteous one' or 'saint'), and, as one of his chief qualities is an ability to work miracles, it is clear that further meanings have from time to time been imported into the term in question.

2. **In the early Pharisaic and Rabbinic literature.** — Throughout the whole vast realm of the Rabbinical literature the 'righteous' man, the צדיק, is judged by one invariable norm—conformity to the Tōrah. Righteousness is an uninterrupted series of loving and loyal obediences to the *mizvōth* of the Tōrah. These *mizvōth*, or 'precepts,' are 613 in number, according to the calculation of the Rabbis, who held that it should be the aim of every man who aspires after righteousness to come as near as possible to the carrying out of these 613 precepts both in letter and in spirit. The Tōrah was looked upon as a divine embodiment on earth. Expressions like 'Tōrah,' 'God,' 'Holy Spirit,' are often used interchangeably in the Talmud and Mishnah. To love the Tōrah with all one's heart and to cleave to it with all one's might was tantamount to the highest and closest communion with the Deity which was possible to the saint. Such was the ideally righteous life. This exaltation of the Tōrah into the apotheosis of all righteousness is already hinted at in Ec 12¹², but grows more apparent in much of the Pharisaic literature of pre-Talmudic times, notably the book of *Jubilees* and the *Psalms of Solomon*. Thus, Psalm xiv. of the latter work, after alluding to 'them who walk in righteousness in His commandments,' summarizes by saying: 'He has given us the Law for our life; and the saints of the Lord shall live thereby for ever.' To the minds of the Rabbis the highest type of righteousness is that evinced by what they called the *saddik gāmūr* ('complete saint'), the class who in T.B. *Shabbath*, 55a, are styled *mekūd-dashim*, 'sainted ones,' i.e. 'they who fulfil the whole Tōrah from its first letter (Aliph) to its last (Tāv).' The Tōrah was the embodiment of Judaism, the first and last word in earth and heaven, possessing nothing superfluous or unimportant. The world was actually called into being through the instrumentality of the Tōrah, and, should the Jew ever reach so low a pitch as to lay aside the Tōrah, then will the cosmos be broken up and revert again to its primeval state of chaos.

As has already been hinted, the degree of righteousness possessed by a man is dependent upon, and corresponds to, the degree of his conformity to the Tōrah. The latter situation involves far more than a mere theoretic attitude of mind or heart. It means much more than verbal or mental assent to this or that dogma. It comprehends the whole domain of human thought, character, and action. Man must not be content with merely following out the rigid letter of the law, a ritual holiness tied down to a book. His ideal must be a righteous living, which can be brought about only by a long-cultivated process of self-sanctification. In the Jewish view, man can never be, he can only become, righteous. To speak of 'Pharisaic self-righteousness' is to falsify the general trend of the Rabbinic ethics. Righteousness was a high peak which the Jew must, during his whole lifetime,

1 See Syriac version in J. Rendel Harris, *The Odes and Psalms of Solomon*, Cambridge, 1911.

patiently and painfully climb. It is an infinite task, an endless striving. With each achievement; there comes the need for a higher achievement; the summit reached only discloses to the eye farther summits to be reached and surmounted. With so high a standard in view, it is no surprise that the Rabbis, as we see from many indications throughout the Talmud and Midrashim, were none too quick to accord the title of 'righteous' to any but the most unquestionably approved. Righteousness was the exception rather than the rule; hence the mere fact of the existence of *one* righteous man at some time or some place might work an unexpected salvation for the world. Thus, T.B. *Yômā*, 38b, says: 'One righteous man can ensure the existence of the world' (based on Pr 10²⁵ 'but the righteous is an everlasting foundation,' as well as on 1 S 2⁹ 'He will keep the feet of his saints'). The same Talmudic passage, quoting Gn 1⁴ 'And God saw the light that it was good,' says that 'good' refers to the righteous man; and that the meaning is: 'God determined to let the world's light exist by reason of the merit of the righteous man who is unalloyed good.'¹ The same rarity of righteousness, and its incomparable prowess when found, is expressed in T.B. *Sukkah*, 45a: 'There are never less than 30 righteous men at any given period for whose sake the world escapes destruction.' But the world must exist. It is God's world, and He willed it. Only through it can the divine purpose 'which rolls through all things' be realized. Hence, with a glaring inconsistency which is often so characteristic of Talmudic ethics, the Rabbis declare, in a more generous vein, that the reason for the continued existence of the world is the fact that it is always being replenished by a succession of righteous men in every generation. 'No sooner is one righteous man removed from the world,' says T.B. *Yômā*, 38b, 'than he is succeeded by another righteous man as good as he; for thus Scripture says: "The sun also ariseth, and the sun goeth down" (Ec 1⁵).' But there is one supreme pitfall on the road to righteousness, one mortal enemy ever lying in wait to entrap the would-be righteous man in its snares. This is the *yezer ha-ra'* ('evil impulse'), whose challenge calls forth the most strenuous efforts on the part of its would-be victim. No righteousness is possible until this innate dragging-down impulse in man is subdued and scotched. But the genuine man of righteousness cannot but be the final victor over this wild beast within him, seeing that, as the Rabbis said (T.B. *Hagigah*, 15), 'God created the evil impulse and also its antidote, viz. the *Tôrāh*.' The righteous man is he who is, *par excellence*, saturated with *Tôrāh* and thus possesses within himself the instrument for dealing the deadly blow to the assailant.

3. Pauline and Rabbinic views compared.—The Christian theologian, reared on the polemics of Paul and his bitterly hostile denunciation of the *Tôrāh* as that through which 'cometh the knowledge of sin' (Ro 3²⁰), will probably be not a little astonished to notice the gulf which yawns between these cheery Rabbinic characterizations of the ever-open door to the attainment of righteousness and the despairing pessimism of the Pauline description of the hopeless sinfulness of all flesh, of man's complete bondage to sin (which is increased rather than decreased by the *Tôrāh*), and hence his utter inability ever to execute righteousness—except by quite another method, viz. a warm and living faith in Jesus Christ. 'Fulfil every jot and tittle of the *Tôrāh*,' say the Rabbis in effect, 'and thus you will become a saint.' 'No,' says Paul, 'not only is it vain and profitless to try to adopt such a course, but it is also wrong, because the more loyal you are to the *Tôrāh*, the worse man do you become.'

¹ See Rashi, *ad loc.*

To the Jewish scholar familiar with the theology of his own race the whole argumentation of Paul about righteousness, law, faith, and grace is as unacceptable as it is unintelligible.

'No Rabbinic Jew,' says C. G. Montefiore, 'could ever have accepted the force, or the argument, of that seventh chapter [of the Epistle to the Romans]. For it was precisely the Law which to his mind enabled him and all others to attain to any measure of human goodness' (*Judaism and St. Paul*, p. 103). Or, as another modern writer has said, 'That the *Tôrāh* was not such as Paul represented it to be is a statement which is true, both positively and negatively. He ascribed to it a character which it did not possess, and he left out of his description features which it did possess, and which were essential to it' (R. Travers Herford, *Pharisaism*, p. 194).

As a matter of fact, one is inclined to endorse Montefiore's view that Paul, living at the time he did, could not have been familiar with what is generally understood by the Rabbinic position, and therefore ought not to be regarded as a responsible exponent or critic of it. No Rabbinic Jew was ever worried, as Paul was obviously worried, by the thought that real righteousness was unattainable by him, seeing that the demands of the Law are too multifarious to be ever fully met by any one; nor is there any trace in Rabbinic literature of a distinction between 'righteousness of faith' (Ro 4¹³) and righteousness of works. Where there are works in the Rabbinic sense, there must be faith, seeing that the prime motive to the execution of works was the invincible belief in the divine origin of the *Tôrāh*, which is the revelation of God's will and the means for securing salvation to mankind; and such a belief must presuppose faith in the existence of a God, the simple faith such as Abraham possessed and which gave him the title to righteousness and a claim to the honour of all men. Faith and works together make up, for the Jew, the real as well as the ideal life, the life of righteousness before God. The guide to such a life is the *Tôrāh*, whose multifarious precepts the aspirant after righteousness has to fulfil both in letter and in spirit, but not in the way in which Paul (either consciously or unconsciously) travestied it when he spoke of the physical impossibility of any one obeying so burdensome a code. For, according to *Sifre*, 133a, 'even the truly righteous are not wholly without blame because they too may have committed some minor transgressions' (*abêrôth kâlôth*). It was the honest striving after righteousness that the Rabbis really had in mind. The seeker after the realization of the ideal of righteousness must resolve to order his life in the way leading to it. If he kept himself up to the same unswervingly high level, fulfilling the precepts of the *Tôrāh* 'through love and joy of soul' (T.B. *Sôtah*, 31a; T.B. *Shabbāth*, 88b), then this very scheme of life was righteousness—no matter what occasional minor lapses occurred in between. Even granted that the Rabbinic Jew may occasionally have felt the pain and pang of the consciousness of a duty omitted here and a duty omitted there, what was this in comparison with the ineffable rapture of what the Rabbis termed *simhah shel mizvâh* ('the joy of a precept fulfilled')—a joy which inevitably brought in its train other joys of other precepts fulfilled, thus making life an unbroken exercise in the joyous search after a true union with the Divine through a righteously-ordered life? It is of those who have attained this pitch of righteousness that T.B. *Sukkah*, 45b, says, 'They behold the Sh'khināh as in a clear mirror.' They are the righteous who, as is said in T.B. *Brākhôth*, 17a, will in the future life 'sit with their crowns upon their heads, delighting in the splendour of the Divine Presence.' To quote a phrase from Lazarus, *Ethics of Judaism*, righteousness is 'unlimited aspiration joined to unlimited capacity to reach higher and ever higher stages of achievement' (pt. ii. p. 280). Paul's haunting dread of the

constant danger of an intervening lapse plays no part whatsoever in this Rabbinic programme of righteousness sought and attained. His picture of Rabbinic Judaism is marred by its total ignorance of the Rabbinic doctrine of divine grace. The effort after righteousness is helped and encouraged by heaven, and this because of the very fact of man's frailty, because of the very fact that man's liability to err is so well within the divine ken. 'Let man but sanctify himself only a little,' runs a favourite Rabbinic belief, 'and then God will help him to sanctify himself much.' As a famous Jewish theologian of the 18th cent. (Moses Hayyim Luzzatto, 1707-47) has put it:

'What man has it in himself to do is to persevere in the pursuit of the true knowledge of the Divine and in a wisely-ordered constancy in holiness of action. God will be his guide on this path which he essays to tread, shedding His holiness upon him and keeping him holy. In the result, his upward striving will surely come to fruition by this very fact of his constant clinging to the Highest, seeing that the obstacles which nature puts in his way will be removed by the help and support given him from on High. It was this that King David meant when he said, "No good thing will He withhold from them that walk uprightly" (Ps 84¹¹)' (*Messillat Yesharim*, Amsterdam, 1740, ch. xxvi.).

Jewish theology looked upon Jews never as a series of isolated units, but always as one consolidated body, a community, a nation, an indivisible entity, shot through with one paramount ideal—righteousness before God. Hence it follows that a life of righteousness on the part of the individual Jew must always involve consideration for the wellbeing of others. Once dissolve the communal cohesiveness, and the communal holiness disappears. It is probably owing to some such conception as this that the term צדיק, 'righteousness,' came, in the Talmud, to mean 'charity' or 'alms-giving'—a meaning which has remained in popular use among the Jews down to the present day. The Qur'ān, it will be remembered, uses a similar word, from the common Semitic root, to denote 'alms-giving'—an undoubted borrowing from Judaism. Almsgiving is righteousness, because thereby does Jew help Jew to sustain himself and become one more servant of God.

When asked by Tinnius Rufus: 'Why does your God, being the lover of the needy, not Himself provide for their support?', R. Akiba replied: 'By charity wealth is to be made a means of salvation; God, the Father of both the rich and the poor, wants the one to help the other, and thus to make the world a household of love' (T. B. *Babba Bathra*, 10a, quoted by K. Kohler in *JE* iii. 668, s.v. 'Charity and Charitable Institutions').

4. The sufferings of the righteous; their destiny; their influence on the world.—As one of the cornerstones of Rabbinic theology is the doctrine of divine retribution—that God rewards those who keep His commands and punishes those who transgress them—it is only to be expected that the question of why the righteous suffer should crop up with frequency and find many attempted solutions. The Rabbis developed no systematic philosophy on the subject. Varying opinions are expressed in the Talmud and Midrashim—opinions echoed and shared with very little modification of the originals by the mediæval Jewish theologians and philosophers—but these are tentative and experimental, invested with no dogmatic binding importance. Yet it is true to say that they all cluster round one fundamental assumption which certainly is a prominent and dominating dogma of Rabbinic and later Jewish thought generally, viz. the reality of a future life. The present world and the world to come are indissolubly linked together. They are mansions of one and the same house. Death, to the righteous, is merely a passing from one life to another; therefore their sufferings in the present life ought really to give us no occasion for surprise or question, because in all probability a joyous recompense awaits them in the Beyond. Sorrow here will be joy there. Nay, the

greater their sorrow in the present existence, the surer is their abounding happiness in the existence which 'eye hath not seen.' The righteous *must* suffer here, because suffering is the one portal through which they are enabled to reach out to the final inheritance of heavenly bliss which their good works have earned for them. Illustrations of these teachings are the following:

In T.B. *Qiddushin*, 40b, R. Eliezer b. Zadok says: 'To what may the righteous be likened in this world? To a tree which stands on clean soil but one of whose branches inclines towards an unclean spot. Cut the branch away and then the whole tree stands upon cleanliness. In the same way, God brings pain to the righteous in this world in order that they may inherit the world to come, as it is said, "Though thy beginning was small, yet thy latter end shall greatly increase" (Job 8⁷). The analogy between death and the lopping off of one branch of a tree—the tree still remaining practically in its entirety—is a particularly happy one because it so well brings out the idea of the life here and the life hereafter as one continuous unbroken whole. In T.B. *Hōrāyōth*, 10, R. Nahman b. Rab Hida discourses thus: 'What is the meaning of the words in Ecclesiastes 8¹⁴ "There is a vanity which is done upon the earth; that there be just men, unto whom it happeneth according to the work of the wicked; again, there be wicked men, to whom it happeneth according to the work of the righteous"? The meaning is this: Ecclesiastes wants to tell us that happy are the righteous whose reward in this world is like the reward of the wicked in the next world (i.e. evil). Woe to the wicked whose reward in this world is like the reward of the righteous in the next world (i.e. good).'

Another aspect of the same train of theological thought is presented by the many Rabbinic assertions about the deathlessness of the righteous.

'The righteous even when dead are called living,' says a passage in T.B. *Brākhōth*, 18a; and the statement is supported by a Biblical text. 'They are like lost pearls of great price,' says T.B. *Megillāh*, 15a, 'lost only to their owner. They are not really lost, because they exist somewhere—and in all their original preciousness and beauty.' All these views are distinctly mirrored in ch. iii. of the Apocryphal Wisdom of Solomon. It is only 'in the sight of the unwise' that 'they seemed to die,' but in reality 'their hope is full of immortality' and, 'having been a little chastised' on this mortal earth, 'they shall be greatly rewarded' and God will find them 'worthy for himself.'

Invested with so inimitable a sanctity, it is no wonder that the righteous should shed a spirituality over their surroundings—a spirituality which is helpful and uplifting to others generally. The *Zohār* elaborates this theme repeatedly.

'Come and see what God does on behalf of the righteous, for although punishment is divinely decreed upon the world, it is held back for their sake and does not come,' runs a *Zohār* comment (on Gn 41¹). 'The righteous are the foundation and mainstay of the world,' says another *Zohār* passage (on Gn 41¹⁴). 'They create peace in heaven and peace on earth and thus unite the bridegroom to the bride,' runs a third (on Gn 41¹⁴), deeply tinged with erotic mysticism; whilst a fourth (*ib.*) tells of the great worth of the righteous in so far as they 'draw goodness down from above in order to do good to us and to all the universe.'

Quite in keeping with these sentiments are the Talmudic sayings to the effect that the coming of the righteous into the world means an influx of light and glory into the world (T.B. *Sanhedrin*, 113a), and that the death of the righteous works atonement for their people (T.B. *Mō'ed Kātān*, 28a; *Tanḥūmā*, *Aḥare Mōth*, 7). Glimpses of a wide universalist conception of this efficacy of righteousness are afforded by the Rabbinic comment on Is 26² 'Open ye the gates, that the righteous nation which keepeth truth may enter in'; it is not the righteous Israelite that is here referred to, but the righteous nation, any people among whom righteousness resides (*Sifra*, ed. I. H. Weiss, Vienna, 1862, ch. 13). There is a similar comment on the words, 'This is the gate of the Lord; the righteous shall enter into it' (Ps 118²⁰)—not priests, Levites, or Israelites, but the righteous, though they be non-Jews (*Sifra*, *loc. cit.*).

5. Views of the mediæval Jewish theologians.—The host of textbooks and manuals on ethics and philosophy produced by the brilliant Jewish literary men of the Middle Ages—notably those of the Spanish-Jewish school which flourished from the 10th to the 15th cent.—all adopt conformity to the *Tōrah* as the norm of righteousness. The interpretation of righteousness as given by the old

Talmudic masters was upheld and reiterated by those moralists and theologians, with, however, many an added variation in obedience to the demands of the changed conditions of Jewish life as well as out of a desire to bring the ideal of Jewish conduct more and more into line with the prevalent philosophy of the day. Typical illustrations are afforded by Bahya ibn Pakudah (who flourished at Saragossa in the first half of the 11th cent.) and Moses Maimonides (*q.v.*). That the ideal righteousness was attainable only by an unswerving loyalty to the Law was to Bahya an incontestable truth. But Bahya, like his somewhat younger contemporary Solomon ibn Gabirol (*q.v.*), was an adherent of the Neo-Platonic mysticism, and the picture that he gives in his famous work (*Duties of the Heart*) of the roads leading to the attainment of righteousness is tinged with many an idea borrowed from non-Jewish sources. In fine, Bahya envisaged Rabbinic righteousness from the standpoint of the general culture in which he was himself steeped. Maimonides was an Aristotelian. Rigid dogmatist as he was in his insistence upon the old Talmudic programme of the real and ideal life of righteousness, it is fairly obvious to every student of his writings that the picture that he had in his mind's eye of the Jewish saint and follower after righteousness was a compound of Rabbinism and Hellenism. One has a lurking suspicion that Maimonides' man of righteousness would have been a somewhat unintelligible character to a Rabbi of the Talmudic epoch.

6. Hasidic interpretations of righteousness.—In the 18th cent. a new religious movement known as Hasidism ('pietism') arose among the Jewish masses in Poland—a pantheistic movement in which the mystical element in Judaism, the teachings of the *Zôhar* and the Kabbalâ generally, overshadowed and largely crushed out the ceremonial and ritualistic formalism belonging to Rabbinic Judaism. The spiritual head of each Hasidic community was known as the *ṣṭṭ*, 'righteous one,' whose claims to the possession of righteousness on quite a superlative scale were based upon the peculiarly mystical connotation given to the term 'righteousness' in the *Zôhar*. Earth is an exact pattern of heaven, and between the 'upper' world of the Deity and the 'lower' world of humanity there is a constant and unbroken intercourse. This intercourse, in its intensest sense, can be called into being only by the ecstatic prayers of the *ṣṭṭ*, the man who wields real influence with the Divine Source of all life, the man whose prayerful 'righteousness' enables him to become a sort of mediator between God and the ordinary folk, bringing down to them from on high not only spiritual bliss but also material help, miraculous cures from disease, good luck in commerce, family joys, and such like. To select for special esteem a 'man of righteousness,' and to look upon him as a power able to bring heaven down to earth, argues a truly noble conception of Judaism's mission and function. But the movement unfortunately carried in itself the poison which proved its undoing. The desire to reach an ecstatic state of mind in prayer came often to be stimulated by artificial means, such as the excessive drinking of intoxicating liquors. Moreover, the *ṣṭṭ* would often seek to impose upon the credulity of his public by unjust claims to the possession of latent powers; and the gifts in money and kind which would come to him from an adoring clientèle could not but exercise upon him a demoralizing influence and serve to bring the whole institution into disrepute. Still, the *ṣṭṭ* has survived down to the present day in many a Hasidic community in E. Europe. Many a one has left behind him an honoured name and an honourable record; and among no sect of the

Jews was religion more a matter of life and death than among the disciples of this particular branch of Jewish mysticism.

7. In modern Judaism.—In modern times the 'orthodox' follower of Judaism finds his ideal of righteousness in a self-adaptation to the standards of living and thinking inculcated in the *Tôrâh* as interpreted by the great Rabbis of the Talmudic ages. Such a self-adaptation grows obviously more and more difficult—and hence more and more rare—with the flow of time and the consequent changes in social and political standards. Modern 'Reform' Judaism and modern 'Liberal' Judaism (*q.v.*) lay great stress on the vital necessity of making every allowance for these inevitable developments and changes in the thought and outlook of the Jew. The general science and theology of to-day as well as the dominant critical theories of the nature and authorship of the Bible obtain a large meed of acceptance among these Jewish 'modernists,' thus causing them to make many a breach with the old 'orthodox' ideal and materially altering their standards of Jewish religious values.

RIGHTEOUSNESS (Muhammadan).—Although righteousness—comprising faithfulness to one's pledges, loftiness of character, and sincerity towards oneself and others—was a wide-spread and highly esteemed quality among Oriental peoples, it does not occupy a very important place in their ethics. Indeed, in the scholastic ethical treatises of the Hellenistic and Neo-Platonic school—e.g., the fine Persian work of Naṣir al-Din Ṭūsî, the *Akhlâqî-Nāṣirî*—we find that righteousness becomes merged in justice, which is divided between the idea of the 'tempering' of feelings and passions so as to preserve the golden mean between two extremes and that of social justice, which belongs to political philosophy. On the other hand, in an ethical treatise of the ascetic type, like the *Bûstân* of Sa'adi, righteousness is passed over in silence, either as a virtue that is too elementary to require discussion or as being too cold and uninteresting for the sentimental mysticism of the Ṣūfis. History, anecdotes, and proverbs, however, as well as the stories and appreciations of travellers in the East, furnish much information on the subject of righteousness.

In the Qur'ân there are some important passages directed against certain disciples whom Muhammad terms 'hypocrites.' These people called themselves Musalmâns, but were treacherous, and wavered between the different parties. Their attitude aroused the indignation of the Prophet, and called forth some sayings of striking psychological interest. He reproaches them for continuing to consort with the unfaithful.

"We are believers," they say, but when they go aside with their devils [the adversaries of the Prophet] they say to them, "We are with you; we were but mocking these others!"¹ These are the people who wait to see the turn of events.

"If the victory be yours from God, they say, "Were we not with you?" And if success goes to the unbelievers, they say to

¹ Qur'ân, ii. 13.

them, "Have we not served you against the believers?" . . . They waver between the one and the other, belonging really to neither.¹

The Prophet condemns them severely :

'Verily the hypocrites are in the lowest depths of hell-fire, and thou shalt not find for them a help.'²

Most of the great personages in Muslim history have been men of upright character. The first *khalifah* (lit. 'successor' of Muhammad), Abū Bakr, received a surname which shows how much his uprightness was appreciated and the great importance that was attached to this quality. He was called *al-siddiq*, 'the righteous one,' 'the upright one,' 'the sincere one.' Celebrities of an opposite character are the exception in Islam. In the earliest times we might mention Mu'awiyah, a clever politician but a man of crafty disposition; and, in modern times, Muhammad 'Alī, who smiled on reading Machiavelli and said, 'Is that all?'

The proverbs offer some good formulas :

'Truth has abandoned me, and I have no longer a sincere friend'—a lament which recalls those of the Psalms: 'When truth arises it scatters falsehood.'³

They also contain some subtle psychological remarks :

'The unjust man gives nothing to anyone without getting double in return.'⁴

The fine collection of anecdotes called the *Mustatraf* contains interesting allusions to sincerity, probity, and righteousness :

'If you say "yes" about something, do it, for the word "yes" constitutes a debt which is obligatory on well-born souls.'⁵

This work quotes Aristotle on the merit of telling the truth :

'The finest discourse, according to this philosopher, is that in which the orator expresses himself frankly, and from which the audience receives benefit.'⁶

At the same time, the author of the *Mustatraf* does not carry the love of justice and truth beyond certain limits. There are times when the practical spirit gains the ascendancy :

'To be just towards some one who is not just' may have disadvantages. 'In this case the unjust measure will be the better course.'⁷

And farther on he raises a point in casuistry which recalls the famous disputes of the Jesuits and the Jansenists.

'It is said,' he writes, 'that lying is laudable when its aim is to reconcile persons who have quarrelled, and that truth is blameworthy when it carries prejudice.'⁸

He gives this opinion as interesting, but takes no side.

If we turn to the accounts of historians and travellers, we find numerous passages in praise of the righteousness of Orientals, especially of the peasants and nomads. This virtue in them is connected with the ancient patriarchal traditions. Let us give two or three passages at random.

'The Arabs,' says A. de Lamartine, 'carried respect for hospitality to the point of superstition. Their most irreconcilable enemy found shelter, security, and even protection as soon as he succeeded in touching the cord of their tents or the hem of their wives' dress. They were brave, generous, heroic. All the virtues, even all the tenderness of chivalry, unknown in Europe until later, had passed into their customs from time immemorial.'⁹

Baron d'Avril¹⁰ cites the mediæval romance of 'Antar'¹¹ and the travellers Niebuhr and Guarnani, on the fidelity of the Arab Bedawin in the matter of hospitality. In 'Antar' a young shepherd takes a horseman into his cave to shield him from the pursuit of his enemies. These arrive and demand that he give him up. The shepherd says: 'Withdraw forty cubits and I shall make him come out.' He then changes clothes with the

man and makes him flee. The hostile Arabs, recognizing the stratagem, admire the fidelity of the shepherd and let him go free.

An Englishwoman, Mrs. Hortestet, who has written a very interesting account of her adventures at the time of the Sepoy rebellion, praises the integrity of the Musalmāns of India, and relates how her elephant-driver, although himself a Musalmān, hid her so that she might escape the rebels.¹

Such examples might be multiplied indefinitely.

RIGORISM.—**I. Early phases.**—In its philosophical sense the term 'rigorism' is applied to that form of ethical idealism which rates reason as the dominant power of the moral life, to the exclusion or subordination of the element of sensibility. Rigorism is thus the ethics of reason. The roots of rigorism lie far back in early Greek philosophy, notably in the naturalistic Cynic and in the transcendental Stoic schools. By the Stoics especially was rigoristic theory developed. The moral rigour of Christianity came to be widely embodied in the discipline and demands of the various monastic orders. As thus applied, rigorism stands in opposition to laxity. Monasticism (*q.v.*), as a system, is founded on a profession of rigour. In the East Basil the Great did much to promote ascetic stringency and disciplined monasticism within the Church. But, in spite of rigid regulations, Eastern laxity in morals grew. In the West the great Benedictine system soon came to absorb all the monachism of that region. It maintained a rigorous discipline, but was more practical and less contemplative than the monasticism of the East. Ascetic rigour assumed a dualistic view of the world (see art. ASCETICISM [Christian]); matter and spirit were to it incompatible. Its fault was to rest content with a negative ideal. The rigours of overstrained asceticism often passed into self-indulgence or were attended by spiritual pride and fanaticism. The Middle Ages were marked by the rigorous poverty of St. Francis and the fanatical scourgings of the Flagellants (*q.v.*)—a strange externalizing of the doctrine of penitence. The moral experience of the monastic life came at length to be fairly well represented in the 'seven deadly sins' and in the significant presence of the moral lassitude, inertness, and discontent which were summed up in the word 'accidie' (*q.v.*).

2. Jansenist asceticism.—Rigorism was applied, in the 17th cent., to the Port Royalists as a byword from the outset of their history. They were called 'rigorists' because, at the Port Royal des Champs establishment, life was very simple and austere, and free from the grave laxity which had invaded the cloistered life. The term 'rigorist,' however, came to stand for a Jansenist. Jansenism (*q.v.*) in its piety, which was of an ascetic rigour, stood over against the worldly spirit of Molinism (*q.v.*). The increasing hold of Jansenism, and the power of the Port Royal press, led to firm persecuting measures against the rigorists. Pascal, says Voltaire, 'was intimately connected with these illustrious and dangerous recluses.'² Pascal (*q.v.*) sought an ethical valuation of his ascetic rigour in the strength brought to man through mortification of his pride and desires, carrying his view, however, to an extreme. The Protestant view of mortifications was only that of their being a means in the warfare against the flesh, but not in themselves meritorious. The rigorism of Christianity is dissolved in the love which is the fulfilment of the law.

3. The Kantian view.—In modern times rigorism is chiefly associated with Kant (*q.v.*), who used it to denote an ascetic or anti-hedonist view of ethics.

The rigorism of Kant, however, was by no means without lapses of momentary character in hedonistic and utilitarian directions. The happiness of others could be to him an end which was also a duty. But, speaking generally, the rigorism of Kant rejected from the outset every hedonistic reference as a motive to morality, which must be free of every eudæmonistic taint or trait (see artt. EUDÆMONISM, HEDONISM, UTILITARIANISM). This initial rigorism proved somewhat one-sided and extreme, since a certain happiness or satisfaction is the natural result of the fulfilment in morality of all the highest instincts of man. Great, no doubt, was the service rendered by the rigorism of Kant, in making the moral independent of empiric motives of utility and of all externalities, and in basing it on reason, whose demands are unconditionally obligatory and universally valid. But his conception of reason, however just in this connexion, was too abstract and formal, too isolated from feeling and desire; hence it lacked the force which should have belonged to it. The basis of his rigorism was too narrow and subjective, and non-percipient of the concrete character and relations of reason. Such an idealism (*q.v.*) was too transcendental, and lacking in vital elements. Its merit lay in its form; its defect was in its content, from which sensibility had been quite shut out. Hence the Kantian rigorism has had to be transformed by later idealists, as by Hegel, T. H. Green, E. Caird, and others, from the standpoint of organic connexion.

RITSCHLIANISM.—I. **LIFE OF RITSCHL.**—Albrecht Benjamin Ritschl was born in Berlin in 1822. He studied theology in Bonn, Halle, and Berlin (1839–44). Unsatisfied by the mediating theology (Nitzsch, Müller, Tholuck), he felt the influence of Hegel, and, without becoming fully a Hegelian, he attached himself to the school of Baur. After six weeks' military service and a term at Heidelberg, he went to Tübingen, where in 1846 he issued his first writing, *Das Evangelium Marcions und das kanonische Evangelium des Lukas*. His defence of the theory of the dependence of Luke's on Marcion's Gospel gave great satisfaction to Baur. In 1846 he passed his examination as a licentiate in theology at Bonn, and soon after became a privatdocent. His monograph on the origin of the Old Catholic Church (*Die Entstehung der altkatholischen Kirche*, Bonn, 1850) showed that he was forsaking his old teacher; and the breach, which took place in 1856, was made public in the second edition of this work in 1857. In 1852 he had become an extraordinary,

and in 1859 he became an ordinary, professor; he removed to Göttingen in 1864, where he lectured not only on Biblical subjects, but also on dogmatics, ethics, and symbolics. Calls to Strassburg and Berlin were refused by him, and he died at Göttingen in 1889.

Ritschl's fame as a theologian rests mainly on his book, *Die christliche Lehre von der Rechtfertigung und Versöhnung*, published at Bonn in three vols., 1870–74, 2nd ed. in 1882, 3rd in 1888, 4th in 1895–1902 (an unaltered reprint of 3rd, cheap ed. in 2 vols. in 1910). In the first volume (Eng. tr., *Critical Hist. of the Christian Doctrine of Justification and Reconciliation*, Edinburgh, 1872) he gives the history, in the second the Biblical material, and in the third (Eng. tr., *The Christian Doctrine of Justification and Reconciliation*, Edinburgh and New York, 1900) the constructive statement. Less noted, but still valuable, is his *Gesch. des Pietismus*, 3 vols., Bonn, 1880–86. Lesser works are his lecture on Christian perfection, *Ueber die christliche Vollkommenheit*, Göttingen, 1874; *Unterricht in der christlichen Religion*, Bonn, 1875, a summary, difficult to understand, of his system (Eng. tr. by A. T. Swing in his *Theology of Albrecht Ritschl*), and *Theologie und Metaphysik*, Bonn, 1881 (a defence of his epistemology). Lectures and essays were collected in two volumes (*Gesammelte Aufsätze*, Freiburg, 1893–96) by his son Otto, who also wrote his *Life* (*Albrecht Ritschls Leben*, 2 vols., do. 1892–96).

Only after thirty years' activity as a teacher did Ritschl begin to gather a school around him in 1875; and from 1881 onwards he was exposed to the cross-fire of criticism from orthodoxy and pietism on the one hand, and from liberalism on the other. In his treatment of the problem of the Old Catholic Church he asserts in opposition to Baur the essential unity of the attitude of the apostles to Christ, the insignificance of Jewish Christianity for, and the dominant influence of Gentile Christianity on, the development of Old Catholicism. His attitude to pietism is unsympathetic; and yet he succeeds in showing its historical significance, while maintaining that its merits have been exaggerated, and that it did contain reactionary Catholic elements. Even this work has the characteristic excellence that he seeks to get to the root of doctrines and institutions in living piety. His influence as a theologian, however, does not rest on these works, but on his discussion of *Justification and Reconciliation*, which contains an exposition of his dogmatic system.

II. **THEOLOGY OF RITSCHL.**—Ritschl's position may be fixed in relation to that of Kant, Hegel, and Schleiermacher on the one hand, and to physical science and literary and historical criticism on the other. While he shared Kant's practical tendency, as is shown in the prominence that he gives to the Kingdom of God as one of the foci of the ellipse to which he compares Christianity, he does not accept the subordination of religion to morality, but strives to assert its independence. His reaction against Hegelianism is seen in his rejection of speculative theism, his condemnation of the intrusion of philosophy into Christian theology in ecclesiastical dogma, and his antagonism to religious mysticism as a philosophically determined type of piety. The emotionalism of mysticism too is uncongenial to him; and, while according a place to emotion in religion, he yet does not follow Schleiermacher in making feeling the distinctive feature of religion, or in emphasizing dependence as its characteristic relation, as he lays stress rather on the assertion of personality over against nature. By his theory of value-judgments he seeks to ward off the intrusion of the principles or the methods of science into the realm of religion

as well as the dominion of philosophy there. Although trained in the school of Baur and for a time an adherent, he does not fully recognize the transforming influence on theological method which literary and historical criticism exercises and cannot but exercise. In throwing all the weight that he does on historical revelation, he fails to recognize how much its supports in the literary records have been exposed to attack by this movement.

Ritschl's system may be described by four characteristics: (1) religious pragmatism, (2) philosophical agnosticism, (3) historical positivism, and (4) moral collectivism; and, even if we cannot present the whole content of his teaching in the discussion of these features, we shall emphasize what is distinctive of it.

I. Religious pragmatism.—(a) *Definition of religion.*—We must first of all examine his definition of religion. He refuses to make it dependent on morality or to mix it up with metaphysics, and claims for it a realm of its own. He wrote before the modern branches of knowledge—religious psychology and the comparative study of religions—had proved how universal and necessary a function of mankind religion is; and doubtless, had he been influenced by these disciplines, his definition would have been more objective and less subjective. Unlike Kaftan, who attempts to define the common element, Ritschl, on the ground that such a definition would be too vague, seeks to determine the common tendency in religion, what in some religions may be so rudimentary as to be scarcely perceptible and can be detected only because it is seen more fully developed in other religions.

'In all religion,' he says, 'the endeavour is made with the help of the exalted spiritual power which man adores, to solve the contradiction in which man finds himself as a part of the natural world, and as a spiritual personality, which makes the claim to rule nature.'¹

He recognizes an intellectual factor in religion.

'The religious world-view in all its kinds has the aim, that man in some degree distinguishes himself in value from the appearances which surround him and from the operations of nature which press in on him. All religion is interpretation of the course of the world in whatever compass it is recognized—in the sense that the exalted spiritual powers (or the spiritual power) which rule in and over it, maintain or confirm for the personal spirit its claims or its independence against the limitations by nature or the natural operations of human society.'²

As regards this world-view, he is altogether pragmatist.

'It can be shown regarding all other religions, that the knowledge of the world, which is made use of in them, is not constituted theoretically without interest, but according to practical objects.'³

This position the most recent thought supports; it is now generally admitted that religion does not primarily gratify intellectual curiosity, but satisfies practical necessity. In it man seeks some good for himself, however he conceives it (goods, goodness, God) by aid of the gods (or God). Ritschl's definition of the good is, however, too limited, and accords with a temporary phase rather than a permanent feature of human thought and life.

(b) *The ideal religion.*—The tendency of all religion is completed in Christianity as the ideal religion.

'Christianity is the monotheistic, completely spiritual, and ethical religion, which, on the basis of the life of its Founder as redeeming and as establishing the Kingdom of God, consists in the freedom of the children of God, includes the impulse to conduct from the motive of love, the intention of which is the moral organization of mankind, and in the filial relation to God as well as in the Kingdom of God lays the foundation of blessedness.'⁴

The ideal more than completes the tendency; the spiritual element of the filial relation to God and

the ethical element of the motive of love go beyond the removal of the contradiction between man's knowledge of himself as a spiritual personality and his sense of his dependence on (as part of) nature; and yet, in working out his system, Ritschl gives prominence to the consciousness of dominion over the world as resulting from the confidence in God's universal providence which the assurance of God's forgiveness of his sins brings to the child of God.

(c) *Doctrine of sin.*—While he represents redemption and the Kingdom of God as the two foci of the ellipse of Christianity, in his conception of redemption an inadequate estimate of sin and its consequences results in an insufficient emphasis on the cancelling of the guilt and the deliverance from the power of sin; and accordingly his representation of the Christian's salvation does not correspond with what has been most distinctive of the evangelical type of Christian experience. He denies the doctrine of original sin, and regards sin as pardonable because due to ignorance; and yet he affirms the reality of guilt as disturbing the relation of man to God, and of the sense of guilt as the feeling which corresponds to this fact. The standard for the judgment of sin is not a primitive perfection of man, or even an absolute law of God, but the historical purpose of God, the Kingdom of God, of which sin is the contradiction, and to which the totality of the sins of mankind may be regarded as a rival rule in history. There is no present wrath of God against sin; it is only a future possibility—the resolve of God to end the existence of those (if any) who finally oppose themselves to His Kingdom; there is, therefore, nothing in God corresponding to man's fear of His judgment or man's view of the evils of life as God's punishment of sin. God can and does pardon sin, so long as it is ignorance—i.e. so long as God's purpose is not finally rejected.

(d) *View of forgiveness.*—As is the view of sin, so also is the view of forgiveness. While there is no hindrance either in God or in man to forgiveness, God is moved to forgive men—i.e. to restore their filial relation with Himself—by His intention to establish the ethical community of men, or the Kingdom of God on earth. This forgiveness (or justification, for Ritschl identifies the two) comes to men in the work of Christ as the Founder of the Kingdom of God. He maintained His religious unity with God through all tests and trials of it even unto death; and the relation to God, thus maintained, He reproduced in His community. This common good the individual believer makes his own by faith, being dependent both logically and historically on the community (to this point we must return in dealing with Ritschl's moral collectivism). Reconciliation, as the removal of man's distrust and hatred of God, and not as any change in God, is consequent on forgiveness or justification. The believer has reached the certainty of salvation only when, conscious of his relation to God in Christ as justified and reconciled, he is also conscious that his relation to the world has changed; and dominion over has taken the place of dependence on the world. In his exposition of Christian experience Ritschl thus returns to his starting-point in the tendency which he finds common to all religions.

Much had to be rejected which has hitherto been regarded as essentially Christian, in order that this conception of religion might be consistently maintained throughout the presentation of Christianity. One-sided as it is, it can be understood as a rejection of and opposition to naturalism, which reduce man to an insignificant result of the cosmic evolution, and even as a recoil towards the Kantian exaltation of moral personality from an absolute idealism, which makes the individual man but a

¹ *Rechtfertigung und Versöhnung*⁴, III, 189, Eng. tr., p. 199.

³ *Ib.*, p. 186, Eng. tr., p. 195.

⁴ *Ib.* p. 13 f., Eng. tr., p. 13.

moment in the evolution of the Idea or Spirit. As the heart makes the theologian, so the theology of Ritschl reflects his independent, vigorous, even aggressive, personality.

2. *Philosophical agnosticism.*—This religious pragmatism—this subordination of cognition to conation, of the interpretation of reality to the practical purposes of man, the maintenance of his own personality despite nature's challenge—results in, and so explains, the second characteristic of his theology, viz. its philosophical agnosticism.

(a) *Phenomenalism.*—The speculative interest must be repressed, and the practical must dominate. Ritschl cares to know only what he needs to know. The attitude is similar to that of Confucius, who declined to discuss the subject of spirits or of the future life as not immediately useful. An individual peculiarity here betrays itself as well as a reaction from the extremes of Hegelian speculation. About Ritschl's metaphysics (in fact only epistemology) we need not concern ourselves, as it is really an afterthought, and not the basis of his system. His philosophical attitude may be very briefly indicated. It is at bottom a phenomenalism, which, while not denying the reality of the noumena, and even asserting that the noumena are apprehended in the phenomena, refuses, though not consistently, to pass from the empirical apprehension (the *Vorstellung*) to the rational conception (the *Begriff*) of reality. He is ever trying to arrest theological inquiry when it passes from the phenomenal to the noumenal. Inconsistently he deduces the phenomenon, the Kingdom of God, from the noumenon, the love of God; but consistently he permits theology to discuss only the phenomenon, the work of Christ, and tries to stop its course before it reaches the noumenon, the person of Christ, although, it must be added, not quite effectively.

(b) *Speculative theism rejected.*—Unlike Schleiermacher, in whom mystical and metaphysical elements blended, Ritschl throws all the stress on the experience of the moral personality. He is not less opposed to pantheism than to naturalism or materialism; and over against both he sets a definite personal monotheism, which, however, he rests on an exclusively religious basis (with an inconsistent lapse to a moral argument), rejecting entirely speculative theism either as incompetent to deal at all with the problem or as offering only a solution which is irrelevant for Christian faith; for his mind wavered between those opinions regarding the question whether philosophy could or could not reach any conception of God. In denying the competence of philosophy to reach a world-view, he not only had the whole history of philosophy against him, but he could not even maintain his own position consistently, for he did attempt philosophically to defend Christian monotheism against both pantheism and materialism; and he did seek to show the inadequacy of the theistic arguments. His polemic against speculative theism was carried much farther than his purpose to defend the Christian idea of God against speculative modifications required, and than the truth in the matters in dispute justified. Further, he himself, in arguing against Strauss for a personal God, asserted the rational principle in both the cosmological and the teleological arguments.

'A law [*Gesetz*], a thing posited [*Gesetztes*],' he says, 'points back the understanding to the positing [*setzenden*] Spirit and Will, the moral order of the world to a law-giving [*gesetzgebenden*] and purposefully guiding Author.'¹

While in the first edition of his great work Ritschl accepted the argument for the existence of God in Kant's *Critique of Judgment*, and maintained that

¹ *Rechtfertigung und Versöhnung*⁴, III. 219, Eng. tr., p. 231. Observe the play on words.

'the acceptance of the idea of God is not a practical belief, but an act of theoretical knowledge,'¹ in the third edition he concluded the same argument with the contradictory statement:

'This acceptance of the idea of God is, as Kant observes, practical faith, and not an act of theoretical knowledge.'²

His inconsistency is due to conflicting aims. Distrusting philosophy, and desiring to assert the sole claims of faith, he yet wanted theology to be regarded as a science, and not to be ignored by philosophy. Refusing the alliance, he tried to ward off the antagonism of philosophy.

(c) *Theory of value-judgments.*—To the statement just quoted he adds:

'If, accordingly, the correspondence of Christianity with reason is hereby proved, it is always with the reservation that the knowledge of God finds expression in another kind of judgment than that of the theoretical knowledge of the world.'³

Here he gives his alternative solution of the problem of the relation of philosophy and theology, reason and faith. There need be neither alliance nor antagonism; there may be neutrality. Even if philosophy and theology be both competent to deal with the doctrine of God, their conclusions need not be put in rivalry or conflict, because due to the exercise of different mental functions upon one object. Thus we come to the well-known, but much misunderstood, theory of value-judgments.

To meet a common objection, it may be affirmed at the outset that the value-judgment is not less true, and is not meant to be taken as less true, than the theoretical judgment; it is just as much a judgment about reality, and not illusion, as is the other. The distinction between the two kinds of judgment Ritschl expresses as follows:

'Now to seek the difference in the sphere of the subject, I recall the double way in which the spirit further appropriates the sensations excited in it. These are determined in the feelings of pleasure and pain, according to their value for the ego. On the other hand, the sensation is in the representation judged in respect of its cause, of what kind it is, and what is its relation to other causes.'⁴

The first way of regarding an object—its relation to, and value for, the self—yields the value-judgments; the second—its nature and relations—the theoretical judgments. As, however, even in knowledge there is, and cannot but be, interest, we must distinguish between accompanying and independent value-judgments. In science we have the former, in religion the latter.

'Independent value-judgments are all perceptions [*Erkenntnisse*] of moral purposes, or hindrances to such purposes [*Zweckwidrigkeiten*], in so far as they excite moral pleasure or pain, especially as they set the will in motion to appropriate good [*Güter*] or to protect itself against what is contrary.' Not only are moral judgments value-judgments; so also are religious. 'Religious knowledge moves in independent value-judgments, which refer to the position of man in regard to the world, and excite feelings of pleasure or pain, in which he either enjoys his dominion over the world accomplished by God's help, or grievously feels the lack of the help of God for that end.'⁵

Religious value-judgments are concerned not with individual feelings, but with the universal relation of man to God as helped by God to gain dominion over the world; they are not merely subjective as feelings are, but objective—i.e. true for all who stand in this relation to God. What is true in the theory is that moral and religious judgments are conditioned by personal character and experience, unlike the theoretical judgments, in which methods of reasoning, common to all sound minds, are applied to data of perception apprehended by all sound senses. The pure in heart shall see God. If a man will to do the will, he shall know the doctrine. Although Ritschl's unguarded statements of the theory offer some

¹ P. 192.

² P. 214, Eng. tr., p. 224 f.

³ *Ib.* p. 214, Eng. tr., p. 225.

⁴ *Ib.* p. 194, Eng. tr., p. 203 f.

⁵ *Ib.* p. 195, Eng. tr., p. 206.

justification for the charge, the theory does not necessarily involve an intellectual dualism—that, e.g., the philosophically true might be the theologically false, or *vice versa*. The unity of all truth must be maintained, and it must be our endeavour so to unify our knowledge as to approach that unity as closely as we can; and Ritschl was wrong in attempting to arrest the process. But this does not exclude our recognizing that different methods of knowledge are necessary for different objects. The use that Ritschl made of the theory to prevent the thorough intellectual interpretation of the objects of Christian faith is to be condemned—not the theory itself. Religion by its very nature is concerned with ultimate reality. Its quest can end only when the eternal God is its refuge and underneath are the eternal arms; and therefore to use a theory of religious knowledge to shut up faith within the phenomenal, and to shut it out of the noumenal, is to deny it its full and abiding satisfaction. In religion the value of the object for the subject may be the starting-point, but its goal can be the assurance of its reality, and its harmonious relation to the totality of reality; e.g., Christ loses His value for faith as God, if there lingers the doubt, and there lacks the assurance, that He is God in reality.

(d) *Ecclesiastical dogma*.—Rejecting the aid of philosophy on the one hand, and limiting the scope of religious knowledge to value-judgments on the other, Ritschl is necessarily opposed to the method of ecclesiastical dogma. In the first volume of his great work he gives an account of the history of the doctrine, and dissents not from results only, but also from methods; in the third volume he criticizes as he constructs. It is Harnack, however, who in his *Dogmengeschichte*⁴ (3 vols., Tübingen, 1909, Eng. tr., *Hist. of Dogma*, 7 vols., London, 1894-99) has most fully carried out the Ritschlian condemnation of ecclesiastical dogma. Into the details of this criticism it is not necessary for the present purpose to go.

(e) *The doctrine of Christ*.—An instance, but a crucial one, of the application of the Ritschlian method is the doctrine of Christ. Here we can test most thoroughly its adequacy as an interpretation of Christian faith. The place that Ritschl assigns to Christ in the Christian religion puts it beyond doubt or question that he means to affirm the divinity of Christ in reality and truth, although as a value-judgment, i.e. on the basis of Christian experience. His criticism of ecclesiastical dogma is very severe; and he intends to affirm that Christ is divine even more adequately and correctly than it has done. Whatever we may think of his result, we must assume this intention, if we are to do him justice. He modifies the current teaching about the work of Christ, from which, he insists, we must start in dealing with the person in four respects: (α) he puts personal vocation for office; (β) he lays stress on the likeness of the Founder and the members of the Christian community on the ground that 'what Christ is for us must be verified in the transfer of His worth to us';¹ (γ) consistently with the prominence that dominion over the world has in his conception of Christian life, he subordinates the priestly (or Godward) and the prophetic (or manward) function to the kingly; (δ) instead of assigning the three functions to different periods, he insists that there is a continuity in the exercise of all the three in the state of humiliation and of exaltation. The perfect fulfilment, in doing as in suffering, of His vocation yields us the ethical estimate of His person. His vocation being what it is, the revelation of God to man and of man to

God, i.e. wholly within the mutual relation of God and man, the religious valuation inevitably follows on the ethical in the predicate of His divinity. He who in all respects perfectly realizes the relation of God to man and of man to God is God. As He in His vocation identifies Himself with God, so God in His mind and will identifies Himself with Him.

'The personal purpose of Christ for Himself has the same content as is included in God's purpose for Himself, which Christ knew and willed as such; and accordingly He as the bearer of the divine purpose for self (*Selbstzweck*) is in anticipation known and loved by God.'¹

Even although He brings men into the same relation to God as He holds Himself, He nevertheless in our religious estimate of Him as God is unique.

'As He as the Founder of the Kingdom of God, or as the bearer of the moral dominion of God over mankind, is the Unique One (*Einzig*) in comparison with all others who have received from Him the same final determination (*Zweckbestimmung*), so is He that Being (*Grösse*) in the world in whose self-end God makes His own eternal self-end in an original manner operative and manifest, whose whole activity in His vocation accordingly forms the content of the complete revelation of God present in Him, or in whom the Word of God is a human person.'²

So far many theologians would heartily go with Ritschl, but he bids them stop here. Christ is given to men as the Revealer of God that they may believe in Him; and this faith in Him can be disturbed only by vain attempts to offer a scientific explanation of His relation to God His Father. That the theologian cannot arrest his inquiry at this point Ritschl himself shows by going beyond it at a later stage of his discussion. The reasons for which the predicate of divinity may be ascribed to Christ are: (α) His grace and truth, (β) His dominion over the world in His independence of it alike in action and in passion, (γ) His success in establishing on earth a community in which He reproduces His own relation to God, which, original in Him, is imparted to others by Him. At this point Ritschl makes his speculative attempt to get from the phenomenal to the noumenal, from the temporal to the eternal. His statement must be given in his own words, lest a paraphrase might put too much or too little into them:

'The unity and the similarity with God, which the Kingdom of God must command in order to be understood as the objective of the love of God, belongs to the same only in so far as it is evoked by the Son of God, and subordinates itself to Him as Lord. Accordingly, the love of the Father is in the first place directed to the Son of God, and only for His sake to the community of which He is the Lord. If these relations, further, are eternally posited in the loving will of God, then it arises from this our knowledge, that the specific significance of Christ for us is not already exhausted in this, that we value Him as a revelation temporally limited. But it further belongs to this—that He as the Founder and as the Lord over the Kingdom of God, is in the same way the object of the eternal knowledge and volition of God as is the moral union of men, which through Him becomes possible, and which possesses in Him its type, or rather that He, in the eternity of the divine knowledge and volition also precedes His community.'³

This statement might mean only an ideal pre-existence of the community as of the Founder. While Ritschl, on the one hand, re-affirms his conviction of the mystery of the relation of the Son to the Father—'the eternal divinity of the Son of God is completely intelligible for God Himself alone'⁴—yet, on the other, he asserts the necessity for our thought of setting aside as regards God the difference which we can make in man between willing and fulfilling, since we cannot conceive a volition of God, as it were, eternally suspended from action; and accordingly he draws the inference:

'Christ exists for God just such as ['als derjenige, 'als der'] He is revealed to us in temporal limitations. But this only for God; for as pre-existing, Christ is hidden from us.'⁵

He cannot mean that the historical circumstances of the person and work of Christ exist eternally

¹ *Rechtfertigung und Versöhnung*⁴, iii. 425, Eng. tr., p. 450 f.

² *Ib.* p. 426 f., Eng. tr., p. 451.

³ *Ib.* p. 441, Eng. tr., p. 468 f.

⁴ *Ib.* p. 443, Eng. tr., p. 471.

⁵ *Ib.*

¹ *Rechtfertigung und Versöhnung*⁴, iii. 395, Eng. tr., p. 418.

for God as they are recorded for us; for he does recognize that as pre-existing Christ is a mystery to us, and cannot, therefore, be in all particulars just as He is known in history. What characterizes Him as divine, that and that only we may suppose to exist eternally in God. This falls short but moves in the direction of the doctrine of the Trinity as speculatively construed, in which stress is laid on the necessity of a personal object of the love of God. An eternal object of knowledge and volition might be ideal; must not an eternal object of love be personal? And does not Ritschl in the statement quoted speak of God's love as first directed to the Son? The conclusion of the matter seems to be that he goes as far in affirming real pre-existence as his phenomenalism allows.

3. *Historical positivism.*—Rejecting the aid of philosophy in giving objectivity to the judgments of value, Ritschl seeks to escape the subjectivism which his theory of knowledge in religion seems to involve by his historical positivism. What is often forgotten in the criticism of Ritschl is that the judgments of value do not give themselves their own content; in them through religious appreciation there is intellectual apprehension of an objective reality; and that reality is given in a historical revelation.

(a) *Attitude to revelation.*—In his attitude to historical revelation there are both attachment to, and detachment from, his intellectual environment. With Hegel he values history in relation to the moral and religious life of man, as the 18th cent. with its abstract naturalism had failed to do. To this his religious pragmatism also led him; the religion which achieves dominion over the world must have firm footing in the world. Nevertheless, though he was for a time an adherent of the school of Baur, and preserved the methodical critical discipline of that school, one must admit that his treatment of the Scriptures is not always critical; his exegesis is sometimes dogmatic rather than historical. Further, he isolates the Christian religion and its forerunner, the Hebrew, from the general movement of man Godward in human history; he is unaffected by the influence of religious psychology and the comparative study of religions, which dominate the religious-historical school.

(b) *Use of the Scriptures.*—Ritschl does not use the Bible, as the Protestant scholastics had done, as an inspired textbook of theology. His conception of religion limits his appreciation of revelation; the divine supply in revelation corresponds to the human demand in religion. His conception of the Kingdom of God, as we shall see, is not historical, but dogmatic, and may be taken as an instance of how he uses the Scriptures as the basis of his system. The person and work of Christ as the Revealer of God, and so the Founder of the Kingdom of God—that is his dominating interest. But he recognizes the value of the interpretation of Christ by the primitive community. As the Founder of the community, He can be understood only as we know what the community, in its historical beginnings, thought of Him; and the inquirer must even assume the same relation to Him within the community of his own time.

'The full compass of His historical reality one can reach only from the faith in Him of the Christian community; and even His intention to found the same cannot be understood historically in its completeness if one does not subordinate oneself to His Person as a member of that community. . . . It would be a falsely understood purism if one were to prefer the less developed indications of Jesus in this respect to the forms of the apostolic representations. Further, one will be justified in not levelling down the most developed forms of the Pauline structure of thought, but in maintaining them erect in theological use, because they serve the purpose of expressing most distinctly the contrast of Christianity and Judaism.'¹

Thus the idea of the Kingdom of God is interpreted not at all eschatologically, and not only ethically, but soteriologically. The Pauline circle of ideas is included in the historical revelation. This does not involve, however, that Ritschl sets up Paul as an infallible theological authority. When he does not agree with Paul, he does not hesitate in setting aside his teaching; an apostolic idea is not necessarily a theological rule.¹ There is even something arbitrary in his use of the Scriptures. A doctrine is true, not because it is in the Bible, but because it verifies itself experimentally and practically.

(c) *Pragmatic view of the Bible.*—Ritschl does not deal with the apologetic problem of proving the value and authority of the Scriptures. He writes for and within the Christian community, for which the problem does not press for solution. With all that is included in Christian evidences he does not concern himself. Maintaining as he does the independence of religion, it is probable that the answer which he would have given to the question of the authority of the Scriptures would have been that they are the records of the historical revelation which meets the religious need of man. Here again is pragmatism; what works as religion is true as revelation. His historical positivism explains his antagonism to the two types of religion which depreciate history—mysticism and philosophical theism. The problems that now press on us most are those for which he offers no solution directly.

4. *Moral collectivism.*—As a historical revelation gives the content to the value-judgments (the formal principle), so the Kingdom of God gives the regulative idea (the material principle, as the doctrine of justification had been at the Reformation).

(a) *The primacy of the doctrine of the Kingdom.*—It is true that he speaks of the Kingdom of God and redemption as the two foci of Christianity; but there can be no doubt that in reality he subordinates the doctrine of redemption to the doctrine of the Kingdom as the means to the end on account of 'the recognized teleological character of Christianity.'² The account which he gives of the relation in the mind of Christ between the two ideas points to such a subordination:

'The purpose recognized by Christ of the universal moral Kingdom of God evoked in Him the recognition of and the resolution for the kind of redemption which He accomplished by maintaining His fidelity to His vocation, and His blessed communion with God in suffering unto death.'³

So also does his speculative deduction of the Kingdom of God from the love of God as its necessary object. Further, in his treatment of sin and salvation the conception of the Kingdom of God dominates; he is concerned not with man's actual condition of sinner, but with his possible destination as a citizen of the Kingdom of God. While Christian theology must be pistobasic, resting on personal faith, bibliospheric, getting its contents from the Scriptures, and Christocentric, having Christ as its standard, it is as the Founder of the Kingdom (the King) that He reveals God (the Prophet) and redeems man (the Priest).

(b) *The Kingdom defined.*—It has already been pointed out that Ritschl's use of the idea of the Kingdom of God is quite unhistorical, as the recent discussions have shown. In his *Unterricht* he so defines the term as to bring to it as the centre the two foci:

'The Kingdom of God is the highest good assured by God to the community founded by His revelation in Christ; yet it is regarded as the highest good, only inasmuch as at the same time it is reckoned as the moral ideal, for the realization of which the members of the community bind themselves to one another by a definite mode of reciprocal action.'⁴

¹ See *Rechtfertigung und Versöhnung*, III. 841, Eng. tr. p. 359.

² *Ib.* p. 9.

³ *Ib.* p. 10.

⁴ *Unterricht in der christl. Religion*, p. 8, Eng. tr., p. 174f.

¹ *Rechtfertigung und Versöhnung*, III. 8, Eng. tr., p. 8.

While the religious good (justification and redemption) is put in the fore-front, yet the second clause shows that the religious good is subordinated to the moral ideal. It is quite in accord with Ritschl's religious pragmatism, with its emphasis on action rather than thought or feeling, with its detachment from philosophy and its attachment to history, that his theology should issue in this moral collectivism. His affinity is with Kant rather than Hegel or Schleiermacher; but he advances beyond Kant's individualism to collectivism. It is to the community that the religious good of justification or redemption belongs, and the individual appropriates the good for himself only as he reckons himself a member of that community and within it sets himself, by actions from the motive of love, to the realization of its common ideal. If redemption is a means towards the Kingdom of God, Ritschl is quite consistent in maintaining that the individual can make this good his own only as he enters the community and accepts its common tasks. While, of course, he is not thinking of an ecclesiastical organization exclusively, he so far identifies Church and Kingdom that it is the same community of believers which as the one worships God and as the other acts, in the relations of its members, from love, the Church being as it were the Kingdom on its knees with hands folded in prayer, and the Kingdom the Church on its feet with the tools for work or weapons for warfare in its hands. As identical with the Kingdom, Ritschl would say of the Church: 'Extra ecclesiam nulla salus.' The individual is not forgiven by God's grace, immediate and direct, when he repents and believes; but these isolated acts of justification 'are only the temporal appearances of the one eternal resolve of justification for mankind for Christ's sake';

for 'there is one Divine predestination according to which out of the totality [*Gesamtmasse*, total mass] of the human race the totality [*Gesamtheit*, organic total] of the new creation will be evoked.'¹

Ritschl does not in these words teach a restricted election, as he admits that God's wrath conditions God's love only as the resolve of God finally to extinguish the life of those who ultimately oppose themselves to His purpose in the Kingdom; but still it is the community rather than the individual that is his interest as a theologian. Further, in developing this argument he maintains that God's purpose is realized in nations rather than in individuals, so that it is in his citizenship and consequent participation in the national religion that the individual becomes a member of the Christian community; and that only the historical nations of the West seem capable of realizing that purpose. This is a trait characteristic of German theology, which since the days of Luther has identified nation and Church, patriotism and piety, in a way which recalls the national religion of the OT rather than the individualism (already reached by Jeremiah and Ezekiel) and, therefore, the universalism (presented even in the Deutero-Isaiah) of the NT.

(c) *The κοινωνία of the Spirit.*—We may fully recognize the merit of Ritschl in emphasizing Christian character and conduct against a mere religious dogmatism or emotionalism (orthodoxy or pietism) and in giving prominence to the Christian community. The NT demands the fruits of the Spirit as the test and proof of faith; and the love of the Father through the grace of the Son has for Paul its issue in the *κοινωνία* of the Spirit (not the individual possession of a common Spirit, but the common participation in one Spirit). Yet Ritschl is one-sided; Christian experience as the realized relation of God and man has its own intrinsic value, and not merely as the *δύναμις*, of

which character is the *ἐνέργεια*, even although faith is energetic in love (Gal 5⁶); and the Father, as Christ has taught us, cares for, seeks, and saves each and all of His children. Ritschl's antagonism both to mysticism and to pietism is due to this moral collectivism.

III. *THE SCHOOL OF RITSCHL.*—Although Ritschl had many grateful scholars, it was not till after thirty years' activity that his school began to be formed. It was a letter of W. Herrmann (Jan. 1875) that Ritschl himself regarded as the beginning of a common theological movement. Herrmann had not been a student of Ritschl, but of Tholuck and Julius Müller (both mediating theologians), and yet he confessed that Ritschl's writings had had a decisive influence on his theological development.¹ In 1876 Harnack extended his influence to Leipzig. Schürer as editor of the *Theologische Literaturzeitung* in 1876 also made it the chief organ of the school, until it came to be represented also by the *Christliche Welt* in 1887, and the *Zeitschrift für Theologie und Kirche* in 1891. From 1876 appeared the *Zeitschrift für die Kirchengeschichte*, of which Ritschl himself was an editor and contributor. By the influence of Stade there was formed in Giessen, in 1878, a theological faculty largely inspired by Ritschl, and including, besides Stade, F. Kattenbusch, E. Schürer, A. Harnack, and J. Gottschick. In Göttingen itself Ritschl did not enjoy any general popularity; but many of the best students came to him. Although his personality impressed those who came into contact with him, his influence was exercised mainly by his writings, and continued as great after his death as during his life. His theology was dominant in Berlin, Marburg, Tübingen, Bonn, Jena, and (for a short time) Leipzig. Hermann Schultz and J. F. T. Brieger, though not his students, associated themselves with Ritschl. To the first generation of his students, besides those that are mentioned above, belong J. Kaftan, T. Häring, P. Lobstein, and H. H. Wendt; to the second circle of those who had either heard Ritschl himself or been influenced by some of his followers belong S. Eck, O. Kirn, F. W. B. Bornemann, F. A. Loofs, M. W. T. Reischle, P. M. Rade, Otto Ritschl, F. Traub, J. Weiss, and even Troeltsch, who has, however, since followed other paths. By the end of the 19th cent., however, divergences of interest and conviction showed themselves, and the unity of the school was broken. Some of the older Ritschlians, whose interests were critical, have gone over to the religious-historical school; others, whose interests were in dogmatics, have attached themselves to the modern positive school, which seeks, on the one hand, to retain the orthodox inheritance, and yet, on the other hand, by restatement to meet the demands of literary and historical criticism. It must be admitted then that, while Ritschl has permanently enriched theology in his writings, the school which was formed by his influence has run but a short course.

1. *Features common to all disciples.*—Although ready to acknowledge their indebtedness to Ritschl, yet his disciples are also so given to asserting their independence even by criticism of the master that Pfeiderer has asked the question:

'Do not their opinions now already differ in so many ways that it appears perilous to bring them together under a common label?'²

Nevertheless there are several common features:

[1] The exclusion of metaphysics from theology; [2] the rejection consequently of speculative theism; [3] the condemnation of ecclesiastical dogma as an illegitimate mixture of theology and metaphysics; [4] the antagonism shown to religious mysticism as a metaphysical type of piety; [5] the practical

¹ O. Ritschl, *Abrecht Ritschls Leben*, II. 267.

² *Die Ritschlsche Theologie*, p. 77.

¹ *Rechtfertigung und Versöhnung*, III. 123, Eng. tr., p. 128 f.

conception of religion; [6] the consequent contrast between religious and theoretical knowledge; [7] the emphasis laid on the historical revelation of God in Christ as opposed to any natural revelation; [8] the use of the idea of the kingdom of God as the regulative principle of Christian dogmatics; [9] the tendency to limit theological investigation to the contents of the religious consciousness.¹

Not all the adherents of the school have concerned themselves with all these features; some were attracted to Ritschl in one way, others in another; and yet there is such organic unity in Ritschl's system that we may claim in these respects a general agreement.

2. Herrmann.—Herrmann has in his *Metaphysik in der Theologie* (Halle, 1876) and in his *Die Religion im Verhältnis zum Weltkennen und zur Sittlichkeit* (do. 1879) treated with vigour and rigour the relation of metaphysics to theology. His book, *Der Verkehr des Christen mit Gott* (Stuttgart, 1886, 1892, Eng. tr., *The Communion of the Christian with God*², London, 1906), which may be described as a religious classic, expresses unreservedly, in its critical discussion, the antagonism to religious mysticism, and yet in its positive treatment of the relation of the Christian to God through Christ it is marked by what many would call mysticism; for it very closely resembles what has been called Paul's faith-mysticism. It is true that it confines 'the inner life' of Jesus, in which the Christian is found of God, to the historical representation; but it is to empty the book of meaning to suppose that Herrmann confines communion with God to the recall, however vivid, of the earthly Jesus, and excludes experience of the heavenly Christ as a present reality, although in the form of 'the inner life' of Jesus. It is against a metaphysical and a non-historical mysticism that Ritschlianism sets itself; but it goes beyond the NT when, as in Ritschl and Herrmann (not Kaftan), it excludes the Risen and Exalted Lord as the object of knowledge. In the same book Herrmann develops the doctrine of revelation most fully. Without excluding, and ultimately admitting, the Scriptures generally as the channel of revelation, he holds that it is in the fact of the 'inner life' of Jesus that God primarily reveals Himself to us. His moral and spiritual perfection, on the one hand, and His grace to sinners, on the other, give us certainty of, and confidence towards, God as love. He so lays stress on the personal experience of inward transformation by this 'inner life' of Jesus as God's act of revelation that he obscures the truth that there is preserved and diffused in the Holy Scriptures the permanent and universal historical revelation, as the ever available source of this personal experience (see *Der Begriff der Offenbarung*, Giessen, 1885, *Warum bedarf unser Glaube geschichtl. Thaten?*, Halle, 1884). While Ritschl offers no proof of the truth of the Christian revelation, Herrmann answers the question as follows:

'There are two objective bases on which the Christian consciousness of communion with God rests. First, the historical fact of the person of Jesus. This fact is a part of our own reality. . . . Secondly, the fact that the moral demand lays claim to ourselves. . . . God brings it about that the good ceases to be a grievous problem for us, and begins to be the element in which we live. . . . Other objective bases there are not for the truth of the Christian religion.'²

There is a warm glow of personal devotion to Christ in Herrmann which is somewhat lacking in Ritschl himself. He has latterly given more attention to the subject of Christian ethics (*Römisch-kathol. und evangel. Sittlichkeit*, Marburg, 1900 [Eng. tr., in *Faith and Morals*, London, 1904], *Ethik*, Tübingen, 1901, *Die sittlichen Weisungen Jesu*, Göttingen, 1904).

3. Kaftan.—Kaftan, to whom Ritschl was indebted for the term 'value-judgment,' often takes

¹ Garvie, *The Ritschlian Theology*², p. 23 f.

² *Verkehr des Christen mit Gott*², p. 80 f., Eng. tr.², p. 102 f.

quite an independent course. He admits a mystical element in Christian faith, and objects to the narrowing of the term by Ritschl and Herrmann; he insists that 'the highest good of Christianity is the kingdom of God above the world,' and that consequently 'to this religion there is accordingly equally essential a mystical side, turned away from the world, and an ethical side turned towards the world.'¹

Kaftan also differs from Ritschl in his definition of religion. Instead of describing the common tendency, he claims to be able to determine the common element—man's feeling of dissatisfaction with this world, and the search for a satisfying good, either natural or moral, in or beyond the world. On the postulate by the practical reason of a highest good he rests his proof of the truth of Christianity. In *Das Wesen der christl. Religion* (of which the first edition appeared in 1881) he deals with the nature of the Christian religion; in the companion volume, *Die Wahrheit der christl. Religion* (Basel, 1888, Eng. tr., *The Truth of the Christian Religion*, 2 vols., Edinburgh, 1894), he offers the proof of its truth: (a) first of all he gives a criticism of ecclesiastical dogma in order to expose its failure as an apologetic; (b) next, insisting on the primacy of the practical reason, he rejects the traditional speculative method; (c) lastly he offers his own proof.

(a) 'Only the Christian idea of the kingdom of God as the chief good of humanity, answers to the requirements which must be made of the true, rational, absolutely valid idea of the chief good.' (b) There has been 'a special revelation of that kingdom of God in history.' (c) As these two postulates of the practical reason have been fulfilled in the Christian revelation, 'the reasonableness and the absoluteness of the faith reposed in it' have been proved.²

As the second stage of the above argument shows, Kaftan also attaches importance to the historical character of revelation. He has turned his attention to the restatement of the Christian faith in the new intellectual situation (*Glaube und Dogma*, Bielefeld, 1889, *Brauchen wir ein neues Dogma?*, do. 1890, *Zur Dogmatik*, Tübingen, 1904; specially noteworthy is his *Dogmatik*, do. 1897). As these titles show, he does not accept Harnack's restriction of the term 'dogma.' What he means by it is the intellectual expression of the contents in faith.

4. Other writers.—Kaftan and Herrmann represent the more positive tendency in the Ritschlian school, and on many points of doctrine desire to come to an understanding with the evangelical theology; still more so Häring. Harnack, whose manifold interests and activities as a scholar cannot be noted here, represents the more critical tendency, and his point of contact with the school has already been discussed. So also does Wendt. Popular accounts of the theology of the school are W. Bornemann, *Unterricht im Christentum* (Göttingen, 1890), and, although more advanced in its critical standpoint than the school as a whole, Harnack, *Das Wesen des Christentums* (Leipzig, 1900, Eng. tr., *What is Christianity?*, London, 1901). Reischle discusses the same problem as Harnack in his pamphlet 'Der Glaube an Jesus Christus und die geschichtliche Erforschung seines Lebens' (*Aufsätze und Vorträge*, Tübingen, 1906) but from a more positive standpoint. His *Christliche Glaubenslehre* (Halle, 1902) is a brief summary of Christian doctrine of a constructive tendency. He, as it were, stretched one hand backward in his helpful exposition of the theory of value-judgments in his *Werturteile und Glaubensurteile* (Halle, 1900), and one forward in his critical discussion of the methods of the now dominant religious-historical school in his *Theologie und Religionsgeschichte* (Tübingen, 1904). Ritschl's son Otto has also expounded the

¹ *Das Wesen der christl. Religion*², Basel, 1888, p. 262 f.

² *The Truth of the Christian Religion*, ii. 325, 383 f. The writer has not the German original within reach to give the references to it.

theory of value-judgments in his pamphlet *Ueber Werthurtheile* (Freiburg, 1895). Both he and Reischle have done much to remove misconceptions and to introduce modifications so as to get rid of objections to this characteristic feature of the Ritschlian theology.

IV. *THE INFLUENCE OF RITSCHL*.—What gave Ritschl his influence over so many notable scholars and thinkers? His strong personality and his wide learning would not have sufficed, had not the theological situation given him his opportunity. The service which he rendered, according to Rade,¹ was fivefold: he broke the Hegelian yoke; he ended the confusion and compromise of the mediating theology; he was more fully the exponent of Luther than the Neo-Lutherans; he was truly a Biblical theologian; and he had regard both to the interests of the Church and to the claims of practical life.

1. *The new theological position*.—Since his influence in his school was dependent to some extent on these temporary conditions, the changed intellectual situation has necessarily lessened that influence, as the differences within the school itself show. Three changes may be specially mentioned. There has been a philosophical revival—a neo-idealism which takes due account of the progress of knowledge. The literary criticism, of which Ritschl did not take full account as it existed in his own day, has developed into a historical criticism, against the negative conclusions of which Ritschl's system is not protected, but which, as has already been indicated, has affected members of his school; so that those who have not identified themselves with the tendency have been compelled to offer a defence of their faith against it. Probably the greatest contrast between the theological position in Ritschl's and the present time is due to the study which is now given to the religions of the world (the history of religions, the psychology of religion, the comparative study of religions).

2. *Weaknesses of the Ritschlian teaching*.—Weaknesses in his theology, apart from its irrelevance to the problems and needs of the hour, have been more clearly recognized with the lapse of time. The epistemological foundation is not solid rock, but shifting sand. His conception of religion seems now far too narrow, too much affected by 'the personal equation,' in view of the extensive and varied knowledge which we now have of the religious life, especially what we may call its enthusiastic aspects, the place and power of emotion in it. While he accepted the modern critical position as regards the Bible, he was not thorough in the application of the method, and so much of his exegesis now seems arbitrary, even dogmatic, imposed on rather than evoked from the text. For those to whom the evangelical type of Christianity makes the strongest appeal Ritschl's treatment of sin and salvation must now seem quite inadequate. For those to whom the Bible, even when studied from the modern standpoint, still approves itself the literature of divine revelation and human redemption the treatment of the Holy Scriptures by Ritschl must often prove disappointing; there seems much more to be got out of this treasure-house than he has found in it. To the mystical type of Christianity Ritschl must be an offence; and it must be admitted that he does not recognize what is true and worthy in mysticism. The speculative type of Christian will not be satisfied with the essays in speculation that he inconsistently made, and will desire such an interpretation of reality as Ritschl even rudely turned his back upon. To the practical type of believer he will make his strongest appeal, although there

are many practical problems of to-day of which he betrays no knowledge whatever.

3. *Ritschl's merit*.—Has his theology then only a historical interest, and no present value? So vigorous a personality in a masterly way shaping a system which, apart from some inconsistencies, has an organic unity so lacking in much of the theological thought of to-day commands respect. In a time when there are so many cross-currents in religious thought and life much is to be learned from the independence and solidity of his religious attitude; and against the many challenges of religion his assertion of its place and power as giving sure footing to the soul is reassuring. This appeal to the Christian experience can never lose its force. That he rescued theology from its precarious support in philosophy and discovered for it securer foundations in history remains his merit, even if historical criticism makes the defence of his position more difficult than it ever appeared to be to him. From him too theologians may learn to construct as they criticize—to advance to new positions not by disregarding the thought of the past, but by rethinking and, when needful, re-shaping that thought. A theology will bear richest fruit for the future which strikes deepest root into the past. Here learning is the servant of insight. Ritschl's stress on the Christian community is not only in harmony with the modern conception of society as organic, but is a necessary corrective of an individualism within the Christian churches which has not yet recognized the significance of that conception. While his representation of Christianity as an ellipse with two foci may well be forgotten, his inability to maintain it is a convincing proof of the need of some one regulative principle in theology. If modern scholarship forbids his unhistorical use of the term 'Kingdom of God,' some other conception more central still must be sought for. Can it not be found in the Christian doctrine of God as expressed in the apostolic benediction—the love of the Father through the grace of the Son in the community of the Spirit?

4. *British appreciation*.—In Britain Ritschlianism at first had a very hostile reception; but soon the tide turned, and, although the movement never gained any popularity, and no prominent British theologian has avowed himself a disciple of Ritschl, the interest has continued and the appreciation increased; it is probable, however, that, as in the land of its birth, so here, the influence of the school is at an end; but in the matters mentioned above it has made a permanently valuable contribution to Christian thought.

LITERATURE.—To the works mentioned in the article the following books on the movement may be added: C. Fabricius, *Die Entwicklung in Albrecht Ritschls Theologie von 1871 bis 1889 nach den verschiedenen Auflagen seiner Hauptwerke dargestellt und beurteilt*, Tübingen, 1909; J. Thikötter, *Darstellung und Beurtheilung der Theologie Albrecht Ritschls*², Bonn, 1887; C. von Kögeler, *Grundriss der Ritschli'schen Dogmatik*², Leipzig, 1903; G. Ecke, *Die theol. Schule A. Ritschls und die evangel. Kirche der Gegenwart*, Berlin, 1897, i. (specially valuable); J. Wendland, *Albrecht Ritschl und seine Schüler*, do. 1899; W. Herrmann, *Der evang. Glaube und die Theologie Albrecht Ritschls*, Marburg, 1896; A. Titius, 'Albrecht Ritschl und die Gegenwart,' in SK lxxvi. [1913] 64 ff.; F. Kattenbusch, 'Von Schleiermacher zu Ritschl,' in *Reden und Aufsätze*², Harnack, 'Ritschl und seine Schule,' in *Reden und Aufsätze*², do. 1909, ii. 845 ff.; F. Traub, 'Ritschls Erkenntnistheorie,' in ZTK iii. [1894] 91–129; J. Steinbeck, *Das Verhältnis von Theologie und Erkenntnistheorie*, Leipzig, 1898; R. Esslinger, *Zur Erkenntnistheorie Ritschls*, Zürich, 1891; M. Scheibe, *Die Bedeutung der Werturtheile für das religiöse Erkennen*, Halle, 1893; H. Lüdemann, *Das Erkennen und die Werthurtheile*, Leipzig, 1910; R. Wegener, *A. Ritschls Idee des Reiches Gottes*, do. 1897.

While some of the above works are critical in their attitude, the following are hostile: O. Pfleiderer, *Die Ritschl'sche Theologie*, Brunswick, 1891; F. H. R. Frank, *Zur Theologie A. Ritschls*², Leipzig, 1891; C. Stange, *Der dogmatische Ertrag der Ritschli'schen Theologie nach Julius Kaftan*, do. 1906; F. Nippold, *Die theol. Einzelschule im Verhältnis zur*

¹ RGG iv. 2386.

evang. Kirche, Berlin, 1898 (in opposition to this B. Stade, *Die Reorganisation der theologischen Fakultät zu Giessen*, Giessen, 1894).

There are two French books worth mention: H. Schoen, *Les Origines historiques de la théologie de Ritschl*, Paris, 1893; M. Goguel, *Wilhelm Herrmann et le problème religieux actuel*, do. 1906.

The following books in English are in order of publication: L. Stählin, *Kant, Lotze, and Ritschl*, tr. D. W. Simon, Edinburgh, 1899; J. Orr, *The Christian View of God and the World*, do. 1898; J. Denney, *Studies in Theology*, new ed. London, 1896; Orr, *The Ritschlian Theology and the Evangelical Faith*, do. 1897; A. E. Garvie, *The Ritschlian Theology: Critical and Constructive*, Edinburgh, 1899, 21902; A. T. Swing, *The Theology of Albrecht Ritschl*, New York and London, 1901; Orr, *The Progress of Dogma*, London, 1901, *Ritschlianism: Expository and Critical Essays*, do. 1903; J. K. Mozley, *Ritschlianism*, do. 1909; E. A. Edghill, *Faith and Fact: A Study of Ritschlianism*, do. 1910; Garvie, *The Christian Certainty amid the Modern Perplexity*, do. 1910, chs. viii. and xv.; G. Halliday, *Faith and Values: a Study of the Ritschlian Method*, do. 1914; R. Mackintosh, *Albrecht Ritschl and his School*, do. 1915.

ROMAN RELIGION.—The religion of the Roman people is a very complex subject; and this complexity is mainly due to the extraordinary development of a small city-State (with its own religious ideas and organization, and composed of families and *gentes* each practising its own simple religious rites) into a great Empire, which gradually absorbed all the peoples, civilized and semi-civilized, lying around the basin of the Mediterranean, and which at all times was ready to admit the religious ideas and cults of foreign peoples, under certain conditions, within the circle of its own religious operations. It will be obvious that, if by the Roman people we understand the inhabitants of the Roman Empire after its complete development, no sufficient account of it can be given in a single article; but, if our subject be limited to the religious ideas and practices of the Roman citizens who acquired and governed that Empire down to the 2nd cent. A.D. and the age of the Antonines, it will be possible to treat of it with tolerable succinctness. Even considered thus, however, it must be taken historically, as a growth, for at no period of its existence can it be said to be wholly free from foreign influences; and the real native ideas of the primitive Romans had, by the time when Roman literature begins, either become entirely obsolete or survived only in a fossilized form, in rites of which the original meaning had been completely forgotten. The position of Rome at the mouth of the chief river of central Italy, and on the west coast, which offers suitable harbours to immigrants, laid the city open at a very early period to the invasion of these foreign influences; and we now know that even before the 8th cent. B.C. this coast was settled by Greeks, bringing with them works of art, in which their own religion and mythology were depicted. Then the Etruscan people, whose origin is still matter of doubt, and who were themselves largely indebted for their religious ideas both to Greece and to Egypt, spread over the same region, and added to the confusion. Later a fresh influx of Greek rites and deities gained entrance into the city, and in many cases transformed the native ones in ways which make them extremely difficult to detect; and, finally, the religions of the East began to make their appearance, and rapidly gained ground as the Roman population became less pure in descent and less Italian in feeling.

It will be convenient at once to indicate the periods into which, by the common consent of inquirers, the history of the Roman religion falls. They are four: viz. (I.) from the earliest times (no more definite expression will serve) down to the end of the regal period—an age lasting, we may presume, for several centuries, in which the religion was in the main that of the city-State proper, answering to the *jus civile* in the sphere of law, and in fact constituting a part of it; (II.) from the reign of the last king, Tarquinius Superbus, to the war with Hannibal—a period of nearly three centuries (507–218 B.C.), in which the increasing commercial and political intercourse with foreign peoples and the spread of the Roman dominion in Italy brought in new worships and began to cause the neglect of the old ones; (III.) from the Hannibalic war to the age of Augustus, in which the same process was continued with ever increasing strength, while the intellectual awakening under the influence of Greek philosophy sapped the faith of almost all educated men in the efficacy of their cults, and in the very existence of their deities; (IV.) from the age of Augustus to that of the Antonines—a period which is marked, on the one hand, by a partially successful attempt to revive the old cults and, on the other, by the introduction of a new one with a wide political meaning, viz. the worship of the Emperors. The characteristics of these four periods will be traced in detail in the course of this article; but it will be necessary first to give some account (a) of the sources of information on which we depend for our knowledge of the Roman religion, and (b) of the principal modern works in which those sources have been utilized with good results.

(a) *Ancient authorities.*—The most important evidence that we have of the original character of the religion of the Roman State is contained in the surviving religious calendars, or *Fasti*, of which we have fragments of about thirty, and one almost complete. These exist chiefly on stone, but for four of them we have to depend on written copies of lost originals; they were edited together by Mommsen in vol. i. of the *Corpus Inscriptionum Latinarum*, and we have the benefit of a revision of this edition by the same hand, published in 1893, with one or two newly found fragments. They all date from between 31 B.C. and A.D. 51, and thus represent the calendar as revised by Julius Cæsar; but most fortunately the skeleton of the original Republican calendar, first published, according to Roman tradition, in 304 B.C., is fully preserved in them, as Mommsen conclusively showed. This skeleton is easily distinguished from later additions by the large capital letters in which it is inscribed or written in all the fragments that we possess; it gives the days of the month with their religious characteristics as affecting State business (e.g., *F.* = *fastus*, a day on which legal business may lawfully be transacted, and *N.* = *nefastus*, on which such business is unlawful and ill-omened), and the names of the great religious festivals which concern the whole State, including the *Kalends*, *Nones*, and *Ides*, or days of the new moon, the first quarter, and the full moon. Excluding the latter, we have the names, in a shortened form, of forty-five great festivals, from the *Equirria* on March 14 to the festival of the same name on Feb. 27, the last day of the old Roman year; and, though it is not in every case by any means possible to recover the meaning of the name, yet it is obvious that these festivals, thus placed by an absolutely certain record in their right place both in each month and in the year, must be the foundation of all scientific study of the religious practices of the Roman State, taken together with the additions in

smaller capitals, which date from the Republican period. (For fuller information about the Fasti see Mommsen's commentary in *CIL*¹ i. 283 ff., condensed in Fowler's *Roman Festivals*,¹ p. 11 ff.)

This invaluable record would, however, be of little use to us, were it not for other evidence of a varied character supplied by Roman literature and by Greek writers on Roman subjects, to which must be added a few *additamenta* preserved in the Fasti themselves, and chiefly in those found at Praeneste and in the grove of the Fratres Arvales. Two men of real learning, who lived and wrote at the end of the Republican period and at the beginning of the Empire, would, if we only had their works complete, furnish us with an immense amount of detail, both on the public religious calendar and on the religious life of the family and *gens* at Rome: these are Varro and Verrius Flaccus, who, though deeply affected by ideas in reality quite foreign to the Roman religion proper, took great pains to investigate the facts and the meaning of the ancient rites. Earlier writers are of comparatively little use to us, for Roman literature began in an age when men were far more interested in politics or in Greek philosophy than in a religion which was fast losing its meaning; and it was only with the revival of that religion under Augustus that scholars, poets, historians, and writers on law began to interest themselves in it once more. The works of Varro and Verrius have come down to us only in a fragmentary condition or embedded in the works of later writers, such as Servius, Nonius, Gellius, Macrobius, Plutarch, and some of the Christian Fathers, especially Tertullian and Augustine. Three other writers of the Augustan age, whose works are more completely preserved, need special mention: Livy, who in religious matters, like Varro and Verrius, made some use of the books of the Pontifices, the sacred archives of the old religion; Dionysius of Halicarnassus, who was for some time in Rome, and occasionally records what he saw as well as what he had learnt of Roman rites; and Ovid, whose six books of poetical commentary on the Fasti contain a great deal that is curious and interesting about the festivals from January to June, mixed up with stories of late Greek origin and fanciful explanations which call for very cautious criticism. Of inscriptions and works of art we have very few until the Empire, and the few we have are difficult of interpretation; nor is it likely that modern excavation will produce anything that will throw much light, except indirectly, on the problems with which we have to deal. Thus it may fairly be said that at every point in the detail of this religion we are met by very serious difficulties, owing not only to the fragmentary condition of our authorities, but to the difficulty of explaining and piecing together what survives of them (Wissowa, *Religion und Kultus der Römer*, ch. i.).

(b) *Modern research.*—Until the 19th cent. very little progress had been made in this work of reconstruction and interpretation; but the new impulse given by Niebuhr to the study of early Rome produced a long series of valuable researches, and the names of Hartung, Ambrosch, Schwegler, Preller, Marquardt, Jordan, Wissowa, and Aust are now familiar to all students of the subject. Of these the most important are Marquardt, who first struck the right note by taking the facts of the worship of the Romans as the only legitimate basis for arriving at any conclusions as to their religious ideas (*Römische Staatsverwaltung*, iii., ed. Wissowa, Leipzig, 1885); Preller, whose *Römische Mythologie* (ed. Jordan, Berlin, 1881–83) is indispensable, but needs careful handling, in-

asmuch as it is based on a conception of the Roman deities as impersonations of natural forces which is now generally admitted to be in great part misleading; and Wissowa, whose *Religion und Kultus der Römer* (Munich, 1902 [2nd ed., much improved, 1912],¹ vol. v. pt. 4 of Iwan Müller's *Handbuch der klassischen Altertumswissenschaft*) is at present the most complete, and at the same time the most cautious, account of the subject that we possess, its only considerable defect being the author's unwillingness to recognize the value of the tentative efforts of folklorists and anthropologists to explain Roman ritual by the comparative method. To these works must be added the edition of the Fasti by Mommsen already mentioned, and many other valuable contributions by the same great scholar made in the course of his indefatigable researches into Roman history; and, lastly, the *Ausführliches Lexikon der griechischen und römischen Mythologie*, ed. Roscher, in which the Roman articles, though of varying value, taken as a whole, indicate an important advance in our knowledge. The new ed. of Pauly's *Real-Encyclopädie*, by Wissowa, has already re-handled some of the articles in Roscher's work.

We proceed to consider in succession the four periods into which, as has been explained, the State religion may be historically divided. In dealing with these, and especially with the first, the characteristics of the Roman attitude towards the supernatural should be made tolerably plain.

I. FIRST PERIOD

(From the earliest times to the end of the regal period).

It has already been said that the Fasti, *i.e.* the skeleton of the oldest religious calendar, must be the basis of our inquiry, and that this was first published, according to tradition, in the year 304 B.C. But, just as Domesday Book is a record which carries us back for centuries before it was drawn up, so with the Fasti, which the Romans themselves attributed to their priest-king Numa, and which bear unmistakable internal evidence of a very high antiquity. Though no actual date can be assigned, it is important to notice two facts which indicate the age in which it must have been drawn up. (1) The *terminus ad quem* is the date of the building of the Capitoline temple, universally attributed to Tarquinius Superbus, since there is no festival in the calendar which has any relation to the trias of deities (Jupiter, Juno, Minerva) which was worshipped there. (2) The *terminus a quo* is the absorption of the Quirinal hill in the limits of the city, for the Quirinalia and the cult of Quirinus on that hill are included in the Fasti (see Wissowa², p. 31). Thus, abandoning the doubtful names of legendary kings, we may say with confidence that the Fasti came into existence, in the form in which we have them, in the period of the city which included the Palatine and Quirinal hills, with the Subura, the Esquiline, and part of the Caelian hill. That is, when the city-State had grown into the form in which we know it, when Roman history may be said to begin, the work of religious as well as political organization (and the two were at no period wholly distinct) had begun with a definite catalogue, for the use of the religious-political rulers of the people, of religious ceremonies which concerned the welfare of the State as a whole.

We have thus gained a firm footing in a definite period of the development of the Roman city-State; but the Fasti then drawn up do actually carry us back still further; as we might naturally expect, we find embodied in them, as organized

¹ Hereafter cited as 'Fowler.'

² Hereafter cited as 'Wissowa².'

parts of the worship of the city, cults and rites which beyond all question arose in an age when there was no city-State as yet, and which belong to the life of the shepherd and the agriculturist. It is not, indeed, too much to say that the native Roman religion had its roots in the mental attitude of the men of that early age towards the powers to whom they believed themselves indebted for the prosperous issue of their labour spent in procuring subsistence from crops, flocks, and herds, or to whose ill-will they fancied they owed its failure. Almost all genuine Roman ideas of the supernatural can be referred to this principle of origin, and it must be carefully borne in mind throughout the following pages. In order to make this clear, a list of the festivals (*i.e.* holy days of special religious importance) is here given, in the order in which they stood in the oldest calendar, beginning with March, which was the first month of the old Roman year (see Fowler, p. 5, and *reft.* there given):

Mar. 14. Equirria.	Aug. 23. Volcanalia.
" 17. Agonia, Liberalia.	" 25. Opiconsivia.
" 19. Quinquatrus.	" 27. Voltumnalia.
" 23. Tubilustrium.	Sept. —
April 15. Fordicidia.	Oct. 11. Meditrinalia.
" 19. Cerealia.	" 13. Fontinalia.
" 21. Parilia.	" 19. Armilustrium.
" 23. Vinalia.	Nov. —
" 25. Robigalia.	Dec. 11. Agonia.
May 9. Lemuria.	" 15. Consualia.
" 11, 13. —	" 17. Saturnalia.
" 21. Agonia.	" 19. Opalia.
" 23. Tubilustrium.	" 21. Divalia.
June 9. Vestalia.	" 23. Larentalia.
" 11. Matralia.	Jan. 9. Agonia.
July 5. Poplufugia.	" 11. Carmentalia.
" 19. Lucaria.	" 15. Lupercalia.
" 21. —	Feb. 15. Lupercalia.
" 23. Neptunalia.	" 17. Quirinalia.
" 25. Furrinalia.	" 21. Feralia.
Aug. 17. Portunalia.	" 23. Terminalia.
" 19. Vinalia.	" 24. Regifugium.
" 21. Consualia.	" 27. Equirria.

Now, though there are in this long list many festivals of which the origin and meaning are obscure, yet we can distinctly trace in it the course of the operations of agriculture, and may conclude that those festivals in which this feature appears were taken into the State organization from a purely agricultural population. Thus all the April festivals have to do with the safety of the crops and herds; at the Fordicidia pregnant cows were slaughtered, and the unborn calves torn from the womb and burnt by the Virgo vestalis maxima, with the object, as the Romans themselves believed (Ovid, *Fasti*, iv. 633), of procuring the fertility of the growing corn; the name of the Cerealia speaks for itself, though the ancient ritual was obscured by later *ludi Cereales*; the Parilia was a survival on the Palatine hill of the ceremony of purifying (*i.e.* averting evil from) the sheep, by driving them through burning straw, laurel, etc.; and the Robigalia had a kindred object in averting the dreaded mildew (*robigo*) from the growing corn. In June the ritual of the Vestalia clearly indicates a time when the Vestal virgins, whose origin, as we shall see, is to be found in the daughters of the agricultural household, cleansed the *penus Vestæ*, the representative of the storehouse of the State, and made it ready for the reception of the grain about to be reaped; this work was finished on the 15th, which day is marked in the ancient calendar by the letters Q. St. D. F., *i.e.* 'Quando stercore delatum fas' (Varro, *de Ling. Lat.* vi. 32); when the refuse had been cleared away, public business, which had been forbidden since the 7th of the month, might be resumed. In August we meet with the true harvest festivals, after the corn had been brought home; for both the Consualia and the Opiconsivia, in honour of deities or spirits closely connected

with each other (*consus* and *consiva*, from *condere*, 'to store up'), show traces of harvest customs. Harvest over, we find few festivals till December, when a second Consualia points to an inspection of the stored grain, and is followed by another festival of Ops, the deity of the material wealth of the community; between the two comes the Saturnalia, which retained throughout Roman history the features of a mid-winter rejoicing of farm-labourers, in connexion with the worship of an obscure deity of agriculture who afterwards became mixed up with the Greek Cronos. Thus, without venturing further here into the difficult questions which beset the inquirer into the original meaning of other festivals, we have ample evidence that the Roman ideas of religion were largely influenced by their life as an agricultural people. The movable feasts also, and those which were not included in the calendar as not undertaken on behalf of the State as a whole (Festus, p. 245), point in the same direction. In the beginning of January we have the Compitalia, a survival in the city of the sacrifices made by *rustici* to Lares at the cross-roads when the season of ploughing was over (schol. on Persius, iv. 28); and the Ambarvalia at the end of May was in the same way a survival of the processional ritual by which the crops were purified from hostile influences (see also Fowler for probable explanations of other rites—*e.g.*, the *Argeorum sacra*, May 14 or 15, p. 111 ff., and the 'October-horse,' p. 241 ff.).

If the evidence of the most ancient calendar is clear as to the agricultural character of the life whose religious side it embodies, we next proceed to interrogate it as to the nature of the supernatural beings who were the objects of worship. Here we at once meet with disappointment. Very few of the festival names give us any clear indication of a deity, and, even where deities seem to be suggested, they are not those which are familiar to us in Roman literature. The Vestalia, Neptunalia, Volcanalia, Saturnalia, Quirinalia, and one or two others, do indeed suggest names that we know; but of these all but Vesta are in reality extremely obscure as genuine Roman deities. Neptunus, Vulcanus, and Saturnus are familiar names only because they became identified in later times with Greek gods of a polytheistic system; Quirinus seems to be a form of Mars, either an independent deity identified with him or an adjectival name of Mars which took shape eventually as a separate entity. The cult of Vesta was so perfectly preserved throughout Roman history that we seem to have no doubt as to her existence as a definite deity; yet the Romans themselves were not agreed as to her real nature, and we cannot safely distinguish her as a deity from the sacred fire itself which was the chief object of her cult. Again, it is easy to say that the Cerealia in April were in honour of Ceres; but a very little investigation will dispel all possibility of discovering under this name any clearly conceived goddess of the type to which we are accustomed, *e.g.*, in the Greek forms of religion (see art. 'Ceres,' in Roscher; Wissowa², pp. 192 f., 297 ff.). The Robigalia of April 25 was supposed to be the festival of a god Robigus, and a note in the Prænentine fragment of calendar, almost certainly from the hand of Verrius Flaccus (cf. *CIL*² i. 236), runs: 'Feria Robigo via Claudia ad milliarium v ne robigo frumentis noceat'; yet it is impossible to be sure that, when the calendar was first drawn up, many centuries before Verrius' note was written, Robigus as a god was clearly distinguished from *robigo*, the mildew on the corn. So with the Terminalia in February: *terminus* was a boundary-stone between two properties, and we have explicit accounts of the ritual used in fixing the stone, which bears the mark of a high

antiquity, yet does not indicate any clear conception of such a deity as became associated with Jupiter in the legend of the Capitoline temple (Fowler, p. 324 ff.). Once more, the Lupercales, which became famous owing to a well-known event in the life of Julius Caesar, is generally believed to have been in honour of Faunus; but the Romans themselves were not agreed on the point; and it is extremely doubtful whether in this case, as in others, we need to associate the rites with the name of any deity at all. Lastly, it will be noticed that the names of Jupiter, Juno, Minerva, the great trias of the Capitoline worship of later times, as also those of Mars and Janus, are not indicated in the names of the festivals; and it is only from the additions made to the calendar under the Republic, and from Roman literature, that we learn that the Kalends of each month were sacred to Juno and the Ides to Jupiter, that the rites of March and of the 'October-horse' had some special connexion with Mars, and that at the Agonia (which is probably an ancient name for sacrifice) of Jan. 9 a ram was offered to Janus.

These examples will be enough to show that we should not be justified in supposing that the most ancient Romans had any very clearly defined ideas about the supernatural beings whom they invoked, and that it is better to rid our minds at once of the impression conveyed by both Greek and Roman literature, that each deity was a clearly realized *personality* with distinct attributes. It seems certain that to the Romans the cult appealed as the practical means of obtaining their desires, of warding off evil influences from all that they most valued, while the unseen powers with whom they dealt in this cult were beyond their ken, often unnamed, or named only by an adjective significant of their supposed functions, and visible only in the sense of being seated in, or in some sense symbolized by, a tree, stone, animal, or other object, such as the mildew, the fire, a spring, etc. Had they been as personally conceived as we are apt to suppose, we may be sure that they would not have been so easily superseded and absorbed by Greek and other deities as we shall see that they were. They are often multiplex, as the Fauni (on this point Wissowa², p. 208 ff., holds a different opinion), Silvani, Lares, Penates, Semones, Carmentes, and they are apt eventually to run into one another, as do Tellus, Maia, Ceres, and the Dea Dia of the Arval Brotherhood (G. Henzen, *Acta Fratrum Arvalium*, Berlin, 1874, p. 48). In fact, we have beyond doubt in this oldest stratum of Roman religions thought a dæmonistic and not a polytheistic type of religion, such a type as has been shown by J. E. Harrison (*Prolegomena to the Study of Greek Religion*, Cambridge, 1903) and others to have existed in Greece before the great deities of Olympus occupied the attention of the Greek mind, and such as is known to have existed not only among savage peoples but in Europe (e.g., Lithuania) and in China (see Usener, *Götternamen*, p. 80 ff., and P. D. Chantepie de la Saussaye, *Lehrbuch der Religionsgeschichte*, Freiburg, 1887-89, i. 240 ff.). The Roman objects of worship were spiritual powers (*numina*, in the Latin tongue); they were beings whose undefined nature made them very hard to invoke with certainty or security—a fact which in the history of this religion gave rise to an elaborate priestly system of invocation (see below).

It is obvious, too, that in such a theology there could have been little chance for even a people more naturally imaginative than the Romans were to find material for myth; and we may fairly conclude with Aust (*Religion der Römer*, p. 19) that, though there were Roman deities and Roman worship, there was no Roman mythology.

'The deities of Rome,' he goes on, in a very instructive passage, 'were deities of the cult only. They had no human form, they had not the human heart with its virtues and vices. They had no intercourse with each other, and no common or permanent residence; they enjoyed no nectar or ambrosia, . . . they had no children, no parental relation. They were, indeed, both male and female, and a male and female deity are often in close relation to each other; but this is not a relation of marriage, and rests only on a similarity in the sphere of their operations: so we have Faunus Fauna, Cacus Caca, Jupiter Juno, Liber Libera, Consus Ops, Lua Saturni, Salacia Neptuni, Hora Quirini, Maia Volcani, Nerio Martia.' The expressions *pater* and *mater* that often occur in the cult (Janus pater, Jupiter, Mars pater, Mater Matuta, etc.) point to a creative or generative power only in the region of nature. These deities never become independent existences: they remain colourless cold conceptions, *numina* as the Romans called them, that is, supernatural powers whose existence only betrays itself in the exercise of certain powers. The Roman did not trust himself to mark clearly the sex or name of his deities, as we see in the custom of invoking all deities *confuse* or *generatim* after prayer to a particular one, in order not to pass over any from ignorance or to give him a wrong name. In the formulas of prayer we meet with expressions such as "sive deus sive dea es," "sive mas sive femina," "quisquis es," "sive alio quo nomine te appellari volueris."

Again, after what has been said, it will easily be understood that such *numina* could not have resided in temples made with hands, or have been represented in iconic form; what Tacitus says of the German Suevi may be taken as adequately describing the ideas of the early Romans themselves: 'nec cohibere parietibus deos, neque in ullam humani oris speciem adsimulare, ex magnitudine coelestium arbitrantur: lucos ac nemora consecrant, deorumque nominibus appellant secretum illud, quod sola reverentia vident' (*Germania*, ix.). This is well illustrated in the cult which was probably the oldest form of Jupiter-worship at Rome, that of Jupiter Feretrius, whose *numen* seems originally to have resided in an oak on the Capitoline hill, on which oak Romulus is said to have fixed the first *spolia opima* taken from a conquered enemy; underneath this oak, as we may guess, a small altar was in course of time erected within a consecrated enclosure, the two forming what was called a *sacellum*, or small piece of holy ground; and only in later times was this again enlarged into a building with a roof, of the kind called an *ædes*, or house of the god.

So far we have been interrogating the oldest calendar as to the religious life and ideas of the Romans before their organization into a city-State, and have ventured to conclude: (1) that these were the life and ideas of an agricultural people; (2) that the objects of their religious thought and worship were not definitely conceived personal gods, but spirits, or *numina*, active in certain special functions (all of them, we may now add, in immediate relation to man, and otherwise non-existent), but having no human personality or affections. But beyond this it would be rash to venture in attempting to divine the religious conceptions of the oldest Romans; and we will now turn to consider the Fasti as the ordered record of the yearly recurring religious procedure of a fully developed city-State, from the union of the Palatine and Quirinal cities to the time of the Etruscan dynasty of the Tarquinii.

The following specimen of the Fasti is here reproduced in order to show better than could be done by any description the high state of religious organization which the Roman State had attained when the calendar was drawn up; it is taken from the Fasti Maffeiiani (*CIL*² i. 223):

1. K(al) Feb. N.	8. N.
2. N.	9. N.
3. N.	10. N.
4. N.	11. N.
5. NON. N ^p .	12. N.
6. N.	13. EID. N ^p .
7. N.	14. N.

¹ In these last examples the female name probably indicates no more than some aspect of the activity of the male *numen*.

Here it must be obvious that the fixing of Kalends, Nones, and Ides, and of the great festivals, together with the distinction of the days as proper (F. or C.) for State business, or improper (N. or NP.), or proper only after certain sacrificial rites were over (EN, Q. R. C. F., and Q. St. D. F.), proves that the State whose religious life it regulated had already gone through a long process of development, and was in the hands of capable and clear-headed religious rulers. We have to see, now that we have reached this stage, who these rulers were; what deities they admitted as specially concerned with the welfare of the Roman State; what holy places they reckoned as proper for their religious functions; and what sacrifices they performed there, and in what insignia of office.

i. **THE PRIESTHOODS.**—At the head of the whole religious system was the King (Rex). This is made certain by what may be called the method of survivals, by which alone we can conjecture safely the details of administration in the regal period. When that period came to an end, the sacrificial functions of the Rex passed to a Rex sacrorum or sacrificulus (cf. the *ἀρχων βασιλεύς* at Athens), who continued to hold the first rank in dignity (Festus, p. 198 [ed. Lindsay]). We may be almost as sure that other functions exercised in Republican times by the Pontifex maximus also belonged originally to the Rex, viz. the selection of the Vestal virgins and the Flamines, and the superintendence of these, who were in his *potestas* (Marquardt, p. 240). The Vestals had the care of the sacred fire, the symbol of the unity of the State, while the Flamines were sacrificing priests attached to particular worships; thus it is now generally admitted that the State in this early form represents the discipline of the earliest Roman household, the Rex taking the place of the *paterfamilias*, the Vestals of the daughters of the family, and the Flamines of the sons. Further, in accordance with a Roman practice which also had its origin in the life of the family, the Rex was assisted by competent counsellors in all matters relating to religious law or custom: one *collegium*, the Pontifices (five in number, according to tradition), was specially concerned with the administrative details of the *jus sacrum*, and another, the Augures, with the science of omens, now apparently beginning to be developed out of the crude superstitions of an original peasantry. In matters relating to alliances, truces, declaration of war, etc., in which the relation of the State with other peoples was concerned, the Rex was assisted also by a *collegium* of Fetiales. Lastly, there were certain associations whose activity was confined to particular occasions: the Luperci, of whom we hear only at the Lupercalia; the Salii, or dancing priests of Mars (active only in March and October); the Fratres Arvales, whose grove was at the fifth milestone, i.e. the boundary of the original *ager Romanus* on the road to Ostia, and who were concerned chiefly with the lustration of the crops in May; and the Sodales Titii, of whom nothing is known but their name. Cf. art. PRIEST, PRIESTHOOD (Roman).

ii. **DEITIES.**—The *numina* with whom the State had to do—the divine inhabitants, so to speak, of the city and its territory—were known, in later times at least, as *di indigetes*, and were thus distinguished from the *di novensiles* (or *novensides*), i.e. new inhabitants, in a manner analogous to the familiar distinction between *patricii* and *plebei*

(Wissowa², p. 18). Wissowa has elaborated a list of these on the evidence of the Fasti and of the names and functions of the priesthoods; and this list may be accepted, if we bear in mind the characteristic ideas of the Romans about their deities, as already explained; such a caution is here necessary because this writer is apt to regard all Roman deities as clearly conceived in too polytheistic a sense.

This table is most useful in enabling us to see at a glance, in conjunction with the order in rank of the priesthoods, the worships which were most prominent in the Rome of this period. The Rex, it will be remembered, was at the head of these; then came the Flamen Dialis, the Martialis, and the Quirinalis, and lastly the Vestals. Now we find that the Rex sacrificed to Janus on Jan. 9; he was also, no doubt, concerned in other rites—e.g., at the Regifugium on Feb. 24 (see Fowler, p. 327) and in those of the Vestals which afterwards fell to the Pontifices; but this is the only one of which we have certain evidence. The Flamen Dialis was the special priest of Jupiter, and sacrificed the *ovis idulis* on all Ides to the god; on many other occasions—e.g., at the Vinalia both in April and in August, and at the Lupercalia—he was present; in the latter case he may, however, have taken the place of the Rex after the abolition of the kingship. The Flamen Martialis and the Quirinalis were obviously connected specially with the cults of Mars and Quirinus, though we are in need of more explicit evidence; it is probable that the Martialis took part in the rite of the 'October-horse' (Oct. 15) and in the Ambarvalia in May, and of the Quirinalis we know that he officiated at the Robigalia and the Consualia (for details see Marquardt, p. 332 ff.). The Vestals were, of course, chiefly occupied with the cult of Vesta, though in Republican times they seem to have taken part in many other ceremonies (cf. Marquardt, p. 336 ff.).

The most prominent deities, then, were Janus, Jupiter, Mars, Quirinus, and Vesta. These form the core, so to speak, of the Roman ideas of the supernatural in relation to the State; others which we find in Wissowa's table will grow faint and lose vitality—e.g., those to which the *Flamines minores* were attached—or will take a different shape under foreign influences; but these five, or four, if we take Mars and Quirinus as two aspects of the same deity, the one belonging to the Palatine, the other to the Quirinal city, remained at all times leading Roman religious conceptions, and must now be briefly considered as the characteristic deities of this period.

1. Janus and Vesta.—These two may be taken together, for in Roman ritual they were the first and the last deities in all invocations, public and private (Marquardt, p. 25 and notes). There is no conjugal relation between them (that, as we have seen, is foreign to Roman ideas), but they had beyond doubt a common origin, which left its traces on their cult to the last. Originally they were the *numina* residing in the doorway and the hearth of the house, i.e. they symbolize (if the word can be safely used) the sacred entrance to the house and its sacred inmost recess, where the sacred fire was. As the house and the family were the foundation of Roman civilization, so were Janus and Vesta the foundation of Roman worship. The temple of Janus, famous in later times, was in reality no temple at all: it was a gateway, with the sacred associations of all entrances; it was under the special care of the king, as the doorway of the house had been in the care of the *paterfamilias*, so that no evil thing, natural or supernatural, might pass through it into the house. This position of Janus in the house and in the State may safely be taken as the origin of all the practices in which he appears as a god of beginnings: he was the oldest god, *deorum deus*, the beginner of all things and of all acts; he is an object of worship at the beginning of the year, the month, and the day; but all this arose out of the characteristic Roman association of a *numen* with the doorway of the house and the gate of the city (see Wissowa², p. 103 ff.; art. 'Janus,' in Roscher; Fowler, p. 282 ff.).

2. Jupiter.—In contrast with Janus and Vesta, who represented the sacred character of the house, Jupiter (*Diouis pater*, from root *div*, 'shining') was the great *numen* of the open heaven under which the Italian, then as now, spent the greater part of his time. He was the *numen* of that heaven at all times and under all aspects, whether by night or by day, in clear weather or in storm and rain. In the Sallian hymn, one of the two oldest fragments of Roman invocation that we possess (Macrob. *Sat.* i. xv. 14), he is addressed as *Lucetius*, the deity of light; the Ides, when the moon was full, were sacred to him; when rain was sorely needed, his aid was sought under the name *Elivius*, by a peculiar ritual (Fowler, p. 232); as Jupiter *Fulgur* or *Summanus* he was the power who sent the lightning by day or night, and all places struck by lightning were sacred to him; the festivals of the vintage (*Vinalia* and *Meditrinalia*), which specially needed the aid of the sun and the light, were dedicated to him, and his *Flamen* was on all such occasions the priest employed. This conception of the deity was not only Roman, but common to all the Italian peoples who were of the same stock; and everywhere we find him worshipped on the summits of hills, where nothing intervened between the heaven and the earth, and where all the phenomena of the heavens could be conveniently observed.

In Rome the oldest cult of Jupiter was on the Capitoline hill, and on the southern summit, where

it became overshadowed in the next period by the great temple of Jupiter, Juno, and Minerva. This was the cult of Jupiter *Feretrius*, already mentioned in another connexion. The tiny temple (only 15 feet wide, Dion. Hal. ii. 34) contained no image of the god, but it has been thought that he was supposed to reside in a stone (*silex*) which may have been believed to be a thunderbolt (but see *JES* ii. [1912] 49 f.); this stone the *Fetiales* took with them on their official journeys; and the oath by which treaties, etc., were ratified by them was said to be 'per Iovem (lapidem).' Here we get an early glimpse of that moral aspect of Jupiter which was retained in one way or another throughout Roman history; as *Dius fidius* (Fowler, p. 138), and perhaps also under the clearly Greek name *Hercules*, he was the deity in whose name oaths were taken ('*mediusfidius*,' '*mehereule*'); his *Flamen* presided at the old Roman marriage ceremony of the *confarreatio*, where he seems to have been regarded as a kind of witness of the solemn contract entered into (Wissowa², p. 118); and on the Alban hill his cult, though overshadowed like that of the Capitol by the later innovations of the Tarquinian dynasty, was doubtless from the beginning of Rome's relations with other Latin cities the centre-point of the religious aspect of the Latin league. (For the many forms of the Jupiter-cult, of which only the prominent features in the earliest period can be here described, see the exhaustive article by Aust in Roscher, condensed in Wissowa², p. 113 ff.)

A word must here be said about Juno, who does not seem at all times to have been closely associated with Jupiter, certainly not as his wife, until Greek anthropomorphic conceptions gained ground at Rome. That she, too, represented the light seems probable from the name (Juno = *Jovino*, also from root *div*); but at some early time she became specially associated with the moon, as is shown by the formula used by the Pontifex in announcing the date of the Nones as soon as the new moon has appeared—'*dies te quinque (or septem) calo, Juno Covella*' (Varro, *de Ling. Lat.* vi. 27). Either from the supposed effects of the moon on women or from some other cause at which we can only guess, Juno was at all times peculiarly the *numen* of the female sex: Juno *Lucina* was invoked at the moment of childbirth (as, e.g., in Virgil, *Ecl.* iv. 10), and the genius of a woman was called her Juno.

3. Mars and Quirinus.—Mars is the specially characteristic deity of the early Roman State, and was intertwined with the foundation legend of the city: it was the wolf of Mars that suckled the twins Romulus and Remus. Why this was is on the whole clear, though the etymology of his name and the original conception which it indicated are quite uncertain, and we only know that, like Jupiter, he was worshipped by all the peoples of Latin and Sabellian stock. Agriculture and war were the two chief occupations of the early Romans, and it is precisely these with which the Mars-cult is most closely connected, as a careful examination of the *Fasti* plainly shows. These two occupations, it should be noted, are also closely related to each other on their religious side; during the same period of the year, from March to October, the State was specially liable to the attacks of enemies—not only the human ones who attacked the Roman people and the crops and herds which sustained it, but also the divine enemies who might damage the growing or the harvested crops, and might also work havoc on the human population by disease or hindered fertility. It was in this period, March to October, and especially in these two months themselves, the first of which (also the first of the year) bears the

name of Mars, that the cult of this deity was most prominent.

In March the dancing warrior-priests of Mars, the Salii, whose antiquity as a *collegium* is proved by the fact that they must be of patrician descent, dressed in the costume of the old Italian warrior, performed a series of processional dances, clashing their shields and spears as if to avert some evil influence, and singing the songs of which a fragment has come down to us (J. Wordsworth, *Fragments and Specimens of Early Latin*, Oxford, 1874, p. 567). The table given above shows that the 1st, the 14th (originally probably the 15th, as no other festival was on a day of even number), and the 17th were also great days in his cult, though we are more or less in the dark as to the rites performed; but on the 23rd, the Tubilustrium, the *tuba* used in war seem to have been made ready for the war season by the religious process of *lustratio*; and it may be that the horses of the cavalry were treated in the same way at the Equirria on the 14th. At the Ambarvalia in May, where Mars was eventually ousted by Ceres or Dea Dia, the Frates Arvales went in procession for the lustration of the *ager Romanus*, and the hymn they sang, so far as we can judge from what we possess of it (Marquardt, p. 457; Henzen, p. 26), had a direct reference to Mars as the *numen* capable of averting noxious influences. This is confirmed by the prayer of the Roman farmer preserved in Cato (*de Agricultura*, 141), which begins, 'Father Mars, I pray thee to be willing and propitious to me, my household, and my slaves,' and prays him to avert all evil from crops and herds, and to bring the farmer's labour to a successful issue. From May to October we lose sight of Mars; but at the end of the agricultural and military season we find him again prominent. On October 15, which probably corresponded with the Equirria of March 14 (or 15), a horse was sacrificed with very curious ritual in the Campus Martius; in this rite we may perhaps see a survival of an old harvest custom, which took a new shape and meaning as the State grew accustomed to war, just as Mars himself, originally perhaps the protector of man, herds, and crops alike, became the deity of war-horses and warriors (Fowler, p. 249). The Mars-season was completed on Oct. 19 by the festival called Armilustrium, at which the Salii again appeared with their *arma* and *ancilia* (sacred shields), which were then subjected to *lustratio* and put away until the ensuing March. This short sketch of the ritual connected with Mars will suffice to show that the leading ideas in it are as we said, agriculture and warfare; it is needless to distinguish the two more precisely, for we cannot separate the Roman warrior from the Roman husbandman, or the warlike aspect of his deity from his universal care for his people. (For more detail see Roscher's art. in his *Lexikon*; art. 'Salii,' in Smith's *Dict. of Antiquities*; Fowler, pp. 1-65 and 241 ff. with ref. there given.)

Of Quirinus all that need be said here is that it is probable that this very obscure deity was a form of Mars belonging to the community settled on the hill that still bears his name; he seems to have had the same two characteristics as the Palatine deity, though these are difficult to trace with any certainty (see Wissowa, p. 153). The most convincing evidence for the essential identity of the two lies in the fact that there were twelve Salii *Collini*, i.e. of the Quirinal hill, concerned in the worship of Quirinus, answering to the twelve Salii *Palatini* of the Mars-cult (Liv. v. 52).

iii. *CULT OF THE DEAD*.—The Romans do not seem to have had, in early times at least, any idea of an under world tenanted by deities; Orcus and Dis Pater are not conceptions of home growth, and

Vejovis, in spite of Wissowa's reasoning (p. 237), is far too obscure to be reckoned in such a category. Nor is this surprising: the deities of the Romans have always a direct relation to the *life* of the people, and in fact, as has already been said, exist only so far as they were supposed to have some direct influence for good or evil upon the activity of that life. As death brought with it an end of that activity, and the dead man was free from all responsibility for it, subject to no sentence of punishment or reward, there was no call upon the imagination of the Romans (which was never strong or inventive) to create an under world like that of the Greeks, and the splendid picture of such a world which we find in the sixth *Aeneid* is wholly the result of Hellenic fancy.

But the *Fasti* supply us with certain evidence that the dead, when duly buried with the proper rites, were the object of an organized cult. In February, the last month of the year, and one specially appropriated to what we may call, for want of a better word, purification, nine days were set apart for this cult (*dies parentales*), of which the last, the 21st, appears as a State festival, the Feralia. Whether the dead were cremated or buried (both customs existed in this period, as we know from the XII Tables, 10) was indifferent; in either case the dead man was believed in some sense to live on, to have entered into that world of spirits which contained all the Roman deities, and thus the dead came to be *di parentes* or *di manes*, the latter word being explained by the Romans themselves as meaning 'the good.' On these days in February the rites of burial were, as it were, renewed, to make sure that the relation between the living and the dead should be a happy and wholesome one. The dead had long been buried in the family tomb in the city of the dead outside the city of the living, had been well cared for since their departure, and were still members of the family. They had their *jura* (*jus manium*) under the supervision of the Rex and later of the Pontifices; experience has taught the citizen that the State must regulate his conduct towards the *di manes* for the benefit of both parties. In May too, another month of purification and apparently of ill omen, we find three days, the 9th, 11th, and 13th, styled *Lemuria*, i.e. 'festivals' (if the word may be here used) of the Lemures or Larvæ, the ghosts of ancestors who had died away from home in war or otherwise, and had not been buried with due rites; these were probably supposed to be apt to return to the house which they once tenanted, and had to be got rid of again by special ceremonies, of which Ovid has given us a specimen in his *Fasti* (v. 432). These days of the Lemuria are marked 'nefasti' in the calendar, while the *dies parentales* of February are—some of them at least—'C.' (*comitialis*), and the Feralia is 'F.P.'; hence it has been inferred with justice that the Lemuria was the older festival, representing a conception of the dead as hostile to the living, which is not consistent with the organized life of a city-State, where the majority of human beings would die at home and in peace. This view (Fowler, pp. 107, 308) may account for the fact that of the Lemuria we hear hardly anything but what Ovid tells us in the passage just quoted, and even that belongs rather to the private life of the household than to the *jus sacrum* of the city. It would seem that the cheerful character of service of the dead which we find in February had entirely taken the place of the older and ruder rites. (For other indications in the calendar of the cult of the dead see Wissowa, p. 236; and, for the whole subject, Marquardt, p. 310 ff.; Aust, p. 225 ff.; and De Marchi, *Il Culto privato*, p. 180 ff.; cf. art. ANCESTOR-WORSHIP [Roman].)

iv. *HOLY PLACES*.—All places in the city and its *ager* which, for want of a more exact word, we should term 'holy' were of two kinds, according as they were or were not authorized by the State; if they had been, in accordance with the directions of Rex and Senate, subjected to the process of *dedicatio* and *consecratio*, i.e. devotion to a deity by the Pontifices, they were *loca sacra*. If, on the other hand, they were objects of fear or reverence from their own nature only, and as a consequence of the common feeling of the people or any part of it, they were *loca religiosa*. The best authority for this distinction is Aelius Gallus, *ap. Festus*, p. 424 (ed. Lindsay): 'Gallus Aelius ait sacrum esse quodcumque more et instituto civitatis consecratum sit, sive aedis sive ara sive locus sive pecunia sive quid aliud, quod dedicatum atque consecratum sit; quod autem privati suae religionis causa aliquid earum rerum deo dedicant, id pontifices Romanos non existimare sacrum.' We may thus infer that before the completion of the city-State and its organization, and probably for some time afterwards, the spots supposed to be inhabited by *numina* were *loca religiosa*, and this is borne out by the fact that places such as those which had been struck by lightning, the *Lacus Curtius* in the Forum, and others to which popular superstition attached ill omen, were *loca religiosa*. The term, therefore, though often applied to objects simply because they had not undergone the rites necessary to make them *sacra* (e.g., tombs, *sacella*, etc.), seems to take us back to a time when the civilizing and reassuring influence of the State had not yet fully done its work in bringing the divine inhabitants of the city into happier relations with the human population. But, when once a deity had been successfully settled in a particular spot, with ceremonies about the efficacy of which no one could have any doubt, since they were authorized and carried out by the State authorities, there was no further cause for any vague apprehensions about his attitude to the people; if duly propitiated, and especially on the anniversary of the dedication of the spot, he would be retained as a member of the community, unless, indeed, some enemy could persuade him to desert it (*evocare*); and his attitude should be beneficent. All places in which deities were thus settled were designated by the word *sacer*.

Strictly speaking, it was the ground they occupied that was thus styled; and it was matter of no moment what might be erected on it. When a temple or altar had been destroyed, the ground still remained *sacer*. The general word for such a place, without any special reference to what was erected there, was *fanum*; the simplest kind of erection was a *sacellum*, i.e., as Trebatius defined it (Gell. vii. xii. 5), 'locus parvus deo sacratus cum ara,' and without a roof (Festus, p. 422); there were many of these in the city, even in the time of Augustus. But the holy place might be a grove or an opening within it (*lucus*), a cave like the *Lupercal*, a hearth like that of *Vesta*, or an archway, as that of *Janus*. All these were *loca sacra* if they had been duly dedicated and consecrated. The oldest example, so far as we know, of a house erected for the dwelling of a deity is the *Aedes Vestæ*, which was round, like the earliest form of Italian house (*A Companion to Latin Studies*², ed. J. E. Sandys, Cambridge, 1913, p. 217); this was dedicated to the deity and consecrated, but wanted the *inauguratio* of the augurs, which was necessary for a *templum*. This word was applied to a building erected on a *locus sacer*, which had been not only dedicated and consecrated, but also inaugurated according to the technical system of which the augurs held the *secreta*, and of which we have but little

definite knowledge. When a building with its site had been dedicated by the State, consecrated by the Pontifices, and inaugurated by the augurs, it was not only the dwelling of the deity, but was in all respects of good omen, and might even be used for what we should call secular purposes—e.g., for the assembling of the Senate. A document, in later times at least, in the form of an inscription, was drawn up by the Pontifices, recording the dedication, the amount of consecrated land, the rites to be performed, and other points; this was the *lex dedicatio* or *lex templi*. (See Marquardt, p. 270 ff.; and, for the whole subject of *loca sacra*, *ib. p. 145 ff.*; Wissowa², p. 467 ff.; Aust, p. 209 ff.)

As the *collegium* of augurs was certainly in existence in this first period of the Roman religion, it is possible that a few *templa*, in the proper sense of that word, may have come into being before the end of it. But, if we once more interrogate the *Fasti*, we shall find that the oldest festivals (see above, p. 822), with hardly an exception, are connected with places that had not been subjected to *inauguratio*, though they were *loca sacra*. The *Robigalia*, for example, was held at a grove, the *Vestalia* at the *Aedes Vestæ*, the *Lucaria* at a grove, the *Consualia* at an underground *ara*, the *Opiconsivia* in the *Regia*, as also the *Agonia* of Jan. 9, the *Opalia* at an altar in the Forum, the *Feralia* at burial-places, the *Lupercalia* at the *Lupercal*, and the *Regifugium* in the *Comitium* (see Fowler under head of these festivals). The evidence seems convincing that, when the *Fasti* were drawn up, there were no *templa* technically so called. Where, as at the *Quirinalia*, we hear of a sacrifice at a spot where a *templum* is known to have existed in later times (Fowler, p. 322), we are not justified in inferring that it took place originally in such a building; there, as in other cases (Aust, *de Aedibus sacris Populi Romani*, Marburg, 1889, p. 33), the temple was without doubt preceded by a *sacellum*.

v. *RITUAL OF WORSHIP*.—The basis of the Roman's ritualistic dealing with his deities consisted in sacrifice and prayer, the two being, so far as we know, invariably combined. On important occasions, and for particular reasons, these were performed in the course of a procession or circuit round some object—land, city, army, or instruments, such as arms and trumpets—or, again, the whole Roman people, if supposed to be in need of 'purification' from some evil influence; in this extended form the ritual was called *lustratio*; and this ceremonial was perhaps the most characteristic, not only of the Roman, but of all ancient Italian forms of worship.

Sacrifice (*sacrificium*), as the word itself implies, was an act of making over to the deity some property more or less valuable, the meaning of *sacer*, as has already been explained, being 'that which belongs to a deity.' The nature of the *sacrificium*, as Marquardt puts it (p. 169), depended partly on the functions of the deity, partly on the object to be attained by the worshipper. The Roman husbandman offered the firstfruits of all his crops to the *numina* who were concerned with their welfare (Wissowa², p. 409), and this practice survived in the State in various forms; e.g., the *Vestals* plucked the first ears of corn in May for the purpose of making sacred cakes, and the *Flamen Dialis* did the same with the grape-crop in August, with prayer for the safety of the whole vintage (Fowler, p. 204). Unbloody sacrifices of a similar kind also survived, not only in the daily private worship of the family and at the resting-places of the dead, but in the ritual of the festivals which descended directly from an earlier pastoral and agricultural life; e.g., at the *Parilia* in April we hear of baskets of millet, cakes of the same,

pails of milk, etc. (Ovid, *Fasti*, iv. 743 ff.); and at the Vestalia in June the Vestals offered sacred cakes made, in antique fashion, of the ears which they had plucked in May (*mola salsa*). But the evidence of the *Fasti* shows that we cannot get back to a time when animal-sacrifices were not also in use; and this is in entire accordance with the nature of Italian husbandry, which was always more occupied with the rearing of cattle than with the raising of crops. The wealth of the ancient Roman farmer consisted chiefly of cattle, and in State festivals we are not surprised to find that animal-sacrifices formed the staple of the worship. The animals most commonly sacrificed were oxen, sheep, and pigs; but the pig, as the cheaper and less honourable animal, was rarely used except in conjunction with the other two, or as a peculiar sacrifice—a term to be explained below. The technical word for the slain animal, if ox, bull, or cow, was *victima*; if any kind of sheep, *hostia*. Male victims were employed in the worship of male deities and female victims in the worship of female deities, in later times at least; but, in view of the uncertainty of sex in the most ancient deities, it may be doubted whether this held good in our first period. But, so far as our information about the ritual of the earliest festivals reaches, we know that a ram was the sacrifice to Janus, a heifer to Jupiter (this was Jupiter Feretrius [Festus, p. 204]), and at the Fordicidia, presumably to Tellus, a pregnant cow; to Mars in the *lustratio agri*, presently to be described, ox, sheep, and pig. Of ancient usage also was the sacrifice of a dog at the Robigalia in April, and of a horse to Mars, as has already been mentioned, on Oct. 15. Of human sacrifice in the usual sense of the term there is no trace; but it might happen that in a season of great peril or pestilence the children born between March 1 and May 1 were made over to the god (*ver sacrum*), and, when they had grown up, were driven out of the Roman territory (Festus, p. 519; Liv. xxii. 10, xxxiii. 44).

The sacrificial ritual of the altar was extremely elaborate in later times, and it is impossible to say how much of it was in use at the time of which we are now treating; it may best be studied in Marquardt, p. 180 ff. All that need be said here is that the victim, which must be unblemished, was slain by the assistants of the priest, after its head had been sprinkled with fragments of the *mola salsa*, or sacred cake (*immolatio*), and with wine; that in all ordinary sacrifices its internal organs were carefully examined, and, if of good omen, were placed upon the altar, while the rest of the animal was eaten. We can have little doubt that the examination of the liver, etc., formed a part of the ceremonial in the earliest period, since the object was to determine whether the deity would be satisfied with the condition of the animal offered him, and especially with those vital parts which were to be his share; but the extraordinary development of the minutiae of this practice belongs to a later time. At what precise point in the ceremony the prayer was said does not seem to be known; but it was probably during the laying of the *exta* on the altar. The priest or other person who uttered it had his head covered, to shut out all evil influences or omens from his eyes, while a *tibicen* played the *tibia* in order to secure the same result for the ears; all bystanders maintained a strict silence (Marquardt, p. 175 ff.). As is seen below, the prayer was the expression of a desire, if not a claim, on the part of the sacrificers, that the deity would consider favourably such wishes and interests of theirs as were within the range of his activity, either by averting evil or by doing positive benefit. To obtain the desired result, every detail, both of sacrifice and of prayer,

had to be gone through correctly; and a slip in either or any accidental hindrance, such as the stopping of the music of the flute-player, made it necessary to begin the whole ritual over again, and to offer a *piaculum*, or apologetic sacrifice. In this case the victim was usually a pig, and there was no necessity to examine its entrails; it was offered whole or consumed by the priests (Marquardt, pp. 179, 185). On great occasions such a *piaculum* was offered on the day before the festival, in order once for all to expiate any omission that might happen; but it is possible that this was one of the later developments of the *jus divinum* (the victim in this case was a *porcus praecidaneus* [Gell. iv. vi. 7]). Undoubtedly, however, it was in the first period of religious organization within the State that this extraordinary precision in ceremonial detail had its beginning. It was itself the result of that peculiarly Roman conception of the supernatural which has already been touched upon. It was the outward expression of that vague fear of the unknown which we must attribute to the early Roman: he did not know his deities intimately, did not of himself know how to approach them with confidence, and might at any moment, for all he knew, be doing or saying things which would put them in evil mood towards him. It was just here that the State came to the rescue; and the unbounded confidence of the early Roman in his State authorities, both civil and religious, his habit of unquestioning obedience to them, and his sense of obligation or duty, in both private and public life, are largely, perhaps mainly, due to his feeling of helplessness as an individual in his relation with the unseen world. We shall have to trace later the decay of this confidence and sense of duty (*pietas*), as the Roman mind became subjected to new influences, and as the extreme formularization of the old cults gradually destroyed all their life and meaning. But in these early stages of the Roman State the religious discipline of minute ritual unquestionably had certain good and useful results (see Fowler, p. 344 ff.).

Before we leave the subject of ritual, it may be as well to illustrate it, in the most highly developed form which it took in this period, from the ceremony of *lustratio*, in which sacrifice, prayer, and procession were combined. The most remarkable record which we have of such a ceremony is not indeed Roman, but belongs to the Umbrian town of Iguvium; it is an inscription of great length, containing a mass of detail for the instruction of the priests taking part in the *lustratio* of a sacred hill (*ocris fissus*); it is in the Umbrian dialect, and difficult of interpretation, but it entirely confirms all we know of this religious process from Roman sources (Bücheler, *Umbrica*, 1883). The object of this process of *lustratio*, as explained by Wissowa (p. 390), was twofold: (1) to purify the object round which the procession went from all evil that might be lurking there, and so to obtain the goodwill (*pax*) of the deities concerned with it ('*pacem deum exposcere*'); (2) to protect it, by the aid of the god thus obtained, from all hostile influences, the circuit taken being a boundary within which no evil could come if the victims before their slaughter were driven round it according to the prescribed traditional order. This explanation may be taken as representing the Roman idea of historical times, and it is not necessary here to try to penetrate behind it into the notions of primitive man; but it may be remarked that one at least of the lustrations of the old Roman calendar, that of the Palatine hill by the Luperci on Feb. 15, presents very peculiar features, which cannot altogether be explained in this way (see Fowler, p. 310 ff.), and also that the boundary line of city or *ager*, being carefully followed each year on

these occasions, was thus kept accurately in remembrance.

But the typical *lustratio* of which we know the details is that of the Ambarvalia in May, itself developed beyond doubt from the *lustratio* of the farm by the Roman husbandman, of which the detail has been preserved to us in Cato's treatise on agriculture. We have to follow Cato, applying his account to the developed festival of the city; but we have sufficient evidence that the latter was conducted on the same lines (Cato, *de Agricultura*, 141). The procession of victims, bull, sheep, and pig—the most valuable property of the Roman—passed all round the fields just as the crops were ripening, and therefore most liable to injury from storm or disease. Three times they went round the land; at the end of the third round they were sacrificed, and a solemn prayer was recited, which, according to Cato's formula, ran thus (we must suppose that the *Fratres Arvales*, who were the priests presiding at the Ambarvalia, used a similar formula, on an extended scale, for the State land):

'Father Mars, I pray and beseech thee to be willing and propitious to me, my household, and my slaves; for the which object I have caused these victims to be driven round my farm and land. I pray thee, keep, avert, and turn from us all disease, seen or unseen, all desolation, ruin, damage, and unseasonable influence; I pray thee, give increase to the fruits, the corn, the vines, and the plantations, and bring them to a prosperous issue. Keep also in safety the shepherds and their flocks, and give good health and vigour to me, my house, and household. To this end it is, as I have said—namely, for the purification and making due lustration of my farm, my land cultivated and uncultivated—that I pray thee to bless this threefold sacrifice.'

At all these religious ceremonies the sacrificing priest, and all magistrates who had the right of sacrificing (in this period the *Rex* only), wore a peculiar dress. The most regular and characteristic one was the purple-bordered robe called *toga praetexta*, which was also worn by children, both boys and girls, up to the age of puberty, probably because they had originally taken part as acolytes (*camilli*, *camillæ*) in the sacrifices of the family (see Fowler, in *ClR* x. [1896] 317 ff.). But the most ancient priests, who were attached to particular cults, and whose sacrificial functions were continuous throughout the year, had special insignia of their own, which they wore at all times to distinguish them, and so to avoid the many causes of pollution with which they might accidentally meet. The *Flamines* had an *apex*, or leathern cap, in which was fixed an olive twig with a wisp of white wool (Serv. *ad Æn.* ii. 683), and their wives (*flaminicæ*) a *tutulus*, or raised head-dress, bound with a purple fillet. The *Vestals* wore a white robe, and, when sacrificing, a thick white veil with purple stripe (see, for this *suffibulum*, J. H. Middleton, *Ancient Rome in 1885*, London, 1885, p. 199). The *Salii*, when performing their dances, etc., wore a primitive military dress, the *trabea* and *tunica picta*; the *Luperci* ran round the Palatine hill at the *Lupercalia*, girt with skins, probably those of the victims (Marquardt, p. 444, note 3); the *Fratres Arvales* were conspicuous by a crown of corn-ears made fast with white fillets (Gell. vii. vii. 8).

From what has been said in this sketch of the Roman religion in its earliest form as a concern of the State, the following characteristic points should have become conspicuous.

1. The Roman believed himself to live in the midst of a population of spiritual beings (*numina*), whose attitude towards him was a doubtful one, and continually influenced by what he did or said.
2. As a consequence, it was necessary for him to be on good terms with them, and this could be securely accomplished only by the constituted

authorities of a State who by experience and tradition had learnt how to deal with them.

3. This being not only an essential, but the most essential, part of the duties of the State, there was no real distinction between the *jus sacrum* and the *jus civile*; the former was a part of the latter, and always continued so (cf. Cic. *de Legibus*, bks. ii. and iii.).

4. So, too, there is no original distinction between priest and magistrate; they were both alike concerned in conciliating the divine inhabitants of the city. 'It was not a poet or prophet, but a King, and a priest-king, to whom the Romans attributed the origin of their religious organization' (Aust.).

5. This inseparable union of State and religion had important and valuable effects on the Roman character; the State was more to the individual than perhaps in any community ancient or modern. But the religion, as a religion, had an insufficient vitality.

6. This was chiefly because it was originally based on a feeling of fear, which was never wholly shaken off. It was mainly negative in character; i.e., the range of its prohibitions was far larger than that of its precepts. It can hardly be said that the moral law was enforced by it; and there was a distinction between what was due to one's fellow-men (*jus*) and what was due to the gods (*fas*).

7. The one feature of this religion which had a moral value was the constant and indispensable attention to the details of duty; if these were not duties to a deity who is righteous, and the source of all righteousness, yet they were duties that must be fulfilled; and they constituted a righteous dealing towards the divine beings, which created a claim upon them to deal righteously towards the Roman, and to hinder and destroy his enemies, human and material. Beyond this we cannot go; the *pietas* of the old Roman was a valuable quality in itself, but it never led him to base his daily conduct upon higher motives than obedience to the State and its authorities as mediators between himself and a dangerous spiritual world. It would always have been difficult for a Roman to appreciate the story of Antigone.

II. SECOND PERIOD

(From the Etruscan kings to the war with Hannibal).

The religious system which has been described belonged exclusively to the State proper, i.e. to the patricians, or members of the old patrician *gentes*; no plebeian or 'outsider' had any part in it whatever, either as priest or as worshipper. This will be easily understood after what has already been explained as to the relation of the divine and the human members of the State; the former had no existence apart from the latter, and, as the State consisted of the patrician *gentes*, the deities who had taken up their abode in that State had, of course, no dealings with any others, and could be approached only by those who had entered into relations with them. But by the 7th cent. B.C. a considerable population was growing up in the city and its territory which did not belong to the old *gentes*, and whose cults and deities were altogether outside of the religion of the State proper. With the origin of this population we are not here concerned; what is of importance for our present purpose is to note that there is very strong evidence that the last three kings of Rome were not Romans but Etruscans, and that the patrician State succumbed for a time to an invasion of that great Etruscan power which at this time spread itself over central Italy, entering into relations

not only with the Latins of the Campagna, but with the Greeks of Cumæ and the western coast. The consequence was a great and permanent revolution, not only in the political institutions, but in the religious system of the State. The second of these kings, generally known as Servius Tullius, admitted the plebeians to the army, and divided the city and its territory into four tribes, comprising all free men, whether patricians or plebeians, who occupied a certain amount of land. The last king, Tarquinius Superbus, has all the characteristics of the tyrant: the Roman territory was extended, the aristocracy of the patrician *gentes* was oppressed, while the unprivileged classes were brought forward and utilized. A great religious development accompanied the political one, of which we can distinctly trace two features: (1) the admission of the plebeians to a share in the worship of the State; (2) the introduction of new deities and worships, of one new and important priesthood, and of new methods of approaching the divine protectors of the State, both old and new. In the period we have now before us the old worships continued to exist as before, for the Romans held tenaciously to every custom and cult which they had at any time recognized; but the Rome that in the three following centuries extended her dominion over Italy, Sicily, and Sardinia could not but extend at the same time the range of her deities and her worship. Conquest, commerce, alliance, and, we may add, even peril and pestilence brought new additions to her divine population. If a community was conquered by her, its deities and their cult came into her hands, and she must either continue their worship within the conquered city or invite them to take up their abode at Rome (Marquardt, p. 35 ff.). Again, if the State was in peril, either from enemies or from pestilence, it might be necessary to call in the aid of new deities where the old ones seemed to be of no avail; for, as the dominion and intercourse of the State were extended, it came into contact with deities of whom the Roman authorities knew nothing, and who needed special invocation by experts in the right methods. Thus, while the list of the *di indigetes* was closed for ever, that of the *di novensides*, the new-comers, was continually being increased; new and startling forms of worship were seen in the city, and temples were frequently being vowed and dedicated both to old deities and to new ones—to old deities under new names and forms, and to new ones who consented to take up their abode in or just outside the city. It is a period of religious activity as constant and vigorous as the political; but it can be sketched in this article only in outline.

1. The first and perhaps one of the best authenticated examples of the introduction of new cults at Rome is the foundation on the Aventine, outside the *pomerium*, of a temple of Diana. This was universally attributed to Servius Tullius, and is described by Varro (*de Ling. Lat.* v. 43) as 'commune Latinorum Dianæ templum.' Now, the famous cult of Diana at Aricia, which has become familiar to us since the publication of Frazer's *Golden Bough*, was undoubtedly the centre-point of a Latin league which succeeded that of Alba Longa; and the inference is that the headship of that league was now transferred from Aricia to Rome, and with it the cult of Diana, who will not be found (see above) in our list of the *di indigetes*. This was a temple in the full sense of the word, and its *lex dedicationis*, or *lex templi*, became the model for all later ones (*CIL* xii. 4333). Later on it contained, after the fashion which began in this period, a statue of the goddess modelled on the type of the Ephesian

Artemis, and borrowed from her cult at Massilia (Strabo, iv. 180). (For further details and references in connexion with this important event in the history of the Roman religion see Wissowa's exhaustive art. 'Diana,' in his ed. of Pauly's *Real-Encyclopædis*.)

2. To the same period of Etruscan influence, and traditionally ascribed to Tarquinius Superbus, belongs a far more famous sanctuary, and one destined to be for ever the central religious point of the Roman dominion; this is the temple of Jupiter Optimus Maximus, Juno, and Minerva, at the north end of the Capitoline hill, where its foundations, showing unmistakable signs of Etruscan design, may still be seen (Middleton, p. 232). The combination of three deities in a single cult and a single temple was foreign to Rome, though not uncommon in Greece; and, though we do not know why Juno and Minerva shared this great temple with Jupiter (who was at all times the great object of worship there), we infer that the trias came with Italian names from Etruria, where it represented an original trias (Tinia, Thalna, Minerva) introduced under Greek influence. The temple was on a scale of magnificence utterly unknown to the primitive Roman builders: it was divided into three parts by two lines of pillars, and three *cellæ* at the north-western end contained statues of the three deities, with Jupiter in the middle holding his thunderbolt. Such a foundation indicates a very great change in the religious ideas of the Romans, and the researches of recent times have placed it beyond all reasonable doubt that it was meant to overpower all the old cults of the patrician *gentes* by exhibiting in the utmost splendour one which should be common ground for patrician and plebeian alike, and which should symbolize the unity of the Roman State in its new form—the form in which it was destined to advance in fame and dominion till it overshadowed all the States of the civilized world (see J. A. Ambrosch, *Studien und Andeutungen*, Breslau, 1839, p. 205 ff.). At the same time, in all probability, was also built the temple of Jupiter Latiaris on the Alban hill, which henceforward took the place of the temple of Diana in uniting the members of the Latin league in a religious worship (Fowler, p. 95 ff.).

In close connexion with this great temple there came in new usages of the utmost importance in the history of the Roman religion. The *dies natalis*, or dedication day, of the temple was Sept. 13, and on this day took place the *epulum Jovis*, when the images of the three deities were decked out as for a feast, and the face of Jupiter was painted red with minium; the magistrates and Senate partook of a meal in which the deities were supposed also to share. We do not know for certain at what date this practice began, but it is by no means impossible that in one form or another, though hardly perhaps as a completely anthropomorphic conception of the deities concerned, it may be attributed to the same period as the temple (Marquardt, p. 348; cf. Fowler, p. 218). This temple also was the goal of the triumphal procession of the victorious king or consul, who was then dressed and painted like the statue of Jupiter himself; and the games (*ludi votivi*, afterwards *ludi Romani*), which he had vowed to hold in honour of the god if victorious, were originally celebrated on the same day.

3. The most important of all the innovations of this age was the introduction into the temple of the so-called Sibylline Oracles, under the influence of which an entirely new system of ritual was brought into vogue. This must now be explained in some detail. (For the Capitoline temple and

Jupiter see esp. Aust's art. 'Jupiter,' in Roscher, iii. 705 ff.)

According to the familiar Roman story, these 'oracles' were pressed on the last king of Rome by the Sibyl of Cumæ herself, and he finally took from her three books of them, which were preserved in the Capitoline temple. It may be that the Romans first made acquaintance with the Cumæan Sibyl at this time; but it is highly probable that the story was invented to give credit to the verses which from time to time were invented by the Roman priests themselves to suit particular exigencies of the State (H. Diels, *Sibyllinische Blätter*, Berlin, 1890). What is certain is that these verses contained not prophecies of future events, but religious 'prescriptions' as remedies for alarming prodigies, pestilences, etc., and that these had nothing to do with the old Roman worship of the *di indigetes*, but involved the introduction of new deities, or of old ones in a new form, and of new ceremonies of a kind much more sensational, if the word may be used, than any yet seen in the city. The intercourse with Cumæ and the Greek cities thus led directly to great changes; and, though it was the immediate result of the Etruscan dynasty, there can also be no doubt that the change it brought about was accepted by the patrician aristocracy which succeeded that dynasty, and that they manipulated the new 'oracles' with far-reaching effects. The verses were committed to the care of a new patrician priesthood, consisting of two members, the *duoviri sacris faciundis*; on the authorization of magistrates and Senate they were from time to time consulted by these priests, who then announced (without divulging the verses themselves) the result of their inquiries, and recommended certain rites as the necessary remedies for the evils to be averted. Thus it is at once clear that the governing class acquired in this way the legal means of metamorphosing the whole Roman religious system; and it is hardly too much to say that they succeeded in doing it.

4. It was just after the abolition of the kingship, according to the Roman chronicles, that the new priesthood first introduced a new worship; in 493 B.C. was built the temple of the Greek trias Demeter, Dionysus, Persephone, under the Roman names Ceres, Liber, Libera. Apollo, with whom the Sibyl had always been closely connected, followed soon, in 431 B.C. Among other Greek deities introduced in the same way were Artemis as Diana, Aphrodite as Venus (the latter an old Italian deity of the garden), and Æsculapius. All these were worshipped with the *ritus Græcus*, which henceforward was recognized as equally legitimate with the *ritus Romanus*; e.g., the head of the sacrificing priest, which in Roman usage was always covered, as has been described above, was in the *ritus Græcus* uncovered (Marquardt, p. 186). This is the only detail of the new sacrificial ritual of which we have certain knowledge; but there were other ceremonies introduced by the same agency which had a more important bearing both on the Roman religion and on its character. In the year 399 B.C., as we learn from Livy (v. 13), what was called a *lectisternium* was for the first time ordered by the Duoviri 'ex Sibyllinis libris,' in consequence of an alarming pestilence. For eight days Apollo and Latona, Hercules and Diana, Mercurius and Neptunus, were seen reclining on couches in Greek fashion, and appearing to partake of a meal laid out on a table in front of each of them; the figures were wooden puppets richly robed, and rested with their left arms on cushions (*pulvinaria*). Here there seem to be at least one or two of the old Roman deities; but we soon discover that Diana is really Artemis; Latona,

Leto; Mercurius, Hermes; Neptunus, Poseidon; and we can guess that, though the experts may have believed that the foreign gods were more efficacious for the purpose in hand, it was desirable to propitiate the people by introducing some of them at least under familiar names. These *lectisternia* were frequently repeated, and came to form the essential part of the *supplicationes*, or festivals of prayer and intercession, which were also ordered by the Duoviri 'ex Sibyllinis libris,' though sometimes also by the Pontifices and Senate (Marquardt, p. 48), and consisted of processions and worship at each place where the gods were exposed to view, as described above. It is noticeable that, while on the old Roman system the priest alone took part in religious rites and was alone admitted to a temple, here the whole populace was expected to view the processions; men, women, and children prostrated themselves in prayer before the images of the gods, or crowded into the new temples (Liv. iii. 5, 7).

These rites mark the first appearance of a tendency, constantly recurring in later Roman history, to seek for a more emotional expression of religious feeling than was afforded by the old forms of sacrifice and prayer, conducted as they were by the priest on behalf of the community without its active participation. It would seem as if the sensitiveness of the human fibre of a primitive community increases with its increasing complexity and with the greater variety of experience to which it is exposed; and, in the case of Rome, as if the simple ancient methods of dealing with the divine inhabitants who had been induced to settle on the site were felt to be no longer adequate to the needs of a State which was steering its way to empire among so many difficulties and perils. It is not, indeed, certain that the new rites, or some of them, may not have had their prototypes in old Italian usage (see Marquardt, p. 46; Fowler, p. 218); but what we can be sure of, so far as our evidence can carry us, is that the emotional element was wholly new. In Livy's accounts we seem to see a sense of sin, or at any rate of pollution—a something wrong in the relation of the State to the supernatural, which did at times show itself in the ancient world, as, e.g., at Athens in the 6th century B.C. No doubt it indicates, both at Rome and at Athens, the presence of a new population, or at any rate of one outside of political privilege, which cannot rely upon the efficacy of methods in which it has no share and of which it knows nothing—a population left out of account to a great extent in the dealings of the State with the gods, and therefore the more liable to anxiety and emotion. If we can judge of this period of Roman religious history by the general tendency of the policy of the Roman Government, we may see here a deliberate attempt to include the new population in worship of a kind that would calm its fears and satisfy its emotion, while leaving uncontaminated the old ritual which had served the State so long.

But there are not wanting signs in this period that the old religious forms were being cared for and developed in new ways; and this is more particularly obvious in the last century before the war with Hannibal. This brings us to a consideration of the part played after the expulsion of the last king by the two great colleges of Pontifices and augurs, who, as we have seen, were during the regal period only the consulting staff of the Rex in religious matters. The patrician aristocracy used them with consummate skill in establishing their control over all religious aspects of the State's business; and it was not till the year 300 B.C. that plebeians were admitted to them, though long before that date (in 367, Liv.

vi. 37) the Duoviri had been increased to ten, half of whom must be plebeians.

5. The Pontifices.—This *collegium* was originally of the sacred number three (Marquardt, p. 241), was increased to nine in this period as the business of the office grew, and later rose to fifteen. Of these members the Pontifex maximus was at all times both nominally and really the head, while the others formed his *consilium*, according to Roman magisterial practice; on him devolved, when the kingship was abolished, the whole of the functions of the Rex in relation to the *jus divinum*; i.e. the *sacra* of the State, in the widest sense of the word, were in his care. The Vestals, the Rex sacrorum, and the three great Flamines were selected by him under a process which placed them in his *potestas* as they had been in that of the Rex (see above); and he succeeded to the Regia which had been the king's dwelling, and which was close to the temple of Vesta, the heart of the State, on the Via Sacra. As he held his office for life, and as under his presidency the *collegium* co-opted its own members when vacancies occurred, it may fairly be said that he was the most important and influential personage in the State during this period; and this will be still more obvious if we consider his powers and duties. These were chiefly administrative, and may be explained under two heads, as they affected (1) the State in general, and (2) the life and interests of families and individuals.

(1) *State authority*.—The special sacrificial functions of the Rex, which were traditionally associated with his title, passed to the Rex sacrorum; but much ritualistic work remained for the Pontifex maximus and his colleagues. For example, all piacular sacrifices, except those which were undertaken after inspection of the Sibylline books by the Duoviri, were ordered by, and carried out under the supervision of, the Pontifices; the books of Livy abound with examples of this practice. Events were constantly happening which required such expiation, and it was only in extreme cases that the Pontifices gave way to the Duoviri. All *prodigia*, and especially the striking of any spot or building by lightning, called for their action (*procuratio fulguris*), and such places were under their directions walled in and remained sacred. Again, all vows (*vota*) made by magistrates—e.g., in undertaking to build a temple, or to hold *ludi*, in case of the successful issue of a war or other enterprise—were subject to the approval of the Pontifices, who dictated the exact wording of the *votum*, and superintended its fulfilment.¹ No temple could be made over to a deity without their sanction, and the terms of dedication as well as the whole ritual to be followed were laid down by them in the *lex dedicationis*. The reception or admission of new deities lay within their sphere of action; and, though we do not hear of collisions between them and the Duoviri *sacris faciundis*, we can hardly suppose that the latter could have resisted objections on the part of the higher *collegium* to any new cults brought in under their auspices. But, as we examine the list of temple foundations of this period (see Aust, *de Aedibus*), we seem to see that those which were due to the Duoviri and the Sibylline books were most numerous in the first two centuries after the expulsion of the last king, while a new period of pontifical activity in this department seems to begin after the opening of the *collegium* to the plebs in the year 300 B.C. Between 273 and 264 B.C. we find four temples dedicated to gods not of Greek but of Italian origin: to Consus, Pales, Tellus, and Vertumnus; and during the first Punic war to

¹ Liv. iv. 27: 'dictator, praecunte A. Cornelio pontifice maximo, ludos . . . novit.'

the Tempestates, to Janus, to Juturna, and to Fons, all deities connected with water, who were perhaps utilized, in the absence of any distinctively Roman god of the sea, at a time when Roman fleets were in continual peril. The Pontifices seem, too, at this time to have been very active in inventing new deities on Roman lines and in harmony with Roman ways of thinking of the divine; thus abstractions, such as Salus, Fides, Spes, Pudicitia, are provided with habitations, and a deity Argentinus, according to a highly probable conjecture of Mommsen, was introduced when silver coins were first struck in 268 B.C. In fact, the Pontifices, under the headship for many years in this 3rd cent. B.C. of plebeians (Ti. Coruncanius [Liv. *Epit.* xviii.], Cæcilius Metellus, from 243 to 224), were so extremely active in this way that it is not unreasonable to ascribe to them that strange catalogue of deities called the *Indigitamenta*, which is usually referred to a much earlier time, and which is constantly quoted to prove that the Romans of the earliest age invented and named deities who presided over every action of their lives. Varro copied this list from the *libri pontificum*, and St. Augustine (*de Civ. Dei*, iv. 8 ff.) copied them from Varro to show the absurdities of the Roman worship. If, as the present writer believes, these lists were merely the results of pontifical invention in the age of which we are speaking, and, though based on the ideas of the spirit-world which were explained under period I., were never really popular, there is no need to examine them here; we may be content with noting that they exemplify well the tendency to what we may call a scientific theology, built up on popular ideas, but coming far too late to have any permanent effect on the Roman conscience—if, indeed, they ever could have had any. We may see in Cunina, the cradle deity, in Iterduca, the deity who attended the children to school, in Sterculina, the dunghill spirit, and the rest, a pontifical classification which probably had no other effect than to assist in taking the life out of the old Roman's feeling towards the *numina* around him—an example of the process by which a religious system was gradually killed by the exaggeration of its own methods (see art. *INDIGITAMENTA*; and, for the view given above, Fowler, p. 341, and *Religious Experience of the Roman People*, p. 159 ff.).

Two other functions pertaining to public administration remain to be mentioned. First, they had the entire charge of the calendar with its course of religious festivals. It is not necessary here to go into the history of the Roman measurement of time or the nature of their astronomical year; but all such matters, as well as the adjustment of religious rites within the year, were absolutely in the hands of this college, and the frequent necessity for intercalation put a power into their hands which, in later times at least, was often used for political purposes. Secondly, the archives of the State were in their keeping, and consisted of records drawn up by themselves, both of religious and of political events.

(2) *Authority over private life*.—Every Roman family had, like the State, its own *sacra*, which it was bound to keep up as long as it existed, and which ceased to exist when it came to an end; we have already noticed the worship of the door and the hearth, and that of the dead ancestors, and to these were no doubt added in some families special cults of particular deities, as, e.g., that of Vejovis at Bovillæ in the Julia gens. Thus every marriage, every death of a *paterfamilias*, and every testament made by persons *sui juris* was of importance not only in the way in which we regard them at the present day, but as affecting the maintenance of

these *sacra*, which became eventually so often a burden upon the family that a *hereditas sine sacris* was a proverbial instance of good luck. The supervision of all these matters, originally so immensely important for the integrity and perpetuity of the Roman family, was the work of the Pontifices. The old patrician form of marriage by *confarreatio*, a rite of distinctly religious character (De Marchi, p. 147 ff.), could be completed only by the consent and in the presence of the Pontifex maximus; for by this process a new family was created, of which the new *sacra* had to be organized by him. For much the same reason the making of a will was a process of a sacred character, to which the consent of the *collegium* was necessary. In the days of the kings the Rex had presided on these occasions twice in the year, on March 24 and May 24 (Mommsen, *Römisches Staatsrecht*, iii. 375) at the Comitia Curiata (called on these days *Calata*), no doubt with the Pontifices as assessors; and to the Rex succeeded the Pontifex maximus, as we may infer, though we have no direct evidence (cf. Marquardt, p. 307). Once more, the whole *jus manium*, i.e. the rules under which the rites of burial were conducted, and the yearly renewal of these at the Parentalia, the choice of the last resting-place, and all questions as to the right of a dead person to burial—these matters were also wholly under the jurisdiction of the *collegium*. If we try to appreciate the fact that such things were infinitely more important in the eyes of the early Roman population than they are for us—that the least flaw in carrying them out might lead to very unpleasant consequences for the family—we shall begin to understand how great and far-reaching was the power of the Pontifices over the conscience of the *privatus homo*: it can be compared only to the power of the mediæval priest, and might have become a yoke on the popular mind as heavy and as continuous, if the Romans had been sensitive to threatened terrors in another life, or if they had not come into contact with the unbelieving Greek even before this second period came to a close. (For further details see art. PRIEST, PRIESTHOOD [Roman]; A. Bouché-Leclercq, *Les Pontifes de l'ancienne Rome*, Paris, 1871; Marquardt, pp. 235–320; Wissowa², p. 501 ff.)

6. The Augures.—The *collegium* of Augures, originally, like that of the Pontifices, three in number with the Rex at the head, was also increased to nine, and opened to the plebs in the eventful year 300 B.C. by the Lex Ogulnia. It stands apart from the other priesthoods, inasmuch as it had nothing to do with the actual worship of the gods; its activity was entirely concerned with the interpretation of omens, which were supposed to affect all State business, including the appointment of priests, the consecration of temples, the reaping of the crops, and the meetings of assemblies for the election of magistrates and the passing of laws. Doubtless the Italian husbandman, before he had become the citizen of a State, had been wont to observe carefully all signs of weather, among which would naturally be reckoned the movements of birds and other animals; in part such omens would be based on experience and of some practical value, in part also on fancy and superstition. The work of the augurs in the city-State was to reduce these signs to a system, as the Pontifices reduced to a system the details of worship and religious law. Conflicting interpretations would lead to delays and quarrels; and it is most characteristic of the Roman ideas of government that the whole authority in such vital matters should be placed in the hands of a *collegium*, in whose decisions the State and all its members should have absolute confidence as the *interpretes Jovis*, who could construct a system of their own, hold their meetings in strict privacy (on

the Nones of each month), and so relieve the minds of the people from constant scruple and doubt.

Every Roman magistrate of the highest rank had the right of *spectio*, i.e. of taking the auspices; but the college of augurs was the referee in all doubtful cases, and in the city the magistrate was accompanied by an augur when, rising at midnight, he took his position at the proper place in order to observe the heavens (Marquardt, p. 401 and reff.). The details of augural lore which were strictly followed on these occasions are very complicated, and imperfectly known; and they have in reality little to do with the religious beliefs of the people. As an example we may cite the fact that, apart from the observation of the flight of birds and of lightning, which was the chief subject of the elaborate systematization of this *collegium*, that of the manner of feeding of the sacred chickens was also developed under their superintendence: if the chickens refused to feed, the omen was bad; if they so greedily devoured that they dropped grains out of their bills, the omen was good (Cic. *de Divinatione*, i. 15). It is needless to say that such absurdities led to a disbelief in the whole system among educated men, though it was kept up for the benefit of the ignorant and superstitious multitude; and before the close of our period we have a Consul in command of a fleet throwing the sacred chickens (which every fleet and army carried with it) into the sea because they would not feed (in 249 B.C. [Liv. *Epit.* xix.]).

Before we leave these two great *collegia* of the Pontifices and Augures, it is necessary to point out that these 'priests' were in no sense what we should now call ecclesiastics, set apart from the world of laymen to live a holy life, to teach, and to preach; they might be magistrates as well as priests, they taught no doctrine, they practised no asceticism. The religion which they represented was one of works and not of faith; so long as the cults were properly carried out and the omens duly observed, all was done that need be done for the safety and prosperity of the State and its members. As the *jus divinum* was part of the *jus civile*, so were the priests to be reckoned among the officials of the State. Only the most ancient ones, the Vestals and the Flamines, were kept apart from the rest of the population as being engaged in daily sacrificial operations which would be ineffectual if they were liable to contamination, and of these the Vestals alone maintained their exclusive priestly character to the last.

To sum up the characteristics of this period, we notice:

1. The introduction of numerous new deities and their cults, both of Italian and of Greek origin, and of a more showy and emotional ritual, the latter more especially under the direction of the Sibylline books and their keepers, the *duoviri sacris faciundis*.

2. The systematization of the *jus divinum* as an essential part of the *jus civile*, or law of the State, to such a degree that all the important acts of a Roman citizen, both public and private, were regulated in their relation to the divine inhabitants of the city.

3. The rise to paramount power in the State of the two great colleges by whom this regulation was effected, and especially of the Pontifices.

III. THIRD PERIOD

(From the war with Hannibal to the Empire, 218–31 B.C.).

The religious system which we have been so far examining may be described as the sum-total of

all those cults which were recognized and maintained by the State; this maintenance by the State was the unifying principle in it. In the period now to be dealt with we shall find the care of the State for the old cults becoming rapidly relaxed, while at the same time new and foreign ones are introduced of a kind much more incompatible with the old Roman ideas than any that had been adopted in the previous age, those old ideas themselves being used more and more for political purposes only, as the governing class discovered that under the influence of Greek philosophy it ceased to share them, while the lower population remained at least as superstitious as ever. Here, then, the Roman State-religion might be said to come to an end, so far as it was an honest supervision of the relations between the human and the divine population for the mutual benefit of both—a work of *pietas*, a performance of duty from genuine motives, with the object of safeguarding the best interests of the community. As Aust has well said (p. 57), the subject now branches in three directions, if we are to follow the history at Rome of those ideas which may broadly be termed religious, though they no longer combine to form a characteristic national religion. We should have to trace the decay of the old cults; the growth of new beliefs or speculations about the nature of the gods, Fate, divination, and duty; and, thirdly, the superstitious notions of the masses and their increasing sensitiveness to the influence of exciting foreign worships. But to work all this out in detail would be quite beyond the scope of this article. It will be better (1) to give a brief account of the immediate effects of the war with Hannibal, both during its continuance and afterwards, on the religious feelings of the people and on the policy of the governing class; (2) to sketch briefly the influence of Greek literature and philosophy in disintegrating the old religious ideas; (3) to summarize the actual results of these causes on the national religion in the last two centuries B.C. Even the decay of a religion is a valuable study; and perhaps there is no other example of decay so well attested and so easily admitting of explanation. (For detailed accounts of this period see Marquardt, p. 57 ff.; Wissowa², p. 60 ff.; L. Krahner, *Grundlinien zur Gesch. des Verfalls der römischen Staatsreligion*, Halle, 1837, *passim*; Fowler, *Religious Experience*, pp. 314–356.)

I. THE IMMEDIATE EFFECTS OF THE HANNIBALIC WAR.—To those unaccustomed to reflect on the course of Roman history it may seem strange that a single war should be so far-reaching in its results; and it is indeed true that our comparative ignorance of the civil history of the First Punic war, owing to the loss of Livy's second decade, may incline us to attribute too much to the Second. Yet there can be no doubt that the prolonged struggle with Hannibal (218–204 B.C.), carried on nearly all that time in Italy itself, forms a turning-point in the history of the Roman people and therefore of the Roman religion. It was, in fact, a civil war as well as a struggle with a foreign enemy; the population of Italy as well as of Rome suffered terribly, from pestilence as well as slaughter; the economy of the whole peninsula was upset; and at the end, when rest and recuperation were so sorely needed, it was found that another great war with Macedonia was the necessary result of that with Hannibal, and that Rome was but beginning a course of conquest which was destined to change her whole being, leaving hardly a trace of the old Rome whose religious ideas we have been examining.

At all the most critical moments of the war Livy records a number of ill-omened occurrences

(*prodigia*) which were announced from various places in the *ager Romanus*, together with the directions given by the Decemviri or the Pontifices for expiating them (*procuratio*). These *prodigia* seem to have been first made matter of record during the First war with Carthage, for the work of Julius Obsequens (*Prodigiorum liber*) originally began in the year 247 B.C., as we gather from its title, and it must have been at that date that Livy was first able to embody them in his history. It would seem, then, that in stress of war and public danger the nervousness of the people was great, and was met by special measures taken by the religious authorities; and it is to be noticed that these measures are almost without exception derived from the Sibylline books; i.e., they were not the old Roman methods of expiation, but appeals to new methods and often to foreign deities. It was the belief of the people that the old methods were insufficient, and the Roman deities angry or indifferent. It will suffice here to mention the most remarkable of the new prescriptions which are recorded during the Hannibalic war.

Livy tells us that in 218 B.C., after the battle on the Trebbia, almost the whole community was busy with the *procuratio* of a number of *prodigia*; the city was lustrated; forty pounds of gold were carried to the temple of Juno at Lanuvium; the *matronæ* dedicated a bronze statue to Juno in her temple on the Aventine; a *lectisternium* was ordered at Cære, because the *sortes* of the oracle there had 'shrunk'; Fortuna in Algidum had a *supplicatio*; at Rome Juventas had a *lectisternium*, and Hercules a *supplicatio*; then the whole people held a *supplicatio* 'circa omnia pulvinaria'; and a prætor was directed to undertake the fulfilment of certain vows if the State should be in existence ten years later. 'Hæc procurata votaue ex libris Sibyllinis,' adds Livy (xxi. 62), 'magna ex parte levaverant animos religione'; i.e., these measures served for the time to quiet popular scruple and anxiety. But almost directly a new trouble seized men's minds; for the Consul Flaminius, the victim of Trasimene, left the city to assume his command without taking the auspices or making the usual vows in the Capitol, fearing that for political reasons the Senate might detain him by falsifying the auspices—a significant fact, if it be a fact; and his subsequent defeat and death thus served only to increase the general panic. In the first chapter of bk. xxii. Livy records a new series of *prodigia* of all kinds, and recourse was again had to the Sibylline books, and fresh directions were given for expiation, among which we notice the growing Greek influence in the prominence of Juno, the legendary enemy of the Trojans, from whom the Romans were now beginning to believe themselves descended. After the disaster at Trasimene the record becomes still more astonishing. Besides *lectisternia* and *supplicationes*, the Sibylline books directed the general vow of a *ver sacrum* to be made (Liv. xxii. 9); i.e., if five years later the State still existed in integrity, all sheep, oxen, pigs, goats, etc., were to be dedicated to the gods, according to the ancient Italian practice; and *ludi* were also vowed, to cost 333,333 asses, the number three having a special religious significance. Lastly, the Decemviri ordered a *lectisternium* of three days, in which the twelve great Greek gods and goddesses appeared under Roman names: Zeus and Hera, Poseidon and Athene, Ares and Aphrodite, Apollo and Artemis, Hephaestus and Hestia, Hermes and Demeter (Liv. xxii. 10). After the crushing defeat at Cannæ envoys were sent to Delphi to inquire whether there was to be any end of these disasters; and during their absence the Decemviri ordered

'sacrificia aliquot extraordinaria' (Liv. xxii. 57), among which Livy mentions that of a Gallic man and woman and a Greek man and woman, who were buried alive in the Forum Boarium—a horrible rite which is said to have survived even into the Empire (Wissowa², p. 421).

These examples will have made it clear that the strong fibre of the Roman people was giving way under constant peril and anxiety; their belief in supernatural agency was profound, but they knew not what deity was persecuting them, or where to turn for help, and were in danger of complete demoralization. All the religious expedients which Livy has recorded are the attempts of the governing classes to quiet the minds of the people by convincing them that no effort was being spared to set right their relations with the unseen world, to vindicate themselves as mediators with the hostile deities; but so far all had been in vain, and the devices of the great colleges must have been put to a very severe test. Fortunately the worst was over, and only once during the course of the war was the danger again so imminent. When Hasdrubal was nearing Italy in 207 B.C., a fresh outbreak of *prodigia* was announced (Liv. xxvii. 37), and again new measures were taken, in which we once more note the prominence of Juno (Regina) and the predominance of Greek features in the steps taken to appease her. Two years later (206 B.C.) the Decemviri took a singular step in the hope of persuading the people to hold out a while longer until Hannibal should have evacuated Italy; twelve years had passed and he was still there, and both Rome and Italy were exhausted. They said that they found in their books an assertion that Italy could be freed from the enemy only if the sacred stone of the Magna Mater Idæa, the great goddess of Pessinus in Phrygia, were brought to Rome. The king of Pergamus, to whom the place and stone belonged, gave his consent, and the sacred symbol was conveyed to Rome, and received with relief and rejoicing by an excited and now hopeful people. 'Scipio was about to leave with his army for Africa; a fine harvest followed; Hannibal was forced to evacuate Italy the next year; and the goddess did everything that was expected of her' (Fowler, p. 70). The day on which the stone arrived was made a festival (April 4), called by the Greek name *Megalesia*. No Roman was allowed to take part in the service of the goddess, for such Oriental worshipers were of a dangerously orgiastic character; it was, in fact, a dangerous remedy, though a potent one. Nevertheless, the Government was willing within a few years to admit this stone into the very heart of the ancient city; it had been placed at first in the temple of Victoria, but in 191 B.C. was transferred to a temple of the Magna Mater herself on the Palatine hill, dedicated in that year (Aust, *de Edibus sacris*, p. 22). With the introduction of this cult, which was freely taken up by all classes, we may connect the fashion of consulting Oriental astrologers, called by the Romans *Chaldaei* or *mathematici*, which continued far into the period of the Empire, in spite of frequent attempts to restrain it, as in 139 B.C., when they were expelled from Rome and Italy (Val. Max. i. iii. 3; and see the new Epitomes of Livy's sixth decade brought from Egypt by Grenfell and Hunt, line 192 [*Oxyrhynchus Papyri*, pt. iii.]). The worship of Ma or Bellona from Cappadocia, and those of Isis and Mithras, were to follow in due course.

There can, indeed, be no doubt that both Romans and Italians found their own narrow system of religion quite inadequate to express what we may call their religious experience of the last twenty years; they had longed for aid and protection,

and for knowledge of the right way to address themselves to the supernatural powers in whose existence the great mass of them still profoundly believed; and they had invoked in vain, on the old rigid methods, their own local and native deities. Undoubtedly the times had aroused strong emotion of a religious kind, and this had found no legitimate outlet. A still more striking proof of this than even the introduction of the Magna Mater is the extraordinary rapidity with which the rites of Dionysus-worship, surreptitiously introduced at this time, seized upon the minds of men and women of all classes in the year 186 B.C., spread over a great part of Italy, and drove the Government to interfere forcibly to save the State from the moral disintegration which accompanied it. The story is told in full by Livy (xxxix. 8 ff.), and we still have a part of the decree by which the Senate commissioned the Consuls to investigate and check the mischief (*CIL* i. 43). This object was achieved; yet the Bacchus-cult was allowed to remain, under strict supervision—the best of proofs, as Aust observes (p. 78), that the State religion no longer possessed the power to satisfy the cravings of the masses. It must, indeed, be remembered that the population of the city was by this time of a very mixed character; the true Roman people had suffered severely in the wars and by pestilence, and their place was largely taken by liberated slaves who were practically without any religion of their own. To such, and to their descendants, even Jupiter Optimus Maximus himself could hardly appeal, for he was, in fact, a political rather than a religious conception. We may take it as a fact that this population found little comfort in the cults provided for it, and little or no aid towards right conduct. All that could be done was to keep it amused with constant games and shows, which had been originally of a religious character and limited to single days, but now were secularized and freely extended in length, and to keep it provided with the means of existence. To provide it with a common religious belief or worship was utterly beyond the power of the Government. The old dying religion could indeed be used, so far as its forms went, for political purposes, to control the naturally superstitious masses; but it had lost its unifying and comforting power.

ii. *THE INFLUENCE OF GREEK LITERATURE AND PHILOSOPHY.*—The Hannibalic war affected the beliefs and the morale of all classes alike; the critical spirit of Greek thought was to affect chiefly and directly that upper stratum which was more or less capable of comprehending it. This critical spirit had long been acting as a solvent in Greece, not only on the ideas of the gods derived from the old mythology, but on the local cults of the Greek *πόλεις* and the belief in their efficacy; and in this process it had been greatly assisted by the conquests of Alexander and the wars of his successors. With the break-up of the keen individual life of the Greek city disappeared the genuine relation of the polytheistic Greek religion to the life of the citizen; though the old city-cults lingered on in outward form, they lost their real meaning under the overshadowing power of deified kings and the attempts of philosophers to provide a rational basis for the daily conduct of the individual. Thus the Roman governing class, when it came rapidly under the influence of Greek thought in the period with which we are now dealing, when it began to develop a literature and to think, found nothing to learn from the Greeks which could act otherwise than as a solvent of its old religious ideas.

The very first example that we meet of this destructive process is too striking to be omitted

here, though it is no doubt possible to exaggerate its importance. Ennius, the first man of real genius who wrote in Latin, among his many works translated the rationalizing treatise of Euhemerus, in which he attempted to explain the Greek gods as merely ancient kings who had been deified—an idea quite in harmony with the prevailing practice of the post-Alexandrian period; and this translation does not seem to have met with any disapproval at Rome. It is characteristic of the age that the man who did more than any one before Virgil to glorify the Roman character and dominion should have struck the first direct blow at the popular belief in the gods; but Ennius was no Roman himself, and he was perhaps only expressing his personal views (Krahner, p. 44). It is doubtful whether the book became popular; it is mentioned only once in Roman literature (Cic. *de Nat. Deorum*, i. 42, 119), and the methods of publication were then but little understood; but in other works Ennius shows the same tendency (cf. the famous lines in his *Telamo*, based on the teaching of Epicurus: 'Ego deum genus esse semper dixi et dicam caelitem, Sed eos non curare opinor quid agat humanum genus,' etc. [O. Ribbeck, *Trag. Rom. Frag.*, Leipzig, 1897, p. 54]); and in his Pythagorean work entitled *Epi-charmus* he introduced the Romans to naturalistic ideas of the gods which became the common property of educated men, and can be traced in the writers of plays, in Lucilius, Cicero, and Varro.

But the two great systems of post-Aristotelian philosophy which found place at Rome in the last two centuries of the Republic had a far more profound and lasting effect on Roman religious ideas. (The third, the New Academy, being neither positive nor constructive, but critical only, need not be considered here; see art. ACADEMY.)

Epicureanism was first in the field, but was slow in gaining ground, and Rome produced no great Epicurean but Lucretius the poet; nor did even he become popular, for his direct and enthusiastic denial of the value of *religio*, and his appeal to the intellectual faculty of man to rid himself of the degrading bondage of that *religio*, were not in harmony with the Roman genius. Epicureanism was to some extent popular on its practical side (Cic. *Tusc.* iv. 3, *de Div.* ii. 50), with bad moral effects; but, as taking no account of gods or cult, except to put them aside as useless, it suited neither the class that was responsible for the surviving forms of the State religion nor the lower orders still steeped in superstition. See art. EPICUREANS.

Stoicism, on the other hand, laid a strong grasp on the best Roman minds; its ideal man was in many ways in keeping with the ideal Roman character, and its cosmopolitanism suited the wide range and the varied populations of the Roman Empire. It did not deny the existence of the divine, or even, as did the Epicureans, the interest of divine beings in the affairs of the world; it postulated a Supreme Deity, identical with Reason, Law, or Destiny, and left place for the existence of subordinate deities by making them functional emanations from the Supreme One. As has often been observed, it had a strong religious side, and with some of the ablest Romans the teaching of an earnest and learned Stoic like Panætius, the intimate friend of Scipio the younger, and founder of what may be called Roman Stoicism, became almost a substitute for religion. While Stoicism did nothing directly to save the old cults from neglect or extinction, it did much to save the educated Roman from the contempt of all religion which Lucretius had expressed so vehemently, and even did something to save him from moral disintegration. And at the

very end of this period we meet with a very curious attempt, on Stoical principles, to harmonize the old religious beliefs with philosophic theories of the universe. We have lost Varro's *Antiquitates Divinae*, the counterpart of his *Antiquitates Humanae*; but we know enough about it from surviving fragments, and from the criticisms of Augustine and Tertullian, to be confident that it was written not only from antiquarian interest, but from a genuine desire to reconcile Stoic theology with the prevailing ideas of the gods. Krahner was the first to point out the importance of Varro's work in the history of the decay of the Roman religion, and he has been followed by Marquardt and other writers. See art. STOICS.

Varro assumed the Stoic doctrine of the *animus mundi*, the divine principle permeating all material things, which, in combination with those material things, constitutes the Universe, Nature, God, Destiny, or whatever other name the Stoics used to express it. The *mundus* is made up of the four elements, and these *partes mundi* are also divine, as are the various phenomena which they underlie. In the 16th book of his work Varro co-ordinated this Stoic theory with the Græco-Roman State-religion of his age. The chief gods, *di præcipui* or *selecti*, represented the *partes mundi* in various ways; and even the difference of sex among the deities was explained by regarding all male gods as emanating from the heaven, and all female ones from the earth, according to a familiar ancient idea of the active and passive factors of generation (Augustine, *de Civ. Dei*, vii. 23). The Stoic theory of *dæmons* was utilized in the same way to find an explanation for semi-deities, heroes, Lares, Genii, etc., and thus another feature of the old Italian religious mind was to be saved from contempt and neglect. At the head of the whole system was Jupiter, who seems to have been recognized by the Stoics of the Roman school as representing not only the heaven but even the *animus mundi* itself (Cic. *de Nat. Deor.* ii. 1, 4); and the various functional activities of this supreme god multiplied him under innumerable titles (Tertullian, *Apol.* 14). So, too, with the other chief deities; and thus another tendency of the old Roman religion was skillfully worked into the new system, viz. that tendency to see the supernatural manifesting itself in innumerable ways expressed by adjectival titles, and affecting all the details of human action and suffering, of which the Pontifices had taken advantage to construct their so-called *Indigitamenta*. But the deities of the Roman cults had become so worn and indistinct with age that in many or most cases their functions were no longer clearly to be discerned, even by a learned antiquarian like Varro; and he was compelled to include in a large class of *di incerti* those of whose functional activity he could not be sure (Wissowa², p. 72).

Thus the one system of philosophy which could really appeal with effect to the best type of Roman mind was harmonized with the leading features of the old beliefs in a way which was neither unreasonable nor ludicrous. The people, Varro seems to say, have neither time nor ability to reason on these matters, and there are indeed some things which it is better that they should not know (Aug. *de Civ. Dei*, iv. 31); but they have been on the right track in their ideas and worship, wanting only the philosophical basis and warrant for what they do and think. For the educated it is necessary to have this basis and warrant clearly defined, so that they combine the religious practice of their ancestors with reason and knowledge. This surely was a far more healthy and useful position to take up than that of the Epicureans and Lucretius, who looked on all religions as mere folly

and mental bondage; and, to judge from the attacks made on it by St. Augustine and the Fathers, and from the temporary revival of the old cults which Augustus succeeded in achieving shortly after Varro's death, it was probably not without some substantial practical result. But it could have affected only the higher and educated classes; and even they were never quite in earnest in dealing with such questions. Varro himself, a Sabine of the sturdy old-Italian type, with an extraordinary interest in matters of religious antiquity as well as religious philosophy, was probably more in earnest than any other Roman of that age; but the ordinary attitude of the cultivated Roman to such speculations may be well seen in Cicero's three books, *de Natura Deorum*, which followed the work of Varro, and were to some extent influenced by it. Cicero's attitude to religion was simply sceptical and eclectic; he inclined to the Stoic view, but treats the whole subject as a matter for pleasant discussion, without showing any conviction of its importance to Rome or mankind. In all his voluminous writings, including his correspondence, there is no sign that his life was in any way affected either by belief or by cult; the only way in which *religio* interests him is its use for political purposes. And Cicero is a type of the educated Roman of his day (see some good remarks in Boissier, *Religion romaine*², i. 56).

iii. **THE ACTUAL RESULTS ON THE NATIONAL RELIGION.**—We have now to illustrate the actual results for the old religion of these two main causes of disintegration—the Hannibalic war and the influence of Greek philosophy.

(a) *The cults.*—The most striking evidence of the decay of those worships which we examined in the first period is suggested by our present ignorance of the meaning and the details of so many of them (see above, p. 820*). Had they been maintained or fully credited with efficacy, the literature of the last century B.C. would assuredly have contained allusions to them sufficient to give us some idea of the nature of the deities and the details of their worship. But neither Cicero nor any of his contemporaries but Varro has anything important to tell us of them. Varro was the only Roman really interested in them. A little later, Greeks like Dionysius of Halicarnassus, or foreigners like the Mauretanian Juba, took some trouble to understand them, also from antiquarian or philosophical motives. But by the time of Varro and these antiquarians the decay had already gone so far that many of the old cults were quite neglected and forgotten. A few examples will suffice.

The name *Agonia*, which stands for a festival four times in the ancient calendar, was so much a mystery even in Varro's day that we do not know for certain the meaning of the word, or what rites were performed on those days. The *Furrinalia*, *Lucaria*, *Divalia*, are almost entirely lost to us, as they were to Varro (so far as we can guess from what we know of his writings). The *Regifugium* in February and the *Poplifugia* in July were even then wholly misunderstood, being explained by false etymologies (see Fowler, pp. 174, 327). It is quite possible that we should be equally in the dark about the *Lupercalia*, one of the most singular of all the Roman rites, if it had not been brought into fresh prominence by the famous celebration just before Caesar's death. It can hardly have been one of the wholly neglected festivals, yet the fact that no writer mentions it before that date shows conclusively how little interest such old customs excited. With the cults the old deities, of course, vanished in many cases, though this is less astonishing, since the Romans, as we have seen, at all the early stages of their religious

life paid far more attention to worship than to the objects of it. No one knew the true nature of *Vejovis*, nor do we know ourselves; so, too, with *Summanus*, of whom Augustine says, no doubt following Varro, that he was at one time a greater deity than Jupiter himself (*de Civ. Dei*, iv. 23); 'quisquis is est,' writes Ovid in speaking of him (*Fasti*, vi. 731), from which we may infer that Varro was equally in the dark. *Consus* survived only because he had become oddly identified with *Poseidon Hippios*, and we are left to conjecture from stray facts of the cult that he was originally a harvest-god. Even so great a god as *Janus*, whose so-called temple by the Forum was matter of public interest owing to the practice of keeping it open whenever Rome was engaged in war, became the subject of vain philosophical speculation, no one suspecting that his origin was really as simple and humble as we now believe it to have been (see above, p. 825); and Ovid fancifully 'interviews' the old god in the vain hope of discovering his nature (*Fasti*, i. 89 ff.). *Vesta* survived at all times, with her cult and her virgin priestesses; the latter could not become secularized, and the ever-burning sacred fire which it was their duty to maintain was too well recognized as a symbol of the State's vitality to be subject to neglect like other less significant cults. Yet, if we turn to the list of deities represented in the rites of the Numan calendar (see above, p. 824), we shall find on examination that *Vesta* is almost the only one of them who has not been either forgotten or metamorphosed in one way or another under the influence of Greek literature and mythology.

Further, it is a well-attested fact that, in the general indifference to religion and the paralysis of orderly and detailed administration, the temple-buildings of the city were fast going to ruin in the last age of the Republic. Augustus has told us himself that he restored no fewer than eighty-two (*Monumentum Ancyranum*, iv. 17); and the ode of Horace (iii. 6) which begins, 'Delicta majorum immeritus lues, Romane, donec templa refeceris,' etc., is familiar to every one; and *Propertius* and *Ovid* tell the same tale (*Marquardt*, p. 67 and reff.). The greed of capitalists and the want of space for building had long before this begun to override the sacred character of shrines in the city; thus in 179 B.C. the censors had to rescue a number of *sacella* from private occupation (*Liv.* xl. 51. 8; cf. *Cic. Harusp. Resp.* xv. 32); and in his dialogue *de Natura Deorum*, supposed to have taken place in the year 75 B.C., *Cicero* writes of thefts of statues and other property from temples (i. 29, 82)—*sacrileges* which we may probably attribute to the demoralization caused by the social and civil wars. A number of new temples were founded in this period, but they seem to mark the fancy of those who vowed them rather than any fixed religious policy such as we traced in the previous age; and, before the end of the period with which we are now dealing, we find a temple which ominously forecasts the future, that of *divus Julius*, begun the year after his death. (For these foundations see *Aust, de Aedibus sacris*, p. 18 ff.)

(b) *Priesthoods.*—The oldest of these, the *Rex sacrorum* and the *Flamines*, which were attached to particular worships, fell into partial or complete neglect during this period. From the nature of their duties they could not be held together with any office which might take the holder away from Rome; according to the old ideas of the relation of the State to its deities, their absence would have been detrimental to public interests. But from the Hannibalic war onwards every ambitious member of the governing class looked to office and military command to procure him both wealth and influence; and as a consequence he avoided all

employment which would keep him at home. Attempts were made to break the rule, but for a long time the Pontifex maximus forbade such action; and, as these priests were in his *potestas*, disobedience was practically impossible. In 190 B.C. a Flamen Quirinalis was Pretor peregrinus, but was not allowed to hold a foreign command (Liv. xxxvii. 47). In 180 a Rex sacrorum tried to hold his priesthood together with a naval command (*duumvir navalis*), but was compelled to resign it (Liv. xl. 42). In 131 a Flamen Martialis was Consul, and wished to have a command in Sardinia, but again the Pontifex maximus interfered (Cic. *Phil.* xi. 8, 18); yet this same Pontifex maximus, P. Licinius Crassus, later in the same year went to Asia with an army, 'quod nunquam antea factum erat,' says Livy's epitomist (*Epit.* 59).

Perhaps the most remarkable instance of the degradation of the old sacrificial priesthoods is one which has been worked out by the present writer in *CIR* vii. [1893] 193 ff. from records in Livy: a youth of bad character belonging to the great family of the Valerii Flacci was made Flamen Dialis by the Pontifex maximus at the urgent request of his family in order to place him under the innumerable restrictions to which that important priesthood was subjected. Strange to say, this seems to have had the effect of reforming his character, and he became Curule aedile and Praetor later on, his brother being allowed to take the oath of office for him, as the Flamen was not allowed to swear.

The general tendency was undoubtedly to shirk these priestly offices with their awkward restrictions, and it is almost certain that the *flaminium Diale* was vacant from 87 to 11 B.C. (Wissowa², p. 71, note); the *flamines minores* are not heard of in the last century of the Republic, and, as Marquardt justly argues (p. 67, note 1), if they had survived, Varro would hardly have been at a loss for information about the cult and nature of those deities to which they were attached (Furrina, Falacer, etc.). So with the Fratres Arvales, of whom we have no record till they were revived as a corporation by Augustus; the Rex sacrorum alone seems to have survived (Cic. *Harusp. Resp.* vi. 12; Lex Julia Municipalis, sect. 62; *CIL* i. 121).

The great *collegia* of Pontifices, Augures, and Decemviri sacris faciundis were no bar to political advancement and the accumulation of wealth, and during this period we are frequently surprised by the eagerness with which a pontificate or augurship is sought after; e.g., Cicero was immensely pleased at becoming augur, and Cæsar took extraordinary trouble to become Pontifex maximus. The fact was that these offices brought both political and social influence; but as trustees of the old *jus divinum* they were by this time almost useless. The famous Pontifex maximus, Mucius Scaevola, Consul in 95 B.C., held that there were three kinds of religion, the poetic, the philosophical, and the political, and that only the last of these was of any consequence—and that one was not true (Aug. *de Civ. Dei*, iv. 27; Krahner, p. 47 and note). Cæsar as Pontifex maximus can have paid no attention to his duties, though he eventually took advantage of the office to reform the calendar: he was away from Rome some fifteen out of the twenty years during which he held it, and neither he nor Cicero makes any allusion to his pontifical functions. All these posts had become completely secularized, and were filled by popular election like the magistracies. The Pontifex maximus seems to have been elected in Comitia as early as the Second Punic war (Mommsen, *Röm. Staatsrecht*, ii. 35); the other priesthoods, those of Pontifices, Augures, and Decemviri (Quindecimviri in the last century B.C.), were thrown open to election by a Lex Domitia in 104 B.C., though by a method peculiar to themselves (Cic. *de Lege Agraria*, ii. 18). The last thing that a Roman thought of at this time, when he gave his

vote for a Pontifex or an augur, was the qualification of the candidate to perform the traditional duties of his office; the Pontifices let the calendar get into a state of chaos, and failed to keep up the sacrificial priesthoods which were under their control, while the augurs, as Cicero expressly tells us (*de Divinatione*, i. 15, 25, *de Nat. Deor.* ii. 3, 9), had become entirely ignorant of the ancient science of augury. This is indeed not to be wondered at, if we consider how severely the art of divination was criticized by the philosophers, and, on the other hand, how simple was the process by which it might be turned to account for political purposes. If a Consul, even without calling in an augur, announced that he was going to 'observe the heavens,' i.e. for lightning, that alone was sufficient in the eyes of constitutionalists like Cicero to put a legal stop to all business for that day; this was the consequence of the Lex Ælia Fufia of 153 B.C., passed in order to give extra legal strength to a Senatorial Government which was beginning to lose its moral weight. Cicero, though himself sceptical about the whole business of divination, repeatedly speaks of this law as a great bulwark of the constitution, and of its abolition in 58 B.C. as a fatal blow to the cause of Republicanism (Cic. *pro Sestio*, xv. 33, in *Vatinium*, ix. 23).

Of the *collegium* in charge of the Sibylline books we do not hear so frequently in this period; but, whenever the books are consulted, it is in the interest or against the interest of some party or family. To give a couple of examples: in 139 B.C. recourse was had to this device to prevent the great family of the Marcii from having the honour of bringing a new water supply into Rome, without effect in this case (Frontinus, *de Aq.* i. 7; cf. the new Epitt. of Livy, Grenfell and Hunt, line 188); again, in 56 B.C. the Quindecimviri found an oracle that forbade the invasion of Egypt by a Roman armed force, at a time when such an expedition was obnoxious to more than one party in the State; in this case the object was successfully achieved by this intrigue. The destruction of the old Sibyllines in the burning of the Capitoline temple in 81 B.C. had compelled the Government to acquire a new collection by diligent search in Greece and the East (Marquardt, p. 352, note 7), and this had naturally given opportunities for much forgery and double-dealing (Suet. *Aug.* 31; Tac. *Ann.* vi. 12). Of expiations ordered by this *collegium* we hear now little or nothing; the conscience of the people was blunted and callous; if the State was in danger, as in the Cimbrian war, the people hardly realized it. But in 113 B.C. a temple to Venus Verticordia was ordered 'ex Sibyllinis libris,' 'ob incesta Virginitum Vestalium'—a significant fact (Aust, *de Edibus*, p. 28).

Thus, when the Republic came to an end, all real life, all incentive to dutiful conduct, all unifying influence, had departed from the religion of the Romans, and all honesty of purpose, all genuine belief in its efficacy, had vanished from the minds of those who were entrusted with the supervision of it. It must, however, be confessed that, historically speaking, little damage was done by this decay of the old cults and priesthoods, which had no permanent vitality in them, and, for a cosmopolitan population like that of Rome, no saving health. But, like all the striking phenomena of this period of transition from city-State to Empire, the decay set in too rapidly, as the result of the unique struggle with Carthage. It set in before even the governing classes had had time to learn to think, much less to think with due reverence for the past. It came so quickly that no efficient substitute had time to grow up among its ruins as a sanction for morality. If Stoicism could save some men, or a natural sense of duty to the State, as with Cicero, or even only

the love of hard work, as with Cæsar, the ordinary individual, if ritual were neglected, and all trust in a spiritual world failed him, had no moral ballast, no bond of conduct to keep him from evil-doing. Hence, in spite of noble exceptions, there was a real lowering of the level of morality in this age; that there was wickedness in high places we know; and we have every reason to believe that all classes were equally selfish and equally callous.

IV. FOURTH PERIOD

(From the accession of Augustus).

It will be our object, in dealing with the last period of the life of the religion of the Roman State, to examine (1) its resuscitation by Augustus, and (2) the traces of its survival in Rome and the provinces during the next three centuries. We shall leave out of account the foreign religions which became fashionable in this period, as being fully dealt with in other articles; and also the worship of the Cæsars, the most remarkable feature of the religious practice of the early Empire, except so far as it was superimposed upon the older cults and inextricably intertwined with them. This worship was, in fact, in both origin and character foreign to Rome and Roman ideas, for the true Roman conception of the divine, as has been shown throughout this article, was quite inconsistent with the cult of living human beings; and, though officially, no doubt for this reason, only dead emperors were allowed to be worshipped by the State, as dead ancestors had been by the family, the actual practice went far beyond this, and the ideas connected with the practice do not really belong to our subject. See artt. CÆSARISM, DEIFICATION (Greek and Roman), vol. iv. p. 529 ff.

I. *THE REVIVAL OF THE STATE RELIGION BY AUGUSTUS.*—This is not only the most remarkable event in the history of the Roman religion, but one that is almost unique in religious history. We have seen how completely the belief in the efficacy of the old cults had vanished among the educated classes, and how the outward practice of religion had been allowed to decay; and to us it may seem almost impossible that the practice, and to some extent also the belief, should be capable of resuscitation at the will of a single individual, even though that individual represented the best interests and the collective wisdom of the State. The explanation lies in the fact that, though it was too late to revive the old religion in its primitive simplicity, it was not too late to revive the idea, common to all ancient States, that the morality, the political tranquillity, and the physical efficiency of the State were intimately bound up with the attention paid by the State to the divine beings who were interested in it. Right conduct, public concord, and the fertility of men, animals, and crops could not be secured to that State, it used to be firmly believed, unless its divine inhabitants were properly and continually propitiated. Thus the religious revival of Augustus is a part, and a necessary part, of his whole political scheme. He had learnt from the experience of his predecessors in political power that reform on political lines only was quite insufficient and without any element of stability, because it did not appeal to any deeply rooted feeling in the popular mind. The Roman people were tired of political quarrels, of constitutional changes, of endless party legislation, of civil wars; Augustus gradually came to understand that the only healing medicine he could prescribe for the State was not so much of a political as of a moral and religious nature. Real political convictions had long been evanescent; but there still remained the inherited conviction, especially among the masses, of

the power of the gods to give or withhold prosperity, and it was this conviction that Augustus determined to use as his chief political lever. This will be appreciated by any one who will take the trouble to read and meditate upon the famous hymn which Horace wrote, at the request and doubtless almost at the dictation of Augustus, for the celebration of the Secular Games in 17 B.C.; there the ideas of religion, morality, and fertility are deftly woven together, and seem to express exactly this remedial policy of the Princesps. Whether Augustus himself shared those convictions on which he determined to work it is impossible to say, nor is it of much importance for our present object. But, inasmuch as a man's religious beliefs are largely the result of his own experience and that of the society in which he lives, it would not be unreasonable to guess that in his religious revival he was expressing naturally a popular conviction in which he shared, rather than standing entirely apart and administering a remedy which he thought of as mechanical and not organic in its operation. And this view is confirmed by the tone and spirit of the great literary works which he stimulated or inspired.

There is another aspect of the popular feeling of the age about which a few words must be said in order to explain more clearly this strange revival of an almost obsolete religion. It can hardly be doubted that there was more than a sense of weariness and material discomfort abroad among the people; there was also what we may almost call a sense of sin, or at least of moral evil—such a feeling, though doubtless less real and intense, as that which their prophets from time to time awoke in the Jewish people, and one not unknown in the history of Hellas. This is very clearly reflected in the poets and historians of the time—e.g., in the preface to Livy's history, in the fourth *Eclogue* of Virgil and the conclusion of his second *Georgic*, and in some of the earlier poems of Horace, notably in the 16th *Epode* and *Odes*, iii. 6; and it was accompanied, as so often happened in the ancient world, by a tendency to superstitious beliefs and practices unauthorized by the State—astrology, magic, etc. (Boissier², i. 76). This consciousness of neglected duty—duty both to gods and to men, such as alone could enable the Roman State to fulfil its destiny, to carry out the will of Jupiter and the Fates—is, in fact, the *raison d'être* and the moral of the great representative poem of the time, the *Æneid* of Virgil, without a careful study of which it is impossible to understand either the work of Augustus or the temper of the age. It is an emphatic appeal to the Roman to put away from him individual passion and selfishness, and to respond to the call of Fate—of those moral forces which had wrought through the Roman dominion such mighty changes in the world. In the very years when Augustus was endeavouring to restore the old sense of *religio* and *pietas* by rebuilding temples and resuscitating cults Virgil was leading his hero towards the accomplishment of his mission in Italy, developing in him the true quality of *pietas*, i.e. not only the due performance of service to gods and ancestors, but the sacrifice of self to the interests of the community, submission to the divine will in full confidence of ultimate success. The real meaning of Roman *pietas* is as clearly expressed in the poems of Virgil as the best spirit of Puritanism is expressed in those of Milton; but it is expanded far beyond the narrow bounds in which we have so far been tracing it, in accordance with the expansion of the State from a city into an Empire, and it is accompanied by the idea that a great future is yet in store for the State, of which the initial moments are close at hand. Whoever contemplates closely the work of Augustus in combination with Virgil's poem will find the same essential elements in each

of them: an appeal to the past as the only safe basis of reconstruction, and a confident hope for the future on new lines of progress and civilization. In the poem, too, is to be found the conviction that the man who was thus reviving the past and at the same time securing the future was not only *divi filius*, but in fact himself divine.

Much more might be said on this subject, but this may be enough to explain the ideas underlying what has often been wrongly described as a gigantic piece of deception. It is now, however, generally acknowledged that, even if Augustus was himself an unbeliever, he was reflecting and expressing a strong popular feeling (see Boissier², vol. i. chs. i. and iv.; Wissowa², p. 73 ff.; cf. his paper on the 'Ludi Sæculares' in his *Gesammelte Abhandlungen*, p. 192 ff.; and Aust, p. 90 ff.). The one point steadily to keep in mind is that this strange movement was not merely a revival of religious rites, but an appeal through those rites to the conscience of the people. A revival of religious life it certainly was not, for what we understand by that term had never existed at Rome; but it was an attempt to give expression, in a religious form and under State authorization, to certain feelings and ideas not far removed from those which we in these days describe as our religious experience.

We may now proceed to a brief account of the revival of the old cults and priesthoods, noting the changes introduced to suit new circumstances, such as the expansion of the Empire into a cosmopolitan State, and the elevation of a single Roman family to the first place in outward dignity as well as in actual influence.

Augustus did not become Pontifex maximus till the year 12 B.C., i.e. nineteen years after the battle of Actium; he waited with scrupulous patience until the great priesthood became vacant by the death of Lepidus. This, however, did not prevent him from pursuing his religious policy with great earnestness before that date, for he had long been a member of the college of Pontifices, as well as of the Augures and Quindecimviri. The year 12 B.C. may, however, conveniently serve as a landmark, dividing the consummation of his religious authority from a comparatively limited form of it.¹ A good example of his earlier reversion to religious methods is the fact that in declaring war against Antony, or more strictly against Cleopatra, he had revived the old college of the Fetiales (see above, p. 824), with its curious ceremonial. On his return to Rome two years after the victory he began his great work of temple restoration, which he has himself put on record (*Monumentum Ancyranum*, iv. 17): 'duo et octoginta templa deum in urbe consul sextum (28 B.C.) ex decreto senatus refeci, nullo prætermisso quod eo tempore refici debebat.' The great importance which he attached to this work is thus made abundantly clear; and it is confirmed by the prominence given to the subject in the poems and histories of the period (e.g., Liv. iv. 20. 7; Hor. *Odes*, iii. 6; Ovid, *Fasti*, ii. 59), and by the energy with which it was followed up by his successors (see below). Nothing could so well answer his purpose of bringing his policy before the very eyes and minds of the Roman people: the employment of workmen, the adornment of the city, the solemn processes of dedication and consecration—all served the same general end in different ways, and must have done much to rekindle the old feeling that there were divine as well as human inhabitants of the city, and the sense of duty in regard to them. But even from the outset it is most interesting to notice how this

astute reformer contrived to combine the ideas of the Empire and of his own supremacy with the purely civic worship; his family, i.e. the Julii, had always had a special connexion, not only with Venus but with Apollo, the Greek substitute, as it would seem, for the mysterious Roman Vejovis (*CIL* i. 807, xiv. 2387; Wissowa, *Gesammelte Abhandlungen*, p. 198); and it was Apollo of Actium who had assisted him in that decisive moment of his fortunes. It was Apollo, too, who had become the authorized Roman deity of prophecy, and with his cult were connected the Sibylline books and the idea of a new and better age (*Virg. Ecl.* 4); Augustus therefore, in the year 28 B.C., dedicated to Apollo Palatinus a splendid temple on a site which belonged to himself and not to the State (Velleius, ii. 81), thus founding a cult which, though beginning as a private concern of his own family, was destined (as he doubtless well knew) to become one of the most important in Rome.

Another great temple which he built, also 'in solo privato' (*Mon. Anc.* iv. 21) in his own Forum Augusti, S.E. of the Forum Romanum, was that of Mars in the capacity of Ultor, i.e. as the avenger of the murder of Julius. The *lex templi* of this foundation is in part preserved by Dio Cassius (lv. 10), and shows that its founder intended that even the great Jupiter of the Capitol himself was to cede some of his honours to this old deity of a new dynasty; here the members of the Imperial family were to sacrifice after assuming their *toga virilis*; here the *triumphator* was to deposit his *insignia* after the triumph which had been decreed him by the Senate in the same building; here, too, after each *lustrum*, the Censors were to drive a nail into the wall (Wissowa², p. 126). And this temple also stood in the closest relation to the Imperial house, for it contained not only a statue of Mars, but one of Venus (a Greek combination long familiar to the Roman mind, as we have already seen), thus bringing together the characteristic foundation-deity of the city with the reputed ancestress of the Julian family (Wissowa², p. 292). It is interesting to notice that this temple was not dedicated until some years after Augustus had become Pontifex maximus (Aug. 1, 2 B.C.); he had meanwhile been content with a small round temple to the same deity in the Capitol (Mommsen, *Res Gest. Div. Aug.* 126). For another curious and characteristic step he also waited, and took it within a few weeks of his election to the great priesthood—viz. the dedication of a new temple of Vesta on the Palatine hill, immediately connected with the house of the Imperial family (*CIL*² i. 317; Wissowa², p. 76). This did not supersede the old temple below, with its ancient associations, but it signified none the less that the heart and life of the State, in one sense at least, was bound up with the hearth and home of the reigning Princes.

It was going only one step farther when Augustus a few years later took the opportunity of his reorganization of the city, and its division into fourteen regions, to introduce the figure of the Genius Augusti between those of the two Lares Compitales at each *compitum*, or meeting of two streets, thus combining with singular skill the police regulations of the city with the inculcation of the idea that the Princes stood to the public religion as the *paterfamilias* stood to that of the household (G. M. Rushforth, *Latin Hist. Inscriptions of the Early Empire*, Oxford, 1893, p. 58 ff.; Wissowa², p. 171 f.).

We do not know how far Augustus went in restoring the old temple cults; we can only suppose, on the evidence chiefly of Ovid's *Fasti*, that with the restoration of the temples the old forms of worship were as far as possible rescued from oblivion. But we do know that he contrived

¹ His policy was at all times the same, but the new position gave him greater moral weight in the maintenance both of public and of private religion.

to revive the old sacrificial priesthoods, as distinguished from the flourishing semi-political colleges of Pontifices, Augures, and Quindecimviri. In spite of all its disabling restrictions, it was possible once more to fill the post of Flamen Dialis; of Rex sacrorum and the other Flamines we also hear in the early Empire (Marquardt, pp. 326-336); and, as these were in the *potestas* of the Pontifex maximus, i.e. of the Princeps himself, it was not likely that they would be allowed to neglect their duties. Other ancient colleges were also revived, or confirmed by the inclusion of the Emperor himself among their members (*Mon. Anc. Gr.* 4)—the Fetiales, the Sodales Titenses, the Salii, the Luperci, and above all the Fratres Arvales, the brotherhood whose duty it had once been to lead a solemn procession round the crops in May, and so to ensure the blessing of the gods on the most important material of human subsistence (see above, p. 824). A priesthood of this kind was after Augustus' own heart, for it combined in its operations the ideas of agriculture and religion, prosperity and morality, which, as we have said, are so prominent in the *Carmen saculare* of Horace; and the fortunate survival of large fragments of its records, dating from shortly after the battle of Actium, shows that it continued to work and to flourish down to the reign of Gordian (A.D. 241), and from other sources we know that it was still in existence in the 4th century (Henzen, p. 25). These records have been found on the site of the sacred grove which from the time of this revival onwards served as the centre of the activity of the brotherhood; it was doubtless originally one of the points on the boundary of the *ager Romanus* at which the Fratres paused in their procession, and lay at the fifth milestone on the Via Campana between Rome and Ostia. See art. ARVAL BROTHERS and literature there cited; and short accounts will be found in Wissowa², p. 561 f.; Fowler, *Religious Experience*, lect. xix.

The Brethren were twelve in number, with a Magister at their head and a Flamen to assist him; they were chosen from distinguished families by co-optation (Henzen, p. 154), the reigning Emperor always being an ordinary member. Their duties fell into two divisions, which most aptly illustrate the two sides of Augustus' religious policy: (1) the performance of the yearly rites in honour of the Dea Dia, who has taken the place of Mars in the ceremonial (see above, p. 824), probably as a result of the abandonment of the *lustratio agri Romani* as the State enlarged its boundaries; (2) the vows, prayers, and sacrifices for the Emperors and other members of the Imperial house.

The reader of the *Acta* will not fail to be struck by the occurrence of the old Roman piacular sacrifice, which was duly performed and recorded whenever iron was used in the grove, or any damage done to the trees of the grove by lightning or other accident; and on one occasion, in A.D. 183, when a fig-tree sprouted on the roof of the temple (Henzen, p. 142 ff.), *piacula* of all appropriate kinds were sacrificed to Mars, Dea Dia, Janus, Jupiter, Juno, Virgines divae, Famuli divi, Lares, Mater Larum, 'sive deus sive dea in cuius tutela hic lucus locusque est,' Fons, Hora, Vesta Mater, Vesta deorum dearumque, Adolenda Commolenda Deferunda, and sixteen *divi* of the Imperial families. This will serve to show the extent to which the revival of detailed ritual had been carried by Augustus, and the extraordinary tenacity with which it held its ground.

The second part of the activity of the Brethren illustrates the adroit way in which the revival of this priesthood (as doubtless of the Salii and others also) was made to mark the sacred character and political and social predominance of the Im-

perial family. All events of importance in the life of the Emperor and his family were the occasion of vows, prayers, or thanksgivings on the part of the Fratres—e.g., births, marriages, the succession to the throne, journeys and safe return, and the assumption of the consulate and other offices or priesthoods. These ceremonies all took place at various temples or altars in Rome, or at the Ara Pacis, which has recently been excavated in the Campus Martius. A single example taken at random from the *Acta* will suffice to illustrate this. The following is a 'votum susceptum pro salute novi principis' on his accession (Henzen, p. 105):

'Imp(eratore) M. Othone Cæsare Aug(usto), L. Salvio Othone Titiano(terum) co(n)s(ulibus) III. k(alendar) Febr(uaris), mag(istro) imp(eratore) M. Othone Cæsare Aug(usto), promag(istro) L. Salvio Othone Titiano: colleg(i) fratrum Arva(rum) nomine immolavit in Capitolio ob vota nuncupata pro salute imp(eratoris) M. Othonis Cæsaris Aug(usti) in annum proximum in III. non(as) Ianuar(ias) Iovi bovem' m(arem): Iunoni vac(am), Minervæ vac(am) Saluti (publicæ) p(opuli) R(omani) vac(am), divo Aug(usto) bovem' m(arem), divæ Aug(ustæ) vac(am), divo Claudio bovem' m(arem): in collegio adferunt, etc.'

This record, which belongs to the year 69 and the accession of Otho, shows the *divi*, i.e. the deified Emperors Augustus and Claudius, together with the deified Livia, associated with the trias of the Capitoline temple and the Salus publica in the sacrificial rites, Otho himself being the magister of the college, but represented by his brother as pro-magister (Henzen, p. v, note 1). Under the Flavian dynasty which followed, this association was, however, judiciously dropped.

No account of Augustus' work in the sphere of religion would be adequate without some allusion to the Secular Games (*ludi sæculares*) of 17 B.C., in which beyond doubt he endeavoured to express in outward show, in the space of three days, all his views and hopes for the political, moral, and religious future of the Roman world. That year, in which his faithful colleague Agrippa was still spared him, and no serious misfortune had as yet fallen upon the State or the Cæsarean house, may be taken as the zenith of his career, and is aptly marked by this singular celebration, of which the details have come down to us almost complete. To the Sibylline oracle which indicated the rites to be used (printed, e.g., in the *Sibyllinische Blätter* of H. Diels, p. 131 ff., from Zosimus, ii. 6, who also in ch. 5 gives a detailed account of the *ludi*) we have now to add the contemporary account in the form of an inscription (*Monumenti Antichi*, 1891, p. 601 ff.; *Ephem. Epigr.* viii. 255 ff.) found in Sept. 1890 in a mutilated condition near the Tiber in the Campus Martius, the scene of the nightly part of the rites. This document contains a letter of directions from Augustus, two *senatus consulta*, and full instructions for the Quindecimviri as to the details of the ceremonial. In a popular lecture printed in his *Gesammelte Abhandlungen* Wissowa has reproduced the contents of this document with much skill and sympathy. The most important part of it is now easily accessible to students in H. Dessau, *Sylloge Inscr. Lat.*, vol. ii. p. 282 ff. If to these authentic sources of information we add the hymn which Horace wrote for the occasion in accordance with the views of Augustus, and which is mentioned as his composition in the inscription, it must be acknowledged that there is hardly another vital moment of ancient history which can be so clearly reproduced in imagination, and with all its meaning as well as its minutiae of detail.

According to certain old Roman ideas, of which it is hardly possible to trace the origin, a *saeculum* was a period stretching from any moment to the death of the oldest person born at that moment, and a hundred years was the average period so conceived. A new *saeculum* might thus begin at

any time, and might be endowed with special religious significance by certain ceremonies. The idea seems to have been that a new leaf, so to speak, might in this way be turned over in the history of a people, all past evil, material or moral, put away and buried (so the expression 'saeculum condere' is now explained), and a new period of innocence and prosperity entered on. This idea has manifestly something in common with that underlying the many curious rites first collected by Mannhardt in his *Baumkultus*, and familiarized to English readers by Frazer in his *Golden Bough*, in which objects are thrown into the water or buried after certain ceremonies to represent the cessation of one period of vegetation and the beginning of another. It is easy to see how exactly it would suit Augustus' policy, and how it might be manipulated to further his aims. Ever since his active life had begun, the idea had been in the air, and had won general recognition through the 4th *Eclogue* of Virgil and the fashionable mysticism of the age, while at the same time, as we have already seen, the popular feeling of depression and the desire to make a new start were so strong as to give it real meaning and force. But Augustus did not work it out merely on old lines; he did indeed retain for the rites to be performed by night the underground altar of Dis and Proserpina in the Campus, which had been the scene of the *ludi* since their initiation by the Sibylline Oracles in the First Punic war (249 B.C., a period of great depression and danger), but the place of these sombre deities was taken by such as would more exactly suit the lessons that he wished to inculcate: the Greek Mæra, the Greek birth-deities (Ilthyiaë), and on the third night Mother Earth, the deity of all fertility. Thus the fortunes and destinies of the Empire and the fertility of man and of crop were brought in combination to the notice of the people. It was in keeping with this that the date selected for the celebration was the end of May and the beginning of June, when the crops were fast ripening, a time when the Ambarvalia used to be held, and the preliminary harvest festival of the Vestalia was about to begin; and it was also arranged that the people should make offerings of ears of corn to the acting priests on those three days at the end of May (May 29-31), before the high ceremonies followed on June 1-3.

But the bright prospects and hopes of the coming *saeculum* were represented, not by night or at an underground altar where the old *saeculum* might be supposed to be buried, but by day, and on the Capitoline and Palatine hills. On the first and second days the Emperor, with his colleague Agrippa, sacrificed on the Capitol to Jupiter and Juno (Minerva is not mentioned), and prayed for the preservation of the State; on the third day, after the sacrifice to Apollo and Diana on the Palatine, *i.e.* to the protecting deities of the Imperial house in their private dwelling, Horace's hymn was sung by choruses of twenty-seven boys and as many girls, on the Palatine, and on the Capitol, in the areas of the temples of Apollo and Jupiter (see Fowler, *Religious Experience*, lect. xix.). The spectacle must have been extremely beautiful; and so anxious was Augustus to make it universally popular that he even allowed the unmarried, who were excluded as a rule from *ludi*, to be present on this occasion, as we learn from the inscription, line 54. The Principate was to initiate a new era of peace and goodwill, of prosperity and populousness, of agriculture and plenty—and all of these were to be acquired and secured by faithful performance of service to the gods. This is the idea that lies at the root of this famous celebration, as it lies also at the root of the

Æneid, whose author had died but two years earlier.

Many details might be added to this account of Augustus' revival; but what has been here said will be enough to indicate the general outline and meaning of it. It remains to sketch the survival of the old Roman State religion in the Imperial period; but the material for this is as yet imperfectly gathered together from the volumes of the *CIL*.

ii. TRACES OF SURVIVAL OF THE OLD ROMAN STATE RELIGION IN THE IMPERIAL PERIOD.—

(a) *Rome and Italy*.—Though the old Roman religion was now beset, as we have seen, by three formidable enemies which tended to destroy it even while they fed upon it, like parasites in the animal or vegetable world which eat up their host, *viz.* the rationalizing philosophy of symcretism, the worship of the Cæsars, and the new Oriental cults, yet, strange to say, it continued to survive in outward form, and to some extent, no doubt, in popular belief, for more than three centuries. This is the result partly of the tenacious conservatism of the Roman mind in regard to forms and customs, partly of the fresh stimulus which had been given it by Augustus and his men of letters, and the conscientious care with which the successors of Augustus carried out his policy in this department. Tiberius himself had a curious interest in matters of religion, and seems to have endeavoured even to check the growth of the parasites, while scrupulously adhering to the old religious forms; a good example will be found in Tacitus (*Ann.* iii. 58), where he is seen exercising his authority as Pontifex maximus to enforce the ancient restrictions on the life of the Flamen Dialis, or (*ib.* vi. 12) where he expounds the proper method of consulting the Sibylline books. Claudius added to the same tendency a pedantic antiquarianism which made him also a faithful follower of Augustus' policy. With the Flavian dynasty, which was without the religious prestige of the Julian house, the tendency is rather to revert to those cults which were not specially connected with the Imperial house. The great trias of the Capitol—Jupiter, Juno, Minerva—seems to overshadow the Apollo of the Palatine hill and the Mars Ultor of the Forum Augusti; not, indeed, that the trias had ever lost its place as the foremost protecting power of the State (Wissowa², p. 128), but there is no doubt that the advent of a new family to power tended to diminish the prestige of those worships which were associated in the popular mind with the Julii. Domitian made a special point of the worship of Jupiter; he built temples on the Capitol to Jupiter Conservator and Jupiter Custos, and added to the prestige of the cult of the trias by the institution of a festival, the Agon Capitolinus (*Tac. Hist.* iii. 74; Aust, in Roscher, *s.v.* 'Jupiter,' p. 749; for his fanciful devotion to Minerva see Wissowa², p. 255). The Antonines, even Marcus Aurelius himself, in spite of a grandeur of religious and moral belief which has rarely been equalled, were most careful in keeping up the ancient forms; Marcus did not hesitate in times of public distress to put in action the whole apparatus of the old religion (*Jul. Capit.* 13).

During all this early period of the Empire the temples were kept in repair assiduously, as is proved by inscriptions (*CIL* vi. 934, 962, 1001, etc.; Antoninus Pius is thus honoured 'ob insignem erga caerimonias publicas curam ac religionem,' *CIL* vi. 1001); and that there was no falling off in this respect seems to be shown by the well-known story of Constantius in A.D. 329 being shown round the temples when he visited Rome for the first time, and the curious interest which he took

in them in spite of his Christianity (Symmachus, *Rel.* iii.). And there can hardly be a doubt that this spirit of conservatism was not merely an affair of the Government, but that the Government was acting in harmony with popular feeling. In the Theodosian Code (xvi. 10. 2) we find that the worship of the family, i.e. of Lares, Penates, and Genius, had to be forbidden. But, in order to appreciate this tenacity, the student will do best to become acquainted with *CIL* vi., so far as it preserves the votive inscriptions of that age; for the number is legion of those which attest the surviving belief in the great deities of the old time, and especially (apart from the Capitoline trias) in Mars, Minerva, Mercurius, Venus, Apollo, Diana, Ceres, Liber, Fortuna, Hercules, and others. A more concise survey of these inscriptions will be found in the selection by H. Dessau, *Sylloge Inscr. Lat.*, vol. ii. Again, the student of the Christian Fathers will not fail to note that their tendency is to attack the absurd minutiae of the old Roman religion rather than the philosophy or the Oriental worships of their time; and this is more especially the case with St. Augustine, from whose *de Civitate Dei*, as has already been mentioned, we thus incidentally learn so much that is of value for our subject (see esp. bks. iv. and vii.). The very necessity under which the leaders of Christianity found themselves of suiting their own religious calendar, and in some instances even their ceremonies, to the habits and prejudices of the pagans tells the same story; the Christian calendar of feasts is obviously based upon that of the Romans, and to this day there are many practices of the Roman Church, especially in Italy and Sicily, which remind the student of the Roman religion of both the forms and the ideas that are familiar to him. (This very interesting subject, which lies outside the sphere of this article, is handled with great learning by H. Usener in his *Religionsgeschichtliche Untersuchungen*; cf. his *Götternamen*, p. 116, for the way in which the Christian doctrine of saints and angels fastened itself upon the gods of the *Indigitamenta*, aided perhaps by the philosophic doctrine that had explained these same gods as demons [Aust, p. 103]. To this process the Roman idea of the genius of an individual contributed not a little. But we need not here pursue the stages of the death of Roman paganism; nothing is to be learnt from them as to the nature of the old religion, except its extraordinary tenacity of life. The reader may be referred to some interesting chapters in Dill's *Roman Society in the last Century of the Western Empire*², London, 1899, bk. i., and to Boissier's *La Fin du paganisme*, Paris, 1891.)

(b) *In the provinces.*—The volumes of the *Corpus Inscriptionum*, especially those which collect the inscriptions of the northern and western provinces, show us the names of Roman deities with which we have become familiar in the course of this article, continually recurring in large numbers, and serve to remind us that the Roman soldier and the Roman merchant were to be found in all parts of the Empire still worshipping the ancestral deities of the State. But here a great difficulty meets us, which it is not possible entirely to overcome. It was the Roman practice to note the points of similarity between the gods whom they found existing in the provinces they acquired and those of their own religion, i.e. points both in the cult and in the conception: thus both Cæsar and Tacitus use this 'interpretatio Romana' instead of giving us the local names of the strangers (Cæs. *de Bell. Gall.* vi. 17; Tac. *Germania*, 9). As Romans became more permanently settled in distant parts, and as the army came to be recruited almost entirely from provincials, the distinction

between the deities of the Roman pantheon and those of the native provincials was gradually lost sight of, and even for the period of the early Empire it is extremely difficult to be sure to which category a name should be referred. Often, indeed, a cult-title added to the name of the deity enables us to be sure that the conception underlying the name is foreign and not Roman; and in the articles 'Mars' and 'Mercurius' in Roscher (ii. 2395 ff., 2828 f.) will be found a list of all such titles applied to these deities (which chiefly represent the spread of the Roman arms and Roman commerce respectively in the provinces), which may mark them as foreigners under Roman names. But it would be rash to assume that where such titles are not found the deities are always genuinely Roman; and, in fact, we know from other sources that Roman names became permanently attached to local deities, and were so used even by the provincials themselves. Thus in *CIL* vii., which contains the British inscriptions, we find the goddess of the hot springs of Bath addressed as 'Minerva' (no. 43); 'Liber' is the name for the chief god of the Dacians (*CIL* iii. 792, 896, etc.; cf. von Domaszewski, *Die Religion des römischen Heeres*, p. 54); 'Hercules' represents the German 'Donar'; and 'Silvanus,' whose cult is widely spread over the Empire as a deity of gardens, boundaries, and clearings (cf. Wissowa², p. 215), and belongs especially to the life of the Roman settler and farmer, was in Dalmatia undoubtedly the representative of a native deity. The legions, however, retained in the provinces the genuine worship (combined with that of the Emperor) of Jupiter Optimus Maximus, of whom the *aquila* was the symbol (von Domaszewski, p. 12), of Mars, and of Victoria (*ib.* p. 4 ff.); the auxiliary corps, who were not necessarily Roman citizens, continued to worship their own gods, whether under Roman names or not; but the legionary was a citizen, and the very nature of his oath and his service compelled him to the cult of the deities who protected the Roman State by its armies, though in the great majority of cases he was neither a Roman nor an Italian by birth. It is curious to find that in the middle of the 3rd cent. A.D., as a reaction against the Orientalizing tendency of recent Emperors, a new military Mars-religion appears, the work of the legions themselves (cf. von Domaszewski, p. 34: 'No god is so often found on the coins of the Emperors of the decaying Empire').

But the religions of the Roman Empire are a study in themselves, and one still incomplete; for the evidence is even yet not entirely collected. A great advance has been made in J. Toutain, *Les Cultes païens dans l'empire romain*, Paris, 1907-11.

THE RELIGION OF ROMAN PRIVATE LIFE.

So far we have been dealing with the religion of the Roman State. But we have seen (above, p. 822) that this religion of the State was developed out of the worship of the family, and in certain of its most primitive and characteristic features, such as the cult of Vesta, always retained the marks of its ancestry. Other festivals, such as the Paganalia and Compitalia, clearly reflect the common worship of a union of families before the era of the State was reached; these were taken up into the religious life of the State, and became *sacra publica*, according to the definition of that term in Festus, p. 245. But the religion of the family is included in the term *sacra privata*, and, in fact, forms the greater part of such *sacra* ('At privata [sacra] quæ pro singulis hominibus, familiis, gentibus, fiunt,' Fest. *ad loc.*); nor need we here go into

the question how far the individual was or could be the subject of religious rites, nor into the obscurer one of the cults which had become the hereditary property of particular *gentes* or clans.

Of the religion of the family we have considerable details surviving, and these have of late been well put together and discussed by De Marchi in his work, *La Religione nella vita domestica* (Milan, 1896; the sequel, *La Religione gentilizia e collegiale*, appeared in 1908). Other modern authorities are Marquardt, *Staatsverwaltung*, iii. 121 ff., and *Privatalthümer*, vol. I., where the private life of the Roman may be best studied in connexion with his religious practice. See also articles in Roscher on 'Lares,' 'Penates,' 'Genius,' etc., and later ones on kindred subjects in Pauly-Wissowa. E. Samter, in his *Familienfeste der Griechen und Römer* (Berlin, 1901), has interesting discussions of certain practices from the point of view of comparative religious practice; and a short account will be found in Fowler, *Roman Ideas of Deity*, London, 1914, p. 14 ff. It hardly needs to be said that the material from which our information is drawn on this subject is scattered over the whole range of Roman literature from Plautus and Cato to the Christian Fathers, and that the *Corpus Inscriptionum* and archaeological research have of late years added very important matter, which is still increasing, and still imperfectly sifted and absorbed.

Two preliminary remarks seem necessary. (1) There is no question here of periods of development, as in the religion of the State; development, or in one sense degeneration, worked upwards from the worship of the family and but little within it. True, the wealthy Roman families towards the end of the Republican period doubtless felt the influence of the general carelessness, but the *sacra privata* were so closely connected legally with the continuity of the family and its property that the natural conservatism of the Roman was here strongly and for the most part successfully appealed to. On this point, and on the duty of the Pontifices to see that the *sacra privata* were duly maintained, see esp. Cicero, *de Legibus*, ii. 46 ff. So far as we know, the only important change in the character of domestic worship was the iconic representation of the 'household gods,' which came in at the end of the Republican period; e.g., the Penates came to be represented by images of the Dioscuri (Wissowa, *Gesammelte Abhandlungen*, p. 95 ff.); otherwise in the country and in families of ordinary means the religious forms remained always much the same. (2) It is not to be supposed that the religion of the family was entirely independent of the State authorities. In the older forms of marriage, and in the superintendence of the public cemeteries and the private rites there performed, the Pontifices, and especially the Pontifex maximus, had a legitimate right of interference, and could prevent the contamination of *sacra privata* as well as *sacra publica*, as in the case of the Bacchanalia in 186 B.C. As Cic. *de Leg.* ii. 46 ff. shows, the Pontifices were the source of all exact knowledge of the *sacra privata*, and the general referees in all matters relating thereto. In other words, the State was responsible through its authorities for the due maintenance of the religious duties of all its members, including the private ones, just as with us it is responsible for the maintenance of moral duties towards women, children, and animals. This was the result of the inseparable union, so to speak, of Church and State at Rome.

The centre-point of the religion of private life was the house, and the centre-point of the house was the *atrium*, or hall, as we should call it, which represented the original form of Italian dwelling out of which all the additions of the later house were developed. Here the family met for all purposes but that of sleeping; here, in all houses but those of advanced city life and luxurious country villas, the deities of the household had their abode. As the *atrium* was the centre of the house, so was the hearth (*focus*) the centre of the *atrium*—the hearth, 'the natural altar of the dwelling room of man' (Aust, p. 214). This was the seat of Vesta, and behind it was the *penus*, or store-closet, the

seat of the Penates. Thus Vesta and the Penates are in the most genuine sense the protecting and nourishing deities of the household. Here, too, in the *atrium* was the Lararium, or altar of the Lar familiaris, the deity of the land which the family tilled as well as of the house in which they dwelt; and here, too, was worshipped the Genius of the *paterfamilias*, on whose aid the family depended for its fertility and continuance. A few words about each of these deities or spirits will help to make clear the character of this simple and beautiful religious life. They were all quite distinct conceptions, and, in spite of all the web-spinning of later Greek and Roman syncretism, we can feel fairly sure about the essential meaning of each one of them.

1. Vesta was beyond doubt (see above, p. 825) the spirit of the fire on the hearth; she thus represented the most essential part of the domestic economy, the power to keep the body warm and to cook the food—the maintenance of the physical vitality of the family. It has been said, not without reason, that Vesta represents this vitality rather in the abstract, while the other deities represent it in one or another more concrete form (De Marchi, p. 67, following Herzog, in *Rhein. Mus.* xiv. 6). Perhaps it would be more exact to describe her as the centre-point round which the others are set; for she was at least as concrete a conception as any of the others, and more so than the Genius of the head of the house. ('Nec tu aliud Vestam quam vivam intellige flammam,' says Ovid, *Fasti*, vi. 291; cf. J. G. Frazer, *GB*, pt. i., *The Magic Art*, London, 1911, ii. 200 ff.) In front of her dwelling—the hearth—was the table at which the family took their meals, provided with salt-cellar (*salinum*), sacred salt cake, baked according to primitive fashion (*mola salsa*; Fowler, p. 110) by the daughters of the family, as for the State worship by the Vestals, and the little sacrificial dish (*patella*). After the first and chief course of the midday meal silence was enjoined, and an offering of a part of the meal was thrown on to the fire (Serv. *Æn.* i. 730; Marquardt, iii. 126 note). Thus it is certain that this offering was made to the spirit of the fire (Vesta); whether also originally to the Penates may be doubtful, but so it seems to have been understood in later times, if Servius is right in stating that the *focus* was the altar of the *di Penates* (*ad Æn.* xi. 211). The Lar was also included in historical times (Ov. *Fasti*, ii. 633), and the deities of the household were reckoned all together in the offering (so the plural *dei* is used in Serv. *ad Æn.* i. 730); but the practice of casting it into the fire points to a primitive usage in which Vesta alone was concerned, and supports the view taken above that she was the centre-point of the whole group, and the most essential representative of the life of the family. A well-known Pompeian painting (De Marchi, p. 67, tab. iii.) shows Vesta sitting between two Lares, with the ass, her favourite animal, behind her; but this only serves to illustrate the anthropomorphic influence of Greek art on the Roman religion even in domestic life. Cf. also art. HEARTH, HEARTH-GODS (Roman).

2. Penates are the spirits of the household store (*penus*, which word Cicero explains as 'omne quo vescuntur homines' [*de Nat. Deor.* ii. 28; cf. Gell. *Noct. Att.* iv. 1. 17]). The religious nature of this store is well shown by the fact that no impure person was allowed to enter it, and the duty was especially that of the children of the family (see Fowler, *CLR* x. [1896] 317), whose purity and religious capability were symbolized throughout Roman history by the *toga praetexta* which they wore. It is perhaps as well to point out that the Penates are not to be understood as representing

the ancestors of the family; they are purely spiritual conceptions of the genuine Roman kind, attached to a particular spot, and capable of being moved to another spot with the family, as *Aeneas* carried his *Penates* from Troy to Italy. (The termination *-as*, of which *Penates* must be the plural, though the singular is nowhere found, always implies position in a fixed spot.) *Penates* is not, like *Lares*, a substantival name, but an adjective; thus we find *di penates* but never *di lares* (Wissowa², p. 164), and the adjectival form admits of an indefinite number of deities being included under it. Pompeian paintings show many different deities thus included; and in that referred to just above, where *Vesta* and the *Lares* are found together, they may all represent the *di penates* ('*penates sunt omnes dei qui domi coluntur*,' Serv. *ad Æn.* ii. 514). But this elasticity is, no doubt, a later growth; and in the simple Roman family of the country, as in the house of the primitive farmer, the *Penates* must have been, as their name implies, simply the spirits of the household store.

3. *Lar familiaris*.—The origin of *Vesta* and the *Penates* admits of little doubt; but that of the *Lar* is still a matter of dispute. It is now generally agreed that there was originally but one *Lar* of the household, as, e.g., in the prologue to the *Aulularia* of Plautus; but beyond this there is no consensus of opinion among scholars. Varro, so far as we know, was the first to suggest that *Lares* were the same as *Manes* (Aug. *de Civ. Dei*, vii. 6; Wissowa², p. 174), and recently this idea has been again in favour, since the subject of the worship of ancestors has been matter of comparative investigation. It has generally been believed that the *Lar* represented the reputed founder of the family, who (as has been assumed) was originally buried in the house, and continued to reside there. This was the view of F. de Coulanges in his remarkable book *La Cité antique*, and it has of late been maintained by both De Marchi and Samter in the works referred to above. But archaeological research in Italy has failed to discover any trace of burial in the house, or even within the walls of a settlement (see Fowler, *CLR* xi. [1897] 34). At all times the dead had a settlement of their own outside that of the living; and there is no evidence that the Romans ever thought of their duly buried ancestors as having any place in the dwelling of the living. As among other peoples, they may have been conceived as having a desire to return to their abode, especially if deprived by some accident of funeral rites, but in that case the great object of the living was to expel them (Fowler, p. 107 ff.). A convincing argument is that the *Lares*, as has already been mentioned, were never addressed as *di*, as the *Manes* invariably were; i.e., they cannot have been human beings who became divine at death. Of late Wissowa has claimed for the *Lar* a different origin, and his view, in spite of criticism (e.g. Samter, p. 105 ff.), may be said to hold the field at present. The *Lares*, he argues, were not originally household gods at all, but deities presiding over the several holdings of a settlement; they were originally worshipped at the *compita*, or crossways, where several such holdings met; there stood the shrine, with as many altars as there were *Lares* and holdings over which they presided (see Wissowa², p. 167 ff.; art. CROSS-ROADS [Roman]). Thus they fill a place in the private worship which would otherwise be vacant—that of the holding, and its productive power—while the buried ancestors are quite sufficiently represented by *di manes*, *di parentes*, etc. Thus, too, it is easy to account for their occurrence in the Arval hymn, one of the oldest Latin fragments we possess (Henzen, p. 26), for they would naturally be objects

of invocation at the lustration of the crops of the settlement (see above, p. 841). Nor is it difficult to understand how the *Lar* of the holding found his way into the house: he became the object of the worship of the whole *familia*, i.e. the workers on the land, both bond and free, and passed (perhaps as the bond-workers grew more numerous and important) into the circle of *Vesta*—*Penates*—*Genius*, with which, strictly speaking, slaves had nothing to do. It is true that we cannot trace this passage historically, and we know that the *Lares* of the *compita* retained their seat there and remained as *Lares compitales* even in the growing city; but we may be sure that the *Lares* were attached to the land and not, like the *Genius*, to the person of any man, and, as so attached, their presence in the house can hardly be explained in any other way. The arguments for this theory will be found in full in Wissowa's art. '*Lares*' in Roscher, in his *Rel. und Kult.*², p. 167 ff., and in a reply to Samter in *ARW* vii. [1904].

4. *Genius*.—The last of the deities of the household was the *Genius* of the *paterfamilias*, not to be identified, as in the age of syncretism, with the *Lar familiaris* (Censorinus, *de Die Natali*, iii. 2); even so late as the Theodosian Code the two are distinguished in the practice of the cult (see *Cod. Theod.* xvi. 10. 2). The *Genius* was in primitive conception the generative power of the man—that mysterious power which maintained the continuity of the family, yet belonged to the individual for his lifetime only, and to him alone; and apparently as inherent in this power was conceived to be all his masculine capacity of enjoyment and vigour of body and mind. The *Genius* is not the soul of the man, but the *numen* residing in him, whose power exhibits itself chiefly in the continuance of the family, and who must therefore be an object of veneration for all its members. The seat of the *Genius* was more especially the marriage bed (*lectus genialis*); and the festival of the *Genius* was the birthday of the head of the house, in which the whole *familia* took part, slaves and freedmen included (see Wissowa², p. 176; De Marchi, p. 176 ff.). This is the strict meaning of *Genius* in domestic worship: for further developments of the conception see Fowler, *Roman Ideas of Deity*, pp. 17 ff., 153 ff.

As might be guessed from all that we have seen of the Roman ideas of the supernatural, all the important epochs in human life, and the ceremonies connected with them, had, originally at least, a religious character.

5. *Marriage*.—See art. MARRIAGE (Roman).

6. *Birth and early years*.—If we are to believe Varro as quoted by St. Augustine (*de Civ. Dei*, iv. 11, 37; cf. Tertull. *ad Nat.* ii. 11), the processes of birth and bringing up were under the protection of a multitude of spirit-deities, all of whom should be invoked at the proper time and in the proper terms; but, as has been said above (p. 832), it may be doubted whether these lists were not the invention of a comparatively late age of priestly activity, and whether these *numina* were, in fact, recognized in ordinary practice. The chief deity of birth was Juno Lucina; in the fourth *Eclogue* of Virgil, which is a prophetic *carmen* sung at the actual moment of birth (see Fowler, in J. B. Mayor, Fowler, and R. S. Conway, *Virgil's Messianic Eclogue*, 1907, p. 69), this is the only deity invoked. Immediately after the birth, if the infant were *sublatus*, i.e. acknowledged by the father and destined to be brought up, we are told by Varro (*Aug. de Civ. Dei*, vi. 9) of a custom so curious that it may be mentioned here as possibly primitive in its original form and dating from the early agricultural age of Roman life. Three men at night

came to the threshold of the house and struck it respectively with a hatchet, a mortar, and a besom, that 'by these signs of agriculture Silvanus might be prevented from entering'; from these actions arose three deities, Intercidona, Pilumnus, Deverra, by whose guardianship the infant is protected against the power of Silvanus (cf. art. BIRTH [Greek and Roman], § 2). This idea of the force of cultivation in keeping off wild and evil spirits may be illustrated from Robertson Smith's *Religion of the Semites*, lect. iii. We need not follow the infant through the stages of his commitment to the care of other *numina*; it will be sufficient to observe that, though the accounts of these which have come down to us from Varro are doubtless exaggerated, the earliest tender age was, no doubt, matter of the greatest anxiety, and consequently of the utmost endeavour to avert evil influences and omens. That this is the meaning of the children's *bullæ*, or amulet, is almost certain, and probably the *toga prætexta*, which was worn by both boys and girls, had an originally religious or quasi-religious meaning (see Fowler, *CR* x. 317). But the one really religious ceremony of which we know in the first days of infancy is that of the *dies lustricus*—the ninth day for boys and the eighth for girls—on which, as the name implies, the child was purified and adopted into the family and its *sacra*, and received also its name. After this the boy or girl grew up under the protection of the household gods, and performed various religious duties in their service. On reaching puberty the boy laid aside the *bullæ* and the *prætexta*; the former was hung on the images of the Lares in later times (Persius, v. 31), while the latter was taken off finally at the festival of the Liberalia in March, when the youth went to the Capitol and sacrificed there to Jupiter and to Juventas (De Marchi, p. 176; Fowler, p. 56). The girl when about to be married also laid aside her *prætexta*, with her dolls and other marks of childhood, and, if Wissowa guesses rightly (*ARW* vii. 54), offered them to the Lares at the Compitalia. The tender and dangerous age of childhood being then passed, and youth and maiden being endowed with new powers, the peculiar defensive armour of infancy might be dispensed with.

7. **Death, burial, and cult of the dead.**—As Aust has well observed (p. 225), religion had no part to play at the Roman deathbed; the dying man had no reckoning to make with heaven, and had no need for the forgiveness of sins in order to depart this life in peace. His responsibility for his actions ceased with this life, and after death he had nothing to fear or to hope from the gods; thus he had no need of any mediating priest in his last moments. The miserable fears which haunted him through life, painted by Lucretius in such glowing colours of contempt, ceased altogether at his death; his peace and comfort in his grave depended on the right legal and religious conduct of his living family, in respect of proper burial and yearly renewed offerings to the *di manes* of the family at the common tomb. The house which he had left for the last time, and all who had been in contact with the deceased, must be duly purified by lustration, in this case by fumigation and the sprinkling of water, but the true religious rites only began at the grave. It may be observed in passing that both burial and cremation were in use at Rome in historical times, and had been so, as we know from the XII Tables, since at least the 5th cent. B.C.; the religious rites in each case were practically the same; the details of difference in other respects will be found in Marquardt, *Privat-alterthümer*, i. 365 ff.

When the body or ashes had been consigned to the last resting-place, the mourners partook at

the grave of a meal called *silicernium*, which had a religious character. The meaning and derivation of the word are uncertain, but there seems to be little doubt that it indicates some kind of sacramental meal, first offered to the dead and then partaken of by the survivors (De Marchi, p. 192), since Tertullian (*Apol.* 13) parallels it with the *epulum Jovis* of which the magistrates and Senate partook in the visible presence of the three deities of the Capitoline temple (Fowler, p. 218). Thus it would seem to have bound together the living and the *manes* of the deceased in the same mystical way as deity and worshipper were thought to be made one when the victim was not only killed but consumed. The rites at the grave continued till the ninth day; on one of these days occurred the *feriæ denicales*, of which the meaning is uncertain, but they may have included, as De Marchi has suggested (p. 196), a sacrifice of sheep to the Lar familiaris of which Cicero speaks in *de Legibus*, ii. 22, 55. The '*finis funestæ familiæ*,' or conclusion of the mourning, mentioned in the same passage, is the *sacrum novendiale* on the ninth day, which consisted of a sacrifice at the grave, and was followed by the *cena novendialis*, at which the partakers appeared no longer in mourning but in white, and celebrated with good cheer the end of their sorrow; in rich families this might again be followed by *ludi funebres novendiales*, as Æneas in *Æneid*, v., after the *parentatio*, or renewal of these rites in the cult of the dead, refreshed the spirits of his men by athletic contests.

As the dead continued to exist as spirits or deities after due burial, it was necessary to renew every year the rites at the grave which we have described. This took place under the direction of the State on what may be called the Roman All Souls' Days, nine in number, as were the days of original mourning (Feb. 13–21, Parentalia; Fowler, p. 306 ff.). On Feb. 22 was the family festival of the Caristia, described by Ovid (*Fasti*, ii. 617 f.) as a kind of reunion of the living members of the family after they had done their duty by the *di manes*, when all quarrels were forgotten in a general harmony. This took place not at the grave but in the house, and the household gods shared in the sacred meal. Cf. art. DEATH AND DISPOSAL OF THE DEAD (Roman).

8. **Agricultural rites.**—A word must be said about those religious observances of private life which were so important for the prosperous prosecution of the daily labour of the ordinary Roman. Of such observances in the great city itself we know nothing indeed, and it may be that they were obsolete at a very early period, or were never followed out, as in the leisured life of the farm; the 'busy idleness' of town life probably had a damaging effect upon simple piety, as has been the case in modern Europe. But of the religious ritual of the farm we fortunately have valuable records in Cato's treatise on agriculture, compiled in the middle of the 2nd cent. B.C.; these records are in all probability drawn from the books of the Pontifices, and are included by Cato in his work as giving the genuine and correct formulas of invocation to the gods for those about to undertake certain agricultural operations. One of them has already been quoted above, in connexion with sacrificial ritual and prayer; they have been carefully studied of late by De Marchi (p. 128 ff.), and translated by him into Italian, with notes. Here it is possible to give only a general account, and a single specimen of invocation.

For the safety of his oxen the farmer is directed (Cato, *de Agricultura*, 83) to offer to Mars Silvanus in the wood (presumably the woodland where they grazed), and by daylight, for each head of cattle a fixed amount of meal, lard, flesh, and wine. The

offering might be made either by a free man or by a slave, i.e. by the *villicus* in the master's absence; but no woman was to take part in it, or even to see the ceremony. The offerings were to be consumed by the persons present (cf. Fowler, p. 194). Again, when the pear-trees were in blossom, another offering, called *daps* (cf. Festus, p. 68), was to be made for the oxen, in this case to Jupiter Dapalis (cf. Jupiter Farreus in the rite of *confarreatio*). The day was to be a holiday for the oxen and the herdsmen, and for those who took part in the rite; and afterwards it was legitimate to sow various kinds of seed (Cato, 131 f.; cf. Fowler, p. 218). Once more, when wood was cut, or clearing made, or any digging done in a wood which might be inhabited by some unknown deity, a piacular sacrifice of a pig had to be made, and the following prayer recited: 'Si deus, si dea, cujus illud sacrum est, ut tibi ius siet porco piaculo facere illiusce sacri coerendi [i.e. violating] ergo. Harumque rerum ergo sive ego, sive quis iussu meo fecerit, ut id fecerit, recte factum siet. Eius rei ergo te hoc porco piaculo immolando bonas preces precor, uti sies volens propitius mihi domo familieque meae liberisque meis; harumque rerum ergo macte hoc piaculo immolando esto' (Cato, 139 f.; for this kind of *piaculum* cf. Henzen, p. 136 ff.).

The singularly interesting directions for the *lustratio agri* have been already alluded to and in part quoted (above, p. 828). Here we may substitute for it another piece of ritual, to be enacted before the harvest is begun, which is given by Cato in ch. 134. Before the harvest it is necessary to make a sacrifice of a *porca praedanea* in the following way (for this sacrifice of a sow and its connexion with the cult of the dead, from which it may have passed into the common usage of the farm, see Wissowa², p. 193; De Marchi, p. 135, note). The offering must be made to Ceres before the harvesting of wheat, barley, beans, and rape. Janus, Jupiter, Juno are to be invoked with incense and wine before the immolation of the sow; and to Janus a sacred cake (*strues*) is to be offered with the following prayer: 'O Father Janus, with the offering of this cake I pray thee to be propitious to me, my children, my house, and my familia.' Then another kind of cake (*fertum*) was to be presented to Jupiter with the same formula of prayer. Next, wine was to be offered to Janus with the words, 'Father Janus, as I have prayed thee good prayers in offering the *strues*, so for the same object let this offering of wine succeed'; so also a wine offering was to be made to Jupiter. Then the *porca praedanea* was to be slain; and, when the entrails had been laid bare, another *strues* was to be offered to Janus as before, and another *fertum* to Jupiter, and to each of them an offering of wine. Afterwards both the meat and the wine were to be offered to Ceres.

With this specimen of ritual, which so well illustrates the peculiar character of the Roman religious practice, whether public or private, this article may fitly be concluded. Like all such formulæ, it suggests questions which are not easy to answer, and which it is not possible to attempt to explain here. But it may serve to remind the reader of what was said at the beginning of this article as to the origin and essential character of the genuine *religio* of the early Romans, which had its roots in the mental attitude of an agricultural people towards the powers to whom they believed themselves indebted for all success in procuring food and clothing by agricultural labour.

ROMANTICISM.—See CULTURE.

ROSARIES.—I. ORIGIN.—A rosary is a string of knots or beads, designed as an aid to the memory, and, when used in religious exercises, providing a convenient method for counting the recitation of prayers or the repetition of the names and attributes of the Deity. The use of the rosary is very widely spread, but its earliest home seems to be in Asia, where it can lay claim to a fairly venerable antiquity. In dealing with its origin we can do no more as yet than put forward suggestions.

The use of knots (*q.v.*) as mnemonic signs is almost universal, and such a simple device may have been invented again and again; its appearance in many parts of the world does not prove that it was invented in one country and transmitted thence to other centres. The highest development of a system of knots as a means of aiding the memory and for keeping records is seen in S. America, where the *quipu* (a Peruvian word meaning 'knot') served as a means of record and communication in a highly organized society. It was a system of knot-writing, each kind of knot having a separate meaning, the different coloured cords also having each its own significance.¹ In China, in the times of Yung-ching-che, it is stated, the people used little cords marked by different knots, which, by their numbers and distances, served them instead of writing.² This seems to point to the early use by the Chinese of a contrivance similar to the *quipu* of the Peruvians. In the rosary used by the Shingon sect of Buddhists in Japan there is a knot formed by the union of two strings which hang from the main string of beads, and it is said to resemble an ancient Chinese character which means 'man,' being one of a combination of characters used in representing one of the many attributes of Buddha.³

The use of knots as mnemonic signs for purely secular purposes still persists in many countries. Among the Indians of Guiana, when a *paivari* feast is to be held, the entertainers prepare a number of strings, each tied into knots, the number of which corresponds with the number of days to the feast. The headman of each settlement is presented with one of these strings. Every day a knot is untied, and in this way the hosts know on which day to expect their guests.⁴ Among the

⁴ E. F. im Thurn, *Among the Indians of Guiana*, London, 1883, p. 319 f.

Wagogo of Central E. Africa the time of a woman's pregnancy is reckoned by knots; at each new moon one knot is untied.¹

In this country it is a common practice to tie a knot in a handkerchief as an aid to memory. The same custom is found in India, the knot being usually tied in the strings of the *pdejamas*.² Such customs are apt in time to disappear with the advance of culture and the introduction of less cumbersome methods, being retained only for religious purposes. Such a survival of the use of knots for keeping records is seen in some rosaries at the present day in the Greek Orthodox Church, in Egypt, and in India. These will be noted below under the various headings.

Notched sticks are also of universal use for record-keeping, such as the tally-sticks which were utilized in England and Ireland almost up to the present day. In Ireland in quite recent times these sticks have been employed to record the number of prayers uttered, and the suppliant would leave such a stick as a votive offering at some sacred well. These sticks have been called 'votive rosaries.'

II. AGE.—The oldest reference to rosaries to be found in the literature of India is in the Jain canon. Here they are referred to as forming one of the appliances of Brāhmanical monks. In this literature the two names given to rosaries are *ganettiya* and *kañchaniyā* (Prakrit names = Skr. *ganayitrika*, 'the counter,' and *kañchana*, 'gold,' also 'bright' or 'shining'). References in later literature occur in Brāhmanical works only, and here two more names are given—*mātā* (or *mālīka*), 'garland,' and *subra*, 'string.'³ These names refer to the shape of the rosary. Some of the deities are represented as carrying rosaries in their hands. The following passage from the Buddhist 'Forty-two Points of Doctrine,' art. 10, alludes to the rosary:

'The man who, in the practice of virtue, applies himself to the extirpation of all his vices is like one who is rolling between his fingers the beads of the chaplet. If he continues taking hold of them one by one, he arrives speedily at the end. By extirpating his bad inclinations one by one, a man arrives at perfection.'⁴

III. DISTRIBUTION.—The rosary is found to be in use among Hindus, Buddhists, Muhammadans, and Christians. It also has a use among some Jews.

1. Hindu or Brāhman.—It is generally considered that the Hindus were the first to evolve the rosary.

'It is called in Sanskrit *japa-mala*, "muttering chaplet" (and sometimes *smarant*, "remembrancer"), because by means of its beads the muttering of a definite number of prayers may be counted. But the pious Hindu not only computes his daily prayers as if they were so many rupees to be added to his capital stock in the bank of heaven; he sets himself to repeat the mere names of his favourite god, and will continue to do so for hours together.'⁵

This operation of counting is used by ascetics as a means of promoting contemplation.

The rosary differs according to the sect to which the user of it belongs. The materials of which rosaries are made vary greatly, and each has a specific purpose. The number of beads also varies according to the sect. A worshipper of Śiva is supposed to use a rosary of 32 beads, or double that number; a votary of Viṣṇu, on the other hand, is supposed to use one with 108 beads. This number is also sometimes found on a Śaivite rosary; indeed the beads may run into several hundreds, irrespective of the sect. There are usually one or more terminal beads to each rosary; they are not generally counted in with those on the main string.

(a) *Materials, etc.*—A favourite bead of the Śaivites is that called *rudrakṣa*, 'eye of the god Rudra (or Śiva).' This is generally supposed to come from the *Eleocarpus ganitrus*. In the Panjāb, however, the name *rudrakṣa* appears to be applied to the seeds of the jujube-tree, and importance is here attached to the number of facets on the seeds. These slits, running from end to end of each seed, are called 'mouths' (*munh*). A one-mouthed *rud-*

rakṣa is considered a very valuable amulet, and the owner of such a bead also 'possesses' the goddess Lakṣmī and all kinds of blessings. If nothing will tempt the possessor to part with it, it must be stolen from him, and it should be encased in gold and carefully preserved as a family relic. It is only from the most accomplished Yogis that such beads can be obtained, and any price that they demand must be paid by the would-be owner of such a treasure. *Rudrakṣa* seeds with eleven facets are worn by celibate Yogis, while the married ones wear those with two; and those with five facets are sacred to Hanumān, the monkey-god.¹ The rough surface of the *rudrakṣa* seeds may possibly symbolize the austerities connected with Śiva-worship. The seeds, according to a Śiva legend, are said to be the tears of Rudra (or Śiva) which he let fall in a rage (some say in grief, some in ecstasy) and which crystallized into this form. The five facets are also sometimes thought to stand for the five faces or the five distinct aspects of the god.² The worshippers of Viṣṇu, on the other hand, prefer smooth beads, and favour those made of the *tulasi*, or holy basil (*Ocimum sanctum*), this shrub being sacred to Viṣṇu. The Śāktas count up to 100 on the three joints of each finger on the right hand, each ten being marked off on the joint of one of the fingers on the left hand. The number of recitations having reached 100, they place that number of millet grains before them. This is repeated till the required number is reached. The Atits of Bengal break up their rosaries into separate parts, using them as ornaments also. They wear a string of 27 beads from the elbow, a wristlet with five beads, and hanging from each ear is a pendant of three beads.³ In the Jain sect the laity generally use the rosary when repeating the *navakar mantra*. The materials vary according to the use to which they are put and the wealth of the owner. The poorer Jains generally use rosaries made of cotton thread and sandal-wood; the richer use beads of red coral, crystal, cornelian, emerald, pearl, silver, and gold. In this sect there are two special uses of the rosary.

(1) Rosaries of five different colours—red, yellow, green, white, and black—are used for the repetition of certain mystical formulæ and incantations to appease and propitiate Navagrāhās, ten Dikpālās, Ashtamangalās, and other deities on the following occasions: (a) *Sānti-sūtrā* (pacifying and propitiatory rites); (b) *aṣṭottari-sūtrā* (bathing an image 108 times); (c) *anjana-sālākā* (ceremony of sanctifying images); (d) *chaitya-pravīṣha* (first occupation of a newly built Jain temple); (e) *pratiṣṭha* (installation of images in temples). The *tīrthankaras* are believed to have been of different colours, viz. red, yellow, green, white, and dark; hence the use of rosaries in these five colours. Red is represented by the red coral rosary; yellow by the amber or gold; green by the emerald; white by silver, white pearl, or crystal rosaries. The cotton thread rosaries do not represent white and cannot be used as a substitute for silver, pearl, or crystal. The dark, or dark blue, colour is represented by the *akikābahar* rosary.

(2) Rosaries of these five different colours are also used for the repetition of mystical formulæ, charms, spells, and incantations, with a view to obtaining certain benefits from the deities. On the other hand, they may be used for harmful purposes—to injure hostile or obnoxious people, to disable them, to make them ill, to kill them, to subdue them, to obtain their affections, to make them inert, or to summon them.

There are also small rosaries called *boberkhas*. These are used when the more costly rosaries with the usual number of beads are not obtainable, or when the user cannot afford to buy the more expensive beads. These *boberkhas* generally contain 6, 9, 12, 18, 27, 36, or 54 beads—i.e. any sub-multiple of 108.⁴

Devotees attach much importance to the size of the beads—the larger they are, the more effective is the rosary, and the greater the merit attained by the user of it. Monier-Williams⁵ gives the following account of the use of such rosaries by an

⁵ P. 113 f.

old hermit who was living in the neighbourhood of Kaira in a hut near a rude temple:

'He was engaged in his evening religious exercises, and, wholly regardless of the presence of his European visitor, continued turning with both hands and with evident exertion a gigantic rosary. A huge wooden roller, suspended horizontally from the posts of the shed, supported a sort of chain composed of fifteen rough wooden balls, each as big as a child's head. As he kept turning this enormous rosary round and round, each bead passed into his hands, and whilst he held the several balls in his grasp he repeated, or rather chanted in a low tone, a short prayer to the god Rama. All the wooden balls underwent this process of pious manipulation several times before he desisted. The muscular exertion and consequent fatigue must have been great, yet the entire operation was performed with an air of stoical impassiveness. Then the devotee went into another shed, where on another cross-beam, supported by posts, were strung some heavy logs of hard wood, each weighing about twenty pounds. Having grasped one of these with both hands, he dashed it forcibly against the side post, and then another log against the first. Probably the clashing noise thus produced was intended to give increased effectiveness to the recitation of his prayers.'

The rosary plays a part in the initiation ceremony when children, at the age of six or seven years, are admitted to the religion of Viṣṇu. Such a rosary is usually made of *tulsi*-(*tulasi*-) wood, and it is passed round the necks of the candidates by the *guru* (priest), who teaches them one of the sacred formulæ, such as 'Homage to the divine son of Vasudeva,' 'Homage to the adorable Rama,' or 'Adorable Krishna is my refuge.'¹

A high-caste Brāhman employs the rosary merely as a means of counting his daily prayers. He is careful to conceal his hand in a bag, made for this purpose, when telling his beads, so that he may not 'be seen of men.' The bag, which is often beautifully embroidered and is of a particular shape, is called *gaumukhi*, 'cow's mouth.' The favourite *mantra* thus repeated is the *Gāyatrī* from the *Rigveda*—'*Tat savitūṛ varenyaṃ bhargo devasya dhīmahi dhiyo yo nah praçoddayat*,' 'Let us adore that excellent glory of the divine Vivifier: may he enlighten our understandings.' Only those who have been invested with the sacred thread may repeat this *mantra*.

'A Brahman may attain beatitude by simple repetition of the *Gāyatrī*, whether he perform other rites or not,' and 'having repeated the *Gāyatrī* three thousand times he is delivered from the greatest guilt.'²

In the monasteries a novice is instructed to be careful not to lose his beads; should he do so, he is allowed no food or drink till he has recovered them, or, failing this, till the superior has invested him with another rosary.

Further special uses for the different kinds of beads are given by K. Raghunathji:³

'If a rosary be used in honour of a goddess the beads should be of coral (*prdvāl*); if in honour of Nirgun Brahma, they should be of pearls (*muktamala*); if with the object of obtaining the fulfilment of wishes (*vāṣṇā*), they should be of *rudrak*-*śaṣ*; . . . if with the object of obtaining salvation (*moksha*), they should be of crystal (*spāthik*); and if with the object of subduing the passions (*stambhan*), of turmeric roots.'

The Sikhs have a rosary which consists of knots instead of beads. Possibly this is a survival of an early method of keeping count by a system of knots. It is made of many strands of wool, knotted together at intervals—108 knots in all. This kind of rosary is not very durable, the material of which it is composed being liable to the ravages of moths. Another kind of rosary used by Sikhs is made of iron beads, arranged at intervals and connected by slender iron links. They have a rosary also which is peculiar to them and is worn like a bracelet on the wrist. It is made of iron and has 27 beads. Sometimes these beads are strung on a rigid iron ring, sometimes they are connected by links like the longer rosary mentioned above. The rosary with 27 beads has a particular

name (*Lohe kâ Simarna*), and it forms also a tribal mark.¹

The Śāktas use rosaries made of dead men's teeth and similar relics.

A Hindu rosary called *baijanti mala* (*baijanti*, 'flag [or standard] of Viṣṇu') consists of five gems produced from the five elements of nature—sapphire from the earth, pearl from water, ruby from fire, topaz from the air, and diamond from the ether or space.

(b) *Charms*.—It is sometimes difficult to distinguish between the rosary proper and a charm; in fact, the rosary is often itself a charm. The Badi Nats of S. Mirzapur have a sacred musical instrument which is called *nag-daman* ('subduer of snakes'). Rosaries of snake-bones are tied to it, and, until it is furnished with two such rosaries, it does not become sanctified. This instrument is occasionally worshipped, and the beads of the rosaries hung on it are often used to cure diseases by being tied on to the wrist of the sick person.² Snake-charmers in other parts of India make use of similar rosaries as a protective charm, by hanging them on to the pipes on which they play before the snakes. The *faqirs* also make use of a rosary composed of the vertebrae of a snake; they carry it to show that they know of a charm to cure snake-bite. Sometimes the rosary is worn tied to the turban, and a special *mantra* is recited on these beads called the *garur-mantra*, to cure snake-bite. This is an example of the universal belief in the 'doctrine of signatures.' The *faqirs* also cure quartan ague by tying a bead from such a rosary round the wrist of the sufferer.³

There is a rosary much used by Hindus of the Śākti sect which is called *putr jiwa* ('which gives life to sons'). It is composed of beads made of light-coloured seeds, oval in shape, which grow very plentifully. This rosary is used when a Hindu wants a son. No doubt the idea of fertility is involved here.

The following method of obtaining a son is given by Pandit Ram Gharib Chaubé:⁴

'Most Hindus believe that their failure to obtain male issue is due to the unfavourable position of the stars. . . . If it be owing to Sanishchara Mangala, Rahu or Ketu, the Śrāddha rite must be performed either at Gaya or Narayani Sīla at Hardwar, and a Pandit must be employed to recite the *Sri Mad Bhagwat Katha* for seven days. But the most popular plan is to get the following mantra repeated one hundred and twenty thousand times at a temple of Rama or Siva and to have a *Homa* or fire sacrifice done at the end of it: "O Govinda, son of Devaki, lord of the universe, give me a son; I have taken refuge in thee."

Another rosary, used by Hindus who wish to get rid of their superfluous flesh, is made of small, almost black seeds, dry and shrivelled looking, being rather like dried currants in appearance. Doubtless the user hopes that by repeating prayers on it he may obtain a likeness to the seeds, and shrivel up and decrease in size himself. A rosary from the Partabgarh district, which is in the collection at the Pitt-Rivers Museum, Oxford, consists of 213 very small beads, *plus* the terminal, and is finished with a tassel of pink wool. This rosary is stated to be used to prevent the effect of the 'evil eye.'

2. *Buddhist*.—The Buddhist rosary is probably of Brāhman origin, and here again the number of beads on the string is usually 108. This is said to correspond with the number of mental conditions, or sinful inclinations, which are overcome by reciting the beads.

Moreover, 108 Brāhmins were summoned at Buddha's birth to foretell his destiny. In Burma the footprints of Buddha have sometimes 108 subdivisions; in Tibet the sacred writings (*Kahgyur*) run into 108 volumes; in China the white pagoda at Peking is encircled by 108 columns, and in the same country

⁴ *NINQ* iv. 378.

108 blows form the ordinary punishment for malefactors. Again, in Japan, at the *bommatsuri*, or *bonku* (festival of the dead), observed from 13th to 15th July, 108 welcome fires are lighted on the shores of sea, lake, or river; and 108 rupees are usually given in alms.¹

Besides the full rosaries of 108 beads, smaller ones are also used, the number of beads representing the chief disciples of Buddha.

(a) *India*.—In India the Buddhist rosaries do not seem to differ very much from many of those used by Hindus. Some are made of more costly materials than others, the more valuable being of turquoise, coral, amber, silver, pearls, or other gems. The poorer people usually have their rosary beads made of wood, pebbles, berries, or bone, and they are often satisfied with only 30 or 40 beads.

(b) *Burma*.—The Burmese rosary also has 108 beads. It seems to be used merely as a means of counting the repetitions of the names of the Buddha trinity, viz. *Phra* (Buddha), *Tara* (*Dharma*), and *Saṅgha*. On the completion of a round of the rosary the central bead is held and the formula '*Aniṣṣa, Dukka Anatha*,' 'All is transitory, painful, and unreal,' is repeated.² The monks sometimes wear a rosary called *bodhi*, with 72 beads. The beads are black and sub-cylindrical in shape, and are said to be made of slips of leaf on which charmed words are inscribed. These leaves are rolled into pellets with the aid of lacquer or varnish. The rosary is not mentioned in the Southern Scriptures as one of the articles necessary for a monk, and it is not so conspicuous among Southern Buddhists as it is among their Northern co-religionists.³

(c) *Tibet*.—The rosary, *phreng-ba* (pronounced *theng-wa*, or vulgarly *theng-nga*), 'a string of beads,' is an essential part of a Lāma's dress, and is also worn by most of the laity of both sexes. The act of telling the beads is called *tan-c'e*, which means literally 'to purr' like a cat, the muttering of the prayers being suggestive of this sound. The rosaries have 108 beads on the main string. The reason given for this number is that it ensures the repetition of a sacred spell 100 times, the eight extra beads being added for fear of omission or breakage. There are three terminal beads to the rosaries, which are called collectively 'retaining (or seizing) beads,' *dok-dsin*. These symbolize 'the Three Holy Ones' of the Buddhist trinity. The *Gelug-pa*, or established church, have only two or three terminal beads to their rosaries, the pair being emblematic of a vase from which the other beads spring. But an extra bead is often strung with those on the main string, bringing the number up to 109.

The Tibetan rosaries usually have a pair of pendent strings on which are threaded small metal beads or rings. These serve as counters. At the end of one of these strings is a *dorje* (the thunderbolt of Indra), the other string terminating in a bell. Sometimes there are four of these strings attached, in which case the third string often ends with a magic peg (*purbu*), and the fourth with a wheel (*Kor-lo*). The counters on the *dorje* string register units, those on the bell string marking tens of cycles. These terminal ornaments are frequently inlaid with turquoise. The strings are usually attached at the eighth and twenty-first bead on either side of the large central bead, though there is no rule about this and they can be placed anywhere on the string. By means of these counters 10,800 prayers may be counted, but the number uttered depends largely on the leisure and fervour of the devotee. Old women are especially zealous in this respect. Sometimes the beads have been so worn with constant use that their shape has been changed. Besides those pendent counter-strings, various odds and ends often hang from the rosaries, such as metal tooth-picks, tweezers, small keys, etc.

The materials of which the beads are made vary according to the sect, the god or goddess addressed, and the wealth of the owner. The abbots of some of the wealthy monasteries have their rosary beads made of valuable gems and precious stones.

Importance is often attached to the colour of

the rosary, which should correspond with the complexion of the god or goddess to be worshipped. Thus a devotee of the goddess Tara, who is of a bluish-green complexion, would use a turquoise rosary; a worshipper of Tam-din would choose a red rosary; a yellow-coloured rosary is used in the devotion to the yellow Mañjuśrī; and for Viṣṇavan, whose complexion is of a golden-yellow colour, an amber rosary would be used. This applies to rosaries used by the Lāmas. The laity use rosaries made of any kind of bead, and they are not tied by rules as to colour. They usually use glass beads of various hues, mixed with coral, amber, turquoise, etc., and the counter-strings attached to their rosaries generally end with a *dorje*, the beads on both strings recording units of cycles only, this being sufficient for the bead-telling of the laity. The number of beads on the main string is, however, the same as on the rosaries of the Lāmas.

The Lāmas use certain mystical formulæ which are prescribed for repetition, each formula having its own special rosary. Different formulæ are used for different deities, and they are supposed to act as powerful spells as well as to contain the essence of a prayer. These *mantras* are more or less unintelligible to the worshipper, and are indeed usually gibberish. They are probably of Sanskrit origin. The laity, on the other hand, seldom make use of any other formula than the well-known '*Om mani padme Hūm*!'

The rosary is used in Tibet for other purposes than that of prayer, as, e.g., divination. The account of this practice is given by Waddell.¹

The ceremony is performed by the more illiterate people and by the Bon priests. First a short spell is repeated, and then the rosary is breathed upon and a fairly long prayer is recited in which the petitioner begs various religious protectors and guardians that 'truth may descend on this lot,' that light may descend on it, and 'truth and reality appear in it.' After the repetition of this prayer 'the rosary is taken in the palm and well mixed between the two revolving palms and the hands clapped thrice.' Then, closing his eyes, the devotee seizes a portion of the rosary between the thumb and finger of each hand, and, after opening his eyes, counts the intervening beads from each end in threes. The result depends on whether the remainder is one, two, or three in successive countings.

(1) *If one as a remainder comes after one as the previous remainder*, everything is favourable in life, in friendship, in trade, etc. (2) *If two comes after two*, it is bad: 'The cloudless sky will be suddenly darkened and there will be loss of wealth. So Rim-hgro must be done repeatedly and the gods must be worshipped, which are the only preventions.' (3) *If three comes after three*, it is very good: 'Prosperity is at hand in trade and everything.' (4) *If three comes after one*, it is good: 'Rice plants will grow on sandy hills, widows will obtain husbands, and poor men will obtain riches.' (5) *If one comes after two*, it is good: 'Every wish will be fulfilled and riches will be found; if one travels to a dangerous place, one will escape every danger.' (6) *If one comes after three*, it is good: 'God's help will always be at hand, therefore worship the gods.' (7) *If two comes after three*, it is not very good, it is middling: 'Legal proceedings will come.' (8) *If three comes after two*, it is good: 'Turquoise fountains will spring out and fertilize the grounds, unexpected food will be obtained, and escape is at hand from any danger.' (9) *If two comes after one*, it is bad: 'Contagious disease will come. But if the gods be worshipped and the devils be propitiated, then it will be prevented.'

(d) *China*.—The full Buddhist rosary in China has the usual number of 108 beads, with three dividing beads of a different size or colour. As in other countries, the materials composing them vary. There is also a smaller rosary of 18 beads, corresponding to the 18 *lohas* (chief disciples of Buddha). In some rosaries each of these 18 beads is carved into an image of a *lohan*. Sometimes the laity wear this smaller rosary at the waist, when it is perfumed with musk and bears the name *heang-chu*, 'fragrant beads.'² The Chinese name for rosary is *su-chu*. The ends of the rosary strings are usually passed through two retaining or terminal beads, one being large and globular in shape, the other small and oval. Sometimes the larger one contains a sacred relic or a charm.³

Part of a Chinese official's costume consists of a rosary with 108 beads which are often of large size, with dividing beads. The latter are sometimes made of richly enamelled silver. This rosary has usually three pendent strings with counter-beads. From the retaining beads sometimes hangs a silk ribbon embroidered with different-coloured glass beads, the patterns being symbolic. Attached to this ribbon there is generally a medallion, and finally an oval bead of some size. One of these oval beads also forms the terminal to each of the three pendent strings, the four being called the 'dewdrops,' the 'disciple beads,' or the 'regents of the four heavens.' They represent the emperor, father, mother, and teacher, to whom a Chinese owes reverence and obedience.¹ These official rosaries are sometimes very costly, and are worn only by dignitaries on State occasions. They are not apparently of religious significance.

As a religious instrument the rosary seems to be chiefly used to count the repetition of set phrases, whereby the devotee stores up merit for himself. If these repetitions are performed at temples, the greater the merit of the votary.² The rosary is also used as a means of counting prostrations and prayers. The devotee will prostrate himself and strike the ground with his forehead, at the same time muttering a formula. At the end of each prostration and repetition a bead is moved along the rosary string which hangs round his neck.³ On occasions of sickness and death there is a ceremonial performance with the rosary. The officiant must either be taken from a certain class of Taoist priests or be a priest of Buddha. On these occasions the priest chants in a monotonous sing-song certain quotations from the sacred books. Count of these repetitions is kept by means of a rosary, and the benefit and merit obtained by them accrue to those who employ the priests and pay for them.⁴

(e) *Korea*.—The Buddhist rosaries of Korea have 110 beads, though, according to the classics, the number is 108, the two extra beads being large ones—one at the beginning or head of the rosary usually containing a *svastika*, the other dividing the rosary into two parts. Each of these beads is dedicated to a deity. Every bead on the string has its own special name. The devotee, when using the rosary, repeats the 'Hail thou jewel in the Lotus!' (*Om mani padme Hūm!*), holding each bead till he has counted a certain number. On laying the rosary aside he repeats the following sentences:

'Oh! the thousand myriad miles of emptiness, the place which is in the midst of the tens of hundred myriad miles of emptiness, the place which is in the midst of the tens of hundred myriads of emptiness, eternal desert where the true Buddha exists. There is eternal existence with Tranquil Peace.' There is also a small rosary which, if used every day in the four positions or states, viz. going forth, remaining at home, sitting, and lying down, enables the votary to see the land of bliss in his own heart.

'Anita will be his Guardian and Protector, and in whatever country he goes he will find a home.'

The materials of which the rosaries are made have all their intrinsic value, as may be seen from the following:

'Now you can calculate that in repeating the rosary once you will obtain tenfold virtue. If the beads are of lotus seeds you will obtain blessings a thousandfold. If the beads are of pure crystal you will obtain blessings ten thousandfold. But if the beads are made from the Bodhi tree (*Ficus religiosa*) even if you only grasp the Rosary the blessings that you obtain will be incalculable.'

The *Chyey Syek* classic gives certain rules to be observed in connexion with the rosary:

'When you begin chanting the Rosary repeat *Om Akcho Svaha* ("Hail Akchobya [a fabulous Buddha], may the race be perpetuated!") twenty-one times. When you string the beads, after each one repeat *Om mani padme Hūm* twenty-one times, and, after you have finished, repeat *Om Vairochana* (the personification of essential bodhi and absolute purity) *Svaha* twenty-one times. Then recite the following poetry:

The Rosary which I take includes the world of Buddha
Of Emptiness making a cord and putting all thereon.
The Peaceful *Sana* where non-existence is
In the Nest being seen and delivered by Amita.'

On the walls of many of the Buddhist temples in Korea may be seen the classic of the rosary. A copy of one of these was obtained by E. B. Landis, who says:

'The date and authorship I do not know, but it is evidently very old, as it contains many Chinese characters that are now practically obsolete. The copy in my possession was printed from blocks cut at *Pong Eui Sa* (The Temple of the Receiving of Benefits) located at Kwang Chyou. The expense incurred in cutting these blocks was paid by a virgin by the name of *Pak*, who wishes to obtain for herself and parents an abundance of merit.'

(f) *Japan*.—It is in Japan that the Buddhist rosary reaches its most complicated form, each sect having its own special rosary. There is also the one known as the *sho-zuku-jiu-dzu*, or the rosary used by all sects in common.

It consists of 112 beads, divided into two equal parts by two large beads, called the upper parent bead (*ten-no-oya-dama*) and the lower parent bead (*chi-no-oya-dama*). From the upper parent bead hang two strings on which are threaded 21 beads smaller than those on the main string, with terminal beads of elongated form called *tsuyu-dama* (dewdrop beads). They are strung in the following way. Just below the upper parent bead on the left pendent string is a solitary bead; below this the strings are knotted. Then, on each string, are five more beads and another knot; again other five beads on each pendant, both of which terminate in a dewdrop bead. The collective name for these pendent beads is *kami-deshi* ('superior disciples'). The solitary bead is used to show how the rosary should be held. This bead should be on the left hand, thus ensuring the right signification to each bead during prayer.

From the lower parent bead hang three strings, two with five small beads each and the terminal dewdrop beads. These two strings are called the *shimo-deshi* ('inferior disciples'). The third string has ten beads, but is without a dewdrop bead. These are used merely as counters and are called *kadzū-tori*. The four dewdrop beads are also called *shi-ten-no*, the four regents who are said to preside over the four quarters of the universe. The rosary represents metaphorically the Buddhist pantheon, and the position of the dewdrop beads is thought to symbolize their actual positions of power and authority, as, according to Buddhist philosophy, they preside for good or evil over this and all other worlds. Throughout all the Japanese rosaries names of deities or saints are assigned to certain beads.

On the main string of this rosary are dividing beads. At an interval of seven beads on either side of the upper parent bead is a small bead, usually of a different material from the other beads, and again at a further interval of fourteen beads are two more dividing beads, one on each side, similar to the other dividing beads. These beads show where a special invocation should be uttered, the rosary being at the same time raised to the forehead with a reverence.

The materials of which Japanese rosaries are made vary considerably according to fashion or the taste or wealth of the owner. In former times they were made from the wood of the *bodhi-tree* (*pīpal-tree* in India), for under its shade Śākyamuni is said to have attained supreme and universal enlightenment. The difficulty of obtaining this wood probably accounts for the fact that common rosaries are now often made of the wood of the cherry- and plum-trees.

The *sho-zuku-jiu-dzu* is the rosary usually carried by monks and laity of all sects, on all occasions of religious state, on visits of ceremony, at funerals, etc.

Besides the rosaries of the separate sects there are three ceremonies performed for special purposes in which the rosary plays an important part. They are known under the names of *kanō*, *ki-tō*, and *goma*.

(1) *Kanō*.—This ceremony is for the recital of 'prayers of request' (of a just nature) to a deity who has the power of acceding to or refusing the petitions of the devotee. It involves a special manipulation of the rosary, which is held by both hands, the petitioner raising it very reverently and slowly to the forehead or to the chin as the 'prayers of request' are repeated. Also during prayer the beads are rubbed up and down between the hands in a more or less energetic manner, according to the fervour of the petitioner, causing an unpleasant and grating noise. The members of the orthodox school, however, prefer to keep to the 'Middle Path,' considering too extreme an exhibition of this sort to be vulgar.

(2) *Ki-tō*.—This ceremony is peculiar to the Tendai, Shingon, and Nichiren sects—Ryō-bu—or those Buddhist sects which have accepted certain Shintō formulae.

¹ *Proc. U.S. National Mus.* xxxvi. 389.

² J. Doolittle, *Social Life of the Chinese*, ii. 386 f.

³ *Ib.* p. 458.

⁴ *Ib.* p. 387.

¹ All the information on Korean rosaries is obtained from E. B. Landis, in *The Korean Repository*, vol. ii. no. i.

(3) *Goma*.—There are two varieties of this ceremony, the first being that of *go-ki-to* and *goma* combined, which is confined to the Tendai and Shingon sects. The ritual is as follows. In front of the altar in the temples of these two denominations stands a large square wooden box, lined inside with metal, and bearing the name of *goma-dan*. In this box a fire is lit with pieces of a certain kind of wood which crackles a good deal and sends out a number of sparks on all sides. While this is in progress, the monk who is officiating repeats the prayers with great vigour, using the rosary in the way described above under *kanô*. This ceremony is believed to cure and prevent disease, and also to dispel evil spirits.

The second variety of this ceremony is called the *go-ki-to*, being performed without the *goma*. This form is peculiar to the Nichiren sect, and the method of manipulating the rosary is also characteristic. The rosary itself differs somewhat from that in ordinary use. The procedure is as follows. The rosary is tied to a short wooden sword of about five inches in length, the large beads being fastened near to the point. The sword is inscribed with the *dai-moku*, or original prayer of the creed, together with other incantatory prayers. The monk holds the sword in his right hand and repeats the first article of the creed, making at the same time nine passes in the air with the sword. These passes are supposed to correspond (mentally) with the written character which means 'Mysterious!' 'Wonderful!' though the figure sometimes varies. The metre of the prayers recited harmonizes with the nine passes used in making these figures. This is called *ku-ji wo kiru*, cutting the nine figures or words, and breaking the spell. The sword cuts are delivered in a short jerky way, the rosary at the same time clicking against the sword, thus helping to mark time. Only monks who have undergone a special training may officiate in this rite. The monks are trained at a celebrated monastery of the Nichiren sect in Shinjôsa. The course lasts for 100 days and generally takes place in the winter. The curriculum prescribed is very severe, and, at the end of the course, should the candidate be successful in passing the test examination, he is granted a diploma by the abbot.¹

According to one authority,² the rosary in Japan plays an important part in social as well as in religious life. In the tea-room there is always a hook on which to hang a rosary; a rosary of value, historical or other, is much appreciated as an ornament for this room. It is said that rosaries were carried by all the soldiers in the late Russo-Japanese war. The dead also have a rosary slipped on the wrist, whether they are buried or cremated.

At some of the larger temples and at all places of popular pilgrimage there are special shops for the sale of rosaries, having as their sign an enormous rosary hung outside. The devout attach especial value to a rosary that has been consecrated over the sacred flame and incense smoke of a venerated temple.

3. *Muhammadan*.—The rosary used by followers of Islâm generally consists of 99 beads with a terminal bead called the *imâm*, 'leader.' Its chief use is for counting the recital of the 99 names, or attributes, of God, the *imâm* being sometimes used for the essential name, Allâh. This rosary is divided into three parts, 33 beads in each, by beads of another material or shape, or by tassels which are often made of gold thread or of bright coloured silks. According to some authorities, there is another variety of the rosary, not often used, which has 101 beads to correspond with the 101 names of the Prophet.³ A smaller rosary of 33 beads is very commonly used, and the devotee will go round this three times to get the full repetition of the 99 names. In Persia and India the Muhammadan rosary is called *tasbîh*, in Egypt *subhah*, from an Arabic verb meaning 'to praise,' 'to exalt.' At the present day it is used chiefly by the older or more devout Muhammadans; among the younger people it is tending to become merely something to hold in the hand and finger during leisure hours.

Tradition says that the Prophet attributed great merit to those who recited the names of God and repeated certain formulae. 'Verily,' he says, 'there are ninety-nine names of God, and whoever recites them shall enter into Paradise,' and, 'Whoever recites this sentence [the *tasbîh*, 'I extol the holiness

of God," and the *tahmîd*, "God be praised"] a hundred times, morning and evening, will have all his sins forgiven.'⁴

'Umar Ibn Shu'aib relates that the Prophet said: 'He who recites "God be praised" [at *Hamdu li-llâh*] a hundred times in the morning and again a hundred times in the evening shall be like a person who has provided one hundred horsemen for a *jihad*, or "religious war."⁵ At another time the Prophet promises, as a reward for the repetition of a sacred formula, that the devotee 'shall receive rewards equal to the emancipating of ten slaves, and shall have one hundred good deeds recorded to his account, and one hundred of his sins shall be blotted out, and the words shall be a protection from the devil.'⁶

The date of the introduction of the rosary among Muhammadans is uncertain. It has been often assumed that it was taken over by them in a fully developed form from Buddhism. But tradition and various passages in the early literature point to a primitive form of rosary, such as would not have been used if borrowed from a people who had it already in a highly developed form.

Muhammadan tradition points to a very early use of the rosary, dating it back even to the time of the Prophet himself. In support of this belief it is related that Muhammad reproached some women for using pebbles in repeating the *tasbîh*, etc., suggesting that they should rather count them on their fingers.⁷ Another tradition, collected in the 9th cent. A.D., relates that Abu Abd al-Rahman, on visiting a mosque and seeing some of the worshippers engaged under a leader in the recitation of 100 *takbirs*, 100 *tahlis*, and 100 *tasbîhs*, keeping count of these by means of pebbles, reproached them and said: 'Rather count your sins and I shall guarantee you that nothing of your good works will be lost.'⁸ Again, Abdallah, son of Khalifah 'Umar, who died in A.D. 692, on noticing a man picking up pebbles as a means of counting his petitions while he prayed, said: 'Do not do that, for this comes from Satan.'⁹ The last two quotations seem to show that, though a very primitive method of counting prayers was resorted to, the practice was still more or less looked down upon by those of rank or education.

The materials of which the rosaries are made are numerous, though each sect tends to have its own specially sacred form of bead. The Wahhabis, who are followers of the reformer Abd al-Wahhab, use their fingers on which to count their repetitions, their founder regarding a more developed form of rosary as an abomination and its use as a practice not sanctioned by the Qur'an.⁷ Wooden beads are used by all sects, and beads made of clay from Mecca are highly valued. Pilgrims from this sacred city sometimes bring such rosaries back with them.⁸ Date stones are also much used, as are also horn and imitation pearls and coral. Beads made of earth from Kerbala, where Husain is buried, are sacred to the Shi'ahs and are used by members of this sect only. They are often of a greenish-yellow colour. These beads are believed to turn red on the 9th day of Muharram, the night on which Husain was killed. A rosary from India used by Arabs of the Sunni sect has beads made of the seeds of the *Cannabis indica*. These seeds are black in colour and are inlaid with silver. The terminal to this rosary is a complicated knot in bright coloured silk, the knot being of a form characteristic of Muhammadan rosaries. This rosary is said to have been made in Mecca. Another material often used is camel bone. Sometimes these beads are dyed red in honour of Husain, who was slain in his conflict with Yazid, the seventh Khalifah, the red colour representing his blood. Sometimes the beads are dyed green, this being Hasan's colour. Hasan, Husain's elder brother, met his death by poisoning. The poison turned his body green after death; hence these beads are in memory of his tragic end. *Faqirs*, on the other hand, prefer glass beads of various colours, and also amber or agate.⁹

In Egypt on the first night after a burial certain ceremonies take place at the house of the deceased, among them being that of the *subhah*, or rosary.

⁸ *Id.*

¹ *Journ. Asiatic Soc. of Japan*, ix. 178-182.

² *Proc. U.S. National Mus.* xxxvi. 342.

³ *Id.* 348, note 1; Dr. Gaster, on the other hand, has informed the writer of this article that the 101 beads correspond not with the names of the Prophet, but with 101 names of Allâh.

After nightfall a certain number of *faqirs*, sometimes as many as 50, assemble, one of them bringing a large rosary of 1000 beads, each bead being about the size of a pigeon's egg. Certain passages from the Qur'an are recited, after which the formula 'There is no deity but God' is repeated 3000 times. Count of these repetitions is kept by one of the *faqirs* by means of the rosary. They often rest and refresh themselves with coffee at the end of each round of the rosary. Certain other sentences are recited after this and then one of the officiants asks his companions, 'Have ye transferred [the merit of] what ye have recited to the soul of the deceased?' They reply, 'We have transferred it,' and add, 'and peace be on the Apostles, and praise be to God, the Lord of all creatures.'

Thus ends the ceremony of the *subhah*, which is repeated on the second and third nights if the family can afford it. A similar performance takes place when news of the death of a near relative is received.¹

A further interest is attached to this ceremony in Upper Egypt, because a primitive form of rosary is often used on this occasion.

A *faqir* will bring a plain cord with him, and, as he recites each formula or passage from the Qur'an, he makes a knot in his cord till he has reached 1000. The merit in this case also is conveyed to the deceased. The cord with its knots is afterwards thrown away.

The rosary is also used in Egypt in what is called making an *istikharah*, 'application for the favour of Heaven, or for direction in the right course.' Lane² describes it as follows:

The performer takes hold of any two points of a rosary; after reciting the *Fatihah* (1st chapter of the Qur'an) three times, he then counts the beads between these two points, saying, as he passes the first bead through his fingers, '[I extol] the perfection of God'; in passing the second, 'Praise be to God'; in passing the third, 'There is no deity but God,' repeating these formulae in the same order to the last bead. If the first formula falls to the last bead, the answer is affirmative and favourable; if to the second, indifferent; but, if to the last, it is negative.

4. Christian.—The introduction of the rosary among Christians has been attributed to various people, among them being St. Aybert de Crespin, Peter the Hermit, and St. Dominic. The Roman Breviary says of the last-named that he 'was admonished by the Blessed Virgin to preach the rosary as a special remedy against heresy and sin.'³ There has been a fairly widely accepted theory that the rosary was introduced into Europe at the time of the Crusades, having been imitated from Muhammadans. But later research seems to show that, though it is possible that such a means of counting prayers may have become more popular at this period, an earlier date should be assigned for its use in Western Europe. It is stated by William of Malmesbury⁴ that the Lady Godiva of Coventry, wife of Count Leofric, bequeathed to the monastery which she founded 'a circlet of gems which she had threaded on a string, in order that by fingering them one by one as she successively recited her prayers she might not fall short of the exact number.' Lady Godiva died before 1070, so that some mnemonic device seems to have been in use prior to the preaching of the Crusades. The case of the Egyptian abbot Paul, who died in 341, is related by Sozomen (c. 400-450) in his *Ecclesiastical History*,⁵ where it is stated that the saint daily recited 300 prayers, keeping count by means of pebbles gathered in his cloak, dropping one of them at the end of each prayer. Here is seen a much earlier and more primitive system of record-keeping, which suggests that the rosary had evolved independently in some centres, and had not been taken over from others, where presumably it was already in a fairly developed form.

By the 13th cent. the making of paternosters, as the beads were then called, had become a specialized industry both in Paris and in London. In the

former city the workers were divided into four different guilds or companies, each company being distinguished according to the material in which its members worked. In London, at the same period, certain citizens were known as 'paternosterers.' These craftsmen probably resided in Paternoster Row and Ave Maria Lane, being thus conveniently close to the great devotional centre of London, under the shadow of St. Paul's cathedral.¹

That the rosary probably arose from a practice in early Christian times of making repeated genuflexions and prostrations, sometimes combined with prayers or sacred formulae, has been shown by the last-named authority.² This form of self-discipline was practised in Eastern Europe and in Ireland, spreading from these two widely separated centres over the greater part of Europe. Such a form of asceticism survives in the Greek Church at the present day, as will be seen below.

(a) *Roman Catholic*.—The complete Roman Catholic rosary of the present day consists of 150 beads, these being divided into decades by fifteen beads of larger size, sometimes of slightly different shape. These beads form the chaplet. A pendant is usually attached consisting of a cross or crucifix, and one large and three smaller beads, the latter being similar to those on the chaplet forming the decades.

This pendant is little used in practice, but the devotee, after making the sign of the cross, generally begins at once to recite the Pater, followed by ten Aves and a Gloria. This process is repeated for each decade, the Paternosters being recited on the larger beads, the Aves on the small ones. As the 150 Aves correspond to the number of the Psalms, the name 'Our Lady's Psalter' was given to this devotion from an early period. This is the full Dominican rosary, the institution of which a tradition of the order ascribes to St. Dominic himself.

To each of the fifteen decades is assigned for meditation one of the principal mysteries in the life of Christ or of the Virgin Mary. These fifteen mysteries are divided into three parts, viz. five joyful, five sorrowful, and five glorious mysteries.

The five joyful mysteries are: (1) the Annunciation, (2) the Visitation, (3) the Nativity, (4) the Presentation, (5) the Finding of the Child Jesus in the Temple.

The five sorrowful mysteries are: (1) the Agony in the Garden, (2) the Scourging, (3) the Crowning with thorns, (4) Jesus carrying His Cross, (5) the Crucifixion.

The five glorious mysteries are: (1) the Resurrection, (2) the Ascension, (3) the Descent of the Holy Ghost, (4) the Assumption, (5) the Crowning of the Virgin Mary, the last two mysteries being accepted on the authority of tradition.³

In practice the recitation is commonly limited to one of these sets at a time, and the rosary itself usually consists of five decades only and five Paternosters. The fifteen decades may, of course, be said by going round the rosary three times.⁴

There are other special rosaries in use, among them being the following:

The Crown of Jesus, with 33 Paternosters to commemorate the 33 years of Christ's life on earth, and five Aves in honour of the five wounds.⁵ This devotion was first promoted by St. Michael of Florence, in 1516. The beads used must be blessed and indulged by a Camaldolese monk or priest with special power from Rome.

Chaplet of the Sacred Heart, with five large beads in honour

⁴ *Gesta Pontificum* (Rolls Series), bk. iv. ch. ii., quoted by Thurston, *Journ. Soc. Arts*, l. 266; H. P. Feasey, *The Reliquary*, vol. v. no. 3, p. 168.

⁵ *Ib.* 20.

¹ Thurston (*Journ. Soc. Arts*, l. 262) says that there was also in the 14th cent. another Paternoster Lane located beside the Thames in the Vintry ward, close to the church called Paternoster Church, or St. Michael's the Royal. This quarter of London was then inhabited by Gascon vintners who brought their goods by ship up the Thames. They would require their own forms of this devotion, and Thurston suggests that French *patenôtriers* settled in this locality in order to supply this want.

⁵ *Ib.* p. 353, pl. 30, fig. 2.

of the five wounds, and 33 small beads in honour of the 33 years of His life.

Chaplet of Thanksgiving.

Chaplet of the Five Wounds.

Chaplet of the Seven Dolours, consisting of 49 Aves divided into seven groups of seven by seven Paternosters, and three more Aves in honour of the tears shed by the Virgin Mary. The Seven Dolours are as follows: (1) the prophecy of Simeon, (2) the flight into Egypt, (3) the loss of Jesus for three days, (4) the Virgin's meeting Jesus carrying His Cross, (5) her standing beneath the Cross on Calvary, (6) her receiving beneath the Cross the sacred body of Jesus, (7) her witnessing the burial of the body of Jesus.

The Crown of the Twelve Stars, or Rosary of the Immaculate Conception, consisting of twelve small beads in three sets of four, divided by three larger beads. This rosary was composed by a Capuchin Friar of Bologna and approved by a brief of Pope Pius IX., 22nd June 1855.

Chaplet of the Dead, with 40 small beads, divided into four sets of ten by three larger beads. It is used in honour of the 40 hours during which Christ's body lay in the Sepulchre.

The Bridgettine Rosary, with 63 Aves and seven Paternosters. St. Bridget was a Swedish saint, and the 63 small beads in her rosary are to commemorate the 63 years which the Virgin Mary is said to have lived, the seven Paternosters to commemorate her seven sorrows and seven joys.¹

There are several other varieties of rosaries used by particular religious bodies or for special devotions.

Rosaries are blessed with prayers and holy water by some authorized priest in order to make them 'instruments of grace.'

The name 'rosary,' now given to this devotion, seems to be of comparatively late date—not appearing, according to one authority, till the 15th century.² In earlier times other names were applied, such as *patroloquium*, *serta*, *numeralia*, *calculi*, etc.

The word 'bead' (Anglo-Saxon *beade* or *bede*) meant originally 'a prayer.' In the *Vision of Piers Plowman* the expression *bedes bydding* is found. Cf. Spenser's *Faerie Queene*:

'All night she spent in bidding of her bedes
And all the day in doing good and godly deeds.'³

The expression 'a pair of beads,' sometimes met with in early literature, means 'a set of beads.' This term is used in the Prologue of Chaucer's *Canterbury Tales*, where the Prioress carries her beads upon her arm:

'Of smal coral aboute hir arm she bar
A peire of bedes, gauded al with grene;
And ther-on heng a broche of gold ful shene,
On which ther was first write a crowned A,
And after, *Amor vincit omnia*.'

'Gauded al with grene' means having the gawdies green. These gawdies were the larger beads.

The beads were sometimes worn by ladies as a girdle. One set of beads belonging to Isabella Hylls, in 1497, is spoken of as 'a payr of bedes of corell, with six gawds ovver gyllt, and a green gyrdyl with boculle and penant and fourteen studs therein.'⁴

Early representations of prayer-beads on tombs sometimes exhibit the rosary not as a circle but, especially in the case of men, as a single string of ten beads with the two ends unattached and hanging free. Occasionally the two ends are attached at two different points of a girdle. Such a form is also seen in some old pictures.⁵

In the Middle Ages various objects were sometimes attached to the rosary, such as signet rings, cameos, and brooches. This led to a certain amount of extravagance, and efforts were made to check it; the price to be given for a rosary was limited, and no one person could possess more than three or four.⁶

Sometimes beads were carried as a sign of penance, this being often done by pilgrims who visited various holy places in Rome, and the wearing of such beads at the girdle became a distinctive sign of membership of a religious confraternity.

Beads were most highly valued if they had originally belonged to a person of renowned sanctity, or if they had touched the relics of some saint. In this case they were believed to possess a healing virtue.¹ Eastern Christians specially valued rosaries which had been made in Jerusalem or other sacred spots in Palestine.²

The materials composing the beads varied, and still vary, very much, often depending, as is the case among other religions, on the wealth and rank of the devotee, some being so valuable that they were left as legacies. Chaplets of wood were used at funerals by poor bedesmen, and in 1451 Lord John Scrope wills that 'twenty-four poor men clothed in white gowns and hoods, each of them having a new set of wooden beads,' should pray (on them) for him at his funeral, with the liberty to 'stand, sit, or kneel' at their pleasure.³

The Living Rosary.—This is a pious exercise founded on the Dominican rosary. It was instituted by Sister Maria Jaricott, to whom the Society for the Propagation of the Faith owes its existence. It was approved by Pope Gregory XVI. in 1832 and has since that date been established all over the world. Fifteen persons associate together for the purposes of this devotion. One of their number is elected president, and his duty is to superintend the association. Once every month he selects for himself and for his fellow-members one of the fifteen mysteries of the rosary. Each member recites daily one decade, with the Gloria Patri, meditating on the mystery allotted to him. The person to whom the first mystery is given recites, in addition to the above, the Creed once and the Ave thrice. At the conclusion of the decade each person recites the following: 'May the Divine Heart of Jesus and the most pure Heart of Mary be ever known, loved, honoured, and imitated in all places throughout the world.'

The Feast of the Rosary.—This feast is observed on the 1st Sunday in October, in memory of the battle of Lepanto, which took place on this day in 1571. This battle was won while the confraternity at Rome were praying for Christian success. Thereafter Pius V. ordered an annual commemoration of 'St. Mary of Victory,' and, by bull in 1583, Gregory XIII. set aside this particular Sunday as the Feast of the Rosary of the Blessed Virgin Mary, which was to be observed by all churches which maintained an altar in honour of the rosary. Finally, Clement XI., by bull of 3rd Oct. 1716, decreed that the feast should be observed by all churches throughout Christendom.⁴

The rosary in witchcraft.—In S. Italy the rosary, among other things, is used by witches who undertake to break spells. Certain objects are hung under the bed of a man made impotent, and the witch provides herself with a packet of unwashed herbs and a rosary without the medals or other blessed objects. She then tears open the packet and scatters its contents on the ground, meanwhile saying, 'Come io scioglio questo mazzo, cosi scioglio questo c-o.'⁵

Rosary rings.—Another method of counting prayers is by means of the rosary or decade rings. These rings are worn on the finger and usually have ten bosses or knobs for the ten Aves, with occasionally an eleventh for a Paternoster, and sometimes an additional twelfth boss for the repetition of the Creed. The earliest date assigned to these rings by one authority is the 14th century.⁶ Such rings were worn by some classes of devotees during the hours devoted to repose, so that, should they wake during the night, they might repeat

a certain number of prayers, keeping count by means of the bosses on the ring.¹

The Knights of Malta frequently wore chaplet rings of gold or silver, with ten bosses in relief and a cross. These rings were said to have been invented by them. Their use, in place of the ordinary rosary, was spreading rapidly, till in 1836 the matter was referred to the tribunal of penitentiaries by Pope Gregory XVI. This tribunal then decided that such rings could not be blessed 'with the appropriate indulgences.'²

(b) *Orthodox Churches.*—In both Greek and Slavic monasteries part of the investiture of the Little Habit and the Great Habit is a knotted cord which is bestowed ceremonially upon the monk or nun.

The Superior takes the *vervitsa* (knotted cord) in his left hand, and says: 'Take, Brother N., the sword of the Spirit, which is the word of God, for continual prayer to Jesus; for thou must always have the Name of the Lord Jesus in mind, in heart, and on thy lips, ever saying: "Lord Jesus Christ, Son of God, have mercy upon me a sinner." Let us all say for him "Lord have mercy." "And, blessing the *vervitsa* with his right hand, he giveth it to the Candidate; while the Brethren sing thrice, "Lord have mercy." And he, taking the *vervitsa*, kisseth it and the right hand of the Superior.'³

The knotted cord, as has already been pointed out, is possibly a very primitive form of rosary, and, in this case, it is seen surviving in a highly ceremonial function.

The Greeks call the knotted cord a *komvoschinion* (κομβόσχιον); the Russians give it the old Slavic name of *vervitsa* ('string'). In popular language it bears the name *lestovka* because of its resemblance to a ladder (*lestnitsa*).⁴ There is also a string of beads called *komvologion* (κομβολόγιον) by the Greeks, and *chotki* by the Russians. This does not appear to be a religious appliance, it being used by ecclesiastics and laity alike merely as an ornament or as something to hold in the hand.⁵

The *komvoschinion* used by the monks on Mount Athos at the present day has 100 knots, divided by three beads of large size into four equal parts. It has a pendant with three more knots, and terminates with a small cross-shaped tassel. This rosary is used by the *megaloschemos* (monk of the highest grade, called *skhimnik* in the Slavic monasteries) to keep count of a definite number of prostrations every day, viz. 12×100 prostrations down to the ground, and in the evening 300 more, meanwhile repeating the following prayer: 'Lord Jesus Christ, Son and Word of the Living God, through the intercessions of thine all-pure Mother and of all thy Saints, have mercy and deliver us.' Sometimes these prostrations are imposed on a monk as a penance, in which case the accompanying prayer is: 'Lord Jesus Christ, Son of God, have mercy upon me, a sinner.' The prostrations may vary in character thus: ten great metanoias (down to the ground), thirty little metanoias (down to the hips), and the prayer 'Lord Jesus Christ, Son of God, have mercy upon me, a sinner,' repeated sixty times. This has to be done five times a day. The *komvoschinion* is also used for counting any kind of prayers or devotional exercises.⁶

The reason assigned for the adoption of the number 100×3 is as follows:

It corresponds 'with the number of the Psalms and Little Doxologies said at the Canonical Hours. The whole Psalter is divided into 20 portions, each of which is a *kathisma* (κάθισμα, seat), because it is followed by a rest or pause. Each *kathisma* consists of three parts, each part ending with the Little Doxology ("Glory be," etc.) and a threefold Alleluia. For the sake of those unable to read, St. Basil directed that, instead of a *kathisma*, one of the following prayers might be said 300 times: "Lord, have mercy," or "Lord Jesus Christ, Son of God, have mercy upon me a sinner," or "Lord Jesus Christ, for the sake of Theobokos, have mercy upon me a sinner." In other words, the prayer is to be said 100 times for each little Doxology of the *kathisma*, i.e. for each of the three parts of the portion of the Psalms ending with the "Glory be," etc., and the Alleluia. The large beads which separate the knots are merely intended to represent the ending of the three parts of the *kathisma*, and no prayer is connected with them.'⁷

This form of *komvoschinion* is used by Hellenic monks in Greece, Turkey, and the East generally, as well as on Mount Athos.

Among the Russian monks the knotted cord used is the old Slavic *vervitsa*. It has 103 knots or beads, which are separated into unequal groups by larger beads. The groups of beads are as follows: 17+33+40+12, and an additional small bead at the end. In the Slavic *vervitsa* the lower ends are fastened together; they terminate in three flat triangles, inscribed and ornamented. Sometimes these rosaries are made of little rolls of leather chain-stitched together, divided into groups by larger rolls. The terminals are also of leather, triangular in shape, inscribed in Church Slavic (ancient Slavic) with the words 'Jesus Christ, have mercy upon me, a sinner.' This kind of rosary calls to mind the popular name for it, viz. *lestovka*, as it certainly might be thought to resemble a ladder in shape.¹ This rosary is also used for counting a large number of prostrations. For instance, if a monk is prevented from saying the Typica (the selection of Psalms sung at certain offices), he makes instead 700 metanoias; he makes 500 instead of Hesperinos (Vespers), 200 in place of Apodeipnon (Compline), and 500 in place of Orthros (Lauds).²

The use of the *komvoschinion* or *vervitsa* is a purely monastic or ascetic devotion; it is not indulged in by the Orthodox laity, though the laity of the Russian sects called Old Believers have adopted it. Whenever this devotion is seen in use among the Uniates outside the monasteries, it has been copied from the rosary as used among the laity in the West.³

The rosary as a charm.—In certain parts of Poland, namely in the districts of Piotrkow, Czenstochowa, and Plock, the following custom is in use to keep off lightning:

During a storm a rosary—either a genuine one made of cedar-wood from the Holy Land or one made in imitation—is carried round the house three times, together with a little bell called 'the bell of Loreto' (associated with the Holy Mother of Loreto in Italy) and sometimes also a lighted candle, blessed on Candlemas Day (2nd Feb.). The bell is rung, and the rosary is used with the words 'God save us' at the large beads and 'Holy Mother, be our mediator' at the small ones.⁴

(c) *Coptic.*—The rosaries used by the Copts in Egypt have 41 beads, or sometimes 81. They are used for counting a similar number of repetitions of the 'Kyrie eleison.' This petition is repeated in Arabic or Coptic, with the addition, at the end, of a short prayer in Coptic. Sometimes the Copts resort to what is, presumably, a more primitive method of keeping record of their prayers, and count on their fingers.⁵

5. *Jewish.*—Among the Jews the rosary has lost all religious importance, having been taken over by them from the Turks and Greeks. They use it merely as a pastime on the Sabbaths and holy days. No manual labour being permitted on those days, they occupy themselves with passing the beads through their fingers. These rosaries sometimes have 32 beads, sometimes 99.⁶

⁶ Dr. Gaster has suggested to the writer of this article that there may be a kabbalistic reason for the number 32. It is the mystical number for the 'ways of wisdom' by which God created the world. They stand at the beginning of the so-called Book of Creation, and they play an important rôle in the kabbalistic literature. It may be that this has influenced the number of beads on the smaller rosaries.

WINIFRED S. BLACKMAN.

ROSICRUCIANS.—When considering the history of the Rosicrucians, we have to bear in mind that members of that body were, and are, pledged to secrecy, and that the paucity of records is a proof of their sincerity and devotion. But it is permissible to give some data of the history of the Society since its foundation about the year 1420.

Christian Rosencreuz was born in the year 1378. His parents were noble, and he was educated at a monastery. His education being completed, he travelled in the Holy Land, taking with him as companion and guide a certain P.A.L., who, however, died on reaching Cyprus. After a delay caused by this untimely event, Rosencreuz proceeded on his travels alone, and, on reaching Damascus, he placed himself in the hands of certain wise men with whom he continued his studies, and from whom he derived much information respecting their philosophy and science. Thence he journeyed to Egypt, to Fez, and to Spain, gathering in each place a store of learning which he was to use in the development of the fraternity which afterwards bore his name. In the year 1413 he reached Austria, and after five years' preparation, during which he collated his knowledge, he chose three companions, *Fratres G.V., I.A.* (who, it was noted, was not a German), and *I.O.*; to them he imparted his knowledge and the invaluable results of his travels, which included religion, philosophy, and the science of medicine. These four were the original members of the Society of the Rose and Cross. Their communications with each other were made by means of a magical alphabet, language, and dictionary, which assured secrecy; their books *M (Magicon)*, *Axiomata*, *Rota Mundi*, and *Protheus* are known. They built from their own designs a home for the fraternity, which they named 'Domus Sancti Spiritus,' and a few years later increased their number by the creation of a second circle consisting of four other fratres, namely *R.C.* (a cousin of Rosencreuz), *B.* (a draughtsman and painter), *G.G.*, and *P.D.*, who was appointed secretary, thus completing the scheme of work. Their declared object, as narrated in the *Confessio*, was, without interfering with the religious or political actions of States, to improve mankind by the discovery of the true philosophy. While two of the fratres were always with the founder, the others went about doing good works, relieving the poor and attending to the sick. Thus the fraternity was composed of students of religion, philosophy, and medicine, who also practised acts of benevolence.

They were bound by six rules: (1) to profess nothing, but to cure the sick, and that freely; (2) to wear only the dress of the country in which they were; (3) to assemble at the Domus Sancti Spiritus once a year on a certain day (the festival *C.C.*), or send a reason for absence; (4) each frater to select a proper person to succeed him; (5) the

letters *C.R.* to be their seal, mark, and character; (6) to maintain the secrecy of the fraternity for at least 100 years.

It was Frater *I.O.* who, being a learned kabbalist, doctor, and author of the book *H*, visited England, and laid the foundation of the Rosicrucian system which has ever since existed in this country. He it was who cured the young Earl of Norfolk of leprosy, and he was the first of the original members to die.

In the year 1457 Rosencreuz wrote an interesting and curious tractate entitled *Chymische Hochzeit*, which was published at a later period; and in 1484 the founder of the fraternity died and was buried in a vault of seven sides decorated with symbols, which had been erected about eight years previously for his resting-place. The body was embalmed and placed in this specially prepared tomb, which was then closed, and upon the door was fixed a brazen plate upon which was engraved an inscription of a prophetic exclamation of his own, that in 120 years after his death his tomb should be re-opened and his doctrines, in a modified form, once more made available, and that not only to a few, but to the learned in general.

Frater *D.* was chosen as the successor of the founder, and after his death Frater *A.*, at an unknown date. Frater *A.* died in 1600. To him succeeded Frater *N.N.*, who in 1604 disclosed the entrance to the vault and caused it to be opened. In it was found the body carefully preserved under an altar; in the right hand was the parchment roll called the book *T (Testamentum)*; there were also found copies of other valuable books of the fraternity—a *Vita*, and an *Itinerarium* of the founder, together with certain songs (*mantras*), mirrors, bells, lamps, etc. On a brass table were engraved the names of all the brethren who up to the time of the founder's death had been members of the fraternity.

In 1610 a notary named Haselmeyer wrote that, while staying in the Tyrol, he had seen a copy in MS of the history called *Fama Fraternitatis*; the name of its author is not known, but four years later this *Fama* was printed and published at Cassel, in Germany. This narrative of the founding of the Rosicrucian fraternity was re-issued at Frankfort-on-the-Main in 1615, together with an addition called *Confessio Fraternitatis*. The authorship of these tracts has been variously attributed to Johann Valentin Andrea, to Joachim Junge (a philosopher who died in 1657), to the mystic Giles Guttman, and to a comparatively little known writer, one Tauler. Although these works gave to the world a knowledge of the existence of the Rosicrucian fraternity, it is probable that they were not written by any one with a real personal knowledge of the affairs of the brotherhood; neither is there any evidence that they were authorized; but, although they lack literary ability, they may be accepted as founded on facts obtained from current conceptions of the work of the fraternity, since the necessity for strict secrecy had to some extent abated; for between the death of Rosencreuz in 1484 and the opening of the tomb in 1604 the Protestant Reformation had been accomplished by Martin Luther and his coadjutors about the year 1517.

An *Echo of the God-illuminated Brotherhood of the R.C.*, issued at Danzig in 1615, and written by Julius Sperber, rendered high praise to the learnin of the fraternity, while the *Chymische Hochzeit Christiani Rosenkreuz*, claimed by Andrea to b his own work, was published at Strassburg i. 1616, and an English translation, under the title *The Chemical Wedding*, was issued in the year 1690 by R. Foxcroft, Fellow of King's College, Cambridge.

The publication of these works caused a great sensation among the learned in Europe; they were widely criticized, notably by such men as Libavius and Menapius; those anxious to be admitted to the fraternity were loud in their praise, while others, having failed in their attempts to secure reception, denounced the brotherhood unsparingly.

Michael Maier (1568-1622), a notable philosopher and Rosicrucian Magus, the author of many learned works describing the Rosicrucian system, visited England and admitted Robert Fludd to Rosicrucian adeptship. Fludd was born at Milgate House, Bearstead, Kent, in 1574, and was the son of Sir Thomas Fludd, Treasurer of War to Queen Elizabeth. For many years he practised medicine in the city of London, and on his death was buried in Bearstead church, where there is a monument to his memory with a long inscription recording his many virtues. Near the house of his birth are the rose farm and other gardens where he cultivated the plants used in his pharmacy. He was the Magus in this country, and during his life wrote many learned works on kabbalistic theosophy and Rosicrucian doctrines, the most notable being his *Apologia Compendiaria pro fraternitate de Rosea Cruce* (Leyden, 1616), *Tractatus Apologeticus, integritatem Societatis de Rosea Cruce defendens* (Leyden, 1617), and *Summum Bonum* (Frankfort, 1629). His successor was Sir Kenelm Digby (1603-65), philosopher and poet. Among his published works are *Two Treatises: the Nature of Bodies . . . the Nature of Man's Soule* (Paris, 1644), books on medicine and the cure of wounds by sympathy. The jewel and chain of his office as chief of the English Rosicrucians are in the possession of one of his descendants in the south of England. Francis Bacon, Lord Verulam (1561-1626), was influenced by his friend Robert Fludd and became a Rosicrucian.

It is believed that Elias Ashmole (1617-92), the antiquary and astrologer, who was a Rosicrucian, was associated in the introduction of mysticism into the masonic body, and that his influence is felt in modern speculative freemasonry. Towards the end of his life he derived much occult knowledge from William Backhouse, a Rosicrucian of renown and a chemist. In 1646 Ashmole, William Lilly, the astrologer, Thomas Wharton, the eminent anatomist, Sir George Wharton, the astrologer, together with John Hewett, the royalist divine, and John Pearson (afterwards bishop of Chester and author of the famous *Exposition of the Creed*), formed a Rosicrucian lodge in London; this is referred to in *Occult Science*, which forms vol. xxxi. of the *Encyclopædia Metropolitana* of 1845; while in the *New Curiosities of Literature* (2 vols., London, 1847) George Soane writes at length upon Rosicrucians and Freemasons.

Thomas Vaughan (1622-66), twin brother of Henry Vaughan, 'Silurist,' was a celebrated mystic; under the name of Eugenius Philalethes he published an English version of the *Fama and Confessio* (1652). In this he was associated with Sir Robert Moray, the first president of the Royal Society.

In 1710 an adept named Sigismund Richter published, under the pseudonym 'Sincerus Renatus,' a work entitled *Die Warhafft und Volkommene Bereitung aus dem Orden des Gulden und Rosen Kreutzes*, giving 52 rules of the Rosicrucian fraternity of that period. In 1777 the Reformed Rite of the Brethren of the Rose and Golden Cross was established.

Many important works were published during the succeeding years, among them a theosophic book, with coloured emblematic plates, at Altona, *Geheime Figuren der Rosenkreuzer aus dem 16ten und 17ten Jahrhundert* (this work, issued in 1795,

contained the German text of the *Aureum Sæculum Redivivum*, originally printed in 1621, together with *The Golden Tractate of the Philosopher's Stone* and the original *Prayer of a Rosicrucian*). A portion of this volume, translated into English by Franz Hartmann, a member of the German fraternity, was published in 1887.

Among the English Rosicrucians of the last century were Frederick Hockley, Godfrey Higgins, author of *Anacalypsis* (2 vols., London, 1836), Lord Lytton, author of *Zanoni* (London, 1842), William James Hughan, the chief Masonic historian, Robert Wentworth Little, Kenneth R. H. Mackenzie, author of the well-known *Royal Masonic Cyclopædia* (London, 1877), William Robert Woodman, and the present Supreme Magus, William Wynn Westcott, the author of many learned essays on kabbalistic and mystic lore.

In 1866 the strands of the Rosicrucian rope were gathered together, when, under the direction of R. W. Little, the 'Societas Rosicruciana in Anglia' was founded, consolidating the system and erasing some false impressions that had been created during the centuries. At the present time duly authorized Rosicrucian colleges are at work in England, British India, Australia, New Zealand, S. Africa, and S. America, all under the authority of the English body; and there are daughter groups in Scotland and the United States of America working in complete harmony with the parent body. The Continental Rosicrucian system was reorganized in 1890, and its branches were very active up to the outbreak of the Great War in 1914. This body insists upon complete privacy, and its members are forbidden to acknowledge their status; but they had been, until the war, very active in good works, especially in carrying on investigations into the uses of vegetable drugs and the relief of disease by means of coloured lights and by hypnotic processes; there are numerous physicians using these means, which are freely supplied, but these doctors are not necessarily pledged members of the fraternity.

As in the earliest times the Rosicrucians not only studied, but went about ministering to those in distress, so the fratres of to-day are concerned with the study and administration of medicines and with their manufacture upon the old lines. They believe that this world and indeed the whole universe is permeated with the essence of the Creator, that every rock is instinct with life, that every plant and every tree is imbued with a sense derived from the Master Mind that caused it to exist, and that each living thing moves, acts, and thinks in accordance with the supreme design by which all things were made, by which all things exist, and by which they will continue to function till the end of time. At no period did the Rosicrucians declare the transmutation of metals to be a part of their practice, nor did they ever promise indefinite prolongation of life by mysterious drugs, but they did speak of these in parables with the full and complete knowledge that all things are possible, and that, with the forces of nature under their control, they could do even these. They were content, however, to act and to trust to the future, when, the minds of men having been cleansed, the redemption and absorption should be accomplished.

LITERATURE.—The numerous published works of Michael Maier and of Robert Fludd; Elias Ashmole, *Theatrum Chemicum Britannicum*, London, 1652; Thomas de Quincey, *Historico-Critical Inquiry into the Origin of the Rosicrucians and the Free-Masons* (originally published in the *London Magazine* for Jan., Feb., March, and June, 1824, and reprinted in vol. xiii. of de Quincey's *Collected Writings*, ed. D. Masson, Edinburgh, 1889-90); C. W. Heckethorn, *The Secret Societies of all Ages and Countries*, 2 vols., London, 1897; Franz Hartmann, *In the Pronaos of the Temple of Wisdom*, do. 1890; W. Wynn Westcott, *The Rosicrucians: their History and*

Aims, do. 1894, vol. vii., 'Ars Quatuor Coronatorum'; F. L. Gardner, *Catalogue Raisonné of Works on the Occult Sciences*, privately printed, do. 1903, vol. i., 'Rosicrucian Books'; J. E. Craven, *Essays on the Works of Pludd*, Kirkwall, 1902, Michael Maier, do. 1910; John Yarker, *Notes on the Scientific and Religious Mysteries of Antiquity, the Gnosis and Secret Schools of the Middle Ages*, London, 1872, *The Arcane Schools*, Belfast, 1909; C. Gottlieb von Murr, *Über den wahren Ursprung der Rosenkreuzer und Freimaurer*, Sulzbach, 1803; J. G. Buhle, *Über den Ursprung und die vornehmsten Schicksale der Orden der Rosenkreuzer und Freimaurer*, Göttingen, 1804; C. F. Nicolai, *Einige Bemerkungen über den Ursprung und die Geschichte der Rosenkreuzer und Freimaurer*, Berlin, 1806.

ARTHUR CADBURY JONES.

ROTHER.—1. Life.—Richard Rothe was born in Posen on 30th Jan. 1799. His father, a man of striking character, held an important official position under the Prussian Government, and was powerfully influenced by that idea of the State which subsequently found expression in the works of Gustav Freytag. His mother, the daughter of the Hofrath Müller in Liegnitz, was a woman of considerable intellectual culture and of a deeply religious nature. Soon after the birth of Richard, their only child, the parents removed to Stettin, and a few years later to Breslau, in Silesia, with which Rothe's boyhood was chiefly associated. A delicate child, of a shy and retiring disposition, he occupied himself up to the age of eight largely with picture-books and stories of travel, whereby his imaginative faculties were awakened and nurtured. A tendency towards mysticism early exhibited itself, and the Bible, as soon as he was able to read it, made a deep impression upon him. At the age of ten he was sent to the reformed Friedrichsgymnasium in Breslau and at once proved himself to be a pupil of great industry and perseverance. He was fond of the poetry of Schiller, Goethe, Jean Paul, the two Schlegels, Tieck, and Fouqué, although, when he reached the age of sixteen, Novalis became his favourite author.

In April 1817 he entered the University of Heidelberg as a theological student. Heidelberg was at that time at the height of its fame as a seat of learning. Hegel had settled there the year before as Professor of Philosophy, only, however, to migrate to Berlin in Jan. 1818. Rothe attended Hegel's lectures on Logic and Metaphysics, which, he writes in his Diary, although most of the numerous auditors complain of them, he hopes will not remain unintelligible to him. Karl Daub, the 'Talleyrand of German thought,' who was Professor Ordinarius of Theology and a speculative thinker of unusual insight and power, became the teacher to whom Rothe owed his greatest debt.

'Daub,' he writes to his father, 'is a man of whom not only Heidelberg but our whole German Fatherland can be proud. I hesitate not to say that he is the first of all living academical teachers. The enthusiasm with which he is here spoken of is absolutely universal, as also is the love of him on the part of students of all Faculties.'¹

Daub was attempting to work out a philosophy of religion along the lines of the idealism of Schelling and Hegel, and one can understand the fascination that a mind of his bent must have had for the youth of mystic propensities and brooding temperament. Yet the pupil was not a blind hero-worshipper. Towards the end of his student life in Heidelberg he expresses dissent from certain of Daub's contentions. Probably he had come to distrust the perverse tendency in his teacher of finding in the persons and events of the Gospel narratives embodiments of metaphysical ideas. Daub, he complains, yields too much to the philosopher, more than the theologian ought to yield, and when the philosopher has been allowed to have so much of his own way he only laughs at the theologian and then disarms him.

After Daub the man who chiefly succeeded in

¹ Nippold, *Richard Rothe*, I. 48.

winning Rothe's affection was Abegg, a lecturer on New Testament Exegesis—

a man, he writes, 'in whom Christ is formed, as the Scripture puts it, who is penetrated through and through with all that is most fundamental in Christianity, who can look at nothing but with Christian eyes.'¹ 'To me,' he declared in 1840, speaking over Abegg's grave, 'he was one of the first whose personality set the seal of overwhelming certainty upon the essence and reality of Christian devotion.'²

Not only in the class-room did Abegg inspire the ardent young student; Abegg's simple homilies from the pulpit, bearing no trace of art, but full of genuine religious experience, seemed to him models of what true sermons should be. Other teachers of his were F. H. C. Schwarz, who also lectured on the NT, and of whose interpretation of the Johannine writing he speaks with admiration; Friedrich Creuzer, the classical scholar and archaeologist; and F. C. Schlosser, the historian, who appeared to him to know Tacitus by heart. The five semesters spent in Heidelberg were undoubtedly fruitful in every respect. It was here that his mind was moulded; it was here that the interests were engendered which were to be his throughout life. Just before leaving Rothe preached, at a little village in the neighbourhood, called Mauer, his first sermon—a sermon, he tells his father, with which he was utterly discontented, but which convinced him that it was only through diligent practice that one could ever expect to succeed in giving true and unweakened expression to the life which lives in us.

For the winter-semester of 1819 Rothe went to Berlin. The Theological Faculty of the then recently founded University had at its head men of world-wide reputation—Schleiermacher, Neander, and Lücke. And, in the Philosophical Faculty, Hegel had commenced the work which made him the acknowledged leader of philosophical thought in Germany. Looking back upon that period, Rothe wrote in 1862:

'It was a new birth of the German people through the power of the gospel that had again become living, a new formation of its entire life.'³

Yet at the time, and after his Heidelberg experience, he never felt at home in Berlin. He heard Schleiermacher's lectures, delivered for the first time that semester, on *das Leben Jesu*; but they gave him the impression that the great man was troubling himself with artificially constructed difficulties. Schleiermacher's sermons, too, he contrasts unfavourably with those of his beloved Abegg; they lacked, to his mind, the inner spiritual grasp of the Heidelberg preacher, and from them he gained little inspiration, although he admits their ingenuity and scholarly character. He gives his father an interesting account of Schleiermacher's seminar. The work was done mainly by essays written by the students, one of which was discussed at each of the weekly gatherings. To Rothe there had been assigned the theme of determining whether in the reported sayings of Christ traces could be found of His having possessed knowledge of the OT Apocrypha and of His having devoted special attention thereto. Rothe complains *more suo* that, before one could begin to deal with a problem of that sort, a host of prior questions would have to be answered, for the answering of which the necessary historical data were completely wanting. In regard to Neander, who was lecturing on the history of dogma, the young scholar confesses, however, that his expectations had not deceived him.

'He is a wonderful man,' he writes, 'externally altogether dried up, but internally fresh and vigorous in Christian life, although it does not stream forth joyfully, but only gleams through sadly as the moon between graves.'⁴

And he draws a woeful picture of his aching fingers trying to take down the prodigiously rapid dicta-

¹ Nippold, *Richard Rothe*, I. 112.

³ *Ib.* p. 35.

⁴ *Ib.* p. 456 f.

tion which the learned theologian was giving to his class.

'Happiest of all I still feel myself,' he tells his father, 'amongst the old Heidelberg acquaintances, and the well-known, though not exactly melodious, voice of Hegel is for my ear a delicious music from the banks of the Garonne.'¹

Hegel was lecturing five times a week on *Naturrecht*, but had started by dismissing the term as wholly unsuitable because of its implication of a so-called state of nature, and was giving in fact a *Rechtsphilosophie*—an account, namely, of the immanent determinations of the Spirit from the point of view of its necessary development in the form of the State. A second semester was spent in Berlin, during which Schleiermacher was lecturing on Ethics, Neander on Church History, and Marheineke on Symbolics. But Rothe was still yearning for release from the Prussian capital. A considerable number of relatives and family acquaintances resided there, and a good deal of his time had to be spent in visiting.

'It's no wonder,' he exclaims, 'that people of the world get inwardly stunted, for when we have so much to do with outward things we become in fact heathens, and our pure human consciousness grows ever weaker in us.'²

Probably it was recoil from what seemed to him the prevailing worldliness of the Lutheran churchgoers that led to his interesting himself at this time in the Pietist movement, then in its earlier and healthier phase. His letters show that his religious nature was craving for a deeper earnestness and sincerity in the spiritual life, for a simpler and more genuinely personal devotion. And he found a companionable feeling among the devotees of the revival movement.

On 6th Nov. 1820 Rothe entered the theological seminary at Wittenberg, then under the superintendence of Karl Ludwig Nitzsch, 'an old and genial man, of unusually kindly nature, who is full of love for his work.'³ Here he was plunged into a course of preparation for the practical work of the ministry—Bible study with a view to homiletical application, the composition of sermons and of sermon-schemes to be criticized by his teachers, preaching to rural congregations in the district, and visiting people in their homes. Rothe threw himself *con amore* into the work, and yet found time for the studies for which his university training had specially equipped him. Of the teachers at the seminary he was at once drawn to H. L. Heubner, a man of singular simplicity of character, with a wealth of ideas and an insight into the means of applying them such as he had not met with since the days when he had sat at the feet of Abegg. Heubner became his life-long friend, and it was largely due to his influence that Rothe was persuaded, at first very much against his inclination, to keep in view the possibility of devoting himself to an academical career. In March 1821 a former fellow-student at Berlin, Rudolf Stier, entered the seminary, and he was in large measure instrumental in inducing Rothe, already tending in that direction, to espouse warmly for the time being the Pietist propaganda. In his letters home of this period Rothe relates the chilling effect produced upon his mind by the prevalent ecclesiasticism, with its dreary orthodox propositions and verbal formularies. He goes to a church on Easter Sunday and cannot rid himself of the feeling that he is in a Greek temple. Over the altar-table he finds the words 'Friede, Hoffnung, Ruhe und Eintracht allen guten Menschen' inscribed, and they strike him as more fitted for a hall of English deists than for a Christian house of God.

Returning to his parents' house at Breslau in Oct. 1822, he remained there about six months,

during his licentiate period. In Breslau he had much intercourse with 'the Awakened'—J. G. Scheibel, Henrik Steffens, Julius Müller among them—who helped to strengthen his belief in Spener's proposal for restoring the life of the Church. These friends met together frequently for devotional reading and prayer; and, in letters to Stier, Rothe describes the help that he was thus obtaining in his spiritual needs. His days were fully occupied; he was busily engaged with laborious researches into the development of early Christian doctrine, and in addition he was preaching regularly in the place of a pastor who was ill.

On 29th July 1823 he received an invitation from the Government to undertake the work of chaplain to the Prussian embassy in Rome, of which Baron Bunsen was at that time the head. After anxious reflexion Rothe accepted the offer, recognizing that it afforded opportunities for carrying on the historical inquiries to which he felt himself specially called. He was ordained in Berlin on 12th Oct.; and a month later he married Louise von Brücke, to whom he had become engaged while in Wittenberg—one of whose sisters was the wife of his friend Heubner and the other of August Hahn. It was a happy marriage, and he had by his side henceforth a true helper in all his aims and endeavours. Early in Jan. 1824 he arrived with his wife in Rome, and entered at once upon the duties of his office.

'The little flock which I have to shepherd presents,' he writes, 'a peculiar appearance. Externally it is composed of a few so-called upper-class people and a not unimportant number of artists.'⁴

With characteristic zeal he plunged into the work, organizing week-day evening services, and lecturing on various phases of Church History and on the origin and growth of Christian institutions. He preached regularly on Sunday, and of his great power and influence in the pulpit there is abundant testimony. He combined in his utterances a simplicity and a depth of spiritual experience that speedily made their appeal to and touched the hearts of his hearers. Bunsen was at once attracted to the young chaplain, and a warm friendship sprang up between the two men. Bunsen's own studies in ecclesiastical history had been extensive, and he was then engaged in an attempt to bring about the compilation of a liturgy that should be for the evangelical churches of Germany what the Book of Common Prayer was for the Anglican Church. Full of activity as the years in Rome were, Rothe was enabled to continue his theological studies and to lay the foundations for his work on the early Christian Church. Under the many influences of the city his religious views gained in catholicity and broadness; he became convinced that Christian faith could fulfil its mission only by feeling itself at one with reason and with the history of the world.

Towards the end of 1827 Rothe received, partly through the aid of Bunsen, the offer of a professorship of Church History in the theological seminary at Wittenberg; and, after visiting Naples and Florence, he returned to Wittenberg in Sept. 1828. His lectures in the seminary were on the history and constitution of the early Christian Church, and also on selected sermons of ancient and modern times. Besides lecturing, he superintended much of the practical work of the college, and preached frequently. In 1831 he became second director, and, in the following year, *ephorus*, of the seminary. He was thus brought into close personal touch with the students, and their affection for him was unbounded. During these years he devoted himself to literary work. There appeared in 1836 his commentary on Rom. 5¹²⁻²¹; and in the

⁴ Nippold, *Richard Rothe*, i. 357.

following year the first volume of his great undertaking entitled *Die Anfänge der christlichen Kirche und ihrer Verfassung*. During this Wittenberg period Rothe found himself diverging more and more from the ways of thought represented by the Pietists, and, when the two books just mentioned appeared, his secession from Pietism was an acknowledged fact. Though sympathizing with the religious tendencies of the Pietists, he was alienated by their narrow attitude to historical investigation and speculative reflexion.

A new theological seminary was founded in Heidelberg in 1837, and Rothe was chosen to be its first director. The institution started with only fourteen students, and Rothe was discouraged by the absence of any religious interest in the congregations of the district no less than by the prevalent *vis inertiae* among the clergy themselves. He speedily, however, made his presence felt in the circle of the younger theologians, and the influence that he exerted as University Preacher was profound and wide-spread. He concentrated his attention now more than he had done hitherto upon the fundamental principles of religious philosophy, and in 1845 there appeared the first two volumes of the *Theologische Ethik*, which he recognized to be his main contribution to theological science. The third volume appeared in 1848. In the summer of the year 1848 he was called upon, at a time of great unrest and turmoil, to fulfil the duties of Rector of the University. On 22nd Nov. he delivered his rectorial address *Ueber die Aussichten der Universitäten aus dem Standpunkte der Gegenwart*, in which he vindicated the necessity of exact and methodical scientific investigation, as opposed to the superficial tendencies of the past thirty or forty years, whilst emphasizing the dangers attending increasing specialization of losing sight of the ideal of science as a whole.

Rothe accepted in 1849 a call to one of the theological chairs in the University of Bonn, and he was also appointed University Preacher. He had Dorner and Bleek as his colleagues, and the Theological Faculty rapidly increased in numbers; Rothe's lectures on the life of Christ and on ethics awakened the keenest interest. He made few disciples, however, and created no school, as Dorner succeeded in doing. His influence was of a deeper and more enduring kind—that of a man who was constantly feeling his way along the thorny path of speculative theology. He was present at the Synod of 1850 in Dinsburg; and he continued to be largely occupied with ecclesiastical matters.

After five years' residence in Bonn Rothe returned in 1854 to Heidelberg as Professor of Theology in the University. He took part in the General Synod of 1855, at which important issues came up for decision as regards the *Bekenntnisfrage* and the *Katechismusfrage*, and with reference to both he stood for the position of freedom and liberty of thought. The following years, though full of activity, were saddened by the long and depressing illness of his wife, who died in 1861. After her death he was filled with a consciousness of the needs of the age in respect to religion; and he threw himself with great earnestness into several ecclesiastical questions. He took a prominent part in the General Synod of 1861 at Karlsruhe and became a member of the Oberkirchenrath. He was largely instrumental in founding the *Protestantenverein*, which held its first meeting at Eisenach in June 1865. The aims of the Verein were these: that the Church should frankly recognize the culture and science of the time, that perfect freedom should be accorded to both clergy

and laity to search for and to publish the truth in entire independence of external authority, that the clergy and the laity should stand upon a mental and spiritual equality, that the laity should have a greater share in Church matters, and that a National Church should be established upon the basis of universal suffrage. Rothe read an introductory paper at the meeting upon the means by which the estranged members of the Church might be reclaimed. He urged that the Church becomes useless as soon as she loses the moral power to win and keep the hearts of her members, that she had lost this power by opposing modern progress, and could regain it only by becoming progressive.

The last few years of his life were spent in going over once more the ground of his *Theologische Ethik*, but he succeeded in rewriting only the first two volumes. Although his health had been gradually failing, he continued lecturing until a month before his death. He died, after a severe illness, on 20th Aug. 1867.

2. *Writings*.—As a theologian, Rothe may be said to belong to the so-called 'right wing' of the Hegelian school, although no doubt he was largely influenced by Schelling's later writings. The bent of his mind had been set in his early student days by the teaching of Daub, from whom he inherited the theosophic mysticism that characterizes so much of his thinking. Moreover, he imbibed from his study of Origen and the early Fathers many of the ideas which he contrived to incorporate in his speculative system. Schleiermacher's mode of reflexion seems to have attracted him but little. He had no sympathy with those traits of Schleiermacher's philosophy which were derived from Spinoza—such, e.g., as the identification of God with the infinite variety of His manifestations making up the world. He saw too that, for the solution of the problems which religious experience forces upon us, the appeal to feeling was unavailing, and that it was only the patient labour of reason that would enable us to clear up and to systematize our conceptions. And he differed fundamentally from Schleiermacher's view of the relation between religion and morality.

Rothe's earliest work, published in his thirty-sixth year, *Neuer Versuch einer Auslegung der paulinischen Stelle Römer V. 12-21*, illustrates the principle that he consistently sought to apply in the interpretation of the New Testament. He repudiates here with equal decisiveness the orthodox exegesis of Tholuck, in which the text was hidden under a wealth of Patristic quotations, and the rationalizing exegesis of Rückert, in which a number of preconceived theories were brought to bear upon the exposition. As against both, he insists upon the necessity of approaching the epistle with perfect freedom from dogmatic prejudice, of resolutely grappling with its difficulties, and of determining to rest content with no half-solution of these difficulties. He tries, in other words, to set an example of what a genuinely critical treatment of Biblical literature ought to be.

The important work, *Die Anfänge der christlichen Kirche und ihrer Verfassung*, of which only the first volume was issued, is an attempt to trace the course of man's historical development as affected and determined by Christianity. The volume is divided into three books. In the first the relation of the Church to Christianity is dealt with; in the second the rise of the Christian communities and the gradual formation of a Church constitution are handled; whilst in the third the development of the Christian Church in its earlier stages is traced. The book is full of significant suggestions towards a really historical treatment of the history of the Church and of dogma. To

Rothe, as Harnack expresses it,¹ belongs the undiminished credit of thoroughly realizing the significance of nationality in Church History, and to him also we owe the first scientific conception of Catholicism. One characteristic feature of Rothe's later teaching is already foreshadowed in the *Anfänge*—namely, that it is in the State and in civilization rather than in the Church that the ideal of Christianity will ultimately find realization.

Rothe's chief claim, however, to a place in the history of theological science rests undoubtedly upon his *Theologische Ethik*, the first edition of which appeared in three volumes (1845-48), and the second edition in five volumes (1867-71), the last three of the latter being edited and published after his death by Heinrich Holtzmann. This work is the result of a prolonged effort on the part of a comprehensive and logical mind to think out a system of speculative theology that should furnish a rational basis for the religious life of a Christian community. The fundamental ideas are not, indeed, new. No one who is familiar with Daub's *Philosophische und theologische Vorlesungen* (ed. P. C. Marheineke and T. W. Dittenberger, 7 vols., Berlin, 1838-44), which unfortunately are now but little known, can fail to discern the extent of Rothe's indebtedness to his old teacher. And the exhaustive notes to well-nigh every section of the book indicate the many other writers to whom he was under obligations. In the earlier and more metaphysical sections Schelling is the thinker who is most frequently alluded to, but to Fichte and Hegel there are also numerous references. Lotze's *Mikrokosmos* yields him many apt quotations, while Fechner, Weisse, and the younger Fichte are often mentioned. None the less the work as a whole bears the impress of an independent and honest inquirer, of a vigorous intellect wrestling with the greatest problem of human reflexion.

The author starts by making a sharp distinction between speculative thinking and thinking that takes the form of empirical contemplation. The latter must always be directed upon an outer object which is given to it, and in virtue of which this object is interpreted. It is reflexion upon the given object, not self-thinking of it. Speculative thinking, on the other hand, is self-thinking in the strictest sense of the term. It begins with what is purely *a priori* and proceeds by following the dialectical necessity with which each notion produces out of itself new notions. There cannot be, therefore, single, isolated speculations, but only one organic whole of speculation, a speculative system. The success of thought, so conceived, depends upon the fact that the human thinker is a microcosm—that in him the whole of the rest of creation is, so to speak, recapitulated. When, however, speculative thought has completed its task of construction, it must turn its attention to the empirically given facts and ascertain whether the speculative result is in accordance with those facts. If it is not, the system in question will of necessity collapse, and the effort must be commenced afresh with the resolve to carry it through with more rigid dialectical caution and conscientiousness. All the same, the thinker will remain true to the method of thinking out his own thought, as though there were no world around him and nothing in his experience except thought.

Now, in the devout or religious man, according to the measure in which his devoutness is living and healthy, there is immediately contained in his thought as pure thought the notion of being determined by God. The religious man's feeling of self is at the same time a feeling of God, and he cannot

come to a distinct and clear thought of self without coming to the thought of God. In him, that is to say, the consciousness of self is as such the consciousness of God. There is thus provided for the devout subject a twofold point of departure for his speculative thinking and the possibility of a twofold method of speculative inquiry. His thinking can proceed either from the consciousness of self as an *a priori* fact or from the consciousness of God; and, according as he follows the one or the other of these paths, his speculation will take a specific direction. The former will be that of philosophical speculation, the latter that of religious—or, in so far as it is scientifically pursued, of theological—speculation. However near these two may approach each other in certain respects, they will in form inevitably deviate from one another; each will construe what it has to deal with purely *a priori*, but philosophical speculation will think and conceive its subject-matter by means of the notion of the human self, theological speculation by means of the notion of God. Theological speculation is in essence nothing else than the attempt to express in conceptual form the immediately certain content of the devout consciousness, the content of its feeling of the divine. It falls into two main divisions—(a) theology in the strict sense, and (b) cosmology, which again falls into the two subdivisions of physics and ethics. The body of Rothe's treatise is, of course, concerned with the last-named.

The starting-point of theological speculation is, then, the fact that the religious man in thinking of himself thinks likewise, in and through the same act, of God. The primordial form of the religious consciousness is doubtless feeling, the basis of the thought of God is the *Gottesahnung*, just as the basis of the thought of self is the *Ichahnung*. But the primary step in reflective knowledge is to translate this feeling of God into the form of a concept, to express it in a perfectly clear and distinct idea, which shall completely and exhaustively represent it. And the thought in question can be formulated, in its most abstract and elementary aspect, as the thought of the Absolute Being. God, as absolute, is the Unconditioned; whatever else there may be, it is conditioned by Him and does not condition Him. He is numerically one—containing within Himself all that there is of being. Moreover, as being absolute in an absolute way, or the absolutely right, He is the absolutely good Being, or the absolute Good. For the Good is that which is truly perfect, truly eternal and self-dependent. If, however, God as the Absolute is to be really thought by us, it can be only through the application of that category by means of which alone thought is possible—the category, namely, of ground and consequent. And, since in thinking of the Absolute we are thinking of an existing, and not merely of an ideal, reality, the category of ground and consequent assumes in this application the form of cause and effect. But the Absolute can be thought of only as *causa sui*, as the simply self-determined. This implies, further, that in God there is absolute and harmonious union of necessity and freedom; as self-determining, that is to say, God is a living activity.

The concept of pure being is as such the concept of absolute negativity; it is for our thinking purely negative; yet in and for itself it is none the less the most positive of all concepts, only under the form of absolute negativity. It is negative, not in the sense of the absolutely nought, but in the sense of the absolutely not-this-or-that (*das Nichtetwas*). Herein two moments are included; God is the fullness of all being, while the being of this or that appertains to Him only in a negative significance.

¹ A. Harnack, *History of Dogma*, Eng. tr., i. 89.

Now, what is contained in Him only negatively is contained in Him not as posited, not as existent or actual, but only as possible; in Him is to be found the totality of all possible realities, yet such totality can be expressed only as possibility. The thought of real possibility is equivalent, however, to the thought of pure potency or power; and potency or power is in essence causality, which cannot be otherwise conceived than as a bringing forth of effects, i.e. as creative (*wirksam*). God, in other words, as absolute potency or power, must be thought of as issuing forth from mere potentiality, and as realizing His absolute power. The absolute life must be a process of self-realization. Again, self-realization presupposes that the ideal and the real are recognized and distinguished; God, that is to say, must be *actu* a spirit, the Absolute Spirit. And the notion of God as spirit implies that everything real had for its presupposition an ideal subsistence—a thought alone can become and be real. The timeless development of God as spirit includes within itself a twofold immanent development—on the one hand, God becomes conscious of Himself, subjectifies Himself, determines Himself as personality; and, on the other hand, God determines Himself in and through the divine nature which furnishes the means or instrument of His self-activity. But these two immanent processes in God—determination of Himself as personality and as nature—are one and the same process; they can be thought of only in correlation. God, then, as personality posits a nature as His objective counterpart; but this nature is originally ideal, a world of thoughts. Its contents are not originally in Him as operating entities; they are raised from possibility to actuality by His self-activity. And the results of His activity are moral results; His determinations are at the same time commands. As self-determining, God is completely master of His own will; and His will is necessarily at the same time an act of thinking—a thinking, namely, of that which He wills, although the converse is not true, for God is under no necessity to will whatsoever He thinks.

In that God determines Himself to absolute personality He necessarily sets over against Himself the thought of an Other which is all that He is not. Yet He is under no necessity to posit this thought; the fact that He does not forgo the power of positing it is due to His perfection—a perfection which requires that He should realize Himself in and through that which is other than Himself. Thus we reach the notion of creation: God posits, namely, as real a sphere of being opposed to His own, and yet in union therewith, in order to have His own being expressed or manifested in His Other, the world. In what precisely this act of creating consists—what, namely, is thereby added to possibility that it should attain the level of actuality—Rothe is as little able as Leibniz, faced with a similar problem, to say. He confines himself to maintaining that the divine causality in producing the world is not active as an entirety, but divides its activity—in other words, that God created the world not as a finished but as a primitive and unfinished product, a product which could only successively be brought to perfection. The primordial act of creation is the contraposing by God of a non-ego; and what is thus contraposed must be the exact opposite of spirit—namely, pure matter, in the notion of which is implied infinite divisibility. Pure matter is not, however, nature; and the divine creation evinces itself, therefore, as a continuous process, proceeding from one stage of material forms to another—bringing forth a graduated scale of existences that together constitute an organic whole. Rothe tries to trace the evolution from

pure matter, which is virtually identical with space, first of mechanical nature, consisting of atoms conceived as centres of force, then of the chemical properties of these constituents, later of mineral products, and finally of vegetable and animal organisms, until in the human organism the soul differentiates itself from the body as having the relation of subject to itself as object. The gradual process of creation takes, in short, the aspect of a continuous incarnation of the divine Spirit within His non-ego, or matter—a continuous putting forth of divine activity in order to spiritualize that which is the opposite of spirit, and to transform it into an organ of its own life.

'It is no proof of God's omnipotence that He creates pure matter; the proof rather consists in His doing away with matter merely as such.'¹

The progressive creation is just the mode, and the only possible mode, of bringing about that consummation. But creation is creation only in so far as there is exhibited in it no sudden bound, only in so far as each of its links evinces itself as a real development from the preceding links of the chain. Herein is to be discerned the reason of the incompleteness of each successive stage of the world's evolution. That which is defective in the created universe, that which to the human consciousness wears the aspect of evil, is to be traced back in the last resort to matter—matter that is not yet transmuted, not yet done away with merely as such. Moreover, inasmuch as in creation each stage always arises from the dissolution of the stage below, so that the lower, by means of the creative influence, always forms the substratum for the generation of the higher, there must always remain, in every epoch of the world's history, a residuum of matter still unspiritualized—a 'kind of slag,' as Pfeleiderer calls it.² The consequence is that the consummation of one epoch of creation requires that another epoch supervenes, and the world-evolution must be thought of as an endless series of stages following each other in time.

The natural man is conceived by Rothe to have been developed according to the natural laws of animal evolution. In the animal sphere there is no definite contrast between the soul, which emerges out of and rises above matter, and nature, which is in direct union with it. The soul of the animal is entirely under the sway of nature, although even in the animal the merely physical has been transmuted to the extent of exhibiting the power which we call instinct. But with the appearance of human personality a new order of created being enters the world. Matter has given birth to a mode of finite existence in which it is transcended, to a creature whose essence and principle are its direct opposite. Looked at from the genetic point of view, the finite personality is the product of material evolution; considered in and for itself, it is just as certainly not material. That the finite spirit could not be created directly, but only through aid of the creature itself, only through the non-spiritual creature coming to posit itself as spiritual—all this appertains to the essence of spirit as self-determining. The only true power of self-determination is that which determines itself to be so. It follows, therefore, that the creature to whom it belongs cannot have been endowed at its creation with this self-determining power, but can only have been created indirectly—by the creation, namely, of a material non-ego of God so specifically organized as to be able to transubstantiate itself from materiality into spirituality. As a self-determining personality, man acquires the status of a free agent. He is at once a thinking being, whose thoughts find everywhere objects corresponding to them, and a volitional

¹ *Stille Stunden*, p. 66.

² *Philosophy of Religion*, Eng. tr., II. 258.

being, whose autonomous acts find realization in the outward world. A finite spiritual ego or person thus has it for his function to become, in a literal sense, a co-worker with God in the eternal process of creation—the process, namely, of getting rid of matter in so far as it is the mere opposite of spirit.

The process of creation finds, then, its continuation in the human world through the self-determination of finite persons. Hence it is that the life-process in man necessarily assumes a moral character. Man cannot live even the animal life except as a moral life. The formal principle of moral action may be expressed as the elevation of human personality out of its natural state of bondage or external determination to full freedom in itself; the material principle of moral action may be expressed as the appropriation of the natural environment to subserve the ends of personality. Three special features of the moral life call for detailed treatment in any scientific account of its essence and contents: (a) the results or products to be produced by self-determination, (b) the forces which constitute self-determination, and (c) the modes of activity which emanate from self-determination. The science of ethics will consequently comprise a *Güterlehre*, a *Tugendlehre*, and a *Pflichtenlehre*; and it is only through following these three correlative branches of inquiry that a comprehensive science of the moral is possible. Of the three the first is the logically prior, for apart from the notion of the moral Good neither a system of virtues nor a system of duties can be constructed.

Since moral action is in itself a continuation of the divine creative action, it follows, according to Rothe, that the moral life and the religious life really coincide, and, when normal, are identical. The object of both is the realization of the highest good—i.e. the absolute communion of man, individually and socially, with God, and, by means thereof, the perfected Kingdom of God on earth. Only in so far as the world is made the theatre of moral purpose is the truly religious life conceivable; apart from that it is an empty dream. Religion, in order that it may become truth and reality, demands morality as its fulfilment, as the only concrete way in which the idea of fellowship with God can be realized; morality, in order that it may find its perfect unfolding, demands the aid of religion, in the light of which alone it can comprehend its own idea in all its breadth and depth.¹ In the moral process of human evolution the religious process is included as a necessary factor; the perfect development of human personality can be no other than its absolute determination by God, and consequently its perfect consciousness of God. When, then, mankind reaches its full moral stature, the antithesis between the religious and the moral will have disappeared; the moral life will be the religious life, and *vice versa*. The Church, as a community of the devout within the State, must, accordingly, be regarded as a transitory institution; the full realization of the Church's aim can never be reached in abstract severance from the social organism as a whole. Ultimately the Christianized State, embodying, as it will, all the functions of the human spirit, will absorb the Church into itself; in so far as the Church fulfils its mission, it will tend more and more to fall away as a Church and to be the cause of its own dissolution. Its work, as a Church, will be accomplished when the whole social life of man has advanced to a form of worship higher than it can awaken—that, namely, of a religiously moral community.

Five years after Rothe's death a collection of

¹ Cf. *Theologische Ethik*, § 991 ff.

isolated and miscellaneous reflexions which he had left in various notebooks was published by his pupil, F. Nippold, of Bern, under the title of *Stille Stunden*. The volume is a rich storehouse of penetrative thoughts and suggestive ideas. One of these aphorisms sums up in a few words the burden of much of Rothe's teaching.

'In this world,' he says, 'all God, even the noblest and fairest—such as Love—rests upon a "dark ground," which it has to consume with pain and convert into pure spirit.'

LITERATURE.—Rothe's chief works are: *Neuer Versuch einer Auslegung der paulinischen Stelle Römer V. 12-21*, Wittenberg, 1836, *Die Anfänge der christlichen Kirche und ihrer Verfassung*, do. 1837, *Theologische Ethik*, 3 vols., do. 1845-48, 26 vols., do. 1867-71, *Zur Dogmatik*, Gotha, 1863, *Nachgelassene Predigten*, 2 vols., 3rd vol. under title *Predigten*, ed. D. Schenkel, Elberfeld, 1868-69, *Dogmatik*, ed. Schenkel, Heidelberg, 1870, *Stille Stunden*, ed. F. Nippold, Wittenberg, 1872, *Vorlesungen über Kirchengesch. und Gesch. des christlich-kirchlichen Lebens*, ed. H. Weingarten, 2 pts., Heidelberg, 1875, *Der erste Brief Johannis*, ed. R. Mühlhäusser, Wittenberg, 1878, *Theologische Encyclopädie*, ed. H. Ruppelius, do. 1880, *Gesch. der Predigt*, ed. A. Trümpelmann, do. 1881, *Gesammelte Vorträge und Abhandlungen*, ed. Nippold, Elberfeld, 1886. In English have appeared: *Sermons for the Christian Year*, tr. W. R. Clark, Edinburgh, 1877, *Still Hours*, tr. Jane T. Stoddart, London, 1886. For life of Rothe see F. Nippold, *Richard Rothe, ein christliches Lebensbild*, 2 vols., Wittenberg, 1873-74; D. Schenkel, 'Zur Erinnerung an Dr. Richard Rothe,' in *Allgemeine kirchliche Zeitschrift*, viii. [1867] 529-546, ix. [1868] 10-21, 85-99, 208-222. For critical treatment of Rothe's theological conceptions see E. Achelis, *Dr. Richard Rothe*, Gotha, 1869; K. H. W. Schwarz, *Zur Gesch. der neuesten Theologie*, Leipzig, 1869; O. Pfeiderer, *The Philosophy of Religion on the Basis of its History*, Eng. tr., London, 1886-88, ii. 286-290 (cf. his *Development of Theology in Germany since Kant*, Eng. tr., do. 1890); W. König, *Richard Rothe, sein Charakter, Leben und Denken*, Berlin, 1898; H. Basserman, *R. Rothe als praktischer Theologe*, Freiburg, 1899; H. J. Holtzmann, *R. G. DAWES HICKS.

ROUSSEAU.—I. Life.—Jean Jacques Rousseau was born on 28th June 1712, in Geneva. His family was Protestant by tradition: his ancestors had migrated from Paris to Geneva nearly 200 years before his birth, and they adopted the Protestant form of religion from the time of its first beginnings in Europe. His mother was of a well-to-do family, and the birth of her son cost her her life. The boy was thus left to the care of his father, Isaac Rousseau, a watchmaker, who was, as his son tells us, of an ardent and sensitive nature. He was thus early subjected to influences of an emotional kind which affected his whole life. His father and he spent nights in reading romantic literature to one another, and exciting their sensibilities in a way which must have surprised their more stolid Genevese compatriots. After having hastily made their way through certain romantic works of fiction which were inherited from the dead wife and mother, they tackled more serious literature, including a number of classical works of history; and, while still a young boy, Rousseau became devoted to the study of Plutarch, who remained all his life a favourite author. Unfortunately, when about ten or twelve years of age, his happy time with his father and a devoted aunt came to an end. The father, who was probably passionate and unrestrained, got embroiled in a quarrel, and, thinking himself aggrieved, resolved to leave Geneva rather than suffer under what he conceived to be unjust laws. Consequently the lad was placed by an uncle at a school kept by a pastor in the village of Boissy.

At this school there awoke within the boy a sensual consciousness which affected his outlook on life to the end. He tells the whole circumstances in his *Confessions* in a way which alike astonishes and disgusts a modern reader. In this

¹ *Stille Stunden*, p. 136.

extraordinary book, published in his later years, we have a soul laying bare its inmost feelings, faults, and experiences, and the result in Rousseau's case is astounding. At Boissy, also, he experienced his first sense of personal injustice, being accused of a petty misdemeanour of which he was not guilty. This early experience made him intensely sensitive throughout his life to wrongful suffering by others. After leaving Boissy he returned to his uncle in Geneva for a few months, and enjoyed a happy out-of-door life with a young cousin. About 1725 (though this does not tally with his own account) the lad was placed in a notary's office, and, when dismissed from it, he was apprenticed to an engraver. The latter proved to be a brutal master who by his cuffs and blows constrained his apprentice to engage in many reprehensible practices. At the age of sixteen he took the law into his own hands and ran away—a step which, he says, completely altered the whole course of his life. Had he remained where he was born, he might, he considered, have been a peaceful Christian citizen; now came his wanderings into strange lands and devious courses. He made his way into Savoy, where the faith and politics of the people were very different from those of the republic of his birth, and his immediate surroundings always exercised the deepest influence upon his outlook and character. It must, however, be allowed that he had already cut himself adrift from his family ties and caused himself to be regarded as somewhat of an alien.

At once he came into contact with the rector of Confignon in Savoy, who was able to make him an apparent convert to Roman Catholicism without much difficulty, after giving him an excellent dinner. He was then sent to a Madame de Warens of Annecy, a young woman considered zealous in the faith. From her he went to a monastery in Turin, where, after a certain show of protestation, he was formally received into the bosom of the Church. Once satisfactorily converted, he was (in 1728) thrust out to find his way for himself with only twenty francs in his pocket. After various adventures he became a lackey in the house of the Countess de Vercellis, who died three months after he entered her service. After her death a piece of ribbon was missing, which Rousseau had stolen. He basely put the blame on a young girl in the house, and persisted in his accusation. The deed was the cause of the most overwhelming remorse on Rousseau's part, which haunted him to the end of his life. We must, however, recollect that the whole story is told by himself, and that he may more than likely have morbidly exaggerated both the crime and its effects.

After further efforts in service his youthful restlessness took him back over the mountains, this time with a young companion as destitute as himself, and at length he once more reached Annecy and his patroness Mme. de Warens, who still lived there. With this strange figure he took up his abode; indeed, from 1729 to 1738 he was more or less in close touch with her. His friendship for this woman was of a curiously sensuous and mysterious kind. He called her 'Maman,' but she was only about twelve years his senior. She had married early, disagreed with her husband, and become a convert to Roman Catholicism, thereby securing a small pension from the king of Sardinia, Victor Amadeus. Rousseau learned much at this time, and lived in an ecstasy of happiness with this attractive and strange woman of thirty. He received certain instruction with a view to entering the priestly office; then in a desultory way he studied music. Deserted for a short time

by his patroness, he wandered about in adventurous fashion, and finally settled in Lausanne and there announced that he was a teacher of singing, whereas he was ignorant of the first principles of the art. Naturally his imposture was soon discovered, especially as he undertook to perform his own composition. After further wanderings he returned in 1732 to Mme. de Warens, who was living at Chambéry, and took up some clerical work which she found for him. He soon tired of this, and tried music-teaching again, but that, in so far as it involved a certain regularity of hours, was also soon dropped. The final result was that a curious establishment was set up, consisting of Mme. de Warens, Claude Anet, her factotum, and young Rousseau—a happy family party which was broken up by Anet's death. An imaginary illness caused Rousseau to pay a visit to Montpellier at his patroness's expense either before (as Faguet thinks) or after his stay at Les Charmettes (see below). This was, as usual, the occasion of a love affair with a certain lady, and for some reason Rousseau chose to pass himself off as an Englishman. On his return to Mme. de Warens he found a stranger installed in his place, to whom, however, he soon became accustomed. This was about 1737, though dates in the *Confessions* are somewhat vague and confused. Rousseau, who was far from strong, and constantly gave evidence of unhealthiness of mind and body, persuaded Mme. de Warens to go to the country and live in a charming farmhouse named Les Charmettes. His stay here (about 1738) was perhaps the happiest part of his life, for he lived in communion with nature and passed his time in comparative rest and peace. He also began to study seriously, and, more especially, as he tells us in the *Confessions*—the source of most of our knowledge of his life—he began to read Voltaire and the *Spectator*, and these and other books belonging to Mme. de Warens were the means of opening his mind to many things undreamed of. He read philosophy too, Locke's *Essay* and Leibniz, and tried to accept the point of view of each writer in turn and then to formulate his own ideas. He also endeavoured to master the Latin tongue.

The *ménage à trois* became strained, and Rousseau's next occupation was to act as tutor with a certain M. de Mably in Lyons. But, despite his interest in education, the practical drudgery of teaching proved impossible to him. He therefore returned to Mme. de Warens, but, life with her being misery, he went to Paris, vainly attempting to get a new system of musical notation taken up there. He came, however, into relationship with certain great ladies who befriended him, and by whose means, at the age of twenty-nine, he was sent to act as secretary to the French ambassador at Venice. This episode in his life lasted only eighteen months, for it was soon clear that he could not get on with his new master, who was apparently difficult enough to deal with. On his return to Paris in 1745 he united himself to Thérèse le Vasseur, an unlettered serving-girl in the small Hôtel St. Quentin at which he lived. This strange union at least gave satisfaction to Rousseau, since he did not ask for more than sympathy and cared little for permanent companionship of an intellectual sort. Sixteen or seventeen years later, in 1762, their relations changed, as Thérèse's sentiments towards him altered altogether, and Rousseau wrote piteously of his grief on this account. The woman appears to have naturally enough resented the treatment of her offspring, for, much against her will, five children were in turn deposited in the box for receiving foundlings, without any reason being given except that the father was in straits for money. At least certain specious

arguments in defence of his conduct were not developed till later, when Rousseau pretended that he suffered the deprivation of the joys of fatherhood in order that his children might be brought up in a healthy and simple life. We are glad to know that remorse came in the end. The pair were not actually married until 1768, when a certain form was gone through.

Rousseau spent twelve years in Paris—from 1744 to 1756—and it was during this time that his children were born and deserted. It was at this time also that he wrote his *Discourses*. For the rest, he acted as secretary to Mme. Dupin and her stepson, M. de Francueil. Through the latter he received an important and lucrative post, which, however, he resigned about 1750 in favour of the pursuit of a simple life. In 1754 he once more visited Geneva and his former friend Mme. de Warens, now sunk in poverty and misery. To her he showed kindness, even going so far as to offer her a home, but he always blamed himself for not having done more to relieve her unhappy lot. His visit to Geneva caused him to adopt the Protestant religion once more in order to procure the benefit of citizenship. At the same time he was much interested in the religious discussions of the day, which centred in the Deistic position. He did not remain in Geneva, but went to a cottage in the forest of Montmorency provided for him by Mme. d'Épinay, and accepted only when he felt sure that he could do so without sacrificing his independence. His choice of this 'Hermitage' was a great surprise to his friends in Paris who did not love solitude, but, once his mind was made up, he fled to his refuge with all haste. This was the time (the spring of 1756) when plans of future work pressed upon his mind. He made a vain endeavour to edit the papers of the Abbé de Saint Pierre, and this abortive effort was followed by an unwholesome condition of sensuous excitement which culminated in an ecstatic state of intoxicating passion for Mme. d'Houdetot, sister-in-law of Mme. d'Épinay. There was a strange relationship between these two and Saint Lambert, the lady's lover, which finally came to an end by mutual consent. In the winter of 1757 Rousseau hopelessly quarrelled with Mme. d'Épinay, his benefactress, and moved to Mont Louis, in the neighbourhood of Montmorency. While there, he became incensed at an article on Geneva written by d'Alembert in the *Encyclopédie* expressing regret that the Genevese provided no theatres. This expression of opinion was indeed attributed to Voltaire, who had not been permitted to have comedies played in the town. This was the origin of the *Lettre à d'Alembert sur les spectacles*. The work was an immense success, but it lost Rousseau Voltaire's friendship for ever. At this time there were also breaches with Grimm and Diderot as well as with Mme. d'Épinay, Grimm's mistress, which entailed much bitterness and ill-feeling. But it was also a time of great productivity on Rousseau's part. *La nouvelle Héloïse*, written mainly at the Hermitage, was published in 1760, and the *Contrat social* and *Emile* in 1762. Rousseau dwelt in his new home in tolerable contentment, and he had many devoted friends among the great, despite his strange temper and physical condition.

All kinds of difficulties in those days confronted a would-be author before his books could be duly printed and circulated. In 1762 *Emile* was condemned to be burned and its author to be imprisoned. Flight was the only mode of escape, and the fugitive made his way to the canton of Berne. But again he had to depart. Frederick II. of Prussia had the credit of allowing him to take refuge in his territories of Neuchâtel, where

Thérèse joined him, and he there came into touch with Gibbon and Boswell. Rousseau entered upon controversial correspondence at this time with great effect. In 1764 appeared his famous *Lettres de la montagne*, wherein he fully proved the iniquity of his treatment by the republic of Geneva. The *Lettres* were publicly burned by the Parliament of Paris. The Church at Neuchâtel turned against him, and he was persecuted to such an extent that he fled to an island in the Lake of Bienné. He was not suffered to remain there, went to Strassburg, and after much indecision accepted an invitation to make his home in England. Hume brought him to London in Jan. 1766; in London, as in Paris, he had a great reception. In March he settled in the Peak of Derbyshire (at Wootton) with Thérèse. It was cold, and Rousseau had nothing to do, and he soon broke into a quarrel with Hume, accusing him of every kind of perfidy. Hume was, not unnaturally, indignant at this ingratitude, and the quarrel became a vehement one, in which many literary men engaged. Rousseau himself became morbid, upset, and miserable. He set to work to compose the first part of his *Confessions*—that extraordinary revelation of a man consumed with egotism, undisciplined, and living on the feelings of the moment, which yet produces in the reader a sense of reality such as few autobiographies have done before or since. Finally he fled to France in a condition almost distraught. Mirabeau (the father of the more famous statesman) and then the prince of Conti gave him hospitality, and he composed the second part of the *Confessions*, while also pursuing botanical studies, during the year 1767-68. Again he fled, this time to Grenoble and other places. At length in 1770 he settled in Paris, where he remained for the last eight years of his life. He had been temporarily estranged from the unfortunate Thérèse, but became reconciled again, and he occupied himself in copying music and writing his *Dialogues*; indeed, he seems to have lived those last years more peacefully than any that went before, despite constant and uncalled-for quarrels with his friends. He was extremely poor, and would not draw upon the pension granted him by George III. of England. The last months of his life were miserable. He would not accept of help, was subject to delusions, and now untended by Thérèse; some suspected suicide when the end came on 2nd July 1778. His remains were in the first instance buried on an island, but in the Revolutionary days were moved to the Pantheon.

2. Works.—The first of the *Discourses* was written for a prize offered in 1749 by the Academy of Dijon on the question of whether the progress of the sciences has contributed to the improvement or to the corruption of manners. Rousseau was on his way to visit Diderot, then in prison because of his *Lettre sur les aveugles*, when he was seized with an inspiration to enter the competition and deliver himself of his opinions. The paradox of the answer which he designed entranced him. It was to show simply and convincingly that man is good by nature and that by institutions only is he made vile. This original contention really proved to be the basis of the writer's later work; it proved also to be the expression of ideas which must have been latent in the minds of the people of France, for it was laid hold of as though it were a new gospel opened up before them and indicating the beginning of a new epoch in history. It seemed, indeed, to bring fresh possibilities into the life of every citizen. Rousseau won the prize. Three years later he competed for another prize, the subject being the origin of inequality among men and whether it is authorized by natural law. This essay, though unsuccessful in gaining the

prize, proved almost as successful as the first. By these two essays the world came to realize that a new gospel was being preached to it, and an artificial age was called upon to return to simplicity and truth. To us the argument seems shallow, and we feel that a little thought would show, for instance, the value of acquiring new knowledge in a social sense as well as in a material. Still, if it was a one-sided doctrine that Rousseau taught, it was the one of which the nation felt in need. Men longed to return (or thought they did) to the ancient times when humanity was rude and unlettered but natural and unspoiled by the arts of civilized life. From this time onwards the writer of the *Discourses* was a famous man, even though his fame might partly be accounted for because he was the preacher of the paradox that a barbarian was superior to a European of modern days. He established the predominance of feeling over the patient investigation of fact—a doctrine that brought fresh life while it brought fresh dangers to his own and other countries.

La nouvelle Héloïse is a love story of a highly emotional kind—the story of a tutor enamoured of his too attractive pupil. To the modern reader the tale, which is of the slightest so far as events are concerned, seems tame, in spite of a sensuousness which repels though it does not, now at least, corrupt. The epistolary form in which it is written is tedious to those who have come to expect swift action, and the style seems forced and stiff. But when it was published the interest in the tale knew no bounds, and the effect produced by it on an emotional public was incalculable both in Germany and in France. The second part of the book, in which the happiness of the married state is vaunted, was just as much applauded as the first.

The *Contrat social* opens with the famous words, 'Man is born free, and everywhere he is in chains,' and strikes the keynote of the rebellious spirit that animated men of a rebellious age. To Rousseau it was not a time for careful analysis of facts or investigation of the growth of custom, nor had he the necessary knowledge to enable him to do this. To him it was essential that the 'state of nature' should be declared to be the true state of freedom—the freedom which is based on reason. He did not trouble to inquire whether this state of natural freedom has ever yet been realized, and whether man can be independent of the environment in which he is born. The time was ripe for his doctrines, crude as they might seem, and they laid hold of the imagination of the people as no scientific investigation of fact could have done. Therefore this became one of the most notable and influential books of the period.

Emile was virtually a treatise on education set forth in the story of a youth brought up on ideal lines. The theme is an ancient one, but is dealt with in a way that brought conviction and enthusiasm to a generation which was awakening to new ideas in regard to the upbringing of the young. France has ever since Rousseau's time been alive to the essential unity of the family, and to this is probably due the close relationship which exists between the parent and the child. Rousseau brings his readers back to Nature and her teaching, makes the mother realize her primary duties to her offspring, and feel it to be her pleasure as well as her duty to suckle her child. The doctrine of original sin had no attraction for Rousseau. The child was born into the world prepared to be good and happy and healthy, and it was the parents' duty to allow him to attain these ends. We must sweep away the artificial restrictions of an artificial society which prevent the development of the best in a man. Rousseau applied his theories

even to the simplest matters of food and clothing. In fact, he was the forerunner of many of the modern views of infant nurture, and he deserves much credit for awakening the world to the desirability of natural methods of upbringing and instruction based on the development of the reasoning faculties. It is only in respect of the upbringing of girls that his theories are almost Oriental in their obscurantism.

The *Confessions* is perhaps the best known of Rousseau's works and the most extraordinary. Jules Lemaitre¹ says of the writer that he was a creature of nerves and weakness, passion and sin, sadness and visions. But along with all the unhappy qualities that Rousseau possessed Lemaitre recognizes the good side that is always present, and bears no hatred to his person. He is right in saying that Rousseau is the most 'subjective' of all writers, since all his writings are but betrayals of himself. And it was a strange undisciplined soul that he revealed to that brilliant collection of famous men and women who received his outpourings with mingled admiration and derision. Probably these outpourings were in their way sincere and true, though inaccurate in many common details. But, in reading them, we must always recollect that Rousseau was born unhealthy in mind and body, and his upbringing by an excitable and sentimental father did not help him towards self-restraint, though the Protestant Genevan strain was always to be traced in his character and throughout his writings. The world in which he lived was no real world, but one created by his inward fantasies and later by his morbid imagination. As might possibly be expected, the mingling of diverse irreconcilable elements, Protestant and Roman Catholic, Genevan and Parisian, brought about an untoward mixture, while it also resulted in the production of a genius.

RSIS.—See BRĀHMANISM, INSPIRATION (Hindu).

RUKHARS, SUKHARS, UKHARS.—These are all Śaiva mendicants or Yōgis (*q.v.*), occasionally found wandering over N. India. They are said to be branches of the Aughar or Ōghar sect of Yōgis founded in Gujārat by a Śaiva mendicant named Brahmagiri, a disciple of Gōrākhnāth (*q.v.*). Brahmagiri founded five branches of his sect, named respectively Rūkhār, Sūkhār, Bhūkhār, Kūkhār, and Gūdar, of whom the first two are those most commonly met with. They are ordinary Yōgis, differing from others and among themselves only in apparel and appurtenances. Thus the Rūkhars and Sūkhars wear earrings in both ears—the former of copper or pewter and the latter of *rudrākṣa* (olive-nut) seeds—while Gūdars wear a ring in only one ear and a flat copper plate bearing the footprint of Gōrākhnāth in the other. Bhūkhars and

¹ Jean-Jacques Rousseau, pp. 318, 356.

Kūkars do not burn incense in their alms-pot, while the others do. The Kūkars collect alms in a new earthen pot, in which they also cook their food. Sūkhar̥s carry a stick three spans in length, and Rūkhar̥s do not, and so on. The cry of all these, as in the case of many other Saiva mendicants, is 'Alakh' (see art. ALAKHNĀMIS).

Ukhars are said to form a sixth class of these Aughar̥s. The name, however, seems merely to denote those members of the five classes already mentioned who are given to indulgence in flesh and strong drink.

RULE OF FAITH.—See CREEDS, CONFESSIONS, FAITH.

RUSSIAN CHURCH.—I. HISTORY.—The history of the Russian Church falls into four periods, the character of each being defined by its chief events.

1. Primitive period and down to the Mongol invasion (1st to 10th cent., A.D. 988–1237).—Nestor, in his *Chronicle*, gives an ancient tradition, rejected by modern historians, that the beginnings of Christianity in the southern parts of what is now Russia go back to the time of the apostles. According to this, St. Andrew, as he spread the gospel along the north-eastern shore of the Black Sea, came to the hills above the Dnepr upon which Kiev afterwards arose, blessed them, and foretold that upon them the grace of God should shine forth. In the 4th cent. there were already several bishops' sees in the south of Russia—Bosporus, Cherson, and others, founded for the Christians of the Greek colonies existing in that region. From them the seeds of Christianity might easily have been brought into the limits of the land that is now Russia, but it is unlikely that they took root at that distant time. More favourable conditions for the spread of the gospel in Russia came with the establishment of Slavic tribes within its borders at an epoch that we cannot exactly define. The Slavs had long been well acquainted with Greece, whither they went as traders or mercenaries, and there they not infrequently adopted Christianity. In the middle of the 9th cent. the southern Slavs listened to the gospel preached to them by the 'apostles of the Slavs,' SS. Cyril and Methodius. About the same time Prince Rurik (862–879), invited from among the Varyags, laid at Novgorod the foundation of the Russian State, decreed by Providence to profit more than any other Slavic land by the labours of SS. Cyril and Methodius. Of the Russian princes, the Varyags Askold and Dir, the earliest to rule in Kiev (862–882), were the first to fall under the influence of Christianity, and after their raid against Constantinople they accepted the holy faith. Under Prince Oleg (879–912) there was already no small number of Christians among the Russians, and under his successor Igor (913–945), in the treaty with the Greeks concluded at Kiev in 944, the Russians are already divided into baptized and unbaptized; while the latter confirmed their agreement by swearing before the idol of Perun, the baptized swore by the Holy Cross and the Gospels. Igor's widow, Princess Olga (945–969), herself desired to be baptized, and in 955, when she was 67 years old, she journeyed to Constantinople and there, according to the *Chronicle*, accepted Christianity. Many of her following were baptized along with her. On her return to Kiev Princess Olga (baptized as Elena) journeyed through the towns and villages and preached the faith, shining 'like the moon in the night' in the darkness of the

heathenism around her. She tried to persuade her son, Prince Svyatoslav (946–972), to accept Christianity, but in vain. Her grandson, Svyatoslav's son, Prince Vladimir (973–1015), accepted the faith in 987. In 988 the men of Kiev were baptized, and after that Christianity began to spread to the other towns of Russia. The first metropolitan of Kiev, Michael († 991), began by baptizing the people in the towns and villages round about Kiev; afterwards, with bishops and Dobrynya Nikitich, he preached in Novgorod, Rostov (N.N.E. of Moscow), and the surrounding districts, and baptized no small number. Vladimir himself visited Volhynia to preach the faith, and even had several princes of the Kama Bolgars and the Pechenegs baptized at Kiev. Vladimir's sons, sent to the various principalities, also spread the new faith among the people under their rule. So, during the reign of Vladimir, Christianity spread to the feudal centres of Murom, Polotsk, Vladimir-in-Volhynia, Smolensk, Pskov, Lutsik, Tmutarakan (opposite Kerch), etc. For his zeal in spreading the faith of Christ Prince Vladimir received the epithet of *isapostolos* and was canonized by the Russian Church.

Under Vladimir's successors the Christian faith continued to spread. The preaching was specially helped by the fact that in Russia the message was delivered in a Slavic tongue akin to the people's own.

After Vladimir's baptism Christianity became in the full sense of the word the ruling religion in Russia. Accordingly, even in his time there followed the establishment of a special local church, for the existence of which all the conditions were present. At the same time the relations of the Russian Church to the Greek Mother-Church and also its internal local relations to the State and the community began to be defined. In relation to the Greek Church the Russian was established as a special metropolitan see, forming part of the patriarchate of Constantinople and consequently subject to the patriarch's authority. The attempts of Roman Catholic scholars to prove that originally the Russian Church was subject to the pope are absolutely futile. At the head of the Russian Church stood the metropolitan. The whole time of the tenure of St. Michael, the first metropolitan, was taken up in simply spreading the elements of Christianity, so that the Russian Church did not reach complete organization under him. This was achieved by his successor Leontius († 1008). In 992 he divided the Church into dioceses (Novgorod, Chernigov, Vladimir-in-Volhynia, Polotsk, Turov, Belgorod, Rostov, and Tmutarakan), and appointed the first diocesan bishops. Their own see the early metropolitans fixed at Pereyaslav (S.E. of Kiev), and afterwards, under Prince Yaroslav (1017–54), they transferred their place of abode to Kiev. The Russian metropolitans were chosen and consecrated at Constantinople by the patriarch himself with the assent of the emperor. Accordingly the majority of the first rulers of the Russian Church were Greeks. But the metropolitan of Russia, though chosen from among the Greeks, was by no means so dependent on the patriarch as were the other Greek metropolitans. In consequence of the wide extent of his province and the fact that the Russian principality was independent of the Greek Empire, the metropolitan of Russia enjoyed special dignity and almost complete independence of the patriarch; he was in the position of an exarch rather than of a metropolitan. The dependence of the Russian metropolitan upon the patriarch of Constantinople meant no more than that he was chosen and consecrated by the latter and was bound as far as possible to attend the patriarchal synods. Within the Russian Church the metropolitan had an independent jurisdiction

over ecclesiastical affairs, exercised either directly or with a synod of his suffragans, which he often convened at Kiev. His decisions were recognized as final, and recourse to the patriarchal court at Constantinople was very rare—only in specially important cases. The link between the Russian metropolitan province and the patriarchate amounted to this, that the patriarch was prayed for by name in the Russian service, that contributions were often sent from Russia for the needs of the Greek Church, and that there were founded in Russia so-called 'stavropegial' monasteries under the direct jurisdiction of the patriarch. These relations continued till half-way through the 15th century. From the very first days of its existence, however, the Russian Church showed a tendency to complete independence of the patriarch of Constantinople. This appeared in attempts to elect the metropolitans from among native Russians and to enthrone them in Russia. In the period before the Mongols two cases are known of such election and enthronization of Russian-born metropolitans—Hilarion in the middle of the 11th cent. (1051) and Clement a hundred years later (1147); and these were among the best bishops of the Russian Church.

In his relation to the bishops the Russian metropolitan was the elder, counsellor, and guide. He appointed the bishops, summoned them to synods, judged them in synod with the other bishops, and made arrangements concerning the Church as a whole.

The metropolitan of Russia stood in the same relation towards the grand prince as that in which the patriarch of Constantinople stood to the emperor. He was not only the protector of the Church and her interests, the supreme teacher of the faith and religion, but also the guide in many civil affairs. As he always lived near the grand prince, he naturally supported him in his struggle against the vassal princes, and thereby contributed to the strengthening of his authority and the unification of the nation. Being a Greek, he knew the Byzantine laws and customs and thus was enabled to help the grand prince in organizing the life of the Russian State. Furthermore, in accordance with the customs of the Greek Church and the 'Codes' of Princes Vladimir and Yaroslav, the metropolitan was the champion of all the oppressed, the protector of the sick, of widows and orphans, of liberated slaves or prisoners of war who had returned to their own country, and such like. But, although he held so high a place, the metropolitan remained duly conscious of the limits of his rights and obligations. Accordingly, the Russian Church never saw such conflicts between the ecclesiastical and the civil powers as the Western Church shows.

The most eminent metropolitans before the subjugation by the Mongols were St. Michael († 991), the first metropolitan of the Russian Church, who laboured zealously to spread Christianity through the land and encouraged learning, and St. Hilarion (1051–55), remarkable for his ascetic life and labours on behalf of education.

The most important event in the Russian Church during Hilarion's episcopate was the foundation in 1051 of the Pechera Lavra (monastery) at Kiev by Antony († 1073) and Theodosius († 1074). As Kiev was the cradle of Christianity in Russia, so its Pechera monastery became the mother of a large number of other monasteries and gained enormous influence on the general trend of religious life. From it the ascetic outlook spread through Russian society. From it were taken the abbots for other monasteries and bishops for the dioceses. More than fifty of its monks were raised to bishops' sees. The men whom it sent out spread abroad its piety, spirit, rule of life, and the writings of its ascetes.

To it gathered those who desired religious instruction. In it were collected the monuments of ecclesiastical literature; here, too, was begun the Russian *Chronicle*.

After the Pechera monastery there arose monasteries in other places. They were the chief points for the concentration and diffusion of piety in the land, which had indeed been converted, but was far from having cut itself loose from survivals of paganism. Outside the walls of the monastery rude passions had full play; within the monastery was quite another world, where the spirit ruled over the flesh, a world of wondrous tales of monks' ascetic exploits, of visions, of miracles, of supernatural help in the conflict with the power of devils. This explains the desire of the best Russians of the time to enter a monastery, or at any rate before death to don the habit of a monk—so strong that the Church itself very often had to restrain it. Many of the monasteries, like the Pechera Lavra, possessed landed estates. The property of such monasteries went not only to support the religious houses, but also to charitable objects. Almost all the monasteries, besides being quiet havens of asceticism, were also refuges for book learning. In them lettered men gathered and wrote their chronicles, histories, tales, and lives of saints; in them schools were founded. This gave them great importance in the community and increased the tendency of Russian society to monasticism. This tendency to monasticism and the saving of one's soul through ascetic exploits shows that during the first two centuries of its existence in Russia Christianity had made no small progress in the task of changing the old heathen society by education. Further advance in the same direction would have been natural. But in the first half of the 13th cent. Russia suffered a great catastrophe, which for long interrupted the regular development of both civil and ecclesiastical life.

2. From the Mongol invasion to the division of the Church into two metropolitan provinces (1237–1461).—In 1237–40 Russia suffered the devastating invasion of the Mongols; the population was extirpated; the churches and monasteries were ruined or desecrated; the Pechera monastery was destroyed and its monks were scattered into forests and caverns. The calamity did not, however, affect all parts of the land with equal ruin. N.E. Russia was less devastated, and, when the first terrible storm had passed, it recovered. But S. Russia was laid absolutely waste. After devastating it, the Mongols continued their nomadic life upon its borders towards the steppes and were a perpetual threat to its population. Accordingly, the people moved towards the north. The current of Russian historical life set towards the land between the rivers Oka and Volga, and there at Moscow it built up for itself a new centre for the State, to take the place of Kiev. Thither also was transferred the centre of Church life—the metropolitan see of Russia.

When the Mongols subjugated Russia, they left entirely untouched the organization of both the State and the Church. Being at the time heathens, they showed complete religious tolerance both to the adherents of various faiths among themselves and to the Russians. Although they destroyed churches and monasteries at the time of their first incursion, they were not persecutors of the Church, but rather in their subsequent dealings with it proved themselves more than well disposed. Some of the khans were actually protectors of the Church. They paid attention to the petitions of the metropolitans, freed the clergy and churches from taxation, forbade blasphemy against the Christian faith, and put no hindrance in the way of Tatai

princes adopting Christianity. If some of the Russian princes, bishops, and others died martyrs' deaths at the hands of the Mongols, it was only because, not sharing the Mongols' latitudinarianism, they found it impossible to fall in with their demand that they should perform certain superstitious rites practised at the khan's court, such as passing through the fire of purification, worshipping the images of deceased khans, and so on. Christianity itself was not attacked by the Mongols. Later, when in 1313 the Mongols adopted Islam, their attitude to the Russian Church underwent hardly any alteration.

The comparatively favourable attitude of the khans to the Russian Church was due not only to the religious tolerance of the Mongols, but also largely to the behaviour of the rulers who stood at the head of the Church during those troublous times. The most remarkable metropolitans under the Mongol domination were: St. Cyril III. (1242, 1249-81), who laboured hard for the building up of the Church and spent almost all his episcopate in journeys through his province; Maximus (1283-1305), who in 1300 transferred his abode from Kiev to the town of Vladimir on the Klyazma; St. Peter (1308-26), a zealous worker for the good of the Church, who chose as his residence what was then the unimportant town of Moscow, the principality of his friend Ioann Danilovich Kalita (1328-40), thereby contributing in no small degree to its rise. At that time S. Russia, including Kiev, fell into the power of the Lithuanian pagan prince, Gedimin (1315-41), and finally lost its first place in Church matters. This now passed to Moscow, although the metropolitans continued to style themselves 'of Kiev' and not 'of Moscow.' The next specially eminent metropolitan was St. Alexis (1354-78), who devoted himself to making successful petitions to the khan on behalf of the Russian land and Church, contributed to the rise of the prince of Moscow, laboured for the good order of ecclesiastical and monastic life, founded monasteries, worked at translating the NT from Greek into Slavic, and wrote pastoral epistles.

After the death of the metropolitan Alexis great disorder arose in the Church, due to certain men who sought to gain the metropolitan see by dishonest means. The disorder continued for eleven years till the time of the grand prince Vasili Dmitrievich (1389-1425), who accepted Cyprian (1381-82, 1390-1406) as metropolitan of Kiev. The time during which Cyprian ruled the Church passed peaceably. He gave zealous attention to religious education and worked hard to eliminate certain abuses which had crept into the Church services. In his time also there was a break in the long continued attempts on the part of Lithuania to have S.W. Russia erected into a province with a special metropolitan. But after the death of Cyprian division again took place in the Russian Church. Vitovt, grand prince of Lithuania from 1392 to 1430, refused to accept the newly appointed metropolitan Photius (1408-33) and insisted on the election of a second metropolitan for the Lithuanian principality. Gregory Tsamblak (1415-19), a nephew of Cyprian, was elected, a learned man, and zealous for orthodoxy. When Gregory died, Vitovt acquiesced in Photius, and so the unity of the Russian metropolitan province was re-established. But it did not last long. The successor of Photius was St. Jonas (1448-61). He was elected by a synod of Russian bishops in 1434, and set out for Constantinople to be installed. But his installation was long delayed. Half-way through 1436, not long before Jonas arrived, there had been installed as metropolitan of Russia a certain Greek named Isidore, known for his attempt to introduce the Union of Florence into the Russian

Church. Jonas was promised the succession to the metropolitan see only after the death of Isidore. Isidore, on his return from the Council of Florence, met with a most hostile reception in Moscow in 1441, and in the same year fled to Rome. But, even after this, Jonas remained only a bishop and was not enthroned as metropolitan till 1448.

The enthronement of Jonas as metropolitan at the wish of the grand prince Vasili Vasilievich (1425-62) was performed at Moscow by a synod of Russian bishops. This event was of great importance as a long step on the road to the Russian Church's gaining complete independence of the patriarch of Constantinople. From the time of Jonas and his successor Theodosius (1461-64) the Russian metropolitan province was entirely independent, but even after this it did not break off its connexion with its Mother-Church of Greece. When, in 1453, Constantinople was taken by the Turks, Jonas comforted the patriarch Gennadius by sending him presents, and asked for his blessing. It was at this time that the Russian Church is reckoned to have received the right of appointing its metropolitan independently of the Constantinopolitan patriarch.

The final partition of the Church into two provinces took place in the time of Jonas. Isidore, who had fled to Rome, would not give up his pretensions to the Russian Church and wished to take away from Jonas at least the south-western dioceses which were under the rule of the Polish king Kazimir (1440-92), a zealous Catholic. His attempts were not successful, it is true; but through his influence the Constantinopolitan patriarch, Gregory Mammias, who had been deprived of his see for his Latin tendencies and was living in Rome, in 1458 consecrated as the metropolitan of Lithuania a pupil of Isidore, by name Gregory († 1472). After this the council of Russian bishops held in Moscow in 1459 acknowledged the final division of the Russian Church into two provinces—Moscow and Kiev.

3. From the division into two provinces to the establishment of the Holy Synod (1461-1721).—(a) *The province of Moscow.*—In the middle of the 15th cent. Russia was divided into two political aggregations—the eastern, under the rule of the Moscow autocrats, and the western, under the Lithuanian-Polish government.

The Moscow province, under the protection of an Orthodox government, advanced both spiritually and in externals. With regard to spiritual things, it successfully overcame the heresy of the Judaizers which troubled it during the latter half of the 15th cent., and in the 16th cent. took up the important task of correcting various abuses which had crept into the divine service and into Church life as a whole. Externally it continued to extend its boundaries and to adorn itself with outward magnificence, and at the end of the 16th cent. it rose to the dignity of an independent patriarchate.

The Judaizing heresy, besides its bad consequences, had its good side. The struggle with the heresy raised various questions as to the abuses at that time rife in the Church and occasioned attempts to remove them. These abuses dated from early times, being due to insufficient education, but they had greatly increased owing to the disorders of the feudal period and the weight of the Mongol yoke. Side by side with their Christian rites the early Russians had retained various pagan usages: together with the holy books they used to read sundry 'rejected' books full of apocryphal stories and superstitions; many of them visited wizards for divination and took part in pagan festivals; the carelessness and ignorance of scribes had introduced into the Scriptures and liturgical books many false readings and doubtful expressions with

ambiguous or even heretical meanings; into the rites of the Church there had crept many innovations unknown to the Greek Church, such as the singing of 'Alleluia' twice (instead of thrice), the circulation of processions 'with the sun' (from east to west), and the use of only two fingers in making the sign of the Cross. The rectification of these abuses had long been aimed at by the metropolitans Hilarion, Cyril III., Peter, Alexis, Jonas, and others. For the same purpose, at the beginning of the 16th cent., there was summoned to Moscow from the Vatopedi monastery on Mount Athos Maximus the Greek († 1556), a pious and learned monk, who worked hard on the translation of the Holy Scriptures from Greek into Slavic and the correction of the Russian liturgical books. Later, in 1551, there was summoned to Moscow the so-called Stoglav ('Hundred Chapter') Council, and from its time care was devoted to the setting right of various faults in the religious and ecclesiastical life of Russian society, not only of individuals, but of the whole Church. An event of great importance for this period was the foundation by Sergius († 1391) of the Trinity monastery (Troitse-Sergieva Lavra) near Moscow. This had the same significance for N. Russia as the Pechera at Kiev had for the South. The other chief monasteries of the time were Solovetsk, Volokolamsk, and that on the river Sora; these were the refuges of asceticism and of piety and the nurseries of Christian education for all Russia. The Russian monasticism of the time showed two special tendencies—one practical and political, under the headship of Joseph of Volok († 1515), who defended the holding of landed property by monasteries; the other critical and ascetic, led by Nilus Sorski († 1508)—so called after the cell which he founded on the river Sora—who refused all communion with the world. The contest between these two points of view kept cropping up in connexion with all sorts of questions and found its way into all departments of the Church and community. After various discussions the former school triumphed, and in 1503 it was actually approved by a synod at Moscow. In 1480 the grand prince Ivan III. Vasilievich (1462-1505) threw off the Tatar yoke; more and more of the Russian land was united under the power of the Moscow princes, and in 1547 they assumed the title of tsar. All this combined to strengthen their power not only in civil but also in ecclesiastical affairs. In their use of this power some of the Moscow tsars, especially Ivan IV. Vasilievich (the Terrible, 1533-84), reached the limits of despotism. In the second half of the 16th cent. the Muscovite State entered upon an aggressive movement towards the east and subdued the kingdoms of Kazan (1552) and Astrakhan (1556). These conquests had a most important effect upon the Church, as they opened the way to the preaching of Christianity among the Musalmān and pagan tribes inhabiting those kingdoms. The most remarkable men produced by the Church at this time were the metropolitan Macarius (1542-63), who compiled the famous *Menaea*, St. Philip (1566-69), who fearlessly rebuked Ivan the Terrible, and Guri (1555-63), the first archbishop of Kazan, who illumined that part of the country with the light of the Christian faith.

Since the time of the metropolitan Jonas the Russian Church had in practice lived its own life, independently of the Greek patriarch; the only evidence of its tie with the Greek Church was the aid which it rendered to the Orthodox East when it was suffering under the rule of the Turks. The Russian metropolitan, however, continued to be nominally dependent on the patriarch. At the end of the 16th cent. even this seemed out of place, since Russia had become a mighty power, while the patriarch was a subject of the Turkish sultan.

Tsar Theodore Ivanovich (1584-98) accordingly formed a desire to establish for Moscow a patriarchal see of its own. Jeremy II. (1572-79, 1580-84, 1586-95), patriarch of Constantinople, who had come to Moscow in 1588, fulfilled Theodore Ivanovich's desire, and in January 1589 consecrated as patriarch the then metropolitan of Moscow, Job (1589-1605). Two years later (1591) the Eastern patriarchs sent Job an instrument of confirmation and gave him precedence next after the patriarch of Jerusalem.

The establishment of the patriarchate produced no essential changes in the rights of the ruling bishop of the Russian Church. The difference came merely to this, that, whereas he had long been governing his Church independently and enjoying within it rights identical with those of the ruling bishops of the Eastern Church, he was now put on a level with them in his title and hierarchic precedence. In his administrative entourage the patriarch employed more pomp and magnificence than before.

The raising of the ruling bishop of the Church to the rank of patriarch was only in accordance with the Church's dignity and magnificence. Unfortunately the tenure of the first two patriarchs coincided with a time of hard trials for the State. This prevented them from leading the Church along the normal road of gradual advance. On the other hand, the patriarchs at that time saved Muscovite Russia from what seemed to be inevitable destruction. In 1598 Tsar Theodore Ivanovich died without issue. His death cut off the ancient Russian dynasty of princes and tsars of the house of Rurik, and there followed the so-called 'Troubles.' The 'Troubles' were specially rife after the appearance of the first pretender, pseudo-Demetrius I. († 1606), who was a tool of the Poles, Jesuits, and Roman Catholic propaganda, and therefore as serious a menace to the Orthodox Church as to the State; he threatened both the political independence of Muscovite Russia and Orthodoxy. Having accepted Roman Catholicism himself, pseudo-Demetrius energetically prepared, with the help of the Poles, to bring Russia over to Latinism.

It was the patriarch Job who came forward in this anxious time as the champion of the independence of the Russian State and the inviolability of pristine Russian Orthodoxy. With fearless courage Job defied the usurper, whose partisans, when they took Moscow in 1605, unfrocked him and banished him to the Staritski monastery, where he died in 1607.

After a certain Ignatius, a Greek inclined to Roman Catholicism (1605-06, † 1640), had occupied the patriarchal throne for a short time, Hermogenes (Germogen) became patriarch (1606-12). During the 'Troublous Times' he stood fast for Orthodoxy and was an 'unshakable pillar' of Church and State. When, after the deposition of Vasilii Ivanovich Shuyski (1606-10), a mission was sent to the Polish king Sigismund III. (1587-1632) to invite his son Wladyslaw to be tsar, Hermogenes insisted that in all negotiations concerning Wladyslaw the envoys should lay down as an indispensable condition that he should adopt the Orthodox faith. Hermogenes also took an active part in raising the so-called first land-levy (1610-11) to oppose the Poles. For this some of the Moscow nobles, partisans of the Poles, shut him into a cold, damp cellar in the Chudov monastery (in the Moscow Kremlin) and he died of starvation. In 1913, in view of his martyr-death and of the miraculous healings which had taken place through the intermediation of his prayers, Hermogenes was canonized by the Russian Church under the name of Ermogen.

The inviolability of Orthodoxy and the independence of the State were also championed by other representatives of the Church—metropolitans, bishops, and ordinary priests. The religious and patriotic achievements of the monasteries, especially the Troitse-Sergieva Lavra, were also notable at this time. The latter was besieged for sixteen months from September 1608 by a Polish army of 30,000 men. The defenders in this famous siege numbered in all only 2300, some of whom scarcely knew the use of arms.

The first patriarch after the 'Troublous Times' was Philaret Nikitich (1619-33), the father of the newly elected tsar Michael Feodorovich (1613-45). It was during his tenure of the patriarchate that the patriarchal power attained its highest development. The patriarch now shared with his son the title of 'Great Lord' (*Gosudar*). All acts of the supreme power ran in the name of both 'Great Lords': to both reports were addressed; to both foreign ambassadors were accredited. The Church attained complete independence in its affairs. Under Philaret the ecclesiastical courts had respect for no persons, however mighty. In 1625 the patriarch obtained from the tsar the grant of a charter under which all the clergy of his diocese, the monasteries and churches, with their servants and peasants, were placed under the civil jurisdiction of the patriarch. At the same time the patriarch arrayed himself in imperial state and thereby added majesty to his office. Philaret also devoted no little attention to the organization of the Church.

After Philaret the patriarchal throne was occupied by Joasaph I. (1634-40) and Joseph (1642-52). Under them the patriarchal power noticeably weakened, but under the patriarch Nikon (1652-66) it shone forth once more in all its brilliance and dignity. Unbounded friendship united Tsar Alexis Mikhailovich (1645-76) and the patriarch Nikon through almost all the time that the latter ruled the Church. Without the patriarch no political decision was made; during the tsar's absence from Moscow at the Polish wars (1654-55) the patriarch took personal direction of all the affairs of the State. But the high position to which Nikon had attained and certain peculiarities of his character brought about the formation of a strong party opposed to him, consisting of nobles and many others, mostly persons attached to old ways. The numerous mistakes in the Russian liturgical books and the various abuses in ritual had already been clearly pointed out by Maximus the Greek, and also by the Stoglav Council. All admitted the necessity for correction, and throughout the whole period, from the Stoglav Council to Nikon, there had been a series of attempts at emendation—with little success, inasmuch as the actual method of emendation had been faulty. The correction had been carried out according to old Russian texts, themselves erroneous, and rarely by comparison with the Greek originals. Under Nikon the correction of the books was carried out by experts working with Greek and Slavic MSS, and constituted an epoch in the history of the regulation of Church order in Russia. Later times had little left to do in the way of emending either the text of the service-books or the ritual ordering of the services. But this great historic achievement of Nikon aroused the bitter hatred of his contemporaries. Consequently, when in 1658 a difference arose between Nikon and Tsar Alexis Mikhailovich, he left the patriarchal throne and retired to the Monastery of the Resurrection. Meanwhile the movement against Nikon's innovations spread and embraced many people in all ranks of society—from peasants to influential noblemen. To restrain false teachers and to

prevent the further spread of false teaching, Alexis Mikhailovich summoned in 1666 the so-called 'Great Council' (1666-67) of Russian bishops with the participation of the patriarchs of Alexandria and Antioch. This Council began by considering the case of the patriarch Nikon, and, after examining various charges against him, condemned him and deprived him of the patriarchate. Nevertheless, when Nikon died in 1681, Alexis Mikhailovich ordered him to be buried with patriarchal rites, and within a year an instrument was received from the Eastern patriarchs freeing him from the Council's condemnation and restoring him to the rank of patriarch. The Council went on to examine the corrections made in the service-books and ritual during Nikon's patriarchate, entirely approved them, and condemned their chief opponents, certain of whom made public repentance and received absolution, while the unrepentant were anathematized and banished to distant exile. The chief schismatic teachers, Avvakum, Lazar, and Theodore, were later, in 1681, burnt upon a pyre. So appeared in the Russian Church the schism of the Old Believers, who subsequently divided into two sects, the Popovtsy (with priests) and the Bezpopovtsy (priestless), and these again split into a large number of sects and schools. Taking its rise from adherence to the letter of the Church service-book and from faith in the saving power of the rite in itself without any understanding of its sense and meaning, the schism is in its essence faith in ritual, jealously guarding from changes and corrections all that is 'ancient' in the Church books and rites. Of the particular points upon which the tenets of the Old Believers differ from those of the Orthodox the most important are: (1) services must be conducted according to the old books published before the time of Nikon; (2) the eighth article of the Creed must read: 'And in the Holy Ghost the *true* Lord and Giver of Life'; (3) 'Alleluia' must be said twice and not thrice; (4) Church processions must go with the sun, not against it; (5) the sign of the cross must be made with two, not three, fingers; (6) the only cross to be honoured is the eight-pointed (*i.e.* the Russian cross, in which the title and the slanting foot-rest have become extra cross pieces); (7) the name of Jesus Christ must be written and pronounced *Isus*, and not *Iesus*; (8) the liturgy must be celebrated with seven *prophoræ* instead of five.

After its condemnation by the Church the schism at once began to be persecuted by the ecclesiastical and civil governments and took up a hostile position towards both Church and State. Hiding from persecution, the Old Believers filled all the forests of inner Russia with their secret cells. The spread of the sect was still further helped by the strict measures taken against it. Only in 1905 did the sectaries gain the right to religious freedom.¹

(b) *The metropolitan province of Kiev.*—Whilst the province of Moscow enjoyed political independence, the province of Kiev was under the oppression of a Roman Catholic power.

The Polish-Lithuanian Government found it inconvenient that its orthodox subjects should gravitate towards Moscow, which had become the special centre of political life in N. Russia; and, even before it had become Roman Catholic, it had striven energetically towards an ecclesiastical separation from Moscow. But from the time of the grand prince Yagello (1377-1386-1434), during which Lithuania and Poland had been united under a Roman Catholic Government (1386), the position of Orthodoxy in those parts became yet more disadvantageous. In spite of the fact that the greater part of the Lithuanian principality

¹ Cf. art. SECTS (Russian).

consisted of lands inhabited by Orthodox Russians, and that all the notables of the Russian regions held to the Orthodox confession; Yagello made several attempts to spread Roman Catholicism in Lithuania. These attempts completely failed, and even led to Lithuania's absolutely breaking away from Poland under a separate prince, Vitovt (1392-1430); nevertheless they went on with more or less energy according to circumstances. The prudent Vitovt, understanding how predominantly important the Orthodox population was for the Lithuanian State, did not persecute it, but directed all his efforts towards cutting off the Orthodox Church in Lithuania from the province of Moscow—a project realized in 1459 under Yagello's son, Kazimir (1440-92). The separation of S.W. Russia from the power of the metropolitans of Moscow was a definite step towards the establishment of religious union between the divers confessions of the Lithuanian population. After this separation the Orthodox Church in the Polish-Lithuanian State found itself in a most dangerous position—isolated, deprived of all outside support, face to face with strong Catholicism. Kazimir's successor, Alexander, Prince of Lithuania and king of Poland (1492-1506), under the influence of the Catholic clergy, oppressed the Orthodox in every way. But the persecution cost Lithuania very dear. Many notable Orthodox families and even whole towns began to go over and become subject to Moscow. Alexander's successor, Sigismund (1506-48), treated the Orthodox with more tolerance. Profiting by this, the Orthodox bishops of Lithuania held a council at Vilna in 1509, at which were promulgated certain canons, intended to restrict arbitrary lay interference in the affairs of the Church. The next king, Sigismund II. (1548-72), under the influence of a Protestant chancellor of Lithuania, Nicolas Radziwill († 1588), also refrained from persecuting the Orthodox for their faith; but, being in need of money, he plundered the Orthodox churches and imposed excessive taxes upon the people. Under this king also the first forerunners of new misfortunes for the Orthodox Church appeared—the Union of Lublin (1569), which joined the two States of Lithuania and Poland, the coming of the Jesuits, and, soon after, the ecclesiastical Union of Brest (1596).

In spite of the wiles of the Jesuits and the pressure of the Roman Catholic Government, the Orthodox Church in its own districts of Poland and Lithuania held fast to its creed. In the struggle with its foes it was actively supported by the Eastern patriarchs, by the best representatives of Russian society of the time, and by the Orthodox Church brotherhoods. The patriarchs, either in person or through their exarchs, righted abuses in the Church, appointed metropolitans and bishops, and blessed and encouraged the champions of Orthodoxy. The best representatives of Russian society, such as Princes Andrew Kurbski († 1583) and Constantine Ostrozhski († 1608), and the Orthodox brotherhoods, especially those of Lemberg and Vilna, took part in electing the clergy, looked after Church courts and government, helped the clergy to root out disorders in the Church, defended its interests with the Government, set up schools, printing-presses, and almshouses, and collected funds for the maintenance of the churches and clergy. Unfortunately these activities, advantageous though they were to the Church, found no favour with certain of the Orthodox bishops, as they encroached upon their independence. Hence ensued frequent collisions between the bishops and the representative laymen, and these the Jesuits were quick to use for their own ends. At their instigation in 1591 certain of the south-western

bishops secretly laid a petition before King Sigismund III., asking that the South-Western Church should become subject to the papal see as a Uniate Church. Next, in 1595, Bishops Cyril Terlecki († 1607) and Hypatius Pociej († 1613) set out for Rome, where Pope Clement VIII. (1592-1605) met them with great joy, and with solemn ceremony declared the Union of the South-Western Russian Church with the Roman Church. In 1596 there was held at Brest-Litovsk a council of local bishops to which the patriarch of Constantinople sent exarchs, Nicephorus († 1596) and then Cyril Lucaris, afterwards patriarch (1612-38, with interruptions). The purpose was to promulgate the completion of the Union, but strong opposition to it arose among the Orthodox. From the very beginning the council was divided. The Orthodox, as they had no church at their command, met in a private house. They excommunicated both the metropolitan Michael Rahoza († 1599) and the bishops who had joined the Union. The Uniates answered in like manner, and afterwards executed a deed of submission to Rome. So the Union was introduced into S.W. Russia. The bishops who had remained faithful to Orthodoxy were deprived of their sees; the priests were driven out of their parishes; the brotherhoods were declared assemblies of insurgents; townsmen were restricted in the exercise of trade and handicraft; peasants were oppressed with services to their lords and other dues; the churches were leased to Jews. The effect of these restrictions was to lessen the number of Orthodox bishops, and the Orthodox were compelled willy-nilly to have recourse to Uniate priests for the performance of occasional offices. But the Uniates themselves were in no better case. They were looked down upon by both Roman Catholics and Orthodox. So matters stood under Sigismund III. His successor, Wladyslaw IV. (1632-48), though well disposed to the Orthodox, could not help them, as he had not the power to make headway against the turbulence of the nobles and the fanaticism of the Roman Catholic clergy.

When it became clear that the State of Poland and Lithuania either would not or could not satisfy the just aspirations of its Orthodox populations, the defence of their interests was taken up by the Cossacks of that region. One after another came Cossack insurrections. These were unsuccessful and merely served as new excuses for persecuting the Orthodox; but their failure made the champions of Orthodoxy turn to Moscow for defence. In 1654 Little Russia, under the hetman Bohdan Khmelnytsky († 1651), joined the Muscovite power. In 1657 the patriarch Joachim († 1690) appointed Prince Gideon Chetvertinsky († 1690) metropolitan of Kiev, and in 1687 the patriarch of Constantinople, in conjunction with the other patriarchs, recognized the metropolitan of Kiev as under the patriarch of Moscow. From that time the metropolitans of Kiev became dependent on the All-Russian patriarch, and accordingly the W. Russian Church, torn away by Vitovt from alliance with Moscow, was once more united to the All-Russian Church. But the position of the Orthodox who were left in the districts of Poland-Lithuania was, as before, exceedingly wretched. Suffering under the yoke of Roman Catholicism, they tended to join either the Uniates or the Roman Catholics, and it was only later, when Russian influence was firmly established in those parts, that they began to return to the bosom of the Orthodox Church.

Among the men who were most active in promoting Orthodoxy and religious instruction in the S.W. province mention should be made of the metropolitan Peter Mohila (1633-46), who rendered great services to the Orthodox Church. He championed both Orthodox persons and the rights of

Church institutions many times before the Polish-Lithuanian Government; he laboured for the restoration of monuments of ecclesiastical antiquity, richly adorned the Pechera Lavra, and restored from almost complete ruin the cathedral of St. Sophia at Kiev and other churches recovered from the hands of the Uniates. He also wrote and published works in defence of Orthodoxy, corrected the service-books, and laboured to spread education in the Orthodox Church. His most important educational work was his remodelling of the Clerical Academy at Kiev (on the model of a Jesuit college) and his improvement of the instruction given in it. From that time dates a special theological tendency in the Kiev Academy, the mark of which was the influence of Roman Catholicism and the Scholastic philosophy.

4. From the foundation of the Holy Synod to the present time (1721-1917).—Among the most important reforms due to Peter the Great (1682-1725), the transformer of Russia, is the change in the supreme administration of the Church. In his task of organizing the life of the State and the community upon new principles, Peter the Great made straight for his aim without letting anything stand in his way. The administrative organization of ecclesiastical life, as it had existed up to his time, he regarded as producing conditions unfavourable to his transformations. On the one hand, he recognized that the Church and its clergy had a great influence on every part of the people's life; on the other hand, he saw that among the clergy his reforms met with little sympathy. Starting from these premisses, he came to the conclusion that, to secure success, he must change the form of the supreme administration of the Church and for the rule of one man substitute that of a 'college,' or board. Accordingly, when in 1700 the patriarch Adrian (1690-1700) died, Peter refrained from nominating a successor to him and assigned his duties to the metropolitan of Ryazan, Stephen Yavorski († 1722), with the title of *locum tenens* of the patriarchal see. This manner of administering the Church continued until 1721, when the ecclesiastical administration came up for reform. In 1718 Peter the Great had promulgated an edict for the foundation of a 'clerical (spiritual) college,' and entrusted to Theophan Prokopovich, bishop of Pskov († 1736), the work of drawing up a scheme for its governance, the so-called *Clerical Regulations* (*Dukhóvny Reglámént*). In 1720 the *Regulations* were ready, and in 1721 the Clerical College itself was solemnly opened under the name of the 'Most Holy Governing Synod.' In 1723 the Eastern patriarchs sent a deed of confirmation to the synod, and in it they named it their 'Brother in Christ,' and allowed it the rights and authority of a patriarch.

By the *Clerical Regulations* the synod took its place in the general system of higher administration; its members took an oath of allegiance to the emperor and bound themselves to observe all the interests of the State. The synod was at first composed as follows: Stephen Yavorski; two vice-presidents, Theodosius Yanovski (archbishop of Novgorod, deprived of his see in 1725) and Theophan Prokopovich; four councillors; and four assessors. Besides the representatives of the superior clergy there were representatives of the monasteries and of the secular clergy. In its rights it was held equal to the senate and in the same manner was directly subject to the emperor, represented in the synod by the chief procurator (*Ober-Procuror*), a layman, who watched the progress of business, and held up unsatisfactory decisions, reporting upon them to the emperor. The synod was given the right to promulgate new laws touching the Orthodox Church and its members. It was also

its duty to see to the purity of the faith and the due celebration of public worship, to root out superstition, heresies, and schisms, to test reports as to saints (whom it was proposed to canonize), to certify miraculous ikons and relics, to examine books on religious subjects, to survey the building of churches and monasteries, and to care for the religious education of the people and the material support of the churches. The composition of the synod, its rights and duties, as laid down in the *Clerical Regulations*, have remained in the main unchanged up to the time of writing.

After the reign of Peter the position of the Russian Church throughout the 18th cent. was very difficult, especially during the reign of the empress Anna Ioannovna (1730-41), when great influence over Russia was gained by the Germans. Under Catherine II. (1762-96) a secularization of Church property took place (1764). It was opposed by Arsenius Matseevich, metropolitan of Rostov, who died in the fortress of Revel (1772). At the beginning of the 19th cent., under Alexander I. (1801-25), a mystic movement spread in Russia and was supported by the procurator of the Holy Synod, Prince Golitsyn († 1843). Under the influence of this movement the Russian Bible Society was founded in 1812. But by the end of Alexander's reign the mystic tendency gave place to a reaction.

The most important facts of the synod period in the history of the Russian Church have been the establishment of clerical and parish schools, the foundation of missions and of the Edinoverie ('One Faith,' a compromise to bring back the Old Believers), the reconciliation of the Uniates, the restoration of the activity of Church brotherhoods, and the foundation of church and parish wardenships (*popechitelstva*). The necessity of educating the clergy became evident from the time of Peter the Great's reforms. In his need of enlightened bishops Peter first of all directed his attention to the Moscow Academy, which had formerly been the only source of clerical education for the north of Russia, and reorganized it after the pattern of the Kiev Academy, giving it a Latin instead of its former Græco-Slavic tendency. He also improved the financial position of the Kiev Academy. Next he required the bishops to establish, in connexion with their sees, clerical schools with primary and secondary courses, also organized with a Latin tendency. On these lines clerical schools were established all through the 18th cent., and organized after the pattern of the S. Russian schools; and, in spite of lack of funds, they increased in number. At the end of the century there were in Russia three clerical academies (Kiev, Moscow, and Petrograd), 36 seminaries, and 115 clerical schools. From these there went forth a succession of remarkable bishops, ecclesiastics, and writers. In 1808 at the command of Alexander I. the clerical educational institutions were recast and divided into four grades: (1) academies for higher education; (2) seminaries (one in each diocese) for secondary education; (3) district schools; and (4) parish schools for primary education, opened in towns and villages. In 1814 new regulations for the clerical schools were promulgated, according to which they were organized as schools for the clerical caste, with courses of general and of specialized instruction. In 1867-69 and in 1884 the regulations underwent certain changes dictated by experience; these were directed towards improving the material position and regularizing the organization of the schools. At present these institutions are governed by the educational committee of the Holy Synod, established in 1867. Since 1843 schools have been opened for girls of the clerical caste. In 1884 a scheme for church schools in parishes was started,

for the education of the people in the Orthodox faith. These are divided into primary schools (for reading and writing, one-class and two-class schools, and Sunday schools), which give elementary instruction, and teachers' schools (secondary and training schools), which train teachers for the primary schools. These are all governed by the school council of the Holy Synod, established in 1885.

Until the 18th cent. the missionary activity of the Church corresponded closely with the expansion of the State. Its central and northern provinces had been illumined by the light of Christ's faith in the first centuries after the formation of the State; into its distant provinces—into the regions of the Caucasus and Siberia—Christianity penetrated later. Before the time of Peter the Great missionary activity lacked adequate financial support and had no regular organization. Consequently it could not have any very great success. On the non-Russian fringes of the Russian State the number of Christians was insignificant compared with that of the Muhammadans and pagans. But since Peter's time the spread of the gospel among the tribes has been more rapid. Peter himself, though he believed in toleration, supplied funds for the support of missionaries and encouraged converts by various civil privileges. Missionary work was promoted by the empresses Elisabeth (1741-61) and Catherine II., and by the succeeding emperors. The work of spreading Christianity among the non-Russian tribes was specially advanced in the 18th cent. by Tychon, metropolitan of Kazan († 1724), Philotheus Leshchinski, metropolitan of Tobolsk († 1727), St. Innocent, bishop of Irkutsk († 1731), and in the 19th cent. by Macarius Glukharev († 1847) and Innocent Veniaminov († 1879). Since 1870 this work has been the care of the Orthodox Missionary Society, which manages nine Siberian missions. In 1913 was founded a mission council of the Holy Synod, to act as the central authority for the missionary activity of the Church. The Clerical Academy at Kazan opened a separate department in 1854 for the special preparation of missionaries. From Siberia the preaching of the gospel made its way to China and Japan. In Japan the work of the mission was established on firm foundations by the labours of Nicolas, the remarkable archbishop of Japan († 1912). There is also an Orthodox Russian mission in N. America.

The Edinoverie ('One Faith') was established in the Church in order to combat the schism. It first began in 1783, when certain schismatics living about Starodub in the government of Chernigov sent a petition to the synod expressing their readiness to join the Orthodox Russian Church on the following conditions: (1) that the synod should raise the curse laid by the 'Great Synod' of Moscow (1667) upon the use of two fingers in the sign of the cross and upon the other schismatic customs; (2) that the synod should give them a bishop who should consecrate priests after the ancient rite; (3) that both this bishop and the priests should celebrate the services according to the old books; (4) that the synod should grant them some holy oil (*myro*); (5) that they should not be forced to shave their beards or wear European clothes. The desires expressed by the schismatics were recognized by the synod as permissible, except the assigning to them of a special bishop. In 1800 the schismatics who entered into communion with the Orthodox Church on the above conditions received the name of Edinovertsy.

The reconciliation of the Uniates to the Orthodox Church began in the latter part of the 18th cent. and was completed only at the end of the 19th. After the establishment of the Union at the

Council of Brest-Litovsk (1596) the position of Orthodoxy in the west of Russia had become very difficult, and in course of time the Orthodox Russians were forced to join the Uniates and the Uniates to approximate more and more to the Roman Catholics. By the middle of the 18th cent. of the four Orthodox Russian dioceses in W. Russia only one—that of Mohilev, or White Russia—was left. During this period of stress the Orthodox Russians of the south-west found an active defender in George Konisski († 1795), bishop of White Russia, who impelled the empress Catherine II. to come forward as the protector of the Orthodox population of Poland, among whom a movement against the Union arose. Many of the Uniates returned to the bosom of the Orthodox Church. When the three partitions of Poland had successively taken place (1772, 1793, 1795), about two million Uniates, freed from Polish rule, returned to Orthodoxy (1794-96) and made up what is now the diocese of Minsk. A second mass movement of W. Russian Uniates joining the Orthodox Church took place in 1839; from that time the only Uniates left were in the Lublin and Siedlee governments of Poland; in 1875 these finally came over to Orthodoxy.

The Orthodox Church brotherhoods, which existed in ancient Russia, and afterwards, in the 15th and 16th centuries, were so specially important in S.W. Russia, had in the 18th cent. fallen into utter decay, and this continued till the middle of the 19th century. Only in 1864, when 'fundamental rules for the establishment of Orthodox Church brotherhoods' were laid down, did they begin to be restored and to spread throughout Russia. At the present time they exist in almost all dioceses. In the same year, in order to improve the organization of Church life in each parish, a new institution was established, that of church and parish wardenships (*popechitelstva*), which now exist in connexion with most churches.

In the last two centuries, as in earlier times, the Russian Church has produced a line of witnesses to faith and piety, who have been numbered in the canon of the holy saints of God. Such are St. Theodosius, archbishop of Chernigov († 1696); Pitirim, bishop of Tambov († 1698); Mitrophan, bishop of Voronezh († 1703); Demetrius, metropolitan of Rostov († 1709); Ioann Maximovich, metropolitan of Tobolsk († 1715); Innocent, bishop of Irkutsk († 1731); Ioasaph, bishop of Belgorod († 1754); Tychon, bishop of Voronezh († 1783); Seraphim of Sarov († 1833). In the spheres of ecclesiastical activity and religious education during the 18th and 19th centuries distinguished names are: Stephen Yavorski, metropolitan of Ryazan († 1722), the first president of the Holy Synod; Theophan Prokopovich, archbishop of Novgorod († 1736); Plato Levshin, metropolitan of Moscow († 1812); Eugene Bolkhovitinov, metropolitan of Kiev († 1837); Innocent, archbishop of Kherson († 1867); Philaret Gumilevski, archbishop of Chernigov († 1866); Philaret Drosdov, metropolitan of Moscow († 1867); Macarius Bulgakov, metropolitan of Moscow († 1882); Silvester, bishop of Kanev (1908). In religious education a high place belongs to B. Bolotov († 1900), V. Klyuchevski († 1911), E. Golubinski († 1912), N. Glubokovski, and others. The political reforms which took place in the Russian Empire in 1905 had also their effect upon Church life. The interests of the Orthodox Church were most nearly affected by the decree of religious tolerance issued in that year. By it subjects of the Russian Empire were granted the right freely to go over from Orthodoxy to other confessions. As a result, under the influence of Roman Catholic and Protestant propaganda, especially in the western provinces, there fell

away from the Orthodox Church several hundred thousand members. At the same time the question arose of the necessity of reforming the organization of the Russian Church and of summoning a council of the whole Church with that purpose. In order to do the preliminary work, a special 'preconciliatory department' (*Prisúlstvie*) was appointed, afterwards changed into a 'preconciliatory consultation' (*Sovéshchánie*), and is still continuing its labours. In connexion with this consultation there must be mentioned as a reform in the Church a command given by the emperor Nicolas II. in 1916 to the effect that, when the procurator of the synod reports to the emperor on affairs touching the internal organization of Church life and the essence of Church government, the reports should be made in the presence of the senior member of the Holy Synod in order that each point should be duly considered from the point of view of canon law.

[It is too soon (Dec. 1917) to see what will be the effect of the Russian revolution upon the Church. There is little doubt that its special privileges will be taken away, and it will be disestablished. Also the Church and monastery lands will be taken by the State and granted to peasants; it is, however, intended that compensation be paid.]

A council of the whole Church held in Moscow began on 3rd Sept. 1917. Elections had been held in June and July. All adults over 25 years of age took part in these; each parish elected one priest and four laymen to the deanery synod; each deanery sent two priests and three laymen to the diocesan convocation; each diocese sent two priests and three laymen to the council, making 320 in all. Metropolitans and bishops (64) sat *ex officio*. There were also nine representatives of the autocephalous churches of Japan, America, and Georgia (though the last is said to have thrown off its dependence on the Russian Church and refused obedience to the Russian exarch), sixteen from monasteries and academic bodies, ten from the Duma. The office of the procurator of the Holy Synod was abolished, but the synod was to be retained until the meeting of the Constituent Assembly of the Russian State. On 1st Nov. the council voted the revival of the patriarchate, and Tychon was elected. (See H. J. Fynes-Clinton, *Eng. Ch. Rev.* ix. [1918] 65.) E. H. MINNS.]

II. STATISTICS. — At the present time the Orthodox Russian Church reckons its members at 100,000,000 (98,534,800, according to the procurator's report for 1913), and in 1914 there were converted to Orthodoxy 18,966 persons, whilst there fell away from Orthodoxy 10,638.

At the head of the Church stands the Most Holy Governing Synod, whose numbers vary from time to time between eight and ten metropolitans, archbishops, bishops, and proto-presbyters. The Church is divided into 64 dioceses, governed by bishops with the help of clerical consistories. The boundaries of the dioceses mostly coincide with those of the governments or provinces. Besides these there are four mission-dioceses outside the empire — Aleutian Islands, Japan, Peking, and Urumia. Of the dioceses three bear the title of metropolitan (Petrograd, Moscow, and Kiev), one that of exarch (Georgia), the rest that of archbishop and bishop; the holders of the last two titles are not constant in number. A special point in the organization of the Georgian exarchate is the fact that to the exarch are subordinated three diocesan bishops, so that he really has the position of a metropolitan in the Russian Church. In the more extensive dioceses there are suffragan bishops (*vicarii*). In 1915 the Russian Church had 3 metropolitans, 26 archbishops, 40 diocesan bishops, 80 suffragans, and 20 retired bishops.

In 1914 there were 54,174 churches (besides military chapels); of these 40,746 were parish churches; in addition there were 25,593 chapels and oratories. Parishes to the number of 19,718 had wardenships (*popéchtel'stva*), with a total budget of 4,894,458 rubles (£500,000). In the different dioceses there were 711 brotherhoods. The churches possessed 110,307,793 rubles of capital; the expenditure on various needs of the Church was 40,438,134 rubles; contributions made to the Church for charitable and educational objects amounted to 261,209 rubles.

The secular clergy numbered 3246 arch-priests (*protoieréi*), 47,859 priests, 15,035 deacons, and 46,489 psalm-singers. The staffs of the churches possessed a capital of 63,158,366 rubles. The clergy held 2,075,098 *desyatins* (5,400,000 acres) of land, with a rental of 13,000,000 rubles. The funds for supporting the clergy consist of fees, rent of glebe, interest on invested capital, and an annual grant from the State amounting to 54,000,000 rubles, made to about 30,000 parishes to the extent of between 100 and 300 rubles to each.

There were 550 men's monasteries and 475 women's, containing 11,845 monks, 9485 servitors, 17,289 nuns, and 56,016 serving sisters. Institutions for clerical education were: for males, 4 academies with 995 students; 57 seminaries with 22,734 students; 185 schools with 29,419 scholars; for females, 11 schools of the clerical office with 2177 girls, and 72 diocesan schools with 28,671. There were Church parish schools, 37,528 elementary with 2,079,891 scholars, and 418 teachers' training schools with 23,720 students.

The clerical academies publish learned theological monthlies; *Khristiánskoe Chténie* ('Christian Reading') at Petrograd since 1821; *Pravoslávny Sobesédnik* ('Orthodox Conversation') at Kazan since 1855; *Trudyé Kievskoy Dukhóvnoy Akademii* ('Transactions of the Kiev Clerical Academy') since 1860; *Bogoslovski Véstnik* ('Messenger of Theology') at the Moscow Academy in the Sergius Lavra since 1892. The following reviews should also be noted: *Dushopoléznoe Chténie* ('Edifying Reading'), Moscow, 1860 ff.; *Stránnik* ('The Wanderer'), Petrograd, 1860 ff.; *Véra i Razum* ('Faith and Reason'), Kharkov, 1884 ff.; *Rússki Palómnik* ('Russian Pilgrim'), Petrograd, 1887 ff. The Holy Synod publishes the weekly *Tserkovnyya Vedomosti* ('Church News'), 1888 ff., and a daily *Prikhódski Listók* ('Parish Leaflet'), 1914 ff. These have an official character, as have the various *Eparhiál'nnyya Vedomosti* ('Diocesan News'), published in almost all the dioceses.

RYNSBURGERS (or COLLEGIANTS).—Rynsburg, a hamlet on the Old Rhine, six miles below Leyden, became in 1619 the meeting-place of a group of laymen who separated from the Dutch Reformed Church after the Synod of Dort. Similar societies for Bible study were soon formed in many towns of Holland and Germany, and became known generally as Collegia. The Collegiants diminished in numbers in the 18th cent., and the Revolution gave them the death-blow.

1. **Origin.**—The movement was essentially an assertion of the priesthood of all believers, taking shape positively in combined and systematic searching of the Scriptures, and negatively in a repudiation of all ecclesiastical office. It was doubly due to Dirk Volkertszoon Coornhert (1522-90), a notary of Haarlem, who won distinction as engraver, poet, statesman, philosopher, and translator. He was a careful Bible student, and declined to bow to the judgment of clerical theologians. In particular he criticized the famous Heidelberg Catechism with its views of predestination. A young minister of Amsterdam, Jacobus Arminius, was asked to convince him of his errors, but Coornhert won him over, and thus initiated a general leavening of the ministry through the work of Arminius at Leyden, which culminated in the disruption of 1619.¹

Coornhert had also inherited a love of the vernacular Bible, which had been felt two centuries earlier by Gerard Groot of Deventer. The Brethren of the Common Life (*g.v.*) were not only opposed to ecclesiasticism and mendicancy; they devoted themselves to charity, and to education on the basis of the Dutch Bible. A boarder in one of their houses, Erasmus, when issuing a fresh Latin version of the NT, expressed in its preface a hope that others would do for their own people what he was thus doing for the literary world. The hope had hardly been fulfilled in Holland, and only poor versions were available, based on the Vulgate or Luther. Coornhert therefore began a new translation into living, unconventional language; and, as he is acknowledged to have lifted a mere dialect to the level of a literary tongue, creating modern Dutch, he would probably have been the Tyndale of his country, had he lived. He also sketched out a plan of Bible study by groups of people, not

dependent on a set sermon, and thus he laid a second train.

The match was put to both by the Synod of Dort, which not only ignored the Remonstrance against persecution, but started the local synods on inquiries into the doctrines held by pastors and professors, demanding subscription to the Five Points of Calvinism in dispute.¹ The alternative was silence, deposition, and, before long, banishment. The ejected ministers were no more inclined to acquiesce than the priests ejected by Elizabeth, but, until they drew together at Antwerp and systematically mapped out the field for a new organization, their lay sympathizers were thrown on their own resources. Conventicles arose again as in the days of Alva, and it was from one of these that the Rynsburg congregation originated.

In this village lived four brothers van der Kodde, whose father, though but a shoemaker, had educated his large family so well that all were good linguists; a fifth brother, who was professor of Hebrew at Leyden, was ejected at this crisis. Although there was a church in the village, Gysbert van der Kodde was an elder of the church at Warmond, a small town to the north; and, when the minister there was ejected, Gysbert gathered those of like mind to a conventicle in an apple-orchard. This suited so well that, when the Antwerp committee sent other ministers, he dissuaded them from coming, pointing out that their presence rendered the meetings illegal, whereas meetings of laymen only were within the law. As this plea did not keep all the ministers away, the meeting was transferred to a flax-house belonging to Gysbert in Rynsburg. While it was nominally open for all to attend and take part, the four brothers took the lead, helped at first by a fisherman and by Jan Batten, a Leyden man.

They were soon joined by a far more important adherent, who left a deep impress on their methods. Jan Evertszoon Geesteran had been minister at Alkmaar, his birthplace, but, having sided with the Remonstrants, he was banished on 12th March 1618 (or 1619). His forefathers had been in Poland, and were familiar with the discussions provoked there by the appearance of Faustus Socinus and other Italians; his own views were at least tintured with their characteristic theology. But something more superficial attracted greater attention at the time—his reproduction of their practice, the immersion of believers. He was baptized thus at Rynsburg in 1620, and it was commented on as an innovation in Holland. Next year the Poles offered him the rectorship of the university of Rakow, and, though he did not accept, the incident increased his reputation and led him to wider spheres of work. He founded similar societies at Haarlem, Amsterdam, Norden, and Leeuwarden, while Dirk Rafaelszoon Camphuysen established another at Rotterdam, and the movement attained more than local importance.

2. **Development.**—Thus, within three years, the Synod of Dort had broken up all outward uniformity by an attempt to secure it. Of earlier communions, Roman Catholicism had become negligible within the United Provinces; and the earliest reformers, the Doopsgezinden, or Anabaptists, had become relatively insignificant since Menno Simons had recalled them to the principle of non-resistance.² In the times of Alva the fighting Lutherans and Calvinists came to the front, and the Synod of Dort made it clear that the latter weighed heavier in the balance. The Remonstrants, however, unlike the contemporary Puritans in England, declined to submit, and defiantly organized a rival series of congregations;

¹ See vol. i. p. 803b.

² See art. MENNONITES.

thus it appeared as if there would be a variegated fringe of dissent, for the Doopsgezinden themselves were in at least two groups, the Flemings and the Waterlanders. Since these were all averse to Calvinism, negotiations were set afoot to check the divisive forces and to amalgamate into a sort of United Free Church. But the Doopsgezinden and the Remonstrant ministers believed strongly in the necessity of the pastoral office, whereas Coornhert's writings had aroused in many breasts the feeling that all Christians were priests. Hence in town after town similar societies originated, though with frequent disclaimers of any intention to found a new communion; all were welcomed to the meetings who desired to know the mind of the Spirit, and gave evidence of His working in their lives, even if they chose to remain in any other external fellowship.

At this juncture a new edition of Coornhert's works appeared, and crystallized the movement. His idea seems to have been suggested by events at Zürich, but had been clarified by developments in England, where the need for better knowledge of the Bible had been widely felt under Elizabeth. The necessity for providing sermons in place of the Mass pointed not only to the publication of official homilies, but also to the need for training preachers. Since no provision was made for this at the universities or in special seminaries, regular meetings were promoted by some bishops, when the clergy were convened for Bible study, and sermons were delivered to initiate discussion; Northampton is a well-known instance. Elizabeth indeed was suspicious, fearing that the Puritans would capture the meetings and convert them into sects; she therefore forbade them generally, relaxing her prohibition only in special cases, Manchester being a permitted centre. But in the Netherlands the idea had been welcomed, and synods at Wesel, Emden, and Dort had approved, so that similar meetings were held in the great towns for a generation. Coornhert therefore saw a plan actually in use, to which he gave a most important turn. He proposed that such meetings should not be confined to, or be led by, ministers, but should be open to all.

The suggestion was now taken up in earnest, and, while there was much local variety, meetings were often conducted on the following method. Printed lists of texts were prepared to be studied at home, and these were discussed at meetings held on Sunday and Wednesday. Exposition was varied by exhortation and prayer, and a solo was often found a means of edification. Then from the Doopsgezinden came in their attachment to congregational singing, and, while the Calvinist psalms were not favoured, another deposed minister led the way with paraphrases and original poems, till a large selection of hymns was compiled and passed into general use.

The meetings were usually held in private houses, and attendance was compatible with membership in some definite communion. In Amsterdam the numbers were so great that the largest meeting-house of the Doopsgezinden was borrowed, and many young ministers of that body attended to improve themselves. Men and women were encouraged to take an active part, especially in the Bible conference. University students from Leyden were often seen at Rynsburg, and it appears that Descartes, Catholic as he was, walked over once from Endegeest that he might hear how peasants and artisans dealt with the Bible.¹ The great cities of Rotterdam and Amsterdam were naturally the chief centres, but the history has been recovered of other important societies, at Leyden, Haarlem, Hoorn, Krommenie, Wormer-

veer, Zaandam, Alkmaar, Harlingen, Grouw, Knype, and Groningen.

Nor was the movement limited to the Netherlands. Coornhert had lived for many years in Cleves, and before 1651 Hilarius Prache of Breslau knew of a society near Liegnitz in Silesia.¹ Extension in Germany was due to Philipp Jakob Spener, pastor at Frankfort from 1666. He gathered in his own house all who would listen to expositions of the NT and discuss them; and for such meetings he borrowed the name 'Collegia pietatis.' Nine years later, in a preface to Arndt's sermons, he made six proposals for reform, beginning with the thorough study of the Bible in private meetings and a fuller recognition of the universal Christian priesthood by the activity of the laity. These proposals were republished separately in 1678 as *Pia Desideria*, and inaugurated a new movement known in Germany as the Pietist.² In Saxony he found a wider sphere for his work, and from his influence arose 'Collegia biblica' in many places. Several young men trained by him at Frankfort became pastors or professors, and before long Halle was a centre of the German movement; here arose a university with popular vernacular lectures on the Bible, and philanthropic institutions of many kinds. From the orphanage went forth a godson of Spener, Count Zinzendorf, who revived the old Moravian Church, and inaugurated Protestant foreign missions.³ While Halle was the centre, many societies sprang up on the lines advocated and illustrated by Spener. A study of the German Collegiants has been made by Theodor Sippell of Schweinsberg, who finds that they were rather more rigid than the Dutch: they abjured ordinary churches, confined the Lord's Supper to their homes, rejected baptism on the ground that John the Baptist foretold that the baptism of the Holy Spirit would replace water baptism, and were similarly literal in their refusal to take oaths, go to law, hold office, or enlist.

Sippell also suggests that the Seekers of Westmorland and Bristol, about 1650, were derived from the Collegiants.⁴ Despite the similarity, no external evidence of any connexion is offered, whether by a book or by a man. On the contrary, the Friends, who did absorb many of the Seekers, came into contact with the Collegiants in Holland as early as 1656, and George Fox betrays no sense of indebtedness; even his references in his correspondence and journals are not always sympathetic, and he passed through Leyden without turning aside to see Rynsburg.

It has also been said that the English Baptists derived their immersion from the Collegiants; but this is an over-statement. A single group of London Particular Baptists did in 1641 send one of their number to Holland, where he was baptized by Jan Batten, then head of a congregation in Amsterdam,⁵ a fact not found in Collegiant or kindred literature.⁶ Before that date not only had Roger Williams and Ezekiel Holliman baptized one another, but William Kiffin seems to have been baptized in England independently. And, when discussion arose, it became clear that such baptism had originated in many ways,⁷ many Baptists holding to the dictum of a generation earlier that 'succession was Antichrist's chief hold.'

It might have been expected that a movement of this kind, which originated close to Leyden in 1619, would have had some contact with the church of

John Robinson, and that the parallel societies would have attracted attention from Sidrach Simpson, William Bridge, and Jeremiah Burroughes in Rotterdam, if not from John Paget in Amsterdam. But the Collegiants were in revolt against Calvinism, and their deliberate ignoring of the ministerial office was hardly to be matched even among the Brownists.¹ Their latest historian is unable to trace any communication, whether at the origin or in later times, with either Puritans or Separatists. The main thread of their development is to be followed in the Netherlands.

When the university of Rakow was closed, many Polish teachers sought refuge in Holland, much to the alarm of the Calvinists. An edict of the States General was secured to limit their influence, and they found that the Collegiant gatherings were almost the only religious meetings which they might attend. They naturally made an impression on the character of the teaching, and involved the Collegiant movement in suspicion, till it became necessary to stipulate that those who frequented the conferences should acknowledge Christ as the Son of God.

The general tone being anti-Calvinist, the same constituency was appealed to whence the Remonstrants drew followers, and from which the Doopsgezinden had long recruited. A pamphlet of 1663, *Lammerenkrugh*, shows a Fleming debating against a Remonstrant, a Waterlander, and a Collegiant; the characteristic difference of the last-named was that within the one great body of believers to which the baptism of the Spirit introduced men it was wrong to make distinctions, whether of sect and sect or of clergy and laity.

Those were the palmy days of the societies, and such excellent expositions were to be heard at their meetings, as by Laurens Klinkhamer, Abram Galenus, C. and M. van Diepenbroek, and Jacob van Rooyestein, that many attended who hardly considered themselves members. Mosheim avers that adherents were to be found in most of the cities and villages of Holland.

An important influence entered their circles about this time, that of Spinoza (*q.v.*). The young Jew had learned Latin from a physician in Amsterdam who had some connexion with them; and when he was excommunicated he took refuge with another Collegiant near the city, Herman Homan, whose home for the next four years was the centre of a band of young thinkers. In this period he elaborated his first book, the *Short Treatise on God, on Man, and on Wellbeing*. In 1660 his host moved to Rynsburg itself, and here he worked out his *Ethics* in correspondence with his friends at Amsterdam, chief of whom was Jan Rieuwertszoon, the Collegiant bookseller. He left the village in 1663, but continued the correspondence, so that his ideas filtered into the Amsterdam meeting. When the *Tractatus Theologico-Politicus* was published, it was canvassed by them, and a vigorous controversy began two years later between Johannes Bredenburg and Francis Kuyper. His posthumous works were actually edited in their Amsterdam headquarters, and were published by Rieuwertszoon. Feeling ran so high that the societies divided into two groups, and at Rynsburg itself a second meeting-house was erected. When, however, both leaders had passed away, the division healed itself as the century closed.

3. Stagnation and decay.—A decided fossilizing then set in. There was still an insistence, in words, on the absence of all officers and on the duty of all to take part in the meetings; but at the chief centres the Bible study was transferred to the Saturday, and a rota of speakers was drawn up for it; the only relic of the original state of

affairs was a brief pause at the close of the address, nominally for any one else to speak.

The question of celebrating the Lord's Supper was answered in various ways. Very general reluctance was felt to participate at any ordinary church. Some preferred to regard it as a purely domestic ceremony, but, when the larger societies acquired premises of their own, and no longer met in private houses, the domestic character was inevitably obscured. Indeed, about 1700, all Sunday morning was devoted at Amsterdam, and doubtless at other places, to a combined service somewhat on these lines. The worshippers sat in pews around a hall, all facing inwards, a table occupying the centre. The president for the day gave an introductory address, disclaiming all authority and emphasizing the brotherhood of all, reminding his hearers also that they met to illustrate brotherhood not only between those present but between all believers. After silent prayer he invited all who wished to take their seats at the table, while a solo was sung. He recited the words of institution, and passed the plates to right and to left, each helping himself. They ate simultaneously, and the leader gave a few words of exhortation. After thanks for the cup they drank in turn. Then they went back to their pews, and others came to the table; as these partook, the leader told some story from the life of the Lord, or repeated some of His teachings, instead of exhorting further. When all the men had thus shared, the women came to the table, and the leader himself sat down to partake with the last sitting. A thanksgiving by him, and a hymn by all, closed the service. It will be seen that this method, despite the initial disclaimer, kept one man unnecessarily to the front at each service; the only others who lifted up their voices separately were the soloist—often a professional—and the treasurer, who announced for what purpose the alms were desired.

Another striking feature of the Collegiant worship was designed to unify the movement and keep the various societies in touch. At Whitsuntide and in August conventions were held, both at Leeuwarden in Friesland and at Rynsburg in S. Holland; these lasted usually four days. To accommodate the visitors, several buildings arose at Rynsburg, though it was within easy reach of Leyden; it had a sentimental attraction such as Mow Cop exerts on the Primitive Methodists or Keswick on members of many communions. The old flax-house was first disused in favour of a regular meeting-house; then arose another at the time of the Bredenburg quarrel; next came a Great House for visitors, supplemented presently by a Little House. A tract of land belonging to an abbey was leased and laid out as a park, with a grove of trees. It is not clear how these buildings were used for the greater part of the year, for the local adherents were so few that the Amsterdam society assumed the trust early in the 18th century.

A still rarer act of worship was the baptism of any who desired thus to confess their faith. In early days this took place at irregular intervals, in the brook near the village. But in 1736 a baptistery was excavated in the open air opposite the Great House, and was lined with brick, while a boiler-house was built close by to supply huge quantities of warm water. The rite of baptism was observed on the Saturday morning before the convention. After song and prayer an address was given to explain the ceremony, as a confession in deed, optional, non-initiatory; the candidate made an oral confession of faith, then, after many prayers, he went down into the pool with the baptizer, who bowed his head forwards as he knelt, and repeated the words of institution. All then adjourned to the meeting-house for an address,

¹ See artt. BROWNSM, CONGREGATIONALISM.

song, prayer, and thanksgiving. It must be emphasized that such a service was held only at Leeuwarden and at Rynsburg, and was exceptional even there. No baptism is recorded from 1738 to 1742, and, in the whole period of seventy-five years for which the registers of Rynsburg survive, only 116 entries are made. Another point illustrated by this register is the growing officialism; in all this period only seven men acted as baptizers.

Here, then, are many signs of waning zeal, such as indeed affected most religious bodies at the time. But, while the societies of Germany were revived by the missionary zeal of Zinzendorf, and in England John Wesley was firing others with enthusiasm for home evangelization, the Collegiants proper were becoming more and more stereotyped. Moreover, instead of launching out in any new direction, they turned their eyes backward and began to write their own history, while hitherto they had been content with two criticisms on a prejudiced account given by Paschier de Fijne in 1671, and incorporated by Brandt in his general *History of the Reformation . . . in the Low Countries*.

As in Germany, they were philanthropic. A burgomaster of Amsterdam gave his house, the Orange-Apple, to the local society. It was used as an orphanage, while the Sunday meetings were held in the hall. Presently it was rebuilt, and it became the most important of their edifices. The combination of purposes was characteristic, and other similar institutions arose. Besides the weekly alms, offerings were taken at the conventions, and the figures show that 1728-33 was the high-water period, though 1742 saw the largest collection—400 florins at the August gathering.

By this time, whatever their generosity, they were decidedly decaying, and only eighteen places of worship were open next year. The contrast between wealth and low vitality was enhanced when in 1780 a legacy of 13,000 florins was left to the great orphanage, while the last convention met at Rynsburg on 27th May 1787. In the revolutionary era the societies ceased to meet, and John Rippon, when making elaborate inquiry into the religious condition of Holland in 1790, failed to hear of them at all. The latest to hold on was at Zaandam, but this collapsed by 1810. The meeting-houses were disposed of one by one to provide funds for the orphanages, and by 1828 these last relics of the corporate life had passed into other hands.

The Collegiants had always declared that they were no sect, and they had no ecclesiastical organization, whether of a single society or for the Conventions; therefore there were no minutes of meetings. Similarly there were no creeds or other formal documents. The literary remains are chiefly Bible expositions, and even these seem to date rather from the earlier period. The best collection is probably in the Amsterdam library of the Doopsgezinden, with whom their relations were always cordial.

LITERATURE.—Paschier de Fijne, *Kort verhaal*, Waerstadt, 1671 (substance in G. Brandt, *The Hist. of the Reformation . . . in the Low Countries*, Eng. tr., 4 vols., London, 1720-23, without the corrections by Joachim Oudaen, and Joan Hartigvelt, Rotterdam, 1672); S. F. SA'ADYA.—See SEADIAH.

SABÆANS.—A century ago Arabia Felix was an unknown land. There were a few references to it in the OT, classical geographers had a little to say, and Arab historians told wonderful stories of it. That was all. To-day, after a hundred years of discovery and the self-sacrifice of a few explorers, it still plays the sphinx. A few phrases in the Bible have been set in a new light, the Greek and Roman tales have proved well founded, and the Arab traditions have been largely discredited. One or two, like Hamdāni, could spell out the inscriptions, but all that is valuable in their stories is a few names and some references to the latest history.¹ This has come from the discovery of the S. Arabian inscriptions and some monuments of its civilization.

1. History of discovery.—In 1811 Ulrich Jasper Seetzen brought to Europe five copies of inscriptions, but they were so full of mistakes that only one was of any use. In 1835 J. R. Wellsted and in 1838 C. Cruttenden brought home other texts. Then L. Arnaud made his adventurous trip to Marib, bringing back over 50 texts (1843). On this basis Æ. Rödiger, W. Gesenius, and E. Osiander deciphered the alphabet and laid the foundation of all future study. J. Halévy's journey to Negran in 1869 as a Jew from Jerusalem was made at great personal risk; indeed, his safety lay chiefly in the contempt which an Arab felt for killing a Jew. He gathered copies

of nearly 600 inscriptions, and, though much of his work has been superseded, yet it made an epoch in the study of the Yemen. S. Langer gave his life in the search (1882). E. Glaser's journeys from that year on have provided the originals or facsimiles of 2000 texts, though most are still unpublished. His services were great; they should have been greater. Since then activity has been limited to the interpretation of texts already known.

2. Language.—The inscriptions are in a S. Semitic language and are written with an alphabet of 29 letters—the 28 of Arabic plus the samech of N. Semitic. The alphabet is closely related to the Phœnician. Some letters are very like: קקע and n; others are turned round or even upside down: ל and ש; while others are slightly altered: ו and ד. Which is the more original has not been decided. An attempt has been made¹ to derive this alphabet from the Greek. It would be almost conclusive, were not time and space against it. צ and ך are more like the Aramaic forms. Of the letters not found in Phœnician ח is formed from ט and טא from ט. The old Ethiopic alphabet differs very slightly from the S. Arabian; some letters are clearly younger forms, while others are possibly older. So it appears that both descended from a common ancestor. The writing usually runs from right to left, but in some inscriptions, which from internal evidence and by analogy seem to be the oldest, it is boustrophedon. The oldest forms of ד and ש occur in boustrophedon inscriptions. Only one boustrophedon, Fr. lvi., is late and it is boustrophedon only for convenience' sake; it is in very long lines on a wall. Some development can be traced in the script; the older forms of ד and ש are angular, and ך is either an obtuse angle or the arc of a circle. Later forms become curved and more complex. These changes have nothing to do with the elegances of form shown by the most artistic monuments.

¹ *Tubba'* never occurs as a title and is usually part of a compound name.

¹ *PSBA* xxix. [1907] 128.

The inscriptions are mostly on stone, usually engraved, sometimes in relief and sometimes in hollow-relief. One is painted—an evident sign of haste. Many bronze tablets have been found with writing in relief, and all sorts of things—altars, censers, and statues—bear legends.

The language is closely akin to Arabic, especially in grammar, though the vocabulary has much in common with Ethiopic. As no vowels are expressed—in common with all early Semitic alphabets—no exact knowledge of the structure of the language is possible. Vowel letters are used, very sparingly in the middle of words and more freely at the end. Corresponding to nunation in Arabic, a final *m* serves as the indefinite article, and the definite is expressed by a final *n*. Broken plurals are usual, and two construct states can depend on one governing noun. The construct depending on a sentence is very common.

There are at least two clearly defined dialects. Minæan is much less regular in its writing. *h* is often used to mark the presence of a short vowel, and it is inserted between a noun and its suffix. The root consonant of the third personal pronoun and the prefix of the causative stem are *h*. There are many differences in vocabulary.¹ In Sabæan *h* is the root of the third personal pronoun and is the prefix of the causal stem. There are syntactical peculiarities. When several perfects come together and the first is 3rd pers. sing. masc., the others take *n* as a suffix. The perfect with *l* prefixed forms the optative, and the 3rd sing. imperf. always ends in *n*, except where it forms part of a proper name. *h* stands in Minæan and old Sabæan, but in later Sabæan *h* as in Arabic. In Hadramaut the word becomes *h* according to a general rule.²

Minæan inscriptions come from the Jauf, the centre of the kingdom of Ma'in (the pronunciation is derived from Arabic), from the towns of Karna (which seems to have borne also the name of the kingdom), from Barākish, or Yathil, from Kamina, and also from el-Ula on the Hedjāz railway. In this dialect or a near relative of it are the monuments of Katabān (really Qatabān), who at one time held the coast north of Bab-el-Mandeb, and one from Hadramaut. The Sabæans come largely, though not exclusively, from Sirwāh and Marib, east of Sana, though many come from Nashq in Minæan territory and they have been found in Hadramaut. Sketch maps of the district are given in Hommel's *Chrestomathie*. Ptolemy is mistaken in putting Katabān east of Hadramaut.

3. History.—Some have found the earliest reference to the Yemen in Magan of the old Babylonian monuments, identifying it with *mk* of the Minæan inscriptions. Magan has been localized in so many places that this reference is doubtful.³ In the OT various names occur—שָׁבָא, *šabā*, *šabā*,⁴ as being closely connected. *šabā* may be best explained as a doublet of *šabā*, being a fairly exact reproduction of the foreign name, whereas in *šabā* the sibilant has undergone the usual change. It is very doubtful if the Minæans are mentioned in the OT, and so far they have not been found in the Assyrian texts, though Asshurbanipal (c. 645) conquered Abyateh,⁵ king of the Arabs. Abyateh is probably *אביט*, a name that occurs on Minæan though not on Sabæan monuments. In 733 Tiglath Pileser III. refers to Taima Saba and Khaifa. In 715 Sargon⁶ names Samsi, queen of Aribi, and Itamara the Sabæan.⁷ So it is assumed that the people were then living in N. Arabia, perhaps as nomads, and that later they migrated southwards. Be that as it may, the Minæans and Sabæans of history were settled in the Yemen. This district was important because it was on the trade route from India and the East. Its kings owed their wealth to the customs which they levied perhaps more than to the products of their own land.

The names of about 30 kings of Ma'in are found on the monuments, but, though the order of their reigns has been to some extent fixed, yet there are no data to settle the time limits of the kingdom. A son of a king of Ma'in was king of Hadramaut, and Hal. 193 points to close intercourse between the two countries. Their relations with Saba were not always harmonious. More is known of their

activity. They were a peaceful folk and their business enterprise was wide-spread. At el-Ula in N. Arabia was a big Minæan settlement on the caravan route to Gaza, and it has left inscriptions extending over a long period. A sarcophagus was found in Egypt with the epitaph of an Arabian agent in the incense traffic, and in the island of Delos an altar dedicated to Wadd. Controversy still rages over the date of this kingdom. Was it earlier than or contemporary with the Sabæan? Epigraphic considerations suggest that it was at least no earlier. Strabo's authority is quite familiar with the Minæans and regards them as one of the nations of the Yemen. On the other side it is argued that for several hundred years they held a commanding position in N. Arabia, and yet they are never mentioned—at least by name—in Assyrian records. Therefore their power must have come to an end before the arm of Assyria reached so far. But it has been mentioned above that Asshurbanipal probably came in contact with them. Possibly Itamara was the Sabæan official of a Minæan king. Saba is occasionally mentioned in Minæan inscriptions, but Ma'in never in the Sabæan; therefore Ma'in was finished as a kingdom. In view of the fragmentary character of the records and their predominantly religious contents, the argument from silence is risky. The attempt to put Ma'in before Saba—beginning 1400 B.C. or earlier—may be due to the legendary wealth of Arabia Felix; the existence of two States side by side does not agree with the tales of the land of gold and incense.

The history of Saba is clearer; about 50 rulers are known, who fall into three classes: (1) 15 are called *mukarrib* (vocalization uncertain) and are obviously the earliest; the title means 'priest' and is parallel to the title *miswad* borne by some kings of Ma'in; (2) 17 kings of Saba followed, and then (3) 26 kings of Saba and Raidan (*dhū Raidan*). Perhaps the *mukarribs* were vassals of Ma'in. They dwelt in Sirwāh, their family fortress; when they took the title of king, they shifted their residence to Marib, the town famed in Arab story for its great dam, the ruin of which coincided with the fall of the kingdom. We do not know when Saba rose to power; it may have been c. 800 B.C. Some of the later monuments are dated according to an era of their own. One from Hisn-el-Ghurab refers to events that are known from other sources to have happened A.D. 525. That puts the first year of the Sabæan era in 115 or 114 B.C. It is only a guess, though plausible, that this is the year of the upheaval in the state when the new title, 'king of Saba and Raidan,' appears. The period that ended about this time was that of Saba's glory. To it we owe the references in the prophets to the omnipresent activity of Sabæan merchants. Then the legend of Sabæan wealth arose, and the Queen of Sheba—a gross anachronism—reflects popular ideas on the remote country. Contemporary with Saba were kings of Hadramaut. One inscription reads: 'Ilsharh Yahdib and his brother Ya'zil Bayyin the two kings of Saba and Raidan, sons of Fara' king of Saba,' which suggests that the change of government corresponding to the change of title was peaceable and due solely to internal causes, possibly the need of being nearer the sea, the new trade route. Raidan is the Arabic Zafar, near Yerim. Or, if Ilsharh is the *Ἰλσαρῆς* of Strabo, the change may be a result of Gallus's expedition. About this time Aden was destroyed, and Mauza, on the Red Sea, took its place for a time. Some think that this change was caused or accompanied by the rise of the race of

¹ CIS 384: 'Sha'r Autar king of Saba and Raidan son of Alhan Nahfan king of Saba.' Probably this was a customary abbreviation of the second title.

¹ J. H. Mordtmann, *Beiträge zu minäischen Epigraphik*, Weimar, 1897.

⁴ The names respectively of a people, a land, and a town.

⁵ Rassam prism.

⁶ *Annals*, 11. 97–99.

⁷ Itamara is obviously יִתְמָרָא of the Sabæan inscriptions.

Himyar. Others put the rise of Himyar in the 1st century A.D. The author of the *Periplus Maris Erythraei* (c. A.D. 77) calls Saphar the capital of Kharibael, king of the Homerites and Sabaites. Homerites corresponds to Himyar in the inscriptions, Hamer of the Ethiopians. Himyar is occasionally mentioned on the older monuments. The name was taken by the Arabs to cover the whole country and history, because it was the nearest and best known to them. In 27 B.C. fell the famous expedition of Ælius Gallus, the only time when Rome tried to conquer the Yemen. He reached Nejran and the Jauf, destroyed Nesca (Nashq), but failed to reach Marib. Yet Saba's greatest glory was past. What Alexander had tried to do the Ptolemys accomplished. They opened the sea route to India; so Saba, deprived of its customs duties, fell slowly into decay. Arab story has condensed the work of years—perhaps of centuries—into one event, the fall of the dam of Marib, though this was as much the result as the cause of the disappearance of Saba.

Here may be mentioned two other names known to the classics: the Gebanites and the Katabani. Katabān was the name of a clan which held high rank under both Minæan and Sabæan kings. They then became independent; a *mukarrib* is mentioned, and one king apparently became overlord of Ma'in. Their capital was Thumna. Eratosthenes knew them, but in Pliny's time they had disappeared. Probably they were Sabæan by race. Gabān was a clan which stood high in the favour of the Minæan kings. According to Pliny, they owned some of the incense-bearing districts and in later times held the lands of Katabān, ruling as kings in Thumna and Okelis (near Shaikh Saad). They used the Minæan dialect on their monuments.

The Abyssinians now play a part in the history of S. Arabia. Glaser believes that they dwelt originally east of Hadramaut and migrated in historic times to Africa, whence they returned to attack the Himyarites. On the authority of unpublished texts he says that there was in 75 B.C. an alliance of Saba and Habashat (Abyssinians) against Himyar and Hadramaut. There are difficulties in this view; perhaps the Habashat are the Abaseni of the classics. The last known king of Saba and Raidan was alive in A.D. 281. Then came foreign domination, for on the Axum monuments (middle of 4th cent.) the Abyssinian claims to be, according to the Greek text, king of the Axumites, Homerites, Raidan, Ethiopians, Sabæans, and Sile (Salhin?), and, in the Geez text, king of Axum, Hamer, Raidan, Saba, and Salhin (?). Then in 378 native rulers, of whom nine are known, again appear with the title, 'king of Saba, Raidan, Hadramaut, and Yemenat.' Arabia has now sunk to be a pawn in the game between Rome and Persia, and Rome works through Abyssinia. Religious strife has been added to other causes of unrest. After the destruction of Jerusalem Jews migrated to the Yemen and attained considerable influence. One inscription has been found referring to 'the Merciful One, God of Israel and Lord of the Jews.' Christianity was introduced—according to one account, about 350, according to another, about 500; but it was ill received, for it was the faith of the national enemies, the Abyssinians. From this time onwards the Byzantine historians are valuable. The tale is tangled, but the sequence of events seems to be that in 523 the Abyssinians attacked the Yemen and dethroned Dhu Nuwas, the Himyarite king, who took refuge in the mountains. In his hatred to Christianity he is said to have massacred his Christian subjects in Negran (probably the story is highly coloured in the martyrology), and in 525 he was defeated a second time and slain. Esimphaeus (Sumaefa) was installed as regent, though in 531 Abraha, an Abyssinian officer, overthrew him; and, after playing with the idea of independence, he remained faithful to his overlord in Africa. An inscription bearing his

name and the date 543 tells of his turbulent subjects and of a breach of the dam at Marib.¹ This inscription is unique because it invokes Rahman the Merciful One and His Messiah and the Holy Spirit instead of the national gods. In 575 the Persians were called in, and S. Arabia was more or less a Persian province till the coming of Islām.

4. Religion.—As most of the monuments are votive inscriptions, the names of many gods are known. They fall into two classes, and each people had its own favourites. The Minæans honoured Wadd, 'Athtar, Nikrah, and in a lower degree Shams. According to Glaser, Katabān worshipped 'Amm, 'Athtar, Anbai, and Shams; Hadramaut served 'Athtar, Sin, Khāl, and Shams; and Saba recognized 'Athtar, Haubas, Almaquh, and Shams. Haubas—the drier—is said to be the moon as the cause of ebb-tide. What Almaquh was is doubtful. He was a specially Sabæan deity. Hamdāni says he was Venus; and a summary of the theories about him is given in *CIS* ii. His name occurs alone and in connexion with 'Athtar and Haubas. He may be a form of one of these gods. There is nothing against this, for 'Athtar is often named twice in one invocation. He is also mentioned as Almaquh of Hiran. At present judgment must be suspended. Some of these deities are clearly celestial—Sin and Shams; and 'Athtar, though masculine, is one with Ishtar (Venus). Arab authors tell of the star-worship of their forefathers. 'Amm is said to be the moon. While these are the chief gods, there are other forms of them: 'Athtar Sharqan, the eastern or rising, and 'Athtar Dhu Qabd, a title for which the meaning 'setting' has been suggested, but has found no favour. There are also thirteen different forms of 'Athtar in which the god is qualified by some place name like the Baalim of the OT. In the same way Shams, which is feminine, appears in many forms; she is Dhat Nashq, Dhat Ba'dan, Dhat Himai, etc. Nikrah is assumed to be the god of hate and war—the counterpart of Wadd, the god of friendship—and his name is associated with the Arabic *kariha*.² One dedication may be quoted:

'To 'Athtar Sharqan and 'Athtar Dhu Qabd and Wadd and Nikrah the gods of Ma'in and Yathil and all the gods of their lands and tribes and all the gods of sea and land and east and west and the kings of Ma'in.

In the other class is Ta'lab, the god of the clan Riyam, whose temple, Turāt, on Mt. Itwa, was a place of pilgrimage. He seems never to have reached full divine rank, but to have been the patron of his worshippers. Possibly he is a development of tree-worship, as Hagr may be of a stone-cult. In the same way the tribe of Hamdan was specially devoted to Shams and Amir to Dhu Samawi, who may be the lord of heaven and who was worshipped in Haram. His name does not occur in Minæan texts. There are many other gods, but they are only names. In addition to Wadd, who is sometimes described as Shahran, Arabic tradition tells of 'Uzza, Yaghuth, and Nasr, which also occur on the monuments, the last also in the form N-s-w-r. The modern *jinn* finds its prototype in the spirits of wells and watercourses, *m-n-d-h*. It is not clear whether we should speak of a S. Arabian pantheon. Shams does appear as Umm'athtar, and there is an inscription which may mean that Sin is the son of 'Athtar; but, apart from these two indications, the gods stand alone.

Proper names are instructive; many contain divine names. The general Semitic *il* is most common, though 'Athtar, Wadd, and others occur.

¹ Another inscription of 449 tells of a breach of the dam and its repair (Glaser, *Zwei Inschriften über den Dammbruch von Marib*, p. 71.).

² The change of guttural can be paralleled.

Various terms of relationship appear: Ab, Dad, and Akh. Those names that contain Wadd, 'Amm, Khāl, might be so explained, but probably the gods are meant. Then in place of the divine name an abstract appears—righteousness, protection, salvation, or fear. In place of a god or his quality there often stands the name—Sumuh-ali, 'the name is exalted.' From such names we learn that god or some god is exalted, is lord, or is wise; that he blesses, commands, or saves men who are in some sort his kin. In S. Arabian ʾAla is the common noun meaning 'god'; it occurs very seldom in proper names. ʾAla is very common in proper names; it appears once or twice as a proper noun and sometimes as a common noun. The popular favourite, Almaquh, never forms part of a proper name. So it appears that it went out of fashion as an object of worship, though habit remembered him in names. In Gn 10²⁶ Almodad is a son of Joktan.

'Athtar Sharqan was the guardian of temples and tombs; to him men pray that sacrilegious hands may not be laid on their offerings, though they make no gifts to him. In the lists of gods who are invoked the names of men (especially kings) are often inserted, and there are many references to the day of N.N. This day can hardly be anything but a memorial feast, and these facts point to some sort of apotheosis or ancestor-worship. The 'month of fathers' points to the same conclusion.

The antelope was sacred to 'Athtar, and the bull's head was the symbol of the crescent moon. It appears in all manner of forms, from realistic representations of the animal to a conventional object where only the horns are recognizable. Other symbols that may have a religious meaning are the sphinx and the date-palm in fruit. This is often pictured naturally, but sometimes the stem is a truncated cone recalling the pyramid that stands between the horns on the bull's head or that—in conventional designs—supports the horns.

Worship took place in temples that had names of their own. The god took a title from his temple; Almaquh is lord of Awvam. That outside Marib was an open space shaped like an ellipse surrounded by a wall. Various obelisks formed part of the equipment. It is not clear if there was any system of orientation.¹ Perhaps the native rock in the middle was the centre of worship. In other places there was an avenue of obelisks before the gate. Apart from *mukarrib* and *miswad*, several words denote 'priest'; the commonest is *r-sh-w*. It is usually determined by the name of a god or temple. In one place the chief of a tribe is also its priest, and sometimes the eponym also was. There are many inscriptions in which a man devotes himself, his children, his servants, and goods to some god; perhaps this happened when he was made priest. These men may be the 'people of 'Athtar,' the 'servants of Wadd,' who are often mentioned. The word *sh-w* is usually joined with Wadd; the root means 'to help.' In el-Ula occur the title *l-w* and its feminine. Arabic suggests that these persons correspond to the N. Semitic *q'deshim*, while the name recalls the Hebrew *לוי*. Nothing certain can be said about the functions of the priests. Another form of dedication is that in which a man dedicates some other person to the service of a god; these may be *q'deshim*.

The ideas of sacrifice and altar are expressed by the common Semitic root *dhbaha*, 'to cut the throat.' Oxen and sheep were offered, sometimes in large numbers; and incense played a great part in the worship. This is evident from the number of altars of incense that have been found and the

various names in use for them. A special priest seems to have been in charge of the incense.¹ It was common to consecrate figures of men and animals in gratitude for favours received or to secure desired benefits. These may be the bronze figures of animals, four or five inches high, that have been discovered. Nothing is heard of images of the gods. Pilgrimage has already been mentioned in connexion with Ta'lab. There was a month of pilgrimage, apparently in the autumn. Their ideas on ceremonial purity were similar to those of other Semitic peoples; but the Minæan texts dealing with ritual are obscure and still unpublished. Tithes are often mentioned, and perhaps firstfruits, though the word usually has a more general sense.

5. Civilization.—The wealth and luxury of the Yemen were proverbial among the Greeks and Romans, and their tales had a solid foundation. The monuments show the stools, chairs, and couches of which they speak, and tell of gold (gilded?) statues. The buildings and inscriptions that cover the country tell of its wealth, and show that the people were skilled masons. They must have been capable engineers to build the dam at Marib and the tanks at Aden. As sculptors they were not so advanced; for the finest lettering accompanies crude carving. The bas-reliefs are lively and show observation, but the execution is rough and clumsy. They succeeded better in sculpture in the round,² but there is always the suspicion that such figures may be of foreign origin; indeed, the *Periplus* speaks of an import of statuary from Egypt. A pair of eyes—that degenerate into circles—on a tombstone betrays Egyptian influence. Their work in metal was of a much higher level; much of it deserves to be called lifelike. In art they inclined to realism in a way that would not be tolerated now. They were probably fine potters, to judge by a terra-cotta rhyton ending in a goat's head (though this may be imported from Greece).

The coins are usually poor imitations of Athenian models, yet the standard is Babylonian. The oldest show the head of the goddess and the owl on the amphora. Later comes a male head, probably of a king, with long curls and a diadem, while the owl keeps its place on the reverse. Next the head has short hair and a wreath with fillets in imitation of the Roman emperors, while the reverse is unchanged. The expedition of Gallus may have had something to do with this change. Many coins bear the letter N, possibly a mint mark—Nejran? Various inscriptions and monograms occur. To these remarks there is one exception—an Attic tetradrachm with the head of Hercules and the lion's skin and, reverse, a seated figure with the lower limbs draped; the right hand holds a flower, and the hair hangs in curls, while the face is shaven; the name is אריתע, and א stands in the field. The type which served as model came into use about 200 B.C. The head of the god is hardly distinguishable from Greek work and displays the skill and imitative power of the metal-workers. 'Bright Hayyili coins' are named, but not identified; also a *sela'*. In late Hebrew the *sela'* equalled four *denarii*.

The year was solar, and in early times each was named after an eponym, though this custom dropped with the introduction of the Sabæan era. The names of at least twelve months are known, but none agree with those of Arab tradition, so some may be duplicates. Their order is unknown. Some are derived from the seasons, while others are religious, as the months 'of pilgrimage' and 'of fathers.' The year seems to have begun in the spring. There are interesting theories about the

¹ Description in Nielsen, *Die altarabische Mondreligion*, p. 100.

² Os. 30.

² JASB II, [1846] pl. v.

calendar, but they are still too problematical to be mentioned here.

Strabo¹ says that the Minæans practised polyandry. This is borne out by the monuments if, as is probable, the same names in a group refer to the same persons. Elsewhere three men have a son in common. It is quite common to find father and son associated as kings of one state; this probably meant the recognition of the son as heir apparent. Two brothers are also found sharing the title. Governors (*kabir*) are named, as the governor of Muṣri,² and the chiefs of the tribes were important people. The government was clearly feudal, and the line between vassalage and independence was not always sharp. The kings of Saba were vassals of Saba. In Abrahā's inscription the loyal chiefs receive honorary mention as kings. Women appear, sometimes in pairs, as chiefs. Most of the kings have some distinctive epithet—'glorious,' 'exalted,' 'saviour'—as part of their names.

Works of irrigation are often mentioned, but the accounts are usually unintelligible. Palms and vineyards played a great part in the economic life. The word for 'vineyard,' while it means 'grape' in classical Arabic, means 'vineyard' in the Yemen dialect. For details as to trade we must rely on classical authors. Pliny tells of the cultivation of myrrh and describes the collection of incense; it grew in one place only in the Yemen and on the coast of Africa opposite. There were only 3000 families who had the right to gather the gum, and they were held in religious awe. During the harvest they had to separate themselves from women and funerals, and by these religious precautions they improved the crops. There are several S. Arabian names for these aromatic gums, but some still wait identification. The incense was taken to Sabota (Shabwat in Hadramaut), where the priests took a tithe of it for the god. Then only could it be put on the market. It had to be carried through the land of the Gebanīṭa, who took their toll. It is suggested that Gab'an comes from the root meaning 'to collect.'

The ancient inhabitants of S. Arabia borrowed on every hand, yet they were not slavish imitators. The name Arabia Felix seems to have been better merited than such titles generally are.

A. S. TRITTON.

SABAOth (Babylonian).—I. The Babylonian *sābu*.—The word 'Sabaoth' has not yet been found in Assyro-Babylonian, though the noun formed from its root, *sābu*, occurs not infrequently

in both singular and plural. The meaning of *sābu* is 'man,' 'soldier,' and in the plural 'army,' 'host,' agreeing in some respects with the Hebrew cognate. The nearest approach to 'lord of hosts' would be *bēl sābē*, but this has not yet been found. In many historical texts *sābu* is replaced by its synonym *ummanu* (plur. *ummanāti*, expressed by the same ideograph, so that it is sometimes uncertain which word is intended). The Sumerian equivalent of *sābu* is *erim*.

2. *Sar* and its Semitic equivalent.—For the meaning 'hosts,' the equivalent word seems to be *kissatu* (*kašāsu*, 'to be strong,' 'numerous'), in Sumerian *sar*. In many cases, however, some such rendering as 'host,' 'universe,' would be preferable, if, in translating, usage allows it. To all appearance the character *sar*, like that for Utuki, the sun-god, was originally the picture of a circle. This implies that it was intended to express the circle of the earth or the horizon of heaven. Other synonymous signs for *sar*=*kissatu* are *šu*, composed of two wedges derived from a curve probably originally representing the vault of heaven, and *kis*, a character seemingly used on account of its pronunciation. With the determinative prefix for 'god,' *šu* became one of the ideographs for Mero-dach, probably as god of the universe. *Kissatu* is also expressed by the double square or enclosure *nigin*, meaning a collection of things.

3. *Sar* in the Babylonian lists of gods.—But the usage of the inscription gives information of a more interesting nature, the most important being the evidence of the lists of gods and the Semitic legend of the creation. According to a list in *Cuneiform Texts from Babylonian Tablets*, xxiv. 1, the earliest deities were the two Ana, male and female personifications of the heavens. These occur afterwards as An-ki, 'heaven and earth,' and after this as Uraš and Nin-uraš, the two Ana (Anu and Anatu) as deities of fruitfulness. Sixth in the list is An-šar-gal, 'Anu,' the heavens, as 'the great host,' whilst the seventh is An-ki-šar-gal, Anu and Anatu as deities of the 'great host' of earth. The eighth and ninth lines have the names Anšar and Kišar, which give another combination of the root *sar* with a development of the idea, as these words apparently mean 'host of heaven' and 'host of earth'—divine personifications who appear in the Semitic creation-story as having been produced after Lahmu and Lahamu;¹ but in this legend Anu, the god of the heavens, is represented as Anšar's son. Later, in the same text, Anšar sends forth in turn Anu, Ea, and Merodach, to fight Tiamat (Tiawath), the dragon of chaos. The next divine couple, in the list of gods, whose names contain the Sumerian equivalent of Sabaoth consists of En-šar and Nin-šar, the 'lord of the host' and the 'lady of the host.' This makes a total of six couples, the seventh being represented by the Sumero-Akkadian Duri and Dari, perhaps 'Age' and 'Eternity,' the two non-concrete forms or counterparts of *sar*, in which countless number is changed into illimitable time. Concerning the Babylonians we cannot speak with certainty, but the Sumerians at least seem to have realized, at a very early date, how multitudinous were the creatures produced and nourished by the earth, and they had evidently also formed the theory that the gods dwelling in the heavens (and this would include their divine servants and the angels) were at least equally so. As a confirmation of this, the British Museum tablet K.2100 gives (rev. 3, 4) as a synonym of *Dingir-galgalene*, 'the great gods,' the reduplicate word *Sarsara*, 'the very numerous,' or (as the prefix for divinity shows that we should translate) 'the divine host.'

¹ 788.

² Hal. 535, revised text.

¹ See ERE iv. 129.

4. **Anu and his divine partners.**—Naturally it was the really 'great' gods who exercised rule in heaven, where all divine beings obeyed them. In agreement with this, the account of the attack of the evil spirits upon the moon (this was supposed to be the cause of our satellite's eclipses) speaks of Sin, Šamaš, and Ištar having been set to rule the vault (*šamug*) of heaven, and 'with Anu they shared the dominion of the host of heaven' (Sum. *kiš ana*, Sem. *kišsat šamē*, *kiš* here replacing the seemingly more correct *šar*). Here, again, Anu appears as the god of the heaven-host; but it is to be noted that, when Merodach became king of the gods, power over the host was conferred on him, and, as stated in a well-known hymn to that deity,¹ 'the Igigi of the host of heaven and earth' (*Igigi ša kišsat šamē ū ēršiti*^m) are said to wait upon his command. It was for 'the host of heaven and earth' that the new moon shone (*azkaru annu ina šamē ū ēršiti ibbani*, 'this crescent among the host of heaven and earth was created'; in Sum. 'this crescent of the heaven-host [and] the earth-host,' *an-šar-ki-šar*). A deity named Kišsat appears in *WAI* ii. 60, line 32, as patron of a city which is doubtful, but which is possibly the Rabbi of line 30. If this means 'the city of the host,' it may be supposed that the 'host of heaven' was worshipped there.

5. **The god Aššur as the leader of the Assyrian host.**—It is to be noted that, in his abstract of Babylonian cosmology, although Damascius² gives the feminine principle preceding Ēa and Dauké as Kissarē, the masculine companion of the same is not, as would be expected from the Babylonian, Ansaros, but Assōros (Ἀσσωρος). Now, as the name of the god Aššur is most commonly written with the characters An-šar, there is but little doubt that the Assyrian name had influenced the pronunciation, and changed it, even in Babylonia. Whatever may have been the original root of Aššur, therefore, the Assyrians had applied the name of the god to the compound group An-šar, and the Babylonian god of the host (of heaven and earth) became the god of the armies of Assyria. He is represented, in the sculptures of Aššur-našir-apli (c. 880 B.C.), as a divine figure within the winged disk, flying in the air above the army, and drawing the bow against the foe.³ We have here, apparently, an Assyrian parallel to the

Hebrew 'Lord of Hosts, God of the armies of Israel.'

6. **Sar = kiššatu in the titles of the kings.**—As a title of the kings of Assyria, *šar kiššati*, 'king of the host' (of people or of nations), is fairly common. Adad-nirari I. (c. 1330 B.C.) bore it, and it seems to have been also adopted, more or less regularly, by his successors. In Babylonia Man-ištu-su (c. 2700 B.C.) calls himself *lugal kiš*, which, in its common acceptance, would be equivalent to *šar kiššati*; but *kiš* may stand for the city of Kiš, over which he ruled (though it is difficult to understand, in such a carefully-engraved text, how the determinative suffix could have been omitted). Perhaps the modesty of certain Babylonian kings did not permit of their using the *šar* which accompanies divine names. Among the later Babylonian rulers who used the title 'king of the host' (of men) were Nebuchadnezzar the Great and Cyrus. It is mainly the German Assyriologists who have discussed the meaning of the phrase *šar kiššati*. H. Winckler thought that it indicated 'king of a fixed definite state,' and was no mere title. C. P. Tiele was of opinion that it indicated 'something like world-lordship.' Leopold Messerschmidt suggested that *šar kiššati* and 'king of the four regions' signify the possession of two territories, and were not mere titles. F. Hommel holds similar views to the above. C. F. Löhmann-Haupt renders *šar kiššati* (sc. *niši*) as 'king of the totality of nations.' H. V. Hilprecht is of opinion that the title was first used by the kings of Kiš, and was due to word-play (see above).

To all appearance the Assyro-Babylonian idea of the host of heaven was that it consisted of all the divinities whom they regarded as dwelling in and beneath the sky; and the stars and heavenly bodies in general, identified, as they were, with the gods, were included therein. The host of the earth apparently included, in its widest sense, everything in the world which the god had created. In its narrowest sense, however, the latter stood either for all mankind or for the nations under the Babylonian or Assyrian kings, wherever they had made their rule effective.

Babylonian (T. G. PINCHES), p. 889.

Biblical.—See FESTIVALS AND FASTS (Hebrew).

SABBATH (Primitive).—1. **Introductory.**—The term 'sabbath,' in ordinary usage, is applied to a periodic rest-day, dedicated to a god and devoted to the exercises of religion. As such the term refers particularly to the Jewish *Shabbāth*, and its successor the Christian *Dies Dominica*, or the Lord's Day. The Muhammadan *al jum'ah*, 'the meeting' (for worship), which occurs on Friday, is derived from Christian and Jewish practice, but on this day labour is suspended only while services are being conducted at the mosque. In Buddhist lands the *Uposatha*, which usually falls on the day of the new moon, on the day of the full moon, and on the two days which are eighth from new and full moon, is marked by fasting and the cessation of secular activities. The *Uposatha* in its origin among the Aryans of ancient India could have owed nothing to Jewish

Christian.—See SUNDAY.

Muhammadan (G. MARGOLIOUTH), p. 893.

or Christian influence, and in its diffusion throughout S. E. Asia it appears to have been unaffected by the influence of Islam. The question naturally arises how far these sabbaths of civilized peoples find a parallel in savage and barbarian society at the present time.

The observance of rest-days forms a fairly common custom in the lower culture, if exception be made of the Australian, Melanesian, and American areas. But the rest-day among so-called primitive peoples is as a rule not periodic in character, nor is it necessarily consecrated to a deity and employed for religious services. Furthermore, it is usually marked by various regulations which can only be described as superstitions. All public gatherings may be discontinued, the house or the village closed against strangers, lights extinguished, songs, dances, and loud noises forbidden, and abstinence from food and sexual intercourse required. The day of rest then presents itself as a day of complete quiescence.

¹ *WAI* iv. 29, 47-51.

³ A. H. Layard, *Nineveh and its Remains*, London, 1849, ii. 448, *Monuments of Nineveh*, 1st ser., do. 1849, pl. 13, etc.

All these negative regulations find their clearest expression in the tabus which have been studied, first among the natives of Polynesia, then in some other parts of the aboriginal world, and finally among peoples of archaic civilization. Tabu, indeed, is a wide-spread institution, and evidence for its existence steadily accumulates with the progress of anthropological research.¹ A tabu may be defined as a negative regulation or prohibition which is supported by supernatural sanctions. The penalty meted out to the tabu-breaker is generally death or some physical ailment supposed to be inflicted by the offended spirits. In time the punishment for the violation of a tabu may come to be regarded as an important duty of the tribal god, whose chief concern is the maintenance of the customary moral rules.

Things or persons are tabued, primarily because they are considered mysterious, abnormal, dangerous—because they are felt to be potent for weal or woe in the life of man. Early psychology, refining these ideas and applying them to different classes of phenomena, produces the cognate notions of pollution and sanctity. The corpse is unclean; the shedder of human blood is likewise unclean; but the priest and king, who belong to a superior order of beings, are sacrosanct or holy. These characteristics are easily regarded as infectious, as capable of transmission, not only by physical contact, but also by sight and mere proximity. Hence prudence dictates a variety of precautions; the dangerous person or thing is removed to a safe distance, or is carefully isolated, or is subjected to a variety of insulating regulations. The entire community is interested in such proceedings, and on certain occasions may itself be placed under a rigid quarantine. When this happens, a period of abstinence, merging into quiescence, will be considered the surest means of avoiding spiritual dangers which threaten each and every member of the body politic. Moreover, when the impending danger is specifically attributed to the action of spirits or of gods, the observance of the rest-day readily develops into a method of propitiating, and even of honouring, the supernatural powers. The two conceptions of abstinence and propitiation are not, indeed, always sharply distinguishable in concrete cases, and with advancing culture they tend to become more and more closely conjoined.

It is not improbable that some of the communal regulations observed in connexion with primitive sabbaths have been modelled on the tabus observed by single persons and household groups at such critical seasons as birth, puberty, marriage, and death. Comparative studies have indicated how numerous are the prohibitions which attach to these occasions, and it is reasonable to suppose that, with the deepening sense of social solidarity, observances once confined to the individual only, or to his immediate connexions, would often pass over into rites performed by the community at large. However this may be, primitive sabbaths certainly present themselves as public ordinances which bear an obvious resemblance to the entire system of private tabus.

2. *Sabbaths at critical epochs.*—A survey of many rude societies shows that any time of special significance, inaugurating a new era or marking the transition from one state to another, any time of storm and stress, any epoch when untoward events have occurred or are expected to occur, may be invested with tabus designed to meet the emergency in the communal life and to ward off the threatened danger or disaster. Throughout Polynesia, in Indonesia, and in certain parts of S.E. Asia there exists, or until recently existed, an extensive body of communal rest-days, whose pur-

¹ See art. TABU.

pose appears to have been entirely prophylactic and protective. In that part of the world periods of abstinence and quiescence are imposed because of such unusual, and therefore critical, events as a conflagration, an epidemic sickness, or an earthquake; after a death; at the changes of the moon; at the end of the old year and the beginning of the new year; during a time devoted to the banning of ghosts and demons; and in connexion with such important undertakings as the commencement of a war, seed-planting and harvest, and the celebration of a solemn religious ceremony. The procedure in each case is much the same: the community subjects itself to a number of negative regulations, imposing idleness, fasting, and continence upon all its members.

These sabbaths at critical epochs formerly constituted a noteworthy feature of Polynesian life, especially in old Hawaii, where the institution of tabu perhaps reached its acme of development. Their observance varied according as they were common or strict. When a common season prevailed, the men were required only to abstain from their usual duties and to attend at the temple, where prayers were offered every morning and evening. During a period strictly tabued the regulations had a sterner character, and in consequence a general gloom and silence pervaded the whole district or island. Every fire and light was extinguished; canoes were not launched; no person bathed; and no one was to be seen out of doors, except those whose presence was required at the temple.¹ From another account we learn that any one found in a canoe on a tabu day incurred the death penalty, and that a like fate was reserved for the man who indulged in carnal pleasures or only made a noise at such a time.²

Communal tabus of the strict type that has been described were observed by the Hawaiian Islanders on a variety of occasions, particularly when a chief temple was consecrated and when the New Year's festival was celebrated. The Hawaiian religious system also included a remarkable approximation to the institution of a weekly sabbath. In every lunar month there were four tabu periods, dedicated severally to the four great gods of the native pantheon. The first was that of Ku, from the third to the sixth night; the second, that of Hui, at full moon, including the fourteenth and fifteenth nights; the third, that of Kaloa, on the twenty-fourth and twenty-fifth nights; and the fourth, that of Kane, on the twenty-seventh and twenty-eighth nights. During these tabu periods a devout king generally remained in the temple, busy with prayer and sacrifice; women were forbidden to enter canoes, and sexual intercourse was prohibited.³

Seasons of communal abstinence and quiescence were enforced in the Society and Marquesas Islands in connexion with the bonito fishing, and in New Zealand at the time of planting of the kumara, or sweet potato.⁴ In the Tonga Islands, when the sacrifice of firstfruits occurred, all work was forbidden, and even any one's appearance out of doors, unless for the purpose of the ceremony, was interdicted.⁵ The natives of Samoa, who possessed a remarkably complex pantheon of divinities with animal and vegetable attributes,

were obliged to suspend work on certain occasions devoted to their worship.¹ During December, when the god Ratu-mai-Mbulu was supposed to visit the Fiji Islands, a sabbatical period ensued.

'Throughout that moon it is *tabu* to beat the drum, to sound the conch-shell, to dance, to plant, to fight, or to sing at sea. . . . At the end of the month the priest sounds the consecrated shell: the people raise a great shout, carrying the good news from village to village, and pleasure and toil are again free to all.'²

The scanty records of aboriginal Polynesian society also contain some passing references to the observance of communal sabbaths on certain occasions when the social consciousness had been deeply moved by untoward and disastrous events.

In the island of Futuna 'they go so far as to *tapu* the day—e.g., to interdict all work in order to please the gods, or to avert the hurricanes.'³

In Hawaii a tabued period was declared during the sickness of a chief.⁴ In Samoa the death of a chief of high rank was followed by the suspension of all work in the settlement for a period of from ten to thirty days, until the funeral ceremonies were performed.⁵ On the island of Yap, one of the Carolines, two aged wizards, before whom all important questions come for decision, have the power of laying tabus on an entire village. The periods of seclusion have been known to last for six months. The critical epochs, when such interdicts are imposed, occur at a time of drought, famine, or sickness, after the death of a chief or famous man, and before a fishing expedition.

'In short, any great public event is thus celebrated, and, in fact, there is always a *tabu* in full swing somewhere or other, to the great disgust of the traders, who only see in these enforced holidays an excuse for idling, drunkenness, and debauchery.'⁶

Seasons of communal abstinence are not found in Australia, and only faint indications of them exist within the Melanesian area. In New Guinea a few instances have been noted, all within the British possessions there. On the other hand, the Indonesian tribes of Borneo, including the Kayans, the Sea Dayaks, and the Land Dayaks, keep many sabbaths in connexion with agricultural operations and other critical occasions. The Bornean regulations disclose a fairly consistent effort to adjust the length of the communal *tabu* to the importance of the event which it commemorates. Thus, house-building imposes a shorter season of abstinence than does planting or sowing; a single death in the village may require the cessation of activity by the inhabitants for only one day; but an epidemic sickness may necessitate a three days' rest, as among the Sea Dayaks, or even an eight days' rest, as among the Land Dayaks. The restrictions themselves appear to be substantially the same in all instances.

The inhabitants 'remain in their houses, in order to eat, drink, and sleep; but their eating must be moderate and often consists of nothing but rice and salt. . . . People under interdict may not bathe, touch fire, or employ themselves about their ordinary occupations.'⁷

To these prohibitions should be added that of sexual intercourse, a *tabu* specifically mentioned for one Bornean tribe,⁸ and probably found among others.

Communal sabbaths appear to be unknown to the nomadic hunting tribes which occupy the interior parts of Borneo and probably represent an aboriginal population. The custom under con-

sideration must therefore be an Indonesian importation into Borneo—a conclusion which is strengthened by the fact that similar observances prevail among the Indonesian inhabitants of the Nicobars, Bali, Nias, the Mentawi Islands, Formosa, and the Philippine Archipelago. A typical instance is afforded by the inhabitants of the Pagi Islands, which form the southern extension of the Mentawi group. These people worship the evil spirits which manifest their power in thunder and lightning, earthquakes, tornadoes, and floods. When confronted by some real or imaginary danger, they shut themselves up in their villages and exclude all strangers. During this period of separation from the world they may neither give nor receive anything, they must refrain from eating certain articles of food, and they may not engage in trade.¹ Another authority points out that, while all crises in the communal life of the natives are thus kept as periods of restriction, yet in some cases the rest-days have become joyous festivals and holidays.²

Assuming, with modern ethnographers, that the Indonesian peoples represent an admixture in various proportions of primitive Indian and S. Mongolian stocks, we need not be surprised to discover that in certain parts of S.E. Asia, and notably among the Tibeto-Burman tribes of Assam and Burma, communal sabbaths form a characteristic feature of the native culture. The word *genna*, which the Nagas of Manipur apply to anything tabued or forbidden, also signifies the village rest-days imposed in connexion with the rice cultivation, after the occurrence of unusual phenomena, such as earthquakes, eclipses of the sun or moon, and the appearance of comets, the destruction of a settlement by fire, and the outbreak of an epidemic sickness.³ Indeed, as an early writer remarks,

there is 'no end to the reasons on which a *kennie* must or may be declared, and as it consists of a general holiday when no work is done, this . . . Sabbath appears to be rather a popular institution.'⁴

The *genna* custom seems to have attained its most complicated and grotesque development among the Nagas, but it is found among other peoples of Assam and may be traced in various parts of Burma.

The close resemblances which exist between these sabbatical observances in S.E. Asia, Indonesia, and Polynesia lend probability to the hypothesis that we are here in the presence of an institution which has been gradually diffused from its Asiatic home over the Indian Archipelago and thence into the islands of the Pacific. But it will not do to infer that the conceptions which in this part of the world have generated the tabued day are therefore local and confined. On the contrary, they underlie a wide range of social phenomena.

There are few superstitions with a wider prevalence among the lower races than that which requires the suspension of ordinary occupations after a death. The prohibition of work at this time usually forms only one of a number of regulations, which also impose partial or complete abstinence from food and place a ban on loud talking, singing, and the wearing of ornaments and gay clothing. The explanation of the tabus must be sought partly in animistic conceptions: the survivors ought to avoid all conspicuous activity, if they would not attract the unwelcome attentions of the ghost. But a more common belief is that in the pollution of death—a belief which leads to

many regulations as to the proper treatment of a corpse, of undertakers, of the dead man's family and friends, and of mourners generally. The polluting power of death extends to everything in its presence; hence the obvious conclusion that little or nothing should be done by the survivors, at any rate till after the funeral. These tabus are often confined to the family or to the relatives of the dead. Where, however, the sense of social solidarity is strong, the notion of abstinence at so critical a season may be extended to the entire community.

An inquiry into the geographical diffusion of this superstition shows it to be not unknown in Polynesia, Micronesia, New Guinea, Borneo, and some other parts of the Oceanic area. It is discoverable in Assam, Burma, various parts of India, and Tibet. Africa from north to south offers many instances of communal tabus following a death and imposing abstinence from work. In the New World the Eskimo tribes from Greenland to Bering Strait possess the custom in a marked degree. It is also found among some of the Asiatic Eskimo, thus strengthening the argument for the transmission of cultural elements between N.W. America and N.E. Asia. Since these tabued days are observed in many cases by unrelated peoples, who, as far as our knowledge reaches, have never been in cultural contact, it may be concluded that the beliefs underlying the superstition have not been narrowly limited, but belong to the general stock of primitive ideas.

3. Sabbatarian aspects of religious festivals.—The fact that most religious festivals are observed as holidays, when men give up secular occupations and devote themselves to joyful worship and relaxation of all kinds, should not lead to the assumption that the remission of labour at such times has generally been dictated by practical and non-superstitious considerations. It has already been pointed out that, in some fairly rude communities, abstinence from work forms a part of the regular procedure for facing a crisis and the spiritual dangers supposed to characterize such an occasion. The rest is a measure of protection and propitiation, quite as much as the fasts, the sacrifices, and the prayers by which it may be attended. Where ideas of this nature prevail, all labour is tabued.

As we pass from savagery to barbarism and from animism to polytheism, the notion of tabu, at first vague and indeterminate, tends to differentiate into the twin concepts of impurity and holiness. To the primitive mind the sanctity which attaches to the priest or king, to such objects of special reverence as bull-roarers, idols, and altars, and also to certain places and shrines is sufficiently material to be transmissible and to be capable of infecting with its mysterious qualities whatever is done at a particular time. The notion of the transmissibility of holiness may seem of itself to furnish a sufficient reason for abstaining from ordinary occupations on a sacred day. In practice, however, this idea appears to mingle quite inextricably with the opposite though related conception that what is holy can be contaminated by contact with the secular and the profane. Furthermore, when holy days come to be definitely consecrated to deities, who at such times are believed to be present among their worshippers, it is easy to see how the belief arises that a god is pleased and flattered by the enforced idleness of his devotees. Abstinence from work then takes its place among other rites as a recognized way of expressing a proper reverence for the divinity; while, conversely, to labour on his holy day implies a disrespectful attitude towards him.

The consecration of a particular day to a divinity is a common feature of polytheistic cults. Had we

definite information concerning the origin and development of the great deities of the higher religions, it would probably appear that in most instances their connexion with particular days is a secondary rather than a primary formation. In other words, a period dedicated to a god, and observed by his worshippers with abstinence from labour, may once have been a season of tabu for other and quite different reasons. Some pertinent instances of tabued days which developed into holy days may be noted. Thus, in the comparatively well-developed religious system of the Hawaiians, the New Year's festival was consecrated to the god Lono; but the same festival in Fiji was not associated with any particular divinity. The four tabued periods in the Hawaiian lunar month, which were dedicated to the great gods of the native pantheon, must be considered to have had no original connexion with any divinity, for among the Dayak tribes of Borneo there are numerous tabus attaching to the phases of the moon and imposing communal abstinence. The Bontoc Igorot, a non-Christian folk of N. Luzon, observe a sabbath which occurs, on an average, about every ten days during the year. It is dedicated to Lumawig, the only god throughout the Bontoc culture area. Examination of the evidence indicates that this sabbath in its earlier form was not a periodic but an occasional observance, called forth only by particular emergencies in the communal life. The present form of the institution exhibits a tendency, doubtless directed by the Igorot priesthood, to calendarize seasons of tabu at definite and regular intervals. Its dedication to Lumawig is probably only a natural outcome of the pre-eminence assigned to that supreme god, who stands out in such bold relief against the crowd of ancestral spirits, good and bad, investing the Igorot world.¹ Some of the Dravidian peoples of India hold festivals in honour of their local deities, when labour is usually suspended. Mother Earth, an object of much devotion in Bengal, is worshipped at the end of the hot season. The goddess generally manifests herself as the benignant source of all things, but sometimes she brings disease and hence requires a propitiatory festival. At this time all ploughing, sowing, and other work cease, and Bengali widows refrain from eating cooked rice.² A similar sabbath in honour of Mother Earth is very strictly observed by the natives of the Malabar coast.³ Turning to W. Africa, we find on the Slave Coast an annual All Souls' festival kept as a period of abstinence. The festival is held in honour of Egungun, a god who is supposed to have arisen from the dead, and after whom a powerful secret society has been named. A similar ceremony, imposing a cessation of work for eight days, is observed by the Gold Coast tribes, who, however, have not dedicated it to a god. These instances, which do not exhaust the evidence, illustrate the passage of the tabued day into the god's sacred day.

4. Sabbatarian aspects of market-days.—Rest-days, more or less regular in occurrence and following at short intervals after periods of continuous labour, are frequently observed by primitive agriculturists. Sabbaths of this sort appear to be unknown among migratory hunting and fishing peoples or among nomadic pastoral tribes. A wandering hunter requires no regular day of rest, since his life passes in alternations of continuous labour, while following the chase, and of almost uninterrupted idleness after a successful hunt. For the herdsman there can be no relaxation of the diurnal duties, for the cattle must be driven to

¹ A. E. Jenks, *The Bontoc Igorot* (Ethnological Survey Publications), Manila, 1905, i. 205 ff.

² W. Crooke, *Natives of N. India*, London, 1907, p. 232.

³ C. K. Menon, in *Madras Government Museum Bulletin* v [1906] 104 f.

pasture every morning; they must be watched and watered; and at night they must be milked. Again, the shepherd, compared with the farmer, scarcely needs a regular rest-day; his occupation requires so little continuous exertion that he can pursue it all the year round without any injury to his health. A farmer, however, is benefited by a period of rest occurring more or less regularly; and, though agricultural pursuits are dependent upon the seasons and the weather, he is usually able to postpone his work for a brief period without serious loss. It might be argued, therefore, that the change from pastoral to agricultural life would itself be sufficient to call into existence the institution of periodic rest-days. It seems true, however, that the connexion of the rest-days with the farmer's pursuits is due to the obvious fact that a regular sabbath implies a settled life, a fairly well-developed form of social organization, and something approaching a calendar system.

The greater number of periodic rest-days observed by agricultural peoples in the lower stages of culture are associated with the institution of the market (*q.v.*). Days on which markets regularly take place are not infrequently characterized by sabbatarian regulations. Such market-days have a wide diffusion. Markets every fifth day are found in various parts of New Guinea, in Celebes, Sumatra, and Java, and among the natives of Tongking, Siam, and Burma. Throughout the central parts of Africa, from the British and German possessions in the east to those of the Portuguese and French in the west, there are numerous market-places where neighbouring communities meet regularly to exchange their productions. Usually every fourth day is a market-day and is observed by the cessation of ordinary occupations. A similar custom exists among the peoples on both banks of the lower Congo. The market is a well-developed institution among the semi-civilized negroes about the Gulf of Guinea. Here we find market-weeks varying from three to ten days in length. One week-day is usually reserved for the market and is often regarded as the appropriate time for abstaining from toilsome labour. Similar market-days, kept as general holidays, were known in ancient Mexico, Central America, Colombia, and Peru.

A market-day is necessarily more or less of a rest-day. Those who attend a market must abandon for the time being their usual occupations. It is also a holiday, affording opportunities for social intercourse, sports, and amusements of all sorts. Such seems to be the character of most of the market-days found in S.E. Asia and the adjacent islands, as well as in some parts of Africa. In the Congo region, however, the market-day sometimes bears an unlucky character, and a distinct tendency exists to attach various restrictions to it. In the Guinea region the market-day often (though not always) coincides with the general day of rest observed by an entire community. As such it may be consecrated to a god and rigorously observed. This extensive development of sabbatarian regulations appears to be confined to Africa.

5. Unlucky days as sabbaths.—The observance of unlucky days is a familiar phenomenon in primitive society and among peoples of archaic civilization. Under the attenuated form of a survival the superstition still lingers in civilized lands. The precautions which characterize these days—not to engage in various activities, not to eat specified foods, not to indulge in sexual intercourse, not to travel, not to buy or sell—illustrate clearly enough the general likeness between periods tabued and periods deemed unlucky.

A common source of the belief in unlucky days

is to be sought in the erroneous association of ideas. If an unfortunate event has taken place on a certain day, the notion easily arises that all actions performed on the recurrence of the day will have a similarly unfortunate issue. Among the Tshi of W. Africa, *e.g.*, the most unlucky day is the anniversary of the Saturday on which Osai Tutu was slain in ambush near Aeromanti in 1731.¹

The observation of natural phenomena often accounts for the unlucky character assigned to certain occasions. Many superstitions attach themselves particularly to the moon. Various primitive peoples have pronounced beliefs respecting the unfavourable influence of the moon on human activities. A partial or complete abstention from work may be required during the waning moon, as well as during the two or three days of the moon's invisibility at the end of the lunation. Eclipses of the moon are sometimes considered unlucky for work and are accompanied by fasting and other forms of abstinence. During such times of uncanny and terrifying darkness it is thought wise to avoid every sort of activity, as well as the consumption of food which may be tainted with mysterious evil. Thus, in S. India, when an eclipse occurs, the people retire to their houses and remain behind closed doors. No one would think of initiating any important work at this time.²

Among many peoples in the lower culture the time of new moon and full moon, much less commonly of each half moon, is a season of restriction and abstinence. The lunar day is sometimes a holy day dedicated to a god, who may be identified with the moon itself. Instances of this sort are to be correlated with the general course of religious development, involving, as it does, the emergence of polytheistic cults and the schematization of the ritual. But under more primitive conditions the lunar day is an unlucky (or tabued) day, quite independent of any association with a deity. The existence of these lunar tabus in Polynesia, Indonesia, and Africa, to say nothing of the survivals of them in Asiatic and European lands, throws light on the origin of the Hebrew Sabbath and its assumed Babylonian original.

The observance of unlucky days has undoubtedly retarded human progress. They hinder individual initiative and tend to prevent the undertaking of lengthy enterprises which may be interrupted by the recurrence of an unfavourable period. Their extensive development compels fitful, intermittent labour, rather than a steady and continuous occupation. They may even directly affect political and social conditions where, as in modern Ashanti and ancient Rome, assemblies could not be held, or courts of justice stand open, or armies engage the enemy, when the unlucky day came round. It is equally obvious that all such beliefs play into the hands of the astrologer and magician, and thus tend further to strengthen the chains with which superstition fetters its votaries.

LITERATURE.—The authorities are quoted in the article. For a much fuller discussion of the subject, together with an extensive bibliography, see Hutton Webster, *Rest Days*, New York, 1916, esp. chs. i.-v., ix. **HUTTON WEBSTER.**

SABBATH (Babylonian). — Notwithstanding that the Sabbath, as we know it, may be a specifically Hebrew institution, there is every probability that it had its origin in Babylonia. In that country, however, it was not the rest-day ending the seven-day week, owing to the Creator having rested from His work on that day (Gn 2^d), but was due to the festival of the full moon on the 15th

¹ A. B. Ellis, *The Tshi-speaking Peoples of the Gold Coast*, London, 1887, p. 219 f.

² E. Thurston, *Omens and Superstitions of S. India*, London, 1912, p. 44.

day of the month, when the earth's satellite 'rested' for a while at the height of his brilliancy.

1. The Akkadian (Semitic Babylonian) word for 'Sabbath' and its origin.—The word by which the Babylonian Sabbath is designated is the somewhat rare term *šapattu*^m or *sabattu*^m, long known to Assyriologists, and early recognized as the probable original of the Hebrew *sabbath*. The second (labial) radical, however, is apparently not *b*, but *b* or *p*,¹ and the third (the dental) is doubled. The word originated in the Sumerian *sa-bat*, a compound meaning 'mid-rest' or 'heart-rest' (*šag*, 'heart'; *bat*, 'to reach the end,' 'to die'). This the Semitic Babylonians paraphrased as *ám nūh libbi*, 'day of rest of the heart' ('day of mid-repose'), in *WAI* II. pl. 32, 16*ab*. That this was not the designation of the last day of the seven-day week, however, is shown by the fragment published in *WAI* III. pl. 56, no. 4, l. 27, completed by the duplicate in *PSBA* xxvi. [1904] pl., and pp. 51–56, where it is explained as the 15th day of the month, when the moon was more or less at the full.

2. The moon's 'mid-rest' in the creation-story.

—The reason of the adoption of the 15th day of the month as the moon's sabbath seems to be clearly stated in the fifth tablet of the Semitic Story of the Creation,² notwithstanding that the text is unfortunately imperfect, the greater part of an essential character being broken away. The justification for the restoration of the damaged word as *šapattu*, however, is shown by the context. The passage refers to Merodach's ordering of the heavenly bodies:

'Nannaru (the moon) he caused to shine, ruling the night: He set him then as a creature of the night, to make known the days (i.e. the festivals).

Monthly, unfailing, he provided him with a tiara.

At the beginning of the month then, appearing in the land, The horns shine forth to make known the seasons.

'On the 7th day the tiara perfecting,

A sabbath (*šapattu*) shalt thou then encounter, mid-month (?)ly.'

The trace of the first character of *šapattu* lends itself to either of the two signs having the phonetic value of *ša*.

3. The Babylonian Sabbath and the seven-day week.—This is the week with which we are so well acquainted, and which Christians have adopted from the Hebrews, merely changing the day of rest from the seventh to the first day. Here, however, *sa-bat* and *šapattu*, its derivative, were not applied to the seventh day by the Babylonians, but another word was used which they evidently considered more appropriate, namely *ā-hul-gallum*, from the Sumerian *ā-hul-gala*, which they translated by *āmu limnu*, 'evil day.' This was the 7th, 14th, 21st, and 28th days of every month, so that, as the Babylonian months had 29 or 30 days each, every month consisted of three weeks of seven days each, and one of nine or ten days, according to the length of the month. Two reasons may be suggested for the adoption of this seven-day period: (1) the seven (divine) planetary bodies, and (2) the fact that the period of a lunation may be divided, roughly, into four sections of seven days each.³ The following is the paragraph given by the hemerologies for the observance of the seventh day of the month as a sabbath:

'The 7th day is a holy-day (*nubattu*^m) of Merodach and Zēr-pantum—an acceptable day, an evil day (*ā-hul-gallum*^m). The shepherd of the great tribes (*nīšī rabātī*)⁴ shall not eat salted meat cooked over the embers, he shall not change his

body-clothing, he shall not be clothed in white, he shall not offer a sacrifice. The king shall not ride in a chariot, he shall not talk victoriously.⁵ The seer shall not make declaration with regard to a sacred place. A physician shall not touch a sick man. It is not suitable to make a wish.'

To this the hemerology for the intercalary Elul adds:

'In the night the king shall bring his offering into the presence of Merodach and Ištar, he shall make the sacrifice. The raising of his hand (in prayer) is acceptable with the god.'

The entries for the other weekly *dies nefasti* are the same, except that the 14th was dedicated to Nin-lila and Nergal, to whom the king brought offerings and sacrifices at night-time; the 21st was the day of votive offering to Sin (the moon-god) and Šamaš (the sun-god), when, at dawn, the king made his offering to Šamaš and 'the Lady of the lands,' to Sin and Maḥ, Merodach's spouse, whilst the 28th was the day of Ea (god of the deep and of unfathomable wisdom) and the 'rest-day' (Sumerian *ā-naam*, Semitic *bubbulum*) of Nergal, the god of war, disease, and death. On the 28th the king made his offerings to Ea and Maḥ.

The contract-tablets seem to indicate that trading and mercantile transactions, including those requiring legal advice and composition, were continued on the Babylonian 'evil,' 'unlucky,' or 'unsuitable' days just as on any other week-day, though oracles or omens may have been consulted beforehand. The directions given in the hemerologies, therefore, refer only to the personages and officials named—the high-priest (who apparently occupied a position comparable with that of a bishop), the king, the seer, and the physician (all of them, probably, in what the Babylonians would have regarded as 'holy orders'). As the next phrase (that concerning the making of a wish) is in general terms, this alone seems to refer to the ordinary man. At nightfall the ban was apparently removed, for sacrifices and prayer were then allowed to be offered.

Of special interest in connexion with the seven-day week is the 19th⁶ day of the month, which was a 'week of weeks' from the first day of the preceding month. This, like the others, was an *ā-hul-gallum*^m; but it had a special designation, namely *ām ibbā*, explained as *āmu āggati*, 'day of anger' (*ib* or *iba* in Sumerian means 'anger'; hence this rendering). It may therefore be supposed that the prohibitions of the ordinary weekly Sabbath were strengthened on that of the week of weeks. This great day was dedicated to Gula, or Bau, the goddess of healing, and the evening sacrifices were for En-urta (formerly read Ninip), who, in Babylonian mythology, is associated with her.

4. The weekly Sabbath in the inscriptions.—This is revealed only, and that dimly, in certain lists of offerings found at Warka (the Erech of Gn 10¹⁰). These tablets, which are of late date, are best represented by the series in A. T. Clay, 'Babylonian Texts.'⁷ The texts which they bear are in tabular form, and deal with sheep for slaughter and sacrifice. On the 7th, 14th, 21st, and 28th days of the months to which the tablets refer a sacrificial kid (or lamb) was to be offered, though the dates are not always constant. Thus in Chislev of the 5th year of Cyrus, when the month had only 29 days, the four sacrificial days are as indicated here; in Tebet (also 29 days) of the accession-year of Cambyses the first three dates only occur, that of the 28th being omitted; in Tebet (30 days) of the 1st year of Cambyses the sacrificial kid of the 6th and that of the 13th are recorded, two kids for undicated dates being set down for the latter part of the month; in Tebet

¹ Probably *sabath* would be more correct than *sabbath*. Another example of *dagesh lene* transcribed as *dagesh forte* is the name Zerubbabel, the Babylonian Zērū-Bābīlī, 'seed of Babel.'

² Lines 12–18.

³ See the 6th line of the translation in § 2, above.

⁴ Probably the old States of Babylonia, such as Sumer, Akkad, Kīš, Larsa, Ešak Niffer, etc.

⁵ *Šaltis*, probably really meaning 'with pride in his exploits,' implying also that he was not to take part in affairs of State.

⁶ Often written *ā-ni-lala-gi*, 'day 20 less 1.'

⁷ *Fale Oriental Series*, vol. i. pp. 75–81 and plates 86–88.

(29 days) of the 3rd year of Cambyses the dates are the 6th, 14th, 21st, and 27th; and in Nisan (30 days) of the 5th and 6th years of Cambyses the four dates are in both years normal. This seems to indicate that the day was not observed very strictly, but the varying dates for the sacrifices may be due simply to the necessity of performing the sacrifices in the early morning or in the evening,¹ while it was still dark. The names of the gods to whom the offerings were made are in no case given, but the chief deities worshipped at Erech were Anu and Ištar. The 'week of weeks' is not noticed in these lists of offerings.²

In one other respect the Erech tablets confirm, as far as they go, the directions of the hemerologies—namely, that these sacrifices were made by members of the priestly orders, the animals having been sent for the purpose by the temple herdsman in whose charge they were.

T. G. PINCHES.

SABBATH (Jewish).—1. A sign.—It is still far from clear whether or not the Hebrew Sabbath was a derivative from Babylonia. But, whatever its origin, it became one of the most specifically Hebraic institutions. So much was this the case that the day was regarded as a symbol of the close relationship between Israel and God. Ezekiel, reviewing the history of Israel from the day when the people was chosen (20⁵), presents the message: 'Hallow my sabbaths,' 'a sign between me and them, that they might know that I am the Lord that sanctify them' (20^{20, 12}). The same conception of the Sabbath as a sign of the covenant reappears in Ex 31^{13, 17}. Israel hallows the Sabbath as a sign of the people's sanctification by God. In part the sign implies the marking off of Israel from the rest of the world—a conception which finds expression in the *Book of Jubilees*,³ in the early Midrash, and in the liturgy of the Synagogue. But more prominently the distinction is less of Israel than of the day. 'And the Creator of all things blessed this day which he had created for a blessing and a sanctification and a glory above all days.'⁴ Hence in the liturgy the commonest epithet applied to the Sabbath is 'holy.' The two ideas are closely interwoven. The observance of the Sabbath constitutes a sign at once of Israel's and of God's fidelity to the covenant. In the epigrammatic phrase of a popular Sabbath table-hymn composed by Abraham Ibn Ezra (12th cent.), 'I keep the Sabbath, God keeps me: it is an eternal sign between Him and me.' In part, again, the sign was associated with the Creation (as in the Decalogue in Ex 31¹⁷ and in Gn 2³); thus the observance of the Sabbath gives evidence of a belief in 'Him who spake and the world was.'⁵ And in part the sign was historical. This is shown in the association of the Sabbath with the experiences of Israel in Egypt.⁶ Perhaps nothing in the Hebrew Bible

is more beautiful than the use made of Israel's sufferings in Egypt. They are to be motive for kindness to the stranger (Lv 19³⁴), and are to prompt the Israelite to give rest to his servants on the Sabbath (see the Decalogue in Dt 5¹⁵).

2. Sanctification.—All these aspects of the Sabbath—as a memorial of God's power as Creator, of His love as Redeemer from Egyptian bondage, and of the choice of Israel—are summed up in the liturgical *Kiddush*, or sanctification, prescribed for use in the home (and also in the synagogue) on the Friday eve. After quoting Gn 1^{31–28}, the *Kiddush* runs thus:

'Blessed art thou, O Lord our God, King of the universe, who createst the fruit of the vine.

Blessed art thou, O Lord our God, King of the universe, who hast sanctified us by thy commandments and hast taken pleasure in us, and in love and favour hast given us thy holy Sabbath as an inheritance, a memorial of the creation—that day being also the first of the holy convocations, in remembrance of the departure from Egypt. For thou hast chosen us and sanctified us above all nations, and in love and favour hast given us thy holy Sabbath as an inheritance. Blessed art thou, O Lord, who hallowest the Sabbath.

Blessed art thou, O Lord our God, King of the universe, who bringest forth bread from the earth.'¹

3. Eschatology.—The sign is also eschatological. In *Jubilees* the identity between heaven and earth with regard to the Sabbath observance is asserted. The same idea is preserved in the Talmud. The earthly Sabbath points forward to the Sabbath in another world, 'a world which is entirely Sabbath.'² So with the liturgy. In the grace after meals for the Sabbath occurs this sentence: 'May the All-merciful let us inherit the day which shall be wholly a Sabbath and rest in the life everlasting.'³ And, just as this thought worked forwards to the world to come, so it worked backwards to the patriarchal age. In the *Apocalypse of Baruch* we read:

'The unwritten law was named amongst them [Abraham, Isaac, and Jacob], and the works of the commandments were then fulfilled, and belief in the coming judgment was then generated, and hope of the world that was to be renewed was then built up, and the promise of the life that should come hereafter was implanted.'

Jubilees,⁴ too, is animated with the same desire to include those who lived before the Law in the observance of its behests. The same thought is found in the Talmud.⁵ Again, it will be best to quote a passage from the liturgy, which (like the passage cited above) sums up so much of Jewish thought regarding the Sabbath that it will save much exposition. The quotation that follows is from the Sabbath afternoon service.

'Thou art One and thy name is One, and who is like thy people Israel, an unique nation on the earth? Glorious greatness and a crown of salvation, even the day of rest and holiness, thou hast given unto thy people: Abraham was glad, Isaac rejoiced, Jacob and his sons rested thereon: a rest vouchsafed in generous love, a true and faithful rest, a rest in peace and tranquillity, in quietude and safety, a perfect rest wherein thou delightest. Let thy children perceive and know that this their rest is from thee, and by their rest may they hallow thy name.

Our God and God of our fathers, accept our rest; sanctify us by thy commandments, and grant our portion in thy Law; satisfy us with thy goodness, and gladden us with thy salvation; purify our hearts to serve thee in truth; and in thy love and favour, O Lord our God, let us inherit thy holy Sabbath; and may Israel, who hallow thy name, rest thereon. Blessed art thou, O Lord, who hallowest the Sabbath.'⁶

4. Rest.—On the physical side, the predominant feature of the Sabbath was naturally, as the name implies, cessation from labour. The Pentateuch does not define the term 'labour,' but there are incidental references to the prohibition of gathering sticks (Nu 15³²), kindling fire (Ex 35³), cooking and baking (16²³), travelling (16²⁹, but cf. 2 K 4²³), bearing burdens, and conducting business (Am 8³).

¹ As with the Jews, the day in Babylonia began in the evening at sunset.

² In the Calendar of Lucky and Unlucky days, referred to in *ERE* iii. 76b (§ 9), of which the original is published in *WAI* v. plates 43 and 49, there are no recognizable sabbaths—any day of the month might be lucky or unlucky, and suitable or unsuitable for work. Thus the 7th of Sivan has the word *martum*, 'bitterness,' the 14th and 19th are stated to be 'unlucky,' the 21st has the recommendation not to 'ride in a boat' (or 'ship'), and the 28th was 'unlucky.' Among the more noteworthy entries are 'fortunate in lawsuit' for Nisan the 14th, 'lucky for the king' for the 19th and 21st of Tammuz, whilst on the 7th of Ab 'lion-attacks' (were to be feared), and the 14th, 19th, 21st, and 28th were simply 'unlucky.' On the 28th of Chislew one ought not to take a wife, 'it is not prosperous' (*Sum. nu-sia*).

⁶ *Ib.* 104a.

Jer 17², Neh 13¹⁵). The Mishnāh¹ defines the main 39 categories of forbidden work; to these were added others which, though not included in these categories, were liable to result in a breach of the Sabbath laws.² The criticism of these Sabbath laws is too familiar to need discussion; undoubtedly there was an excessive development of legalistic minutiae, but it is not so certain that the consequence was a sacrifice of spirit to letter.³ It must here suffice to indicate that no Sabbatical regulation was, in Rabbinic law, permitted to stand in the way of saving life in cases of illness or danger. The Law, it was held, was given that man might *live* by it (Lv 18⁵); hence the Sabbath must not be pleaded as a reason for permitting man to *die* thereon.⁴ Perhaps the most perverse attack on the Sabbath as a day of rest is found in some of the Greek and Latin authors.⁵ This type of attack culminates in Seneca. To Seneca the Jewish Sabbath is a worthless institution:

'To remain idle every seventh day is to lose a seventh part of life, while many pressing interests suffer by this idleness.'⁶

The difficulty of maintaining a genuine Sabbatical rest, while making the allowances necessary for life, has always been felt. In modern times economical reasons have led to many new anxieties, for which a solution has not yet been found. To revert to the older difficulties, the Maccabees, after experiencing the danger of refusing to fight on the Sabbath against foes who took advantage of the refusal, discriminated between offensive and defensive warfare. Josephus shows that mean advantage was taken by Pompey of this discrimination:

'Pompey utilized the seventh days, on which the Jews abstain from all sorts of work for religious worship, and raised his camp then, but restrained his soldiers from fighting on those days; for the Jews only acted on the defensive on Sabbath-days.'⁷

On the whole, the Rabbinic laws as to the permissible and the forbidden succeeded in avoiding the two extremes. This is seen when the Rabbinic system is compared with that of the Karaites (*q.v.*). Anan, the founder of the sect, insisted on sitting in darkness on Friday nights (Ex 35²), and forbade his adherents to leave the house on Sabbath, except to attend public worship (16²⁹). Similarly with the Samaritans and Sadducees.⁸ Rabbinic custom permitted movement within limits, and also not merely allowed but ordained that lights be kindled before sunset. Great relief was obtained also by employing (under rigid restrictions, however) non-Jewish labour. The legalistic attitude led to certain 'legal fictions'; but on the whole it had the advantage that, by reducing the exceptions to code, it effected the maintenance of the general principle of rest.⁹

5. Joyousness.—The idea that the Sabbath was felt as a burden has no foundation whatever. Once for all this misconception was dispelled by S. Schechter in his *Studies in Judaism*.¹⁰ The Sabbath was given in love; it was a 'good gift'; it was a day of happiness or delight.

'Sanctify or honour the Sabbath by choice meals, beautiful garments; delight your soul with pleasure and I will reward you (for this very pleasure)'¹¹—an idea based on Is 58^{13f}.

¹¹ *Tosefta Berakhoth*, iii. 7.

¹² Midrash to Ps 92.

The liturgy speaks of the Sabbath as a hallowed and blessed day which 'in holiness giveth rest unto a people sated with delights.'¹ The three Sabbath meals were a religious duty.² It was a day of happiness in the home, inaugurated by a sanctification and closed by a ceremony (*habdalah*). This happiness was at once material and spiritual. The mystical came in to help. Typified as the Bride, the Sabbath was greeted with a wonderful chorus of welcome.³ Husband praised wife by reciting the eulogy of the virtuous wife (Pr 31¹⁰⁻³¹), and invoked a blessing on his children. Heine's poem on the Princess Sabbath conveys some of the charm which pervaded the Sabbath as a result of the idealization which became the source of a large number of remarkably beautiful home-rites. Nor did the charm end with the home in which it began.

6. Worship.—Domestic joys were supplemented by special synagogue services, by the reading of the Bible and the religious literature. The majority of Jewish congregations retain the Babylonian custom in accordance with which the whole of the Pentateuch is read through once a year. In a few cases the older Palestine usage (of reading the Pentateuch in a triennial cycle) has been restored. Most of the liberal congregations, however, have introduced lectionaries. There are also regular readings from the Prophets (*haftarah*), while special prayers and Psalms are naturally introduced. Discourses, anciently in the houses of study, now more often in the synagogues, are also a regular feature of the Sabbath services.⁴ Seneca's misconception of the Sabbath as a day of idleness is due to his ignorance of the use made of the day as opportunity alike for study, prayer, and recreation. This combination of the austerity of rest with the joyousness of active spiritual and domestic gladness finds a unique expression in the hymns sung at the table on the Friday night. Space must be found for one of these, for, like the quotations already made, it throws a clear light on the Jewish feeling regarding the Sabbath.

'This day is for Israel light and rejoicing,

A Sabbath of rest.

Thou bade'st us standing assembled at Sinai

That all the years through we should keep Thy behest—

To set out a table full-laden, to honour

The Sabbath of rest.

'This day is for Israel light and rejoicing,

A Sabbath of rest.

Treasure of heart for the broken people,

Gift of new soul for the souls distressed,

Soother of sighs for the prisoned spirit—

The Sabbath of rest.

'This day is for Israel light and rejoicing,

A Sabbath of rest.

When the work of the worlds in their wonder was finished,

Thou madest this day to be holy and blest,

And those heavy-laden found safety and stillness,

A Sabbath of rest.

'This day is for Israel light and rejoicing,

A Sabbath of rest.

If I keep Thy command I inherit a kingdom,

If I treasure the Sabbath I bring Thee the best—

The noblest of offerings, the sweetest of incense—

A Sabbath of rest.

'This day is for Israel light and rejoicing,

A Sabbath of rest.

Restore us our shrine—O remember our ruin

And save now and comfort the sorely oppressed

Now sitting at Sabbath, all singing and praising

The Sabbath of rest.

'This day is for Israel light and rejoicing,

A Sabbath of rest.'⁵

⁴ On the Sabbath see I. Elbogen, *Der jüdische Gottesdienst*, Leipzig, 1913, pp. 107 f., 155 f.

⁵ For Hebrew text see *Authorised Daily Prayer Book*, p. colxix. The English version (p. colxx f.) is by Mrs. R. N. Salaman.

The most remarkable phrase in this hymn is contained in the second verse, which introduces, with lyric pathos, the idea of the over-soul, which resides in man during the Sabbath.¹ The hymn is probably of the 13th century.²

7. Modern conditions.—Reference has been made to the problem presented by modern economic pressure. Myriads of Jews continue to observe the Saturday Sabbath, despite all difficulties and commercial losses. Many, however, are induced, either by laxity or by the exigencies of labour conditions, to work on Saturday. There has not been any serious movement to transfer the Sabbath from Saturday to Sunday. The question was raised in the early part of the 19th cent., when the liberal movement was organized.³ It was, however, soon realized that it would not be possible to retain the Sabbath atmosphere if the day were violently changed, unless the alteration were effected with a unanimity which obviously could not be attained. The fact that the Jewish Sabbath begins on Friday evening has been of considerable value in conserving the Sabbath spirit even when the Saturday rest was no longer observed. The home-rites and sentiments of the Sabbath have been thereby retained in cases where work is done on the following morning. In many congregations in America and on the Continent there are special Friday night services in the synagogue. In London the Jewish Liberal Synagogue holds its chief (though not its only) Sabbath service on Saturday afternoon. These methods have not solved the problem, but they have mitigated it. Throughout modern times the spiritual elements of the Sabbath have been recognized as more or less independent of the strict cessation of labour. In various parts of America special Sunday services are held, but these are not treated as Sabbath services. Holdheim, who in 1846 advocated the transference of the Jewish Sabbath from the seventh to the first day of the week, remained without serious following. Besides the economic problem, liturgical questions have for the past century greatly exercised directors of the synagogues.⁴ Prominent among these questions has been the employment of instrumental music on the Sabbath. The first organ was introduced in a Berlin synagogue in 1815; in 1840 an organ was for the first time set up in America; the invention was also introduced in London in 1859. Organs are still extremely rare in English synagogues, though they are common on the Continent and in America. At first the objection to instrumental music was not exclusively Sabbatical. Music ceased at Jewish worship after the destruction of the Temple, as a token of mourning. Gradually, however, it crept into use again, especially at weddings, and nowadays orthodox synagogues (which refuse to build organs as permanent structures) often admit instrumental music at weddings and at some other functions on week-days. The reason for the objection is partly that the innovation has the appearance of imitation from Church usages. Objection was long felt to mixed choirs,⁵ on other grounds, but this objection no longer holds uniformly with orthodox congregations. Nowadays, with regard to instrumental music, the strongest opposition is due to Sabbatical considerations, for playing on an instrument is held to be a breach of the Sabbath rest.⁶ But neither economic nor liturgical problems have destroyed the essential import of the Sabbath. For, all difficulties notwithstanding, the Sabbath

retains some of its beneficent influence as a day of spiritual and domestic tranquillity and happiness.

LITERATURE.—See the works quoted throughout.

I. ABRAHAMAS.

SABBATH (Muhammadan).—Among the Muhammadans Friday, called by them *yaum ul-jum'ah*, 'day of assembly,' takes the place of the Christian Sunday and the Jewish Sabbath. They are not, indeed, enjoined to treat it as a day of complete rest from work or business, but its special sanctity is emphatically marked by the particular form of mid-day service that is used on it, and by the strict rule of attendance at the mosque, incumbent on all male adults among freemen,¹ in order to be present at its recital.

The outstanding feature of this service is the *khutbah*, or sermon, which is ordered to precede the common *ṣalāt*, or prayer, of two *rak'ahs*, or prostrations, though it is, by way of performing a specially meritorious act, itself usually preceded by another *ṣalāt* of two *rak'ahs*. From Qur'an, lxii., it follows that the practice of holding a service of special obligation on Fridays dates from the time of Muhammad himself, or more accurately from the time of his stay at Medina; but there were naturally developments and diversities of practice at successive periods in later times. There is thus a difference of opinion among the ritual sects with regard to the number of Muslims that have to be present in order to make a *jum'ah* (the Friday mid-day prayer being itself so called) valid, one of the schools maintaining that the attendance must number at least 40, whilst others declare that it is only necessary for the service to be held in a community of some size. Many divines, again, hold that, except in cases of necessity, the Friday service should not be held in more than one mosque in the same place, whilst others would not subject the faithful to such a limitation. In the time of Muhammad the *khutbah*, of course, consisted of the Prophet's own utterances or revelations, which may be presumed to have been later incorporated in the Qur'an, but the later *khutbah*, which was in subsequent times (as it is now) preceded by the *ad'ān* (or cry of the *mu'addin*: 'Allāhu akbar, etc., 'God is great,' etc.), is naturally of a much less weighty order and of varying quality. The rules laid down are that it must be in Arabic, and must include prayers for Muhammad, for the Companions, and, in one form or another, for the sovereign, but its composition and contents are, for the rest, left to the ability and discretion of the preacher.

The only passage in the Qur'an in which the *yaum ul-jum'ah* is referred to runs as follows:

'O ye, who believe! when ye are summoned to prayer on the day of assembly, haste to the commemoration of God, and quit merchandise. . . . And when the prayer is ended, then disperse yourselves abroad and go in quest of the bounty of God. . . . But when they get a sight of traffic or sport, they disperse after it, and leave thee alone.'²

According to the plain sense (idealized, however, by a specially pious mode of interpretation) of the passage, traffic or business is prohibited only at prayer time, and not after or before the *ṣalāt*; and we are incidentally presented with a realistic picture of the Prophet being sometimes left standing alone in the *minbar*, or pulpit, of his *masjid* when his Medinese followers happened to catch sight of sport or a trading caravan. Tradition has, however, been busy providing embellishments and divine sanction of a particularly flattering kind for

⁵ J.E. iv. 41.

⁶ Maimonides' Code, *Shabbath*, xxiii.; *Orah Hayyim*, 388, 389.

¹ This limitation of the rule reminds one of the Talmudic declaration that women, slaves, and boys under the age of thirteen are exempt from the duty of reciting the *Shema* and of putting on phylacteries (*Mishnāh*, *Berākhoth*, iii. 3). It should in addition be observed that Muhammadan law also exempts persons who are not legally resident in a locality from attendance at the mosque on Friday.

² lxii. 9-11.

Muhammad's day of assembly. In the *Mishkāt ul-Maṣābiḥ* (see Literature below) the excellences of the day are, on the Prophet's authority, summed up as follows:

'The best day on which the sun appears is Friday; for on this day Adam was created; on this day Adam was taken into paradise, and turned out from it also on this day (this hardly a recommendation, however!); and the day of resurrection will not be on any day but Friday.'¹

Again:

'When Friday comes, angels stand at the door of the Masjid, and write the names of all those who come first,' etc.²

It is also declared that there is a certain hour on Friday on which any Muslim asking a favour of God will receive it, and that, on the other hand, Muhammad prayed that God may 'put a seal' on the heart of any Muslim who, through negligence, omits the prayers of three Fridays.

The prosaic fact seems to be that Friday was used as a day of assembly of some kind long before the Prophet's time, and the name of the day itself is reported to have been given it by one of Muhammad's ancestors. It is, indeed, conceivable, and may even be regarded as probable, that, if the Prophet had succeeded in attaching a great number of Jews to his cause, he might have made the Sabbath the sacred weekly day for his followers. But, the trend of events having made this impossible, and the Christian Sunday being *per se* excluded from his scheme of ordinances, he naturally settled instead on the old day of assembly, and the name *al-jum'ah* thus superseded the former general designation *al-arḥabah* (Talmudic ארבעה), which stamped the day as merely the eve or preparation of the day following. The attitude taken up by Muhammad towards the Sabbath itself may be regarded as clearly shown in Qur'an, xvi. 125, where it is declared that 'the Sabbath was only ordained for those who differed about it,' which is by a tradition explained to mean that Moses himself had wished to set aside Friday as the sacred day, but that the Jews insisted on keeping the Sabbath-day, because on that day God rested from the work of creation, 'for which reason they were commanded to keep the day they had chosen in the strictest manner.'³ 'The people of the Sabbath'⁴ must, indeed, adhere strictly to the Sabbath order,⁵ but for the followers of the Prophet of Allāh the truly excellent day, namely Friday, has been ordained as the great day of the week.

Goldziher⁶ suggests that Parsi influence may have had its share in the rejection of the Jewish Sabbath by Muhammad. For the Parsis, who say that the world was created in six periods of time, have a festival for each of these periods, but none for the conclusion of creation. But, if (as, indeed, seems legitimate) influence of this kind be once admitted, there seems no reason why the early Babylonian idea which attaches the character of a *dies nefastus* to what may be regarded as the prototype of the Jewish Sabbath should not in some way have been perpetuated in Arabia, where, as is well attested, the Babylonian and Assyrian sphere of authority had been extensive. With regard, however, to the further suggestion that Muhammad had an objection to speaking of God as resting on the Sabbath-day, Goldziher himself⁷ draws attention to the fact that the phrase 'he then [i.e. after the work of creation] mounted the throne,' used in Qur'an, vii. 52, x. 3, xxxii. 3, may be taken to show that the Prophet had no particular objection to the idea of God resting; though, on the other hand, the absence of exhaustion at the end of creation is clearly indicated in Qur'an, i. 14, 37. In this respect, indeed, there need not have been

any radical difference between the Prophet and Rabbinic exegesis, which also emphatically rejects the idea of exhaustion and explains the word נח in Ex 20¹¹ to mean that rest was granted to the world that had been called into being.¹

LITERATURE.—Besides the Qur'an and some parallels from Jewish sources already indicated: *Mishkāt ul-Maṣābiḥ*, originally compiled under the title *Maṣābiḥ ul-Sunnah* by Husain al-Baghawi († A.H. 510 or 516), Eng. tr. by A. N. Matthews, 2 vols., Calcutta, 1809-10; G. Sale, *The Koran*, London, 1734 and subsequent edd., 'Preliminary Discourse' and notes in text; I. Goldziher, 'Die Sabbathinstitution im Islam,' in *Gedenkbuch zur Erinnerung an David Kaufmann*, ed. M. Brann and F. Rosenthal, Breslau, 1900, pp. 86-105; A. 'Djum'a,' where a fuller bibliography will also be found. G. MARGOLIOUTH.

SABBATICAL YEAR.—See FESTIVALS AND FASTS (Hebrew).

SABELLIANISM.—See MONARCHIANISM.

SABIANS.—See ELKESAITES, HARRANIANS, MANDEANS.

SACS.—See ALGONQUINS (Prairie Tribes).

SACERDOTALISM.—The word 'sacerdotalism' does not appear in the English language till the middle of the 19th century. It was called into existence, it would seem, by the controversies and the revival of theological studies which resulted from the Oxford Movement (*q.v.*). It has been used in two senses, a good and a bad. In the first place, it is used to denote the existence in the Christian Church of a ministry consisting of certain persons set apart or ordained by the authority of the Church to minister the things of God to their fellow-men, and to be the exclusive instruments in the divine covenant of sacramental graces. On the other hand, it is used in the sense of an assumption and claim on the part of the clergy to an undue power and authority over the laity.²

The existence of a priesthood is found in religion from the very earliest period of the history of mankind, and there is practically no ancient form of religion in which the priest does not appear in some aspect or other. The priest is the individual who is in some way inspired or illuminated by the divine influence and is thereby enabled to act as the interpreter of God and the will of God to his fellow-men. He it is, moreover, who on behalf of his fellow-men presents their offerings to God in such a way and with such forms and rituals as will render them acceptable to God. Thus he is in a sense the guide and the means by which his fellows find access or approach to God, and as such is naturally their adviser and teacher in spiritual things (see artt. PRIEST, PRIESTHOOD).

The conception of a ministry endowed with certain sacerdotal or priestly powers is found very early in the history of the Christian Church. Christianity was the fulfilment of Judaism, and in Judaism there was an elaborate priestly system and system of sacrifice. Christianity did not claim to replace Judaism, but rather to fulfil it. The sacrifices of the old dispensation, the functions of the priests, were good and efficacious until the old dispensation was fulfilled and made perfect in the new. The priest and priesthood of the old dispensation were necessary until they were replaced by the perfect priesthood of Christ, and the old sacrifices were consummated in the one perfect sacrifice of Christ—a sacrifice so complete and perfect and efficacious for all time for the sins of all mankind, past, present, and future, that it need

never, nor can it ever, be repeated. Christ is the perfect priest offering the one perfect sacrifice of Himself to the Eternal Father, the intercessor and advocate of all the race of men, the means of perfect and complete access to God.

But Christianity is not merely the fulfilment of Judaism; it is much more. It is the fulfilment and satisfaction of all the aspirations of mankind after God. These aspirations and longings for the truth were manifesting themselves in many ways at the time of the foundation of Christ's Church. Heathenism was agape with the desire for truth, and the old materialism of religion no longer satisfied a world that was beginning to realize clearly that matter was not all. New religions sprang up on every side, cults and mysteries, offering, to those who sought, the knowledge of God and purification from sin. Even the old material conception of the gods began to receive a spiritual interpretation.

Thus both Judaism and all that was good in heathenism found their goal and fulfilment in Christianity, and the sacrifices of Judaism and the initiations of heathenism in the perfect offering for the sins of the whole world presented to the Eternal Father in the divinely-appointed commemoration of the One Sacrifice in the Christian mysteries, which were at once the supreme act of worship of the Christian Church and the means by which the efficacy of the act of redemption was applied to the souls of men in gifts of sacramental grace.

In the earliest days of the Church there is a noticeable absence of any analogy between the priesthood of the old and the ministry of the new dispensation. The danger of Jewish formalism in the infant Church was considerable. Still less is there any sign of any acknowledgment of the existence of even a partial apprehension of truth in the religious systems of the heathen world. Nevertheless St. Paul does use technical terms when he speaks of himself as 'the minister of Jesus Christ, the sacrificing priest of the gospel of God, that the offering of the Gentiles might be made acceptable' (Ro 15¹⁶), where he is using definite technical sacrificial words (*λεειτουργός, ιερουργός, προσφορά*). In the same way he uses the terminology of the Greek mysteries in the words 'perfect' (*τέλειος*), 'sealing' (*σφραγιζέσθαι*), 'learned the secret' (*μνέω*), and his technical use of the words is recognized and imitated by Ignatius when he speaks of the Ephesians as being 'initiated into the mysteries of the gospel with the blessed Paul.'¹ Even in the Epistle to the Hebrews we find no sign as yet of the idea of a Christian priesthood offering a Christian sacrifice. The author of the Epistle confines himself to the theme that in Christ are summed up the perfection of priesthood and the finality of sacrifice. He comes near to the definite conception of the Eucharist as in some sense a sacrifice in close connexion with the sacrifice of Christ, when he says 'We have an altar, whereof they have no right to eat which serve the tabernacle. . . . By him therefore let us offer the sacrifice of praise to God continually, that is, the fruit of our lips, giving thanks to his name' (13^{10, 15}). In the NT, then, we find that the Church is conceived of as consisting of a priestly people with a ministry authoritatively appointed to give expression to its worship (1 P 2⁵, Rev 1⁶ 5¹⁰ 20⁶).

When we come to the sub-apostolic age, we find that already there has been a development at least of technical terms. In the *Didache* we find the Eucharist spoken of as the 'pure offering' (*καθάρη ἡ θυσία*) which is to be offered in every place.² Clement of Rome, inculcating the necessity of decency and reverence in the celebration of Christian worship, calls these acts of worship 'offerings

and sacrifices' (*προσφοράι καὶ λειτουργίαι*), and it is significant that he uses the analogy of the Jewish ministry of high-priest, priests, and Levites to illustrate the orderly differentiation in the Church between the orders of the ministry and the layfolk generally.³ Again, he denotes the ministerial functions of the *πρεσβύτερος* by the word *λειτουργία*. Ignatius is still more definitely technical. To be 'within the precincts of the altar' (*ἐντὸς τοῦ θυσιαστηρίου*) denotes with him membership of the Catholic Church with the privilege of communion in the Eucharist,⁴ and the bishop (the normal celebrant of the Eucharist) represents Christ.⁵

From this time onwards sacrificial terms are constantly used to denote the Eucharist and the functions of the Christian ministry. Justin uses the word 'sacrifice' (*θυσία*) of the Eucharist,⁶ and in Irenæus we find such expressions as 'the offering of the Church' (*oblatio ecclesiæ*), 'the pure sacrifice' (*purum sacrificium*), and in Clement of Alexandria 'the offering' (*προσφορά*) as regular normal names of the Eucharist.⁷

In Tertullian and Cyprian we find in regular use such words as *altare, sacrificium, sacerdos*.⁸ Tertullian, followed by Cyprian, regards the three-fold Christian ministry as the successor of the three orders of the Jewish priesthood. The bishop is the high-priest;⁹ the priesthood ordained by God among the Jews passed to the Church of Christ when the Jews crucified the Saviour.¹⁰ Tertullian, again, is quite clear and explicit that, while the Christian community generally is a 'royal priesthood,' having access to God, yet in that community there is a separate ministry and a priestly discipline (*sacerdotalis disciplina*) which exercises the priestly functions of the Church. In Cyprian the word *sacerdos* generally, as often elsewhere and much later, denotes the bishop, but occasionally the presbyter,¹¹ and in one passage he uses the expression *sacerdotes et ministri* of the whole ministerial body.¹² In Cyprian, too, we find the theory of the Eucharistic sacrifice thus expressed:

'Nam, si Jesus Christus Dominus et Deus noster ipse est summus sacerdos Dei Patris, et sacrificium Patri se ipsum primus obtulit, et hoc fieri in sui commemorationem praecepit, utique ille sacerdos vice Christi vere fungitur qui id quod Christus fecit imitatur, et sacrificium verum et plenum tunc offert in ecclesia Deo Patri.'¹³

From the time of Cyprian onwards the sacerdotal character of the Church's ministry is taken for granted. The acceptance on all sides of the sacrificial character of the Eucharist necessarily implied the sacerdotal character of the priest. In the West in particular the civilization of old Rome, with its wonderful legal system, which became the inheritance of the new nations of Europe, tended to define more and more the doctrines and practices of the Church and the duties and functions of the ministry. From the 6th to the 9th cent. there was an active development of liturgy and ritual, all of course accentuating more and more the distinction between cleric and layman. Moreover, the task which the Church had to face during this period ever more and more enhanced the sacerdotal character of the ministry in the direction of increasing the prestige and authority of the clergy over the mass of the people. The Church was called upon to evangelize new and barbarian peoples, Goth and Frank, Burgundian and Lombard. The gross ignorance of their converts rendered it necessary to present the faith to them in its simplest form, and hence the duties of worship and practice, the teaching of the sacraments and penance, were

reduced to simple rules and systematized as much as possible, while for their part the new converts adapted their old belief in magic and the virtue of charms to the mysterious awfulness of the holy sacraments. At the same time the grossness of the people, the low state of morality, and the intervention of penance led to less and less frequency of communion till, with the requirement of confession in the case of all of adult age, communion was rarely made more frequently than once a year, if as often as that. Thus the duty of worship at the Mass took the place of the duty of weekly communion, and in the popular mind the Mass was regarded as a repetition of the sacrifice of Calvary. Hence came the scandalous traffic in masses of the Middle Ages, which, however, those in high places in the Church were constantly trying to repress, and it was commonly believed that a sufficient number of masses said for a man's soul would atone for a life however evil. The sacerdotal theory of the priesthood was then at its highest for some three centuries before the Reformation, and the priesthood, with its powers of remitting or retaining, was believed to hold in its hands the salvation or damnation of the soul.

The Reformation (*q.v.*) was the outcome on the whole of a great advance in the education generally of the people. Knowledge was no longer confined to the clergy, and with the new spread of knowledge men of intelligence rebelled against the old formality of religion, and against a conception of the doctrine of *opus operatum* in the sacraments that more or less relieved the individual of any responsibility, and overshadowed the teaching of the Church that the reception of the virtue of the sacraments depended upon the proper disposition of the recipient. Thus the Reformation was against sacerdotalism in the sense of an assumption of authority on the part of the priesthood to undertake the whole charge and responsibility of the souls of the people. In England the Reformation was a reformation only, while elsewhere it destroyed the Church in the old sense of the word. It is made clear in the preface to the ordination rites of the English Church, in the retaining of the three orders of bishop, priest, and deacon, and in the forms with which these orders are conferred, that the Church claims to be the old historic Church and no new invention, regarding herself as united with the Church of the apostles by the unbroken line of succession of her bishops, and one with it in doctrine and practice. The great defenders of the English Church against the assaults of Romanism have always strenuously taken this line, and have appealed to the Ordinal as proving the truth of their position. Thus, while the Reformation in England was a reformation proper, it purged the Church of many errors and superstitions. The whole status of the clergy was affected, and the restoration to the individual of the sense of personal responsibility lessened immensely the authority of the priesthood over the individual conscience. But, on the other hand, the ministry of the Church retained a definite sacerdotal aspect. Confession was retained and the power of priestly absolution; only it was not required as essential generally. This was maintained generally by the great divines of the 17th cent., and, moreover, the sacrifice of the Eucharist was maintained in the sense of its being a 'commemorative sacrifice.' In such a sense even Cranmer admitted that the Eucharist was a sacrifice. Andrewes, in a defence of the Church of England that was almost official, could say to Bellarmine:

'Take from the Mass your Transubstantiation; and we will have no difference with you about the sacrifice.'¹

and in his first *Answer to Cardinal Perron's Reply*:

'The Eucharist ever was, and by us is considered, both as a Sacrament, and as a Sacrifice.'¹

A long list of names might be quoted in support of this view of the Eucharistic sacrifice—Cranmer, Andrewes, Overall, Montagu, Cosin, Sparrow, Jeremy Taylor, Waterland, and many others. Jeremy Taylor explains thus:

'As Christ, in virtue of His sacrifice on the Cross, intercedes for us with His Father, so does the minister of Christ's priesthood here; that the virtue of the Eternal Sacrifice may be salutary and effectual to all the needs of the Church, both for things temporal and eternal.'²

And, indeed, the teaching of the Church of England is clearly enough shown in the prayer of oblation in the Holy Communion:

'We thy humble servants entirely desire thy fatherly goodness mercifully to accept this our sacrifice of praise and thanksgiving; most humbly beseeching thee to grant, that by the merits and death of thy Son Jesus Christ, and through faith in his blood, we and all thy whole Church may obtain remission of our sins, and all other benefits of his passion. . . . And although we be unworthy, through our manifold sins, to offer unto thee any sacrifice, yet we beseech thee to accept this our bounden duty and service.'

The controversies resultant on the Oxford Movement brought these matters very much to the front, and the word 'sacerdotalism' came into existence. The Church at this time was living on its past. The only theology was that of the great writers of bygone generations. The meaning of the Church's forms and ceremonies, of its theory of orders, of the doctrine of the sacraments, was very little apprehended by the majority of the people. Perhaps one of the great difficulties of the time lay in the absence of any official body of theology. This was one of the great losses consequent on the Reformation, which discredited entirely the old scholastic theology, with all its clearly defined technical terms, and substituted nothing in its place, with the exception of leaving a certain amount of the old technical language enshrined in the formularies of the Book of Common Prayer. The Oxford Movement, therefore, was simply a restatement of what the Prayer Book contains, re-asserting the sacerdotal character of the priesthood as exercised in the celebration of the sacraments, especially in the Holy Communion and the ministry of absolution. The controversies arising raged acutely for a generation, chiefly over the use of technical words and phrases, and then gradually subsided, leaving their mark unmistakably on the Church.

Thus the 'sacerdotalism' of the Church of England is moderate and reasonable. The ministry exists, and always has existed, for the bringing of the sacramental means of grace to the people of Christ. The priest is the minister or steward of Christ authoritatively appointed to his office by Christ's Church, and he is in this way the divinely-constituted organ of a body which is throughout priestly, the *servus servorum*, the servant of his fellow-servants, ministering to them in the orderly manner prescribed by the Church the gifts given by God for the nourishment and health of their souls.

SACRAMENTS (Primitive and Ethnic).—In early Christian usage the word *sacramentum*, though applied especially to Baptism and the Eucharist, was widely used as the name of any ritual observance among Christians, as well as of any sacred thing. In this wide sense sacraments may be said to exist in ethnic religions. Washings or baptisms, ceremonial name-giving, initiations, anointings, and many other rites have a sacramental aspect in this sense of the word. These and other rites have already been fully considered under separate headings.¹ This article is devoted to inquiring how far rites of actual sacramental communion—viewing the word 'sacrament' in a narrow, yet popular, sense—exist among savages and in the higher ethnic religions. Many of the usual examples of this cited by various authorities are to be regarded as inferences rather than explicit facts. Thus, even where the worshippers feast on the remains of a sacrifice, it is doubtful whether this is to be looked upon as more than a meal eaten in common with the god. He, being satisfied with his share of the feast, as it were, invites his worshippers to eat with him. The idea that sacrifice originated from a meal on a divine being or a totem cannot be sustained. Even the idea of kinship with the god, renewed through eating with him, is far from being clearly expressed, and is rather an inference from a given rite. Sacrifice is first the food of the gods, by which they are nourished, strengthened, and made benevolent to men. If now worshippers partake of this food, they are eating with him, and we may suppose them to be similarly nourished and strengthened. There certainly could not have been at first the sacramental eating of a divinity incarnate in the sacrificial victim. That came later, and perhaps only sporadically. Even if the animal is one not usually eaten, or if, being one usually eaten, it is first sacrificially slain and its blood offered to the god, no more than a common meal with the god need be generally inferred. In the latter case the animal is sacrificially slain on the principle that man should always give something of his own to the gods—the same principle as is seen in the offering of firstfruits (*q.v.*).

The theory of Hubert and Mauss—that sacrifice consists 'in establishing a communication between the sacred world and the profane world by means of a victim, i.e. a consecrated thing destroyed in the course of the ceremony,' and that the moral state of the person who performs this religious act or of certain things in which he is interested is thus modified—rests on the Brāhmanic interpretation of Vedic sacrifices, and can be sustained only with difficulty.² If the theory were true, then the victim would always be sacrosanct, filled with the spirit of the divine world, and therefore to eat of it would be a sacramental act, filling the eater with divine vigour. But this 'sacralization' is not proved for sacrifice generally, either savage or civilized.³

Theories of the origin of sacrifice are apt to lay too much stress upon occasional rites, out of harmony with the ordinary and usual rites which are known to us in detail. The real meaning of these occasional rites is often unknown or is the guess of a scholiast or mystic; they are sometimes described vaguely in a late classical author.

¹ See artt. ANOINTING, BAPTISM, INITIATION, NAMES.

² H. Hubert and M. Mauss, 'Essai sur la nature et la fonction du sacrifice,' in *Mélanges d'hist. des religions*, Paris, 1900, pp. 15, 124.

³ Cf. G. Foucart, *Hist. des religions et méthode comparative*, Paris, 1912, p. 136 ff.

An example of this is found in the Bouphonia (below, § 3 [b]). At the same time rites of quite different import are usually classed together, and a similar reason for the slaying and eating of the victim is assigned to instances where it is out of place.

1. The basis of the principle of sacramental communion.—As already shown in the art. CANNIBALISM (vol. iii. p. 197^b), the eating of food, with its result of strengthening or refreshing the body, easily suggested the idea that any special qualities in the animal, or even the man, from whom the food was prepared—strength, courage, wisdom, etc., as well as the contrary qualities (hence tabus on such foods as might transmit these)—could be assimilated by the eater. Added to this, the belief in magic made men assume that, as far as the transmission of such qualities was concerned, a part was as valuable as the whole. Food might also become a vehicle of qualities pertaining to this or that object with which it had been in contact. This is the basis of the idea of sacramental communion with deity in a more or less material sense, as apart from the idea of food eaten symbolizing a virtue or grace spiritually received. The flesh of an animal regarded as the incarnation of a deity, a cereal image, and the like would make the eater a recipient of divine qualities or divine life.

2. Was the sacrificial meal also sacramental?—The meal upon sacrificial food cannot now be regarded as the survival or the equivalent of eating a totem animal in a sacramental mystery (below, § 4). Nor is the conception of kinship between victim and worshippers more than an inference. The sacrificial meal, eaten as in Israel at the holy place, was one in which god and men shared. There was communion between them just in so far as the eating of food at any time strengthened the bond between table-companions. Beyond that we can hardly go. Sacrifice was primarily a feeding of a god, who either ate the actual food or was regaled by the blood, or by its odour, or even by its essence.¹ In the latter instances, where most of the flesh still remained, it was natural that it should be consumed by the worshippers. How far it was regarded as hallowed or even as a vehicle of divine qualities, because part of it had been consumed by a god or offered on an altar, is largely a matter of conjecture. This sacrificial meal is a common aspect of sacrificial rites both in the lower cultures and in higher religions as far back as these can be traced.

In Fiji 'native belief apportioned the soul [of the offering] to the gods, who are described as being enormous eaters; the substance is consumed by the worshippers.'²

In Israel one large class of sacrifices was eaten by the worshippers, after having formed a repast for the divinity. In Babylon the elements of sacrifice were the foods which men commonly ate; animal victims were not apparently regarded as sacred, and the officiants ate the remains 'without appearing to experience the least terror, and without taking extra precautions.'³ In Greece, in the

¹ The last is forcibly expressed by the Limboos of Darjeeling, who, when they eat the sacrifice, say that they dedicate the life-breath to the gods, the flesh to themselves (J. S. Campbell, *TES*, new ser., vii. [1869] 153).

² T. Williams, *Fiji and the Fijians*, London, 1858, I. 231; cf. art. DRAVIDIANS (N. India), vol. v. p. 8^a.

³ Foucart, p. 162.

case of those offerings not wholly made over to divinities, the priests had their share of the sacrifice, and the worshippers feasted on the remains.

This is seen, e.g., in Homer, who describes the prayers, the slaughter of the victims, the cooking of selected portions, and the joyous feast which followed.¹

In Roman sacrificial rites the general rule was that, after the offering of the *exta* to the god, the remainder of the animal was then considered not sacred, and was eaten by the priests or worshippers, or on official occasions by the senators and magistrates. Sacrifice was the offering of a repast to the gods, in which men had a share.²

Toutain insists that the theory of W. R. Smith and others of a kinship between god, victim, and worshippers, renewed through eating the victim—of a sacrificial communion—is not discoverable in the Roman sacrificial ritual.³

In Egypt the remains of the sacrifice were simply eaten by the officers and servants of the temple and by the worshippers. 'They spread a banquet of what remains of the victims.'⁴ According to Foucart, there is no trace in Egyptian texts concerning sacrifice of sacramental communion or of a meal of kinship with the deity in this sacrificial meal, and he speaks of

'l'absence radicale, fut-ce en une ligne d'un seul auteur, d'une allusion au sacrifice communautaire de la victime en Egypte.'⁵

Vedic sacrifices were intended as food for hungry gods, who were thus rendered well-disposed to men. The gods ate first, leaving the remains to be eaten by those who offered them.

Oldenberg says that 'it is impossible to discover in the ceremonies themselves, or in the verses or formulae which accompanied them, the least allusion to any method of regarding the repast on the sacrifice as a repast of communion (*alliance*) or a renewing of kinship.'⁶

Whatever later priestly theories arose regarding sacrifice, the early view remains fairly constant, and in modern Hindu or Dravidian ritual the remains of the sacrifice are commonly eaten by the worshippers.⁷ But in the cult of Kṛṣṇa the cooked food offered to the god is eaten by the priests or distributed to the worshippers, who eagerly receive it as holy or as divine nutriment.⁸ Here a more sacramental view appears. Finally, among the Teutons the evidence is summed up by Grimm as follows: Human food is agreeable to the gods, who are invited to eat their share of the sacrifice. At the same time sacrifice is a banquet: an appointed portion of the victim is placed before the god; the rest is cut up, distributed, and consumed in the assembly. The people thus become part-takers in the holy offering, and the god is regarded as feasting with them at their meal.⁹

To these examples must be added those in which the victim is a human being, and a cannibalistic feast on his flesh follows. Here there is no true sacrament, save where the victim is regarded as representing or incarnating a divinity, as in Mexico and in Dionysiac rites in Crete.¹⁰

Thus the widest evidence of sacrificial rites, apart from all modern theory, is that in a large proportion of sacrifices the worshippers enjoyed a

sacrificial repast, and joined in eating with the god. That probably indicated fellowship with the god or promoted it still further. But how far it was also regarded as a sacramental eating, in the sense that divine virtue passed over to the eater, is a matter of conjecture. Yet it may be admitted that here are the elements out of which a sacramental ritual might easily arise.

The idea that gods and men shared in a sacrificial meal is illustrated by the expressions on recently-found papyri in which a person invites guests to dine with him at the table of a god (the lord Sarapis) on a certain date.¹ Sarapis was here the real host. Unless St. Paul was continuing OT sacrificial language, this may be the source of what he says regarding the impossibility of partaking at once of the table of the Lord and of the table of demons (i.e. eating meat which had formed part of a sacrifice). He regards that act as 'having communion with demons' (1 Co 10:20), because the meat is eaten consciously with demons (1 Co 10:21, and cf. 97). This shows that he regarded the act of eating as an act of communion with the god—probably the view then current in the eastern Mediterranean area. This communion, however, was nothing more than the relationship existing between a host and guests at any meal—a token of fellowship with him on the part of those who recognize the deity. In such sacrificial meals, in the words of the *Clementine Recognitions*,² the eater is 'a guest of demons' and has 'fellowship with that demon whose aspect he has fashioned in his mind.' How far this idea of fellowship or communion with a god in and through sacrificial meals existed elsewhere and in other ages it is difficult to say. The custom is analogous to that of the feasts with the dead—common meals at which dead and living were present.³

3. Eating a sacred animal.—When an animal was regarded as sacred—one devoted to the service of a god, or his representative or symbol, or even his incarnation, or as itself divine—it was nevertheless sometimes sacrificed to him, the reasons for this sacrifice not being the same in all cases. It is important to bear the latter fact in mind. But, in so far as the animal is sacred and the flesh is eaten, there is here a sacramental eating, depending upon the degree of sacredness of the animal. Where the animal is divine or a divine incarnation, there would be an actual eating of the god's flesh. In a sense all animals sacrificed to a god became for the time sacred to him, but we are here contemplating the case of animals more peculiarly sacred. The ceremonial slaying of such animals is perhaps the origin of those so-called mystic sacrifices in which certain animals, more particularly those regarded as 'unclean,' i.e. too sacred for common use, were immolated and sometimes ceremonially eaten. Where such eating took place, its purpose was probably sacramental: it was to obtain some benefit not to be obtained in any other way—e.g., the strength and life of a god. The examples cited by W. R. Smith⁴ are in point here, though his theory of their connexion with earlier totem sacraments has not been verified. The instances range from savagery up to comparatively high levels of civilization.

(a) Certain Hebrews in pre-Exilic days seem to have adopted curious rites from their pagan neighbours or revived earlier rites of their own. Among these was the sacrifice of the swine, the mouse, and the 'abomination.' These animals were unclean, yet they were actually eaten at this rite after some preliminary method of preparation and purification. After sanctifying and purifying themselves, the worshippers are said to have eaten swine's flesh, the mouse, the 'abomination,' while 'broth of abominable things' was in their vessels, no doubt for purposes of a meal (Is 65: 66¹⁷). Doubtless these animals were sacred to certain divinities, and this, rather than their 'unclean' character, aroused the prophet's indignation. The result of the eating was the assertion of a peculiar holiness. Similarly, at a later time the Harranians sacrificed the swine and ate the flesh

once a year. Among the ancient Peruvians, after a three days' fast, the festival of the sun at the summer solstice was observed. Fire was kindled by means of a concave mirror reflecting the sun's rays. Then llamas, the animals sacred to the sun, were sacrificed, and of these a burnt-offering was made. The flesh of other llamas, part of 'the flocks of the sun,' was eaten at a banquet by the Inca and his lords, and distributed to the people. The flesh was eaten along with sacred cakes prepared by the virgins of the sun, and with goblets of fermented liquor of maize. In the latter part of this feast the Spaniards detected a Satanic counterfeit of the Eucharist.¹

(b) Some animal victims may be regarded as divine incarnations. The people of the district of Huanca (Peru) were found by the Inca Pachacutec to have a dog deity represented in their temple. A living dog was chosen to be its incarnation; sacrifice and prayer were offered to it; then it was slain, and parts of its flesh were eaten by the worshippers.² Similarly, in Arkansas an American Indian tribe who traced their descent from a mythic dog ancestor are said to have eaten the flesh of a dog representing this ancestor in an annual rite.³

In the Dionysos cult, the origin of which is to be sought in Thrace, whence it was brought to Greece, there is a fairly clear example of the belief that a god may incarnate himself temporarily in animal or even human form. In the frenzied observance of the cult the myth of Dionysos pursued by the Titans, assuming different forms, and finally in bull shape being rent asunder by them, was reproduced in ritual. An ox, a goat, or sometimes even a boy, representing or incarnating the god, was rent by the maddened worshippers, and the raw flesh was devoured. By such a sacramental feast, and probably also by stimulants, 'the celebrant of the meal of raw flesh'⁴ was made one with the god. He became *ἐνθεός*, and was inspired to new ecstasy, or *ἐνθουσιασμός*, and to acts not possible under normal conditions.⁵

Arnobius says: 'In order that you may show yourselves full of majesty and divinity, you mangle with gory lips the flesh of bleating goats.'⁶ A scholiast on Clem. Alex. *Protrept.*⁷ says that those initiated into the Dionysiac mysteries ate raw flesh, and that this symbolized Dionysos' being rent by the Titans.

In this savage sacrament, which, though not without occasional parallels elsewhere, must not be taken as typical of all religions at a certain stage, there appears the dim craving of the soul for union with deity. When the ritual was transferred to Greece and there tamed and transformed, how far this sacramental act continued is uncertain, though modified survivals of it have been found in Chios and Tenedos at a late date.⁸ Its existence in the Dionysiac-Orphic brotherhoods cannot be proved.

In the *Βουφώνια* at the Diipolia on the Acropolis there is one of those mysterious and sporadic rites apt to be taken as typical and made the basis of a large amount of theory. The rite is described by Pausanias and Porphyry.

Of a number of oxen led up to the altar the one which ate wheat and barley lying upon it was slain by a priest, who was regarded as the murderer of the ox, and finally the blame was laid on the axe or knife. Of those who afterwards flayed the ox all tasted its flesh; then they sewed up the hide, stuffing it with hay, and yoked it to a plough. The rite was traced back to a slaying by Sopatros of an ox which had eaten his cereal offering. In remorse he fled. Dearth followed, and an oracle

announced that the murderer must be punished and the dead raised up. It would also be better for them if, at the same sacrifice in which the ox died, all should taste of its flesh. Sopatros agreed to return, but said that he must be made a citizen, that an ox must be slain, and that all must help him. This was agreed to, and the ritual of the *Βουφώνια* was founded.¹

W. R. Smith regarded this rite as a survival from the time when all pastoral animals were sacred and regarded as kindred with man and his divinities. Hence to slaughter one of them, even ritually, was murder (*βουφονεΐν*), and to eat the flesh was a sacramental rite. These ideas had been derived from earlier totemism, with sanctity and kinship of wild animals.² In this he is partly followed by L. R. Farnell.³ J. G. Frazer finds in the rite an example of slaying an animal representing the corn-spirit—the ox which tasted the corn was viewed as the corn-deity taking possession of his own.⁴

It seems probable that the clue to the *Βουφώνια* is lost. Among savage pastoral tribes who regard their cattle as sacred the occasional slaying of them is not regarded as murder, nor are they invariably considered as of one kin with the clan. For some reason unknown the ox of the *Βουφώνια* was regarded as sacred in a way in which the cattle of ordinary sacrifices never had been. This is shown by its killing being regarded as murder. The eating of the flesh by the slayers has thus a sacramental aspect, in whatever manner the animal was sacred, whether in itself or as representing or incarnating a spirit or god.

(c) W. R. Smith's theory of the slaying of pastoral animals in cases where such animals are seldom or never killed, viz. that the animals are kinsmen to the tribe or group, is hardly borne out by instances from actual pastoral tribes.

With the Todas the lives of the people are devoted to the tending of their herds of buffaloes. These are divided into two classes—(1) ordinary buffaloes, with no special ritual connected with their tendance and milking and no restrictions on the use of their milk; (2) sacred buffaloes of various grades of sanctity, with herdsmen regarded as priests, and dairies for the churning of milk which are regarded as shrines. In the case of the latter the ordinary operations of the dairy have become a religious ritual, each dairy of each class having its own peculiarities and complexities of ritual. Both ordinary and sacred buffaloes are the property not of the clan, but of families or individuals, in that division of the Todas known as *Teivaliol*. Male buffaloes have little or no sanctity even when born of the most sacred cows, and these in fact are mated with ordinary bulls. Buffaloes were created by one of the chief Toda gods, On, and his wife. On's buffaloes were ancestors of the sacred animals, those created by his wife of ordinary buffaloes. Sacred dairies and sacred buffaloes are regarded in some measure as the property of the gods. Buffaloes are not eaten, but, after due ceremonies for counteracting possible danger, the milk of even sacred buffaloes, converted into butter, may be used even by people who are not Todas.⁵ At one feast people of the clan and of other clans may partake of the milk of sacred buffaloes, which is not ordinarily used by them. Rivers sees in this some resemblance to those religious ceremonies of communion 'with the divine by eating and drinking the divine.'⁶ Although the buffalo is not ordinarily eaten, there are certain rites called *ἔρκυμπθῆναι* ('male buffalo we kill') in which a male buffalo calf is slain and eaten, whenever a suitable one is available. At the *ti* dairy the rite takes place thrice yearly. The chief officiant is the *palikārtmōkh*, or dairymen of the village, who must be of the same clan as those performing the sacrifice. The animal is killed by striking with a club made of the wood of the sacred *ṭāḍr*-tree. The flesh is roasted on a sacred fire made by friction. Of this the *palikārtmōkh* eats the *tutmis*, and the others present may eat any portion. Certain parts must not be eaten by women. The remainder of the feast is carried to the village and may be eaten by any one.⁷ At the *ti* sacrifice the *tutmis* is eaten by the *patol* (or priest of this ultra-sacred dairy), certain other parts by him and the *kālmōkh* (assistant). Some parts, again, may be eaten by the *kālmōkh* and privileged visitors (*mōrol*) to the *ti*. Other parts are taken to the outskirts of the priests' sleeping-hut and given to any Todas who may visit the dairy.⁸

The significance of the ceremony is unknown; the male buffalo is not sacred in the sense in which the female sacred buffalo is. From the prayer used before the slaying of the animal Rivers conjectures that the purpose of the rite is the general welfare of the buffaloes. He also thinks it possible that, as the flesh is eaten, the Todas may have preferred

to use for this purpose less sacred animals out of fear of evil consequences.¹ There does not appear to be any clear evidence of kinship with their buffaloes among the Todas.² Nor does there appear to be a sacramental eating of the animal in the sense of eating a victim regarded as divine.

If Rivers' explanation of this meal among the Todas is correct, we may see an analogy to it in the custom of pastoral tribes in the Caucasus who, when obliged to sell their herds to strangers, avert the danger which such sacrilege incurs by consecrating one of the herd, slaying it, and solemnly eating it, afterwards treating the bones with all due respect.³

The eating of the raw flesh of a heifer sacrificed to the spirit of the Nile by heads of clans among the Agaas⁴ and the eating of half-raw flesh of a camel by the clan or tent-group among the Arabs of the Sinaitic peninsula when other food failed⁵ are very vaguely sacramental.

(d) The last group of rites described perhaps shows that at one time all killing of animals was regarded as an act to be gone about circumspectly, for all animals, if not divine or even sacred, have power greater than man's, either in life or after death. Hence, too, innumerable rites of propitiation in connexion with the slaying even of wild animals, by way of averting their vengeance or that of members of the same species. These sometimes crystallize into one definite communal rite, in which propitiation, prayer, ritual slaughter, and ritual eating all have a part. But the slaying is not sacrificial, and the whole rite is perhaps analogous to the solemn eating of firstfruits (below, § 5) before all the harvest becomes available for common food. This rite is most marked in the Ainu bear festival.

With the Ainus, Gilyaks, and other peoples of N. Asia the bear is regarded with respect, if not as divine, but it is freely slain and eaten as food. But one bear is kept in captivity with every evidence of respect; then it is ritually slain with propitiations and apologetic explanations and prayers. Offerings are made to the dead bear. Its blood is drunk by the men present to obtain its courage and other virtues, and part of its flesh, having been offered in 'a cup of offering to its head,' is solemnly eaten by all present. Then all join in eating the rest of the flesh. The liver is said by a 17th cent. authority to be eaten as a medicine for various diseases.⁶

The prayers show that the bear is expected to return to life so as to be slain anew, and in Saghalien the killing is for the purpose of sending messages to the forest-god by means of the bear.⁷ The solemn eating of the bear by all is obviously meant as a propitiatory rite which will make possible the common eating of bear's flesh by all who have thus had communion with the bear.

4. The totem sacrament. — The theory of a general, though occasional, sacrifice and sacramental eating of a totem animal or plant by the men of a totem clan is now generally abandoned for lack of evidence.⁸ With its abandonment the explanation of all solemn eating of a slain or sacrificed animal as due to an earlier totem sacrament must also be given up. Among all actual totem peoples the ceremonial eating of a totem has been found in three instances only, and Frazer points out that in one of these (Arunta) the object of the eating is not mystical communion with a deity,

but to ensure the supply of food for others not of that totem. It is magical, not religious, and the animals in question are not regarded as divine.¹

The Arunta once freely ate their totems, and even now there is no absolute restriction by which a man may not eat of his totem, except in the case of the wild cat, which is also forbidden food to the whole tribe. Besides permission to eat sparingly of his totem at all times, each man at the *intichiuma* ceremonies, for the increasing of the totem animal or plant, must eat of his totem, in order that the totem species may be increased for the benefit of fellow-tribesmen of other totem groups. Without this eating the magical increase ceremonies would not be complete. Members of the totem group now refrain from eating their totem till it is full-grown or plentiful. When that happens, members of other groups may not eat until the members of this group have eaten sparingly of their totem within the camp. This second ceremonial eating is thus akin to the solemn eating of firstfruits by certain persons before all can eat freely. This second ceremonial is obligatory; non-eating would result in the decrease of the totem.²

The second instance is from Benin. Some families of the Bini, at the burial ceremonies, make soup from their totem and offer it in sacrifice to the dead man. This portion may also be put to the lips of members of the family and then thrown away. The rest is thrown away or eaten by the family or strangers. Obviously some benefit to dead and living is here expected.³

The third instance is from Assam, where the Kacharis were formerly divided into totem clans. In two cases the ceremonial eating of a revered animal or plant has been noted. The Leech folk hold the leech in high regard and do not kill it. But once in a lifetime at a certain religious ceremony the Leech folk must chew a leech with vegetables. The Jute folk must also chew jute at great religious ceremonies.⁴

In none of these instances is the totem worshipped as a divinity, and they are all contrary to general practice among totem peoples. They do not lend support to the derivation from totemism of the slaying and eating of sacred animals at higher stages.

5. Firstfruits eaten ritually or sacramentally. — This has already been fully discussed.⁵ But it is obvious that here the word 'sacramentally' will bear various shades of meaning according as the firstfruits are looked upon merely as set apart from ordinary usage, or as sacrificial food, or as actually containing or being a spirit or god.

6. Ceremonial eating of images of dough or other substances. — In cases where the image is described as the god and is eaten there is clearly some idea of sacramental communion. The best instance of this is found in the ancient Mexican religion, where the solemn eating was called *teoqualo*, 'god is eaten.'⁶ Similarly, the Hanifa, in time of famine, made an image of dates kneaded with butter and sour milk and ate it.⁷ Communion with a deity by means of swallowing part of the image is also found among the Mālas of S. India and among the Huichol Indians of Mexico.⁸ These and similar instances may be compared with the ritual offering (though not always eating) of cakes in the form of or stamped with the effigy of a divinity.⁹ These may also be connected with the offering and eating of firstfruits made into a cake or even baked in human form (probably representing the corn-spirit, as Frazer thinks).

The sacramental aspect of eating such dough images is well shown by Acosta's description of the Mexican eating of the image of Huitzilopochtli: the people 'received it with such tears, fears, and reverence as it was an admirable thing, saying that they did eat the flesh and bones of God, wherewith they were grieved.'¹⁰

7. Swallowing sacred substances.—Under this heading may be grouped a variety of rites with a sacramental aspect. As an example from a low level of culture the following case from the Gold Coast may be taken. If the members of a family were about to separate, the fetish-priest ground a fetish to powder, and, having mixed it with a liquid, gave the draught to each member of the family. By this means they were still bound together.¹ In the ceremonies of the various fraternities among the Zufii Indians the drinking of consecrated 'medicine-water' has a prominent place. The consecration is accomplished with prayers to the gods, the dropping of fetishes into the water, prayer invoking the presence of the gods, etc. The altar and the worshippers are sprinkled with the water, and the males present receive a drink of it; on the next night of the ceremonies male and female members drink it; and on the fourth evening the novices receive it.² Plant medicines, each the property and food of a god, are used in other fraternities in a kind of sacramental magic—to cure disease, to make a brave heart, for safety, and the like.³ In India the water in which a sacred image has been washed is drunk as holy water.⁴ The drinking of the *haoma* in Zoroastrian religion and its supposed effects on the partaker have already been fully described in the art. HAOMA. It is also given to the dying as a last sacrament, or *pharapakon dāvaasias*. Its counterpart in Vedic and later Indian religion is *soma* (*g.v.*), both having been originally one. *Soma* was the drink of the gods, and a draught of immortality both for them and for men. It also healed physical and moral ills and gave wisdom. This drink of the gods could also be prepared for men on earth, just as *haoma* was. The drink made the worshipper a new man; the draught of the gods flowed in his veins, purifying and sanctifying him.⁵ The nectar of the Greeks is a similar drink of immortality;⁶ and it is probable that primitive intoxicants, because of the elation caused by them, were regarded as the drink of the gods, conferring immortality and other desirable qualities on them, like Goibniu's 'ale of immortality' in Celtic mythology.⁷ In Babylonian mythology 'food of life' and 'water of life' were the property of the gods, giving immortality, as is seen in the myth of Adapa.⁸ The refreshing powers of water caused it also to be regarded mythically, and in the other world it had magical immortal powers. Fijian mythology shows this. On the way to paradise the dead drank of the 'water of solace,' which caused the grief of the ghost and the mourners on earth to be assuaged.⁹ So at a far higher level, in Orphic-Pythagorean circles, the dead drank 'cool water flowing from the Lake of Memory,' and thereafter had lordship among the other heroes.¹⁰

The idea of the Tree of Life and its effects in Hebrew, early Christian, and Gnostic mythologies may be compared with the mythical concepts here set forth. In Egypt analogous ideas, though of a curious kind, are found. A funerary text speaks of a dead king slaying and devouring the gods to obtain their powers and to become eternal. Similarly, by sucking the milk of a goddess a mortal might acquire immortality.¹¹

8. Sacraments in mystery religions.—It is possible that the conceptions discussed in the last section underlie such sacramental rites as may be found in mystery-religions, though here we must beware of reading too much between the lines of the scanty evidence transmitted to us.

(a) In the Eleusinia certain acts of a sacramental character had a place. What that place was and what precise meaning was attached to them are largely matters of conjecture. As a preparation for the mysteries, the candidates had to be free from crime, and purity of heart and life was necessary. Ceremonial purifications were also used, and before entering the sacred enclosure at night the *μύσται* fasted. Apart from other things done or seen, they partook of a cup of *κυκῶν*—a thick gruel of meal and water, resembling the draught of barley, groats, water, and penny-royal leaves drunk by the mourning Demeter after her nine days' fast.¹ If the emendation by Lobeck² of the text in which Clement of Alexandria describes this rite is correct, possibly sacred bread or cake was also eaten.

'I tasted, I drank the *κυκῶν*, I took from the ark, and, having tasted (*ἐγγυσσάμενος*), I put it away in the basket and from the basket into the ark.'³

The unemended text suggests the handling (*ἐργασάμενος*) of a sacred object rather than the tasting of sacred food. What did this drinking and eating mean to the worshippers? Some inquirers have seen in it a sacramental communion with Demeter in her passion—an infusion of her life into the worshipper.⁴ The secret of Eleusis has been well kept, and these views are quite hypothetical. But the whole group of rites, including this 'sacrament,' was certainly regarded as beneficial and assuring immortality. The *μύσται* were thrice-blessed and believed that divinity was present with them.⁵ These effects were probably not attached to the sacramental rite only.

(b) In the mysteries of Attis, besides the smearing of the lips of the *μύσται* with holy oil and the uttering of the words, 'Be assured, O *μύσται*, the god has been saved: thus for you there shall be salvation from ills,'⁶ at some point in the ritual, they ate and drank sacred food according to a formula preserved by Clement and Firmicus Maternus. The nature of the food is unknown. Firmicus says that into the inner parts of a temple a man about to die (symbolically or ritually?) was admitted and said:

'I have eaten out of the tympanum, I have drunk from the cymbal; I am an initiate of Attis.'⁷

Clement gives the formula as:

'I have eaten from the tympanum, I have drunk from the cymbal; I have carried the *kerpos* [a tray with cups]; I have gone beneath the *pastos*.'⁸

Tympanum and cymbal figured in the myth of Attis. Here again the purpose of the rite is obscure, though some writers boldly maintain that it was to bring the *μύσται* into closer communion with the god.⁹ Dieterich thinks that the initiate, about to die a symbolic death, was reborn through the sacramental food, for Firmicus goes on to commend the true food of life—the Christian Eucharist—as conferring immortality, whereas 'thou hast eaten poison and drunk the cup of death.'¹⁰

(c) In Mithraism there was some form of sacrament, as the words of Justin Martyr and Tertullian show. Justin says that bread and a cup of water were set forth with certain words of blessing in the sacred rites.¹ Tertullian says that Mithra signs his soldiers in their foreheads, celebrates an oblation of bread, and introduces a symbol of the resurrection.² Both Fathers looked upon this sacrament and other rites as a parody of Christian rites suggested by demons. It is not at all improbable that the sacramental rite was adopted as an imitation of the Eucharist. Pliny, however, speaks of *magicis cænis* in Mithraism.³ On a bas-relief from Konjica (Bosnia) this sacrament is supposed to be represented. Two figures, one holding a drinking-horn, recline at a table, in front of which is a tripod holding small loaves of bread. On either side stand human figures, one a Persian, two with masks representing a lion and a raven, and a fourth mutilated figure. The Persian holds aloft a drinking-horn.⁴ Is this the rite to which Justin refers? If it is, it tells us nothing of its meaning, and Pfeiderer's assertion that the standing figures represent the nature of Mithra under different attributes, and show that they have thus 'put on' the god, is somewhat extravagant.⁵ The figures seem to be initiates of the different degrees, and there is no evidence that the sacrament was a mystic communion with Mithra, a partaking of his divine nature, as other writers have also asserted. The likeness which the Fathers saw between this rite and the Eucharist leaves its actual purpose doubtful, and we can only regard it as a rite of communion in a somewhat vague sense, like most of such rites in the mysteries. Cumont interprets it as communicating to the neophyte force to combat evil spirits and conferring on him, as on his god, a glorious immortality.⁶ There is certainly no proof that the rite had any connexion with the slaying of a bull, so often represented in Mithraic bas-reliefs, or with the Zoroastrian future mythic slaying of the bull Hadhaya, by Saoshyant at the last day, from the fat of which, mixed with the juice of white haoma, a drink would be prepared which would assure immortality to all men.

(d) In the cult of the gods of Samothrace, as a recently discovered but incomplete inscription shows, some rite of eating and drinking occurred. The priest 'broke the cake and poured forth the cup for the *μύσται*.' The inscription has been restored in this sense, and, if it is correct, some sacramental act seems to be suggested.⁷

For sacraments in Mandæism see *ERE* viii. 387a, 389, and further, A. J. H. W. Brandt, *Die mandäische Religion*, Leipzig, 1889, pp. 107 f., 203 f.

In this connexion it should be noted that the phrases expressing mystic union, desired or realized, with a god, in the so-called Mithras Liturgy ('Remain with me in my soul'), in the London Papyrus ('Come to me, Lord Hermes, as babes into the wombs of women'), and in the Leyden Papyrus ('For Thou art I, and I am Thou'), quoted by Dieterich,⁸ have no connexion with a sacramental meal.

Did these sacramental rites in the mystery religions impart new life and immortality? Quite possibly they were thought to do so. Plutarch says that the worshippers at the sacrificial banquets looked beyond the mere feast and had a good hope and the belief that God was present with them, and that He accepted their service graciously. Much of this may have been present in the mysteries also. Considering, however, that we know so little of the nature of those sacramental rites, it is ludicrous to find several writers regard-

ing them, not merely as resembling, but actually as the source of, the Christian Eucharist. Nor is there any real evidence that a rite of 'eating the god' was a common or usual one in paganism when Christianity was first founded and promulgated.

LITERATURE.—This has been sufficiently indicated in the foot-notes; but the following additional works may be consulted: C. Clemen, *Primitive Christianity and its Non-Jewish Sources*, tr. R. G. Nisbet, Edinburgh, 1912, p. 238 ff.; W. Heitmüller, *Taufe und Abendmahl bei Paulus*, Göttingen, 1903; J. A. MacCulloch, *Comparative Theology*, London, 1902, p. 254; N. Söderblom, 'Le Breuvage divin, La Vie future, d'après le Mazdaïsme (= *AMG* ix.), Paris, 1901, p. 330 ff. See also artt. DRINKS, FOOD, COMMUNION WITH DEITY, EATING THE GOD, FIRST-FRUIT.

J. A. MACCULLOCH.

SACRAMENTS (Christian, Eastern).—The doctrine of the Holy Orthodox Eastern Church concerning the 'mysteries' (i.e. the sacraments) is officially stated in (1) *The Orthodox Confession of Faith*, composed by Peter Mogila, metropolitan of Kiev (1623–47),¹ and (2) the *Acts of the Synod of Jerusalem* (Bethlehem) of 1672.² In these documents the Orthodox sacramental system has been defined, in opposition to that of the Reformed Churches, in terms more in harmony with those of contemporary Roman Catholicism than with those of the early Eastern Fathers.

A mystery is defined as 'a rite, which under some visible form (*εἶδος*) is the cause of, and conveys to the soul of a faithful man, the invisible grace of God; instituted by our Lord, through whom each of the faithful receives divine grace.'³ Mysteries were instituted to be 'badges (*σημάδια*) of the true sons of God,' 'sure signs (*σημεία*)' of our faith, and 'indubitable remedies (*ιατρικά*)' against sins.⁴

Three things are necessary in a mystery: (a) its proper matter (*ὄλη*)—e.g., water in baptism; (b) a properly ordained priest (*ιερεὺς*) or bishop; (c) the invocation (*ἐπικλήσις*) of the Holy Spirit, with the form of words, 'whereby the Priest consecrates the Mystery by the Power of the Holy Spirit, if he have the definite intention (*γνώμη ἀποφασισμένη*) of consecrating it.'⁵ This insistence on the Epiclesis and the operation of the Spirit is a marked characteristic of Orthodox sacramental teaching.

There are seven mysteries: Baptism, Chrism, the Holy Eucharist, the Priesthood, Penitence, Marriage, Unction.

1. Baptism is administered by triple immersion in pure water, in the name of the Father and of the Son and of the Holy Spirit, normally by a priest, but in cases of necessity by any Orthodox person. Those to be baptized must either themselves or, if infants, by an Orthodox sponsor renounce the devil and all his works and confess the ('Nicene') Creed. The fruits of baptism are the abolition of all sin previously contracted, original and actual, with its penalties, regeneration or renewal into a state of complete purification (*τέλεια κάθαρσις*)⁶ and original justification,⁷ and conferring of the indelible 'character' of members of Christ's Body and immortality.⁸

2. Chrism (*τὸ μύρον τοῦ χρίσματος*).—The baptized

¹ See questions xcvi.–cxix. of pt. i. of 'Ορθόδοξος ὁμολογία τῆς πίστωσης τῆς καθολικῆς καὶ ἀποστολικῆς ἐκκλησίας τῆς ἀνατολικῆς, in E. J. Kimmel, *Monumenta Fidei Ecclesiæ Orientalis*, pt. i. pp. 169–197. The Greek translation of Mogila's Russian Confession was authorized by the four Eastern patriarchs at Constantinople in 1643 as 'faithfully following the Dogmas of Christ's Church, and agreeable to the Holy Canons.'

² See 'Synodus Hierosolymitana adversus Calvinistas,' in Kimmel, pt. i. pp. 308, 404–406, 448–463 (= *Dosithei Confessio*, decreta xv.–xviii.). The Latin translation is not always reliable. This Synod holds a position in the Eastern Church similar to that of the Council of Trent in the Roman. Its main concern was to anathematize Cyril Lucar's attempt in his *Oriental Confession* to bring the Orthodox theology into harmony with the Reformed.

are at once anointed with chrism (a mixture of oil, balsam, and ointments) consecrated by a bishop, and applied by a priest to the brow, eyes, nostrils, mouth, and ears, with the words, 'The Seal of the Gift of the Holy Spirit. Amen.' This rite is the equivalent of the Western 'confirmation,' and is held to effect participation in the Holy Spirit, and increase and confirmation (βεβαίωσις) in grace. Lk 24⁴⁹ is the authority quoted for its institution by Christ.¹

3. The Holy Eucharist excels all other mysteries. It can be celebrated only by a lawful (νόμιμος) priest, and on an altar (θυσιαστήριον) or consecrated cloth (ἀντιμίσθιον). Leavened bread is used and pure wine, mingled with water during the rite. At the time of consecration the priest must intend that the substance (οὐσία) of the bread and wine be changed into the substance (οὐσία) of the true Body and Blood of Christ, by the operation of the Holy Spirit, expressly invoked by him for this definite purpose. This invocation immediately (παρενθύς) effects a 'change of substance' (μετουσίωσις),² apart from the use of the elements for communion; thereafter only the forms (εἶδη) of the bread and wine remain; 'truly and in reality and in substance' (ἀληθῶς καὶ πραγματικῶς καὶ οὐσιωδῶς) the bread and wine become the very Body and Blood of Christ;³ in the mystery Christ is 'really present' (κατὰ πρᾶγμα παρών), and it is right 'to worship and adore (λατρεῖν) the Holy Eucharist even as our Saviour Himself.'⁴ The Eucharist is an 'unbloody sacrifice' (ἀναιμάτος θυσία), propitiatory (ἰλαστική), offered on behalf of all the faithful, living and departed.⁵ The Holy Communion is given to all the faithful under both kinds—to the clergy separately, to the laity by means of intinction. Newly-baptized infants are communicated immediately after receiving the chrism. The fruits of the mystery are remembrance of the passion and death of Christ, propitiation for sins, defence against temptations, and the indwelling of Christ in the faithful. Preparation for communion consists of confession, fasting, and reconciliation with all men.⁶

4. Priesthood (ιερωσύνη) is (a) 'spiritual,' which is shared by all believers (cf. 1 P 2⁹, Rev 5¹⁰, Ro 12¹); and (b) 'sacramental' (μυστηριώδης). The latter can be conferred only by bishops who have received authority for that purpose from the Apostles in unbroken succession. The 'matter' of this mystery is the laying on of hands (ἐπιθεσις τῶν χειρῶν, χειροτονία), the formula the invocation of the Holy Spirit, with express mention of the function for which ordination is conferred. The functions of the higher 'orders' (τάξεις) include those of the lower. A bishop, after his election has been confirmed by the bishops of the patriarchate or province, must be ordained by at least three other bishops. The episcopate is necessary for the very existence of the Church; without a bishop the Church could not be governed; he is 'the fount of all the mysteries,' and 'the living image of God upon earth.'⁷ He alone can ordain priests, confer the lower orders, and consecrate the chrism. Priests can administer all the mysteries except priesthood; their chief functions are to consecrate and offer the Eucharist, and, if

authorized thereto by the bishop, preach and absolve penitents.¹ There are also deacons, subdeacons, readers, exorcists, door-keepers, singers light-bearers.² The fruit of ordination is authority (ἐξουσία) and grace to perform the functions of the order.³

5. Penitence (μετάνοια) consists of oral confession to an Orthodox priest, who assesses penance and pronounces absolution; in doing so he declares himself a sinner and God the Pardoner. This mystery is fruitless unless the penitent is an Orthodox Christian, truly sorry for his sins, purposeful of amendment, and prepared to carry out the penance imposed. Confession should be made at least once, but normally four times, a year. In practice it is frequently of a very formal nature.⁴

6. Honourable marriage (ὁ τίμιος γάμος).—This mystery is in the first place celebrated by the mutual consent of a man and a woman (there being no impediment), but is not considered by the Church a true (ἀληθινός) marriage unless they confirm their consent in the presence of a priest, and, having joined hands, promise to be faithful to each other till death. The civil law of the Eastern Empire permitted divorce *a vinculo*, and the Eastern Church permits such divorce not only for adultery, but for high treason, insanity, leprosy, and other causes. The innocent party may re-marry; no one may obtain a divorce more than once.⁵

7. Unction (τὸ εὐχέλαιον), instituted by Christ (Mk 6¹³) for the sick, is administered only by a priest, with pure oil, a prayer setting forth its efficacy being said during the anointing. This unction is not, as among the Latins, reserved for those *in extremis*, but is administered with a view to the recovery of the sick person. Its recipient must first have confessed to a priest.⁶

Of the seven mysteries the Eastern Orthodox Church affirms that they are 'effectual instruments of grace to the initiated, of necessity' (δράγματα δραστικά τοῖς μωμένοις χάριτος ἐξ ἀνάγκης),⁷ which amounts to a declaration that they are efficacious *ex opere operato*. Each of the mysteries is administered with lengthy rites and elaborate ceremony, but these are not regarded as necessary to their efficacy, but may vary in different parts of the Church, provided the essentials, as stated, are maintained.

The sacramental system in the separated Monophysite and Nestorian Churches is the same as that of the Orthodox in principle and in practice; there are, however, considerable variations in the liturgical framework of the mysteries and in their accompanying ceremonies, nor has their sacramental doctrine been so definitely formulated.

SACRAMENTS (Christian, Western).—The word *sacramentum* first appears in Christian use as the accepted equivalent of the Greek μυστήριον, standing uniformly for it in the O.L. of the canonical books. There is nothing in the known classical use of the word to account for this. It is there found in two senses: (1) of the pledge or security deposited in public keeping by the parties engaged

² *Id.* p. 180.

³ *Id.* p. 462.

⁴ *Id.* pp. 126 and 183. Although the mode of this change of substance is not defined (*ib.* p. 461), it is stated to be 'not typically or figuratively (οὐ τυπικῶς οὐδ' εἰκονικῶς), not by virtue of abounding grace (οὐδὲ χάριτι ὑπερβαλλούσῃ), i.e. the Calvinist doctrine' (p. 461, 2), nor 'by impanation' (κατ' ἀναμνησιν), i.e. Luther's 'consubstantiation' (p. 459), but in such wise that the Body and Blood of Christ are given to 'the mouth and stomach' of both faithful and unfaithful receivers (p. 458). The verbs μεταποιεῖσθαι, μεταβάλλεσθαι, μεταρρυνῖσθαι, are used to describe the change (p. 457).

in a lawsuit, and thence of a lawsuit in general; (2) of the oath taken by Roman soldiers to their *imperator*, and thence loosely of any oath. Both senses had some effect on the development of Christian doctrine, but they do not account for the adoption of the word as a rendering of *μυστήριον*. It is probable that there was a popular sense of the word which has left no trace in extant literature apart from Christian writers. If so, it must be determined by the earliest Christian use.

Here it is necessary to refer to the letter of Pliny¹ regarding the Christians of his province. He observed that they assembled for worship, 'seque sacramento non in scelus aliquod obstringere, sed ne furta, ne latrocinia, ne adulteria committerent, ne fidem fallerent, ne depositum appellati abnegarent.' He evidently understood the word of a pledge or oath, but his description does not answer to anything known in Christian origins, and it seems certain that he misunderstood the information given him. What is interesting is the use of the word *sacramentum*. It must have been used either by the Christians examined, if they spoke Latin, or by an interpreter. In the latter case it will be an example of the popular sense here assumed.

What that sense was may be gathered from Tertullian, *de Præscr.* 20, where he speaks of the unity of Christians:

'Dum est illis communicatio pacis, et appellatio fraternitatis, et contessatio hospitalitatis; quae iura non alia ratio regit quam eiusdem sacramenti una traditio.'

Here *sacramentum* can be nothing less than the whole Christian religion.² The word seems to signify any kind of religious institution, general or particular. Thus for St. Cyprian the Church is '*sacramentum unitatis*.' By insisting on the likeness of baptism and other '*sacramenta divina*' to the Mithraic and other mysteries, Tertullian³ recalls the Greek original and shows that he considered the word a just translation. It is possible that St. Thomas Aquinas, in his etymological guess⁴ relating *sacramentum* to *sacrare* exactly as *ornamentum* to *ornare*, lighted upon the true development of the word.

Another sense emerges when Tertullian calls the types of the OT '*figurarum sacramenta*.'⁵ With this we may compare Cyprian's saying about the seamless robe: '*Sacramento uestis et signo declarauit ecclesiae unitatem*.'⁶

When Tertullian says '*Vocati sumus ad militiam Dei uiui iam tunc, cum in sacramenti uerba respondimus*,'⁷ he has in mind the military oath, and perhaps plays consciously on the word, likening the mystical initiation of baptism to the soldier's enrolment. Cæcilius of Bithia, in the Council convened by Cyprian, used the phrase '*sacramentum interrogat*' in much the same way,⁸ and the analogy became a commonplace.

Cyprian's collocation of *sacramentum* and *signum* suggests a current use of the word which may enable us to establish more precisely its equivalence to *μυστήριον*. The legal deposit or security of a lawsuit had a symbolic value as well as its real value, representing the whole matter in dispute. It may have been called *sacramentum* for this reason, or, on the other hand, that word may have acquired the generic sense of a symbol from this specific use. There is no direct evidence for either conclusion, but the religious formalities and sanctions of Roman jurisprudence, which involved this use of a word evidently of sacred associations, would facilitate its retransfer to religious uses with a new sense thus acquired. It would then stand for any kind of religious symbolism, and in particular for the rites of a mystery-religion. Such use is certainly implied when St. Augustine says that signs or symbolic actions, '*cum ad res diuinas pertinent, sacramenta appellantur*.'⁹ The words

of *Serm.* 272, '*Ista dicuntur sacramenta, quia in eis aliud uidetur, aliud intellegitur*,' look like an appeal to the common understanding; and in the same connexion he renews the identification of *mysterium* and *sacramentum*, saying, '*Mysterium nostrum in mensa dominica positum est*,' that is to say, 'the mystery or sacrament of what you yourselves are,' namely, the Body of Christ. In *de Civ. Dei*, x. 5, he seems to be defining *sacramentum*:

'Sacrificium uisibile inuisibilis sacrificii sacramentum, id est sacrum signum, est.'

But he probably did not intend a formal definition, any more than when he called sacraments '*signacula ueritatis*.'¹ His constant recurrence to this idea, however, prepared the way for the formal definition which Isidore of Seville propounded towards the end of the 7th century:

'Sacramentum est in aliqua celebratione, cum res gesta ita fit, ut aliquid significari intellegatur quod sancte accipiendum est.'²

Augustine used the word in its widest extension of meaning, as did Leo the Great,³ but he moved in the direction of making it more specific, as when he spoke of the '*pauca sacramenta saluberrima*' of the gospel,⁴ or contrasted the manifold rites of the OT with the few of the NT, saying:

'Sacramentis numero paucissimis, observatione facillimis, significatione praestantissimis, societatem noui populi colligauit.'⁵

This implies the same limitation which the word *celebratio* imports into Isidore's definition. The movement was slow. It is noteworthy that Isidore himself could still speak of '*sacramentum Trinitatis*.'⁶ But the tendency was to restrict the use of the word to some action, *res gesta*, done with symbolic significance as a rite of the Church.

The fact that St. Jerome contemporaneously substituted *mysterium* for *sacramentum* in many passages of his revised version of the Scriptures does not seem to have any bearing on this movement, for he evidently did not distinguish the words on any principle. They were still true equivalents. He retained *sacramentum* in the following texts: Dn 218 48, To 127, Wis 222, Eph 19 32, 9 532, 1 Ti 316, Rev 120. The whole range of meaning which *μυστήριον* can have is here included.

The importance of the symbolic sense has a consequence. The compendious definition '*signum rei sacrae*' involves the distinction between *signum* and *res*, which appears definitely in the writings of Augustine, and acquires great importance in the system of theology ultimately elaborated from his teaching. At times he makes the distinction very sharp. The *signum* is visible, or presented to other senses than sight; the *res* is invisible. He notes two kinds of *signa*—those which are *naturalia*, as the track of an animal or smoke showing where there is fire, and those which are *data*, or merely conventional;⁷ and sacraments are evidently of the latter kind, so that *signum* and *res* are arbitrarily conjoined. Elsewhere he observes that in the case of such conventions the sign may be identified with (*sustinere personam*) the thing signified, as when St. Paul says 'That rock was Christ,'⁸ but only by a figure of speech. This of *signa* in general; in a passage often quoted he says much the same of sacraments:

'Si sacramenta quamdam similitudinem earum rerum quarum sacramenta sunt non habent, omnino sacramenta non essent. Ex hac autem similitudine plerumque etiam ipsarum rerum nomina accipiunt. Sicut ergo secundum quamdam modum sacramentum corporis Christi corpus Christi est, sacramentum sanguinis Christi sanguis Christi est, ita sacramentum fidei fides est.'

But this must be read with the context. He has been asked how an infant brought to baptism can be said to have faith; he replies that the child has *fidem* because he has the *sacramentum fidei*, and he goes on to say that this is sufficient for salva-

tion if subsequent sin does not undo what is done. He has said immediately before:

'Nonne semel immolatus est Christus in seipso, et tamen in sacramento non solum per omnes Paschae solemnitates sed omni die populus immolatur, nec utique mentitur qui interrogatus eum responderit immolari.'¹

This crucial passage therefore sets up something more than a typical or figurative relation between *signum* and *res*, and from this beginning proceeded the theology of the School.

So far the meaning of *sacramentum* is narrowed only to the case where there is a sensible sign of an intelligible reality. But Augustine did much more than impress on the word this connotation. His elaborated doctrine of grace, and his insistence on the connexion of this with certain sacraments, and especially with baptism, afforded ground for a narrower distinction. His statements must be read with care. When he says '*Sacramenta Novi Testamenti dant salutem; sacramenta Veteris Testamenti promiserunt Salvatorem*,'² he probably means the whole content of revelation. His conception of the working of grace made it impossible for him to tie this absolutely to particular rites or ordinances, and he was constantly enlarging on the futility of such a notion, but he was equally clear that certain sacraments were the ordinary vehicles for the conveyance of grace to the soul. It followed that certain ordinances might be distinguished as so used, and this distinction became the basis of the subsequent doctrine of the sacraments.

It is noteworthy that in the case of marriage, the *sacramentum magnum* of Eph 5³, he does not seem to have recognized any conveyance of saving grace. The *bona matrimonii* were *proles, fides, et sacramentum*, but by *sacramentum* he seems to have meant only its symbolism of Christ and the Church, in consequence of which marriage became (a) indissoluble, as it would not be by natural law '*nisi alicuius rei maioris . . . quoddam sacramentum adhiberetur*,'³ and (b) so sacred that the liberties taken even by virtuous pagans, such as Cato, were now intolerable.⁴

It was not, however, until the 12th cent. that the doctrine was formulated. Even then Hugh of St. Victor⁵ spoke of sacraments with the older generality, enumerating no fewer than 30 in particular. Shortly after his date appeared the *Libri Sententiarum* of Peter Lombard, which speedily became a textbook of the Schools and so acquired an importance disproportionate to its merits. He distinguished seven sacraments specifically conferring grace: Baptism, Confirmation, the Eucharist, Penance, Extreme Unction, Order, and Marriage. The various grounds given by his commentators for this limitation and enumeration indicate that it was in fact arbitrary. St. Thomas Aquinas seems to state the whole truth when he propounds, as the reason for maintaining it, the fact '*quod communiter ordinantur ab omnibus sacramenta, sicut prius dictum est*.'⁶

In the *Summa c. Gentiles*, iv. 58, Aquinas develops an analogy with nature. Corporal life has three essential needs: birth, growth, and nutriment, to which correspond Baptism, Confirmation, and the Eucharist; and one *per accidens* in case of need, i.e. healing, to which answer Penance and Extreme Unction. There are further required a source and an ordering of life, parents and governors, which are provided in the system of the Church by the sacraments of Order, supplying spiritual needs alone, and of Marriage, supplying both spiritual and corporal needs. Other *scholia* are even more forced and artificial. Some better varieties are collected in *Summa Theol.* iii. lxx. 2.

Yet this septenary system, however ill-founded it may seem, bore the test of criticism as understood in the Schools of the Middle Ages; and its general acceptance by the Greeks, who were not much disposed to borrow doctrine from Latins, seems to indicate that it was either drawn from a wider tradition or based on a larger sense of fitness than appears on the surface. It is not pretended

that the number is anywhere found expressed earlier than the 12th cent., when Otto of Bamberg introduced it into a catechetical instruction for his Pomeranian converts (c. 1127), but he propounds it as an accepted tradition. Shortly after him Hugh of St. Victor, though using the word more generally, distinguishes the '*septem principalia sacramenta*,' which were later set in a category apart. Contemporary with them was Gregory of Bergamo, who has the same classification in his treatise *de Veritate Corporis Christi*. A scheme recognized by men of such diverse associations, and not put forward as a novelty, must certainly have been for some time current, though it can be traced no higher. This must be remembered when the general adoption of the scheme is attributed with good reason to the influence of Peter Lombard and his commentators in the schools of theology. From the 13th cent. onwards the seven sacraments were mentioned with more or less of dogmatic assertion by numerous minor councils, by the General Council of Constance, and notably in the *Decretum pro Armenis* promulgated by Eugenius IV. at the Council of Florence, which followed almost verbally the *Opusculum Quartum* of Thomas Aquinas. Finally the Council of Trent condemned under anathema any who should say '*sacramenta novae legis non fuisse omnia a Iesu Christo Domino nostro instituta, aut esse plura vel pauciora quam septem*.'¹

There is a subordinate classification of *sacramenta mortuorum*, which confer first grace (Baptism and Penance), and *sacramenta vivorum*, which confer special graces on persons in the state of grace.

This more precise teaching, which had been gradually gaining ground, is in evident conflict with the language of the Fathers and of many writers down to the 12th cent., and in particular with the statement of St. Bernard² that the washing of feet is a sacrament for the remission of venial sins. He says emphatically that our Lord's action was done '*pro sacramento, non pro solo exemplo*.' To avoid this difficulty, theologians have generally argued that sacraments are spoken of either *sensu generico* or *sensu proprio*. A sacrament *proprie dictum* is one of the seven, and it is argued, not very successfully, that Bernard himself observed this distinction and used the word in the generic sense. The distinction first appears in Peter Lombard's definition:

'Sacramentum proprie dicitur, quod ita signum est gratiae Dei, et invisibilis gratiae forma, ut ipsius imaginem gerat et causa existat.'³

The weakness of the distinction lies in the implication that the name originally belonged to the ordinances thus specified, and was then extended in a loose sense to others, which is an exact inversion of the historic movement. The difficulty is thinly disguised by the practice, common to theologians, of calling other ordinances resembling the proper sacraments by the name of *sacramentalia*. Such are the anointing of kings, the clothing and consecration of nuns, and various benedictions.

The several sacraments being treated in this work under their proper heads, it is sufficient here to speak in general terms of what is common to them.

1. Institution. — According to the Tridentine definition, all sacraments were instituted by our Lord Jesus Christ. This follows from the limitation of the term confining it to ordinances by which grace is conferred. Thomas Aquinas carefully distinguishes between the divine nature, which is the source of grace, and the humanity of our Lord, by which the gift is mediated to us, the

sacraments being by His authority an extension of this mediation, though 'Ipse potuit effectum sacramentorum sine exteriori sacramento conferre.'¹ He has been closely followed by all theologians, but obvious lack of evidence in the case of some sacraments has led to a distinction between immediate institution by our Lord and institution by others acting on His authority. St. John Bonaventura argued that Confirmation and Extreme Unction were thus instituted by the Apostles.² Alexander of Hales went so far as to ascribe the origin of Confirmation to a council of the 9th century.³ The point has been laboured since the Council of Trent by almost all commentators; some assert that immediate institution by our Lord while on earth, and the committal of the institution to the written or unwritten tradition of the Church, are defined as *de fide* by the Council; others say that it certainly follows from the words of the Council, but is not expressly defined; others deny the necessity of this consequence, but will not venture to call the conclusion in doubt; Franzelin⁴ and other moderns find it hard to believe that the Council anathematized the teaching of St. Bonaventura or determined a historic question of such dubiety, but nevertheless maintain on *a priori* grounds the narrowest interpretation of the definition. In the Pontifical Letter *Lamentabili* of 1907 Pius X. condemned various propositions calling in question the immediate institution of the sacraments by Christ Himself.

2. Ordering.—The institution of the sacraments by our Lord being assumed, it seems to follow that some conditions of their valid administration are imposed. Since they derive their efficacy only from divine appointment, those conditions must be jealously guarded. Hence comes the theological notion of the 'substance' of the sacraments which the Church has no power to vary.

The decree of the Council of Trent invalidating marriages contracted without the presence of the *parochus* was opposed on this ground. If the consent of the parties was sufficient, as had always been held, to constitute a valid marriage, to vary this rule was to touch the substance of the sacrament. The objection is overruled by the fine distinction that the effect of the decree is only to render the parties *inhabiles*.⁵

The same consideration imposes the rule of tutiorism. Where there is any possibility of doubt as to the content of the substance of a sacrament, nothing must be neglected which there is even slender ground for supposing necessary. The safer course of including it must be followed in practice.

The factors in the substance of a sacrament are conveniently summarized under three heads: the minister, the intention of the minister, the matter and form. The intention of the minister has been treated elsewhere (art. INTENTION [Theological]); the other two heads can be more simply examined here.

(a) *Minister*.—Since in a sacrament there is always something done, a doer is required; and, since it is to be done by the appointment of Christ, it is important to ascertain who has authority to act. Apart from the Ignatian insistence on the part of the bishop in the Eucharist, which might be treated as mere matter of discipline, the earliest question raised on this head appears in the baptismal controversy of the 3rd century. Cyprian maintained with logical consistency that Baptism, being a conveyance of the gifts of grace deposited in the Church, could be administered only by the Church. Narrowly defining the Church, he denied that heretics or schismatics could baptize. In other words, the minister of the sacrament must

be a Catholic Christian. Arguing thus, he defended the practice of his predecessor Agrippinus, and apparently of all the African bishops, who rebaptized all heretics coming to them. Stephen of Rome maintained that this was an innovation, meeting it with the peremptory demand, 'Nihil innoetur nisi quod traditum est.'¹ The historic question is not easily determined. There had probably been a long-standing divergence of practice. Cyprian was supported by Firmilian of Cæsarea and other Easterns; the Donatists inherited his contention, and pressed it; but Augustine asserts that the contrary opinion, fortified by conciliar decisions, was already exclusively held among Catholics before the date of his birth, A.D. 353.² This conclusion about Baptism carried with it a like consequence in regard to other sacraments, and the Council of Nicæa agreed to receive Novatian bishops as validly ordained.

In the Western Church, however, disputes about the validity of schismatical ordinations long continued, as witness the history of St. Wilfrid in England, and of Formosus at Rome. The scandals arising out of the latter case led to the establishment of the judgment in favour of such ordinations secured by the influence of St. Peter Damian.³

During the later Middle Ages the contention of the Donatists was revived in a new form by the Puritan sects to which the practical corruptions of the Church gave rise. The power of ministering the sacraments was restricted by them to men of openly virtuous life. In the Profession of Faith imposed on the Waldensians by Innocent III. this opinion is expressly repudiated. It re-appeared in the teaching of Wyclif, was condemned by John XXII. in his Constitution against the Fraticelli, and by the Council of Constance in dealing with the Hussites.

The common teaching of theologians as against these errors is that a sacrament has its effect from God and from the institution of Christ, and not from anything which the minister himself contributes, his action being purely ministerial. When he performs what is required of him in this immediate connexion, the act is complete. The doctrine is safeguarded by the assertion that a sacrament is effective *ex opere operato*. The phrase first becomes conspicuous in the treatise *de Sacro Altaris Myst.* of Innocent III., who seems to have been taught it by his master Pierre of Poitiers in the school of Paris. He fixes the meaning precisely:

'Quamvis opus operans aliquando sit imundum, semper tamen opus operatum est mundum.'⁴

The *opus operans* is the personal action of the minister; *opus operatum* is the sacramental effect produced by this action. The distinction was repeated by William of Auxerre and by Alexander of Hales, but was not yet fully established in use when Aquinas wrote his commentary on the Sentences, for he there says only that it was employed 'a quibusdam.'⁵ He also varied the sense of the distinction as used by his predecessors, making *opus operans* equivalent to *usus sacramenti*. Later theologians have preferred the form *opus operantis*, which fixes the meaning more exactly on the personal action of the minister or the recipient. The other member of the distinction is perfectly stable; *opus operatum* is the thing done according to the institution of Christ, and having its effect therefrom. It was ultimately defined in the Council of Trent that by the sacraments of the New Law grace is conferred *ex opere operato*.⁶

It will be convenient to mention here the doctrine of *obex*. The word dates from Augustine, who, in his critical Letter to

Boniface on the baptism of infants, wrote that the child 'etiamsi fidem nondum habeat in cogitatione, non ei tamen obicem contrariae cogitationis opponit, unde sacramentum eius salubriter percipit.'¹ The *obex* here is a mental state opposed to faith, which in the case of an adult might annul the saving effect of the sacrament. The argument has been extended to the operation of the sacraments in general. An *obex* must be distinguished from a defect such as lack of necessary intention, or a personal incapacity for sacramental grace (e.g., lack of baptism in the case of other sacraments, and certain diriment impediments in the case of marriage) which is nullifying in a different manner. The sacrament is in this case understood to be valid; it impresses character, if it be one of those having that effect; it may ultimately confer grace by reviviscence when the *obex* is removed; but the soul receives no benefit of justifying grace from the immediate operation. The *obex* is a state of soul actively repugnant to the working of grace. A favourably active disposition is not required in such sort that the infusion of grace will be due to the co-operation of the recipient, as if *ex opere operantis*; a passive disposition suffices for adults as for infants; but, where an *obex* exists, the active operation of the recipient is needed for its removal, since the hindering state of soul cannot be changed without his will. The Council of Trent anathematized 'si quis dixerit, sacramenta novae legis . . . gratiam ipsam non ponentibus obicem non conferre.'²

So far it is seen only that neither orthodoxy nor personal sanctity is requisite in the minister of a sacrament. A larger licence, of which obscure indications are found in earlier times, appears definitely in the *Responsa ad Bulgaros* of Nicolaus I. The pope considers two cases. The first (ch. 14) is that of a pretended priest who had baptized many converts; the answer is that persons baptized 'a quocunque Christiano' are not to be rebaptized. The second (ch. 104) is that of a Jew—whether Christian or unbeliever was not ascertained—who also had baptized many. In respect of these the pope answers:

'Hi profecto, si in nomine Sanctae Trinitatis, uel tantum in nomine Christi sicut in Actibus Apostolorum legitur, baptizati sunt (unum quippe idemque est, ut sanctus exponit Ambrosius), constat eos non esse denuo baptizandos.'

Yet he directs inquiry whether the man were a Christian or not, for what purpose is not clear, concluding with a citation from Augustine:

'Baptismus Christi nulla peruersitate hominis, siue dantis, siue accipientis, posse uiolari.'³

This halting treatment suggests that he was not sure of his ground, lacking definite precedents; but his practical ruling in favour of baptism administered by any layman, or even by one who was not a Christian, was the starting-point of a doctrine that became firmly established in the schools of theology.

It follows that any human being is capable of acting as minister of a sacrament. Parity of reasoning might seem to extend this conclusion to other sacraments equally with Baptism, but the inference has not been drawn; the practice of the Church, supported by more or less weighty argument, has restricted the administration of other sacraments to particularly qualified persons. To determine who is an 'idoneus minister,' one must refer to the theology of the several sacraments.

(b) *Matter and form.*—A sacrament being a sensible sign of grace, it is obvious that something visible or audible or tangible, and so forth, is requisite; and this something must be determined by the institution of Christ. Theologians have debated the question whether such determination may be generic, or must be specific. If generic, it may then be left to the Church to determine specifically what shall be used, and this may even be determined differently in various parts of the Church; if specific, no variation is possible. In the case of Baptism specific determination is universally accepted; baptism must be by water in the name of the Holy Trinity. Yet even here the teaching of Nicolaus I., quoted above, about baptism 'in nomine Christi' may raise a doubt;

and it is perhaps only on tutorist grounds that the normal formula can be treated as indispensable.¹ In some other cases generic determination seems to be indicated by actual variations in the practice of the Church. Again, determination may be more or less specific; the use of bread in the Eucharist is determined by the institution of Christ, but all Western theologians agree that it may be indifferently leavened or unleavened; they discuss hypothetically whether wheaten bread is indispensable, to the exclusion of barley bread, but in practice the use of wheaten bread is imposed on tutorist grounds.

The importance of such determination is attested from early times by the practical watchfulness of the Church against innovations, as in the case of the Aquarian heresy. The use of water in place of wine for the Eucharist was not merely a disorderly proceeding, but an offence against the doctrine of the Church. But there was little theorizing until the introduction of the Peripatetic metaphysics in the 13th cent., when the distinction of matter and form was applied to the sacraments. William of Auxerre is credited with this innovation, but it is doubtful whether his 'materia et forma verborum' should be understood in the sense of *forma essentialis*. The true distinction was, however, in vogue soon after his time. The saying of Augustine about baptism, 'accedit uerbum ad elementum et fit sacramentum,'² detached from its context and treated as a quasi-definition of a sacrament in general, lent itself to the new mode of thought. The sensible act or thing used in the administration of a sacrament was likened to formless matter, being indeterminate in use and adaptable to many purposes; it was determined to a spiritual significance by the use of words, which thus played the part of the metaphysical *forma essentialis*. Some ingenuity was required to fit this conception to all the seven sacraments. There were various schemes. The one set out by Aquinas in his *Opusculum Quartum* obtained a great vogue; it was incorporated by Eugenius IV. in his *Decretum pro Armenis* at the Council of Florence, and with some modification in regard to Holy Order it still holds the field. The Council of Trent spoke in general terms³ of 'materia et forma quibus sacramenti essentia perficitur.' It is a postulate of current theology, therefore, that the sacraments were thus instituted by Christ, either immediately or mediately, either generically or specifically. It would be a mistake, however, to suppose that theologians hold themselves bound to the Peripatetic theory of matter and form, sometimes known as hylomorphism. It is rather the case that phrases derived from that theory have been adapted to the facts of sacramental practice, and are retained as consecrated by long usage in the Church.

3. *Efficacy.*—Before the rise of the Pelagian controversy (see art. PELAGIANISM AND SEMI-PELAGIANISM) there was no analytical teaching about the effect of the Christian sacraments. This began with Augustine's insistence on the practice of infant baptism as proving against Pelagius that infants stood in need of saving grace. The argument induced inquiry into the effect of baptism, and this led to a comparison with circumcision as a sacrament of the OT. St. Paul had declared that there was no justification 'by the works of the law'; circumcision was a work of the Law, though anterior to Moses, and the Apostle emphasized this by insisting that

¹ Ep. 98.

² Sess. vii. 'de Sac. in Gen.' 6.

³ De Bapt. vi. 1. The compatibility of this with his doctrine of *obex* is secured by a distinction which he proceeds to draw between *sacramentum* and *effectus uel usus sacramenti*. He remarks that Cyprilian failed to observe this distinction.

¹ The same expression as used by Stephen I. (Cypr. Ep. lxxiii. 16) possibly meant 'Christian Baptism' in general. For the use of the Creed as form of baptism in the 3rd cent. see F. E. Brightman, *Essays on the Early History of the Church and Ministry* (1918), p. 244 ff.

² In Joh. 80.

³ Sess. xiv. 2.

Abraham was justified by his faith before the institution of the sacrament. How did baptism differ from this? Augustine replied that circumcision was a sacrament or sign of a Deliverer to come, by faith in whom the people of God so marked were justified; but the Deliverer, being come, has instituted the sacrament of Baptism 'ad innovationem hominis'.¹ He adds that even before circumcision there was presumably some 'sacramentum iustificationis ex fide' latent in the working of God. From this distinction there proceeded with increasing precision a doctrine almost uniform in all Latin writers, that the sacraments of the OT were ineffective signs or symbols of a work of grace wrought independently of them, while the sacraments of the NT were instruments for the doing of that work.

Earlier expositions of this doctrine had been very crude. According to Tertullian, there was a *vis sanctificandi* in the water of baptism by descent of the Holy Spirit.² Augustine's studies in the doctrine of grace led to refinements which sometimes seem to reduce a sacrament to the standing rather of a pledge of grace given (a suggestion drawn from one use of the word *ut supra*), or of a 'conditio sine qua non'; but the later theology followed the main current of his thought, and was expressly concerned with the exclusion of these minimizing conceptions. A sacrament was taken to be a *vera causa* of grace. Aquinas in particular laboured this point, but in defining the nature of the causality he wavered, and gave occasion for a dispute which still engages the attention of theologians. In his commentary on the Sentences³ he taught that a sacrament is an *instrumental* cause of a certain disposition in the soul which is followed by the infusion of grace, but is not even instrumentally a cause of that infusion. In his later works he abandoned this distinction, adopting a theory of sacramental operation which seems to exclude his previous negation. In *Summa*, III. lxii. 5, he contrasts the human hand as *instrumentum coniunctum* with a stick as *instrumentum separatum*, both being operated by the principal cause, which is the man. So in the operation of grace God is the principal cause, the humanity of Christ is *instrumentum coniunctum*, a sacrament is *instrumentum separatum*; but it is evident that the same effect is produced whether the *instrumentum separatum* be used or not. Therefore he concludes:

'Sacramenta ecclesiae specialiter habent virtutem ex passione Christi, cuius virtus quodam modo nobis copulatur per susceptionem sacramentorum.'⁴

Among the later Scholastics those who adhered to the earlier teaching of Aquinas attributed the dispositive effect of the sacraments to a *physical* causation (Cajetan being apparently the first to use this phrase) which could not reasonably be extended to the actual infusion of grace. Those who adhered to his later teaching attributed the whole efficacy of the sacraments to a *moral* causation, as being instruments of an action of Christ Himself in His sacred humanity which is the moral cause of our justification.⁵ Melchior Cano, the first formulator of this conception, was followed later by Vasquez and De Lugo. Suarez, on the other hand, extended the notion of physical causation to the infusion of grace. His argument is that every creature of God has a natural adaptability to any end which the Creator may appoint (*potentia obedientialis*), and that this potentiality becomes active in the sacraments, by the supernatural appointment of God, to the production of

supernatural grace.¹ Among his followers the severely Thomist Drouin avows that the teachers of physical causation in the sacraments 'virtutem aliquam diuinitus acceptam in eis agnoscant, per quam proprie ueroque influxu sacramentales effectus in suscipientium corda insinuent'.² This opinion, after giving way for some time before the teaching of Vasquez and De Lugo, has recently been revived in the American *CE*, s.v. 'Sacraments.' On the other hand Billot³ has moved in the contrary direction, reducing the effect of sacramental causation to the creation of a *title* to grace, and so approximating to the first position of Aquinas.

The indelible effect of a sacrament as imposing character, and the vexed question of the reviviscence of grace in those who have received it without the necessary disposition for its salutary working, concerns the specific theology of those sacraments which have this effect, viz. Baptism, Confirmation, and Holy Order.

With the doctrine of sacramental causation is intimately connected the phrase *continere gratiam*, current from the time of its use by Hugh of St. Victor.⁴ The Council of Trent anathematized 'si quis dixerit, sacramenta nouae legis non continere gratiam, quam significant.'⁵ The phrase cannot safely be rendered by the English word 'contain,' which seems to be used only in a spatial or quasi-spatial sense and in the sense of restraint. Neither sense is applicable here; the grace signified is not tied restrictively to the sacraments, nor is there any spatial connexion, except so far as the sacrament operates at a certain place on persons there present. Grace is in the sacraments, says Aquinas,⁶ only as signified by them ('sicut in signo'), or as an effect is in the cause. It is not in them 'sicut in vase,' except only as a vessel may be considered an instrument of conveyance. It should be observed that the Tridentine canon sets *continere gratiam* in contrast with the notion that sacraments are 'signa tantum externa acceptae per fidem gratiae uel iustitiae.' The sense of *continere* here is that of immediate and continuous connexion, the connexion being specifically causal. It is a conception which falls in more easily with the theory of physical causation than with that of moral causation, but it is not inconsistent with the latter, and is in fact held along with it as a necessary consequence of the Tridentine definition. According to either theory, the causal connexion is unaffected by the occurrence of an *obex*, which interrupts the flow of the content of the sacrament to the soul of the recipient, but does not reduce it to a nullity.

LITERATURE.—In addition to the works mentioned throughout, the following are of first-rate importance: T. de V. G. Cajetan (the first of the modern school), *Commentary on Summa Theol.*, pt. III., contained in the Leonine ed. of St. Thomas Aquinas, Rome, 1888; F. Suarez, 'De Sacramentis in Genere,' in *Opera*, Venice, 1740-57, xviii.; R. F. R. Bellarmine, 'De Sacramentis,' in *Disputationes de controversiis Fidei*, Cologne, 1617, iii.; F. de Lugo, 'De Sacramentis in Genere,' in *Opera*, Venice, 1718, v.; H. Tournely (Lafosse), 'De Sacramentis,' in *Praelectiones Theologicae*, Paris, 1725-30; C. R. Billuart, *Summa Sancti Thomae*, Liège, 1746-51 (containing severe criticism of Tournely, from the extreme Thomist standpoint, abridged in *Summa Summe*, Ghent, 1763); G. Perrone, *Praelectiones Theologicae*, Rome, 1835-42 (a full course at the Collegium Romanum, once of great vogue, but superseded by Franzelin); J. A. Möhler, *Symbolik*, Mainz, 1832, tr. J. E. Robertson, *Symbolism*, London, 1906; F. Probst, *Sacramente und Sakramentalien in den drei ersten christlichen Jahrhunderten*, Tübingen, 1879; J. B. Franzelin, *Tractatus de Sacramentis in Genere*, Rome, 1888 (the last great work of the kind before the Thomist revival under Leo XIII.); L. Billot, *De Ecclesiae Sacramentis*, Rome, 1907 (the chief exponent of the new Thomism at the Collegium Romanum).

SACRAMENTS (Christian, Lutheran).—The doctrine of the sacraments, as understood and taught in the Lutheran Church, is a practical application of the doctrine of justification by faith. As the discussions of the Reformation period were occupied with a thorough criticism of the definition not only of 'justification,' but also of such closely related terms as 'grace' and 'faith,' so they inevitably led also to a radical change in the conception of 'sacrament.'

Recognizing the fact that the term in its ecclesiastical sense is not Scriptural, and that therefore considerable latitude could be allowed in its signification, the Lutheran Reformers were concerned only that a unique place should be assigned to Baptism and the Lord's Supper as means of grace, and that no rites, however useful in their place, that have not been instituted by divine authority for the same purpose as these two ordinances should be elevated to the same rank.¹ The term *sacramentum* in the Vulgate, as the equivalent of the Greek *μυστήριον* (in such places as Dn 2¹⁸, To 12⁷), designates what is in general secret and mysterious, and, because of being so, awakens wonder and inquiry that can be answered only by supernatural revelation. As such, it is applied repeatedly in the NT to the Incarnation (1 Ti 3¹⁶, Col 1²⁷, Eph 1⁹ 3², 5⁵²). In Patristic usage it was generally applied to any 'sacred sign' or 'a visible seal (*signaculum*) of invisible divine things,' 'a symbol of a sacred thing and a visible form of invisible grace.' The term was applied to manifold customs and rites, and at a very early date its pertinency to Baptism and the Lord's Supper, above all other rites, was generally recognized. The Reformers found in force the Decree of Florence (1439), designating the number as seven, viz. Baptism, Confirmation, the Eucharist, Penance, Ordination, Matrimony, and Extreme Unction; and at Augsburg they were forced by the criticism of art. xiii. of the *Augsburg Confession*, on the part of the authors of the *Confutation*, to define clearly their position as to the number. This necessarily involved a fixing of the definition. Prior to this Luther had, years before, in his private writings, freely criticized the teaching hitherto current. Of fundamental importance is his *Treatise on the New Testament* (1520); but he expresses himself at greater length in the *Prelude on the Babylonian Captivity*, written later in the same year—a trenchant criticism of the entire mediæval sacramental system.

'I must deny,' he says, 'that there are seven sacraments, and for the present hold to but three—baptism, penance, and bread. . . . To be sure, if I desired to use the term in the scriptural sense, I should allow but a single sacrament, with three sacramental signs.' Then he adds in conclusion: 'There are, strictly speaking, but two sacraments, baptism and bread; for only in these two do we find both the divinely instituted sign and the promise of the forgiveness of sins.'

Melanchthon, in the *Loci Communes* (1521), simply re-echoes these statements:

'What others call sacraments we call signs, or, if you please, sacramental signs. For Paul calls Christ Himself the Sacrament. But if the name "sign" displeases you, you may call them seals, and thus more nearly express the force of the sacraments. . . . Two signs have been instituted by Christ in the Gospel, viz. baptism and the participation of the Lord's Table.'

Accordingly, the *Apology* (1531) proposes the definition: 'Sacraments are rites which have the command of God, and to which the promise of grace has been added,' i.e. the promise of the gratuitous forgiveness of sins for Christ's sake, or the gospel. It also became a prominent feature of the Lutheran conception of a sacrament to emphasize the fact that this promise of grace is individualized in the administration of the sacrament.

¹ See *Apology of the Augsburg Confession*, p. 218, and the chapter of the *Examen Concilii Tridentini* of Chemnitz, ii. 2 ff., 'de Vocabulo Sacramenti.'

'Christ causes the promise of the Gospel to be offered not only in general, but through the sacraments, which He attaches as seals of the promise. He seals and thereby especially confirms the certainty of the Gospel to every believer.'

Thus the sacrament is not only a visible word, but it is the visible word individualized.

The efficacy of the sacrament lies, therefore, neither in the character nor in the intention nor in the regular ordination of its ministers, nor in the element received, nor in the sacramental transaction itself, but solely in the word of divine grace which it applies to the individual receiving it. The sacrament, being not man's but God's act, cannot profit as an act of obedience on the part of man. Man's part in it is entirely receptive. Most important is the distinction between a sacrament and a sacrifice.

'A sacrament is a ceremony or work, in which God presents to us that which the promise annexed to the ceremony offers, as baptism is a work, not which we offer to God, but in which God baptizes us, i.e. a minister in place of God; . . . A sacrifice, on the contrary, is a ceremony or work which we render God.'

This position Luther most strenuously maintained against the extreme of Romanism on the one hand, which changed the Lord's Supper into a propitiatory sacrifice in the Mass, and of the radical reaction against Rome on the other, which regarded it as only a Eucharistic sacrifice.

'We should not presume to give God something in the sacrament, when it is He who therein gives us all things.'

Nor have they profit as works wrought for men by a priest. With the greatest decision the Reformers repudiated the Scholastic doctrine that a sacrament profits *ex opere operato*, except where recipients intentionally oppose an obstacle (such as a mortal sin, or the purpose to commit sin) to its efficacy. Against such a mechanical theory the value of the sacrament was placed solely in its communication of the word of grace, to be apprehended by the intelligence of the subject, and appropriated by faith. The best known of all Luther's books, the *Small Catechism*, says:

'It is not the water that produces these effects, but the Word of God which accompanies and is connected with the water, and our faith which relies on the Word of God connected with the water'; and 'The eating and drinking do not produce these great effects, but the words which stand here, "Given and shed for you for the remission of sins." 'He who believes these words has what they set forth, namely the remission of sins'; and, to quote the *Treatise on the NT* once more, 'Sacrament without testament is the case without the jewel.'

The mechanical theory of the sacrament broke down with the scholastic theory of justification. This failed in the recognition of the Pauline doctrine of justification as an act of God with reference to man, and regarded it, on the other hand, as wrought within man, in a continuous, gradual process, by the infusion of grace, through the sacraments. But, according to the NT, grace, in the proper sense, is no quality inhering in man, or communicable to man, but a disposition of God toward man, i.e. God's favour shown man without merit on man's part. The grace of God reaches man through a promise, and that promise is apprehended only by faith. Nor is justification a process wrought within man, but a simple and complete act of God, without stages or degrees. Sanctification, or the process by which man grows in all the gifts of grace, is one thing; justification, by which God places man in a new relation with God Himself, is quite another. There are also degrees of faith by which the promise is apprehended; but, wherever justification is present, it is always of the same value, namely that of the complete obedience of Christ; and this is the gift offered in the sacraments.

Nor is this most clearly enunciated theory of

¹ *Formula of Concord*, p. 656 (quotations from the Confessions of the Lutheran Church are from the Eng. tr. of *Book of Concord*, Philadelphia, 1911).

² *Apology*, 262. 18.

³ Luther, *Treatise on the NT*.

the sacraments in any way contradicted by difficulties connected with the explanation of the agency of the Holy Spirit in infant baptism upon the mind and heart of the child baptized. For, even with respect to adults, the work of regeneration always remains a mystery (Jn 3⁸); and, however emphatically Luther connects regeneration and baptism, nevertheless the ground and motive of infant baptism is not that faith may be wrought in an unconscious child, but that Christ's command concerning it may be obeyed.

Everything depends upon the word and command of God.¹ 'We bring the child in the purpose and hope that it may believe, and we pray that God may grant it faith; but we do not baptize it upon that, but solely upon the command of God.'² 'It is very certain that the promise of God belongs also to little children. . . . Therefore, it is necessary to baptize little children, that the promise of salvation may be applied to them, according to Mt 28¹⁹. Just as there is salvation offered to all, to men, women, and children, so baptism is offered to all—men, women, children, infants. It clearly follows, therefore, that infants are to be baptized, because with baptism salvation is offered.'³ 'Through baptism is offered the grace of God, and children, being offered to God through baptism, are received into His grace.'⁴

Where, then, God thus offers His grace, it is believed that He provides also a certain measure of receptivity for it, even although we cannot define either method or measure. All explanations attempted are pure hypotheses and not articles of faith, and cannot be admitted as standards according to which a universal principle concerning the sacraments may be deduced, particularly if such principle antagonize what is no hypothesis. It is enough to know that the word of promise is offered in baptism, and 'is and remains efficacious until we pass from this estate of misery to eternal glory';⁵ and to this promise faith is to recur throughout all subsequent periods of life. The stress, however, lies always not on the faith of the recipient, but on the surety of the promise made to the individual, just as the adult is justified not because of his faith, but because of the grace of God and the merit of Christ that his faith apprehends.

For a proper estimate of the office of the sacraments, a consideration of the doctrine of the Word of God as taught by Luther is also important. In his judgment the Word is no mere directory, informing men of the way of life; besides being such, it brings the very life whereof it teaches. The activity of the Holy Spirit is not supplementary to the Word; nor is there any inner Word, apart from the Word as written, preached, and announced in the sacraments. The outward Word, which is heard and read, is the true means through which the Holy Spirit works. Outward and inner Word, if distinguished, are only two sides or relations of one and the same thing. Nor are the means of grace institutions by which man approaches God; they are institutions by which God comes to man (Ro 10⁶⁻¹⁵). Strictly speaking, there is but one means of grace, viz. the Word, and that, too, the Word of the gospel; but, since this Word comes in two forms, we speak, in the wider sense, of both Word and sacraments as the means of grace.

The grace, therefore, offered and received in the sacraments in no way differs from that offered and received in hearing and reading the Word. The promise of the sacraments is the very same as is offered in the Word without the sacraments. The necessity of the Word is absolute; without it there is no salvation; that of the sacraments is relative. We are bound to them because God has instituted and enjoined them.

Nevertheless, 'since the testament is far more important than the sacrament, so the words are far more important than

the signs. For the signs might be lacking, if one only have the words, and thus might be saved without sacrament, yet not without testament.'¹

The relative necessity of sacraments arises out of a gracious accommodation of God to the weakness of man's faith.

'Mens humana non tantum per se non nouit promissionem de gratuita reconciliatione, verumetiam quando illa verbo nobis reuelatur, . . . difficulter illam ut privatim ad me etiam pertinentem apprehendere et retinere potest. Deus igitur Sacramenta instituit, ut essent externa et visibilia signa et pignora gratiae et uoluntatis Dei erga nos: quibus illustri uisibili testimonio testificetur, quod promissio ad singulos illos pertineat, qui fide eam in usu Sacramentorum amplectuntur.'²

Faith contributes nothing, therefore, to the efficacy of the sacraments, since all their power comes from the Holy Spirit in and through the Word of the promise which they apply. Their virtue is objective, dependent alone on their divine institution; but faith is the organ by which the promise is received. God's Word is living and powerful, whether I receive it or not; but it is so in me only as by faith it enters and controls my heart. A sacrament is received by faith when the Word attached to the sacrament has entrance. Even though at the time of the administration faith should be absent, the promise is there for appropriation and saving application, at whatever time thereafter the one to whom the sacrament has been given turns to God in repentance and faith.

Most important therefore is it that in the administration the words of each sacrament should have the central place, and that the attention of those receiving it be not diverted by a multitude of ceremonies that dazzle the eye from the simple word of the gospel, which it is the office of the sacrament to apply and on which all else should be focused. Still greater is the loss where the words are omitted, as, in the Roman Mass, 'given and shed for you for the remission of sins' fell out, or where the words of institution are recited in a language unknown to the people, or in low and subdued tones that cannot reach them, even though they understand the language. For how can faith be enkindled by the Word when hidden under an unintelligible form? As the gospel is the power of God to salvation, not from any magical or occult power inhering in the syllables, but from the revelation of God's will which it brings to man's intellect and heart, so also with the sacraments. Luther's object in the reformation of the Mass was, first of all, that the promise and pledge of the sacrament should reach every mind, and, through the mind, touch every heart of those participating.³

Nor is the change in the ministers of the sacraments made by the Lutheran Reformation to be overlooked; for the authority to administer them was not limited to a priestly self-perpetuating order within the Church, both because a sacrament is not a sacrifice and because such authority is vested in the entire Church and dare not be usurped by any part.

'For wherever the Church is, there is the authority to administer the Gospel. Wherefore it is necessary for the Church to retain the authority to call, elect, and ordain ministers.'⁴

Ministers are the executives of the Church, and in discharging functions which God has entrusted to the Church they are no less the representatives of God; and the Church is 'where two or three are gathered' in Christ's name.

In rejecting the errors of the mediæval Church, the Lutheran Church has also been careful to guard against exaggerations arising from a more radical reaction against Roman Catholicism. While there is, indeed, a sense in which sacraments

are 'marks of Christian profession among men,' this pertains rather to their use than to the sacraments themselves. For, as they are God's and not man's work, they are 'rather signs and testimonies of the will of God toward us, instituted to awaken and confirm faith.'¹ Man's profession of faith is not a sacramental but a sacrificial act, in response to the sacramental Word. For a like reason, they are not simply 'symbols of Christian fellowship,' although this fellowship also is attested in our use of the sacrament (1 Co 10¹⁷). Nor are they allegories either of divine grace or of Christian virtues, or mere testimonies of a grace previously bestowed.

In Lutheran countries baptism is generally administered within a few days after the birth of the child. The meaning and efficacy of baptism receive particular recognition and emphasis in the rite of confirmation, which is so far removed from the Roman sacrament known by that name as to constitute an entirely different ceremony. The Reformers urged not only that the so-called sacrament of confirmation was without divine institution, but that it derogated from the recognition of the efficacy of baptism, since it was extolled as conferring the fullness of gifts of the Holy Spirit, for which baptism furnished only a preparatory grace. Accordingly, confirmation fell into almost entire disuse among Lutherans, until, since its gradual reintroduction in another sense by Spener (1635-1705), it is to-day universally observed by them, as an edifying ecclesiastical rite, in which the contents and claims of the divine covenant made in baptism are recalled to those who are about to receive the Lord's Supper for the first time, while they, on their part, solemnly declare that they realize not only what their baptism meant when administered, but also what it means at all times, since it is the formal affirmation in mature life of their full understanding and believing acceptance of what was done for them in their infancy.

Baptism is never to be repeated—not because of the Roman figment of any *character indelibilis*, but because baptism is a perpetual covenant on God's part, and by repentance we are daily to return to our baptism.

¹ For though we were a hundred times put under the water, it would, nevertheless, be but one baptism.²

In the Lord's Supper the sacramental conception culminates. While Baptism is the sacrament of initiation, the Lord's Supper is the sacrament of the mature Christian life. The former concerns the foundation, the latter the growth of faith. The former gives the general assurance of divine favour; the latter announces that a 'new testament' shows forth the Lord's death, and tenders His glorified Body and Blood as the seal of completed redemption to the individual who has already been baptized, for the comfort and strengthening of the faith previously received.

The controversy as to the presence of the glorified humanity was one which Luther and his associates could not avoid; and yet it has obscured the main stress of the doctrine. For, while Luther insists that the chief thing in the sacrament is the words, 'given and shed for you,' etc., nevertheless he could yield nothing of what he found in the words of institution, nor was he willing to surrender the comfort of the Real Presence by removing the humanity from the Holy Supper to a distance greater than that which separates heaven and earth. Nor could he reconcile himself to the thought that nothing but a sign or figure of the absent Body is present, or that Christ is present only in His divine nature, offering the sympathy and support of His far-remote humanity. For faith forbids us to place any limitations upon the ability of Christ to be present wherever He wills

to be, or to do whatever He wills to do. No theory of Christ's ubiquity, as is often asserted, but only the words of institution determine the Lutheran teaching on this point, although the main attacks upon this teaching, Luther promptly showed, involved a misconception of what is meant by 'the right hand of God' as well as of Christology in general. Transubstantiation and all other attempts to define specifically this presence were repudiated. Every attempt to formulate it in philosophical terms must fail; it is enough to know that the real body of Christ is truly present—not, indeed, in a natural, but in a supernatural and heavenly way.

² Nos uero praesentiam ipsam, quia testimonium habet uerbi Dei, simpliciter credimus: de modo uero praesentiae, quia uerbo Dei reuelatus non est, iudicamus non esse disputandum. Non igitur definimus certum modum illius praesentiae, sed eum humiliter commendamus sapientiae et omnipotentiae Dei.¹

Strenuous as was the controversy, however, and often as it may have degenerated into an academic question and have been diverted into Scholastic subtleties, with Luther its deeply religious side was central. To him the Lord's Supper was the sign and sacrament of completed redemption; but he saw the sign not in the element, but in the heavenly object by which it was accompanied. The Body and Blood of Christ, actually tendered to the communicant with the bread and wine, tell not only of sin and guilt and the need of redemption above man's ability to provide, but also of the completion of redemption, and God's gracious will that the communicant to whom they are offered should personally share in all that Christ has and is.

But man's faith cannot create this presence. Whether man believe or not, the presence exists solely because of Christ's institution. Only by faith, however, can the gospel, as thus offered in the sacrament, be appropriated. While the sacramental and the spiritual receptions of Christ are carefully distinguished, while the spiritual may occur without the sacramental, and the sacramental without the spiritual, nevertheless the end of the sacramental giving and receiving of Christ is that He may be received in the highest measure spiritually, i.e. by faith.

In the canon of the Mass the priest offers to a just and wrathful God the Body and Blood of Christ, as a sacrifice for the sins of the living and the dead; and, as the representative of the penitent people, he intercedes that, by the interposition of this offering, God's wrath may be appeased and punishment immediately and hereafter impending averted. But, in the evangelical communion, as restored by Luther, the perfection of Christ's sacrifice offered on the Cross once for all, and the all-availing intercession which He continually makes for all believers, completely reverse the activity. The Body and Blood of Christ have become the pledges offered by God, through the administrator of the sacrament, to each and every communicant, that His thoughts are only those of love. Christ and all that Christ is are given with the bread and wine, to assure him that, with Christ, he is to possess all things. This pledge is given in the sacramental act, of which the words of distribution, as given by Christ at the original institution, are the most important part. The consecration of the elements is not effected by the prayer either of minister or of congregation, or by the recitation at the time of the original words of institution, but by those words, as they were originally uttered by Christ, which, like the marriage blessing (Gn 1²⁸), remain effective throughout all subsequent ages. Those words are to be proclaimed and never to be omitted when the sacrament is administered, 'that

¹ Chemnitz, ii. 76, 'de Reali Praesentia.'

² Augsburg Confession, art. xiii. ² Large Catechism, 475.

the faith of the hearers may be excited and strengthened by Christ's word.¹ The proper preparation for the Lord's Supper is, occupied also with the same words. Through them the sense of need is awakened, that they who hunger and thirst after righteousness may be filled. The imagination that one may be rendered worthy of its reception on the ground of character or a good purpose, or through the regimen of ascetic exercises, or by the purifying effects of either bodily or mental pain, only increases unworthiness. Confession of sins is of no benefit if it be thought that the confession itself removes guilt and gives a better title for approach. As Luther says, 'the only thing we can bring to the altar is a broken and empty heart.' All confessional services, whether private or public, that are in use have as their end the promotion of such spirit in all who would partake.

'He is truly worthy and well-prepared who believes these words: "Given, and shed for you, for the remission of sins." But he who does not believe these words, or who doubts, is unworthy and unfit; for the words: "for you" require truly believing hearts.'²

Holding, further, that 'the communion of the unworthy' (1 Co 11²⁷) cannot refer to the weak in faith (since it was just for such that it was especially instituted) or to believers coming to the sacrament without proper self-examination (since the condemnation whereof warning is given cannot apply to those who are in Christ [Ro 8¹]), and having in mind the judgment announced in 1 Co 11²⁸, the Lutheran takes great care to guard against any thoughtless approach, out of mere habit, or from any motive other than a longing for the spiritual benefit offered to faith in the sacramental Word. This is the explanation of the provision described in the *Augsburg Confession*:³

'It is not usual to give the body of the Lord, except to them that have been previously examined and absolved.'

The withholding of the cup from the laity—an acknowledged departure from apostolic usage—being recognized as a mutilation of the sacrament, was promptly remedied as the principles of the Reformation were applied to a revision of the liturgy.

Attention should be called to the fact that the Lutheran conception of the sacraments was a gradual growth. As in every formative movement, there are stages through which it passed before it reached consistent expression. In the Lutheran Confessions and the more mature treatises of Luther the sources are found for learning the results attained, while among those known as Lutherans individual opinions, in various lands and ages, show decided variations, as one or the other extreme of either ecclesiasticism or radical subjectivism has had influence.

LITERATURE.—The primary sources of information are the Confessions of the Lutheran Church (in German and Latin: J. T. Müller, *Die symbolischen Bücher der evang.-luther. Kirche*¹⁰, Gütersloh, 1907; in English: *Book of Concord*, ed. H. E. Jacobs, Philadelphia, 1911); the writings of Luther (see art. LUTHER) and Melancthon (*Corpus Reformatorum*, vols. i.-xxviii., ed. C. G. Bretschneider and H. E. Bindseil, Halle and Brunswick, 1834-60); and the numerous Church Orders of the 16th cent., as found in the collections of A. L. Richter (2 vols., Weimar, 1846) and E. Sehling (5 vols., Leipzig, 1904-13). The secondary sources are the dogmaticians of the purer period, especially Martin Chemnitz, *Examen Concilii Tridentini*, 4 pts., Frankfurt, 1665-73, and later edd., who gives more accurate scientific expression than any of his successors to the positions of Luther. See also J. Köstlin, *Luthers Theologie*², 2 vols., Stuttgart, 1883, Eng. tr., Philadelphia, 1897; P. Tschackert, *Die Entstehung der lutherischen und reformierten Kirchenlehre*, Göttingen, 1910; the histories of doctrine by G. Thomasius (ed. R. Seeberg, Leipzig, 1886-89), A. Harnack (Eng. tr., London, 1894-99), R. Seeberg, (2 Leipzig, 1913), and F. Loofs (2 Halle, 1906), and the *Symbolik* (Tübingen, 1876) of G. F. Oehler.

HENRY E. JACOBS.

SACRAMENTS (Christian, Reformed).—Calvin not only encountered this subject as a *locus communis* of theology, handling it in the fourth book of the *Institutes* (chs. xiv.-xix.), that on the Church, and not only had he, as a reformer, to assail it as part and parcel of the sacerdotal system which he was out to overthrow, but he was brought into close contact with the subject in more than one incident which formed part of his day's work. When he first emerged on the scene, Protestantism was being vexed and weakened with a controversy between the followers of Luther and those of Zwingli over the sacraments, and it concerned him vitally to keep this away from the sphere of his own labours. For this purpose he entered into negotiations with Zwingli's successor, Bullinger, and with such success that the entire Swiss Church became united in a detailed statement on the sacraments in the Consensus of Zürich, 1549. So conciliatory was he, and so fully did he include what was of most importance in the Lutheran view, that between him and Melancthon there sprang up the closest friendship, and even Luther is reported to have said, at an early stage of the proceedings, that, if Zwingli had spoken in such tones, there would never have been any war between them. But in other quarters the success of the peace negotiations produced a different impression. To such a degree did the clearness and reasonableness of Calvin's view begin to tell that there was a wide-spread turning towards the Reformed as distinguished from the Lutheran point of view. This alarmed the protagonists on the Lutheran side, and one of them, Westphal, a theologian of Hamburg, began to attack Calvin in no measured terms. This man, indeed, passes in history for a controversialist of the worst type—noisy, obstinate, and unfair, making use of the most truculent language, as was, however, the custom of the time. Calvin at first handled him lightly; but, when his restraint seemed to be doing no good, he met violence with the incisiveness and sarcasm which, when necessary, he was able to wield; and this controversy perfected the development of his own views. As, however, all this was past before the production of the last edition of the *Institutes* (1559), that issue may be regarded as containing his fully matured convictions.

He begins with defining a sacrament:

'It is an external sign, by which the Lord seals on our consciences his promises of goodwill towards us, in order to sustain the weakness of our faith, and we in our turn testify our piety towards him, both before himself, and before angels as well as men.'¹

He adds the definition of Augustine—'a visible form of an invisible grace'—but says there is no difference between the longer and the shorter definition. The word 'sacrament' does not express all this in itself; its use arose from its being employed in the Vulgate in place of the Greek *μυστήριον*; what the Latins call *sacramenta* the Greeks call *μυστήρια*. He does not add—what is the case—that the transference to the rites of the Church of the word *μυστήριον* was a departure from the use of the word in the NT, where it means something which had been hidden from the knowledge of men in the earlier dispensation but revealed in the dispensation of the gospel. In this confusing, at the beginning, of things that differed lay the origin of many mistakes which were subsequently to darken the mind of the Church. 'Sacrament' is not a Biblical word, and with its misuse are connected not a few of the saddest pages in the history of the Church.

Calvin proceeds:

'From the definition which we have given, we perceive that

¹ Formula of Concord, 615 f.

² Small Catechism, pt. v. (vi.).

³ Art. xxv.

¹ *Institutes*, tr. H. Beveridge, Edinburgh, 1863, bk. iv. ch. xiv. § 1.

there never is a sacrament without an antecedent promise, the sacrament being added as a kind of appendix, with the view of confirming and sealing the promise.¹

This is not for the sake of establishing the truth, which needs no confirmation except from itself; but it is a concession to human weakness, to facilitate our apprehension of the truth.

¹This is commonly expressed by saying that a sacrament consists of the word and the external sign.²

The phrase has, indeed, been misapplied, the 'word' being understood of the muttering by the priest in a tongue unknown to the multitude.

²Very different is the doctrine of Augustine concerning the sacramental word: "Let the word be added to the element and it will become a sacrament. For whence can there be so much virtue in water as to touch the body and cleanse the heart, unless by the agency of the word, and this not because it is said, but because it is believed?" . . . Therefore, when we hear mention made of the sacramental word, let us understand the promise, which, proclaimed aloud by the minister, leads the people by the hand to that to which the sign tends and directs us.³

To this view of the sacrament as 'a visible word'—to quote another phrase of Augustine—it might be objected that the sacrament was a superfluity, since the true will of God was sufficiently known through the Word, and the sacrament could make us no wiser. But to this the reply is made:

³The seals which are affixed to diplomas, and other public deeds, are nothing considered in themselves, and would be affixed to no purpose if nothing were written on the parchment, and yet this does not prevent them from sealing and confirming when they are appended to writing. . . . 'Sacraments bring with them the clearest promises, and, when compared with the word, have this peculiarity, that they represent promises to the life, as if painted in a picture.'⁴

He goes on to give other illustrations of the virtue of signs or seals with a liveliness of imagination for which he would hardly have received credit, and with the result of demonstrating that the clarifying or confirming of faith is no superfluity.

⁴It had been better for the objectors to pray, with the apostles, "Lord, increase our faith." . . . Let them explain what kind of faith his was who said, "Lord, I believe; help thou mine unbelief."⁵

It is no disparagement to the Holy Spirit to assign to the sacraments this office of increasing and confirming faith; for they are only the instrumental-ality through which He acts.

⁵The sacraments duly perform their office only when accompanied by the Spirit, the internal Master, whose energy alone penetrates the heart, stirs up the affections, and procures access for the sacraments into our souls. If he is wanting, the sacraments can avail us no more than the sun shining on the eyeballs of the blind, or sounds uttered in the ears of the deaf.⁶

This, however, is no more than might be said of the Word of God itself, which none would dare to consider superfluous in the region of grace.

⁶God uses the means and instruments which he sees to be expedient, in order that all things may be subservient to his glory, he being the Lord and disposer of all.⁷

At this point the author refers, in rather a tone of deprecation, to the importance attached by some to the meaning of *sacramentum* in the sense of the soldier's oath of loyalty, sworn in Roman times in the Campus Martius before setting forth on a campaign.

⁷So by our signs we acknowledge Christ to be our commander, and declare that we serve under his standard. As the toga distinguished the Romans from the Greeks, who wore the pallium; and as the different orders of Romans were distinguished from each other by their peculiar insignia;—e.g., the senatorial from the equestrian by purple, and crescent shoes, and the equestrian from the plebeian by a ring, so we wear our symbols to distinguish us from the profane.⁸

Such similitudes he does not reject, but, in obvious allusion to the Zwinglians, he condemns those by whom that which they signify is made 'the first, and indeed the only thing.' A little later he

returns to this side of the subject, quoting Chrysostom, who calls sacraments 'pactions, by which God enters into covenant with us, and we become bound to holiness and purity of life, because a mutual stipulation is here interposed between God and us.'¹ But he does not develop this aspect of the sacraments with fullness or sympathy, and to this extent he fails in giving a well-balanced exposition of the definition with which, as was noted above, he started. He is too preoccupied with the more negative side of the truth, limiting what he has said about the use of the sacraments by the Holy Spirit. This, he remarks, does not include 'a kind of secret virtue,' or what he has earlier called 'a kind of secret efficacy perpetually inherent in them.' Here he is doubtless alluding to the Lutherans, but far more to the Roman Catholics, and his language in reference to the latter is very strong indeed. He appeals to St. Augustine (whom he quotes so often, as he says on a later page, as being 'the best and most faithful witness of all antiquity'), who distinguishes between the sacrament and the matter of the sacrament.

¹'The sacrament,' says this authority, 'is one thing, the virtue of the sacrament another. Why is it that many partake of the altar and die, and die by partaking? For even the cup of the Lord was poison to Judas, not because he received what was evil, but, being wicked, he wickedly received what was good.'²

The author goes on, in his own name, with the warning:

²'A sacrament is so separated from the reality by the unworthiness of the partaker, that nothing remains but an empty and useless figure. Now, in order that you may have . . . the thing with the sign, the word which is included in it must be apprehended by faith.'³ 'Let it be a fixed point that the office of the sacraments differs not from the word of God; and this is to hold forth and offer Christ to us, and, in him, the treasures of heavenly grace. . . . The sacraments are to us what messengers of good news are to men, or earners in ratifying pactions. They do not of themselves bestow any grace, but they announce and manifest it, and, like earnest and badges, give a ratification of the gifts which the divine liberality has bestowed upon us. The Holy Spirit, whom the sacraments do not bring promiscuously to all, but whom the Lord specially confers upon his people, brings the gifts of God along with him, makes way for the sacraments, and causes them to bear fruit. . . . In this doctrine of the sacraments, their dignity is highly extolled, their use plainly shown, their utility sufficiently proclaimed, and moderation in all things duly maintained; so that nothing is attributed to them which ought not to be attributed, and nothing denied them which they ought to possess.'⁴

There follows a discourse on the sacraments of the OT, especially circumcision, the view being taken that these set forth Christ just as certainly as do the sacraments of the NT, the only defect in their way of presenting Him arising from the fact that He was then enveloped in the mist of futurity, whereas now He stands in the clear light of history.

It has been taken for granted throughout this whole chapter that the sacraments of the NT are only two, Baptism and the Lord's Supper; but, after these two have been thoroughly explained in chs. xv.–xviii., the author returns in ch. xix. to a discussion of the pseudo-sacraments, as he considers them, of Confirmation, Penance, Extreme Unction, Orders, and Marriage. In somewhat the same way as in the Anglican Church not a few have been disposed to show a partiality for the first of these, as being, if not exactly on the level of the two undoubted sacraments, at least near it, Calvin, while deprecating the chrism and the notion that only a bishop is equal to the performance of the ordinance, acknowledges that admission to the membership of the Church is an occasion of great importance, which might well be dignified by such a ceremony as the laying on of hands, though he does not allow that this rises to the rank of a sacrament. But his tone in dealing with the rest of the so-called sacraments is

¹ Institutes, bk. iv. ch. xiv. § 2.

extremely severe; and, to account for this, we must remember the height to which in the Church before the Reformation the multiplication of ceremonies and symbolism had been carried. A glance, e.g., into Hamilton's *Catechism*—a *vademecum* with which the clergy were supplied for the performance of their functions by an archbishop of St. Andrews just before the Reformation—will show that the simple rite of baptism had been converted into a perfect cycle of ceremonies, some of them perhaps beautiful, but others the reverse, and some very obscure. The people were supposed to understand these, but the clergy themselves did not always understand them, and this was the reason for the publication of Hamilton's instructions. Calvin makes fun of the variety of meanings attributed to the ceremony of the tonsure, and any one who turns to *A Catholic Dictionary* will discover how utterly at a loss the most scholarly are even at the present day to explain a practice so common. But, indeed, it is the Mass itself that is the greatest of all combinations of symbolism. Nothing could be more unlike the simple, domestic observance of the first Lord's Supper than is the performance of a Mass in a great cathedral; and Calvin was doing an unspeakable service to Christianity when he contended that the original mode of administering the sacrament was the best model for all time.

John Knox was, if not in scholarship, at least in spirit, the best disciple of Calvin; and his statement, in the old Scots Confession of 1560, though brief, excels even that of the master. It begins, instead of ending, with the sacraments of the OT; it is much more vigorous than Calvin could afford to be in repudiating the shortcomings of the Zwinglians; and—best of all—it states with warmth and fullness the positive element which was always lacking in the Zwinglian creed, namely, that, besides the commemoration of the past and the profession of loyalty for the future, there is in the sacrament a transaction here and now between the Saviour and the communicant, each giving himself to the other and receiving the other as an everlasting possession.

'As the Fatheris under the Law, besydis the veritie of the sacrifices, had two cheaf Sacraments, to witt, Circumcisioun and the Passover, the despyaris and condemnaris whairof war not reputed for Godis people; so [do] we acknowledge and confesse that we now, in the tyme of the Evangell, have two Sacraments onlie, institutis be the Lord Jesus, and commanded to be used of all those that will be reputed members of his body, to witt, Baptisme and the Supper, or Table of the Lord Jesus, called The Communion of his body and bloode. And these sacramentis (alsweill of the Auld as of the New Testament) war institut of God, not onlie to maik ane visible difference betwixt his people and those that war without his league; but also to exercise the faith of his children; and by participation of the same sacramentis, to seal in their heartis the assurance of his promeis, and of that most blessed conjunction, unioin, and societie, whiche the Elect have with thair head, Christ Jesus.'¹

At a time when the use of the seven sacraments is being commended to the Church of England by one so highly placed and much esteemed as Bishop Gore the words of the Thirty-nine Articles have special importance:

'There are two sacraments ordained of Christ our Lord in the Gospel, that is to say, Baptism and the Supper of the Lord. Those five, commonly called Sacraments, that is to say, Confirmation, Penance, Orders, Matrimony, and Extreme Unction, are not to be counted for Sacraments of the Gospel, being such as have grown partly of the corrupt following of the Apostles, partly are states of life, allowed in the Scriptures; but yet have not like nature of Sacraments with Baptism and the Lord's Supper, for that they have not any visible sign or ceremony ordained of God.'²

In the *Heidelberg Catechism* the question 'What are the Sacraments?' is answered as follows:

'They are visible, holy signs and seals, appointed of God for this end, that by the use thereof He may the more fully declare

and seal to us the promise of the Gospel; namely, that He grants us out of free grace the forgiveness of sins and everlasting life, for the sake of the one sacrifice of Christ accomplished on the Cross.'¹

The workmanship of the Westminster Assembly of Divines on this subject is careful and learned in all the documents, but it is specially felicitous in the *Shorter Catechism*, where the three following questions and answers form an almost perfect summary of Reformed doctrine:

'How do the sacraments become effectual means of salvation?

The sacraments become effectual means of salvation, not from any virtue in them, or in him that doth administer them; but only by the blessing of Christ, and the working of His Spirit in them that by faith receive them.

What is a sacrament?

A sacrament is an holy ordinance instituted by Christ; wherein, by sensible signs, Christ and the benefits of the new covenant are represented, sealed, and applied to believers.

Which are the sacraments of the New Testament?

The sacraments of the New Testament are Baptism and the Lord's Supper.'²

There was never any serious difference of opinion in the Reformed Church itself in the post-Reformation period, unless it was in the transactions leading up to the Synod of Dort, when the Arminians were accused of minimizing the value of sacraments; but, the contest with both Roman Catholics and Lutherans still continuing, the affirmations and the denials of the Reformed theologians became more and more informed and distinct; and so both the statement and the defence of the Reformed position became more and more easy. Hence works of recent date afford clear and thorough knowledge on every point, but none can perhaps compete with that of Charles Hodge in his *Systematic Theology* (3 vols., Edinburgh, 1872-73), where the discussion is included under 'Soteriology.'

The sacraments are expounded by Hodge under five heads—their nature, their number, their efficacy, their necessity, and their validity. In investigating their nature he imposes on himself as the true method 'to take those ordinances which by common consent are admitted to be sacraments, and by analyzing them determine what are their essential elements or characteristics,' and then 'exclude from the category all other ordinances, human or divine, in which those characteristics are not found.'³ As for their number, Calvin had been able to prove that Augustine, though himself fond of significant numbers, said not a word about the number seven; but his knowledge did not enable him to go farther down. Hodge, on the contrary, is able to show that, so far from this number being primitive or scriptural, it was not current before the 12th century. What is said on the efficacy of the sacraments is practically an exposition of the questions of the *Shorter Catechism* quoted above. The necessity is what is called a *necessitas præcepti*; i.e., the use of sacraments is necessary because it is commanded by God—but it is not a *sine qua non*, because the same blessings which are communicated through the sacraments can be obtained without them, nothing being conveyed through them that may not be conveyed through other channels, especially the Word of God.

Under his last head—their validity—Hodge takes up an interesting question, namely, whether sacraments are rendered invalid if administered by any but lawfully ordained ministers. In ordinary circumstances it is unseemly and wrong that they be administered otherwise; but in special circumstances is the presence of such an administrator imperative?

'If a number of pious Christians assemble, where no minister can be had, to celebrate the Lord's Supper, in what sense is such a service invalid? Do they not commemorate the death of

¹ Art. xxi.

Christ? Are not the bread and wine to them the symbols of his body and blood? If faith be in exercise, may they not receive those symbols to their spiritual nourishment and growth in grace? Again, if baptism be a washing with water in the name of the Holy Trinity, to signify and seal our engrafting into Christ, does it cease to be, or to signify this if not administered by an ordained minister? Does not the man thus baptized make a profession of his faith in Christ? and does he not thereby become a member of that great body which confesses Him before men? Can it, therefore, be any more invalid than the Gospel, when preached by a layman?¹

The liberality of such sentiments has doubtless been learnt in the United States through the exigencies of ecclesiastical life on the frontiers in the Far West; but the learned and orthodox author conveniently forgets that this view is flatly contradictory of the Confession of Faith. Indeed, in the First Book of Discipline the administration of the sacraments by any but lawfully ordained ministers is declared to be worthy of death.

A few years ago, in the Presbyterian Church of England, the question was raised whether elders, being ordained men, might officiate at the distribution of the communion elements in missions connected with city churches where the services of a minister could not be easily secured as frequently as might be necessary; and, after prolonged discussion, the Synod, in 1907, decided in the negative.

Since, in 1817, the union of Lutheran and Reformed Churches was secured in Prussia, the movement extending soon to other German States, there has naturally been a disposition among Protestant theologians to emphasize the points of sacramental theory and practice on which both sides are agreed, though the controversy of both with Rome has not ceased. Schleiermacher, who was the son of a Reformed pastor, threw out the suggestion that the sacraments may be regarded as acts in the work of the risen Christ—an idea germane to that of Dorner, who treated the Church as the domain of the Holy Ghost.

Speculations of the most radical description have not been lacking in recent times, doubt being cast on the institution of the sacraments by the Author of Christianity, and the question specially raised whether He had any intention of making the Lord's Supper a permanent institution or only celebrated it once with His disciples in a genial hour, without any thought about the future. By a certain school a very close connexion has been assumed as having existed between the sacraments of Christianity and the initiatory rites of other religions by which it was surrounded in the primitive age and from which it drew its converts; and some regard the sacramental system as a vagrant boulder projected into Paulinism from the outside and inconsistent

in its nature with the rest of the landscape. With such notions Reformed doctrine has nothing special to do.

It has, however, to do with novel ideas which some have been bringing back from the War, since among the Reformed the tradition has always been specially strong that the preaching of the Word is the great means of grace. Some of the Presbyterian chaplains, when serving abroad, have obtained occasional glimpses of stately worship in the Roman Catholic Churches; they have seen how the celebration of the Eucharist supplies form and body to the Anglican service; they have witnessed the eagerness with which the members of their own denomination have welcomed a communion service; and some of them have ventured to invite all present who were desirous to partake, whether members of the Church at home or not. From such experiences they have derived the impression that in their Church at home enough is not made of the sacraments; and some of them have been proposing that the Lord's Supper should form a part—the most prominent part—of the principal diet of worship every Sunday, as well as that the Table should always be open to all who desire to come, without questions asked. Such suggestions deserve the attention always due to impressions received from first-hand experience; but the Church will also bring to bear on their solution its older experience, which is very ample in regard to some of the points raised. Changes may be made and experiments tried; but the Reformed Church will not turn her back on her own past, by displacing preaching from its position of primacy, as long as she remembers the statement in the gospel, 'Jesus himself baptized not, but his disciples,' and the words of St. Paul, 'Christ sent me not to baptize, but to preach the gospel.'

LITERATURE.—All the writings of Calvin on the sacraments, outside the *Institutes*, will be found in vol. viii. of the *Opera Omnia*, Amsterdam, 1667-71, as well as in vol. ii. of his *Tracts*, tr. H. Beveridge, Calvin Translation Society, Edinburgh, 1849. The passage from the old Scots Confession of 1560 is extracted from John Knox, *Works*, ed. D. Laing, Edinburgh, 1864, vol. ii., and that from the *Heidelberg Catechism* from A. Smellie's ed., London, 1900. For other confessional statements, as well as that quoted from the XXXIX. Articles, see P. Schaff, *The Creeds of Christendom*, New York and London, 1877, iii., 'The Evangelical Protestant Creeds,' or E. F. K. Mueller, *Die Bekenntnisschriften der reformierten Kirche*, Leipzig, 1903. Much solid matter will be found in W. Cunningham, *The Reformers and the Theology of the Reformation*, Edinburgh, 1862 (esp. Essay v. 'Zwingli and the Doctrine of the Sacraments'), as well as in Alexander Schweizer, *Die protestantischen Centraldogmen in ihrer Entwicklung innerhalb der reformierten Kirche*, 2 vols., Zürich, 1854-56. Among recent books may be mentioned J. S. Candlish, *The Christian Sacraments*, Edinburgh, 1881, and J. C. Lambert, *The Sacraments in the New Testament*, do. 1908.
